MONTGOMERY COUNTY PUBLIC SCHOOLS
Rockville, Maryland

November 12, 2002

MEMORANDUM

To: Members of the Board of Education

From: Jerry D. Weast, Superintendent of Schools

Subject: Final Examination Performance in Five Selected Courses, June 2002

The attached tables summarize the performance of students on semester 2 final exams in five subjects related to the forthcoming High School Assessments. These courses are: Algebra 1, Geometry, Biology, English 1 (9th grade), and National/State/Local Government (NSL). Course enrollments and performance on the semester 2 final exams are compared to course enrollments and performance on the semester 1 final exams. The summaries include the following groups of students:

- Countywide results for high school students enrolled in the five courses
- Countywide results for middle school students enrolled in Algebra 1 or Geometry
- Countywide results for racial/ethnic groups in high schools
- Results for each high school (sorted by community superintendent clusters)
- Results by racial/ethnic group within each high school
- Results for each middle school (sorted by community superintendent clusters)
- Countywide results for racial/ethnic groups in middle schools (only in Algebra 1 because Geometry data too sparse by racial/ethnic group)
- Results by racial/ethnic group within each middle school

A review of these and other data suggest the following conclusions:

- Passing rates on final exams in Semester 2 were similar to those in Semester 1 except in Biology where the Semester 2 passing rate showed a 19-percentage point improvement.
- Students who are better prepared academically tend to enroll in math and science courses earlier and to perform better than do students who enroll in the same course in higher grade levels.
- Final exam passing rates for African American and Hispanic students were one-half to two-thirds as high as the passing rates of White and Asian students, depending upon the course.

- Final exam passing rates are lower than final course marks. Thus, if standards on the new High School Assessments are as high as the current standards on final exams, many students may, without further instructional support, have to repeat the courses prior to graduation.

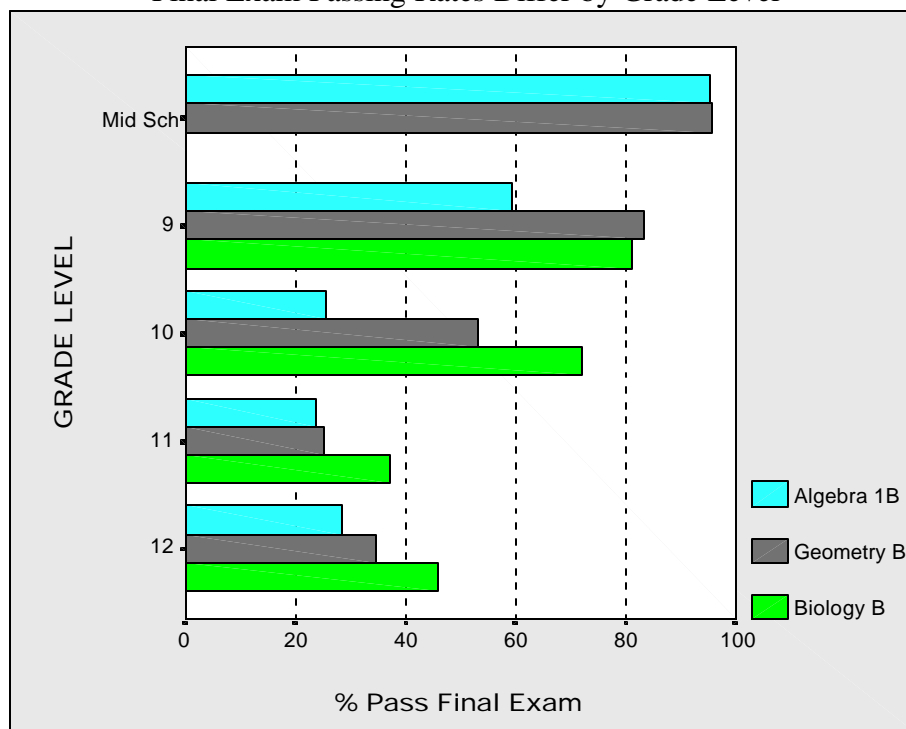

Summary by courses. Final exam passing rates were highest in English 1 (81 percent) followed by NSL (78 percent), Biology (72 percent), Geometry (62 percent), and Algebra 1 in high school (50 percent). In middle schools, the final exam passing rates were 95 percent for Algebra 1 and 96 percent for Geometry.

