

Expectation

- 1.1 The student will represent functions and relations numerically, graphically, and algebraically.

Essential Question

How do sequences and series model real-world problems and their solutions?

Enduring Understanding

Sequences and series are discrete functions whose domain is the set of whole numbers.

Indicators

- 1.1.A2.12 represent arithmetic and geometric sequences explicitly and recursively.
- 1.1.A2.16 determine the sum and n^{th} term of an arithmetic or geometric series.
