B. Inspect support and attachment components for damage and defects.

C. Repair cuts and abrasions in galvanized finishes using zinc-rich paint recommended by manufacturer. Replace components that exhibit signs of corrosion.

D. Correct deficiencies and replace damaged or defective support and attachment components.

END OF SECTION 260529

DRAFT

SECTION 260533
RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Metal conduits, tubing, and fittings.

B. Nonmetal condutis, tubing, and fittings.

C. Metal wireways and auxiliary gutters.

D. Surface raceways.

E. Boxes, enclosures, and cabinets.

F. Handholes and boxes for exterior underground cabl

1.02 RELATED REQUIREMENTS

A. Section **<< 078400 - Firestopping>>**.

B. Section **<< 260526 - Grounding and Bonding for Electrical Systems>>**.

C. Section **<< 260529 - Hangers and Supports for Electrical Systems>>**.

1.03 REFERENCE STANDARDS

A. ANSI C80.1 - American National Standard for Electrical Rigid Steel Conduit (ERSC).

B. ANSI C80.3 - American National Standard for Electrical Metallic Tubing -- Steel (EMT-S).

C. ANSI C80.6 - American National Standard for Electrical Intermediate Metal Conduit.

D. NECA 1 - Standard for Good Workmanship in Electrical Construction.

E. NECA 101 - Standard for Installing Steel Conduits (Rigid, IMC, EMT).

F. NECA 111 - Standard for Installing Nonmetallic Raceways (RNC, ENT, LFNC).

G. NECA 130 - Standard for Installing and Maintaining Wiring Devices.

H. NEMA FB 1 - Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit, Electrical Metallic Tubing, and Cable.

I. NEMA TC 2 - Electrical Polyvinyl Chloride (PVC) Conduit.

J. NEMA TC 3 - Polyvinyl Chloride (PVC) Fittings for Use with Rigid PVC Conduit and Tubing.

K. NFPA 70 - National Electrical Code.

L. UL 1 - Flexible Metal Conduit.

M. UL 5 - Surface Metal Raceways and Fittings.

N. UL 6 - Electrical Rigid Metal Conduit-Steel.

O. UL 6A - Electrical Rigid Metal Conduit-Aluminum, Red Brass, and Stainless Steel.

P. UL 360 - Liquid-Tight Flexible Metal Conduit.

Q. UL 514B - Conduit, Tubing, and Cable Fittings.

R. UL 651 - Schedule 40, 80, Type EB and A Rigid PVC Conduit and Fittings.

S. UL 797 - Electrical Metallic Tubing-Steel.

T. UL 1242 - Electrical Intermediate Metal Conduit-Steel.

DRAFT

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate minimum sizes of conduits with actual type and quantity of conductors to be installed, including adjustments for conductor sizes increased for voltage drop.
   2. Coordinate arrangement of conduits with structural members, ductwork, piping, equipment, and other potential conflicts.
   3. Verify exact conduit termination locations required for boxes, enclosures, and equipment.
   4. Coordinate work to provide roof penetrations that preserve integrity of roofing system and do not void roof warranty.
   5. Notify **<<Architect>>** of conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.
   6. Coordinate the placement of raceways with millwork, furniture, equipment, etc. installed under other sections or by others.
   7.

B. Sequencing:
   1. Do not begin installation of conductors and cables until installation of conduit between termination points is complete.

1.05 SUBMITTALS

A. Product Data: Provide manufacturer's standard catalog pages and data sheets for each product type provided.
   1. Surfac Raceway Systems: Include information on fill capacities for conductors and cables.

B. Sustainable Design Submittals:
   1. Product Data for Sustainable Design credits: For solvent cements and adhesive primers, documentation including printed statement of VOC content.

C. Shop Drawings:
   1. For custom enclosures and cabinets. Include plans, elevations, sections and attachment details.

1.06 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

DRAFT

PART 2 PRODUCTS

2.01 METAL CONDUITS, TUBING, AND FITTINGS

A. Do not use conduit and associated fittings for applications other than as permitted by **<<NFPA 70>>**, manufacturer's instructions, and product listing.

B. Galvanized Rigid Steel Conduit (GRC, RMC): Comply with **<<ANSI C80.1>>** and listed and labeled as complying with **<<UL 6>>**.

C. Galvanized Steel Intermediate Metal Conduit (IMC): Comply with **<<ANSI C80.6>>** and listed and labeled as complying with **<<UL 1242>>**.

D. Galvanized Steel Electrical Metallic Tubing (EMT): Comply with **<<ANSI C80.3>>** and listed and labeled as complying with **<<UL 797>>**.

E. Flexible Metal Conduit (FMC): Comply with **<<UL 1>>**, and listed for use in classified firestop systems.

F. Liquidtight Flexible Metal Conduit (LFMC): Comply with **<<UL 360>>**.

G. Fittings for Metal Conduit:
   1. Nonhazardous Locations: Use fittings complying with **<<NEMA FB 1>>** and listed and labeled as complying with **<<UL 514B>>** or **<<UL 6>>**.
   2. Material: Use steel.
      a. Use threaded type fittings only. Provide compression type connectors for exterior use. Provide set screw type connectors for interior use.

H.

2.02 NONMETALLIC CONDUITS, TUBING, AND FITTINGS

A. Rigid Polyvinyl Chloride Conduit (PVC): **<<NFPA 70>>**, Type PVC rigid polyvinyl chloride conduit complying with **<<NEMA TC 2>>** and listed and labeled as complying with **<<UL 651>>**; Schedule 40 unless otherwise indicated, Schedule 80 where subject to physical damage; rated for use with conductors rated 90 degrees C.

B. Fittings for PVC:
   1. Description: Fittings complying with **<<NEMA TC 3>>** and listed and labeled as complying with **<<UL 651>>**; material to match conduit.
   2. Provide solvent cement made by manufacturer of the conduit and fittings.

2.03 METAL WIREWAYS AND AUXILIARY GUTTERS

A. Steel, with hinge cover, complying with UL 870 and NEMA 250, Type 1, unless otherwise indicated and sized according to NFPA 70.
   1. Cover: Screw type. Opening complete width and lenght of trough.
   2. Finish: Manufactuer's standard baked enamel.

B. Fittings:
   1. Made with removable covers and sides to permit installation of a complete system with access to wires throughout system. UL listed with the troughs.
   2. Provide threaded screws at every connector.

2.04 SURFACE RACEWAYS

A. General Requirements:
   1. Provide all components, fittings, supports, and acceessories required for a complete raceway system.
   2. Provide products listed, classified, and labeled as suitable for the purpose intended.

B. Surface Metal Raceways: Galvanized steel with snap-on covers. Listed and labeled as complying with **<<UL 5>>**.
   1. One-piece type, equal to Wiremold No. 700 as a minimum size, steel 0.04 inch thick, complete with fittings, connectors and appurtenances.
   2. Two-piece type, equal to Wiremold 2000, steel, base 0.04 inch thick and cover 0.025 inch thick, complete with receptacles, fittings, connectors, conductors, and appurtenances.
   3. Elbows: "FiberReady" full-capacity elbows.
   4. Two-piece, two-channel type, equal to Wiremold 4000, galvanized steel, no less than 4.75 inches wide, base 0.05 inch thick and cover 0.04 inch thick, complete with divider, fittings, connectors, devices, and appurtenances.
      a. Cover 4000C, precut or field cut.
      b. Divider 4000D, galvanized steel with one painted side, with divider clip every 2.5 feet.

DRAFT

c. Device mounting bracket and trim plate: At each location indicated on drawings, 4050, high-impact plastic. Trim plate overlaps raceway cover and seam between mounting bracket and adjacent cover plate.

d. Face plates: 5507 Series, types for types of locations indicated on drawings.

1) Location indicated for duplex receptacle: Duplex receptacle type.

2) Location indicated for data and telephone: Dual RJ11/RJ45 type.

3) Location indicated for future system: Blank.

e. End cap at vertical termination of raceway: Entrance end fitting 4010 with removable divider, capable of allowing connection with minimum 1.25-inch conduit.

f. V4011FO "FiberReady" full-capacity corner elbows and T fittings which maintain a controlled 2-inch minimum cable bend radius.

5. Multi-outlet plug-in strips: Wired assemblies, equal to Wiremold No. 2000 Series, of lengths indicated.

6. Finish Color: Ivory.

2.05 BOXES, ENCLOSURES, AND CABINETS

A. General Requirements:

1. Do not use boxes and associated accessories for applications other than as permitted by **<<NFPA 70>>** and product listing.

2. Provide all boxes, fittings, supports, and accessories required for a complete raceway system and to accommodate devices and equipment to be installed.

3. Provide products listed, classified, and labeled as suitable for the purpose intended.

4. Where box size is not indicated, size to comply with **<<NFPA 70>>** but not less than applicable minimum size requirements specified.

5. Provide grounding terminals within boxes where equipment grounding conductors terminate.

B. Sheet Metal Outlet and Device Boxes: Comply with NEMA OS 1 and UL 514A.

C. Cast-Metal Outlet and Device Boxes: Comply with NEMA FB 1, ferrous alloy, Type FD, with gasketed cover.

D. Outlet boxes in concrete construction: Octagonal, two-piece type, of sufficient depth to keep conduits not closer than 1 inch to surface.

E. Switch and receptacle boxes in masonry partitions and walls: Square cornered tile wall boxes 3.5 inches deep, or 4-11/16 inches square boxes with raised tile wall device covers. The device covers shall be of extra depths required to suit the block or brick construction in which they are placed.

F. Switch and receptacle boxes in metal stud partitions: 4-11/16 inches square by 2.125 inches deep square boxes with 0.75-inch raised tile wall device covers finishing flush with finished wall surface.

G. Wall and partition mounted outlets for low-voltage systems: Same as specified above for switches and receptacles.

H. Junction and Pull Boxes:

1. Junction and pull boxes in feeder conduit runs: Galvanized, of size required for conduit arrangement and not less than the size required by NFPA 70, and furnished with screwed covers.

DRAFT

2.06 FLOOR BOXES AND SERVICE FITTINGS

A. Floor box for power and communications: equal to Wiremold EFB Evolution Series.
   1. Complete in-floor multi-service box consisting of floor box housing, removable cover, wiring devices and device plates, as detail on drawings.

2.07 POKE-THROUGH DEVICES

A. Poke Through service fittings for power and communications: equal to Wiremold 8-inch Evolution Series.
   1. Listed by UL and classified for fire resistance up to and including two-hour fire rating. Provide units with wiring devices and device plates as detail on the drawings.

2.08 HANDHOLES AND BOXES FOR EXTERIOR UNDERGROUND WIRING

2.09 CONDUIT APPLICATIONS

A. Do not use conduit and associated fittings for applications other than as permitted by **<<NFPA 70>>**, manufacturer's instructions, and product listing.

B. Unless otherwise indicated and where not otherwise restricted, use conduit types indicated for specified applications. Where more than one listed application applies, **<< comply with most restrictive requirements; or _____>>**. Where conduit type for particular application is not specified, **<< use galvanized steel rigid metal conduit; or _____>>**.

C. Underground:
   1. Under Slab on Grade: Use **<< galvanized steel rigid metal conduit (RMC); stainless steel rigid metal conduit (RMC); aluminum rigid metal conduit (RMC); galvanized steel intermediate metal conduit (IMC); stainless steel intermediate metal conduit (IMC); PVC-coated galvanized steel rigid metal conduit (RMC); galvanized steel electrical metallic tubing (EMT); stainless steel electrical metallic tubing (EMT); aluminum electrical metallic tubing (EMT); rigid PVC conduit; reinforced thermosetting resin conduit (RTRC); high-density polyethylene (HDPE) conduit; or _____>>**.
   2. Exterior, Direct-Buried: Use **<< galvanized steel rigid metal conduit (RMC); stainless steel rigid metal conduit (RMC); aluminum rigid metal conduit (RMC); galvanized steel intermediate metal conduit (IMC); stainless steel intermediate metal conduit (IMC); PVC-coated galvanized steel rigid metal conduit; galvanized steel electrical metallic tubing (EMT); stainless steel electrical metallic tubing (EMT); aluminum electrical metallic tubing (EMT); rigid PVC conduit; reinforced thermosetting resin conduit (RTRC); high-density polyethylene (HDPE) conduit; or _____>>**.
   3. Exterior, Embedded Within Concrete: Use **<< galvanized steel rigid metal conduit (RMC); stainless steel rigid metal conduit (RMC); aluminum rigid metal conduit (RMC); galvanized steel intermediate metal conduit (IMC); stainless steel intermediate metal conduit (IMC); PVC-coated galvanized steel rigid metal conduit (RMC); galvanized steel electrical metallic tubing (EMT); stainless steel electrical metallic tubing (EMT); aluminum electrical metallic tubing (EMT); rigid PVC conduit; reinforced thermosetting resin conduit (RTRC); high-density polyethylene (HDPE) conduit; or _____>>**.
   4. Where **<< rigid polyvinyl chloride (PVC) conduit; high-density polyethylene (HDPE) conduit; or _____>>** is provided, transition to **<< galvanized steel rigid metal conduit (RMC); stainless steel rigid metal conduit (RMC); aluminum rigid metal conduit (RMC); galvanized steel intermediate metal conduit (IMC); stainless steel intermediate metal conduit (IMC); PVC-coated galvanized steel rigid metal conduit (RMC); galvanized steel electrical metallic tubing (EMT); aluminum electrical**

DRAFT

metallic tubing (EMT); schedule 80 rigid PVC conduit; Type XW reinforced thermosetting resin conduit (RTRC); or _____>> where emerging from underground.

D. Embedded Within Concrete:
   1. Within Slab on Grade: Not permitted.
   2. Within Slab Above Ground: Not permitted.
   3. Within Concrete Walls Above Ground: Use **<< galvanized steel rigid metal conduit (RMC); stainless steel rigid metal conduit (RMC); aluminum rigid metal conduit (RMC); galvanized steel intermediate metal conduit (IMC); stainless steel intermediate metal conduit (IMC); PVC-coated galvanized steel rigid metal conduit (RMC); galvanized steel electrical metallic tubing (EMT); aluminum electrical metallic tubing (EMT); rigid PVC conduit; electrical nonmetallic tubing (ENT); reinforced thermosetting resin conduit (RTRC); or _____>>**.
   4. Where rigid polyvinyl (PVC) conduit is provided, transition to **<< galvanized steel rigid metal conduit (RMC); stainless steel rigid metal conduit (RMC); aluminum rigid metal conduit (RMC); galvanized steel intermediate metal conduit (IMC); stainless steel intermediate metal conduit (IMC); PVC-coated galvanized steel rigid metal conduit (RMC); galvanized steel electrical metallic tubing (EMT); aluminum electrical metallic tubing (EMT); reinforced thermosetting resin conduit (RTRC); or _____>>** where emerging from concrete.

E. Concealed Within Masonry Walls: Use **<< galvanized steel rigid metal conduit (RMC); stainless steel rigid metal conduit (RMC); aluminum rigid metal conduit (RMC); galvanized steel intermediate metal conduit (IMC); stainless steel intermediate metal conduit (IMC); galvanized steel electrical metallic tubing (EMT); stainless steel electrical metallic tubing (EMT); aluminum electrical metallic tubing (EMT); reinforced thermosetting resin conduit (RTRC); or _____>>**.

F. Concealed Within Hollow Stud Walls: Use **<< galvanized steel rigid metal conduit (RMC); stainless steel rigid metal conduit (RMC); aluminum rigid metal conduit (RMC); galvanized steel intermediate metal conduit (IMC); stainless steel intermediate metal conduit (IMC); galvanized steel electrical metallic tubing (EMT); stainless steel electrical metallic tubing (EMT); aluminum electrical metallic tubing (EMT); reinforced thermosetting resin conduit (RTRC); or _____>>**.

G. Concealed Above Accessible Ceilings: Use **<< galvanized steel rigid metal conduit (RMC); stainless steel rigid metal conduit (RMC); aluminum rigid metal conduit (RMC); galvanized steel intermediate metal conduit (IMC); stainless steel intermediate metal conduit (IMC); galvanized steel electrical metallic tubing (EMT); stainless steel electrical metallic tubing (EMT); aluminum electrical metallic tubing (EMT); reinforced thermosetting resin conduit (RTRC); or _____>>**.

H. Interior, Damp or Wet Locations: Use **<< galvanized steel rigid metal conduit (RMC); stainless steel rigid metal conduit (RMC); aluminum rigid metal conduit (RMC); galvanized steel intermediate metal conduit (IMC); stainless steel intermediate metal conduit (IMC); PVC-coated galvanized steel rigid metal conduit (RMC); galvanized steel electrical metallic tubing (EMT); stainless steel electrical metallic tubing (EMT); aluminum electrical metallic tubing (EMT); reinforced thermosetting resin conduit (RTRC); or _____>>**.

I. Exposed, Interior, Not Subject to Physical Damage: Use **<< galvanized steel rigid metal conduit (RMC); stainless steel rigid metal conduit (RMC); aluminum rigid metal conduit (RMC); galvanized steel intermediate metal conduit (IMC); stainless steel intermediate metal conduit (IMC); galvanized steel electrical metallic tubing (EMT); stainless steel**

DRAFT

electrical metallic tubing (EMT); aluminum electrical metallic tubing (EMT); rigid PVC conduit; reinforced thermosetting resin conduit (RTRC); or _____>>.

J. Exposed, Interior, Subject to Physical Damage: Use **<< galvanized steel rigid metal conduit (RMC); stainless steel rigid metal conduit (RMC); aluminum rigid metal conduit (RMC); galvanized steel intermediate metal conduit (IMC); stainless steel intermediate metal conduit (IMC); galvanized steel electrical metallic tubing (EMT); stainless steel electrical metallic tubing (EMT); schedule 80 rigid PVC conduit; Type XW reinforced thermosetting resin conduit (RTRC); or _____>>**.

K. Exposed, Interior, Subject to Severe Physical Damage: Use **<< galvanized steel rigid metal conduit (RMC); stainless steel rigid metal conduit (RMC); aluminum rigid metal conduit (RMC); galvanized steel intermediate metal conduit (IMC); stainless steel intermediate metal conduit (IMC); or _____>>**.

1. Locations subject to severe physical damage include, but are not limited to:
   a. High traffic industrial and warehouse areas where exposed below **<< 8 feet; _____ feet; or _____>><< , except within electrical and communication rooms or closets; , _____; or None - N/A>>**.
   b. Mechanical Rooms.
   c. Loading Dock.
   d. Gymnasiums.
   e. Cooridors used for traffic of forklifts or similar vehicles.

L. Exposed, Exterior: Use **<< galvanized steel rigid metal conduit (RMC); stainless steel rigid metal conduit (RMC); aluminum rigid metal conduit (RMC); galvanized steel intermediate metal conduit (IMC); stainless steel intermediate metal conduit (IMC); PVC-coated galvanized steel rigid metal conduit (RMC); galvanized steel electrical metallic tubing (EMT); stainless steel electrical metallic tubing (EMT); reinforced thermosetting resin conduit (RTRC), type XW; or _____>>**.

M. Flexible Connections to Luminaires Above Accessible Ceilings: Use **<< flexible metal conduit (FMC); or _____>>**.

1. Maximum Length: **<< 6 feet; _____ feet; or _____>>**.

N. Flexible Connections to Vibrating Equipment:

1. Dry Locations: Use **<< flexible metal conduit (FMC); or _____>>**.
2. Damp, Wet, or Corrosive Locations: Use **<< liquidtight flexible metal conduit (LFMC); or _____>>**.
3. Maximum Length: **<< 6 feet; _____ feet; or _____>>** unless otherwise indicated.
4. Vibrating equipment includes, but is not limited to:
   a. Transformers.
   b. Motors.

O. Class 2 & 3 Wiring shall be installed in conduit subject to application requirements above in 2.01.

2.10 CONDUIT - GENERAL REQUIREMENTS

A. Comply with **<<NFPA 70>>**.

B. Provide conduit, fittings, supports, and accessories required for complete raceway system.

C. Provide products listed, classified, and labeled as suitable for purpose intended.

D. Where conduit size is not indicated, size to comply with **<<NFPA 70>>** but not less than applicable minimum size requirements specified.

DRAFT

2.11 GALVANIZED STEEL RIGID METAL CONDUIT (GRC)

A. Description: **<<NFPA 70>>**, Type RMC galvanized steel rigid metal conduit complying with **<<ANSI C80.1>>** and listed and labeled as complying with **<<UL 6>>**.

B. Fittings:

1. Nonhazardous Locations: Use fittings complying with **<<NEMA FB 1>>** and listed and labeled as complying with **<<UL 514B>>** or **<<UL 6>>**.
2. Material: Use **<< steel; malleable iron; die cast zinc; or _____>>**.
3. Connectors and Couplings: Use **<< threaded type fittings only. Threadless fittings, including set screw and compression/gland types, are not permitted; threaded or threadless type fittings; or _____>>**.

2.12 STAINLESS STEEL RIGID METAL CONDUIT (RMC)

A. Description: **<<NFPA 70>>**, Type RMC stainless steel rigid metal conduit complying with **<<ANSI C80.1>>** and listed and labeled as complying with **<<UL 6A>>**.

B. Fittings:

1. Nonhazardous Locations: Use fittings complying with **<<NEMA FB 1>>** and listed and labeled as complying with **<<UL 514B>>** or **<<UL 6A>>**.
2. Material: Use stainless steel with corrosion resistance equivalent to conduit.
3. Connectors and Couplings: Use **<< threaded type fittings only. Threadless fittings, including set screw and compression/gland types, are not permitted; threaded or threadless type fittings; or _____>>**.

2.13 FLEXIBLE METAL CONDUIT (FMC)

A. Description: **<<NFPA 70>>**, Type FMC **<< standard-wall steel; reduced-wall steel; standard-wall aluminum; reduced-wall aluminum; or _____>>** flexible metal conduit listed and labeled as complying with **<<UL 1>>**, and listed for use in classified firestop systems.

B. Fittings:

1. Description: Fittings complying with **<<NEMA FB 1>>** and listed and labeled as complying with **<<UL 514B>>**.
2. Material: Use **<< steel; malleable iron; aluminum; die cast zinc; or _____>>**.

2.14 LIQUIDTIGHT FLEXIBLE METAL CONDUIT (LFMC)

A. Description: **<<NFPA 70>>**, Type LFMC polyvinyl chloride (PVC) jacketed **<< steel; aluminum; or _____>>** flexible metal conduit listed and labeled as complying with **<<UL 360>>**.

B. Fittings:

1. Description: Fittings complying with **<<NEMA FB 1>>** and listed and labeled as complying with **<<UL 514B>>**.
2. Material: Use **<< steel; malleable iron; aluminum; die cast zinc; or _____>>**.

2.15 GALVANIZED STEEL ELECTRICAL METALLIC TUBING (EMT)

A. Description: **<<NFPA 70>>**, Type EMT galvanized steel electrical metallic tubing complying with **<<ANSI C80.3>>** and listed and labeled as complying with **<<UL 797>>**.

B. Fittings:

1. Description: Fittings complying with **<<NEMA FB 1>>** and listed and labeled as complying with **<<UL 514B>>**.
2. Material: Use **<< steel; malleable iron; die cast zinc; or _____>>**.

DRAFT

3. Connectors and Couplings: Use **<< compression/gland; set-screw; or _____>>** type.
    a. Do not use indenter type connectors and couplings.

2.16 RIGID POLYVINYL CHLORIDE (PVC) CONDUIT

A. Description: **<<NFPA 70>>**, Type PVC rigid polyvinyl chloride conduit complying with **<<NEMA TC 2>>** and listed and labeled as complying with **<<UL 651>><< ; Schedule 40 unless otherwise indicated, Schedule 80 where subject to physical damage; ; Schedule 40 or Schedule 80 as indicated; ; Schedule 80 unless otherwise indicated; ; _____; or None - N/A>>**; rated for use with conductors rated 90 degrees C.

B. Fittings:
1. Manufacturer: Same as manufacturer of conduit to be connected.
2. Description: Fittings complying with **<<NEMA TC 3>>** and listed and labeled as complying with **<<UL 651>>**; material to match conduit.

PART 3 EXECUTION

3.01 RACEWAY APPLICATION

A. Minimum raceway size for interior applications is 3/4 inch. Minimum raceway size for exterior applications is 1 inch.
1. Provide GRC for the following applications:
    a. Conduit buried in earth, except where noted to be plastic.
    b. Conduit in concrete slab, except where noted to be plastic.
    c. First five feet of conduit extending outside building.
    d. Under roads and paved areas where existing pavement is not to be disturbed, extending at least five feet beyond edges of pavement.
    e. Elbows penetrating floor slabs, exterior walls, or bearing walls.
    f. In exterior walls.
2. Provide IMC for the following applications:
    a. Wiring to exterior equipment.
    b. In exterior walls.
3. Provide EMT for the following applications:
    a. Sizes 4 inches and smaller, except as noted above.
4. Provide FMC for the followign applications:
    a. For connection to vibrating equipment indoors.
5. Provide LFMC for the following applications:
    a. For connection to vibrating equipment outdoors.
6. Provide PVC for the following applications:
    a. For exterior circuits, directly buried, except first five feet from building.
    b. Where noted under concrete slab, concrete encased.
    c. Where noted under concrete slab, directly buried.
    d. For concrete encased ductbanks.

B.

3.02 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

DRAFT

B. Install conduit in accordance with **<<NECA 1>>**.

C. Surface Raceways:
   1. Where field cutting is required, make each cut with the manufacturer's tool specifically designed for cutting their product.
   2. Make raceway runs plumb, level, true and parrallel with building and casework lines.
   3. Except as otherwise shown on drawings, locate raceways in corners, beneath chalkboard and tackboard frames, adjacent to door trims, and in other ways to be inconspicuous, even when this requires additional lengths.
   4.

D. Boxes
   1. Install boxes in accordance with **<<NECA 1>>** (general workmanship) and, where applicable, **<<NECA 130>><< , including mounting heights specified in those standards where mounting heights are not indicated; , except for mounting heights specified in those standards; , _____; or None - N/A>>**.
   2. Arrange equipment to provide minimum clearances in accordance with manufacturer's instructions and **<<NFPA 70>>**.
   3. Provide separate boxes for emergency power and normal power systems.
   4. Unless otherwise indicated, provide separate boxes for line voltage and low voltage systems.
   5. Flush-mount boxes in finished areas unless specifically indicated to be surface-mounted.
   6. Unless otherwise indicated, boxes may be surface-mounted where exposed conduits are indicated or permitted.
   7. Provide box at each outlet, switch, and appurtenance. Each box shall be of a type suitable for the duty intended and shall be installed in accordance with the manufacturer's instructions.
      a. Where conduit is exposed, provide cast-steel or aluminum boxes.
   8. Coordinate locations of boxes with installation of conduit as specified in Section ######.
   9. "Through-wall" boxes: Not permitted in partitions.
   10. Firmly secure boxes in place, plumb, level and with front device cover even with finished wall surface.
   11. Boxes in metal wall stud partitions shall be securely supported by metal channels spanning between two studs and attached to the same.
   12. Outlet boxes used for supporting lighting fixtures: Furnish with malleable iron fixture studs of "No-Bolt" type, secured by locknut. Provide structural channel supports for boxes occurring in ceilings. Outlets in ceilings directly on bottom of joists shall be supported independent of ceiling construction. Outlets in suspended ceilings shall not be supported from ceiling construction. Special supports for boxes shall be as directed and approved by the Architect.
   13. Where service fittings will not permit ganging of boxes for floor outlets, outlets shall be as close as practiable.
   14. Provide a single cover plate where two or more devices are grouped together in one box.
   15. Provide poke-through service fittings where indicated.
      a. Install more than 2 feet apart, and not to exceed an average of one every 65 sq. ft.
      b. Core drill holes 8 inches in diameter.
   16. Verify door swings with door fame installed before locating switch outlets.
   17. Outlet boxes in fire-rated assembly:
      a. Clearance between boxes and wallboard shall not exceed 0.125 inch.

DRAFT

b. Surface area of individual outlet box does not exceed 16 square inches.
c. Entire surface area of boxes shall not exceed 100 square inches per 100 square feet of wall surface.

18. Interior of boxes for thermostats shall be painted maroon. ***** MCPS STANDARD *****

E. Galvanized Steel Rigid Metal Conduit (RMC): Install in accordance with **<<NECA 101>>**.

F. Rigid Polyvinyl Chloride (PVC) Conduit: Install in accordance with **<<NECA 111>>**.

G. Conduit Support:
1. Secure and support conduits in accordance with **<<NFPA 70>>** using suitable supports and methods approved by authorities having jurisdiction; see Section **<< 260529>>**.
2. Provide independent support from building structure. Do not provide support from piping, ductwork, or other systems.

H. Connections and Terminations:
1. Use approved **<< zinc-rich paint; conduit joint compound; or _____>>** on field-cut threads of galvanized steel conduits prior to making connections.
2. Where two threaded conduits must be joined and neither can be rotated, use **<< three-piece couplings; split couplings; or _____>>**. Do not use running threads.
3. Use suitable adapters where required to transition from one type of conduit to another.
4. Provide drip loops for liquidtight flexible conduit connections to prevent drainage of liquid into connectors.
5. Terminate threaded conduits in boxes and enclosures using **<< threaded hubs; double lock nuts; or _____>>** for dry locations and **<< raintight hubs; or _____>>** for wet locations.
6. Provide insulating bushings, insulated throats, or listed metal fittings with smooth, rounded edges at conduit terminations to protect conductors.
7. Secure joints and connections to provide mechanical strength and electrical continuity.

I. Penetrations:
1. Do not penetrate or otherwise notch or cut structural members, including footings and grade beams, without approval of Structural Engineer.
2. Make penetrations perpendicular to surfaces unless otherwise indicated.
3. Provide sleeves for penetrations as indicated or as required to facilitate installation. Set sleeves flush with exposed surfaces unless otherwise indicated or required.
4. Conceal bends for conduit risers emerging above ground.
5. Provide suitable **<< sealing system; or _____>>** where conduits penetrate exterior wall below grade.
6. Where conduits penetrate waterproof membrane, seal as required to maintain integrity of membrane.
7. Make penetrations for roof-mounted equipment within associated equipment openings and curbs where possible to minimize roofing system penetrations. Where penetrations are necessary, seal as indicated or as required to preserve integrity of roofing system and maintain roof warranty.
8. Install firestopping to preserve fire resistance rating of partitions and other elements; see Section **<< 078400; or _____>>**.

J. Conduit Movement Provisions: Where conduits are subject to movement, provide expansion and expansion/deflection fittings**<< or approved flexible connections; _____; or None - N/A>>** to prevent damage to enclosed conductors or connected equipment.**<< This includes, but is not limited to:; _____ .; or None - N/A>>**

DRAFT

1. Where conduits cross structural joints intended for expansion, contraction, or deflection.
2. Where calculated in accordance with **<<NFPA 70>>** for rigid polyvinyl chloride (PVC) conduit installed above ground to compensate for thermal expansion and contraction.
3. Where conduits are subject to earth movement by settlement or frost.

K. Conduit Sealing:
1. Use **<< foam conduit sealant; or _____>>** to prevent entry of moisture and gases.**<< This includes, but is not limited to:; _____ .; or None - N/A>>**
   a. Where conduits enter building from outside.
   b. Where service conduits enter building from underground distribution system.
   c. Where conduits enter building from underground.
   d. Where conduits may transport moisture to contact live parts.
2. Where conduits cross barriers between areas of potential substantial temperature differential, use **<< foam conduit sealant; or _____>>** at accessible point near penetration to prevent condensation.**<< This includes, but is not limited to:; _____ .; or None - N/A>>**
   a. Where conduits pass from outdoors into conditioned interior spaces.
   b. Where conduits pass from unconditioned interior spaces into conditioned interior spaces.

L. Provide grounding and bonding; see Section **<< 260526>>**.

3.03 IDENTIFICATION

A. Identification on outside covers of pull and junction boxes in ceiling space or exposed on walls: Paint with color enamel or mark with permanent, waterproof black marker, or both as specified.
1. Fire alarm system: Red.
2. Other special systems: Mark with system type, such as Data or Public Address.
3. Power and lighting: Panelboard designation and circuit number(s).

B. Identification on inside boxes for recess-mounted or concealed in walls and partitions: Plasticized card stock tags marked with permanent, waterproof black markers.
1. Fire alarm system: Red.
2. Other special systems: Mark with system type, such as Data or Public Address.
3. Power and lighting: Panelboard designation and circuit number(s).

3.04 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>** for additional requirements.

B. Repair cuts and abrasions in galvanized finishes using zinc-rich paint recommended by manufacturer. Replace components that exhibit signs of corrosion.

C. Correct deficiencies and replace damaged or defective conduits.

3.05 CLEANING

A. Clean interior of conduits, boxes, enclosures, and cabinets to remove moisture and foreign matter.

3.06 PROTECTION

A. Immediately after installation of conduit, use suitable manufactured plugs to provide protection from entry of moisture and foreign material and do not remove until ready for installation of conductors.

DRAFT

B. Protect installed raceways from subsequent construction operations.

C. Immediately after installation, protect boxes from entry of moisture and foreign material until ready for installation of conductors.

END OF SECTION 260533

DRAFT

SECTION 260543
UNDERGROUND DUCTS AND RACEWAYS FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Direct-buried conduit, ducts, and duct accessories.
   2. Concrete-encased conduit, ducts, and duct accessories.
   3. Handholes and boxes.

1.02 DEFINITIONS

A. Trafficways: Locations where vehicular or pedestrian traffic is a normal course of events.

1.03 REFERENCE STANDARDS

A. AASHTO HB - Standard Specifications for Highway Bridges.

B. ANSI C80.1 - American National Standard for Electrical Rigid Steel Conduit (ERSC).

C. ASTM C858 - Standard Specification for Underground Precast Concrete Utility Structures.

D. ASTM C891 - Standard Practice for Installation of Underground Precast Concrete Utility Structures.

E. ASTM F512 - Standard Specification for Smooth-Wall Poly(Vinyl Chloride) (PVC) Conduit and Fittings for Underground Installation.

F. NEMA TC 2 - Electrical Polyvinyl Chloride (PVC) Conduit.

G. NEMA TC 3 - Polyvinyl Chloride (PVC) Fittings for Use with Rigid PVC Conduit and Tubing.

H. SCTE 77 - Specifications for Underground Enclosure Integrity.

I. UL 514B - Conduit, Tubing, and Cable Fittings.

J. UL 651 - Schedule 40, 80, Type EB and A Rigid PVC Conduit and Fittings.

1.04 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include ductbank materials, including separators and miscellaneous components.
   2. Include ducts and conduits and their accessories, including elbows, end bells, bends, fittings, and solvent cement.
   3. Include accessories for manholes, handholes, boxes.
   4. Include warning tape.

B. Shop Drawings:
   1. Precast or Factory-Fabricated Underground Utility Structures:
      a. Include plans, elevations, sections, details, attachments to other work, and accessories.
      b. Include duct entry provisions, including locations and duct sizes.
      c. Include reinforcement details.
      d. Include frame and cover design and manhole frame support rings.
      e. Include Ladder details.
      f. Include grounding details.

DRAFT

g. Include dimensioned locations of cable rack inserts, pulling-in and lifting irons, and sumps.
h. Include joint details.

2. Factory-Fabricated Handholes and Boxes Other Than Precast Concrete:
a. Include dimensioned plans, sections, and elevations, and fabrication and installation details.
b. Include duct entry provisions, including locations and duct sizes.
c. Include cover design.
d. Include grounding details.
e. Include dimensioned locations of cable rack inserts, and pulling-in and lifting irons.

C. Ductbank Coordination Drawings: Show duct profiles and coordination with other utilities and underground structures.
1. Include plans and sections, drawn to scale, and show bends and locations of expansion fittings.
2. Drawings shall be signed and sealed by a qualified professional engineer.

D. Field quality-control reports.

1.05 FIELD CONDITIONS

A. Ground Water: Assume ground-water level is 36 inches below ground surface unless a higher water table is noted on Drawings.

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS FOR DUCTS AND RACEWAYS

A. Comply with ANSI C2.

B. Install underground conduits and ductbanks per the table below. Locate a minimum of 3 feet from other utility systems (steam, chilled water, sewer, storm, etc.).
1. Install not less than 4- #4 reinforcing bars tied to a square cage at 8 foot centers for conduits in ductbank under roadways.
2. Concrete encased with a minimum envelope of 3 inches around each conduit where encasement is required.
3. Concrete shall be red dyed utilizing red dye mixed into the concrete for a minimum of 5 minutes prior to pouring. Minimum of 1 bag of dye per 1 yard of concrete.

	Above 600V	600V and Below	Other Systems
Below Building Slabs	PVC Schedule 40 or GRS, 36" deep, red concrete encasement, 3000 psi	PVC Schedule 40 or GRS, 18" deep, no concrete encasement required	PVC Schedule 40 or GRS, 24" deep, no concrete encasement required
Outside of Building Footprint	PVC or GRS, 36" deep, red concrete encasement, 3000 psi	GRS, 36" deep, no encasement, or PVC, 24" deep with 2000 psi concrete encasement, no dye	GRS, 36" deep, no encasement, or PVC, 24" deep with 2000 psi concrete encasement, no dye (PVC Schedule 80 below auto traffic areas)

DRAFT

2.02 CONDUIT

A. Rigid Steel Conduit: Galvanized. Comply with **<<ANSI C80.1>>**.

B. RNC: **<<NEMA TC 2>>**, Type EPC-40-PVC, **<<UL 651>>**, with matching fittings by same manufacturer as the conduit, complying with **<<NEMA TC 3>>** and **<<UL 514B>>**.

2.03 NONMETALLIC DUCTS AND DUCT ACCESSORIES

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
   1. ARNCO Corp.
   2. Electri-Flex Company.
   3. Lamson & Sessions.
   4. Spiraduct/AFC Cable Systems, Inc.

B. Underground Plastic Utilities Duct: **<<NEMA TC 2>>**, **<<UL 651>>**, **<<ASTM F512>>**, Type EPC-40, with matching fittings complying with **<<NEMA TC 3>>** by same manufacturer as the duct.