Between semester 1 and semester 2, the final exam passing rates differed by no more than six percentage points across the courses except for Biology. In Biology the semester 2 passing rate exceeded the semester 1 passing rate by 19 percentage points.

Note that in the courses that enrolled some seniors (Geometry, NSL), the seniors were exempted from taking the final exam in semester 2. Furthermore, the semester 2 course enrollments in schools differ from the semester 1 enrollments because some students do not enroll in the course for semester 2, or because some students leave the school or leave Montgomery County Public Schools in the second semester and may be replaced by other students.

Final exam passing rates differ by grade level. Figure 1 suggests that students who are prepared to take the course earlier in their school careers also perform better on the final exam.

Figure 1
Final Exam Passing Rates Differ by Grade Level

Racial/ethnic groups differ in preparation for higher-level mathematics in high school.

Figures 2a and 2b show large racial/ethnic group differences in the percentages of students who leave middle school ready to study a mathematics course beyond Algebra 1 (Figure 2a). Conversely, large racial/ethnic group differences remain at the end of ninth grade in the percentages of students who have yet attained the level of Algebra 1 (Figure 2b). Close to one out of three African American and Hispanic students ends Grade 9 at a math level lower than Algebra 1, and those students must complete Algebra 1 and Geometry prior to graduation. The percentages of White and Asian students who are similarly challenged remain below 10 percent.

