

School Staff

What single factor contributes the most towards energy conservation in your school?

Human Behavior

You can make a difference by modeling energy-aware behavior!

Did you know that two-thirds of the electricity use in a school comes from lighting, computers, and other plug in appliances?

It's simple. You can help by:

- turning off lights in unoccupied rooms,
- shutting down computers and printers when not in use, and
- turning off electronic appliances and equipment.

Start today...lead by example!

Help your school earn SERT Awards by using less energy and actively recycling.