C. Duct Accessories:
   1. Duct Separators: Factory-fabricated rigid PVC interlocking spacers, sized for type and size of ducts with which used, and selected to provide minimum duct spacing indicated while supporting ducts during concreting or backfilling.
   2. Warning Tape: Underground-line warning tape specified in Divisio 26 Section "Identification for Electrical Systems."

2.04 PRECAST CONCRETE HANDHOLES AND BOXES

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
   1. Christy Concrete Products.
   2. Oldcastle Precast, Inc.
   3. Utility Concrete Products, LLC.

B. Comply with **<<ASTM C858>>** for design and manufacturing processes.

C. Description: Factory-fabricated, reinforced-concrete, monolithically poured walls and bottom unless open-bottom enclosures are indicated. Frame and cover shall form top of enclosure and shall have load rating consistent with that of handhole or box.
   1. Frame and Cover: Weatherproof cast-iron frame, with cast-iron cover with recessed cover hook eyes and tamper-resistant, captive, cover-securing bolts.
   2. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
   3. Cover Legend: Molded lettering, As indicated for each service.
   4. Configuration: Units shall be designed for flush burial and have open bottom unless otherwise indicated.
   5. Extensions and Slabs: Designed to mate with bottom of enclosure. Same material as enclosure.
      a. Extension shall provide increased depth of 12 inches **<< 12 inches>>**.
      b. Slab: Same dimensions as bottom of enclosure, and arranged to provide closure.
   6. Joint Sealant: Asphaltic-butyl material with adhesion, cohesion, flexibility, and durability properties necessary to withstand maximum hydrostatic pressures at the installation location with the ground-water level at grade.

DRAFT

7. Windows: Precast openings in walls, arranged to match dimensions and elevations of approaching ducts and duct banks, plus an additional 12 inches vertically and horizontally to accommodate alignment variations.
    a. Windows shall be located no less than 6 inches from interior surfaces of walls, floors, or frames and covers of handholes, but close enough to corners to facilitate racking of cables on walls.
    b. Window opening shall have cast-in-place, welded-wire fabric reinforcement for field cutting and bending to tie in to concrete envelopes of duct banks.
    c. Window openings shall be framed with at least two additional No. 3 steel reinforcing bars in concrete around each opening.
8. Duct Entrances in Handhole Walls: Cast end-bell or duct-terminating fitting in wall for each entering duct.
    a. Type and size shall match fittings to duct or conduit to be terminated.
    b. Fittings shall align with elevations of approaching ducts and be located near interior corners of handholes to facilitate racking of cable.
9. Handholes 12 inches wide by 24 inches long and larger shall have inserts for cable racks and pulling-in irons installed before concrete is poured.

PART 3 EXECUTION

3.01 PREPARATION

A. Coordinate layout and installation of ducts, manholes, handholes, and boxes with final arrangement of other utilities, site grading, and surface features as determined in the field. Notify Architect if there is a conflict between areas of excavation and existing structures or archaeological sites to remain.

B. Coordinate elevations of ducts and duct-bank entrances into manholes, handholes, and boxes with final locations and profiles of ducts and duct banks, as determined by coordination with other utilities, underground obstructions, and surface features. Revise locations and elevations as required to suit field conditions and to ensure that duct runs drain to manholes and handholes, and as approved by Architect.

C. Clear and grub vegetation to be removed, remove and stockpile topsoil for reapplication, and protect vegetation to remain according to Division 31 requirements and Civil Drawings.

3.02 UNDERGROUND DUCT APPLICATION

A. Ducts for Electrical Cables More than 600 V: RNC, NEMA Type EPC-40-PVC, in concrete-encased duct bank unless otherwise indicated.

B. Ducts for Electrical Feeders 600 V and Less: RNC, NEMA Type EPC-40-PVC, in concrete-encased duct bank unless otherwise indicated.

C. Ducts for Electrical Branch Circuits: RNC, NEMA Type EPC-40-PVC, in direct-buried duct bank unless otherwise indicated.

D. Underground Ducts Crossing Paved Paths and Roadways: RNC, NEMA Type EPC-40-PVC, encased in reinforced concrete.

3.03 UNDERGROUND ENCLOSURE APPLICATION

A. Handholes and Boxes for 600 V and Less:
    1. Units in Roadways and Other Deliberate Traffic Paths: Precast concrete. **<<AASHTO HB>>** 17, H-10 structural load rating.

DRAFT

2. Units in Driveway, Parking Lot, and Off-Roadway Locations, Subject to Occasional, Nondeliberate Loading by Heavy Vehicles: Precast concrete, **<<AASHTO HB>>** 17, H-20 structural load rating.
3. Units in Sidewalk and Similar Applications with a Safety Factor for Nondeliberate Loading by Vehicles: Precast concrete, **<<AASHTO HB>>** 17, H-10 structural load rating.
4. Units Subject to Light-Duty Pedestrian Traffic Only: Fiberglass-reinforced polyester resin, structurally tested according to **<<SCTE 77>>** with 3000-lbf vertical loading.
5. Cover design load shall not exceed the design load of the handhole or box.

3.04 EARTHWORK

A. Excavation and Backfill: Comply with Section 312000 "Earth Moving," but do not use heavy-duty, hydraulic-operated, compaction equipment.

B. Restore surface features at areas disturbed by excavation, and re-establish original grades unless otherwise indicated. Replace removed sod immediately after backfilling is completed.

C. Restore areas disturbed by trenching, storing of dirt, cable laying, and other work. Restore vegetation and include necessary topsoiling, fertilizing, liming, seeding, sodding, sprigging, and mulching. Comply with Division 32 requirements and Civil Drawings as applicable.

D. Cut and patch existing pavement in the path of underground ducts and utility structures according to the "Cutting and Patching" Article in Division 1.

3.05 DUCT INSTALLATION

A. Install ducts according to NEMA TCB 2.

B. Slope: Pitch ducts a minimum slope of 1:300 down toward manholes and handholes and away from buildings and equipment. Slope ducts from a high point in runs between two manholes, to drain in both directions.

C. Curves and Bends: Use 5-degree angle couplings for small changes in direction. Use manufactured long sweep bends with a minimum radius of 60 inches, both horizontally and vertically, at other locations unless otherwise indicated.

D. Joints: Use solvent-cemented joints in ducts and fittings and make watertight according to manufacturer's written instructions. Stagger couplings so those of adjacent ducts do not lie in same plane.

E. Installation Adjacent to High-Temperature Steam Lines: Where duct banks are installed parallel to underground steam lines, perform calculations showing the duct bank will not be subject to environmental temperatures above 104 degrees F. Where environmental temperatures are calculated to rise above 40 deg C, and anywhere the duct bank crosses above an underground steam line, install insulation blankets listed for direct burial to isolate the duct bank from the steam line.

F. Duct Entrances to Manholes and Concrete and Polymer Concrete Handholes: Use end bells, spaced approximately 10 inches o.c. for 5-inch ducts, and vary proportionately for other duct sizes.

1. Begin change from regular spacing to end-bell spacing 10 feet from the end bell without reducing duct line slope and without forming a trap in the line.
2. Direct-Buried Duct Banks: Install an expansion and deflection fitting in each conduit in the area of disturbed earth adjacent to manhole or handhole. Install an expansion fitting near the center of all straight line direct-buried duct banks with calculated expansion of more than 3/4-inch.
3. Grout end bells into structure walls from both sides to provide watertight entrances.

DRAFT

G. Building Wall Penetrations: Make a transition from underground duct to rigid steel conduit at least 10 feet outside the building wall, without reducing duct line slope away from the building, and without forming a trap in the line. Use fittings manufactured for duct-to-conduit transition. Install conduit penetrations of building walls as specified in Division 26 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."

H. Sealing: Provide temporary closure at terminations of ducts that have cables pulled. Seal spare ducts at terminations. Use sealing compound and plugs to withstand at least 15-psig hydrostatic pressure.

I. Pulling Cord: Install 100-lbf-test nylon cord in empty ducts.

J. Concrete-Encased Ducts: Support ducts on duct separators.
   1. Excavate trench bottom to provide firm and uniform support for duct bank. Prepare trench bottoms as specified in Division 31 for pipes less than 6 inches in nominal diameter.
   2. Width: Excavate trench 12 inches wider than duct bank on each side.
   3. Depth: Install top of duct bank at least 24 inches below finished grade in areas not subject to deliberate traffic, and at least 30 inches below finished grade in deliberate traffic paths for vehicles unless otherwise indicated.
   4. Support ducts on duct separators coordinated with duct size, duct spacing, and outdoor temperature.
   5. Separator Installation: Space separators close enough to prevent sagging and deforming of ducts, with not less than five spacers per 20 feet of duct. Secure separators to earth and to ducts to prevent floating during concreting. Stagger separators approximately 6 inches between tiers. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.
   6. Minimum Space between Ducts: 3 inches between ducts and exterior envelope wall, 2 inches between ducts for like services, and 4 inches between power and signal ducts.
   7. Elbows: Use manufactured duct elbows for stub-ups at poles and equipment, at building entrances through floor, and at changes of direction in duct run unless otherwise indicated. Extend concrete encasement throughout length of elbow.
   8. Forms: Use walls of trench to form side walls of duct bank where soil is self-supporting and concrete envelope can be poured without soil inclusions; otherwise, use forms.
   9. Concrete Cover: Install a minimum of 3 inches of concrete cover at top and bottom, and a minimum of 2 inches on each side of duct bank.
   10. Concreting Sequence: Pour each run of envelope between manholes or other terminations in one continuous operation.
      a. Start at one end and finish at the other, allowing for expansion and contraction of ducts as their temperature changes during and after the pour. Use expansion fittings installed according to manufacturer's written recommendations, or use other specific measures to prevent expansion-contraction damage.
      b. If more than one pour is necessary, terminate each pour in a vertical plane and install 3/4-inch reinforcing-rod dowels extending a minimum of 18 inches into concrete on both sides of joint near corners of envelope.
   11. Pouring Concrete: Comply with requirements in Division 3 Concrete specification. Place concrete carefully during pours to prevent voids under and between conduits and at exterior surface of envelope. Do not allow a heavy mass of concrete to fall directly onto ducts. Allow concrete to flow to center of bank and rise up in middle, uniformly filling all open spaces. Do not use power-driven agitating equipment unless specifically designed for duct-bank application.

K. Direct-Buried Duct Banks:

DRAFT

1. Excavate trench bottom to provide firm and uniform support for duct bank. Comply with requirements in Division 31 for preparation of trench bottoms for pipes less than 6 inches in nominal diameter.
2. Support ducts on duct separators coordinated with duct size, duct spacing, and outdoor temperature.
3. Space separators close enough to prevent sagging and deforming of ducts, with not less than five spacers per 20 feet of duct. Secure separators to earth and to ducts to prevent displacement during backfill and yet permit linear duct movement due to expansion and contraction as temperature changes. Stagger spacers approximately 6 inches between tiers.
4. Depth: Install top of ductbank at least 36 inches below finished grade unless otherwise indicated.
5. Set elevation of bottom of ductbank below frost line.
6. Install ducts with a minimum of 3 inches between ducts for like services and 6 inches between power and signal ducts.
7. Elbows: Install manufactured duct elbows for stub-ups at poles and equipment, at building entrances through floor, and at changes of direction in duct run unless otherwise indicated. Encase elbows for stub-up ducts throughout length of elbow.
8. Install manufactured rigid steel conduit elbows for stub-ups at poles and equipment, at building entrances through floor, and at changes of direction in duct run.
    a. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3 inches of concrete.
    b. For equipment mounted on outdoor concrete bases, extend steel conduit horizontally a minimum of 60 inches from edge of equipment pad or foundation. Install insulated grounding bushings on terminations at equipment.
9. After installing first tier of ducts, backfill and compact. Start at tie-in point and work toward end of duct run, leaving ducts at end of run free to move with expansion and contraction as temperature changes during this process. Repeat procedure after placing each tier. After placing last tier, hand place backfill to 4 inches over ducts and hand tamp. Firmly tamp backfill around ducts to provide maximum supporting strength. Use hand tamper only. After placing controlled backfill over final tier, make final duct connections at end of run and complete backfilling with normal compaction. Comply with requirements in Division 31 for installation of backfill materials.
    a. Place minimum 3 inches of sand as a bed for duct bank. Place sand to a minimum of 6 inches above top level of duct bank.
    b. Place minimum 6 inches of engineered fill above concrete encasement of duct bank.

L. Warning Tape: Bury warning tape approximately 12 inches above all concrete-encased ducts and duct banks. Align tape parallel to and within **<< 3 inches>>** of centerline of duct bank. Provide an additional warning tape for each 12-inch increment of duct-bank width over a nominal **<< 18 inches>>**. Space additional tapes 12 inches apart, horizontally.

3.06 INSTALLATION OF CONCRETE MANHOLES, HANDHOLES, AND BOXES

A. Cast-in-Place Manhole Installation:
    1. Finish interior surfaces with a smooth-troweled finish.
    2. Windows for Future Duct Connections: Form and pour concrete knockout panels 1-1/2 to 2 inches thick, arranged as indicated.
    3. Comply with requirements in Division 3 concrete section for cast-in-place concrete, formwork, and reinforcement.

B. Precast Concrete Handhole and Manhole Installation:

DRAFT

1. Comply with **<<ASTM C891>>** unless otherwise indicated.
2. Install units level and plumb and with orientation and depth coordinated with connecting ducts, to minimize bends and deflections required for proper entrances.
3. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1-inch sieve to No. 4 sieve and compacted to same density as adjacent undisturbed earth.

C. Elevations:
1. Manhole Roof: Install with rooftop at least 15 inches below finished grade.
2. Manhole Frame: In paved areas and trafficways, set frames flush with finished grade. Set other manhole frames 1 inch above finished grade.
3. Install handholes with bottom below frost line, below grade.
4. Handhole Covers: In paved areas and trafficways, set surface flush with finished grade. Set covers of other handholes 1 inch above finished grade.
5. Where indicated, cast handhole cover frame integrally with handhole structure.

D. Manhole Access: Circular opening in manhole roof; sized to match cover size.
1. Manholes with Fixed Ladders: Offset access opening from manhole centerlines to align with ladder.
2. Install chimney, constructed of precast concrete collars and rings, to support cast-iron frame to connect cover with manhole roof opening. Provide moisture-tight masonry joints and waterproof grouting for frame to chimney.

E. Waterproofing: Apply waterproofing to exterior surfaces of manholes and handholes after concrete has cured at least three days. After ducts have been connected and grouted, and before backfilling, waterproof joints and connections, and touch up abrasions and scars. Waterproof exterior of manhole chimneys after mortar has cured at least three days.

F. Dampproofing: Apply dampproofing to exterior surfaces of manholes and handholes after concrete has cured at least three days. Refer to Division 7 for Bituminous Dampproofing. After ducts are connected and grouted, and before backfilling, dampproof joints and connections, and touch up abrasions and scars. Dampproof exterior of manhole chimneys after mortar has cured at least three days.

G. Hardware: Install removable hardware, including pulling eyes, cable stanchions, and cable arms, and insulators, as required for installation and support of cables and conductors and as indicated.

H. Fixed Manhole Ladders: Arrange to provide for safe entry with maximum clearance from cables and other items in manholes.

I. Field-Installed Bolting Anchors in Manholes and Concrete Handholes: Do not drill deeper than 3-7/8 inches for manholes and 2 inches for handholes, for anchor bolts installed in the field. Use a minimum of two anchors for each cable stanchion.

3.07 INSTALLATION OF HANDHOLES AND BOXES OTHER THAN PRECAST CONCRETE

A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting ducts, to minimize bends and deflections required for proper entrances. Use box extension if required to match depths of ducts, and seal joint between box and extension as recommended by manufacturer.

B. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1/2-inch sieve to No. 4 sieve and compacted to same density as adjacent undisturbed earth.

DRAFT

C. Elevation: In paved areas and trafficways, set cover flush with finished grade. Set covers of other handholes 1 inch above finished grade.

D. Install handholes and boxes with bottom below frost line, below grade.

E. Field cut openings for ducts and conduits according to enclosure manufacturer's written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.

F. For enclosures installed in asphalt paving and subject to occasional, nondeliberate, heavy-vehicle loading, form and pour a concrete ring encircling, and in contact with, enclosure and with top surface screeded to top of box cover frame. Bottom of ring shall rest on compacted earth.
   1. Concrete: 3000 psi, 28-day strength, complying with Division 3 concrete specification, with a troweled finish.
   2. Dimensions: 10 inches wide by 12 inches deep.

3.08 GROUNDING

A. Ground underground ducts and utility structures according to Division 26 "Grounding and Bonding for Electrical Systems."

3.09 FIELD QUALITY CONTROL

A. Perform the following tests and inspections and prepare test reports:
   1. Demonstrate capability and compliance with requirements on completion of installation of underground ducts and utility structures.
   2. Pull solid aluminum or wood test mandrel through duct to prove joint integrity and adequate bend radii, and test for out-of-round duct. Provide a minimum 6-inch-long mandrel equal to 80 percent fill of duct. If obstructions are indicated, remove obstructions and retest.
   3. Test manhole and handhole grounding to ensure electrical continuity of grounding and bonding connections. Measure and report ground resistance as specified in Division 26 "Grounding and Bonding for Electrical Systems."

B. Correct deficiencies and retest as specified above to demonstrate compliance.

3.10 CLEANING

A. Pull leather-washer-type duct cleaner, with graduated washer sizes, through full length of ducts. Follow with rubber duct swab for final cleaning and to assist in spreading lubricant throughout ducts.

B. Clean internal surfaces of manholes, including sump. Remove foreign material.

END OF SECTION 260543

DRAFT

SECTION 260553
IDENTIFICATION FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

A. Electrical identification materials and devices required to comply with ANSI, NFPA, and OSHA standards.

B. Identification of electrical equipment, raceways, boxes, conductors, and other related electrical system components.

1.02 SECTION INCLUDES

A. Identification of power conductors and control cables.

B. Identification of equipment and instructions.

C. Miscellaneous identification products.

1.03 RELATED REQUIREMENTS

A. Sections in Divisions 26, 27, and 28.

1.04 REFERENCE STANDARDS

A. ANSI Z535.2 - American National Standard for Environmental and Facility Safety Signs.

B. ANSI Z535.4 - American National Standard for Product Safety Signs and Labels.

C. NFPA 70 - National Electrical Code.

D. NFPA 70E - Standard for Electrical Safety in the Workplace.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Verify final designations for equipment, systems, and components to be identified prior to fabrication of identification products.

B. Sequencing:

1. Do not conceal items to be identified, in locations such as above suspended ceilings, until identification products have been installed.
2. Do not install identification products until final surface finishes and painting are complete.

1.06 SUBMITTALS

A. Product Data: For each type of electrical identification product.

1.07 QUALITY ASSURANCE

A. Comply with requirements of **<<NFPA 70>>**.

B. Comply with ANSI A13.1 and IEEE C2.

C. Comply with OSHA standards.

D. Comply with ANSI Z535.4 for safety signs and labels.

DRAFT

1.08 FIELD CONDITIONS

A. Do not install adhesive products when ambient temperature is lower than recommended by manufacturer.

1.09 COORDINATION

A. Coordinate identification names, abbreviations, colors, and other features with requirements in other sections requiring identification applications, drawings, shop drawings, manufacturer's wiring diagrams, and the operation and maintenance manual; and with those required by codes, standards, and safety regulations. Use consisten designations throughout Project.

B. Coordinate installation of identification materials and devices with completion of covering and painting surfaces where devices are to be applied.

C. Coordinate installation of identification materials and devices with location of access panels and doors.

D. Install identifying materials and devices before installing acoustical ceilings and similar concealment.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Subject to compliance with requirements, provide products by one of the following manufacturers, or approved equal:

1. Brady USA, Inc.
2. Carlton Industries
3. Graphic Products, Inc.
4. Ideal Industries
5. Panduit Corporation
6. Presco
7. Seton Identification Products
8. Thomas and Betts Company
9. Utility Safeguard

DRAFT

2.02 GENERAL PRODUCT REQUIREMENTS

A. Except where otherwise indicated, provide manufacturer's standard identification products of category and type suitable for each application. Where more than one identification method is specified for an application, the installer shall select and utilize each material in a consistent manner.

2.03 CONDUCTOR AND CABLING IDENTIFICATION

A. Adhesive labels: Preprinted, flexible, self-adhesive vinyl with legend overlaminated with a clear weather and chemical resistant coating and matching wraparound adhesive tape for securing ends of legend label.

B. Color-coded, adhesive tape: Self-adhesive, vinyl tape, in appropriate colors for system voltage and phase.

C. Marker tapes: Vinyl or vinyl-cloth, self-adhesive, wraparound type with preprinted numbers and letters.

2.04 EQUIPMENT IDENTIFICATION

A. Engraved plastic nameplates: Laminated plastic, engraved, white letters on black background, excepter where other schemes are noted or specified:
   1. Size: Minimum 0.75-inch by 2.5-inches.
   2. Letter size: Minimum height of 0.375-inch.
   3. Mechanically fastened, except adhesive mounted where necessary due to substrate.
      a. Mechanical fastener: Punched or drilled, vandalproof stainless steel or brass screws or rivets.

B. Baked-enamel signs: Preprinted, aluminum signs, punched or drilled for fasteners with corner grommets; with colors, legend, and size required for application.

C. Exterior, metal-backed signs: Weather-resistant, nonfading, preprinted, cellulose-acetate butyrate (CAB) signs with galvanized steel backing; punched or drilled for fasteners with corner grommets; with colors, legend, and sized required for application.

D. Adhesive film label: Machine-printed, black letters on white background, through thermal transfer or equivalent process, with clear weatherproof and UV-resistant covering. Minimum letter size height of 0.375-inch.

2.05 MISCELLANEOUS IDENTIFICATION PRODUCTS

A. Underground warning tape: Permanent, bright-colored, continuous-printed, vinyl tape for use with underground cables, conduits, and ductbanks. Comply with ANSI Z535.
   1. Not less than 6-inches wide by 4 mils thick.
   2. Tape Material:
      a. Made of metal detectable polyester or vinyl.
      b. Compounded for permanent direct-burial service. Tape material and ink shall be chemically inert, and not subject to degrading when exposed to destructive substances commonly found in soils.

B. Printed legend with black lettering, indicating type of underground line.
   1. Provide inscriptions for power cabling with red-colored tape: Example - "CAUTION - BURIED ELECTRIC LINE BELOW".
   2. Provide inscriptions for low-voltage system cabling with orange-colored tape: Example - "CAUTION - TELECOMMUNICATIONS LINE BELOW".

C. Wiring device tape labels:
   1. Adhesive film label: Machine-printed, black letters on clear background, through thermal transfer or equivalent process. Minimum letter size height of 0.25-inch.

D. Labeling for electrical devices and components suck as receptcles, switches, control device stations, manual motor starters, network and phone jacks, junction and pull boxes, etc.

E. Warning labels and signs:
   1. Self-adhesive warning labels: Factory-printed, multicolor, pressure-sensitive adhesive labels, configures for display on front cover, door, or other access to equipment unless otherwise noted.
   2. Baked-enamel warning signs: Preprinted, aluminum signs, punched or drilled for fasteners with corner grommets; with colors, legend, and size required for application.
   3. Fasteners: Self-tapping, stainless-steel screws or, stainless-steel machine screws with nuts, flat and lock washers.

F. Cable ties: Fungus-inert, self-extinguishing, one-piece, self-lock, color-coded, nylon cable ties suitable for application (general purpose, UV-stablized outdoor, or plenum rated).

DRAFT

G. Paint: Formulated for the type of surface, location, and intended use.

H. Stencling: Nonfading, waterproof, ink or paint. Black or color-coded.

I. Adhesive: Heavy-duty, thermo-resistant, industrial grade adhesive, for adhesion to any surface without identification curling, peeling, or falling off.

PART 3 EXECUTION

3.01 PREPARATION

A. Clean surfaces to receive adhesive products according to manufacturer's instructions.

3.02 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Verify identity of each item before installing identification products.

C. Location: Install identification products at locations for most conveient viewing without interference with operation and maintenance of equipment.

1. For finished public spaces, coordinated identification product mounting locations with Architect.

D. Apply identification products to surfaces after equipment finish work has been completed.

E. Attache signs and plastic labels that are not self-adhesive type with mechanical fasteners appropriate to the location and substrate.

F. System identification color-coding bands for cables: Each color-coding band shall completely encircle cable.

G. Underground-line warning tape: During backfilling of trenches, install continuous underground-line warning tape directly above line at 6 to 8 inches below finished grade. Use multiple tapes where width of multiple lines installed in a common trench or concrete envelope exceeds 16-inches overall.

H. Painted identification: Comply with requirements of Division 09 for surface preparation and paint application.

I. Install identification products centered, level, and parallel with lines of item being identified.

J. Install self-adhesive labels and markers to achieve maximum adhesion, with no bubbles or wrinkles and edges properly sealed.

3.03 APPLICATION

A. Miscellaneous:

1. Access doors and panels: Apply engraved nameplate labels at access doors identifying concealed electrical item. Do not locate labels in finished, public spaces.

B. Junction and pull boxes:

1. Label each junction box and pull box, identifying circuit designation or type of system.
   a. Exposed boxes: Place label on coverplate, externally visible.
   b. Concealed boxes: Place label or tag on inside of cover of box.
   c. Junction boxes concealed above suspended ceilings or exposed in non-occupied spaces may be marked with permanent ink marker in lieu of printed labels.
2. Fire alarm system boxes shall have red finish. Boxes shall be prefinished prior to installation.

C. Wiring and cabling identification:

DRAFT

1. Power circuit conductor identification, 600 V or less: Apply color-coded identification for cables, feeders, and power circuit conductors exposed in accessible vaults, junction and pull boxes, utility structures, and equipment enclosures. Apply color-coding schemes as indicated in below throughout the building's network of feeders and circuits, unless otherwise required by the authority having jurisdiction.
    a. Colors on conductors No. 10 and smaller, or No. 6 and smaller for grounded and grounding conductors: Solid colored insullation.
    b. Colors on conductors No. 8 and larger, No. 4 and larger for grounded and grounding conductors: Apply colored tape wrapped a minimum of 6 inches on either end of conductor and in boxes where splices or taps are made.
    c. Conductors used solely for grounding purposes shall be green, if insulated.
    d. Where multi-conductor cables are used, use same color coding system for identification of wiring in Section 260519.
2. Conductors for future use: Attach tags with circuit designations for conductors to be extended for future use.
3. Control and low-voltage system wiring shall be coded with colors and markings different from those used to designate phase wires.

D. Wiring device labels: For wiring devices such as receptacles, devices installed in surface raceway assemblies, and other wiring devices operating at or greater than 120V.
1. Apply adhesive film labels on inside of wiring device identifying circuit designation serving device.

E. Equipment identification: Install unique designation label consistent with contract documents and shop drawings.
1. Labeling instructions:
    a. Engraved plastic laminate nameplates, unless otherwise indicated.
    b. Unless otherwise required, provide a single line of text with 0.5-inch high lettering on 1.5-inch high label. Where two or more liens are required, use single label with increased height.
    c. For multi-section or multi-compartment equipment, apply labels identifying each compartment or section.
    d. For fusible equipment, identify fuse type and size on the front cover.
    e. For enclosed circuit breaker equipment, identify device trip rating where rating is not visible.
    f. Where equipment has more than one source of power (i.e., transfer switch, separate control power soruce), the location and circuit designation of each power source shall be clearly identified at the equipment location.
2. Apply nameplates and labels to equipment according to the below identification schemes:
    a. Identify equipment designation; voltage rating; phase and number of wires; and designatino and location of load served. Apply products to the following equipment:
        1) Panelboards
        2) Switchboards
        3) Dimming system equipment
        4) Lighting control system equipment
    b. Identify equipment designation; primary and secondary voltage ratings; phase and number of wires; circuit designation and location of primary source; and designation and location of load served. Apply products to the following equipment:
        1) Disconnect switches

DRAFT

2) Enclosed circuit breakers
3) Contactors
4) Motor starters and combination motor starter-disconnect switches
5) Variable frequency drives
6) Transformers

c. Identify equipment designation; voltage rating; phase and number of wires; and capacity rating. Apply products to the following equipment:
1) Generator: Capacity rating kilo-watts (kW).
2) Transfer switches: Capcity rating in amperes; identify the location and circuit designation of each power source at the equipment location.

d. Identify equipment designation; and circuit designation and location of primary source. Apply products to the following equipment:
1) Monitoring and control equipment
2) Control stations
3) Fire alarm control panels and auxiliary equipment

3. Nameplates shall incorporate white lettering on colored background based on the following color-coding scheme:
a. Normal Power System: Black background.
b. Emergency Power System (Life-Safety Branch): Red background.
c. Emergency Power System (Equipment Branch): Blue background.

F. Warning and caution labels and signs:
1. Apply warning and caution lables on equipment in accordance with NFPA 70 and 70E, ANSI, and OSHA requirements, inculding arc-flash hazard warning lables and special clearance requirements.
2. Apply warning and caution labels and signs at locations where safe operation and maintenance of electrical system equipment is of concern.
3. Apply warning signs on electrical room doors in accordance with NFPA 70 and 70E, ANSI , and OSHA requirements. Where doors are located in finished, public areas, locate sign on the inside of the door. Coordinate mounting requirements with door type.

G. Service-entrance equipment: Provide field marking of service entrance equipment maximum available fault current values in accordance with NFPA 70 requirements.

H. Underground Warning Tape: Apply underground warnign tabpe above underground ductbanks, conduit, or direct-buried cable.

3.04 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Replace self-adhesive labels and markers that exhibit bubbles, wrinkles, curling or other signs of improper adhesion.

C. Coordinate names, abbreviations, colors, and other designations with construction documents, submittals, and applicable code and standards requirements. Utilize consistent designations and identification techniques throughout projects.

D. Install identification products at locations that are clearly visible at normal viewing angles and without interference with operation and maintenance of the equipment.

DRAFT

E. Install identification products in a neat and clean, workmanship-like manner where products are securely attached and orientated parallel to equipment edges.

END OF SECTION 260553

DRAFT

SECTION 260573
POWER SYSTEM STUDIES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Electrical system fault-current and protective device study:
   1. Fault-current analysis.
   2. Coordination study and device settings.
   3. Arc flash hazard analysis and shock risk assessment.

1.02 RELATED REQUIREMENTS

A. Section **<< 260553 - Identification for Electrical Systems>>**: Additional requirements for arc flash hazard warning labels.

B. Section **<< 262413 - Switchboards>>**.

C. Section **<< 262416 - Panelboards>>**.

1.03 REFERENCE STANDARDS

A. ANSI Z535.4 - American National Standard for Product Safety Signs and Labels.

B. IEEE 141 - IEEE Recommended Practice for Electric Power Distribution for Industrial Plants.

C. IEEE 242 - IEEE Recommended Practice for Protection and Coordination of Industrial and Commercial Power Systems.

D. IEEE 399 - IEEE Recommended Practice for Industrial and Commercial Power Systems Analysis.

E. IEEE 551 - IEEE Recommended Practice for Calculating Short-Circuit Currents in Industrial and Commercial Power Systems.

F. IEEE 1584 - IEEE Guide for Performing Arc-Flash Hazard Calculations.

G. NEMA MG 00001 - Motors and Generators.

H. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems.

I. NFPA 70 - National Electrical Code.

J. NFPA 70E - Standard for Electrical Safety in the Workplace.

K. IEEE 241 - IEEE Recommended Practice for Electric Power Systems in Commercial Buildings.

L. IEEE 1015 - IEEE Recommended Practice for Apply Low-Voltage Circuit Breakers Used in Industrical and Commercial Power Systems.

M. OSHA 29 Code of Federal Regulations (CFR) Part 1910, Subpart S.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate the work to provide equipment and associated protective devices complying with criteria for selection and adjustment, as determined by studies to be performed.
   2. Notify **<<Architect>>** of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Sequencing:

DRAFT

1. Submit study reports prior to or concurrent with product submittals.
2. Do not order equipment until matching study reports and product submittals have both been approved by **<<Architect>>**.

1.05 SUBMITTALS

A. Product data: For computer software to be used to perform studies.

B. Produt certificates: For power system study computer software programs, certifying compliance with IEEE 399.

C. Qualifications:
   1. Submit evidence indicating individual and organization compliance with requirements indicated in "Quality Assurance" below.

D. Delegated Design Report: Stamped or sealed and signed by study preparer.

E. Preliminary electrical system study: Submit for review before distribution equipment shop drawings have been submitted, and before equipment order has been released to manufacturer.
   1. If formal completion of the study may delay the project schedule, Architect/Engineer may approve use of the preliminary draft for ordering equipment.
   2. If approved for use in ordering equipment, preliminary draft shall include sufficient study data to ensure that the selection of device ratings and characteristics will be satisfactory.
   3. Use of the preliminary study to order equipment shall be the full responsibility of the contractor. Any changes made to the electrical distribution system resulting from the review of the final electrical system study shall be incorporated at no additional cost to the owner and shall be the sole responsibility of the general contractor.

F. Final electrical system study:
   1. Submit final report for review and record.
   2. Incorporate changes resulting from deficiencies and corrections of preliminar

G. Reports:
   1. Electrical system study report: Submit reports required above including the following items:
      a. General report information: Scope, definitions, descriptions, assumptions, and other information necessary to properly interpret results of the report.
      b. Tabulated summary comparing protective device ratings and calculated available fault-current levels.
      c. Tabulated summary of protective device settings including circuit braker, fuse and relay
      d. Fault-current analysis calculations.
      e. Selective coordination study overlay, plots of device time-current curves and relationship to other distribution system components.
      f. Arc flash hazard calculations including details of the incident energy and flash protection boundary calculations.
      g. Tabulated summary of values associated with load flow study.
      h. Tabulated summary of values associated with voltage drop analysis.
      i. Recommendations for system improvements.
      j. System one-line diagram.
      k. Input and output data used for each component and for study calculations.
   2. Submit final reports as electronic files in portable document format (.pdf) to Owner.

DRAFT

a. Study shall reflect as-built conditions.
b. Include computer software files used to prepare studies with file name(s) cross-referenced to specific pieces of equipment and systems.

1.06 POWER SYSTEM STUDIES

A. Scope of Studies:
1. Except where study descriptions below indicate exclusions, analyze system at each bus **<< from primary protective devices of utility source down to each piece of equipment involved; or _____>>**, including parts of system affecting calculations being performed (e.g. fault current contribution from motors).
2. Include in analysis alternate sources and operating modes (including known future configurations) to determine worst case conditions.

B. General Study Requirements:
1. Comply with **<<NFPA 70>>**.
2. Perform studies utilizing computer software complying with specified requirements; manual calculations are not permitted.

C. Data Collection:
1. Collect and compile information on project-specific characteristics of actual installed equipment, protective devices, feeders, etc. as necessary to develop single-line diagram of electrical distribution system and associated input data for use in system modeling.
a. Utility Source Data: Include primary voltage, maximum and minimum three-phase and line-to-ground fault currents, impedance, X/R ratio, and primary protective device information.
1) Obtain up-to-date information from **<< Utility Company; Owner; or _____>>**.
b. Generators: Include manufacturer/model, kW and voltage ratings, and impedance.
c. Motors: Include manufacturer/model, type (e.g. induction, synchronous), horsepower rating, voltage rating, full load amps, and locked rotor current or **<<NEMA MG 00001>>** code letter designation.
d. Transformers: Include primary and secondary voltage ratings, kVA rating, winding configuration, percent impedance, and X/R ratio.
e. Protective Devices:
1) Circuit Breakers: Include manufacturer/model, type (e.g. thermal magnetic, electronic trip), frame size, trip rating, voltage rating, interrupting rating, available field-adjustable trip response settings, and features (e.g. zone selective interlocking).
2) Fuses: Include manufacturer/model, type/class (e.g. Class J), size/rating, and speed (e.g. time delay, fast acting).
f. Protective Relays: Include manufacturer/model, type, settings, current/potential transformer ratio, and associated protective device.
g. Conductors: Include feeder size, material (e.g. copper, aluminum), insulation type, voltage rating, number per phase, raceway type, and actual length.

D. Short-Circuit Study:
1. Comply with **<<IEEE 551>>** and applicable portions of **<<IEEE 141>>**, **<<IEEE 242>>**, and **<<IEEE 399>>**.
2. For purposes of determining equipment short circuit current ratings, consider conditions that may result in maximum available fault current, including but not limited to:

DRAFT

a. Maximum utility fault currents.
b. Maximum motor contribution.
c. Known operating modes (e.g. utility as source, generator as source, utility/generator in parallel, bus tie breaker open/close positions).

3. For each bus location, calculate the maximum available three-phase bolted symmetrical and asymmetrical fault currents. For grounded systems, also calculate the maximum available line-to-ground bolted fault currents.

E. Protective Device Coordination Study:
1. Comply with applicable portions of **<<IEEE 242>>** and **<<IEEE 399>>**.
2. Analyze alternate scenarios considering known operating modes (e.g. utility as source, generator as source, utility/generator in parallel, bus tie breaker open/close positions).
3. Analyze protective devices and associated settings for suitable margins between time-current curves to provide adequate protection for equipment and conductors while achieving **<< full selective coordination.; best possible coordination.; selective coordination for fault durations extending beyond 0.1 seconds.; selective coordination for fault durations extending beyond the following thresholds:; or _____ .>>**

F. Arc Flash and Shock Risk Assessment:
1. Comply with **<<NFPA 70E>>**.
2. Perform incident energy and arc flash boundary calculations in accordance with **<<IEEE 1584>>** (as referenced in **<<NFPA 70E>>** Annex D), where applicable.
3. For equipment with main devices mounted in separate compartmentalized sections, perform calculations on both the line and load side of the main device.
4. Analyze alternate scenarios considering conditions that may result in maximum incident energy, including but not limited to:
a. Maximum and minimum utility fault currents.
b. Maximum and minimum motor contribution.
c. Known operating modes (e.g. utility as source, generator as source, utility/generator in parallel, bus tie breaker open/close positions).