Figure 2a
Percentages of Grade 8 Students Who Have Attained Algebra 1 or Higher

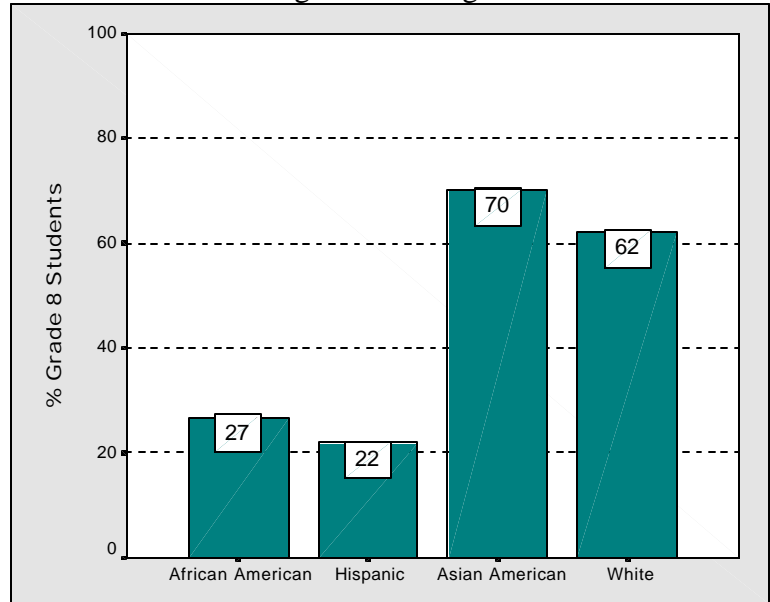

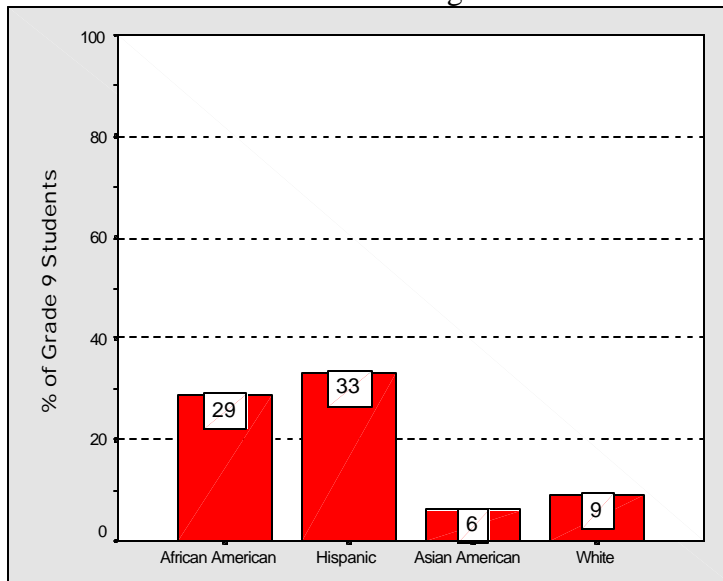

Figure 2b
Percentages of Grade 9 Students Who Have Not Yet Studied Algebra 1

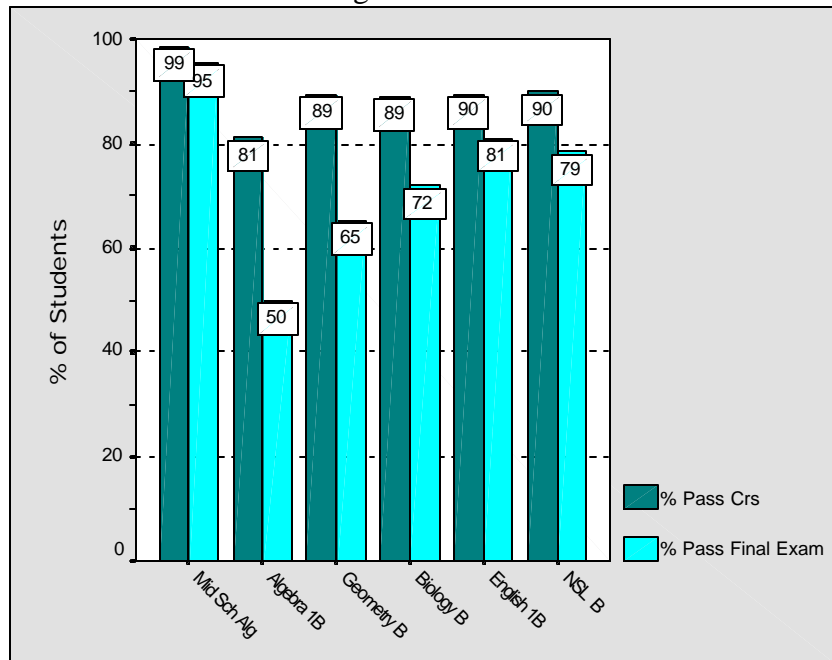

Implications for High School Assessments. Many students fail the final exam and pass the course. This discrepancy appears because, in the MCPS grading policy, the final exam counts for just 25 percent of the final class mark. Figure 3 shows, for each of the five courses, the difference in passing rates for the final exam and for the course. The difference between the two bars represents, for each course, the percentage of students who pass the exam but fail the course. For example, in Algebra 1 in high school, 81 percent of students pass the course, but only 50 percent pass the final exam. This means that 31 percent (81 minus 50) fail the exam but pass the course.

With the implementation of the new High School Assessments, students must pass the assessments in order to graduate. The results in Figure 3 imply that if future students pass the high school assessments at the same rates as the current passing rates on final exams, then many of them will have to continue study of the course material in order to graduate. Such outcomes will ultimately depend upon the alignment of the MCPS coursework and final exams with the high school assessments, the difficulty level of the standards that are eventually set on those assessments, and the students' motivations to perform on such assessments.

If you have questions, please call Dr. Larson at (301) 320-6564, or Ms. Marilyn Powell at (301) 320-7624.
