

2010 Summer Strategies
3:00 p.m. —5:00 p.m.
6/21/10-8/20/10

Summer Peak Load Management Strategies for Reducing Peak Load Charges

Your efforts during a few key hours this summer can reduce our costs and avoid brown-outs and black-outs of the electricity grid.

Schedule Early

- When possible schedule early to curtail the need for independent air-conditioned areas after 3:30 p.m. unless absolutely necessary.

Do the SERT Summer Shut Down

- Implement SERT summer shut-down procedures and periodically survey the building to make sure equipment has not been turned back on.
- Unnecessary lights, computers, exhaust fans, unit ventilators, and outside lights should be turned off.

Sweep Daily

- Survey the building starting at 3:00 p.m. to turn off unnecessary corridor lights, gymnasium lights, and exhaust fans to minimize use during critical hours.