G. Study Reports:
1. General Requirements:
a. Identify date of study and study preparer.
b. Identify study methodology and software product(s) used.
c. Identify scope of studies, assumptions made, implications of possible alternate scenarios, and any exclusions from studies.
d. Identify base used for per unit values.
e. Include single-line diagram and associated input data used for studies; identify buses on single-line diagram as referenced in reports, and indicate bus voltage.
f. Include conclusions and recommendations.
2. Short-Circuit Study:
a. For each scenario, identify at each bus location:
1) Calculated maximum available symmetrical and asymmetrical fault currents (both three-phase and line-to-ground where applicable).
2) Fault point X/R ratio.
3) Associated equipment short circuit current ratings.

DRAFT

b. Identify locations where the available fault current exceeds the equipment short circuit current rating, along with recommendations.

3. Protective Device Coordination Study:
   a. For each scenario, include time-current coordination curves plotted on log-log scale graphs.
   b. For each graph include (where applicable):
      1) Partial single-line diagram identifying the portion of the system illustrated.
      2) Protective Devices: Time-current curves with applicable tolerance bands for each protective device in series back to the source, plotted up to the maximum available fault current at the associated bus.
      3) Conductors: Damage curves.
      4) Transformers: Inrush points and damage curves.
      5) Generators: Full load current, overload curves, decrement curves, and short circuit withstand points.
      6) Motors: Full load current, starting curves, and damage curves.
      7) Capacitors: Full load current and damage curves.
   c. For each protective device, identify fixed and adjustable characteristics with available ranges and recommended settings.
      1) Circuit Breakers: Include long time pickup and delay, short time pickup and delay, and instantaneous pickup.
      2) Include ground fault pickup and delay.
      3) Include fuse ratings.
      4) Protective Relays: Include current/potential transformer ratios, tap, time dial, and instantaneous pickup.
   d. Identify cases where either full selective coordination or adequate protection is not achieved, along with recommendations.
4. Arc Flash and Shock Risk Assessment:
   a. For the worst case for each scenario, identify at each bus location:
      1) Calculated incident energy and associated working distance.
      2) Calculated arc flash boundary.
      3) Bolted fault current.
      4) Arcing fault current.
      5) Clearing time.
      6) Arc gap distance.
   b. For purposes of producing arc flash hazard warning labels, summarize the maximum incident energy and associated data reflecting the worst case condition of all scenarios at each bus location.

1.07 QUALITY ASSURANCE

A. Electrical system study shall be performed by one or more independent qualified organizations, and under the supervision and approval of a Registered Professional Engineer skill in peforming and interpreting the power system studies.

B. Study Preparer Qualifications: Professional electrical engineer licensed in the State in which the Project is located and with minimum five years experience in preparation of power system studies of similar type and complexity using specified computer software.
   1. Study preparer may be employed by manufacturer of electrical distribution equipment.

DRAFT

C. Computer Software for Study Preparation: Use the latest edition of commercially available software utilizing specified methodologies.
   1. Products:
      a. EasyPower LLC: www.easypower.com/#sle.
      b. ETAP/Operation Technology, Inc: www.etap.com/#sle.
      c. Power Analytics Corporation: www.poweranalytics.com/#sle.
      d. SKM Systems Analysis, Inc: www.skm.com/#sle.
      e. EDSA Micro Corporation.

PART 2 PRODUCTS

2.01 COMPUTER SOFTWARE REQUIREMENTS

A. Comply with IEEE 399.

B. Computer software program shall be capable of performing fault-current analysis of project electrical distribution system.

C. Computer software program shall be capable of plotting and diagramming time-current characteristic curves as part of its output. Computer software program shall report device settings and ratings of all overcurrent protective devices and shall demonstrate selective coordination by computer-generated, time-current coordination plots.

D. Computer software program shall be capable of performing arc fault hazard analysis using equations as established by IEEE 1584 and requirements presented in NFPA 70E, Annex D.

E. Software shall include comprehensive equipment library of manufacturer-based and IEEE/ANSI based equipment to accurately model the electrical distribution system.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine project submittals for compliance with electrical distribution system requirements outlined in the contract documents.

3.02 SYSTEM DATA COLLECTION

A. The Contractor shall furnish all data required to perform the power system studies. The Engineer peforming the power system studies shall furnish the Contractor with a listing of required data immediately after award of the contract. The Contractor shall expedite collection of the data to ensure completion of the studies as required for final approval of the distribution equipment shop drawings and/or prior to the release of the equipment for manufacturing.

B. If applicable, include fault contribution of existing motors and equipment in the study. The Contractor shall obtain required existing equipment data, if necessary, to satisfy the study requirements.

C. The Engineer peforming the studies shall gather and tabulate input data necessary to support each study including the following:
   1. Product data for each component of the electrical distribution system.
   2. Utility available fault contribution and impedance values.
   3. Drawings, one-line, and riser diagrams showing system configuration, equipment designations, feeder lengths, and other applicable system characteristics.

DRAFT

3.03 SYSTEM FAULT CURRENT ANALYSIS

A. Calculate the maximum available short-circuit momentary current and interrupting duties in amperes rms symmetrical for electricla power distribution system components. The calculatino shall be peformed for current immediately after initiation and for a three-phase bolted fault at each of the following locations:
   1. Electric utility's support termination.
   2. Switchboards.
   3. Distribution panelboards.
   4. Branch circuit panelboards.
   5. Generator output terminals.
   6. Automatic transfer switch terminals.
   7. Variable frequency drives serving motors equal to and greater than 25 hores

B. Study the project's electrical distribution system from normal and alternate power sources throuhout electrical distribution system.

C. For grounded systems, provide line-to-ground fault current values for areas as defined above for the three-phase, bolted fault, short-circuit study.

D. Calculations to verify interrupting ratings of overcurent protective devices shall comply with IEEE 141, IEEE 241 and IEEE 242.

E. Study Report:
   1. Input data: Gather and provide the following input data, in tabular or graphic form, used to perform fault calculations and other studies in this section.
      a. Utility three-phase and line-to-ground available contribution with associated X/R ratios.
      b. Short-circuit reactance of rotating machines with associated X/R ratios.
      c. Cable type, construction, size, quantity per phase, length, impedance and conduit type.
      d. Transformer primary & secondary voltages, winding configurations, kVA rating, impedance, and X/R ratio.
      e. Circuit breaker types and sizes.
   2. Methods and assumptions: Indicate calculation methods and assumptions that may have been used to peform analysis.
   3. Results: Show calculated X/R ratios and equipment interrupting rating (1/2-cycle) fault currents on electrical distribution system diagram. Provide the following in a table format:
      a. Source fault impedance and generator contributions.
      b. X/R ratios.
      c. Asymmetry factors.
      d. Motor contributions
      e. Short circuit KVA.
      f. Symmetrical and asymmetrical fault currents.
   4. Equipment evaluation and conclusions:
      a. Verify interrupting ratings and withstand ratings are equal to or higher than calculated fault current levels.
      b. Verify adequacy of phase conductors at maximum three-phase, botled fault currents.

DRAFT

5. Recommendations: List recommendations for equipment with inadequate ratings. Notify Architect, in writing of existing equipment improperly rated for the calculated available fault current of the system.

3.04 SYSTEM COORDINATION STUDY

A. Perform coordination study using approved computer software program. Prepare a written and graphical report using results of fault current study and proposed protective devices and system distribution components. Comply with IEEE 399.

B. Coordination curves: Prepared to determine settings of overcurrent protective devices to achieve selective coordination. Graphically illustrate that adequate time separation exists between devices installed in series using time-current curves plotted on log-log scale graphs.

C. Prepare separate sets of curves to demonstrate full system coordination. Include the following equipment on plotted coordination curves:
   1. Low-voltage equipment circuit breaker trip devices, including manufacturer's tolerance bands.
   2. Transformer full-load current, magnetizing inrush current, and ANSI through-fault protection curves.
   3. Conductor damage curves.
   4. Ground-fault protective devices.
   5. Signficant motor starting characteristics and motor damage points.
   6. Significant generator short-circuit decrement curve and generator damage point.
   7. Largest feeder circuit breaker for distribution panelboards.
   8. Largest feeder circuit breaker for 208-volt panelboards on secondary side of 480V-120/208V step-down transformer.

D. Recommended device settings: Prepare a tabulated summary of recommended device settings for system adjustable protective devices. Include the following information:
   1. Device tags.
   2. Phase and Ground Relays:
      a. Current transformer ratios.
      b. Current settings.
      c. Time settings.
      d. Instantaneous settings.
      e. Specialty non-overcurrent device settings.
      f. Recommendations for improved system coordination.
   3. Circuit Breakers:
      a. Sensor and plug ratings, where applicable.
      b. Adjustable pickups and time delays (long time, short time, ground).
      c. Adjustable time-current characteristic
      d. Adjustable instantaneous pickup.
      e. Recommendations for improved system coordination.
   4. Fuses:
      a. Current rating
      b. Type.

DRAFT

3.05 SYSTEM ARC FLASH HAZARD ANALYSIS

A. The arc flash hazard analysis shall be performed according to the IEEE 1584 equations that are presented in NFPA 70E, Annex D.

B. The flash protection boundary and the incident energy shall be calculated at all significant locations in the electrical distribution system (such as switchboards and panelboards) where work could be performed on energized parts.

C. The arc flash hazard analysis shall include electrical equipment locations where work such as examination, adjustment, service, or maintenacne could be performed on energized parts.

D. Safe working distances shall be based upon the calculated arc flash boundary considering incident energy of 1.2 cal/cm2.

E. When appropriate, the short circuit calculations and the clearing times of the phase ovecurrent devices will be retrieved from the short-circuit and coordination study model. Ground overcurent relays should not be take into consideration when determining the clearing time when peforming incident energy calculations.

F. The short-circuit calculations and the corresponding incident energy calculations for multiple system scenarios must be compared and the greatest incident energy must be uniquely reported for each equipment location. Calculations must be performed to represent the maximum and minimum contributions of fault current magnitude for all normal and emergency operating conditions. The minimum calculation will assume that the utility contribution is at a minimum and will assum a minimum motor contributino (all motors off).

   1. Conversely, the maximum calculation will assume a maximum contribution from the utility and will assume the maximum amount of motors to be operating. Calculations shall take into consideration the parallel operation of synchronous generators with the electric utility, where applicable.

G. The incident energy calculations must consider the accumulation of energy over time when peforming arc flash calculations on buses with multiple sources. Iterative calculations must take into account the changing current contributions, as the sources are interruped or decremented with time. Fault contribution from motors and generators shoudl be decremented as follows:

   1. Fault contribution from induction motors should not be considered beyond 3-5 cycles.
   2. Fault contribution from synchronous motors and generators should be decayed to match the actual decrement of each as closesly as possible (e.g. contributions from permanent magnet generators will typically decay from 10 per unit to 3 per unit after 10 cycles).

H. For each equipment location with a separately enclosed main device (where there is adequate separation between the line side terminals of the main protective device and the work location), calculations for incident energy and flash protection boundary shall include both the line and load side of the main breaker.

I. When performing incident energy calculations on the line side of a main breaker (as required per above), the line side and load side contributions must be included in the fault calculation.

J. Mis-coordination should be checked amongst all devices within the branch containing the immediate protective device upstream of the calculation location and the calculation should utilize the fastest device to compute the incident energy for the corresponding location.

K. Arc flash calculations shall be based on actual overcurrent protective device clearing time. Maximum clearing time will be capped at 2 seconds based on IEEE 1584. Where it is not phsyically possible to move outside of the flash protection boundary in less than 2 seconds during an arc flash event, a maximum clearing time based on the specific location shall be utilized.

DRAFT

L. Incident energy and flash protection boundary calculations:
   1. Arcing fault magnitude.
   2. Device clearing time.
   3. Duration of arc.
   4. Arc flash boundary.
   5. Working distance.
   6. Incident energy.
   7. Hazard Risk Category.
   8. Recommendations for arc flash energy reduction.

3.06 ARC FLASH HAZARD WARNING LABELS

A. Provide warning labels complying with **<<ANSI Z535.4>>** to identify arc flash hazards for each work location analyzed by the arc flash and shock risk assessment.
   1. Materials: Comply with Section **<< 260553>>**.
   2. Minimum Size: 4 by 6 inches.
   3. Legend: Provide custom legend in accordance with **<<NFPA 70E>>** and OSHA standards based on equipment-specific data as determined by arc flash and shock risk assessment.
      a. Include the text "Arc Flash and Shock Hazard, Appropriate PPE Required".
      b. Include the following information:
         1) Available incident energy and corresponding working distance.
         2) Site-specific PPE (personnel protective equipment) requirements.
         3) Nominal system voltage.
         4) Limited approach boundary.
         5) Restricted approach boundary.
         6) Equipment identification.
         7) Study preparer, report reference, and date calculations were performed.

B. Arc flash labels shall be provided in the following manner and all labels shall be based on recommended overcurrent device settings.
   1. For each 600V, 480V, and applicable 208V panelboard, one arc flash label shall be provided.
   2. For each motor control center, one arc flash label shall be provided.
   3. For each low-voltage switchboard, one arc flash label shall be provided.
   4. For each switchgear, one flash label shall be provided.
   5. For medium voltage switches, one arc flash label shall be provided.

3.07 ARC FLASH TRAINING

A. The equipment vendor shall train personnel of the potential arc flash hazards associated with working on energized equipment (minimum of 4 hours). Maintenance procedures in accordance with the requirements of NFPA 70e, shall be provided in the equipment manuals.

3.08 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Inspect and test in accordance with **<<NETA ATS>>**, except Section 4.

DRAFT

C. Adjust equipment and protective devices for compliance with studies and recommended settings at no additional cost to the owner. Field adjustments to be completed by the engineering service division of the equipment manufacturer under the Startup and Acceptance Testing contract portion.

D. Make modifications to equipment as required to accomplish conformance with short circuit and protective device coordination studies.

E. Notify **<<Architect>>** of any conflicts with or deviations from studies. Obtain direction before proceeding.

END OF SECTION 260573

DRAFT

SECTION 260923
LIGHTING CONTROL DEVICES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Occupancy sensors.

B. Time switches.

C. In-wall time switches.

D. Outdoor photo controls.

E. Lighting contactors.

1.02 RELATED REQUIREMENTS

A. Section **<< 260519 - Low-Voltage Electrical Power Conductors and Cables>>**.

B. Section **<< 260526 - Grounding and Bonding for Electrical Systems>>**.

C. Section **<< 260529 - Hangers and Supports for Electrical Systems>>**

D. Section **<< 260534 - Boxes for Electrical Systems>>**.

E. Section **<< 260553 - Identification for Electrical Systems>>**: Identification products and requirements.

F. Section **<< 260573 - Power System Studies>>**.

G. Section **<< 262726 - Wiring Devices>>**: Devices for manual control of lighting, including **<< wall switches; wall dimmers; fan speed controllers; and _____>>**.

H. Section **<< 265100 - Interior Lighting>>**.

I. Section **<< 265600 - Exterior Lighting>>**.

1.03 REFERENCE STANDARDS

A. ANSI C136.10 - American National Standard for Roadway and Area Lighting Equipment - Locking-Type Photocontrol Devices and Mating Receptacles - Physical and Electrical Interchangeability and Testing.

B. ANSI C136.24 - American National Standard for Roadway and Area Lighting Equipment - Nonlocking (Button) Type Photocontrols.

C. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

D. NEMA 410 - Performance Testing for Lighting Controls and Switching Devices with Electronic Drivers and Discharge Ballasts.

E. NEMA IA 10030 - Industrial Control and Systems: Enclosures.

F. NFPA 70 - National Electrical Code.

G. UL 773 - Plug-in, Locking Type Photocontrols for Use with Area Lighting.

H. UL 773A - Nonindustrial Photoelectric Switches for Lighting Control.

I. UL 916 - Energy Management Equipment.

J. UL 917 - Clock-Operated Switches.

DRAFT

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate placement of lighting control devices with millwork, furniture, equipment and other potential conflicts.
   2. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression system, and partition assemblies.
   3. Coordinate placement of occupancy sensors with millwork, furniture, equipment and other potential obstructions to motion detection coverage.
   4. Coordinate placement of photo sensors for daylighting controls with windows, skylights, and luminaires to achieve optimum operation. Coordinate placement with ductwork, piping, equipment, or other potential obstructions to light level measurement.
   5. Coordinate lighting control device product selections with luminaire characteristics; see Section **<< 265100>>** and lighting fixture schedule.
   6. Notify **<<Architect>>** of conflicts or deviations from Contract Documents to obtain direction prior to proceeding with work.

1.05 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>**, for submittal procedures.

B. Product Data: Include ratings, configurations, standard wiring diagrams for power/signal/control wiring, dimensions, colors, service condition requirements, and installed features.

C. Shop Drawings:
   1. Occupancy Sensors: Provide lighting plan indicating location, model number, and orientation of each occupancy sensor and associated system component.
   2. Digital Load Controllers: Provide dimensioned plan views indicating locations of system components, required clearances, and field connection locations. Include system interconnection schematic diagrams showing factory and field connections. Include manufacturer product characteristics and application instructions for wired and wireless applications, including start-up and commissioning.
   3. Daylighting Controls: Provide lighting plan indicating location, model number, and orientation of each photo sensor and associated system component.

D. Field quality control reports.

E. Operation and Maintenance Data: For each type of device, include detailed information on device programming and setup as well as emergency, operation and maintenance manuals..

F. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.
   1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
   2. Extra Locking Receptacle-Mounted Outdoor Photo Controls: **<< Five; or _____>>** percent of total quantity installed for each type, but not less than **<< two; or _____>>** of each type.
   3. Occupancy Sensors, Daylight Sensors, Wall Switch Controls, Load Control Relays: **<< one; and _____>>** percent of total quantity installed for each type but not less than **<< two; and _____>>**.

1.06 QUALITY ASSURANCE

A. Comply with **<<NFPA 70>>**.

B. Devices shall be UL listed and labeled for their intended application.

DRAFT

C. Provide services from factory certified field service engineer to perform functional testing.
   1. Qualifications for factory certified fiel service engineer:
      a. Minimum experience of two years training in the electrical field.
      b. Certified by the equipment manufacturer on the system installed.

D. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum five years documented experience.

E. Product Evaluation and Listing Organization Qualifications: Organization engaged in evaluation of products and services, including those recognized by OSHA as Nationally Recognized Testing Laboratories (NRTL), and acceptable to authorities having jurisdiction.

1.07 DELIVERY, STORAGE, AND PROTECTION

A. Store products in clean, dry space in original manufacturer's packaging in accordance with manufacturer's written instructions until ready for installation.

1.08 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Manufacturer's standard form in which manufacturer agrees to repair or replace components of lighting controls that fail in materials or workmanship or from transient voltage surges, and the Contractor agrees to provide associated electrical work to make good within the specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Failure equipment to operate, or to operate reliably.
      b. Damage of electronic components due to transient voltage surges.
   2. Warranty Period: Five years from date of Final Acceptance for material and labor.
   3. Extended Material Warranty Period Failure Due to Transient Voltage Surges: 10 years from date of Final Acceptance.

C. Provide necessary materials, laptop, programs, and service tools for training(s). The owner shall have access to TechSupport for the life of the materials.

PART 2 PRODUCTS

2.01 LIGHTING CONTROL DEVICES - GENERAL REQUIREMENTS

A. Provide products listed, classified, and labeled as suitable for purpose intended.

B. Unless specifically indicated as excluded, provide components necessary for complete operating system including, but not limited to, conduit, wiring, connectors, hardware, and accessories.

C. Products for Switching of Electronic Ballasts/Drivers: Tested and rated to be suitable for peak inrush currents specified in **<<NEMA 410>>**.

D. Open protocol systems are only to be considered. Non-proprietary systems shall not be used. An example of open protocol systems is Bacnet IP protocols.

2.02 OCCUPANCY SENSORS

A. Acceptable Manufacturers:
   1. Sensorworx
   2. Hubbell Incorporated: www.hubbell.com/#sle.
   3. Cooper Lighting Solutions

DRAFT

4. Sensor Switch Inc: www.sensorswitch.com/#sle.
5. Acuity Brands, Inc.

B. Source Limitations: Furnish products produced by single manufacturer and obtained from single supplier.

C. General Requirements:
1. Description: Factory-assembled commercial specification grade devices for indoor use capable of sensing both major motion, such as walking, and minor motion, such as small desktop level movements, according to published coverage areas, for automatic control of load indicated.
2. Sensor Technology:
a. Ultrasonic Occupancy Sensors: Designed to detect occupancy by sensing frequency shifts in emitted and reflected inaudible sound waves.
b. Passive Infrared/Ultrasonic Dual Technology Occupancy Sensors: Designed to detect occupancy using combination of both passive infrared and ultrasonic technologies.
3. Provide LED to visually indicate motion detection**<< with separate color LEDs for each sensor type in dual technology units; _____; or None - N/A>>**.
4. Dual Technology Occupancy Sensors: Field configurable turn-on and hold-on activation with settings for activation by either or both sensing technologies.
5. Turn-Off Delay: Field adjustable**<< , with time delay settings up to 30 minutes; , _____; or None - N/A>>**.
6. Sensitivity: Field adjustable.
7. Integral Photocell: Optional integral photocell for light level sensing and adjustment.
8. Where wired sensors are indicated, **<< wireless sensors are acceptable provided that all components and wiring modifications necessary for proper operation are included; wireless sensors are not acceptable without prior approval of Architect; or _____>>**.

D. Wall Switch/Dimmer Occupancy Sensors:
1. All Wall Switch/Dimmer Occupancy Sensors:
a. Description: Occupancy sensors designed for installation in standard wall box at standard wall switch mounting height with a field of view of 180 degrees**<< , integrated manual control capability,; , automatic control only (no integrated manual control capability),; , _____ ,; or None - N/A>>** integrated dimming control where indicated, and no leakage current to load in off mode.
b. Unless otherwise indicated or required to control load indicated on drawings, provide **<< line voltage units with self-contained relay; low voltage units, for use with separate compatible accessory power packs; or _____>>**.
c. Where indicated, provide two-circuit units for control of two separate lighting loads, with separate manual controls and separately programmable operation for each load.
d. Operation: **<< Field selectable to operate either as occupancy sensor (automatic on/off) or as vacancy sensor (manual-on/automatic off); Operates only as vacancy sensor (manual-on/automatic-off) in accordance with California Title 24 requirements; or _____>>**.
e. Finish: White, unless otherwise indicated.
f. Sensor unit shall be available with the following powered methods:
1) Line voltage, 120VAC or 277VAC, supplied by utility through a local circuit.

DRAFT

g. Sensor unit accommodates neutral (3-wire) and no neutral (2-wire) installation, as well as multi-way switching installation. Unit shall meet NEC 404.2 & 404.22 guidelines regarding power over ground & current leakage.

h. Ambient light override: Option of an integrated photocell for ambient light sensing. The functional mode of this photo sensor shall be initial inhibit only; i.e. if enough ambient light is sensed for a duration of five (5) minutes, unit will prevent the lights from automatically turning on. Sensor unit shall have an auto-setpoint option or a manual setpoint from 10fc to 99fc.

i. Sensor unit shall have an operating temperature from 32 degrees to 122 degrees.

j. Dimmer shall be solid state with continuous full-range even control following square law dimming curve, integral radio freqnency filtering, power failure present memory, air gap switch, and listed as complying with UL 1472; type and rating suitable for load controlled.

k. Provide field adjustable dimming present for occupied state.

l. Provide fade-to-off operation to notify occupant of impending load turn-off.

2. Passive Infrared/Ultrasonic/Acou Dual Technology Wall Switch Occupancy Sensors: Capable of detecting major motion within an area of **<< 900 square feet; or _____>>** and minor motion within an area of 300 square feet.

E. Ceiling/Wall Mounted Occupancy Sensors:

1. General Requirements:

a. Unless otherwise indicated or required to control load indicated on drawings, provide **<< low voltage units, for use with separate compatible accessory power packs; line voltage units with self-contained relay; or _____>>**.

b. Provide field selectable setting for disabling LED motion detector visual indicator.

c. Occupancy sensor to be field selectable as either manual-on/automatic-off or automatic on/off.

d. Finish: **<< White unless otherwise indicated; or _____>>**.

2. Passive Infrared/Ultrasonic/Acoustic Dual Technology Occupancy Sensors:

a. Capable of detecting minor motion within a minimum area of 900 square feet at a mounting height of **<< 8-12 feet; 9 feet; or _____>>**, with a field of view of **<< 360 degrees; 180 degrees; 360 or 180 degrees as indicated on the drawings; or _____>>** for ceiling-mounted sensors, 90 degrees minimum for wall mounted sensors.

b. Sensors shall be available with the following powered methods:

1) Low voltage, 12-24VDC, supplied by power supply or power pack.

c. Sensors shall have an optional integral photocell with three different modes of operation available. Where daylighting is indicated on drawings, provide integral photocell, adjustable from 10-100fc, to turn lights off when selected lighting level is present.

1) Daylight Harvesting (0-10V dimming to maintain the target light level).

2) ON/OFF photocell control (lights switched OFF if ambient level surpasses the threshold and back ON if level drops).

3) Inhibit only photocell control (lighting is held OFF if sufficient ambient light level is present upon initial occupancy).

d. Sensor housing shall be impact resistant plastic.

e. Sensors shall have adjustable time delay increment settings from 30 seconds to 30 minutes (default 15 minutes), that is easily accessible to the use

DRAFT

f. Sensors shall be designed to fail to the ON condition for predictable internal failure conditions.

g. Sensors shall have the ability to be wired in parallel to provide detection coverage of large areas beyond the range of a single unit. All joined sensors must time out (i.e. register unoccupied) before lights will turn OFF.

h. Sensor shall be available with an isolated low voltage relay for providing interfaces. Relay shall communicate occupancy status to BAS, HVAC system or any other system requiring contact closure style status signal. Relay logic shall be programmable.

i. Sensor unit shall have an operating temperature from 32 degrees to 122 degrees.

3. High Bay Sensors: Capable of detecting motion within a distance of **<< 50 feet; or _____>>** at a mounting height of **<< 30 feet; or _____>><< None - N/A; , with a field of view of _____ degrees; or , _____>>**.

4. Passive Infrared/Ultrasonic/Acoustic Dual Technology Long-range Occupancy Sensors: Capable of detecting motion within a distance of **<< 40 feet; 80 feet; or _____>>** at a mounting height of **<< 10 feet; or _____>><< None - N/A; , with a field of view of _____; or , _____>>** with a field of view of 45 degrees.

5. Outdoor Motion Sensors:

a. Description: Factory-assembled wet location listed device suitable for wall or ceiling/eave mounting, with integral swivel for field adjustment of coverage, capable of detecting motion for automatic control of load indicated.

b. Sensor Technology: Passive Infrared (PIR) designed to detect occupancy by sensing movement of thermal energy between zones.

c. Operation: Unless otherwise indicated, motion sensor to turn load on when motion is detected and to turn load off when no motion is detected during an adjustable turn-off delay time interval.

d. Turn-Off Delay: Field adjustable, with time delay settings available up to 15 minutes.

e. Integral Photocell: For dusk to dawn operation.

f. Coverage: Capable of detecting motion within a distance of **<< 40 feet; 50 feet; or _____>>** at a mounting height of **<< 20 feet; 8 feet; or _____>>**, with a field of view of **<< 270 degrees; or _____>>**.

2.03 AUXILIARY COMPONENTS

A. Power pack: Universal 120/277V, switched input, controlled through a high-current 20A relay. Low voltage output, less than or equal to 24VDC, for powering low voltage occupancy sensors. Enclosrue shall be plenum rated.

B. Override switch: Low-voltage switch shall operate on voltage less than or equal to 24VDC and shall have a momentary contact actuator to send a signal to the associated power pack to change the current lighting state. Color shall match switch device color specified above.

C. Provide quantity and configuration of power and slave packs with associated wiring and accessories as required to control load indicated on drawings.

D. Input Supply Voltage: **<< Dual rated for 120/277 V ac; As indicated on the drawings; 120 V ac unless otherwise indicated; 277 V ac unless otherwise indicated; or _____>>**.

2.04 DAYLIGHT SENSORS

A. General: Provide a complete and operable daylight sensor system in areas shown on the drawings.

DRAFT

B. System Components: Daylight sensor lighting control shall include, but not be limited to, all required sensors, relays, power supplies, and low-voltage or line voltage wiring.

C. Sensor Requirements:
   1. Sensors shall be self-contained, solid-state, photo-electric detectors which shall provide detection of ambient light level in a given area.
   2. Sensors shall be available with the following powered methods:
      a. Low voltage, 12-24VDC, supplied by power supply or power pack.
   3. Sensor housing shall be impact resistant plastic.
   4. Setpoint: The minimum overall light level that shall be maintained in a space by the sensor is referred to as the setpoint:
      a. Sensor shall have manually adjustable setpoint from 5fc to 100fc.
      b. Sensor shall have an auto-setpoint method which shall automatically determine setpoint in a given area based on the controlled and uncontrolled light sources.
   5. Sensor shall have the following operational modes:
      a. Daylight harvesting to low trim
      b. Daylight harvesting to OFF (requires power pack)
      c. Photocell override (ON/OFF)
      d. Initial inhibit only (Hold OFF)
   6. Sensor with daylight harvesting option restricts the manual dimming range by a wall dimmer station to a maximum level that equals the setpoint down to the low-trim and/or off position. Sensor will ignore any attempt to raise the lighting above the setpoint with any wall dimmer station.
   7. Sensor shall have an operating temperature from 32 degrees to 122 degrees.

2.05 LOW VOLTAGE WALL STATIONS

A. General: Provide low voltage wall stations as required in areas shown on Drawings. These devices are to function seamlessly with other control devices.

B. System Components: Low Voltage Wall Station shall include, but not be limited to, all required sensors, relays, power supplies, and low-voltage wiring.

C. Wall Station Requirements:
   1. Station shall be capable of switching and/or dimming the lighting load with a momentary pulse length of 250msec.
   2. Station shall have multiple colors of LED indicator light for the following:
      a. Location of switch when lighting load is Off
      b. Relay status
      c. Response to programming push button
      d. Indication of function current setting when queried
      e. Current dimming level with five (5) stacked LEDs displayed to the user (dimming station only)
   3. Station shall be capable of Multiway Switching with all connected stations indicate the same state. Manual dimming control shall be available at one (1) location.
   4. Station shall have an operating temperature from 32°F to 122°F (0°C to 50°C) standard, and down to -40°F/C with an optional conformal coating.
   5. Station shall be UL Listed, RoHS Compliant, and BAA Compliant.
   6. Full electronic and mechanical assembly of sensors shall be in the USA.
   7. Dimming Station:

DRAFT

a. Station shall have High-End and Low-End Trim settings:
   1) High End Trim enables energy saving task tuning by setting a maximum level (100%-50%) to which users are allowed to raise lights.
   2) Low-End Trim enables minimum user level of dimmer to be customized.
b. Station shall have Turn On/Turn Off Dimming Operation (when used with a load controller and an occupancy sensor):
   1) Turns On lighting to last user level or can be programmed to a pre-set level (100%, 50%, or custom).
   2) Lighting can turn Off lighting by switching Off power (by opening relay) or dimming below electronic Off Level.
   3) Lighting can also be held at low-end trim level during unoccupied/off state.
c. Station shall have adjustable Fade On and Fade Off Times;
   1) Adjustable time interval for level to ramp up to Turn On Level is 0.75 sec, 1.5 sec, 3 sec, 5 sec, or 15 sec.
   2) Adjustable time interval for level to ramp down to Off is 0.75 sec, 1.5 sec, 3 sec, 5 sec, or 15 sec.

2.06 LOAD CONTROL RELAYS

A. General: Provide a complete and operable load control relay system to be used in conjunction with occupancy sensors, daylight sensors, and wall stations in areas shown on drawings.

B. Provide quantity and configuration of power and slave packs with associated wiring and accessories as required to control load indicated on drawings.

C. System Components: Load Control Relays shall include, but not be limited to, all required sensors, wall stations, power supplies, and low-voltage or line-voltage wiring.

D. System Requirements:
   1. Load Control Relay shall have an operating voltage of 120VAC or 277VAC.
   2. Load Control Relay shall have a Class 2 Output Rating of at least 18VDC, 150mA with 80mA dedicated to powering connected devices. Voltage will be higher when a reduced low voltage load is connected.
   3. Load Control Relay shall be capable of switching the following loads:
      a. 20A @ 120VAC – General Purpose Plug Load
      b. 20A @120/277 VAC – General Purpose, Tungsten, Magnetic Ballast
      c. 16A @ 120/277 VAC – Electronic Ballast, LED Driver
   4. Load Control Relay shall have the following options to be ordered:
      a. PowerPack with Single Relay with 150mA Supply
      b. PowerPack as Secondary Relay
      c. Power Supply (No Relay) with 150mA Supply
   5. Load Control Relay shall be plenum rated.
   6. Load Control Relay housing shall be impact-resistant plastic.
   7. Load Control Relay shall be mounted inside a junction box or shall be provided with separate junction box for concealing low voltage wiring and connecting low voltage conduit.
   8. Load Control Relay shall have optional 0-10 Volt Stepped Dimming for Partial Off or Partial On Operation.
   9. Load Control Relay shall have optional Auxiliary Switch Input wires for Manual On, Hold On, or Hold Off Operation.

DRAFT

10. Load Control Relay shall have a relay status output signal to keep all connected wall station indicator LEDs operating in unison.
11. Load Control Relay shall have the following operational modes:
    a. Auto On / Auto Off (Occupancy Mode)
    b. Manual On / Auto Off (Vacancy Mode) – requires Low Voltage Wall Station(s)
    c. Override On for Logic High or Logic Low
    d. Override Off for Logic High or Logic Low
12. Load Control Relay shall have an operating temperature from 32°F to 122°F

2.07 TIME SWITCHES

A. Manufacturers:
    1. Cooper Industries, Inc.
    2. Intermatic, Inc.
    3. Leviton Manufacturing Co., Inc.
    4. NSi Industries LLC.

B. Electronic Time Switches: Solid state, programmable, with alphanumeric display; complying with UL 917.
    1. Listed and labeled as defined in NFPA 70, and marked for intended location and application.
    2. Contact Configuration: DPDT
    3. Contact Rating: 30A inductive or resistive, 240VAC.
    4. Programs: Each channel is individually programmable with two on-off set points on a 24-hour schedule, allowing different set points for each day of the week.
    5. Astronomic Time: All channels.
    6. Automatic daylight savings time changeover.
    7. Battery Backup: Not less than seven days reserve, to maintain schedules and time clock.

2.08 IN-WALL TIME SWITCHES

A. Manufacturers:
    1. Intermatic, Inc**<< ; _____; or None - N/A>>**: www.intermatic.com/#sle.
    2. Wattstoper
    3. Leviton
    4. Acuity
    5. Current
    6. Cooper
    7. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
    8. Source Limitations: Furnish products produced by single manufacturer and obtained from single supplier.

B. Digital Electronic In-Wall Time Switches:
    1. Description: Factory-assembled solid state programmable controller with LCD display, suitable for mounting in standard wall box, and listed and labeled as complying with **<<UL 916>>** or **<<UL 917>>**.
    2. Program Capability:
        a. 7-Day Time Switches: Capable of different schedule for each day of week.

DRAFT

b. Astronomic Time Switches: Capable of different schedule for each day of week and field-configurable astronomic feature to automatically adjust for seasonal changes in sunrise and sunset times.

3. Provide automatic daylight savings time compensation.
4. Provide power outage backup to retain programming and maintain clock.
5. Manual override: Capable of overriding current schedule both permanently and temporarily until next scheduled event.
6. Switch Configuration: Suitable for use in either SPST or 3-way application.
7. Contact Ratings: As required to control load indicated on drawings.
8. Program Capability: Designed to turn load off at end of preset time interval.

C. Digital Electronic In-Wall Interval Timers

1. Description: Factory-assembled solid state programmable controller with LCD display, suitable for mounting in standard wall box, and listed and labeled as complying with **<<UL 916>>** or **<<UL 917>>**.
2. Program Capability: Designed to turn load off at end of preset time interval.
   a. Damp location rated where required by NFPA.
3. Input Supply Voltage: Dual rated for 120/277VAC unless otherwise indicated.
4. Cabling Terminations:
   a. Provide manufacturer supplied and factory tested control wiring.
   b. Include two RJ45 wiring connections.
5. Compatibility:
   a. Compatible with luminaires specified with integral sensors; include auxiliary contact closure accessory components for controls indicated.
   b. Compatible with wired sensors and communication protocols for controlling lin-voltage loads.
      1) Electromagnetic Interference/Radio Frequency Interference (EMI/RFI) Limits: Comply with FCC requirements of 47 CFR 15, for Class B application.
   c. Configurable for single room control as indicated from single digital load controller.
6. Provide UL 2043 plenum rated control unit with self-contained relay(s) and low-voltage class 2 transformer, compatible with specified wired and wireless sensors, components, and ballasts/drivers.
   a. Comply with NFPA 70 for use in plenum spaces.
   b. Provide UL 2043 plenum rating for associated system control components for control indicated.
7. Surface Mounting: Manufacturer approved box
8. Provide one auxiliary contact closure output where indicated.
9. Minimum Load Rating: As required to control load indicated on drawings.
10. Control Inputs:
    a. Digital: Two
    b. Include 24VDC device power input and coordinate maximum current draw as required.
    c. Include automatic-on and manual-on occupancy control wiring inputs.
    d. Include wiring inputs for manual overrides as indicated.
11. Output Control Capability:
    a. Single Zone Switching Modules: One programmable channel.
    b. Multi-Zone Switching Modules: Three separately programmable channels.

DRAFT

c. Channel Dimming as Indicated:
   1) Range: From 1% to 100% allowing for precise control of light levels.
   2) Method: 0-10VDC protocol: coordinate maximum current draw as reuired.
d. Provide integral load protection from external faults (e.g. power surges and short circuits).

12. Emergency Branch Circuit Loads:
    a. Comply with NFPA 70 for controlling or bypassing emergency branch circuits as indicated.
    b. Provide control devices listed for interfacing with fire alarm system for override operations.
       1) Refer to section **<< 284600>>**.
    c. Provide UL 924 listed components.

