

Bees Land in Media Center

by Ms. Metallo

Third grade students have been busy as bees learning about how bees pollinate flowers. Students have been working hard in class identifying the parts of a bee. As a take home project students created a bee model. Their models include the head, thorax and abdomen, six legs, four wings, two antennae, two compound eyes, and three simple eyes. Students were very creative in material selection and construction of these models. Come by the Media Center to check them out while they are on display.
