

IB Psychology

So, you want to be a psychologist,
or do you want to learn more about human behavior?

The IB Diploma Programme psychology course is the **systematic study of behavior and mental processes**. The psychology course examines the interaction of biological, cognitive and sociocultural influences on human behavior. Students will develop an understanding of how psychological knowledge is generated, developed and applied.

The holistic approach reflected in the curriculum, which sees biological, cognitive and sociocultural analysis being taught in an integrated way ensures that students are able to develop an understanding of what all humans share, as well as the immense diversity of influences on human behavior and mental processes.

Consider the ethical
implications of
psychological research....