D. Additional Integrated Requirements for Digital Load Controllers:
   1. Central monitoring and Management: Include programmable user interface for lighting system controllable features; control access locally by plugging into devices with settings retained in nonvolatile memory.
   2. Provide additional auxiliary contact closure outputs where required for functions and operating modes indicated.
   3. Occupancy Controls:
      a. Scene Control: Occupant selections by lighting control devices for controls as indicated.
      b. Bi-level Switching: Multi-level lighting for controls as indicated.
      c. Dimming: Occupancy controlled dimming, including blink warning; 50% light-level after programmed delay time.
      d. Shade Control: Interfacing capability.
   4. Energy Monitoring:
      a. Include capability for integration with power monitoring system via BACnet/IP communications.
      b. Include reporting and expor
   5. Daylight Harvesting:
      a. System Description:
         1) Control system with compatible control modules, power packs, contactors, or relays as required for automatic control of load indicated according to available natural light.
         2) System control responds to changes in measured light levels according to selected settings.
         3) Capable of integrating with daylighting sensors, occupancy sensors, and manual override controls.
      b. Daylighting Control Photo Sensors: Low-voltage class 2 photo sensor units with output signal proportional to measured light level and provision for zero or offset based signal.
         1) Sensor Range: 5 to 100 footcandles.
      c. Finish: White unless otherwise indicated.
      d. Where sensors are indicated, wireless sensors are not acceptable without prior approval of Architect and owner.
      e. Dimming Photo Sensors: Photo sensor units with integral controller compatible with specified dimming drivers, for direct continuous dimming of up to 50 drivers.

DRAFT

f. Input delay: To prevent unwanted cycling due to intermittent light level fluctuations.
g. Daylight Control Switching Modules: Unless otherwise indicated, load to be turned on when light level is below selected low set point and load to be turned off when light level is above selected high set point, with no-switching dead band between set points to prevent unwanted cycling.
h. Daylight Control Dimming Module Operations:
1) Unless otherwise indicated, specified load to be continuously brightened as not enough daylight becomes available and continuously dimmed as enough daylight becomes available.
2) Load to be turned off when available daylight is sufficient to fully dim load after selected time delay.
3) Dimming and Fade Rates: Adjustable from 5 to 60 seconds.
4) Cut-Off Delay: Selectable and adjustable from 0 to 20 minutes.
5) Output Voltage: Compatible with specified dimming drivers.

6. Accessories:
a. Where indicated, provide compatible accessory wall switches for manual override control.
7. Time Interval: Field selectable range of presets available up to **<< 12 hours; or _____>>**.
8. Provide field selectable audible and visual indication to warn that end of interval operation is about to turn off load.
9. Provide power outage backup to retain programming and maintain clock.
10. Manual override: Capable of both turning load off and resetting timer to original preset time interval.
11. Switch Configuration: Suitable for use in either SPST or 3-way application.
12. Contact Ratings: As required to control the load indicated on drawings.

2.09 OUTDOOR PHOTO CONTROLS

A. Manufacturers:
1. Intermatic, Inc**<< ; _____; or None - N/A>>**: www.intermatic.com/#sle.
2. Tork, a division of NSI Industries LLC**<< ; _____; or None - N/A>>**: www.tork.com/#sle.
3. NSi Industries LLC
4. Cooper
5. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
6. Source Limitations: Furnish products produced by single manufacturer and obtained from single supplier.

B. Stem-Mounted Outdoor Photo Controls:
1. Description: Direct-wired photo control unit with threaded conduit mounting stem**<< and field-adjustable swivel base; _____; or None - N/A>>**, listed and labeled as complying with **<<UL 773A>>**.
2. Housing: Weatherproof, **<< impact resistant polycarbonate; heavy duty die cast metal; or _____>>**.
3. Photo Sensor: Solid State.
4. Provide external sliding shield for field adjustment of light level activation.
5. Light Level Activation: **<< 1 to 5 footcandles; _____; or 1 to 10 footcandles>>** turn-on with delayed turn-off of 15 seconds minimum.

DRAFT

6. Voltage: **<< As required to control load indicated on drawings; 120 V unless otherwise indicated; 208-277 V unless otherwise indicated; or _____>>**.
7. Failure Mode: Fails to the on position.
8. Load Rating: **<< As required to control load indicated on drawings; 1,800 W for tungsten load or 1,000 VA for ballast load; or _____>>**.
9. Provide accessory wall-mounting bracket where indicated or as required to complete installation.

C. Locking Receptacle-Mounted Outdoor Photo Controls
1. Description: Plug-in locking type**<< None - N/A; utility grade; or _____>>** photo control unit complying with **<<ANSI C136.10>>** for mounting on compatible receptacle, listed and labeled as complying with **<<UL 773>>**.
2. Housing: Weatherproof, **<< impact resistant UV stabilized polypropylene; or _____>><< , color to be selected; , color coded by voltage according to ANSI C136.10; , color _____; or None - N/A>>**.
3. Photo Sensor: Solid State.
4. Light Level Activation: **<< 1 to 3 footcandles; 1.5 to 10 footcandles; or _____>>** turn-on **<< with instant turn-on and delayed turn-off; with instant turn-on and turn-off; or _____>>**.
5. Voltage: **<< As required to control load indicated on drawings; 120-277 V unless otherwise indicated; 120 V unless otherwise indicated; 208-277 V unless otherwise indicated; or _____>>**.
6. Failure Mode: Fails to the **<< on; or off>>** position.
7. Load Rating: **<< As required to control load indicated on drawings; 1,000 W for tungsten load or 1,000 VA for ballast load; or _____>>**.
8. Surge Protection: **<< 160 joule metal oxide varistor; 320 joule metal oxide varistor; Air gap arrester with 2.5 kV spark over; or _____>>**.
9. Provide the following accessories where indicated or as required to complete installation:
   a. Receptacle: Complying with **<<ANSI C136.10>>**.
   b. Mounting Bracket.
   c. Shorting Cap: Suitable for replacing locking photo control to complete circuit.

D. Button Type Outdoor Photo Controls
1. Description: Direct-wired photo control unit complying with **<<ANSI C136.24>><< with weatherproof gasketed wall plate where required or indicated; _____; or None - N/A>>**, listed and labeled as complying with **<<UL 773A>>**.
2. Housing: Weather resistant polycarbonate.
3. Photo Sensor: Solid State.
4. Light Level Activation: **<< 1 to 3 footcandles; 1.5 to 10 footcandles; or _____>>** turn-on with delayed turn-off of 15 seconds minimum.
5. Voltage: **<< As required to control load indicated on drawings; 120 V unless otherwise indicated; 208-277 V unless otherwise indicated; or _____>>**.
6. Failure Mode: Fails to the on position.
7. Load Rating: **<< As required to control load indicated on drawings; 1,500 W for tungsten load or 1,000 VA for ballast load; or _____>>**.

2.10 DIGITAL LOAD CONTROLLERS

A. Manufacturers:
1. ILC - Evo System

DRAFT

2. Crestron - Zum System
3. Current - NX System
4. Acuity - nLight System
5. Wattstopper - WLM System
6. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
7. Source Limitations: Furnish products produced by a single manufacturer and obtained from a single supplier.

B. System Description:
1. Stand-alone system, including interconnected modules and accessories, for lighting and plug load low-voltage control as indicated on the drawings.
2. [endif][endif]Product standard system configurations preconfigured out of box, plug-and-play, automatically self-addressing devices for communications, and without need to field configure or program features, or requiring device setting adjustments. LEDs on unit indicate operation and troubleshooting without software intervention.
3. [endif]Provide quantity and configuration of power and slave packs, communication modules, and load expansion modules, including associated wiring, wired and wireless components, and accessories to control loads indicated.
4. [endif]Also referred to as room, area, or architectural digital load controllers, as indicated, depending on space and functionality. Each controller includes one or more channels for load control, also referred to as zones.
5. [endif]Provide networkable digital load controllers and system components for future integration of luminaires and devices.

C. General Requirements
1. Listed for powering and controlling line-voltage loads, power packs, contactors, relays, and other lighting control devices.
a. UL 916 listed for energy management.

2.11 LIGHTING CONTACTORS

A. Manufacturers:
1. Allen Bradley/Rockwell Automation
2. ASCO Power Technologies
3. General Electric Company
4. Schneider Electric; Square D Products**<< ; _____; or None - N/A>>**: www.schneider-electric.us/#sle.
5. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Description: Electrically operated, combination-type lighting contactors with nonfused disconnect, complying with NEMA ICS 2 and UL 508.
1. Current Rating for Switching: Listing or rating consistent with type of load served, including tungsten filament, inductive, and high-inrush ballast (ballast with 15 percent or less total harmonic distortion of normal load current).
2. Fault Current Withstand Rating: Equal to or exceeding the available fault current at the point of installation.
3. Provide with control and pilot devices as indicated on Drawings, matching the NEMA type specified for the enclosure.

C. Short Circuit Current Rating:

DRAFT

1. Provide contactors with listed short circuit current rating not less than available fault current at installed location as determined by short circuit study performed in accordance with Section **<< 260573>>**.

D. Enclosures:
   1. Comply with **<<NEMA IA 10030>>**.
   2. Environment Type per **<<NEMA EN 10250>>**: **<< Unless otherwise indicated, as specified for the following installation locations:; As indicated on the drawings.; or _____ .>>**
      a. Indoor Clean, Dry Locations: **<< Type 1; Type 3R; or _____>>**.
      b. Outdoor Locations: **<< Type 3R; Type 4X; or _____>>**.
   3. Finish: **<< Manufacturer's standard unless otherwise indicated; or _____>>**.

2.12 EMERGENCY LOAD CONTROL DEVICES

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

B. Acuity Brands Lighting, Inc.
   1. Watt Stopper.
   2. Bodine
   3. Functional Devices
   4. LVS
   5. Myers

C. Automatic Load Control Relay (ALCR)
   1. Description: Normally closed, electrically held relay and control circuitry for bypassing the normal switching and dimming means when normal utility power is lost, per NEC 700.26. When normal power is lost, relay will close on the emergency lighting circuit to energize the emergency fixtures.
      a. Voltage rating: 120-277 VAC
      b. Load rating: as required to control load indicated on drawings.
      c. Compatible with 0-10 Vdc dimming drivers and allows for override for full illumination upon loss of normal power.
      d. Integral test switch as well as remote test inputs (dry contacts) for an alternate test switch or for fire alarm panel contact switching.
      e. Normal power indicator light and an alternate power indicator light contained in the enclosure.
      f. UL Listed (UL924) for field or factory installation in indoor or damp locations.

D. Brance Circuit Emergency Lighting Transfer Switch (BCELTS)
   1. Description: Automatic transfer switch and control circuitry for bypassing the normal switching means when normal utility power is lost, per NEC 700.25. When normal power is lost, switch will transfer from normal to emergency power to energize the emergency fixtures.
      a. Voltage rating: 120-277VAC
      b. Load rating: as required to control load indicated on drawings; 20A maximum per NEC 700.25.
      c. Integral test switch as well as remote test inputs (dry contacts) for an alternate test switch or for fire alarm panel contact switching.

DRAFT

d. Normal power indicator light, an emergency power indicator light and a load power indicator light contained in the enclosure.
e. UL Listed (UL1008) for field installation in indoor or damp locations.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.
B. Verify that outlet boxes are installed in proper locations and at proper mounting heights and are properly sized to accommodate devices and conductors in accordance with **<<NFPA 70>>**.
C. Verify that openings for outlet boxes are neatly cut and will be completely covered by devices or wall plates.
D. Verify that final surface finishes are complete**<< , including painting; , _____; or None - N/A>>**.
E. Verify that branch circuit wiring installation is completed, tested, and ready for connection to lighting control devices.
F. Verify that service voltage and ratings of lighting control devices are appropriate for service voltage and load requirements at location to be installed.
G. Verify that conditions are satisfactory for installation prior to starting work.
H. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
I. Examine roughing-in for controls to verify actual locations of controls and electrical connections before installation. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Provide extension rings to bring outlet boxes flush with finished surface.
B. Clean dirt, debris, plaster, and other foreign materials from outlet boxes.

3.03 INSTALLATION

A. Coordinate locations of outlet boxes as required for installation of lighting control devices; see Section **<< 260534>>**.
B. Maintain separation of remote-control, signaling, and power-limited circuits.
   1. See manufacturer instructions and Section **<< 260519>>** for control wiring conductors, wiring methods, and identification requirements.
C. Install lighting control devices in accordance with manufacturer's instructions.
D. Unless otherwise indicated, connect lighting control device grounding terminal or conductor to branch circuit equipment grounding conductor and to outlet box with bonding jumper.
E. Install lighting control devices plumb and level, and held securely in place.
F. Where required and not furnished with lighting control device, provide wall plate; see Section **<< 262726>>**.
G. Provide required supports; see Section **<< 260529>>**.
H. Where applicable, install lighting control devices and associated wall plates to fit completely flush to mounting surface with no gaps and rough opening completely covered without strain on

DRAFT

wall plate. Repair or reinstall improperly installed outlet boxes or improperly sized rough openings.**<< Do not use oversized wall plates in lieu of meeting this requirement.; _____ .; or None - N/A>>**

I. Outdoor Photo Control Locations:
   1. Where possible, locate outdoor photo controls with photo sensor facing north. If north facing photo sensor is not possible, install with photo sensor facing east, west, or down.
   2. Locate outdoor photo controls so that photo sensors do not face artificial light sources, including light sources controlled by photo control itself.

J. Install outdoor photo controls so that connections are weatherproof. Do not install photo controls with conduit stem facing up in order to prevent infiltration of water into photo control.

K. Contactor Installation
   1. Mount electrically held lighting contactors with elastomeric isolator pads to eliminate structure-borne vibration, unless contactors are installed in an enclosure with factory-installed vibration isolators.

L. Wiring Installation
   1. Wiring Method: Comply with section **<< 260519>>**. Minimum conduit size is 3/4 inch.
   2. Wiring within Enclosures: Comply with NECA 1. Separate power-limited and non-power-limited conductors according to conductor manufacturer's written instructions.
   3. Size conductors according to lighting control device manufacturer's written instructions unless otherwise indicated.
   4. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.

M. Daylighting Control Photo Sensor Locations:
   1. Unless otherwise indicated, locate photo sensors for closed loop systems to accurately measure light level controlled at designated task location, while minimizing measured amount of direct light from natural or artificial sources such as windows or pendant luminaires.
   2. Unless otherwise indicated, locate photo sensors for open loop systems to accurately measure the level of daylight coming into space, while minimizing measured amount of lighting from artificial sources.

DRAFT

3.04 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Inspect each lighting control device for damage and defects.

C. Test occupancy sensors to verify proper operation, including time delays and ambient light thresholds where applicable. Verify optimal coverage for entire room or area**<< . Record test results in written report to be included with submittals; _____; or None - N/A>>**.

D. Test time switches to verify proper operation.

E. Test outdoor photo controls to verify proper operation, including time delays where applicable.

F. Test daylighting controls to verify proper operation, including light level measurements and time delays where applicable**<< . Record test results in written report to be included with submittals; _____; or None - N/A>>**.

G. Correct wiring deficiencies and replace damaged or defective conductors, cables, and lighting control devices.

3.05 ADJUSTING

A. Adjust devices and wall plates to be flush and level.

B. Adjust occupancy sensor settings to minimize undesired activations while optimizing energy savings, and to achieve desired function as indicated or as directed by **<<Architect>>**.

C. Adjust time switch settings to achieve desired operation schedule as indicated or as directed by **<<Architect>><< . Record settings in written report to be included with submittals; or None - N/A>>**.

D. Adjust external sliding shields on outdoor photo controls under optimum lighting conditions to achieve desired turn-on and turn-off activation as indicated or as directed by **<<Architect>>**.

E. Occupancy Adjustments: When requested within **<< 1 year; and _____>>** of Final Completion, provide on-site assistance in adjusting sensors to suit actual occupied conditions. Provide up to two visits to project during other-than-normal occupancy hours for this purpose.

3.06 CLEANING

A. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.07 CLOSEOUT ACTIVITIES

A. Demonstration: Demonstrate proper operation of lighting control devices to **<<Architect>>**, and correct deficiencies or make adjustments as directed.

B. Training: Train **<<Owner>>**'s personnel on operation, adjustment, programming, and maintenance of **<< lighting control devices; or _____>>**.

1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.

END OF SECTION 260923

DRAFT

SECTION 260943
LIGHTING CONTROL RELAY PANELS

PART 1 GENERAL

1.01 RELATED REQUIREMENTS

A. Section **<< 260526 - Grounding and Bonding for Electrical Systems>>**.

B. Section **<< 260529 - Hangers and Supports for Electrical Systems>>**

C. Section **<< 260534 - Boxes for Electrical Systems>>**.

D. Section **<< 260553 - Identification for Electrical Systems>>**: Identification products and requirements.

E. Section **<< 260573 - Power System Studies>>**.

F. Section **<< 262726 - Wiring Devices>>**

G. Section **<< 260923>>**-Lighting Control Devices

H. Section **<< 265100 - Interior Lighting>>**.

I. Section **<< 265600 - Exterior Lighting>>**.

1.02 REFERENCE STANDARDS

A. NECA 1 - Standard for Good Workmanship in Electrical Construction.

B. NECA 130 - Standard for Installing and Maintaining Wiring Devices.

C. NECA 407 - Standard for Installing and Maintaining Panelboards.

D. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

E. NEMA 410 - Performance Testing for Lighting Controls and Switching Devices with Electronic Drivers and Discharge Ballasts.

F. NFPA 70 - National Electrical Code.

G. UL 924 - Emergency Lighting and Power Equipment.

H. UL 1472 - Solid-State Dimming Controls.

I. UL 60947-1 - Low-Voltage Switchgear and Controlgear - Part 1: General Rules.

J. UL 60947-4-1 - Low-Voltage Switchgear and Controlgear - Part 4-1: Contactors and Motor-starters - Electromechanical Contactors and Motor-starters.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the placement of devices and equipment with millwork, furniture, equipment, etc. installed under other sections or by others.
2. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression system, and partition assemblies.
3. Notify **<<Architect>>** of any conflicts or deviations from Contract Documents to obtain direction prior to proceeding with work.

1.04 SUBMITTALS

A. Product Data:

DRAFT

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for control modules, power distribution components, relays, manual switches and plates, and conductors and cables.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
3. Sound data including results of operational tests of central dimming controls.
4. Operational documentation for software and firmware.

B. Shop Drawings:
1. Include dimensioned plans, elevations, sections, and details. Show tabulations of installed devices, equipment features, and ratings.
2. Detail enclosure types and details for types other than NEMA 250, Type 1.
3. Detail wiring partition configuration, current, and voltage ratings.
4. Short-circuit current rating of relays.
5. Address Drawing: Reflected ceiling plan and floor plans, showing connected luminaires, address for each luminaire, and luminaire groups. Base plans on construction plans, using the same legend, symbols, and schedules.
6. Point List and Data Bus Load: Summary list of all control devices, sensors, ballasts, and other loads. Include percentage of rated connected load and device addresses.
7. Wire Termination Diagrams and Schedules: Coordinate nomenclature and presentation with Drawings and block diagram. Differentiate between manufacturer-installed and field-installed wiring.
8. Retain "Block Diagram" Subparagraph below when control is digital, PC or IP based.
9. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines.

C. Field Quality Control Reports.

D. Operation and Maintenance Data: For each type of device, include detailed information on device programming and setup as well as emergency, operation and maintenance manuals..

E. Project Record Documents: Record actual installed locations settings, and MAC and IP addresses (where applicable) for lighting control devices.

DRAFT

1.05 QUALITY ASSURANCE

A. Comply with requirements of **<<NFPA 70>>**.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum **<< five; or _____>>** years**<< documented; _____; or None - N/A>>** experience.

D. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.06 DELIVERY, STORAGE, AND PROTECTION

A. Store products in a clean, dry space in original manufacturer's packaging in accordance with manufacturer's written instructions until ready for installation.

1.07 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

1.08 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Manufacturer's standard form in which manufacturer agrees to repair or replace components that fail in materials or workmanship or from transient voltage surges, and the Contractor agrees to provide associated electrical work within the specified warranty period.

1. Failures include, but are not limited to, the following:
   a. Failure equipment to operate, or to operate reliably.
   b. Damage of electronic components due to transient voltage surges.
2. Warranty Period: Five years from date of Final Acceptance for material and labor.
3. Extended Material Warranty Period Failure Due to Transient Voltage Surges: 10 years from date of Final Acceptance.

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS

A. Input signal from manual switches, digital signal sources, contact closure input or a protocol signal from the BAS system shall open or close one or more lighting control relays in the lighting control panels. Any combination of inputs shall be programmable to any number of control relays. Control panels shall also be capable of setting separate and independent control schedules from BAS system.

B. Surge Protective Device: Factory installed as an integral part of control components or field-mounted surge suppressors complying with UL 1449, SPD Type 2.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Comply with 47 CFR, Subparts A and B, for Class A digital devices.

E. Comply with UL 916 and UL 508.

F. Provide products listed, classified, and labeled as suitable for the purpose intended.

2.02 LOW VOLTAGE LIGHTING CONTROL RELAY PANELS

A. Manufacturers:

1. Current Lighting Controls
2. Leviton Manufacturing Co., Inc.
3. Acuity Brands Lighting, Inc.
4. WattStopper.
5. ILC

B. Description: Standalone lighting control panel using relays to control lighting.

C. Lighting Control Panel:

1. A single enclosure with incoming lighting branch circuits, control circuits, switching relays, and on-board timing and control unit.
2. A vertical barrier separating branch circuits from control wiring.

DRAFT

D. Relays: Electrically operated, single-pole switch, rated at 20 A at 277 V. Short-circuit current rating shall be not less than 5 kA. Control shall be three-wire, 24-V ac.

E. Power Supply: NFPA 70, Class 2, sized for connected equipment, plus 20 percent spare capacity. Powered from a dedicated branch circuit of the panelboard that supplies power to the line side of the relays, sized to provide control power for the local panel-mounted relays, bus system, low-voltage inputs, field-installed occupancy sensors, and photo sensors.

F. Control Unit: Contain the power supply and electronic control for operating and monitoring individual relays.
   1. Timing Unit:
      a. 365-day calendar, astronomical clock, and automatic adjustments for daylight savings and leap year.
      b. Clock configurable for 12-hour (A.M./P.M.) or 24-hour format.
      c. Four independent schedules, each having 24 time periods.
      d. Schedule periods settable to the minute.
      e. Day-of-week, day-of-month, day-of-year with one-time or repeating capability.
      f. 16 special date periods.
   2. Nonvolatile memory shall retain all setup configurations. After a power failure, the controller shall automatically reboot and return to normal system operation, including accurate time of day and date.
   3. Operator Interface:
      a. Integral alphanumeric keypad and digital display, and intuitive drop-down menus to assist in programming.
      b. Log and display relay on-time.
      c. Connect relays to one or more time and sequencing schemes.

2.03 CONDUCTORS AND CABLES

A. Power Wiring to Supply Side of Class 2 Power Source: Not smaller than No. 12 AWG, complying with Section **<< 260519>>**.

B. Classes 2 and 3 Control Cables: Multiconductor cable with copper conductors not smaller than No. 18 AWG, complying with Section **<< 260519>>** .

C. Class 1 Control Cables: Multiconductor cable with copper conductors not smaller than No. 14 AWG, complying with Section **<< 260519>>**.

D. Digital and Multiplexed Signal Cables: Unshielded, twisted-pair cable with copper conductors, complying with TIA/EIA-568-B.2, Category 6 for horizontal copper cable and with Section **<< 271000>>**.

2.04 MANUAL SWITCHES AND PLATES

A. Push-Button Switches: Modular, momentary contact, three wire, for operating one or more relays and to override automatic controls.
   1. Match color and style specified in Section **<< 262726>>**.
   2. Integral green LED pilot light to indicate when circuit is on.
   3. Internal white LED locator light to illuminate when circuit is off.

B. Wall Plates: Single and multigang plates as specified in Section **<< 262726>>**.

C. Legend: Engraved or permanently silk-screened on wall plate where indicated. Use designations indicated on Drawings.

DRAFT

2.05 FIELD-MOUNTED SIGNAL SOURCES

A. Daylight Harvesting Switching Controls: Comply with Section **<< 260923>>**. Control power may be taken from the lighting control panel, and signal shall be compatible with the relays.

B. Indoor Occupancy Sensors: Comply with Section **<< 260923>>** Control power may be taken from the lighting control panel, and signal shall be compatible with the relays.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that outlet boxes are installed in proper locations and at proper mounting heights and are properly sized to accommodate devices and conductors in accordance with **<<NFPA 70>>**.

C. Verify that openings for outlet boxes are neatly cut and will be completely covered by devices or wall plates.

D. Verify that branch circuit wiring installation is completed, tested, and ready for connection to lighting control devices.

E. Verify that conditions are satisfactory for installation prior to starting work.

F. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

G. Examine roughing-in for controls to verify actual locations of controls and electrical connections before installation. Proceed with installation only after unsatisfactory conditions have been corrected.

H. Examine panels before installation. Reject panels that are damaged or rusted or have been subjected to water saturation.

3.02 PREPARATION

A. Provide extension rings to bring outlet boxes flush with finished surface.

B. Clean dirt, debris, plaster, and other foreign materials from outlet boxes.

3.03 INSTALLATION

A. Wiring
   1. Wiring Method: Comply with section **<< 260519>>**.
   2. Raceway: Comply with section **<< 260533>>**. Minimum raceway size is 3/4 inch.
   3. Wiring within Enclosures: Comply with NECA 1. Separate power-limited and non-power-limited conductors according to conductor manufacturer's written instructions.
   4. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

B. Panels
   1. Comply with NECA 1.
   2. Install panels and accessories according to NECA 407.
   3. Mount top of trim 90 inches above finished floor unless otherwise indicated.
   4. Mount panel cabinet plumb and rigid without distortion of box.
   5. Install filler plates in unused spaces.

DRAFT

3.04 IDENTIFICATION

A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section **<< 260553>>**.

B. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with Section **<< 260553>>**.

C. Create a directory to indicate loads served by each relay; incorporate Owner's final room designations. Obtain approval before installing. Use a PC or typewriter to create directory; handwritten directories are unacceptable.

D. Lighting Control Panel Nameplates: Label each panel with a nameplate complying with requirements for identification specified in Section **<< 260553>>**.

3.05 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Perform the following tests and inspections:

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

C. Acceptance Testing Preparation: Test continuity of each circuit.

D. Lighting control panel will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports, including a certified report that identifies lighting control panels and describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations made after remedial action.

3.06 ADJUSTING

A. When requested, within 12 months of Final Completion, provide on-site assistance in adjusting control schedules and programming of lighting control system to suit actual occupied conditions. Provide up to two visits to project site during other-than-normal occupancy hours for this purpose.

3.07 CLEANING

A. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.08 CLOSEOUT ACTIVITIES

A. Demonstration: Demonstrate proper operation of lighting control devices to **<<Architect>>** and owner, and correct deficiencies or make adjustments as directed.

B. Training: Train **<<Owner>>**'s personnel on operation, adjustment, programming, and maintenance of the lighting control system.

1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.

END OF SECTION 260943

DRAFT

SECTION 262200
LOW-VOLTAGE TRANSFORMERS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. General-purpose transformers.

1.02 RELATED REQUIREMENTS

A. Section **<< 033000 - Cast-in-Place Concrete>>**: Concrete equipment pads.

B. Section **<< 260526 - Grounding and Bonding for Electrical Systems>>**.

C. Section **<< 260529 - Hangers and Supports for Electrical Systems>>**.

D. Section **<< 260533 - Conduit for Electrical Systems>>**: Flexible conduit connections.

1.03 REFERENCE STANDARDS

A. 10 CFR 431 - Energy Efficiency Program for Certain Commercial and Industrial Equipment - Distribution Transformers.

B. IEEE C57.94 - IEEE Recommended Practice for Installation, Application, Operation, and Maintenance of Dry-Type Distribution and Power Transformers.

C. IEEE C57.96 - IEEE Standard Guide for Loading Dry-Type Distribution and Power Transformers.

D. NECA 1 - Standard for Good Workmanship in Electrical Construction.

E. NECA 409 - Standard for Installing and Maintaining Dry-Type Transformers.

F. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

G. NEMA ST 20 - Dry Type Transformers for General Applications.

H. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems.

I. NFPA 70 - National Electrical Code.

J. UL 506 - Standard for Specialty Transformers.

K. UL 1561 - Standard for Dry-Type General Purpose and Power Transformers.

1.04 SUBMITTALS

A. Product Data: Include voltage, kVA, impedance, tap configurations, insulation system class and rated temperature rise, efficiency, sound level, enclosure ratings, outline and support point dimensions, weight, required clearances, service condition requirements, and installed features.

B. Shop Drawings: Provide dimensioned plan and elevation views of transformers and adjacent equipment with all required clearances indicated.

C. Field Quality Control Test Reports.

D. Maintenance Data: Include recommended maintenance procedures and intervals.
   1. Final settings for transformer taps and measured voltage.

E. Certifications:
   1. Specified sound levels.
   2. Compliance with DOE 2016 for energy efficiency.

DRAFT

1.05 QUALITY ASSURANCE

A. Comply with requirements of **<<NFPA 70>>**.

B. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

C. UL Energy Verification Mark to confirm compliance with DOE 2016.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Store in a clean, dry space. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.

B. Handle in accordance with manufacturer's written instructions. Lift only with lugs provided for the purpose. Handle carefully to avoid damage to transformer internal components, enclosure, and finish.

1.07 PROTECTION

A. Apply temporary heat within indoor transformer enclosures, in accordance with manufacturer's recommendations, until the space temperature and humidity are under normal control.

1.08 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. ABB: www.electrification.us.abb.com/#sle.

B. Eaton Corporation: www.eaton.com/#sle.

C. Schneider Electric: www.se.com/#sle.

D. Siemens Industry, Inc: www.new.siemens.com/#sle.

E. Source Limitations: Each transformer shall be from the same, single source manufacturer. All panelboards, switchboards, circuit breakers, transformers and disconnect switches shall be of the same manufacturer.

2.02 TRANSFORMERS - GENERAL REQUIREMENTS

A. Description: Factory-assembled, dry type transformers for 60 Hz operation designed and manufactured in accordance with **<<NEMA ST 20>>** and listed, classified, and labeled as suitable for the purpose intended.

B. Unless noted otherwise, transformer ratings indicated are for continuous loading according to **<<IEEE C57.96>>** under the following service conditions:

1. Altitude: Less than **<< 3,300 feet>>**.
2. Ambient Temperature:
   a. Greater than 10 kVA: Not exceeding **<< 104 degrees F>>**.
   b. Less than 10 kVA: Not exceeding **<< 77 degrees F>>**.

C. Core: High grade, non-aging silicon steel with high magnetic permeability and low hysteresis and eddy current losses. Keep magnetic flux densities substantially below saturation point, even at 10 percent primary overvoltage. Tightly clamp core laminations to prevent plate movement and maintain consistent pressure throughout core length.

DRAFT

D. Coils: Continuou aluminum windings without plices except for taps.

E. Impregnate core and coil assembly with non-hydroscopic thermo-setting varnish to effectively seal out moisture and other contaminants.

F. Basic Impulse Level: 10 kV.

G. Enclosure: Heavy-gage steel enclosure and base, arranged for conduit entrance on the primary and secondary sides and provided with adequate louvered openings to allow suitable ventilation and cooling. NEMA 250 Type 1.

H. Enclosure Finish: Degreased, cleaned, phosphatized, primed and finished with baked enamel paint. Comply with NEMA 250; color manufacturer's standard gray.

I. Isolate core and coil from enclosure using vibration-absorbing mounts.

J. Nameplate: Include transformer connection data, ratings, wiring diagrams, and overload capacity based on rated winding temperature rise.

K. Taps: Four, 2.5 percent rated kVA taps, two below and two above rated primary voltages, except transformers rated 15 kVA and smaller may have two 5-percent-rated kVA taps, one above and one below rated primary voltage.

L. Sound levels based on NEMA ST 20 test procedure:
   1. Transformers 50 kVA and smaller: Not more than 45 dB.
   2. Transformers 51 to 150 kVA: Not more than 50 dB.
   3. Transformers 151 to 300 kVA: Not more than 55 dB.
   4. Transformers 500 kVA: Not more than 60 dB.

2.03 GENERAL PURPOSE TRANSFORMERS

A. Description: Self-cooled, two winding transformers listed and labeled as complying with **<<UL 506>>** or **<<UL 1561>>**; ratings as indicated on the drawings.

B. Insulation System and Allowable Average Winding Temperature Rise: The maximum hot spot temperature can be 30 degrees C higher than the specified below.
   1. Less than 15 kVA: Class 180 degrees C insulation system with 115 degrees C average winding temperature rise.
   2. 15 kVA and Larger: Class 220 degrees C insulation system with 150 degrees C average winding temperature rise.

C. Energy Efficiency: Comply with **<<10 CFR 431>>**, Subpart K.

D. Mounting Provisions:
   1. As indicated on the drawings.

E. Accessories:
   1. Mounting Brackets: Provide manufacturer's standard brackets.
   2. Weathershield Kits: Provide for ventilated transformers installed outdoors to provide a listed **<<NEMA EN 10250>>**, type 3R assembly.
   3. Lug Kits: Sized as required for termination of conductors as indicated**<< on the drawings; _____; or None - N/A>>**.

PART 3 EXECUTION

3.01 INSTALLATION

A. Perform work in accordance with **<<NECA 1>>** (general workmanship).

DRAFT

B. Install products in accordance with manufacturer's instructions.

C. Install transformers in accordance with **<< NECA 409; IEEE C57.94; and _____>>**.

D. Use flexible conduit, under the provisions of Section **<< 260533>>**, **<< 2 feet; or _____>>** minimum length, for connections to transformer case. Make conduit connections to side panel of enclosure.

E. Arrange equipment to provide minimum clearances as specified on transformer nameplate and in accordance with manufacturer's instructions and **<<NFPA 70>>**.

F. Install transformers plumb and level.

G. Mount on wall, ceiling, or floor as indicated on the drawings. Transformers shall not be mounted in corrosive areas.

1. Wall mount: Use manufacturer's wall-mounted bracket in accordance with manufacturer's instructions.
2. Ceiling mount: Use one of the following two methods:
   a. Use manufacturer's ceiling mounted bracket in accordance with manufacturer's instructions.
   b. Field-fabricated trapeze mount: Trapeze mounting made from galvanized-steel struct or channel. Suspend trapeze from galvanized-steel rods, anchor to ceiling or structure above. If trapeze is adjacent to wall, additionally fasten to wall. Provide vibration isolation between transformer and trapeze or between trapeze and its supports.
3. Floor mount: On equipment foundation (4" concrete housekeeping pad).
4. Exterior mount: On equipment foundation as shown on the drawings.

H. Provide grounding and bonding in accordance with Section **<< 260526>>**.

I. Remove shipping braces and adjust bolts that attach the core and coil mounting bracket to the enclosure according to manufacturer's recommendations in order to reduce audible noise transmission.

J. Where not factory-installed, install lugs sized as required for termination of conductors as indicated.

K. Where furnished as a separate accessory, install transformer weathershield per manufacturer's instructions.

L. Protect against overload on the primary side by circuit breakers in the panelboard as indicated.

M. Install transformers on neoprene vibration isolator pads.

N. Make immediate connections to and from transformers through flexible metal conduit.

3.02 IDENTIFICATION

A. Materials: Refer to Division 26 Section "Identification for Electrical Systems".

B. Nameplates: Refer to Division 26 Section "Identification for Electrical Systems" for additional requirements. Provide identification nameplate for each transformer located on front of assembly.

3.03 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Inspect and test in accordance with **<<NETA ATS>>**, except Section 4.

C. Remove and replace units that do not pass tests or inspections and retest as specified above.

DRAFT

D. Test Labeling: On completion of satisfactory testing of each unit, attach a date and signed "Satisfactory Test" label to tested component.

E. Prepare and submit test reports.

3.04 ADJUSTING

A. Measure primary and secondary voltages and make appropriate tap adjustments.
   1. Measure voltage on the secondary side of transformer during a typical occupancy period and adjust taps to achieve nominal voltage output. Nominal voltage shall be plus three percent or minus two percent of nameplate secondary voltage.

B. Record final tap settings and measure voltage and include in Operation and Maintenance manuals.

C. Adjust tightness of mechanical and electrical connections to manufacturer's recommended torque settings.

3.05 CLEANING

A. Clean dirt and debris from transformer components according to manufacturer's instructions.

B. Repair scratched or marred exterior surfaces to match original factory finish.

END OF SECTION 262200

DRAFT

SECTION 262413
SWITCHBOARDS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Low-voltage (600 V and less) switchboards and associated accessories for service and distribution applications.

B. Overcurrent protective devices for switchboards.

1.02 RELATED REQUIREMENTS

A. Section **<< 033000 - Cast-in-Place Concrete>>**: Concrete equipment pads.

B. Section **<< 260526 - Grounding and Bonding for Electrical Systems>>**.

C. Section **<< 260529 - Hangers and Supports for Electrical Systems>>**.

D. Section **<< 260553 - Identification for Electrical Systems>>**: Identification products and requirements.

E. Section **<< 260573 - Power System Studies>>**: Additional criteria for the selection and adjustment of equipment and associated protective devices specified in this section.

F. Section **<< 262713 - Electricity Metering>>**: For interface with equipment specified in this section.

G. Section **<< 262813 - Fuses>>**: Fuses for fusible switches.

H. Section **<< 264300 - Surge Protective Devices>>**.

1.03 REFERENCE STANDARDS

A. FS W-C-375 - Circuit Breakers, Molded Case; Branch Circuit and Service.

B. IEEE C57.13 - IEEE Standard Requirements for Instrument Transformers.

C. NECA 1 - Standard for Good Workmanship in Electrical Construction.

D. NECA 400 - Standard for Installing and Maintaining Switchboards.

E. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

F. NEMA PB 2 - Deadfront Distribution Switchboards.

G. NEMA PB 2.1 - General Instructions for Proper Handling, Installation, Operation, and Maintenance of Deadfront Distribution Switchboards Rated 1000 Volts or Less.

H. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems.

