

SYSTEMATIC TEAM CLEANING MINIMUM REQUIREMENTS

Systematic Team Cleaning (STC) is a methodical, organized approach to cleaning that focuses on the health of building occupants and workers while maximizing productivity. Use of certified, MCPS approved for use supplies and equipment and time tested procedures ensure that consistently healthy, high performance cleaning (HHPC) is performed in a way that maximizes the use of time, steps, motion, materials, supplies and equipment.

A fully implemented STC program must include:

1. Written work plan with detailed cleaning and project work schedules.
2. Written building inspections performed weekly by school based staff. These inspections should be used to track performance and drive improvement
3. Use of Healthy High Performance (Green) Cleaning Products
4. Use of Healthy High Performance (Green) Cleaning Equipment
