

2011 Summer- Peak Load Management

Below you will find strategies to help reduce energy use:

- * When possible schedule meeting and activities for early in the day, try not to need independent air-conditioned areas after 3:30 p.m.
- * Implement SERT summer shut-down procedures to make sure unnecessary lights, computers, exhaust fans, unit ventilators, and outside lights are turned off.
- * Periodically survey your school to make sure equipment is turned off.
- * Survey schools daily at 3:00 p.m. to turn off unnecessary corridor lights, gymnasium lights, and exhaust fans.
- * Use public address system daily to remind staff to shut down unnecessary equipment @ 3:00 p.m.