I. NFPA 70 - National Electrical Code.

J. UL 489 - Molded-Case Circuit Breakers, Molded-Case Switches and Circuit Breaker Enclosures.

K. UL 869A - Reference Standard for Service Equipment.

L. UL 891 - Switchboards.

M. UL 1053 - Ground-Fault Sensing and Relaying Equipment.

DRAFT

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate the work with other trades to avoid placement of ductwork, piping, equipment, or other potential obstructions within the dedicated equipment spaces and working clearances required by **<<NFPA 70>>**.
   2. Coordinate arrangement of electrical equipment with the dimensions and clearance requirements of the actual equipment to be installed.
   3. Verify with manufacturer that conductor terminations are suitable for use with the conductors to be installed.
   4. Coordinate with manufacturer to provide shipping splits suitable for the dimensional constraints of the installation.
   5. Notify **<<Architect>>** of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Service Entrance Switchboards:
   1. Coordinate with Utility Company to provide switchboards with suitable provisions for electrical service and utility metering, where applicable.
   2. Coordinate with **<<Owner>>** to arrange for Utility Company required access to equipment for installation and maintenance.
   3. Obtain Utility Company approval of switchboard prior to fabrication.
   4. Arrange for inspections necessary to obtain Utility Company approval of installation.

1.05 SUBMITTALS

A. Product Data: Provide manufacturer's standard catalog pages and data sheets for switchboards, enclosures, overcurrent protective devices, and other installed components and accessories.

B. Shop Drawings: Indicate dimensions, voltage, bus ampacities, overcurrent protective device arrangement and sizes, short circuit current ratings, conduit entry locations, conductor terminal information, and installed features and accessories.
   1. Include dimensioned plan and elevation views of switchboards and adjacent equipment with all required clearances indicated.
   2. Single-line diagram representation of switchboard, bus configuration, current, and voltage ratings.
   3. Short-circuit current rating of switchboard assembly and overcurrent protective devices.
   4. Utility company metering provisions with indication of approval by Utility Company.
   5. Include time-current coordination curves for each type and rating of overcurrent protective devices included in switchboards.
   6. Include wiring diagrams showing all factory and field connections.

C. Service Entrance Switchboards: Include documentation of Utility Company approval of switchboard.

D. Coordination Drawings: Floor plans, drawn to 1/4" = 1'-0" scale, on which the follwing items are shown and coordinated with each other based on input from installers of the items involved:
   1. Dimensioned concrete based: outline of equipment; and required clearances; relationship between components and adjacent architectural, structural and mechanical elements.
   2. Underground conduit stub-up locations, where applicable.
   3. Overhead conduit riser locations.
   4. Grounding cable locations and terminations.

DRAFT

5. Identify equipment sections including front and rear orientation.

E. Field Quality Control Test Reports.

F. Maintenance Data: Include information on replacement parts and recommended maintenance procedures and intervals.

G. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.
1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
2. Enclosure Keys: **<< Two; or _____>>** of each different key.

1.06 QUALITY ASSURANCE

A. Comply with requirements of **<<NFPA 70>>**.

B. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

C. Source limitations: Obtain switchboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.

D. Product selectino for restricted space: Drawings indicate maximum dimensions for switchboards including clearances between switchboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.

1.07 COORDINATION

A. Coordinate layout and installation of switchgear and components with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required clearances for workspace and equipment access doors and panels.

B. Coordinate size and location of concrete bases.

C. Coordinate location of underslab conduit.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store switchboards in accordance with **<< manufacturer's instructions; NECA 400; NEMA PB 2.1; and _____>>**.

B. Store in a clean, dry space having a uniform temperature to prevent condensation (including outdoor switchboards, which are not weatherproof until completely and properly installed). Where necessary, provide temporary enclosure space heaters or temporary power for permanent factory-installed space heaters.

C. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.

D. Handle carefully to avoid damage to switchboard internal components, enclosure, and finish.

1.09 FIELD CONDITIONS

A. Maintain field conditions within required service conditions during and after installation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Switchboards:
1. ABB: www.electrification.us.abb.com/#sle.
2. Eaton Corporation: www.eaton.com/#sle.

DRAFT

3. Schneider Electric: www.se.com/#sle.
4. Siemens Industry, Inc: www.new.siemens.com/#sle.

2.02 SWITCHBOARDS

A. Provide switchboards consisting of all required components, control power transformers, instrumentation and control wiring, accessories, etc. as necessary for a complete operating system.

B. Provide products listed, classified, and labeled as suitable for the purpose intended.

C. Description: Dead-front switchboard assemblies with front accesscomplying with **<<NEMA PB 2>>**, and listed and labeled as complying with **<<UL 891>>**; ratings, configurations and features as indicated on the drawings.

D. Service Entrance Switchboards:
   1. Listed and labeled as suitable for use as service equipment according to **<<UL 869A>>**.
   2. For solidly-grounded wye systems, provide factory-installed main bonding jumper between neutral and ground busses, and removable neutral disconnecting link for testing purposes.
   3. Comply with Utility Company requirements for electrical service.

E. Service Conditions:
   1. Provide switchboards and associated components suitable for operation under the following service conditions without derating:
      a. Altitude: Less than **<< 6,600 feet>>**.
      b. Ambient Temperature:
         1) Switchboards Containing Molded Case or Insulated Case Circuit Breakers: Between **<< 23 degrees F>>** and **<< 104 degrees F>>**.
   2. Provide switchboards and associated components suitable for operation at indicated ratings under the service conditions at the installed location.

F. Short Circuit Current Rating:
   1. Provide switchboards with listed short circuit current rating not less than the available fault current at the installed location as determined by short circuit study performed in accordance with Section **<< 260573>>**.
   2. Listed series ratings are **<< acceptable, except where not permitted by motor contribution according to NFPA 70; acceptable only where specifically indicated; not acceptable; or _____>>**.

G. Main Devices: Configure for top or bottom incoming feed as indicated or as required for the installation. Provide separate pull section and/or top-mounted pullbox as indicated or as required to facilitate installation of incoming feed.

H. Bussing: Sized in accordance with **<<UL 891>>** temperature rise requirements.
   1. Through bus (horizontal cross bus) to be fully rated through full length of switchboard (non-tapered). Tapered bus is not permitted. Ampacity and braced to ahve short-circuit current rating of RMS symmetrical amperes, as shown on the drawings. The through bus shall have provisions for the addition of future sections. Bolt supports, connections and joints with grade 5 hex head bolts and belleville washers.
   2. Provide solidly bonded equipment ground bus through full length of switchboard, with a suitable lug for each feeder and branch circuit equipment grounding conductor.
   3. Phase and Neutral Bus Material: Copper or Aluminum.
   4. Ground Bus Material: Copper.

I. Enclosures:

DRAFT

1. Environment Type per **<<NEMA EN 10250>>**: **<< Unless otherwise indicated, as specified for the following installation locations:; As indicated on the drawings.; or _____ .>>**
   a. Indoor Clean, Dry Locations: **<< Type 1 or Type 2 (drip-proof); Type 2 (drip-proof); or _____>>**.
   b. Outdoor Locations: **<< Type 3R; or _____>>**.
2. Finish: **<< Manufacturer's standard unless otherwise indicated; or _____>>**.
3. Sections: Each shall have an open bottom and individual removable top plate for installatino and termination of conduit.
   a. Wireway front covers: Hinged to permit access to the branch breaker load side terminals without removing the covers.

J. Future Provisions:
   1. Prepare designated spaces for future installation of devices including bussing, connectors, mounting hardware and all other required provisions.

K. Surge Protective Devices: Where factory-installed, internally mounted surge protective devices are provided in accordance with Section **<< 264300>>**, list switchboards as a complete assembly including surge protective device.
   1. As part of the switchboard, provide service entrance SPD in accordance with Section 264300 Surge Protective Devices.

L. Ground Fault Protection: Where ground-fault protection is indicated, provide system listed and labeled as complying with **<<UL 1053>>**.

M. **<<Owner>>** Metering:
   1. Provide microprocessor-based digital electrical metering system including all instrument transformers, wiring, and connections necessary for measurements specified.
   2. Meter shall be capable of BACnet communication and connection to the building automation system.
   3. Measured Parameters:
      a. Voltage (Volts AC): Line-to-line, line-to-neutral for each phase.
      b. Current (Amps): For each phase**<< and neutral; _____; or None - N/A>>**.
      c. Frequency (Hz).
      d. Real power (kW): For each phase, 3-phase total.
      e. Reactive power (kVAR): For each phase, 3-phase total.
      f. Apparent power (kVA): For each phase, 3-phase total.
      g. Power factor.
   4. Meter Accuracy: Plus/minus **<< 1.0; 0.5; 0.2; or ___>>** percent.

N. Instrument Transformers:
   1. Comply with **<<IEEE C57.13>>**.
   2. Select suitable ratio, burden, and accuracy as required for connected devices.
   3. Current Transformers: Connect secondaries to shorting terminal blocks.
   4. Potential Transformers: Include primary and secondary fuses with disconnecting means.

2.03 OVERCURRENT PROTECTIVE DEVICES

A. Circuit Breakers:
   1. Interrupting Capacity:

DRAFT

a. Provide circuit breakers with interrupting capacity as required to provide the short circuit current rating indicated, but not less than specified minimum requirements.
b. Fully Rated Systems: Provide circuit breakers with interrupting capacity not less than the short circuit current rating indicated.

2. Molded Case Circuit Breakers:
a. Description: Quick-make, quick-break, over center toggle, trip-free, trip-indicating circuit breakers; listed and labeled as complying with **<<UL 489>><< , and complying with FS W-C-375 where applicable; , _____; or None - N/A>>**; ratings, configurations, and features as indicated**<< on the drawings; _____; or None - N/A>>**.
b. Thermal Magnetic Circuit Breakers: For each pole, furnish thermal inverse time tripping element for overload protection and magnetic instantaneous tripping element for short circuit protection.
c. Electronic Trip Circuit Breakers: Furnish solid state, microprocessor-based, true rms sensing trip units.
1) Provide the following field-adjustable trip response settings:
(a) Long time delay.
(b) Short time pickup and delay.

B. Energy reductino maintenance switch (ERMS):
1. Switchboard shall contain an arc energy reduction maintenance switch (ERMS) for each circuit breaker rated 1200-amps or larger, including any provisional spaces as indicated as "space and provision" and marked with 1200-amp or greater frame size. The ERMS shall include the following features:
a. External override and circuitry which shall be connected to a breaker's trip unit, and shall be adjustable between 2.5x - 10x trip unit sensor rating.
b. Operation: Enabled via a mode selector switch located adjacent the circuit breaker or electronic trip unit integral to circuit breaker.
1) Mode selector switch: A separate local LED status indicator light shall demonstrate switch is in the "normal" or "maintenance" mode. The selector switch shall be lockable and accessibly mounted on the front enclosure cover above or adjacent to each breaker position served.
2) Electronic trip unit: Confirmation of protection mode via LED indicator light.
c. An ERMS hazard warning label shall be provided indicating presence of the ERMS.
2. Provide trip unit settings for maintenance after performing arc flash study in accordance with the NFPA 70E. The arc flash study shall provide arc flash energy and hazard category with "normal" and "maintenance" device protection (trip unit) settings respecfively including protective coordination curves.

2.04 SOURCE QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Factory test switchboards according to **<<NEMA PB 2>>**, including the following production (routine) tests on each switchboard assembly or component:
1. Dielectric tests.
2. Mechanical operation tests.
3. Grounding of instrument transformer cases test.
4. Electrical operation and control wiring tests, including polarity and sequence tests.
5. Ground-fault sensing equipment test.

DRAFT

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that the ratings and configurations of the switchboards and associated components are consistent with the indicated requirements.

C. Verify that mounting surfaces are ready to receive switchboards.

D. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install switchboards in accordance with **<<NECA 1>>** (general workmanship), **<<NECA 400>>**, and **<<NEMA PB 2.1>>**.

C. Arrange equipment to provide required clearances and maintenance access, including accommodations for any drawout devices.

D. Where switchboard is indicated to be mounted with inaccessible side against wall, provide minimum clearance of **<< 1/2 inch; or _____>>** between switchboard and wall.

E. Provide required support and attachment in accordance with Section **<< 260529>>**.

F. Install switchboards plumb and level.

G. Unless otherwise indicated, mount switchboards on properly sized **<< 4 inch; or _____>>** high concrete pad constructed in accordance with Section **<< 033000; or _____>>**.

H. Provide grounding and bonding in accordance with Section **<< 260526>>**.

I. Install all field-installed devices, components, and accessories.

J. Where accessories are not self-powered, provide control power source as indicated or as required to complete installation.

K. Set field-adjustable circuit breaker tripping function settings as determined by overcurrent protective device coordination study performed in accordance with Section **<< 260573>>**.

L. Set field-adjustable ground fault protection pickup and time delay settings**<< as indicated; as directed; or _____>>**.

M. Provide filler plates to cover unused spaces in switchboards.

3.03 CONNECTIONS

A. Connect switchboards and components to wiring systems according to other sections of Division 26 and instructed by manufacturer's recommendations.

B. Ground equipment according to Section 260526 Grounding and Bonding, and as instructed by manufacturer's recommendations.

C. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. Where manufacturer's values are not indicated, use those specified inUL 486A adn UL 486B.

3.04 IDENTIFICATION

A. Identify field-installed wiring and components as specified in Section 260553 Identification for Electrical Systems.

DRAFT

B. Nameplates: Provide identification nameplate for each switchboard and section, including associated components, located on front of assembly.

3.05 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Provide services of a manufacturer's authorized representative to **<< observe installation and assist in inspection and testing; perform inspection and testing; or _____>>**. Include manufacturer's reports with submittals.

C. Disconnect surge protective devices (SPDs) prior to performing any high potential testing. Replace SPDs damaged by performing high potential testing with SPDs connected.

D. Before energizing switchboard, perform insulation resistance testing in accordance with **<<NECA 400>>** and **<<NEMA PB 2.1>>**.

E. Inspect and test in accordance with **<<NETA ATS>>**, except Section 4.

F. Perform inspections and tests listed in **<<NETA ATS>>**, Section 7.1.

G. Molded Case and Insulated Case Circuit Breakers: Perform inspections and tests listed in **<<NETA ATS>>**, Section 7.6.1.1**<< for all main circuit breakers and circuit breakers larger than _____ amperes; for all main circuit breakers; for circuit breakers larger than _____ amperes; _____; or None - N/A>>**. Tests listed as optional are **<< not required.; required.; not required, except for the following:; or _____>>**

H. Ground Fault Protection Systems: Test in accordance with manufacturer's instructions as required by **<<NFPA 70>>**.

1. Perform inspections and tests listed in **<<NETA ATS>>**, Section 7.14. The insulation-resistance test on control wiring listed as optional is **<< not required; required; or _____>>**.

I. Meters: Perform inspections and tests listed in **<<NETA ATS>>**, Section 7.11.2.

J. Instrument Transformers: Perform inspections and tests listed in **<<NETA ATS>>**, Section 7.10. The dielectric withstand tests on primary windings with secondary windings connected to ground listed as optional are **<< not required; required; or _____>>**.

K. Correct deficiencies and replace damaged or defective switchboards or associated components.

3.06 ADJUSTING

A. Adjust tightness of mechanical and electrical connections to manufacturer's recommended torque settings.

B. Adjust alignment of switchboard covers and doors.

3.07 CLEANING

A. Clean dirt and debris from switchboard enclosures and components according to manufacturer's instructions.

B. Repair scratched or marred surfaces to match original factory finish.

3.08 CLOSEOUT ACTIVITIES

A. Training: Train **<<Owner>>**'s personnel on operation, adjustment, and maintenance of switchboard and associated devices.

DRAFT

1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.

END OF SECTION 262413

DRAFT

SECTION 262416
PANELBOARDS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Power distribution panelboards.

B. Lighting and appliance panelboards.

C. Overcurrent protective devices for panelboards.

1.02 RELATED REQUIREMENTS

A. Section **<< 260526 - Grounding and Bonding for Electrical Systems>>**.

B. Section **<< 260529 - Hangers and Supports for Electrical Systems>>**.

C. Section **<< 260553 - Identification for Electrical Systems>>**: Identification products and requirements.

D. Section **<< 260573 - Power System Studies>>**: Additional criteria for the selection and adjustment of equipment and associated protective devices specified in this section.

E. Section **<< 264300 - Surge Protective Devices>>**.

1.03 REFERENCE STANDARDS

A. FS W-C-375 - Circuit Breakers, Molded Case; Branch Circuit and Service.

B. NECA 1 - Standard for Good Workmanship in Electrical Construction.

C. NECA 407 - Standard for Installing and Maintaining Panelboards.

D. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

E. NEMA PB 1 - Panelboards.

F. NEMA PB 1.1 - General Instructions for Proper Installation, Operation and Maintenance of Panelboards Rated 1000V or Less.

G. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems.

H. NFPA 70 - National Electrical Code.

I. UL 50 - Enclosures for Electrical Equipment, Non-Environmental Considerations.

J. UL 50E - Enclosures for Electrical Equipment, Environmental Considerations.

K. UL 67 - Panelboards.

L. UL 489 - Molded-Case Circuit Breakers, Molded-Case Switches and Circuit Breaker Enclosures.

M. UL 869A - Reference Standard for Service Equipment.

N. UL 943 - Ground-Fault Circuit-Interrupters.

O. UL 1699 - Arc-Fault Circuit-Interrupters.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

DRAFT

1. Coordinate the work with other trades to avoid placement of ductwork, piping, equipment, or other potential obstructions within the dedicated equipment spaces and working clearances for electrical equipment required by **<<NFPA 70>>**.
2. Coordinate arrangement of electrical equipment with the dimensions and clearance requirements of the actual equipment to be installed.
3. Coordinate the work with other trades to provide walls suitable for installation of flush-mounted panelboards where indicated.
4. Verify with manufacturer that conductor terminations are suitable for use with the conductors to be installed.
5. Notify **<<Architect>>** of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

1.05 SUBMITTALS

A. Product Data: Provide manufacturer's standard catalog pages and data sheets for panelboards, enclosures, overcurrent protective devices, and other installed components and accessories.

B. Shop Drawings: Indicate outline and support point dimensions, voltage, main bus ampacity, overcurrent protective device arrangement and sizes, short circuit current ratings, conduit entry locations, conductor terminal information, and installed features and accessories.

C. Field Quality Control Test Reports.

D. Project Record Documents: Record actual installed locations of panelboards and actual installed circuiting arrangements.

E. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.
1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
2. Panelboard Keys: **<< Two; or _____>>** of each different key.

1.06 QUALITY ASSURANCE

A. Comply with requirements of **<<NFPA 70>>**.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store panelboards in accordance with manufacturer's instructions and **<<NECA 407>>**.

B. Store in a clean, dry space. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.

C. Handle carefully in accordance with manufacturer's written instructions to avoid damage to panelboard internal components, enclosure, and finish.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. ABB: www.electrification.us.abb.com/#sle.

B. Eaton Corporation: www.eaton.com/#sle.

C. Schneider Electric: www.se.com/#sle.

D. Siemens Industry, Inc: www.new.siemens.com/#sle.

DRAFT

E. Source Limitations: Provide panelboards and associated components produced by same manufacturer as other electrical distribution equipment used for project and obtained from a single supplier.

2.02 PANELBOARDS - GENERAL REQUIREMENTS

A. Provide products listed, classified, and labeled as suitable for the purpose intended.

B. Unless otherwise indicated, provide products suitable for continuous operation under the following service conditions:
   1. Altitude: Less than **<< 6,600 feet>>**.
   2. Ambient Temperature:
      a. Panelboards Containing Circuit Breakers: Between **<< 23 degrees F>>** and **<< 104 degrees F>>**.

C. Short Circuit Current Rating:
   1. Provide panelboards with listed short circuit current rating **<< not less than the available fault current at the installed location as indicated on the drawings; as indicated on the drawings; or _____>>**.
   2. Provide panelboards with listed short circuit current rating not less than the available fault current at the installed location as determined by short circuit study performed in accordance with Section **<< 260573>>**.

D. Panelboards Used for Service Entrance: Listed and labeled as suitable for use as service equipment according to **<<UL 869A>>**.

E. Mains: Configure for top or bottom incoming feed as indicated or as required for the installation.

F. Branch Overcurrent Protective Devices: Replaceable without disturbing adjacent devices.

G. Bussing: Sized in accordance with **<<UL 67>>** temperature rise requirements.
   1. Provide **<< fully rated; 200 percent rated; or _____>>** neutral bus**<< unless otherwise indicated; where neutral is indicated; _____; or None - N/A>>**, with a suitable lug for each feeder or branch circuit requiring a neutral connection.
   2. Provide solidly bonded equipment ground bus in each panelboard, with a suitable lug for each feeder and branch circuit equipment grounding conductor.

H. Conductor Terminations: Suitable for use with the conductors to be installed.

I. Enclosures: Comply with **<<NEMA EN 10250>>**, and list and label as complying with **<<UL 50>>** and **<<UL 50E>>**.
   1. Environment Type per **<<NEMA EN 10250>>**: **<< Unless otherwise indicated, as specified for the following installation locations:; As indicated on the drawings.; or _____ .>>**
      a. Indoor Clean, Dry Locations: **<< Type 1; or _____>>**.
      b. Outdoor Locations: **<< Type 3R; Type 4X, stainless steel; or _____>>**.
   2. Boxes: Galvanized steel unless otherwise indicated.
      a. Provide wiring gutters sized to accommodate the conductors to be installed.
   3. Fronts:
      a. Fronts for Surface-Mounted Enclosures: Same dimensions as boxes.
      b. Fronts for Flush-Mounted Enclosures: Overlap boxes on all sides to conceal rough opening.
   4. Lockable Doors: All locks keyed alike unless otherwise indicated.

DRAFT

J. Future Provisions: Prepare all unused spaces for future installation of devices including bussing, connectors, mounting hardware and all other required provisions.

K. Surge Protective Devices: Where factory-installed, internally mounted surge protective devices are provided in accordance with Section **<< 264300>>**, list and label panelboards as a complete assembly including surge protective device.

1. Provide SPD where indicated on drawings.

L. All branch breakers serving electrical distribution equipment (transformers, panelboards, transfer switches, etc.) and all main breakers in panelboards on the life safety (NEC 700), legally required (NEC 701), and optional standby (NEC 702) systems shall have LSI (long time, short time, and instantaneous) settings.

M. All panelboards on the life safety (NEC 700) system shall have surge protection.

N. Multi-Section Panelboards: Provide enclosures of the same height, with **<< feed-through lugs; sub-feed lugs; or _____>>** and feeders as indicated or as required to interconnect sections.

1. Panelboard shall be a maximum of 42 poles per enclosure. Provide multiple sections as required to maintain pole quantity indicated on panelboard schedule.

2.03 POWER DISTRIBUTION PANELBOARDS

A. Description: Panelboards complying with **<<NEMA PB 1>>**, power and feeder distribution type, **<< circuit breaker type; fusible switch type; circuit breaker or fusible switch type as indicated; or _____>>**, and listed and labeled as complying with **<<UL 67>>**; ratings, configurations and features as indicated**<< on the drawings; _____; or None - N/A>>**.

B. Conductor Terminations:

1. Main and Neutral Lug Material: Copper, suitable for terminating aluminum or copper conductors.
2. Main and Neutral Lug Type: **<< Mechanical; Compression; or _____>>**.

C. Bussing:

1. Phase and Neutral Bus Material: Copper.
2. Ground Bus Material: Copper.

D. Circuit Breakers:

1. Provide **<< bolt-on; plug-in; or _____>>** type**<< or plug-in type secured with locking mechanical restraints; _____; or None - N/A>>**.

E. Enclosures:

1. Provide **<< surface-mounted; flush-mounted; or _____>>** enclosures**<< as indicated; unless otherwise indicated; _____; or None - N/A>>**.
2. Fronts: Provide door-in-door trim with hinged cover for access to load terminals and wiring gutters, and separate lockable hinged door with concealed hinges for access to overcurrent protective device handles without exposing live parts.
3. Provide **<< clear plastic; metal; or _____>>** circuit directory holder mounted on inside of door.

2.04 LIGHTING AND APPLIANCE PANELBOARDS

A. Description: Panelboards complying with **<<NEMA PB 1>>**, lighting and appliance branch circuit type, circuit breaker type, and listed and labeled as complying with **<<UL 67>>**; ratings, configurations and features as indicated**<< on the drawings; _____; or None - N/A>>**.

DRAFT

B. Conductor Terminations:
   1. Main and Neutral Lug Material: Copper, suitable for terminating aluminum or copper conductors.
   2. Main and Neutral Lug Type: **<< Mechanical; Compression; or _____>>**.

C. Bussing:
   1. Phase Bus Connections: Arranged for sequential phasing of overcurrent protective devices.
   2. Phase and Neutral Bus Material: Copper.
   3. Ground Bus Material: Copper.

D. Circuit Breakers: Thermal magnetic **<< bolt-on; plug-in; or _____>>** type**<< unless otherwise indicated; _____; or None - N/A>>**.

E. Enclosures:
   1. Provide **<< surface-mounted; flush-mounted; or _____>>** enclosures**<< as indicated; unless otherwise indicated; _____; or None - N/A>>**.
   2. Fronts: Provide door-in-door trim with hinged cover for access to load terminals and wiring gutters, and separate lockable hinged door with concealed hinges for access to overcurrent protective device handles without exposing live parts.
   3. Provide **<< clear plastic; metal; or _____>>** circuit directory holder mounted on inside of door.

2.05 OVERCURRENT PROTECTIVE DEVICES

A. Molded Case Circuit Breakers:
   1. Description: Quick-make, quick-break, over center toggle, trip-free, trip-indicating circuit breakers listed and labeled as complying with **<<UL 489>><< , and complying with FS W-C-375 where applicable; , _____; or None - N/A>>**; ratings, configurations, and features as indicated**<< on the drawings; _____; or None - N/A>>**.
   2. Interrupting Capacity:
      a. Provide circuit breakers with interrupting capacity as required to provide the short circuit current rating **<< indicated, but not less than:; indicated.; or _____>>**
      b. Fully Rated Systems: Provide circuit breakers with interrupting capacity not less than the short circuit current rating indicated.
   3. Conductor Terminations:
      a. Lug Material: Copper, suitable for terminating aluminum or copper conductors.
   4. Thermal Magnetic Circuit Breakers: For each pole, furnish thermal inverse time tripping element for overload protection and magnetic instantaneous tripping element for short circuit protection.
   5. Electronic Trip Circuit Breakers: Furnish solid state, microprocessor-based, true rms sensing trip units.
   6. Multi-Pole Circuit Breakers: Furnish with common trip for all poles.
   7. Provide the following circuit breaker types where indicated:
      a. Ground Fault Circuit Interrupter (GFCI) Circuit Breakers: Listed as complying with **<<UL 943>>**, class A for protection of personnel.
      b. Ground Fault Equipment Protection Circuit Breakers: Designed to trip at 30 mA for protection of equipment.
      c. Arc-Fault Circuit Interrupter (AFCI) Circuit Breakers: Combination type listed as complying with **<<UL 1699>>**.

DRAFT

8. Do not use tandem circuit breakers.
9. Do not use handle ties in lieu of multi-pole circuit breakers.
10. Provide **<< multi-pole circuit breakers; circuit breaker handle-ties; or _____>>** for multi-wire branch circuits as required by **<<NFPA 70>>**.
11. Provide the following features and accessories where indicated or where required to complete installation:
    a. Shunt Trip: Provide **<< coil voltage as required for connection to indicated trip actuator; 120 VAC coil; or _____>>**.
    b. Handle Pad-Lock Provision: For locking circuit breaker handle in OFF position.

2.06 SOURCE QUALITY CONTROL

A. Factory test panelboards according to **<<NEMA PB 1>>**.

PART 3 EXECUTION

3.01 INSTALLATION

A. Perform work in accordance with **<<NECA 1>>** (general workmanship).
B. Install products in accordance with manufacturer's instructions.
C. Install panelboards in accordance with **<< NECA 407; NEMA PB 1.1; and _____>>**.
D. Arrange equipment to provide minimum clearances in accordance with manufacturer's instructions and **<<NFPA 70>>**.
E. Provide required support and attachment in accordance with Section **<< 260529>>**.
F. Install panelboards plumb.
G. Install flush-mounted panelboards so that trims fit completely flush to wall with no gaps and rough opening completely covered.
H. Mount panelboards such that the highest position of any operating handle for circuit breakers or switches does not exceed **<< 79 inches>>** above the floor or working platform.
I. Provide minimum of four spare 1-inch trade size conduits out of each flush-mounted panelboard stubbed into accessible space above ceiling and below floor.
J. Provide grounding and bonding in accordance with Section **<< 260526>>**.
K. Install all field-installed branch devices, components, and accessories.
L. Where accessories are not self-powered, provide control power source as indicated or as required to complete installation.
M. Multi-Wire Branch Circuits: Group grounded and ungrounded conductors together in the panelboard as required by **<<NFPA 70>>**.
N. Set field-adjustable circuit breaker tripping function settings as determined by overcurrent protective device coordination study performed according to Section **<< 260573>>**.
O. Provide filler plates to cover unused spaces in panelboards.
P. Provide circuit breaker lock-on devices to prevent unauthorized personnel from de-energizing essential loads**<< where indicated; as directed; _____; or None - N/A>>.<< Also provide for the following:; or None - N/A>>**
    1. Emergency and night lighting circuits.
    2. Fire detection and alarm circuits.
Q. Identify panelboards in accordance with Section **<< 260553>>**.

DRAFT

3.02 CONNECTIONS

A. Connect panelboards and components to wiring and to ground as indicated.

B. Shared neutral conductors shall not be permitted, except where indicated.

C. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. Where manufacturer's values are

3.03 IDENTIFICATION

A. Materials: Refer to Section 260553. Identify units, auxiliary devices, controls, and wiring. Identify equipment ratings.

B. Nameplates: Refer to Section 260553. Provide identification nameplate for each panelboard and associated components located on the front of the assembly.

C. Identify field-installed wiring and components. Refer to Section 260553.

D. Provide printed directory for each panelboard. Handwritten directories are not acceptable. Copying of panel schedules and descriptions on drawings is not acceptable. Circuit directory shall reflect final circuit installation. Include the following informaiton:

1. Panelboard designation and room location.
2. Circuit breakers, size and number of poles.
3. Circuit or feeder descripption including destination room name(s) and number(s).
4. Clear description of type of load circuit serves.
5. Panelboard ratings: Main bus ampacity, main circuit breaker or main lug ampacity, AIC rating.
6. Incoming primary feeder size and source panelboard circuit designation.

E. Room names and numbers on the panelboard directories shall match names and numbers used by the Owner. Note that room names and numbers on the drawings may not match the Owner's final room name and numbering scheme.

3.04 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Inspect and test in accordance with **<<NETA ATS>>**, except Section 4.

C. Molded Case Circuit Breakers: Perform inspections and tests listed in **<<NETA ATS>>**, Section 7.6.1.1**<< for all main circuit breakers and circuit breakers larger than _____ amperes; for all main circuit breakers; for circuit breakers larger than _____ amperes; _____; or None - N/A>>**. Tests listed as optional are **<< not required.; required.; not required, except for the following:; or _____>>**

D. Test GFCI circuit breakers to verify proper operation.

E. Test AFCI circuit breakers to verify proper operation.

F. Test shunt trips to verify proper operation.

G. Procure services of a qualified manufacturer's representative to observe installation and assist in **<< inspection; testing; and adjusting>>**. Include manufacturer's reports with field quality control submittals.

H. Correct deficiencies and replace damaged or defective panelboards or associated components.

3.05 ADJUSTING

A. Adjust tightness of mechanical and electrical connections to manufacturer's recommended torque settings.

DRAFT

B. Adjust alignment of panelboard fronts.

3.06 CLEANING

A. Clean dirt and debris from panelboard enclosures and components according to manufacturer's instructions.

B. Repair scratched or marred exterior surfaces to match original factory finish.

END OF SECTION 262416

DRAFT

SECTION 262550
GENERATOR DOCKING STATIONS

PART 1 - GENERAL

1.01 REFERENCE STANDARDS

A. NFPA 70 - National Electrical Code.

B. UL 50 - Enclosures for Electrical Equipment, Non-Environmental Considerations.

C. UL 489 - Molded-Case Circuit Breakers, Molded-Case Switches and Circuit Breaker Enclosures.

1.02 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in **<<NFPA 70>>**, by a qualified testing agency, and marked for intended location and application.

B. ETL/UL LISTED

C. **<<UL 50>>** LISTED

1.03 COORDINATION

A. Coordinate layout and installation of Generator Docking Station, and components with equipment served and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels

1.04 WARRANTY

A. Manufacturer Warranty shall be provided for a minimum of 1 Year,
   1. Extended Warranty will be supplied upon at user's request at an additional charge from Manufacturer.

B. The equipment installed under this contract shall be left in proper working order

C. New materials and equipment shall be guaranteed against defects in composition, design or workmanship. Guarantee certificates shall be furnished.

DRAFT

PART 2 - PRODUCTS

2.01 DOCKING STATION

A. Manufacturers: Subject to compliance with requirements, provide products by the following:
   1. Basis of Design - TRYSTAR: Dual Purpose Docking Station DBDS-5
   2. Asco
   3. Eaton

2.02 GENERAL REQUIREMENTS

A. Enclosure
   1. NEMA 3R Rain-Tight Aluminum Enclosure
      a. Pad-lockable front door shall include a hinged access plate at the bottom for entry of temporary cabling that prevents unauthorized tampering while in use.
      b. NEMA 3R Integrity shall be maintained while temporary cabling is connected during use
      c. Front and Side shall be accessible for maintenance

d. Top, Side, and Bottom shall be accessible for permanent cabling

2. Powder coat
   a. Paint after fabrication shall be Hammer tone Gray

B. Phase, Neutral, and Ground Busbar
   1. Material: Silver-plated Copper
   2. Equipment Ground Bus: bonded to box.
   3. Ground Bus: 100% of phase size.
   4. Neutral Bus: Neutral bus rated 100 percent of phase bus.

C. Temporary generator and Load Bank connectors shall be Camlok style mounted on gland plate.
   1. Camlok shall be 16 Series model and color coded according to system voltage requirements.
   2. Camlok connections shall be Bus Bar Style, Cabling or Double Set Screw is not acceptable
   3. Camlok connection shall be protected against accidental contact while not in use

D. Permanent Connection shall be factory installed broad range set-screw mechanical type, located behind a physical barrier

E. Short Circuit & Withstand Rating
   1. Shall be minimum 65 KAIC unless otherwise indicated on drawings

F. Voltage & Amperage
   1. **<< as indicated on the drawings; _____; or None - N/A>>**

G. Factory Installed Phase Rotation Monitor Device:
   1. Phase monitoring relay to be Siemens 3U4512-1AR20 or equal and factory installed

H. Breaker Disconnects in Permanent Line, Temporary Line, and Temporary Load Bank Positions
   1. Must be **<<UL 489>>** Listed Breaker
   2. Breakers shall be removable for service and maintenance
   3. Interlocked permanent line breaker and temporary line breaker

I. Additional accessories shall be included in submittal drawing as follows:
   1. SCADA Terminal Port
   2. Kirk Key Door Interlock
   3. Listed Monitoring Device
   4. Surge Protection Device
   5. Utility Light/Alarm

DRAFT

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine elements and surfaces to receive Generator Docking Station for compliance with installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected

3.02 INSTALLATION

A. Surface, Flush or Base Mounted: Determined by Application
   1. Install anchor bolts to elevations required for proper attachment to Generator Docking Station.

3.03 IDENTIFICATION

A. Comply with requirements in Division 26 Section "Identification for Electrical Systems."

B. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.

C. Label each enclosure with engraved metal or laminated-plastic nameplate.

3.04 FACTORY COMMISSIONING

A. Upon completion of the installation, the docking station shall be commissioned by the Manufacturer’s factory authorized technician.

B. SCOPE OF WORK SHALL INCLUDE:

1. Review and verify the installation of all components and verify the correct electrical flow as depicted on the one-line drawings.
2. (If Applicable) The Manufacturer’s authorized technician will set the long time, short time, instantaneous and ground fault protection settings on the Generator Docking Station circuit breaker(s) in accordance with the engineer’s specifications or as provided as part of the coordination study.
3. Factory training for on-site personnel to educate them on how to connect the GDS to a portable generator.
4. The Manufacturer’s factory authorized technician shall, upon completion of the commissioning provide a written report to the electrical contractor and electrical engineer indicating the completion of the work.
5. Any issue that is found during the start-up that is determined at that time to be a warranty issue will be covered by Manufacturer. Any issues that are specific to the scope for the electrical installing contractor are the sole responsibility of the installing contractor.
6. Upon successful completion of the commissioning, provide a complimentary 12-month warranty extension, above and beyond the 12-month manufacturer warranty.

3.05 FIELD QUALITY CONTROL

A. Third Party Tests and Inspections to include the following:

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.

B. Prepare test and inspection reports, including a certified report that identifies Generator Docking Station and that describes scanning results. Include notation.

END OF SECTION 262550

DRAFT

SECTION 262653
ELECTRIC VEHICLE CHARGING EQUIPMENT - LEVEL 2

SECTION 262653 - ELECTRIC VEHICLE CHARGING EQUIPMENT - LEVEL 2

PART 1 GENERAL

2.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

2.02 SUMMARY

A. Section includes EV charging equipment that provides Level 2 EV charging.

B. Provide duel chargers with one charging port.

2.03 DEFINITIONS

A. EV: Electric vehicle.

B. EV Cable: The off-board cable containing the conductor(s) to connect the EV power controller to the EV that provides both power and communications during energy transfer.

C. EV Capable: Parking spaces that include nearby termination of raceway (conduit) to a power source with sufficient electrical panel capacity designed for simultaneous charging of electric vehicles in all planned EV parking spaces. Electrical wiring need not be pulled through raceway (conduit) until charging station is installed.

D. EV Charger or EV Charging Equipment: See "EVSE".

E. EV Connector: A conductive device that, when electrically coupled to an EV inlet, establishes an electrical connection to the EV for the purpose of power transfer and information exchange. This device is part of the EV coupler.

F. EV Coupler: A mating EV inlet and connector set.

G. EV Inlet: The device in the vehicle into which the EV connector is inserted, and a conductive connection is made for the transfer of power and communication. This device is part of the EV coupler.

