

Centralized Recycling Stations

- Use Maximo to order Centralized Recycling Stations

Centralized recycling stations include three Slim Jim® containers: a blue recycling bin for paper, a grey bin for trash, and a blue bin for commingled items. This effective combination should be used in high traffic areas where students, staff, or community members gather; in high schools with open lunches; or in schools with the Maryland Meals for Achievement Program.

Grey Slim Jim® bins should always be paired with two blue bins to create centralized recycling stations. They are not to be used as stand-alone trash bins in classrooms.