H. EV Make Ready: Parking spaces that include nearby termination of raceway (conduit) and electrical wiring pulled to a power source with sufficient electrical panel capacity for simultaneous charging of electric vehicles in all EV parking spaces.

I. EVSE: Electric Vehicle Supply Equipment. It includes the EV charging equipment and conductors, including the ungrounded, grounded, and equipment grounding conductors and EV cables, attachment plugs, and all other fittings, devices, power outlets, or apparatus installed specifically for transferring energy between the premise wiring and the EV.

2.04 REFERENCE STANDARDS

A. NECA 1 - Standard for Good Workmanship in Electrical Construction.

B. NFPA 70 - National Electrical Code.

C. SAE J1772 - SAE Electric Vehicle and Plug in Hybrid Electric Vehicle Conductive Charge Coupler.

D. UL 486A-486B - Wire Connectors.

DRAFT

E. UL 2231-1 - Standard for Safety for Personnel Protection Systems for Electric Vehicle (EV) Supply Circuits: General Requirements.

F. UL 2231-2 - Standard for Safety for Personnel Protection Systems for Electric Vehicle (EV) Supply Circuits: Particular Requirements for Protection Devices for Use in Charging Systems.

G. UL 2594 - Standard for Electric Vehicle Supply Equipment.

2.05 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at project site.

2.06 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for EV charging equipment.
   2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Shop Drawings: For EV charging equipment.
   1. Include plans, elevations, sections, and mounting details.
   2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   3. Detail fabrication and assembly of mounting assemblies for EV charging equipment.
   4. Include diagrams for power, signal, and control wiring.
   5. Include verification of wireless communications service at each location of EV charging equipment.

C. Product Schedule: For EV charging equipment. Use same designations indicated on Drawings.

D. Sustainable Design Submittals: Refer to Division 1 Section “Sustainable Design Requirements.”

2.07 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Area plans and details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Structural members to which equipment will be attached.
   2. Electrical service.
   3. Communications service, including wireless communications equipment.

B. Qualification Data: For Installer.

C. Field quality-control reports.

D. Sample Warranty: For manufacturer's warranty.

2.08 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For EV charging equipment to include in operation and maintenance manuals.

B. Software and Firmware Operational Documentation:
   1. Online training and help documentation.
   2. Station activation sticker.

DRAFT

2.09 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in **<<NFPA 70>>**, by a qualified testing agency, and marked for intended location and use.

C. Comply with **<<UL 2231-1>>**. **<<UL 2231-2>>**, **<<UL 2594>>**, and NEC Article 625.

D. Comply with **<<SAE J1772>>**.

E. Comply with FCC Part 15 Class A.

F. Meet the connected functionality criteria for ENERGY STAR certified EVSE.

G. Provide capability of responding to time-of-use market signals (e.g., price).

2.10 FIELD CONDITIONS

A. Wireless Survey: Complete wireless survey to determine if wireless provider signals meet or exceed manufacturer's recommended minimum values.

B. Rate equipment for continuous operation under the following conditions unless otherwise indicated:

1. Ambient Temperature: Not exceeding minus 22 to plus 122 deg F (minus 30 to plus 50 deg C).
2. Altitude: Not exceeding **<< 6600 feet>>**.

C. Rate Equipment for non-operation under the following conditions:

1. Ambient Temperature: Not exceeding minus 40 to plus 140 deg F (minus 40 to plus 60 deg C).
2. Altitude: Not exceeding **<< 6600 feet>>**.

D. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:

1. Notify Owner no fewer than seven days in advance of proposed interruption of electric service.
2. Do not proceed with interruption of electric service without Owner’s written permission.

DRAFT

2.11 WARRANTY

A. Manufacturer's Warranty: Manufacturer and Installer agree to repair or replace components of EV charging units that fail(s) in materials or workmanship within specified warranty period.

1. Standard Warranty Period: One year from date of Substantial Completion.
2. Extended Warranty Period: Five years from date of Substantial Completion.

2.12 SUBSTITUTIONS

A. Substitutions of the EV charging unit are allowed provided the following is provided with the Submittal package.

1. Provide all data as required for submittals with substitution package. Indicate variances with basis of design equipment.

PART 2 PRODUCTS

3.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following:
   1. ZeroVA Technologies AX48 Series (Basis of design)
   2. ChargePoint CT4000
   3. BTC Power EVP-2002-30
   4. Clipper Creek HCS-40
   5. EvoCharge

B. Source Limitations: Obtain EV charging equipment from single manufacturer.

3.02 EV CHARGING EQUIPMENT DESCRIPTION

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in **<<NFPA 70>>**, by a qualified testing agency, and marked for intended location and use.

B. Comply with **<<NFPA 70>>**.

C. ADA compliant.

D. Metering: +/- 2 percent from 2 percent to full scale of output (30 A).

E. EV Charging Equipment Mounting: Bollard mount.

F. Enclosures:
   1. Rated for environmental conditions at installed location.
      a. Outdoor Locations: NEMA 250, Type 3R.
      b. Aluminum and UV-resistant plastic.
      c. Paint and Anodized.
      d. Charging components protected by security screws.
      e. Charging connectors in locking holsters.
      f. Meter, modem, and CPU, tamper resistant.

G. EV Cable and Connectors:
   1. **<<SAE J1772>>** connector.
   2. Single station: One connector with locking holster.
   3. Dual station: Two connectors with locking holster.
   4. Minimum 24.6-foot (7.5-m) cable with cable management system.

H. Status Indicators:
   1. LEDs to indicate power, vehicle charging, charging complete, system status, faults, and service, as well as authorization.

I. Display Screen:
   1. VGA-resolution, daylight-viewable LCD screen with UV protection. Daylight readable and fingerprint resistant.
   2. Displays power, charging, charging complete, remote control, system status, faults, payment and pricing details, and service.

J. Networking:
   1. WAN Communications: Cellular GSM/GPRS and CDMA.
   2. LAN Communications: 2.4 GHz Wi-Fi 802.11b/g/n.

DRAFT

3. Capable of remote configuration, diagnostics and reporting.
4. Capable of remote software updates (future proof).

K. Payment System:
1. RFID (ISO 15693, ISO 14443), NFC, Contactless credit card reader.
2. PCI (Payment Card Industry) compliant.
3. Capable of remote control and authorization including mobile phone application or toll free phone number.

L. Charging Network: Compatible with the Manufacturers EV charging network.
1. Multiple units shall independently connect to charging network.
2. Multiple units shall have one unit designated as a master unit that is configured as a gateway unit between the EV charging equipment and the charging network.
3. Individual units shall be capable of indicating station status and availability providing or connecting user to customer support and remote control.

3.03 PERFORMANCE REQUIREMENTS

A. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.

B. Surge Withstand: 6 kV at 3000 A.

C. Integral GFCI.

D. Auto-GFCI fault retry.

E. Input Power:
1. One 60 A, 208/240-V ac, 60 Hz, single phase per charger.
2. Dual circuits do not need to be interlocked.

F. EV Charging Levels:
1. Single vehicle: AC Level 2 at up to 11.5 kW per vehicle.
2. Dual vehicles, AC Level 2 at up to 11.5 kW per vehicle.
3. Multiple vehicles simultaneously charging at a site using Automatic Power Load Management may be charged up to 11.5 kW per vehicle.

3.04 GENERAL FINISH REQUIREMENTS

A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 EXECUTION

4.01 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine roughing-in for EV charging equipment electrical conduit to verify actual locations of conduit connections before equipment installation.

C. Examine walls, floors, and pavement for suitable conditions where EV charging equipment will be installed.

DRAFT

D. Proceed with installation only after unsatisfactory conditions have been corrected.

4.02 INSTALLATION

A. Comply with **<<NECA 1>>** and NECA 413.

B. Concrete Base Mounting:

1. Install EV charging equipment on 6-inch (150-mm) nominal-thickness concrete base. Base should be 24-inch **<< 23.62 inch>>** diameter or square (minimum 12-inch (**<< 11.81 inch>>**) from the center located conduit stub-up). Comply with requirements for concrete base specified in Section 033000 "Cast-in-Place Concrete".
    a. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
    b. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
    c. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
    d. Install anchor bolts to elevations required for proper attachment to supported equipment.
    e. Secure EV charging equipment to concrete base according to manufacturer's written instructions.

C. Bollard Mounting:

1. Allow a minimum of **<< 24 inches>>** of clearance around EV charging equipment.
2. EV charging equipment receptacles or holders shall be not less than **<< 24 inches>>** and not more than **<< 4 feet>>** above finished grade.
3. Mount EV charging equipment plumb and rigid without distortion of enclosure.
4. Secure EV charging equipment according to manufacturer's written instructions.

D. Comply with mounting and anchoring requirements specified in Section 260548.16 "Seismic Controls for Electrical Systems."

E. Wiring Method: Install cables in raceways and cable trays. Conceal raceway and cables except in unfinished spaces.

1. Comply with requirements for raceways and boxes specified in Section 260533 "Raceways and Boxes for Electrical Systems."

F. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.

G. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

H. Circuit Breakers: Comply with Section 262816 "Enclosed Switches and Circuit Breakers."

I. Secure covers to enclosure.

4.03 CONNECTIONS

A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Comply with grounding requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

DRAFT

C. Comply with requirements for installation of conduit in Section 260533 "Raceways and Boxes for Electrical Systems." Drawings indicate general arrangement of conduit, fittings, and specialties.

D. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in **<<UL 486A-486B>>**.

4.04 IDENTIFICATION

A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

4.05 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

B. Perform tests and inspections with the assistance of a factory-authorized service representative.

C. Tests and Inspections:
   1. For each unit of EV charging equipment, perform the following tests and inspections:
      a. Unit self-test.
      b. Operation test with load bank.
      c. Operation test with EV.
      d. Network communications test.

D. EV charging equipment will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

4.06 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform startup service.
   1. Complete installation and startup checks according to manufacturer's written instructions.

4.07 ONGOING MANAGEMENT SERVICES

A. Engage a station manufacturer that offers a service to manage the administration and policies of the electric vehicle charging stations on an ongoing basis.

4.08 SOFTWARE SERVICE AGREEMENT

A. Technical Support: Beginning at Substantial Completion, service agreement shall include software support for the duration of an active Manufacturers Network Service Plan.

B. Upgrade Service: At Substantial Completion, remotely update software to latest version. Install and program software upgrades that become available while an active Manufacturers Network Service Plan is maintained. Upgrading software shall include operating system and new or revised licenses for using software.

4.09 DEMONSTRATION

A. Train Owner's maintenance personnel to adjust, operate, and maintain EV charging equipment.

END OF SECTION 262653

DRAFT

SECTION 262713
ELECTRICITY METERING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Equipment for electricity metering by utility company.

B. Equipment for **<<Owner>>** electricity metering:

1. Single circuit electricity meters.
2. Multi-circuit electricity meters.

1.02 RELATED REQUIREMENTS

A. Section **<< 260526 - Grounding and Bonding for Electrical Systems>>**.

B. Section **<< 260529 - Hangers and Supports for Electrical Systems>>**.

C. Section **<< 260534 - Boxes for Electrical Systems>>**: Cabinets and enclosures for metering system components.

D. Section **<< 260553 - Identification for Electrical Systems>>**: Identification products and requirements.

E. Section **<< 262413 - Switchboards>>**: For interface with meters specified in this section.

F. Section **<< 262416 - Panelboards>>**: For interface with meters specified in this section.

G. Section **<< 262813 - Fuses>>**.

1.03 REFERENCE STANDARDS

A. ANSI C12.1 - Electric Meters - Code for Electricity Metering.

B. ANSI C12.20 - American National Standard for Electricity Meters - 0.1, 0.2, and 0.5 Accuracy Classes.

C. IEC 62053-21 - Electricity Metering Equipment - Particular Requirements - Part 21: Static Meters for AC Active Energy (Classes 0,5, 1 and 2).

D. IEC 62053-23 - Electricity Metering Equipment - Particular Requirements - Part 23: Static Meters for Reactive Energy (Classes 2 and 3).

E. IEEE 1459 - IEEE Standard Definitions for the Measurement of Electric Power Quantities Under Sinusoidal, Nonsinusoidal, Balanced, or Unbalanced Conditions.

F. IEEE C57.13 - IEEE Standard Requirements for Instrument Transformers.

G. NECA 1 - Standard for Good Workmanship in Electrical Construction.

H. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

I. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems.

J. NFPA 70 - National Electrical Code.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate work to provide equipment suitable for interface with electricity metering systems to be provided.

DRAFT

2. Notify **<<Architect>>** of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

1.05 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>**, for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for electricity metering systems and associated components and accessories. Include ratings, configurations, standard wiring diagrams, dimensions, service condition requirements, and installed features.

C. Shop Drawings: Include system interconnection schematic diagrams showing all factory and field connections. Include requirements for interface with other systems.

D. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

E. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.
   1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
   2. Operating and applications software documentation.
   3. Software licenses.
   4. Software service agreement.
   5. PC installation and operating documentation, manuals, and software for the PC and all installed peripherals. Software shall include system restore, emergency boot diskettes, and drivers for al linstalled hardware. Provide separately for each PC.
   6. Hard copies of manufacturer's specifications sheets, operating specifications, design guidelines, user's guides for software and hardware, and PDF files on USB thumb drive of the hard copy submittal.

1.06 QUALITY ASSURANCE

A. Comply with requirements of **<<NFPA 70>>**.

1.07 FIELD CONDITIONS

A. Maintain field conditions within required service conditions during and after installation.

1.08 PROJECT CONDITIONS

A. Interruption of existing electrical service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to the requirements indicated:
   1. Notify Construction Manager no fewer than 14 days in advance of proposed interruption of electrical service.
   2. Do not proceed with interruption of electrical service without Owner's written authorization.

1.09 COORDINATION

A. Electrical service connections: Coordinate with utility companies and components they furnish as follows:
   1. Comply with requirements of utilities providing electrical power services.
   2. Coordinate installation and connection of utilties and services, including provision for electricity-metering components.

B. Coordinate features of distribution equipment and power monitoring and control components to form an integrated interconnection of compatible components.

DRAFT

1. Match components and interconnections for optimum performance of specified functions.

C. Coordinate work of this section with those in sections specifying distribution components that are metered, monitored or controlled by metering, power monitoring and control equipment.

PART 2 PRODUCTS

2.01 EQUIPMENT FOR ELECTRICILITY METERING BY UTILITY COMPANY

A. Meters will be furnished by utility company.

B. Current-Transformer Cabinets: Comply with requirements of electrical power utility company.

C. Meter sockets: Comply with requirements of electrical power utility company.
1. Steady-state and short-circuit current ratings shall meet indicated circuit ratings.

2.02 EQUIPMENT FOR OWNER ELECTRICITY METERING

A. Manufacturers:
1. Leviton.
2. Eaton Corporation.
3. General Electric Company.
4. Schneider Electric USA, Inc.

B. Provide power monitoring, metering & controll in accordance with the International Energy Conservation Code 2021.
1. Provide measurement devices to monitor the electrical energy use for each of the following load types indicated on the contract documents.
2. The electrical energy use for all load types specified shall be recorded a minimum of every 15 minutes and reported at least hourly, daily, monthly and annually.
3. System shall automatically communicate consumption to data acquisition sytem.

C. Provide a system that can communicate with Owner's BAS system. BACnet IP protocol is required. If that is not possible, provide a BACnet gateway to communicate with the BAS system.

D. Provide microprocessor-based digital electricity metering systems including all instrument transformers, wiring, and connections necessary for measurements specified.

E. Provide products listed, classified, and labeled as suitable for the purpose intended.

F. Provide electricity metering systems and associated components compatible with the equipment and associated circuits to be metered.

G. Service Conditions: Provide electricity meters suitable for operation under the service conditions at the installed location.

H. Enclosures:
1. Where not furnished by manufacturer, provide required cabinets and enclosures in accordance with Section **<< 260534>>**.
2. Environment Type per **<<NEMA EN 10250>>**: **<< Unless otherwise indicated, as specified for the following installation locations:; As indicated on the drawings.; or _____ .>>**
a. Indoor Clean, Dry Locations: **<< Type 1; or _____>>**.
b. Outdoor Locations: **<< Type 3R or Type 4; Type 4X; or _____>>**.
3. Provide lockable door(s)**<< for outdoor locations; where indicated; _____; or None - N/A>>**.

DRAFT

4. Finish: **<< Manufacturer's standard unless otherwise indicated; or _____>>**.

I. Instrument Transformers:
1. Comply with **<<IEEE C57.13>>**, where applicable.
2. Select suitable ratio, burden, and accuracy as required for connected devices.
3. Current Transformers: Compatible with connected meters; replace meters damaged by connection of incompatible current transformers. Provide shorting terminal blocks for connection of secondaries where applicable.
4. Potential Transformers: Include primary and secondary fuses with disconnecting means.

J. Accessories:
1. Wiring: Provide manufacturer's recommended cables as indicated or as required for connections between system components.

K. Interface with Other Work:
1. Interface with building automation system as specified in Section 230900 - Building Automation System.

2.03 SINGLE CIRCUIT ELECTRICITY METERS

A. Single Circuit Electricity Meter**<< Type _____; for _____; _____; or None - N/A>>**:
1. Accuracy:
a. Real/Active Power/Energy: **<< Revenue grade; plus/minus 1.0 percent; complying with ANSI C12.1 and/or IEC 62053-21 Class 1; Revenue grade; plus/minus 0.5 percent, complying with ANSI C12.20 accuracy and/or IEC 62053-22 Class 0.5S; Revenue grade; plus/minus 0.2 percent, complying with ANSI C12.20 accuracy and/or IEC 62053-22 Class 0.2S; Plus/minus ____ percent; or _____>>**.
b. Reactive Power/Energy: **<< Plus/minus 2.0 percent, complying with IEC 62053-23 Class 2; Plus/minus _____ percent; or _____>>**.
c. Voltage: Plus/minus 2.0 percent.
d. Current: Plus/minus 2.0 percent.
2. Measured Parameters:
a. Voltage (Volts AC); line-to-line and line-to-neutral; **<< per phase; average of all phases; and _____>>**.
b. Current (Amps); **<< per phase; average of all phases; and _____>>**.
c. Frequency (Hz).
d. Real/active power (kW); **<< per phase; total of all phases; and _____>>**.
e. Reactive power (kVAR); **<< per phase; total of all phases; and _____>>**.
f. Apparent power (kVA); **<< per phase; total of all phases; and _____>>**.
g. Power factor; **<< per phase; total of all phases; and _____>>**.
h. Real/active energy (kWh).
i. Reactive energy (kVARh).
j. Apparent energy (kVAh).
k. Power demand; **<< real/active; reactive; apparent; and _____>><< ; present and maximum; ; _____; or None - N/A>>**.
l. Current demand**<< ; present and maximum; ; _____; or None - N/A>>**.
3. Data logging.
a. Storage Capacity: A minimum of 36 months of readings at 15 minute intervals.

DRAFT

4. Inputs:
   a. Pulse Contact Accumulator Input(s): **<< One; Two; or _____>>**; user-configurable to support measurement of other related energy values (gas, water, steam, etc.) using pulse-output transducers.
5. Communications: Compatible with connected systems. Provide all accessories necessary for proper interface.
   a. Serial Communications: **<< RS-485; or _____>>**; support for **<< Modbus RTU; BACnet MS/TP; or _____>>** & BACnet protocol.
   b. Ethernet Communications: Support for **<< Modbus TCP; BACnet IP; and _____>>** & BACnet protocol.

B. ----------

C. Use the following paragraphs to specify basis of design products from selected manufacturers or use the paragraphs above to specify generic, nonproprietary descriptions.

D. VERIS BASIS OF DESIGN PRODUCTS----->

2.04 MULTI-CIRCUIT ELECTRICITY METERS

A. Multi-Circuit Electricity Meter**<< Type _____; for _____; _____; or None - N/A>>**:
1. Metering Capacity: **<< As indicated or as required for circuits to be metered; _____ single phase or _____ three-phase circuits; One main device, one neutral, and _____ branch circuits; or _____>>**.
2. Accuracy:
   a. Real/Active Power/Energy: **<< Revenue grade; plus/minus 1.0 percent; complying with ANSI C12.1 and/or IEC 62053-21 Class 1; Revenue grade; plus/minus 0.5 percent, complying with ANSI C12.20 accuracy and/or IEC 62053-22 Class 0.5S; Revenue grade; plus/minus 0.2 percent, complying with ANSI C12.20 accuracy and/or IEC 62053-22 Class 0.2S; Plus/minus _____ percent; or _____>>**.
   b. Reactive Power/Energy: **<< Plus/minus 2.0 percent, complying with IEC 62053-23 Class 2; Plus/minus _____ percent; or _____>>**.
   c. Voltage: Plus/minus 2.0 percent.
   d. Current: Plus/minus 2.0 percent.
3. Measured Parameters:
   a. Voltage (Volts AC); line-to-line and line-to-neutral; **<< per phase; average of all phases; and _____>>**.
   b. Current (Amps); **<< per phase; average of all phases; and _____>>**.
   c. Frequency (Hz).
   d. Real/active power (kW); **<< per phase; total of all phases; and _____>>**.
   e. Reactive power (kVAR); **<< per phase; total of all phases; and _____>>**.
   f. Apparent power (kVA); **<< per phase; total of all phases; and _____>>**.
   g. Power factor; **<< per phase; total of all phases; and _____>>**.
   h. Real/active energy (kWh).
   i. Reactive energy (kVARh).
   j. Apparent energy (kVAh).
   k. Power demand; **<< real/active; reactive; apparent; and _____>><< ; present and maximum; ; _____; or None - N/A>>**.

DRAFT

l. Current demand**<< ; present and maximum; ; _____; or None - N/A>>**.

4. Data logging.
   a. Storage Capacity: 36 months of readings at 15 minute intervals.
5. Inputs:
   a. Pulse Contact Accumulator Input(s): **<< One; Two; or _____>>**; user-configurable to support measurement of other related energy values (gas, water, steam, etc.) using pulse-output transducers.
6. Communications: Compatible with connected systems. Provide all accessories necessary for proper interface.
   a. Serial Communications: **<< RS-485; or _____>>**; support for **<< Modbus RTU; BACnet MS/TP; or _____>>** & BACnet protocol.
   b. Ethernet Communications: Support for **<< Modbus TCP; BACnet IP; and _____>>** & BACnet protocol.

B. ----------

C. Use the following paragraphs to specify basis of design products from selected manufacturers or use the paragraphs above to specify generic, nonproprietary descriptions.

D. VERIS BASIS OF DESIGN PRODUCTS----->

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that the ratings and configurations of metering systems and associated components are consistent with the indicated requirements.

C. Verify that mounting surfaces are ready to receive meters.

D. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Perform work in accordance with **<<NECA 1>>** (general workmanship).

B. Utility Company Meter:
   1. Install meters furnished by utility company. Install raceways and equipment according to utility company's written requirements. Provide empty conduits for metering leads and extend grounding connections as required by utility company.

C. Install products in accordance with manufacturer's instructions.

D. Provide required support and attachment components in accordance with Section **<< 260529>>**.

E. Provide grounding and bonding in accordance with Section **<< 260526>>**.

F. Provide fuses complying with Section **<< 262813>>** as required.

G. Identify meters and associated wiring in accordance with Section **<< 260553>>**.

3.03 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Inspect and test in accordance with **<<NETA ATS>>**, except Section 4.

C. Meters: Perform inspections and tests listed in **<<NETA ATS>>**, Section 7.11.2.

DRAFT

D. Instrument Transformers: Perform inspections and tests listed in **<<NETA ATS>>**, Section 7.10. The dielectric withstand tests on primary windings with secondary windings connected to ground listed as optional are **<< not required; required; or _____>>**.

E. Correct deficiencies and replace damaged or defective metering system components.

3.04 ADJUSTING

A. Program system parameters according to requirements of **<<Owner>>**.

3.05 CLEANING

A. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

END OF SECTION 262713

DRAFT

SECTION 262726
WIRING DEVICES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Wall switches.

B. Receptacles.

C. Wall plates and covers.

D. Floor box service fittings.

E. Poke-through assemblies.

1.02 RELATED REQUIREMENTS

A. Section **<< 260519 - Low-Voltage Electrical Power Conductors and Cables>>**: Manufactured wiring systems for use with access floor boxes with compatible pre-wired connectors.

B. Section **<< 260526 - Grounding and Bonding for Electrical Systems>>**.

C. Section **<< 260534 - Boxes for Electrical Systems>>**.

D. Section **<< 260553 - Identification for Electrical Systems>>**: Identification products and requirements.

E. Section **<< 260923 - Lighting Control Devices>>**: Devices for automatic control of lighting, including **<< occupancy sensors; in-wall time switches; in-wall interval timers; and _____>>**.

F. Section **<< 271000 - Structured Cabling>>**: Voice and data jacks.

1.03 REFERENCE STANDARDS

A. FS W-C-596 - Connector, Electrical, Power, General Specification for.

B. FS W-S-896 - Switches, Toggle (Toggle and Lock), Flush Mounted (General Specification).

C. NECA 1 - Standard for Good Workmanship in Electrical Construction.

D. NECA 130 - Standard for Installing and Maintaining Wiring Devices.

E. NEMA WD 1 - General Color Requirements for Wiring Devices.

F. NEMA WD 6 - Wiring Devices - Dimensional Specifications.

G. NFPA 70 - National Electrical Code.

H. UL 20 - General-Use Snap Switches.

I. UL 498 - Attachment Plugs and Receptacles.

J. UL 514D - Cover Plates for Flush-Mounted Wiring Devices.

K. UL 943 - Ground-Fault Circuit-Interrupters.

L. UL 1310 - Class 2 Power Units.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

DRAFT

1. Coordinate the placement of outlet boxes with millwork, furniture, equipment, etc. installed under other sections or by others.
2. Coordinate wiring device ratings and configurations with the electrical requirements of actual equipment to be installed.
3. Coordinate the placement of outlet boxes for wall switches with actual installed door swings.
4. Coordinate the installation and preparation of uneven surfaces, such as split face block, to provide suitable surface for installation of wiring devices.
5. Coordinate the core drilling of holes for poke-through assemblies with the work covered under other sections.
6. Notify **<<Architect>>** of any conflicts or deviations from Contract Documents to obtain direction prior to proceeding with work.

1.05 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>**, for submittal procedures.

B. Product Data: Provide manufacturer's catalog information showing dimensions, colors, and configurations.

C. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.
   1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
   2. Extra Wall Plates: **<< One; Two; Ten (10); or ____>>** of each style, size, and finish.

1.06 QUALITY ASSURANCE

A. Comply with requirements of **<<NFPA 70>>**.

B. Products: Listed, classified, and labeled as suitable for the purpose intended.

C. Product Evaluation and Listing Organization Qualifications: Organization engaged in evaluation of products and services, including those recognized by OSHA as Nationally Recognized Testing Laboratories (NRTL), and acceptable to authorities having jurisdiction.

1.07 DELIVERY, STORAGE, AND PROTECTION

A. Store in a clean, dry space in original manufacturer's packaging until ready for installation.

PART 2 PRODUCTS

2.01 WIRING DEVICES - GENERAL REQUIREMENTS

A. Provide wiring devices suitable for intended use with ratings adequate for load served.

2.02 WALL SWITCHES

A. Manufacturers:
   1. Hubbell Incorporated**<< ; _____; or None - N/A>>**: www.hubbell.com/#sle.
   2. Leviton Manufacturing Company, Inc**<< ; _____; or None - N/A>>**: www.leviton.com/#sle.
   3. Pass & Seymour, a brand of Legrand North America, Inc**<< ; _____; or None - N/A>>**: www.legrand.us/#sle.

B. General Requirements: AC only, quiet operating, general-use snap switches with silver alloy contacts, complying with **<<NEMA WD 1>>** and **<<NEMA WD 6>>**, and listed as complying with **<<UL 20>><< and where applicable, FS W-S-896; _____; or None - N/A>>**; types as indicated**<< on the drawings; _____; or None - N/A>>**.

DRAFT

1. Wiring Provisions: Terminal screws for side wiring**<< and screw actuated binding clamp for back wiring; _____; or None - N/A>>** with separate ground terminal screw.

C. Standard Wall Switches: **<< Industrial specification grade; Commercial specification grade; Residential grade; or _____>>**, **<< 20; 15; or _____>>** A, **<< 120/277; 120; or _____>>** V with **<< standard toggle type; decorator style rocker type; or _____>>** switch actuator and maintained contacts; **<< single pole single throw; double pole single throw; three way; four way; or _____>>** as indicated**<< on the drawings; _____; or None - N/A>>**.

D. Pilot Light Wall Switches: **<< Industrial specification grade; Commercial specification grade; Residential grade; or _____>>**, **<< 20; 15; or _____>>** A, **<< 120/277; 120; or _____>>** V with **<< red; green; clear; or _____>>** illuminated **<< standard toggle type; decorator style rocker type; or _____>>** switch actuator and maintained contacts; illuminated with load on; **<< single pole single throw; double pole single throw; three way; four way; or _____>>** as indicated**<< on the drawings; _____; or None - N/A>>**.

E. Locking Wall Switches: **<< Industrial specification grade; Commercial specification grade; Residential grade; or _____>>**, **<< 20; 15; or _____>>** A, **<< 120/277; 120; or _____>>** V with **<< lever type; cylinder type; or _____>>** keyed switch actuator and maintained contacts; switches keyed alike; **<< single pole single throw; double pole single throw; three way; four way; or _____>>** as indicated**<< on the drawings; _____; or None - N/A>>**.

2.03 RECEPTACLES

A. Manufacturers:
1. Hubbell Incorporated: www.hubbell.com/#sle.
2. Leviton Manufacturing Company, Inc: www.leviton.com/#sle.
3. Lutron Electronics Company, Inc: www.lutron.com/#sle.
4. Pass & Seymour, a brand of Legrand North America, Inc: www.legrand.us/#sle.
5. Eaton ArrowHart Wiring Devices.
6. Source Limitations: Where wall controls are furnished as part of **<< lighting control system; window shade control system; or _____>>**, provide accessory matching receptacles and wallplates by the same manufacturer**<< in locations indicated; _____; or None - N/A>>**.

B. General Requirements: Self-grounding, complying with **<<NEMA WD 1>>** and **<<NEMA WD 6>>**, and listed as complying with **<<UL 498>><< , and where applicable, FS W-C-596; , _____; or None - N/A>>**; types as indicated**<< on the drawings; _____; or None - N/A>>**.
1. Wiring Provisions: Terminal screws for side wiring**<< or screw actuated binding clamp for back wiring; _____; or None - N/A>>** with separate ground terminal screw.
2. NEMA configurations specified are according to **<<NEMA WD 6>>**.
3. All receptacles shall be federal specification grade. Provide brass mounting strap.
4. Device finish color:
   a. General purpose receptacles: White.
   b. Generator power receptacles: Red.
5. Device plates finish color: Finish color of device plates shall match finish color of devices, unless otherwise indicated.

C. Convenience Receptacles:

DRAFT

1. Standard Convenience Receptacles: **<< Industrial specification grade; Commercial specification grade; Hospital grade; Residential grade; or _____>>**, **<< 20A, 125V, NEMA 5-20R; 15A, 125V, NEMA 5-15R; or _____>><< None - N/A; , rectangular decorator style; or , _____>>**; single or duplex as indicated**<< on the drawings; _____; or None - N/A>>**.
2. Automatically Controlled Convenience Receptacles: **<< Industrial specification grade, ; Commercial specification grade, ; Hospital grade, ; _____; or None - N/A>><< 20A, 125V, NEMA 5-20R; 15A, 125V, NEMA 5-15R; or _____>><< None - N/A; , rectangular decorator style; or , _____>>**; controlled receptacle marking on device face per **<<NFPA 70>>**; single or duplex as indicated**<< on the drawings; _____; or None - N/A>>**.
3. Weather Resistant Convenience Receptacles: **<< Industrial specification grade; Commercial specification grade; Hospital grade; Residential grade; or _____>>**, **<< 20A, 125V, NEMA 5-20R; 15A, 125V, NEMA 5-15R; or _____>><< None - N/A; , rectangular decorator style; or , _____>>**, listed and labeled as weather resistant type complying with **<<UL 498>>** Supplement SD suitable for installation in damp or wet locations; single or duplex as indicated**<< on the drawings; _____; or None - N/A>>**.
4. Tamper Resistant Convenience Receptacles: **<< Industrial specification grade; Commercial specification grade; Hospital grade; Residential grade; or _____>>**, **<< 20A, 125V, NEMA 5-20R; 15A, 125V, NEMA 5-15R; or _____>><< None - N/A; , rectangular decorator style; or , _____>>**, listed and labeled as tamper resistant type; single or duplex as indicated**<< on the drawings; _____; or None - N/A>>**.
5. Tamper Resistant and Weather Resistant Convenience Receptacles: **<< Industrial specification grade; Commercial specification grade; Hospital grade; Residential grade; or _____>>**, **<< 20A, 125V, NEMA 5-20R; 15A, 125V, NEMA 5-15R; or _____>><< None - N/A; , rectangular decorator style; or , _____>>**, listed and labeled as tamper resistant type and as weather resistant type complying with **<<UL 498>>** Supplement SD suitable for installation in damp or wet locations; single or duplex as indicated**<< on the drawings; _____; or None - N/A>>**.

D. GFCI Receptacles:

1. General Requirements: Self-testing, with feed-through protection and light to indicate ground fault tripped condition and loss of protection; listed as complying with **<<UL 943>>**, class A.
2. Standard GFCI Receptacles: **<< Industrial specification grade; Commercial specification grade; Hospital grade; Residential grade; or _____>>**, duplex, **<< 20A, 125V, NEMA 5-20R; 15A, 125V, NEMA 5-15R; or _____>><< , rectangular decorator style; , _____; or None - N/A>>**.
3. Weather Resistant GFCI Receptacles: **<< Industrial specification grade; Commercial specification grade; Hospital grade; Residential grade; or _____>>**, duplex, **<< 20A, 125V, NEMA 5-20R; 15A, 125V, NEMA 5-15R; or _____>><< , rectangular decorator style; , _____; or None - N/A>>**, listed and labeled as weather resistant type complying with **<<UL 498>>** Supplement SD suitable for installation in damp or wet locations.
4. Tamper Resistant GFCI Receptacles: **<< Industrial specification grade; Commercial specification grade; Hospital grade; Residential grade; or _____>>**, duplex, **<< 20A, 125V, NEMA 5-20R; 15A, 125V, NEMA 5-15R; or _____>><< , rectangular decorator style; , _____; or None - N/A>>**, listed and labeled as tamper resistant type.

DRAFT

5. Tamper Resistant and Weather Resistant GFCI Receptacles: **<< Industrial specification grade; Commercial specification grade; Hospital grade; Residential grade; or _____>>**, duplex, **<< 20A, 125V, NEMA 5-20R; 15A, 125V, NEMA 5-15R; or _____>><< , rectangular decorator style; , _____; or None - N/A>>**, listed and labeled as tamper resistant type and as weather resistant type complying with **<<UL 498>>** Supplement SD suitable for installation in damp or wet locations.

E. USB Charging Devices:
1. General Requirements: Listed as complying with **<<UL 1310>>**.
a. Charging Capacity - Two-Port Devices: **<< 2.1 A; or _____>>**, minimum.
2. USB Charging/Tamper Resistant Receptacle Combination Devices: Two-port (**<< Type A; or _____>>**) USB charging device and receptacle, **<< commercial specification grade; hospital grade; residential grade; or _____>>**, **<< duplex; single; single or duplex as indicated; or _____>>**, **<< 20A, 125V, NEMA 5-20R; 15A, 125V, NEMA 5-15R; 15A, 125V, NEMA 5-15R or 20A, 125V, NEMA 5-20R as indicated; or _____>>**, listed and labeled as tamper resistant type**<< ; rectangular decorator style; ; _____; or None - N/A>>**.

F. Locking Receptacles: **<< Industrial specification grade; or _____>><< , configuration as indicated on the drawings; , _____; or None - N/A>>**.

2.04 WALL PLATES AND COVERS

A. Wall Plates: Comply with **<<UL 514D>>**.
1. Configuration: One piece cover as required for quantity and types of corresponding wiring devices.
2. Size: Standard.
3. Screws: Metal with slotted heads finished to match wall plate finish.

B. Nylon Wall Plates: Smooth finish, high-impact thermoplastic.

C. Stainless Steel Wall Plates: Brushed satin finish, **<< Type 302; Type 430; or _____>>** stainless steel.

D. Weatherproof Receptacle Covers for Damp Locations: Gasketed, **<< cast aluminum; thermoplastic; zinc die-cast; or _____>>**, with self-closing hinged cover and corrosion-resistant screws; listed as suitable for use in wet locations with cover closed.

E. Weatherproof Receptacle Covers for Wet Locations: Gasketed, **<< cast aluminum; thermoplastic; or _____>>**, with hinged, clear lockable cover and corrosion-resistant screws; listed as suitable for use in wet locations while in use with attachment plugs connected and identified as extra-duty type.

2.05 FLOOR BOX SERVICE FITTINGS

A. Floor box service fittings for power and communications: As specified in Section 260534, provide specification grade 20-ampere, 125-volt receptacles as indicated on the drawings.

B. Description: Service fittings compatible with floor boxes provided under Section **<< 260534>>** with components, adapters, and trims required for complete installation.

2.06 POKE-THROUGH ASSEMBLIES

A. Poke-through assemblies for power and communications: As specified in Section 260534, provide specification grade 20-ampere, 125-volt receptacles as indicated on the drawings.

DRAFT

B. Description: Assembly comprising floor service fitting, poke-through component, fire stops and smoke barriers, and junction box for conduit termination; fire rating listed to match fire rating of floor and suitable for floor thickness where installed.

2.07 RELAYS

A. Equal to Square D Company, Class 8501 Type C in NEMA 250 Type 1 enclosure.

B. Contacts: Double break fine silver, convertible from normally open to normally closed contacts. Provide contact status indication.

C. Coils: Molded construction, terminals provided with pressure wire connectors.

D. Coil voltage and number of contacts shall be as indicated on the drawings.

2.08 TERMINAL BLOCKS

A. Terminal blocks: Equal to Hoffman Engineering Company screw-terminal type size as required by NEC. Terminal blocks shall be housed in NEMA 1 boxes with hinged cover.

2.09 CONTACTORS

A. Equal to Square D 8903, UL 508 listed, in NEMA 250 Type 1 enclosure, mechanically held, electrically operated, enclosed silver-alloy double-break contacts, coil-clearing contacts; withstand rating as indicated on the drawings; Hand-Off-Auto selector switch on cover.

1. Provide contactor with two-wire control relay for two-wire control of mechanically held lighting contactor.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that outlet boxes are installed in proper locations and at proper mounting heights and are properly sized to accommodate devices and conductors in accordance with **<<NFPA 70>>**.

C. Verify that wall openings are neatly cut and will be completely covered by wall plates.

D. Verify that final surface finishes are complete**<< , including painting; or None - N/A>>**.

E. Verify that floor boxes are adjusted properly.

F. Verify that branch circuit wiring installation is completed, tested, and ready for connection to wiring devices.

G. Verify that core drilled holes for poke-through assemblies are in proper locations.

H. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Perform work in accordance with **<<NECA 1>>** (general workmanship) and, where applicable, **<<NECA 130>><< , including mounting heights specified in those standards unless otherwise indicated; , except for mounting heights specified in those standards; , _____; or None - N/A>>**.

B. Coordinate locations of outlet boxes provided under Section **<< 260534>>** as required for installation of wiring devices provided under this section.

1. Locate wall switches on strike side of door with edge of wall plate **<< 3 inches; _____ inches; or _____>>** from edge of door frame. Where locations are indicated otherwise, notify **<<Architect>>** to obtain direction prior to proceeding with work.

DRAFT

2. Locate receptacles for electric drinking fountains concealed behind drinking fountain according to manufacturer's instructions.

C. Install wiring devices in accordance with manufacturer's instructions.

D. Install permanent barrier between ganged wiring devices when voltage between adjacent devices exceeds 300 V.

E. Where required, connect wiring devices using pigtails not less than **<< 6 inches; _____ inches; or _____>>** long. Do not connect more than one conductor to wiring device terminals.

F. Connect wiring devices by wrapping conductor clockwise 3/4 turn around screw terminal and tightening to proper torque specified by the manufacturer. Where present, do not use push-in pressure terminals that do not rely on screw-actuated binding.

G. Unless otherwise indicated, connect wiring device grounding terminal to branch circuit equipment grounding conductor and to outlet box with bonding jumper.

H. Provide GFCI receptacles with integral GFCI protection at each location indicated. Do not use feed-through wiring to protect downstream devices.

I. Where split-wired duplex receptacles are indicated, remove tabs connecting top and bottom receptacles.

J. Install wiring devices plumb and level with mounting yoke held rigidly in place.

K. Install wall switches with OFF position down.

L. Install vertically mounted receptacles with grounding pole on **<< top; bottom; or _____>>** and horizontally mounted receptacles with grounding pole on **<< left; right; or _____>>**.

M. Install wall plates to fit completely flush to wall with no gaps and rough opening completely covered without strain on wall plate. Repair or reinstall improperly installed outlet boxes or improperly sized rough openings **<< Do not use oversized wall plates in lieu of meeting this requirement.; or None - N/A>>**

N. Provide a single cover plate where two or more devices are grouped together in one box.

O. Install blank wall plates on junction boxes and on outlet boxes with no wiring devices installed or designated for future use.

P. Identify wiring devices in accordance with Section **<< 260553>>**.

1. Attach nameplates securely to receptacle cover plates. Provide nameplates for all devices except 120-volt receptacles and lighting switches, identifying equipment and use.

Q. Install poke-through closure plugs in each unused core holes to maintain fire rating of floor.

3.03 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Inspect each wiring device for damage and defects.

C. Test each receptacle to verify operation and proper polarity.

D. Test each GFCI receptacle for proper tripping operation according to manufacturer's instructions.

E. Correct wiring deficiencies and replace damaged or defective wiring devices.

3.04 ADJUSTING

A. Adjust devices and wall plates to be flush and level.

DRAFT

3.05 CLEANING

A. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

END OF SECTION 262726

DRAFT

SECTION 262813
FUSES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Fuses.

B. Spare fuse cabinet.

1.02 RELATED REQUIREMENTS

1.03 REFERENCE STANDARDS

A. NEMA FU 1 - Low Voltage Cartridge Fuses.

B. NFPA 70 - National Electrical Code.

C. UL 248-1 - Low-Voltage Fuses - Part 1: General Requirements.

D. UL 248-4 - Low-Voltage Fuses - Part 4: Class CC Fuses.

E. UL 248-8 - Low-Voltage Fuses - Part 8: Class J Fuses.

F. UL 248-10 - Low-Voltage Fuses - Part 10: Class L Fuses.

G. UL 248-12 - Low-Voltage Fuses - Part 12: Class R Fuses.

H. UL 248-15 - Low-Voltage Fuses - Part 15: Class T Fuses.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate fuse clips furnished in equipment provided under other sections for compatibility with indicated fuses.
2. Coordinate fuse requirements according to manufacturer's recommendations and nameplate data for actual equipment to be installed.
3. Notify **<<Architect>>** of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

1.05 SUBMITTALS

A. Product Data: Each type of fuse.

B. Provide manufacturer's standard data sheets including voltage and current ratings, interrupting ratings, time-current curves, and current limitation curves.

1. Spare Fuse Cabinet: Include dimensions.

C. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.

1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
2. Extra Fuses: Provide up to 50% of each type and amperage, with no less than one, if only one of each type. ***** MCPS STANDARD *****
3. Spare Fuse Cabinet Keys: **<< Two; or _____>>**.

1.06 QUALITY ASSURANCE

A. Comply with requirements of **<<NFPA 70>>**.

DRAFT

B. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

C. Comply with the following standards:
   1. UL 198E.
   2. UL 198C, Class L fuses, also Classes G and J.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Bussmann, a division of Eaton Corporation: www.cooperindustries.com/#sle.

B. Littelfuse, Inc: www.littelfuse.com/#sle.

C. Mersen: ep-us.mersen.com/#sle.

2.02 APPLICATIONS

A. Service Entrance:
   1. Fusible Switches up to 600 Amperes: **<< Class RK1, time-delay; Class RK1, fast-acting, non-time-delay; Class RK5, time-delay; Class RK5, fast-acting, non-time-delay; Class J, time-delay; Class J, fast-acting, non-time-delay; Class T; or ____>>**.
   2. Fusible Switches Larger Than 600 Amperes: **<< Class L, time-delay; Class L, fast-acting, non-time-delay; Class T; or ____>>**.

B. Feeders:
   1. Fusible Switches up to 600 Amperes: **<< Class RK1, time-delay; Class RK1, fast-acting, non-time-delay; Class RK5, time-delay; Class RK5, fast-acting, non-time-delay; Class J, time-delay; Class J, fast-acting, non-time-delay; Class T; or ____>>**.
   2. Fusible Switches Larger Than 600 Amperes: **<< Class L, time-delay; Class L, fast-acting, non-time-delay; Class T; or ____>>**.

C. General Purpose Branch Circuits: **<< Class RK1, time-delay; Class RK1, fast-acting, non-time-delay; Class RK5, time delay; Class RK5, fast-acting, non-time-delay; Class J, time-delay; Class J, fast-acting, non-time-delay; Class T; or ____>>**.

D. Individual Motor Branch Circuits: **<< Class RK1, time-delay; Class RK5, time-delay; Class J, time-delay; or ____>>**.

2.03 FUSES

A. Provide products listed, classified, and labeled as suitable for the purpose intended.

B. Unless specifically indicated to be excluded, provide fuses for all fusible equipment as required for a complete operating system.

C. Provide fuses of the same type, rating, and manufacturer within the same switch.

D. Comply with **<<UL 248-1>>**.

E. Unless otherwise indicated, provide cartridge type fuses complying with **<<NEMA FU 1>>**, Class and ratings as indicated.

F. Voltage Rating: Suitable for circuit voltage.

G. Class R Fuses: Comply with **<<UL 248-12>>**.

DRAFT

H. Class L Fuses: Comply with **<<UL 248-10>>**.

I. Selectivity: Where the requirement for selectivity is indicated, furnish products as required to achieve selective coordination.

J. Provide the following accessories where indicated or where required to complete installation:
   1. Fuseholders: Compatible with indicated fuses.
   2. Fuse Reducers: For adapting indicated fuses to permit installation in switch designed for fuses with larger ampere ratings.

2.04 SPARE FUSE CABINET

A. Description: Wall-mounted sheet metal cabinet with shelves and hinged door with cylinder lock, suitably sized to store spare fuses and fuse pullers specified.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that fuse ratings are consistent with circuit voltage and manufacturer's recommendations and nameplate data for equipment.

B. Verify that mounting surfaces are ready to receive spare fuse cabinet.

C. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Do not install fuses until circuits are ready to be energized.

B. Install fuses with label oriented such that manufacturer, type, and size are easily read.

C. Install spare fuse cabinet to wall location selected by Own.

END OF SECTION 262813

DRAFT

SECTION 262816
ENCLOSED CIRCUIT BREAKERS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Enclosed circuit breakers.

1.02 RELATED REQUIREMENTS

A. Section **<< 260526 - Grounding and Bonding for Electrical Systems>>**.

B. Section **<< 260529 - Hangers and Supports for Electrical Systems>>**.

C. Section **<< 260573 - Power System Studies>>**: Additional criteria for the selection and adjustment of equipment and associated protective devices specified in this section.

1.03 REFERENCE STANDARDS

A. FS W-C-375 - Circuit Breakers, Molded Case; Branch Circuit and Service.

B. NECA 1 - Standard for Good Workmanship in Electrical Construction.

C. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

D. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems.

E. NFPA 70 - National Electrical Code.

F. UL 50 - Enclosures for Electrical Equipment, Non-Environmental Considerations.

G. UL 50E - Enclosures for Electrical Equipment, Environmental Considerations.

H. UL 489 - Molded-Case Circuit Breakers, Molded-Case Switches and Circuit Breaker Enclosures.

I. UL 869A - Reference Standard for Service Equipment.

J. UL 1053 - Ground-Fault Sensing and Relaying Equipment.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate work with other trades. Avoid placement of ductwork, piping, equipment, or other potential obstructions within dedicated equipment spaces and within working clearances for electrical equipment required by **<<NFPA 70>>**.
2. Coordinate arrangement of electrical equipment with the dimensions and clearance requirements of the actual equipment to be installed.
3. Verify with manufacturer that conductor terminations are suitable for use with the conductors to be installed.
4. Notify **<<Architect>>** of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

1.05 SUBMITTALS

A. Product Data: Provide manufacturer's standard catalog pages and data sheets for circuit breakers, enclosures, and other installed components and accessories.

B. Maintenance Data: Include information on replacement parts and recommended maintenance procedures and intervals.

DRAFT

1.06 QUALITY ASSURANCE

A. Comply with requirements of **<<NFPA 70>>**.

B. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Store in a clean, dry space. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.

B. Handle carefully in accordance with manufacturer's written instructions to avoid damage to enclosed circuit breaker internal components, enclosure, and finish.

1.08 FIELD CONDITIONS

A. Maintain ambient temperature between **<< 23 degrees F>>** and **<< 104 degrees F>>** during and after installation of enclosed circuit breakers.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. ABB: www.electrification.us.abb.com/#sle.

B. Eaton Corporation: www.eaton.com/#sle.

C. Schneider Electric: www.se.com/#sle.

D. Siemens Industry, Inc: www.new.siemens.com/#sle.

E. Source Limitations: Provide enclosed circuit breakers and associated components produced by **<< same manufacturer as other electrical distribution equipment used for project; single manufacturer; or _____>>** and obtained from single supplier.

2.02 ENCLOSED CIRCUIT BREAKERS

A. Description: Units consisting of molded case circuit breakers individually mounted in enclosures.

B. Provide products listed, classified, and labeled as suitable for the purpose intended.

C. Separately enclosed circuit breakers, as indicated, manually operated, trip-free from the handle, and provided with inverse-time, thermal-element overload protection and instantaneous magnetic short-circuit protection on all poles.

D. Unless otherwise indicated, provide products suitable for continuous operation under the following service conditions:

1. Altitude: Less than **<< 6,600 feet>>**.
2. Ambient Temperature: Between **<< 23 degrees F>>** and **<< 104 degrees F>>**.

E. Short Circuit Current Rating:

1. Provide enclosed circuit breakers with listed short circuit current rating not less than the available fault current at the installed location as determined by short circuit study performed in accordance with Section **<< 260573>>**.

F. Enclosed Circuit Breakers Used for Service Entrance: Listed and labeled as suitable for use as service equipment according to **<<UL 869A>>**.

G. Conductor Terminations: Suitable for use with the conductors to be installed.

DRAFT

H. Provide thermal magnetic circuit breakers**<< unless otherwise indicated; for circuit breaker frame sizes less than 60A and not on the NEC 700, 701, or 702 branch of the generator; _____; or None - N/A>>**.

I. Breaker sizes, calibrations and interrupting capacity: Noted on the drawings. Breakers shall be calibrated for 50 degrees C ambient.

J. Provide insulated, groundable fully rated solid neutral assembly**<< where a neutral connection is required; where indicated; _____; or None - N/A>>**, with a suitable lug for terminating each neutral conductor.

K. Provide solidly bonded equipment ground bus **<< in each enclosed circuit breaker; where equipment grounding conductors are provided; or _____>>**, with a suitable lug for terminating each equipment grounding conductor.

L. Enclosures: Comply with **<<NEMA EN 10250>>**, and list and label as complying with **<<UL 50>>** and **<<UL 50E>>**.

1. Environment Type per **<<NEMA EN 10250>>**: **<< Unless otherwise indicated, as specified for the following installation locations:; As indicated on the drawings.; or _____ .>>**
   a. Indoor Clean, Dry Locations: Type 1.
   b. Outdoor Locations: Type 3R with raintight hubs.
2. Provide **<< surface-mounted; flush-mounted; or _____>>** enclosures**<< as indicated; unless otherwise indicated; _____; or None - N/A>>**.

M. Provide externally operable handle with means for locking in the OFF position. Operating handles shall clearly idnicated the positions ON, TRIP and OFF.

N. Provide shunt trip operation where indicated on the drawings.

O. Ground Fault Protection: Where ground-fault protection is indicated, provide system listed and labeled as complying with **<<UL 1053>>**.

1. Where electronic circuit breakers equipped with integral ground fault protection are used, provide separate neutral current sensor where applicable.

P. Selectivity: Where the requirement for selectivity is indicated, furnish products as required to achieve selective coordination.

2.03 MOLDED CASE CIRCUIT BREAKERS

A. Description: Quick-make, quick-break, over center toggle, trip-free, trip-indicating circuit breakers listed and labeled as complying with **<<UL 489>><< , and complying with FS W-C-375 where applicable; , _____; or None - N/A>>**; ratings, configurations, and features as indicated**<< on the drawings; _____; or None - N/A>>**.

B. Interrupting Capacity:

1. Provide circuit breakers with interrupting capacity as required to provide the short circuit current rating **<< indicated, but not less than:; indicated.; or _____>>**
2. Fully Rated Systems: Provide circuit breakers with interrupting capacity not less than the short circuit current rating indicated.

C. Conductor Terminations:

1. Lug Material: **<< Aluminum, suitable for terminating aluminum or copper conductors; Copper, suitable for terminating copper conductors only; or _____>>**.

DRAFT

D. Thermal Magnetic Circuit Breakers: For each pole, furnish thermal inverse time tripping element for overload protection and magnetic instantaneous tripping element for short circuit protection.

E. Electronic Trip Circuit Breakers: Furnish solid state, microprocessor-based, true rms sensing trip units.
   1. Provide the following field-adjustable trip response settings:
      a. Ground fault pickup and delay**<< where ground fault protection is indicated; _____; or None - N/A>>**.

F. Multi-Pole Circuit Breakers: Furnish with common trip for all poles.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that the ratings of the enclosed circuit breakers are consistent with the indicated requirements.

C. Verify that mounting surfaces are ready to receive enclosed circuit breakers.

D. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Perform work in accordance with **<<NECA 1>>** (general workmanship).

C. Arrange equipment to provide minimum clearances in accordance with manufacturer's instructions and **<<NFPA 70>>**.

D. Provide required support and attachment in accordance with Section **<< 260529>>**.

E. Install enclosed circuit breakers plumb.

F. Except where indicated to be mounted adjacent to the equipment they supply, mount enclosed circuit breakers such that the highest position of the operating handle does not exceed **<< 79 inches>>** above the floor or working platform.

G. Provide grounding and bonding in accordance with Section **<< 260526>>**.

H. Where accessories are not self-powered, provide control power source as indicated or as required to complete installation.

I. Set field-adjustable circuit breaker tripping function settings as determined by overcurrent protective device coordination study performed according to Section **<< 260573>>**.

J. Set field-adjustable ground fault protection pickup and time delay settings**<< as indicated; as directed; or _____>>**.

3.03 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Inspect and test in accordance with manufacturer's instructions and **<<NETA ATS>>**, except Section 4.

C. Perform inspections and tests listed in **<<NETA ATS>>**, Section 7.6.1.1**<< for circuit breakers used for service entrance and for circuit breakers larger than _____ amperes; for circuit breakers used for service entrance; for circuit breakers larger than _____**

DRAFT

amperes; _____; or None - N/A>>. Tests listed as optional are **<< not required.; required.; not required, except for the following:; or _____>>**

1. Perform insulation-resistance tests on all control wiring with respect to ground.

D. Ground Fault Protection Systems: Test in accordance with manufacturer's instructions as required by **<<NFPA 70>>**.

E. Correct deficiencies and replace damaged or defective enclosed circuit breakers.

3.04 ADJUSTING

A. Adjust tightness of mechanical and electrical connections to manufacturer's recommended torque settings.

3.05 CLEANING

A. Clean dirt and debris from circuit breaker enclosures and components according to manufacturer's instructions.

B. Repair scratched or marred exterior surfaces to match original factory finish.

END OF SECTION 262816

DRAFT

SECTION 262817
ENCLOSED SWITCHES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Enclosed safety switches.

1.02 RELATED REQUIREMENTS

A. Section **<< 260526 - Grounding and Bonding for Electrical Systems>>**.

B. Section **<< 260529 - Hangers and Supports for Electrical Systems>>**.

C. Section **<< 260553 - Identification for Electrical Systems>>**: Identification products and requirements.

D. Section **<< 260573 - Power System Studies>>**: Additional criteria for the selection of equipment and associated protective devices specified in this section.

E. Section **<< 262813 - Fuses>>**.

1.03 REFERENCE STANDARDS

A. NECA 1 - Standard for Good Workmanship in Electrical Construction.

B. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

C. NEMA BS 31047 - Heavy Duty Enclosed and Dead-Front Switches (600 Volts Maximum).

D. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems.

E. NFPA 70 - National Electrical Code.

F. UL 50 - Enclosures for Electrical Equipment, Non-Environmental Considerations.

G. UL 50E - Enclosures for Electrical Equipment, Environmental Considerations.

H. UL 98 - Enclosed and Dead-Front Switches.

I. UL 869A - Reference Standard for Service Equipment.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the work with other trades. Avoid placement of ductwork, piping, equipment, or other potential obstructions within the dedicated equipment spaces and within working clearances for electrical equipment required by **<<NFPA 70>>**.
2. Coordinate arrangement of electrical equipment with the dimensions and clearance requirements of the actual equipment to be installed.
3. Verify with manufacturer that conductor terminations are suitable for use with the conductors to be installed.
4. Notify **<<Architect>>** of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

1.05 SUBMITTALS

A. Product Data: Provide manufacturer's standard catalog pages and data sheets for enclosed switches and other installed components and accessories.

DRAFT

B. Maintenance Data: Include information on replacement parts and recommended maintenance procedures and intervals.

1.06 QUALITY ASSURANCE

A. Comply with requirements of **<<NFPA 70>>**.

B. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Store in a clean, dry space. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.

B. Handle carefully in accordance with manufacturer's written instructions to avoid damage to enclosed switch internal components, enclosure, and finish.

1.08 FIELD CONDITIONS

A. Maintain ambient temperature between **<< -22 degrees F>>** and **<< 104 degrees F>>** during and after installation of enclosed switches.

PART 2 PRODUCTS

2.01 ENCLOSED SAFETY SWITCHES

A. Manufacturers:
1. ABB: www.electrification.us.abb.com/#sle.
2. Eaton Corporation: www.eaton.com/#sle.
3. Schneider Electric: www.se.com/#sle.
4. Siemens Industry, Inc: www.siemens.com/#sle.

B. Description: Quick-make, quick-break enclosed safety switches listed and labeled as complying with **<<UL 98>>**; **<< heavy duty; general duty; heavy or general duty as indicated; or _____>>**; ratings, configurations, and features as indicated**<< on the drawings; _____; or None - N/A>>**.

C. Provide products listed, classified, and labeled as suitable for the purpose intended.

D. Properly size switches for number of poles and provide fused or non-fused as required for project conditions and to meet NFPA 70 requirements.
1. Neutral kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper neutral conductors.
2. Auxiliary contact kit: Two NO/NC (Form "C") auxiliary contact(s), arranged to activate before switch blades open.

E. Unless otherwise indicated, provide products suitable for continuous operation under the following service conditions:
1. Altitude: Less than **<< 6,600 feet>>**.
2. Ambient Temperature: Between **<< -22 degrees F>>** and **<< 104 degrees F>>**.

F. Horsepower Rating: Suitable for connected load.

G. Voltage Rating: Suitable for circuit voltage.

H. Short Circuit Current Rating:

DRAFT

1. Provide enclosed safety switches, when protected by the fuses or supply side overcurrent protective devices to be installed, with listed short circuit current rating not less than the available fault current at the installed location as determined by short circuit study performed in accordance with Section **<< 260573>>**.
2. Minimum Ratings:
   a. Heavy Duty Single Throw Switches Protected by **<< Class R; Class J; Class L; Class T; or _____>>** Fuses: **<< 200,000; or _____>>** rms symmetrical amperes.

I. Enclosed Safety Switches Used for Service Entrance: Listed and labeled as suitable for use as service equipment according to **<<UL 869A>>**.

J. Provide with switch blade contact position that is visible when the cover is open.

K. Fuse Clips for Fusible Switches: As required to accept fuses indicated.

L. Conductor Terminations: Suitable for use with the conductors to be installed.

M. Provide insulated, groundable fully rated solid neutral assembly**<< where a neutral connection is required; where indicated; _____; or None - N/A>>**, with a suitable lug for terminating each neutral conductor.

N. Provide solidly bonded equipment ground bus **<< in each enclosed safety switch; where equipment grounding conductors are provided; or _____>>**, with a suitable lug for terminating each equipment grounding conductor.

O. Enclosures: Comply with **<<NEMA EN 10250>>**, and list and label as complying with **<<UL 50>>** and **<<UL 50E>>**.
   1. Environment Type per **<<NEMA EN 10250>>: << Unless otherwise indicated, as specified for the following installation locations:; As indicated on the drawings.; or _____ .>>**
      a. Indoor Clean, Dry Locations: Type 1.
      b. Outdoor Locations: Type 3R with raintight hubs.

P. Provide safety interlock to prevent opening the cover with the switch in the ON position with capability of overriding interlock for testing purposes.

Q. Fuse contacts and quick-make/quick-break jaws shall insure positive contacts with reinforcing spring clips or approved means.

R. Switches shall be front-operated.

S. Hinges: Noncurrent-carrying.

T. Switches shall be lockable in either open or closed position.

U. Type:
   1. Nonfused switches: General duty type on 120/208-volt or 120/240-volt systems, and heavy duty type on 277/480-volt or 240/480-volt systems.
   2. Fused switches: Heavy duty type.

V. Heavy Duty Switches:
   1. Comply with **<<NEMA BS 31047>>**.
   2. Conductor Terminations:
      a. Lug Material: **<< Aluminum, suitable for terminating aluminum or copper conductors; Copper, suitable for terminating copper conductors only; or _____>>**.
   3. Provide externally operable handle with means for locking in the OFF position, capable of accepting three padlocks.

DRAFT

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that the ratings of the enclosed switches are consistent with the indicated requirements.

C. Verify that mounting surfaces are ready to receive enclosed safety switches.

D. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Provide fusible disconnect switches for all equipment. Provide one replacement fuse per disconnect switch.

B. Certain equipment, as indicated, shall be furnished with control panels and auxiliary control components. Mount the panels, furnish and install source wiring and disconnects, and completely connect controls and motors.

C. Provide source wiring, connections, and disconnects for mechanical heating, ventilating, and air-conditioning (HVAC) equipment specified in Division 23. Refer to sections of Division 23 for equipment and controls.

1. Provide weathertight enclosures for disconnects for outdoor equipment.
2. Mount starters, where required, and provide proper size overload protection.

D.

E. Install products in accordance with manufacturer's instructions. Install enclosed switches where indicated and as required for motor outlets or other equipment.

F. Provide an enclosed switch for each motor, as required by NFPA 70, except where it is provided in a panelboard within sight and easy reach of the motor, and provide wiring and connections from source.

G. Perform work in accordance with **<<NECA 1>>** (general workmanship).

H. Arrange equipment to provide minimum clearances in accordance with manufacturer's instructions and **<<NFPA 70>>**.

I. Provide required support and attachment in accordance with Section **<< 260529>>**.

J. Install enclosed switches plumb.

K. Except where indicated to be mounted adjacent to the equipment they supply, mount enclosed switches such that the highest position of the operating handle does not exceed **<< 79 inches>>** above the floor or working platform.

L. Provide grounding and bonding in accordance with Section **<< 260526>>**.

M. Provide fuses complying with Section **<< 262813>>** for fusible switches as indicated or as required by equipment manufacturer's recommendations.

N. Where accessories are not self-powered, provide control power source as indicated or as required to complete installation.

O. Identify enclosed switches in accordance with Section **<< 260553>>**.

P. Provide neutral kit where required for four-wire applications.

Q. Provide auxiliary contact kit where indicated on drawings.

DRAFT

3.03 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Inspect and test in accordance with **<<NETA ATS>>**, except Section 4.

C. Perform inspections and tests listed in **<<NETA ATS>>**, Section 7.5.1.1.

D. Correct deficiencies and replace damaged or defective enclosed safety switches or associated components.

3.04 ADJUSTING

A. Adjust tightness of mechanical and electrical connections to manufacturer's recommended torque settings.

3.05 CLEANING

A. Clean dirt and debris from switch enclosures and components according to manufacturer's instructions.

B. Repair scratched or marred exterior surfaces to match original factory finish.

END OF SECTION 262817

DRAFT

SECTION 262913
ENCLOSED CONTROLLERS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Enclosed NEMA controllers for low-voltage (600 V and less) applications:
   1. Magnetic motor starters and combination starters.
   2. Manual motor starters.

B. Phase and voltage p

1.02 RELATED REQUIREMENTS

A. Section **<< 260553 - Identification for Electrical Systems>>**: Identification products and requirements.

B. Section 220513 - Common Motor Requirements for Plumbing Equipment.

C. Section 230513 - Common Motor Requirements for HVAC Equipment.

D. Section 230934 - Variable-Frequency Motor Controllers.

1.03 SUBMITTALS

A. Product Data: Provide manufacturer's standard catalog pages and data sheets for motor controllers, enclosures, overcurrent protective devices, and other installed components and accessories.
   1. Include characteristic trip curves for each type and rating of overcurrent protective device included in the project.

B. Shop Drawings: Indicate dimensions, voltage, controller sizes, short circuit current ratings, conduit entry locations, conductor terminal information, and installed features and accessories.
   1. Include wiring diagrams showing all factory and field connections.

C. Maintenance Data: Include information on replacement parts and recommended maintenance procedures and intervals.

D. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.
   1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.

1.04 QUALITY ASSURANCE

A. Comply with requirements of **<<NFPA 70>>**.

B. Source limitations: Obtain motor starters of a single type through one source from a single manufacturer.

1.05 COORDINATION

A. Coordinate layout and installation of motor starters with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required clearances for work space and for access.

B. Coordinate features, accessories, and functions of each motor starter with ratings and characteristics of supply circuit, motor, control sequence, and duty cycle of motor and load.
   1. Refer to wiring diagrams required in the sections specifying the

DRAFT

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. ABB**<< ; _____; or None - N/A>>**: www.electrification.us.abb.com/#sle.

B. Eaton Corporation**<< ; _____; or None - N/A>>**: www.eaton.com/#sle.

C. Schneider Electric**<< ; _____; or None - N/A>>**: www.se.com/#sle.

D. Siemens Industry, Inc**<< ; _____; or None - N/A>>**: www.new.siemens.com/#sle.

E. Source Limitations: Provide enclosed motor controllers and associated components produced by **<< single manufacturer; same manufacturer as other electrical distribution equipment used for project; or _____>>** and obtained from single supplier.

2.02 ENCLOSED CONTROLLERS

A. Provide enclosed controller assemblies consisting of all required components, control power transformers, instrumentation and control wiring, accessories, etc. as necessary for a complete operating system.

B. Provide products listed, classified, and labeled as suitable for the purpose intended.

C. Description: Enclosed controllers complying with **<<NEMA ICS 2>>**, and listed and labeled as complying with **<<UL 60947-1>>** and **<<UL 60947-4-1>>**; ratings, configurations and features as indicated**<< on the drawings; _____; or None - N/A>>**.

D. Enclosures:

1. Comply with **<<NEMA IA 10030>>**.
2. Environment Type per **<<NEMA EN 10250>>**: **<< Unless otherwise indicated, as specified for the following installation locations:; As indicated on the drawings.; or _____ .>>**
   a. Indoor Clean, Dry Locations: Type 1.
   b. Outdoor Locations: Type 3R.
   c. Kitchen Areas: Type 4X, stainless steel.
3. Finish: **<< Manufacturer's standard unless otherwise indicated; or _____>>**.

E. Magnetic Motor Starters: Motor starters and combination starters shall be across-the-line magnetic type, equal to Square D Company, Class 85326, Type S, rated in accordance with NEMA standards, sizes and horsepower ratings.

1. Contacts: Double-break silver-alloy type, replacement from the front without removing power wiring or removing the starter from its mounting.
2. Overload protection: Melting-alloy or bimetallic thermal overload device, one-piece construction, interchangeable, with reset button set in cover.
   a. Heaters in each phase: Matched to nameplate full-load current of the motor to which they connect and with appropriate adjustment for duty cycle.
3. Starter shall operate when protective relays are in place.
4. Combination starters shall be lockable in the OFF position.
5. Disconnecting switch for combination starters: NEMA KS 1, heavy-duty, nonfusible switch. Interlock with unit cover.

F. Control Circuit: 120-Volt.

1. Control power transformer: Primary voltage as required for the motor, 120-V secondary voltage; capacity to operate connected indicating and control devices and 100 percent spare capacity.

DRAFT

2. Primary and secondary fuse protection for each control power transformer: Class CC fuses, current-limiting rejection type, rated 0.1 to 30 A, 600V, and 200 kA interrupting rating.

G. Auxiliary control contacts:
   1. One spare normally open and one spare normally
   2. Additional contacts required by the automatic temperature control system.

H. Selector switches, indicating lights, and identification on each motor starter cover, complete with wiring and interconnections to starter and auxiliary control contacts:
   1. Selector switch: Hand-Off-Automatic (HOA), heavy-duty.
   2. Indicating lights: Push-to-test, 30.5 mm or 22 mm, transformer type, LED or neon. Indications:
      a. Red for Stopped.
      b. Green for Running.
   3. Identification: Printed or engraved nameplates for HOA switch and for each indicating light.

2.03 MANUAL MOTOR STARTERS:

A. Enclosures: NEMA 250 Type 1 for interior use and NEMA 250 Type 3R for exterior or damp or wet locations.
   1. Mounting:
   2. Indicating lights mounted in enclosure.
   3. Engraved plastic identification plates.

B. Manual motor-starting switch: Equal to Square D Class 2510, single- or two-pole as required, with or without built-in thermal overload protection as indicated on drawings.

C. Switch: Toggle, quick-make and quick-break, with self-indicating, trip-free handle, and means for locking in OFF position.

D. Overload protection unit: Melting-alloy type, interchangeable; starter shall be inoperative if unit is removed.

2.04 PHASE AND VOLTAGE PROTECTION DEVICE

A. Device designed to protect 3-phase equipment from phase loss, under- and over-voltage events, and phase unbalance, with automatic reset. Basis of design product is ICM Controls ICM450; subject to compliance with requirements, provide the specified product.

B. Phase unbalance protection: Voltage, 2-20 percent adjustable.

C. Over- and under-voltage protection: Each 2-25 percent adjustable.

D. Phase loss protection: 25 percent of nominal for any phase; system will shut down and a fault will be recorded.

E. Delay on breaker timer: Control voltage 18-240 Vac; time delay 0-10 minutes, adjustable.

F. Fault interrogation delay: 0-15 seconds, adjustable, between fault detection and system shutdown, to eliminate nuisance trips and unnecessary shutdowns.

G. Temperatures: Control operating minus 40 to 75 degrees C, storage minus 40 to 80 degrees C; LCD operating minus 20 to 75 degrees C.

H. Mounting: Surface-mounted in separate enclosure with screws: screw terminals.

I. Enclosure: NEMA 250 Type 1, unless otherwise indicated.

DRAFT

J. Indicator: LED display with buttons for setting, reading, and indicating faults.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install controllers in accordance with **<<NECA 1>>** (general workmanship).

C. Arrange equipment to provide minimum clearances in accordance with manufacturer's instructions and **<<NFPA 70>>**.

D. Provide required support and attachment in accordance with Section **<< 260529>>**. For equipment at walls, bolt units to wall or mount on lightweight structural-steel channels bolted to wall. For equipment not at walls, mount on lightweight structural-steel channels bolted to floor or to structure above ceiling.

E. Install enclosed controllers plumb and level.

F. Provide grounding and bonding in accordance with Section **<< 260526>>**.

G. Install all field-installed devices, components, and accessories.

H. Applications: Magnetic motor starters for all equipment unless otherwise specified or indicated on drawings.

I. Install starters, phase and voltage protection devices, auxiliary contacts, and automatic control devices furnished with equipment, except those that are already mounted on the equipment, fully wired and connected. See coordination requirements specified in Part 1 above.

J. Installing phase and voltage protection devices: Provide one device for each magnetic motor starter or combination starter indicated on the drawings.

1. Connect protection device output contacts in series with the control circuit of the starter so that when the protection devices drops out, the starter opens.
2. Install in separate enclosure, adjacent to starter.

K. Check the size of the overload protection, and change or adjust it as required, after the HVAC systems have been adjusted and balanced as specified in Section 230593 - Testing, Adjusting, and Balancing for HVAC.

3.02 FIELD QUALITY CONTROL

A. Provide services of a manufacturer's authorized representative to **<< observe installation and assist in inspection and testing; perform inspection and testing; or _____>>**. Include manufacturer's reports with submittals.

B. Inspect and test in accordance with **<<NETA ATS>>**, except Section 4.

3.03 ADJUSTING

A. Adjust tightness of mechanical and electrical connections to manufacturer's recommended torque settings.

3.04 CLEANING

A. Clean dirt and debris from controller enclosures and components according to manufacturer's instructions.

B. Repair scratched or marred exterior surfaces to match original factory finish.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the work with other trades to avoid placement of ductwork, piping, equipment or other potential obstructions within the spaces dedicated for photovoltaic system components.
2. Coordinate arrangement of electrical equipment with the dimensions and clearance requirements of the actual equipment to be installed.
3. Roof-Mounted Arrays: Coordinate the work with other trades to provide roof penetrations that preserve the integrity of the roofing system and do not void the roof warranty.
4. Notify **<<Architect>>** of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Utility Interconnection:

1. **<< Prepare and submit; Assist in preparing and submitting; or _____>>** documentation as required for securing utility interconnection agreement between **<<Owner>>** and Utility Company.
2. Preinstallation Meeting: Convene a minimum of two weeks prior to commencing work of this section to review interconnection requirements and details with Utility Company representative.
3. Coordinate with Utility Company to provide utility metering suitable for system requirements.
4. Arrange for inspections and secure permits necessary to obtain Utility Company approval of system.

DRAFT

1.05 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>**, for submittal procedures.

B. Design Documents: Prepare and submit all information required for plan review and permitting by authorities having jurisdiction, including but not limited to floor plans, riser diagrams, details, and description of operation.

C. Product Data: Provide manufacturer's standard catalog pages and data sheets for each product. Include ratings, configurations, standard wiring diagrams, outline and support point dimensions, finishes, weights, service condition requirements, and installed features.

D. Shop Drawings: Include dimensioned plan views and sections indicating locations of system components, required clearances, attachment locations and details, and proposed size, type, and routing of conduits and cables. Include system interconnection schematic diagrams showing all factory and field connections.

E. Manufacturer's detailed field testing procedures.

F. Source quality control test reports.

G. Field quality control test reports.
   1. Include manufacturer's field reports.

H. Warranty: Submit sample of manufacturer's warranty and documentation of final executed warranty completed in **<<Owner>>**'s name and registered with manufacturer.

I. Maintenance contracts.

J. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.
   1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.

1.06 QUALITY ASSURANCE

A. Comply with **<<NFPA 70>>**.

B. Comply with Utility Company requirements for interconnection.

C. Electrical Designer Qualifications: Registered electrical engineer licensed in **<<the State in which the Project is located>>** experienced in the design of photovoltaic systems.

D. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum **<< three; or _____>>** years**<< documented; _____; or None - N/A>>** experience.

E. Installer Qualifications: Company**<< specializing in performing the work of this section; _____; or None - N/A>>** with minimum **<< five; or _____>>** years**<< documented; _____; or None - N/A>>** experience with photovoltaic systems of similar size, type, and complexity.
   1. Licensed in **<<the State in which the Project is located>>** to install photovoltaic systems.
   2. Manufacturer's authorized installer.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging, keep dry and protect from damage until ready for installation.

1.08 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Specified warranties indicate minimum requirements. Provide additional warranties or extended warranty periods where required to qualify for rebate and incentive programs.

C. Photovoltaic Modules:
   1. Provide minimum **<< five; or _____>>** year manufacturer warranty covering repair or replacement due to defective materials or workmanship.
   2. Provide**<< linear; _____; or None - N/A>>** manufacturer warranty guaranteeing minimum **<< 90; or _____>>** percent of rated power output for **<< 10; or _____>>** years and minimum **<< 80; or _____>>** percent of rated power output for 25 years.

DRAFT

PART 2 PRODUCTS

2.01 PHOTOVOLTAIC SYSTEM REQUIREMENTS

A. **<< Provide; Design and provide; or _____>>** complete photovoltaic system consisting of **<< photovoltaic modules; or _____>>** and associated balance of system components**<< necessary for connection to facility electrical system; necessary for connection to _____; _____; or None - N/A>>**.

B. System Description:

1. Photovoltaic array is **<< roof-mounted; ground-mounted; pole-mounted; or _____>><< in location indicated on the drawings; _____; or None - N/A>>**.
2. Orientation of array is **<< as indicated on the drawings; South; or _____>>**.
3. System **<< includes interconnection with utility grid (grid-tied system); does not include interconnection with utility grid (off-grid system); or _____>>**.
   a. Utility metering configuration: **<< Net metering; or _____>>**.
4. System **<< does not include; includes; or _____>>** battery storage system.
5. System **<< includes; does not include; or _____>>** DC system surge protection.
6. System **<< does not include; includes; or _____>>** monitoring system.

C. Capacity:

1. Minimum Expected Annual Energy Production: **<< _____ kWh; _____ percent of facility expected annual energy requirements; or _____>><< , as calculated by National Renewable Energy Laboratory's PVWatts calculator or approved equivalent; , as calculated by National Renewable Energy Laboratory's PVWatts calculator; , as calculated by _____; , _____; or None - N/A>>**.
2. Total Nominal Rated Power Output of Array: **<< Equal to or greater than the rated output of the basis of design array; _____ kW, rated under Standard Test Conditions (STC); or _____>>**.
3. Nominal Rated Power Output of Individual Modules: **<< Equal to or greater than the rated output of the basis of design module; _____ W, rated under Standard Test Conditions (STC); or _____>>**.

D. Size:

1. Array: **<< Designed to fit within the area designated on the drawings; Designed to fit within the same area as the basis of design array; Designed to fit within an area of _____; Array size is not critical; or _____>>**.
2. Individual Modules: **<< Size is not critical; Same exact size as basis of design module; _____ by _____ by _____ inches; or _____>>**.

E. Provide photovoltaic system and associated components suitable for wind loads, snow loads, seismic loads, and other structural design considerations of the installed location.

F. Provide photovoltaic system and associated components suitable for continuous operation under **<< the service conditions at the installed location.; the following service conditions:; or _____ .>>**

G. Provide products listed, classified, and labeled as suitable for the purpose intended.

H. Unless specifically indicated to be excluded, provide all required equipment, conduit, boxes, wiring, connectors, hardware, supports, accessories, software, system programming, etc. as necessary for a complete operating system.

I. DC Arc Fault Circuit Protection: Provide DC photovoltaic arc-fault protection devices listed as complying with **<<UL 1699B>>** as required for compliance with **<<NFPA 70>>**.

DRAFT

J. Rapid Shutdown of Photovoltaic Systems on Buildings: Provide listed equipment arranged to provide rapid shutdown in accordance with **<<NFPA 70>>**.

K. Arrange equipment to provide minimum clearances in accordance with manufacturer's instructions and **<<NFPA 70>>**.

L. Arrange array to minimize shading during peak production periods.

M. Roof-Mounted Arrays:

1. Arrange array such that normal roof drainage is not affected.
2. Arrange array to maintain required safety clearances from edges of roof **<< as indicated; as directed; as required by authority having jurisdiction; or _____>>**.
3. Arrange array to maintain access and clearance requirements for other roof-mounted equipment.
4. Arrange array to avoid spanning of expansion joints.

2.02 PHOTOVOLTAIC MODULES

A. Acceptable Module Types: **<< Either crystalline silicon or thin film modules complying with specified requirements will be considered for this project; Only crystalline silicon modules are acceptable. Thin film modules will not be considered for this project; Only thin film modules are acceptable. Crystalline silicon modules will not be considered for this project; or _____>>**.

B. General Requirements:

1. Photovoltaic Modules: Factory assembled; consisting of photovoltaic cells, frame, junction box, cables for series connection, and bypass diodes for shade tolerance; rated for 600 V DC; complying with **<<IEC 61215-1>>** and **<<IEC 61215-2>>** and listed as complying with **<<UL 1703>>**.
2. Crystalline Silicon Photovoltaic Modules: Comply with **<<IEC 61215-1-1>>**.
3. Thin Film Photovoltaic Modules: Comply with **<<IEC 61215-1-2>>**, **<<IEC 61215-1-3>>**, or **<<IEC 61215-1-4>>** as applicable.
4. Frame: Anodized aluminum.
5. Factory-Installed Junction Box: Weatherproof, with factory-installed terminals and bypass diodes.
6. Factory-Installed Cables: Type USE-2 or listed photovoltaic (PV) wire with polarized locking connectors.
7. Unless otherwise indicated, specified module performance characteristics are rated under Standard Test Conditions (STC).

2.03 BALANCE OF SYSTEM COMPONENTS

A. Photovoltaic Module Mounting System:

1. Provide complete mounting system compatible with modules to be installed and suitable to properly install them in the location indicated, including all necessary hardware and accessories.
2. Support Structure and Associated Hardware Materials: Use **<< aluminum; galvanized steel; stainless steel; or _____>>**.
3. Roof-Mounted Arrays:
   a. Acceptable System Types: **<< Either non-penetrating or penetrating systems complying with specified requirements will be considered for this project; Only non-penetrating systems are acceptable. Penetrating systems will not be**

DRAFT

considered for this project; Only penetrating systems are acceptable. Non-penetrating systems will not be considered for this project; or _____>>.

b. Provide system compatible with the roof at the installed location.

c. Module Tilt Angle: **<< As required to provide maximum energy production for installed location; _____ degrees; No tilt; As indicated on drawings; or _____>>**.

d. Provide minimum clearance of **<< 3 inches; or _____ inches>>** between roof and module for air circulation and drainage.

B. Photovoltaic Inverters:

1. Provide inverter(s) as indicated or as required for connection of the photovoltaic array DC system to the AC system indicated.
2. Inverters: Suitable for the requirements of the connected array; output configuration compatible with connected system; listed as complying with **<<UL 1741>>**; furnished with the following features:
   a. Maximum power point tracking (MPPT).
   b. LCD display.
3. Grid-Tied Inverters: Comply with **<<IEEE 1547>>**, including over/under grid voltage and frequency protection, and anti-islanding protection to automatically disconnect upon loss of utility power and to remain disconnected until utility power restoration has been maintained for five minutes.
4. Total Harmonic Distortion: Less than **<< five; or _____>>** percent.
5. Enclosure Environment Type per **<<NEMA EN 10250>>**: **<< Unless otherwise indicated, as specified for the following installation locations:; As indicated on the drawings.; or _____ .>>**
   a. Indoor Clean, Dry Locations: **<< Type 1; or _____>>**.
   b. Outdoor Locations: **<< Type 3R; or _____>>**.

C. Surge Protective Devices, in Addition to Requirements of Section **<< 264300>>**:

1. Surge Protective Devices for DC System:
   a. Rated for **<< 600; or _____>>** V DC.
   b. Listed and labeled as complying with **<<UL 1449>>**, Type 1.
   c. Surge Current Rating: Not less than **<< 50 kA per mode; or _____>>**.
   d. **<<UL 1449>>** Nominal Discharge Current (I-n): 20 kA.

D. Molded-Case Circuit Breakers and Switches for DC System: Rated for **<< 600; or ____>>** V DC; listed as complying with **<<UL 489B>>**.

E. Monitoring System:

1. Provide a system to monitor photovoltaic system performance including all sensors, dataloggers, connections, software, equipment and accessories necessary for a complete operating system.
2. System communications interfaces to be **<< wired; wireless; or _____>>**, with compatible interconnected components.
   a. Provide suitable raceway, minimum **<< 3/4 inch; or _____ inch>>** trade size, for all required wired connections.
3. System to monitor and record**<< , in 15 minute intervals; , _____; or None - N/A>>**:
   a. Inverter status.
   b. Instantaneous power (kW).

DRAFT

c. Cumulative energy production (kWh).

4. Energy Production Meter: Revenue grade, with accuracy of plus or minus two percent.
5. System real-time and historical data to be accessible from the following locations:
   a. Remote public display(s)**<< , quantity and location as indicated on the drawings; , _____; or None - N/A>>**.
6. System to provide alarm notification**<< via e-mail or instant message; _____; or None - N/A>>**.

2.04 SOURCE QUALITY CONTROL

A. Factory test the following products to verify operation and performance characteristics**<< . Include test reports with submittals; or None - N/A>>**.
   1. Photovoltaic modules.
   2. Photovoltaic inverters.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that ratings and configurations of system components are consistent with the indicated requirements.

C. Verify that mounting surfaces are ready to receive system components.

D. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Perform work in accordance with **<<NECA 1>>** (general workmanship).

B. Install products in accordance with manufacturer's instructions.

C. Install photovoltaic system in accordance with **<<NECA 412>>**.

D. Provide required support and attachment in accordance with Section **<< 260529>>**.

E. Mount equipment such that the highest position of any operating handle for circuit breakers or switches does not exceed **<< 79 inches>>** above the floor, ground, or working platform.

F. Circuiting Requirements, in Addition to Requirements of Section **<< 260519>>**:
   1. Photovoltaic DC System Conductor Color Code:
   2. Maintain separation of photovoltaic and non-photovoltaic circuits in accordance with **<<NFPA 70>>**.

G. Grounding and Bonding Requirements, in Addition to Requirements of Section **<< 260526>>**:
   1. Ensure that there is only one AC System bonding connection between grounding system and grounded/neutral conductor, including external connections and connections internal to equipment.

H. Identification Requirements, in Addition to Those Specified in Section **<< 260553>>**:
   1. Use **<< identification nameplate; means of identification acceptable to authority having jurisdiction; or _____>>** to identify the presence of multiple power sources and the location of main service disconnecting means and each photovoltaic system disconnecting means. Locate **<< at main service disconnecting means and at each photovoltaic system disconnecting means; or _____>>**. Verify format and descriptions with authorities having jurisdiction.

DRAFT

2. Use **<< identification nameplate; or _____>>** to identify each photovoltaic system disconnecting means**<< with text "PV SYSTEM DISCONNECT"; _____; or None - N/A>>**.
3. Use **<< identification nameplate; identification label; or _____>>** to identify systems equipped with rapid shutdown and associated rapid shutdown switch(es). Format, descriptions, and locations to comply with **<<NFPA 70>>** and requirements of authorities having jurisdiction.
4. Use **<< identification nameplate; identification label; or _____>>** to identify the information required by **<<NFPA 70>>** for marking of direct-current photovoltaic power sources. Locate at each DC disconnect means requiring marking.
5. Use **<< identification nameplate; identification label; or _____>>** to identify the interactive system point of interconnection at the disconnecting means as a power source and with the rated AC output current and the nominal operating AC voltage.
6. Use **<< warning labels; or _____>>** to identify electrical hazards for photovoltaic system disconnecting means. Include the word message **<< "Warning - Electric Shock Hazard; Terminals on the line and load sides may be energized in the open position"; or _____>><< or approved equivalent; _____; or None - N/A>>**.
7. Use **<< wire and cable markers; or _____>>** to identify photovoltaic system source, output, and inverter circuit conductors at all points of termination, connection, and splices.
8. Use **<< voltage markers; identification labels; stenciled text; suitable permanent marking approved by authority having jurisdiction; or _____>>** to identify exposed raceways, cable trays, pull boxes, junction boxes, and conduit bodies**<< with the text "Warning: Photovoltaic Power Source"; _____; or None - N/A>>** at maximum intervals of **<< 10 feet; or _____ feet>>** in accordance with **<<NFPA 70>>**.

3.03 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. See article "SYSTEM STARTUP" below for additional requirements related to testing and inspection.

C. Provide services of a manufacturer's authorized representative to **<< observe installation and assist in inspection and testing; perform inspection and testing; or _____>>**. Include manufacturer's **<< detailed testing procedures; field reports; and _____>>** with submittals.

D. Inspection and testing to include, at a minimum:
   1. Inspect each system component for damage and defects.
   2. Verify that equipment enclosures, boxes, and associated connections installed outdoors are weatherproof.
   3. Verify proper wiring connections have been made and check for conductor continuity. Verify proper polarity.
   4. Verify tightness of mechanical and electrical connections are according to manufacturer's recommended torque settings.
   5. Measure and record voltages at the inverter AC and DC inputs.
   6. Measure and record AC output power.
   7. Perform inverter functional test.
      a. Grid-Tied Inverters: Include simulation of loss of utility power and subsequent power restoration.

DRAFT

8. Verify proper operation of monitoring system.

E. Correct defective work, adjust for proper operation, and retest until entire system complies with Contract Documents.

F. Repair roof or adjacent roof-mounted items damaged as a result of work of this section.

3.04 SYSTEM STARTUP

A. Obtain **<<Owner>>**'s approval prior to performing system startup.

B. Grid-Tied Systems: Obtain Utility Company's approval prior to performing system startup.

C. Prepare and start system in accordance with manufacturer's instructions.

3.05 CLEANING

A. Clean modules using only methods recommended by manufacturer to avoid scratches and other damage. Clean exposed surfaces on other components to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.06 MAINTENANCE

A. Provide to **<<Owner>><< , a proposal as an alternate to the base bid,; , at no extra cost,; , _____ ,; or None - N/A>>** a separate maintenance contract for the service and maintenance of photovoltaic system for **<< two years; or _____>>** from date of Substantial Completion, to include the work described below; Include a complete description of preventive maintenance, systematic examination, adjustment, cleaning, inspection, and testing, with a detailed schedule.

END OF SECTION 263100

DRAFT

SECTION 263213
ENGINE GENERATORS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Packaged engine generator system and associated components and accessories:
   1. Natural gas or Diesel engine with electronic generator set controls, governor, and voltage regulator.
   2. Generator set enclosure: located in outdoor, weather-protected, sound-attenuated enclosure.
   3. Generator remote annunciator and accessories.

1.02 RELATED REQUIREMENTS

A. Section **<< 033000 - Cast-in-Place Concrete>>**: Concrete equipment pads.

B. Section **<< 231113 - Facility Fuel-Oil Piping>>**:
   1. Diesel fuel piping.

C. Section **<< 231123 - Facility Natural-Gas Piping>>**.

D. Section **<< 235100 - Breechings, Chimneys, and Stacks>>**: Engine exhaust piping.
   1. Includes installation of exhaust silencer specified in this section.

E. Section **<< 260526 - Grounding and Bonding for Electrical Systems>>**.

F. Section **<< 260529 - Hangers and Supports for Electrical Systems>>**.

G. Section **<< 260553 - Identification for Electrical Systems>>**: Identification products and requirements.

H. Section **<< 263600 - Transfer Switches>>**.

1.03 REFERENCE STANDARDS

A. ASTM D975 - Standard Specification for Diesel Fuel.

B. NECA 1 - Standard for Good Workmanship in Electrical Construction.

C. NECA/EGSA 404 - Standard for Installing Generator Sets.

D. NEMA MG 00001 - Motors and Generators.

E. NFPA 30 - Flammable and Combustible Liquids Code.

F. NFPA 37 - Standard for the Installation and Use of Stationary Combustion Engines and Gas Turbines.

G. NFPA 70 - National Electrical Code.

H. NFPA 99 - Health Care Facilities Code.

I. NFPA 110 - Standard for Emergency and Standby Power Systems.

J. UL 142 - Steel Aboveground Tanks for Flammable and Combustible Liquids.

K. UL 1236 - Battery Chargers for Charging Engine-Starter Batteries.

L. UL 2085 - Protected Aboveground Tanks for Flammable and Combustible Liquids.

M. UL 2200 - Stationary Engine Generator Assemblies.

DRAFT

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate compatibility of generator sets to be installed with work provided under other sections or by others.
      a. Transfer Switches: See Section **<< 263600; or _____>>**.
   2. Coordinate the work with other trades to avoid placement of ductwork, piping, equipment or other potential obstructions within the spaces dedicated for engine generator system.
   3. Coordinate arrangement of equipment with the dimensions and clearance requirements of the actual equipment to be installed.
   4. Coordinate the work to provide electrical circuits suitable for the power requirements of the actual auxiliary equipment and accessories to be installed.
   5. Notify **<<Architect>>** of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Preinstallation Meeting: Convene **<< one week; two weeks; or _____>>** before starting work of this section; require attendance of all affected installers.

1.05 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>**, for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for each product, including ratings, configurations, dimensions, finishes, weights, service condition requirements, and installed features. Include alternator starting capabilities, engine fuel consumption rates, and cooling, combustion air, and exhaust requirements.
   1. Include generator set sound level test data.
   2. Include characteristic trip curves for overcurrent protective devices.
   3. Include manufacturer's factory emissions certification
   4. Include alternator thermal damage curve.
   5. Documentation proving that generator provided has sufficient starting kVA to start the loads under any load sequence.
   6. Generator accessories:
      a. Batteries
      b. Battery charger
      c. Silencer
      d. Jacket heater
   7. Remote alarm annunciator panel.
   8. Enclosure components and accessories.

C. Bill of materials: Provide detailed list of components.

D. Shop Drawings: Include dimensioned plan views and sections, of specific project installation and location, indicating locations of system components, required clearances, and field connection locations. Include system interconnection schematic diagrams showing all factory and field connections. Include fuel storage tank calculations indicating maximum running time for generator set configuration provided.

E. Source quality control test reports.

F. Provide **<<NFPA 110>>** required documentation from manufacturer**<< where requested by authorities having jurisdiction; _____; or None - N/A>>**, including but not limited to:
   1. Certified prototype tests.

DRAFT

2. Torsional vibration compatibility certification.
3. **<<NFPA 110>>** compliance certification.
4. Certified rated load test at rated power factor.

G. Manufacturer's detailed field testing procedures.

H. Field quality control test reports.

I. Operation and Maintenance Data: Include detailed information on system operation, equipment programming and setup, replacement parts, and recommended maintenance procedures and intervals.
1. Include contact information for entity that will be providing contract maintenance and trouble call-back service.

J. Maintenance contracts.

K. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.
1. Extra Fuses: **<< One; Two; or _____>>** of each type and size.
2. Extra Filter Elements: **<< One; Two; or _____>>** of each type, including fuel, oil and air.

1.06 QUALITY ASSURANCE

A. Comply with the following:
1. **<<NFPA 70>>** (National Electrical Code).
2. **<<NFPA 110>>** (Standard for Emergency and Standby Power Systems)**<< ; meet requirements for Level 1 system; ; meet requirements for Level 2 system; ; _____; or None - N/A>>**.
3. **<<NFPA 37>>** (Standard for the Installation and Use of Stationary Combustion Engines and Gas Turbines).
4. **<<NFPA 30>>** (Flammable and Combustible Liquids Code).

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum **<< three; or _____>>** years**<< documented; _____; or None - N/A>>** experience.
1. Authorized service facilities located within **<< 200 miles; 100 miles; _____ miles; or _____>>** of project site.

C. Installer Qualifications: Company**<< specializing in performing the work of this section; _____; or None - N/A>>** with minimum **<< three; or _____>>** years**<< documented; _____; or None - N/A>>** experience with engine generator systems of similar size, type, and complexity**<< ; manufacturer's authorized installer; ; _____; or None - N/A>>**.

D. Maintenance Contractor Qualifications: **<< Same entity as installer or different entity with specified qualifications; Same entity as installer; or _____>>**.
1. Contract maintenance office located within **<< 200 miles; 100 miles; or ___ miles>>** of project site.

E. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

F. Emissions: Equipment shall be certified to U.S. EPA Stationary Emission Regulation, 40 CFR, Part 60.

G. Permits: Serve as the Owner's representative during the application process. Collect generator information, prepare and submit required applications for air quality construction and operational permits required by the State of Maryland Department of the Environment in

DRAFT

compliance of state environmental regulations. Include payment for applicable permit costs. Approved permits and registration shall be issued to the Owner.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store generator sets in accordance with manufacturer's instructions and **<<NECA/EGSA 404>>**.

B. Store in a clean, dry space. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.

C. Handle carefully in accordance with manufacturer's instructions to avoid damage to generator set components, enclosure, and finish.

1.08 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

1.09 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Provide minimum five year manufacturer warranty covering repair or replacement due to defective materials or workmanship.

1. Warranty shall include all parts and labor with no deductible.

1.10 EXTRA MATERIALS

A. Furnish extraa materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fuses: One for every ten of each type and rating, but no fewer than one of each.
2. Indicator lamps: One for every five of each type used, but no fewer than two of each.
3. Filters: One set of each of lubricating oil, fuel, and combustion-air filters.

B. Provide fuel required for resting, re-testing, and demonstrations.

1.11 MAINTENANCE SERVICE

A. Initial maintenance service: Beginning at substantial completion, provide 12 months', full maintenance by skilled employees of manufacturer's designated service organization. Include quarterly exercising to check for proper starting, load transfer, and running under load. Include routine preventive maintenance as recommended by manufacturer and adjusting as required for proper operation. Provide parts and supplies same as those used in manufacture and installation of original equipment. Provide detailed service records from all services with 12 month service period to Owner for record.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Packaged Engine Generator Set:

1. Caterpillar Inc: www.cat.com/#sle.
2. Cummins Power Generation Inc: www.cumminspower.com/#sle.
3. Generac Power Systems: www.generac.com/industrial/#sle.
4. Rehlko: www.powersystems.rehlko.com/#sle.
5. Rolls-Royce Power Systems; MTU: www.mtu-solutions.com/#sle.

DRAFT

B. Source Limitations: Furnish engine generator sets and associated components and accessories produced by single manufacturer and obtained from single supplier.

2.02 PACKAGED ENGINE GENERATOR SYSTEM

A. Provide **<< new; modifications and additions to existing; or _____>>** engine generator system consisting of all required equipment, sensors, conduit, boxes, wiring, piping, supports, accessories, system programming, etc. as necessary for a complete operating system that provides the functional intent indicated.

B. Provide products listed, classified, and labeled as suitable for the purpose intended.

C. System Description:

1. Application: **<< Emergency/standby; Prime power; Continuous duty; or _____>>**.

D. Packaged Engine Generator Set:

1. Type: **<< Diesel (compression ignition); Gaseous (spark ignition); or _____>>**.
2. Power Rating: **<< _____ kW; As indicated on drawings; or _____>>**, **<< standby; prime; continuous; or _____>><< , including applicable derating adjustments; , _____; or None - N/A>>**.
3. Voltage: **<< As indicated on drawings; 208Y/120 V, 3 phase, 60 Hz; 480Y/277 V, 3 phase, 60 Hz; 240/120 V, 1 phase, 60 Hz; 240/120 V, 3 phase, 60 Hz; or _____>>**.
4. Main Line Circuit Breaker**<< Number One; Number Two; Number _____; _____; or None - N/A>>**:
   a. Type: **<< Thermal magnetic; Electronic trip with long time and short time delay and instantaneous pickup; or _____>>**.
   b. Trip Rating: **<< Select according to generator set rating; As indicated on drawings; _____ amps; or _____>>**.
   c. Circuit breaker shall conform to standards established by UL 489 and NFPA 70.

E. Generator Set General Requirements:

1. Prototype tested in accordance with **<<NFPA 110>>** for Level 1 systems.
2. Factory-assembled, with components mounted on suitable base.
3. List and label engine generator assembly as complying with **<<UL 2200>>**.
4. Power Factor: Unless otherwise indicated, specified power ratings are at 0.8 power factor for three phase voltages and 1.0 power factor for single phase voltages.
5. Provide suitable guards to protect personnel from accidental contact with rotating parts, hot piping, and other potential sources of injury.
6. Main Line Circuit Breakers: Provide factory-installed line side connections with suitable lugs for load side connections.

F. Service Conditions: Provide engine generator system and associated components suitable for operation under the service conditions at the installed location.

1. Altitude: Sea level to minimum 1000 feet.
2. Ambient Temperature: Between 5 to 40 degrees C.
3. Relative humidity: 0 to 95 percent.
4. Available Natural Gas Pressure: 7 to 11 inches water column.

G. Starting and Load Acceptance Requirements:

DRAFT

1. Cranking Method: **<< Cycle cranking complying with NFPA 110 (15 second crank period, followed by 15 second rest period, with cranking limiter time-out after 3 cycles); or _____>>**, unless otherwise required.
2. Cranking Limiter Time-Out: If generator set fails to start after specified cranking period, indicate overcrank alarm condition and lock-out generator set from further cranking until manually reset.
3. Start Time: Capable of starting and achieving conditions necessary for load acceptance within **<< 10 seconds (NFPA 110, Type 10); or _____>>**.
4. Maximum Load Step: Supports **<< 100 percent of rated load in one step; or _____>>**.

H. Exhaust Emissions Requirements:
1. Comply with federal (EPA), state, and local regulations applicable at the time of commissioning**<< ; include factory emissions certification with submittals; ; _____; or None - N/A>>**.
2. Do not make modifications affecting generator set factory emissions certification without approval of manufacturer**<< and Engineer; _____; or None - N/A>>**. Where such modifications are made, provide field emissions testing as necessary for certification.

I. Sound Level Requirements:
1. Minimum sound attenuation of 25 dB at 500 Hz.
2. Do not exceed 85 dBA when measured at 10 feet from generator set in free field (no sound barriers) while operating at full load**<< ; include manufacturer's sound data with submittals; ; _____; or None - N/A>>**.

J. Interface with building automation system**<< as specified in Section ____; _____; or None - N/A>>**.

2.03 ENGINE AND ENGINE ACCESSORY EQUIPMENT

A. Provide engine with adequate horsepower to achieve specified power output at rated speed, accounting for alternator efficiency and parasitic loads.

B. Engine Fuel System - Diesel (Compression Ignition):
1. Fuel Source: Diesel**<< , ASTM D975 No. 2-D or approved cold weather diesel blends; , _____; or None - N/A>>**.
2. Fuel Storage: **<< Sub-base fuel tank; Main fuel tank (bulk tank) without day tank; Main fuel tank (bulk tank) with day tank; or _____>>**.
3. Engine Fuel Supply: Provide engine-driven, positive displacement fuel pump with replaceable fuel filter(s), water separator, check valve to secure prime, manual fuel priming pump, and relief-bypass valve. Provide fuel cooler where recommended by manufacturer.
4. Engine Fuel Connections: Provide suitable, approved flexible fuel lines for coupling engine to fuel source.
5. Sub-Base Fuel Tank:
   a. Provide sub-base mounted, double-wall fuel tank with secondary containment; listed and labeled as complying with **<< UL 142; UL 2085 (protected tank); or _____>>**.
   b. Tank Capacity: Size for minimum of **<< 24 hours; 48 hours; 72 hours; 96 hours; or _____>>** of continuous engine generator operation at 100 percent rated load, but not larger than permissible by applicable codes.
   c. Features:
      1) Direct reading fuel level gauge.

DRAFT

2) Normal atmospheric vent.
3) Emergency pressure relief vent.
4) Fuel fill opening with lockable cap.
5) Dedicated electrical conduit stub-up area.

C. Engine Fuel System - Gaseous (Spark Ignition):
1. Fuel Source: **<< Natural gas; Propane (LP), vapor withdrawal; Propane (LP), liquid withdrawal; Dual fuel configuration; primary fuel of natural gas with automatic changeover to secondary fuel of propane (LP), vapor withdrawal; Dual fuel configuration; primary fuel of natural gas with automatic changeover to secondary fuel of propane (LP), liquid withdrawal; or _____>>**.
2. Engine Fuel Connections: Provide suitable, approved flexible fuel lines for coupling engine to fuel source.
3. Provide components/features indicated and as necessary for operation and/or required by applicable codes, including but not limited to:
a. Carburetor.
b. Gas pressure regulators.
c. Fuel shutoff control valves.
d. Low gas pressure switches.

D. Engine Starting System:
1. System Type: Electric, with DC solenoid-activated starting motor(s).
2. Battery(s):
a. Battery Type: **<< Lead-acid; Nickel-cadmium; or _____>>**.
b. Battery Capacity: Size according to manufacturer's recommendations for achieving starting and load acceptance requirements under worst case ambient temperature; capable of providing cranking through **<< two; or _____>>** complete periods of cranking limiter time-outs without recharging.
c. Provide battery rack, cables, and connectors suitable for the supplied battery(s); size battery cables according to manufacturer's recommendations for cable length to be installed.
3. Battery-Charging Alternator: Engine-driven, with integral solid-state voltage regulation.
4. Battery Charger:
a. Provide dual rate battery charger with automatic float and equalize charging modes**<< and minimum rating of 10 amps; _____; or None - N/A>>**; suitable for maintaining the supplied battery(s) at full charge without manual intervention.
b. Capable of returning supplied battery(s) from fully discharged to fully charged condition within **<< 24 hours, as required by NFPA 110 for Level 1 applications; time required by NFPA 110 for Level indicated; 12 hours; _____ hours; or _____>>** while carrying normal loads.
c. Listed as complying with **<<UL 1236>>**.
d. Furnished with integral overcurrent protection; current limited to protect charger during engine cranking; reverse polarity protection.
e. Provide integral DC output ammeter and voltmeter with five percent accuracy.
f. Provide alarm output contacts as necessary for alarm indications.

E. Engine Speed Control System (Governor):
1. Single Engine Generator Sets (Not Operated in Parallel): Provide **<< electronic isochronous governor; electronic isochronous or mechanical governor; or _____>>** for controlling engine speed/alternator frequency.

DRAFT

2. Frequency Regulation, Electronic Isochronous Governors: No change in frequency from no load to full load; plus/minus **<< 0.25; or _____>>** percent at steady state.

F. Engine Lubrication System:

1. System Type: Full pressure, with engine-driven, positive displacement lubrication oil pump, replaceable full-flow oil filter(s), and dip-stick for oil level indication. Provide oil cooler where recommended by manufacturer.

G. Engine Cooling System:

1. System Type: Closed-loop, liquid-cooled, with **<< unit-mounted radiator/fan and engine-driven coolant pump; or _____>>**; suitable for providing adequate cooling while operating at full load under worst case ambient temperature.
2. Fan Guard: Provide suitable guard to protect personnel from accidental contact with fan.
3. Coolant Heater: Provide thermostatically controlled coolant heater to improve starting under cold ambient conditions; size according to manufacturer's recommendations for achieving starting and load acceptance requirements under worst case ambient temperature.

H. Engine Air Intake and Exhaust System:

1. Air Intake Filtration: Provide engine-mounted, replaceable, dry element filter.
2. Engine Exhaust Connection: Provide suitable, approved flexible connector for coupling engine to exhaust system.
3. Exhaust Silencer: Provide**<< hospital grade or better; critical grade or better; residential grade or better; industrial grade or better; _____; or None - N/A>>** exhaust silencer**<< with sound attenuation not less than basis of design; with minimum sound attenuation of _____dBA; _____; or None - N/A>>**; select according to manufacturer's recommendations to meet sound performance requirements, where specified.

2.04 ALTERNATOR (GENERATOR)

A. Alternator: **<< 4-pole, 1800 rpm (60 Hz output); or _____>>** revolving field, synchronous generator complying with **<<NEMA MG 00001>>**; connected to engine with flexible coupling; voltage output configuration as indicated, with reconnectable leads for 3 phase alternators.

B. Exciter:

1. Exciter Type: Brushless; **<< provide permanent magnet generator (PMG) excitation system; self-excited (shunt) systems are not permitted; either self-excited (shunt) or permanent magnet generator (PMG) excitation systems are permitted; or _____>>**.
2. PMG Excitation Short-Circuit Current Support: Capable of sustaining 300 percent of rated output current for 10 seconds.
3. Voltage Regulation (with PMG excitation): **<< Plus/minus 0.5 percent; or _____>>** for any constant load from no load to full load.

C. Temperature Rise: **<< Comply with UL 2200; or _____>>**.

D. Insulation System: **<<NEMA MG 00001>><< , Class H; , Class F or Class H; , _____; or None - N/A>>**; suitable for alternator temperature rise.

E. Enclosure: **<<NEMA MG 00001>>**, drip-proof.

F. Total Harmonic Distortion: Not greater than **<< five; or _____>>** percent.

DRAFT

2.05 GENERATOR SET CONTROL SYSTEM

A. Provide microprocessor-based control system for automatic control, monitoring, and protection of generator set. Include sensors, wiring, and connections necessary for functions/indications specified.

B. Control Panel:

1. Control Panel Mounting: **<< Unit-mounted unless otherwise indicated; vibration isolated; Wall-mounted, located as indicated on the drawings; Wall-mounted, located _____; or _____>>**.
2. Generator Set Control Functions:
   a. Automatic Mode: Initiates generator set start/shutdown upon receiving corresponding signal from remote device (e.g. automatic transfer switch).
   b. Manual Mode: Initiates generator set start/shutdown upon direction from operator.
   c. Reset Mode: Clears all faults, allowing generator set restart after a shutdown.
   d. Emergency Stop: Immediately shuts down generator set (without time delay) and prevents automatic restarting until manually reset.
   e. Cycle Cranking: Programmable crank time, rest time, and number of cycles.
   f. Time Delay: Programmable for **<< shutdown (engine cooldown); start (engine warmup); and _____>>**.
   g. Voltage Adjustment: Adjustable through range **<< of plus/minus 5 percent; of _____; or _____>>**.
3. Generator Set Status Indications:
   a. Voltage (Volts AC): Line-to-line, line-to-neutral for each phase.
   b. Current (Amps): For each phase.
   c. Frequency (Hz).
   d. Real power (W/kW).
   e. Reactive power (VAR/kVAR).
   f. Apparent power (VA/kVA).
   g. Power factor.
   h. Duty Level: Actual load as percentage of rated power.
   i. Engine speed (RPM).
   j. Battery voltage (Volts DC).
   k. Engine oil pressure.
   l. Engine coolant temperature.
   m. Engine run time.
   n. Generator powering load (position signal from transfer switch).
4. Generator Set Protection and Warning/Shutdown Indications:
   a. Comply with **<<NFPA 110>>**; configurable for **<<NFPA 110>>** Level 1 or Level 2, or **<<NFPA 99>>** systems including but not limited to the following protections/indications:
      1) Overcrank (shutdown).
      2) Low coolant temperature (warning).
      3) High coolant temperature (warning).
      4) High coolant temperature (shutdown).
      5) Low oil pressure (shutdown).
      6) Overspeed (shutdown).

DRAFT

7) Low fuel level (warning).
8) Low coolant level (warning/shutdown).
9) Generator control not in automatic mode (warning).
10) High battery voltage (warning).
11) Low cranking voltage (warning).
12) Low battery voltage (warning).
13) Battery charger failure (warning).

b. In addition to **<<NFPA 110>>** requirements, provide the following protections/indications:
1) High AC voltage (shutdown).
2) Low AC voltage (shutdown).
3) High frequency (shutdown).
4) Low frequency (shutdown).
5) Overcurrent (shutdown).

c. Provide contacts for local and remote common alarm.
d. Provide lamp test function that illuminates all indicator lamps.

5. Other Control Panel Features:
a. Event log.

C. Remote Annunciator:
1. Remote Annunciator Mounting: Wall-mounted; Provide **<< flush-mounted annunciator for finished areas and surface-mounted annunciator for non-finished areas unless otherwise indicated; flush-mounted or surface-mounted annunciator as indicated; or _____>>**.
2. Generator Set Status Indications:
a. Generator powering load (via position signal from transfer switch).
b. Communication functional.
3. Generator Set Warning/Shutdown Indications:
a. Comply with **<<NFPA 110>>**; configurable for **<<NFPA 110>>** Level 1 or Level 2, or **<<NFPA 99>>** systems including but not limited to the following indications:
1) Overcrank (shutdown).
2) Low coolant temperature (warning).
3) High coolant temperature (warning).
4) High coolant temperature (shutdown).
5) Low oil pressure (shutdown).
6) Overspeed (shutdown).
7) Low fuel level (warning).
8) Low coolant level (warning/shutdown).
9) Generator control not in automatic mode (warning).
10) High battery voltage (warning).
11) Low cranking voltage (warning).
12) Low battery voltage (warning).
13) Battery charger failure (warning).

b. Provide audible alarm with silence function.
c. Provide lamp test function that illuminates all indicator lamps.

DRAFT

D. Remote Emergency Stop: Provide approved red, mushroom style remote emergency stop button where indicated or required by authorities having jurisdiction.

2.06 GENERATOR SET ENCLOSURE

A. Enclosure Type: **<< Sound attenuating, weather protective; Weather protective (non-sound attenuating); or _____>>**.

B. Enclosure Material: **<< Steel or aluminum; Aluminum; or _____>>**.

C. Hardware Material: **<< Stainless steel; or _____>>**.

D. Color: **<< Manufacturer's standard; Custom color to be selected by Architect; or _____>>**.

E. Access Doors: Lockable, with all locks keyed alike.

F. Openings: Designed to prevent bird/rodent entry.

G. External Drains: Extend oil and coolant drain lines to exterior of enclosure for maintenance service.

H. Sound Attenuating Enclosures: Line enclosure with non-hydroscopic, self-extinguishing sound-attenuating material.

I. Exhaust Silencers: Where exhaust silencers are mounted within enclosure in main engine compartment, insulate silencer to minimize heat dissipation as necessary for operation at rated load under worst case ambient temperature.

2.07 SOURCE QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>** for additional requirements.

B. Perform production tests on generator sets at factory to verify operation and performance characteristics prior to shipment**<< . Include certified test report with submittals; _____; or None - N/A>>**.

1. Tests: Comply with NFPA 110, Level 1, energy converters.
2. Alternator tests: Comply with IEEE 115.
3. Equivalent components and accessories: Submit evidence that items furnished with the unit, but that are not identical to those on the prototype, are reliable and compatible with the application.

C. Generator Set production testing to include, at a minimum:

1. Operation at rated load and rated power factor.
2. Single step load pick-up.
3. Transient and steady state voltage and frequency performance.
4. Operation of safety shutdowns.

D. Diesel Fuel Storage Tanks: Perform pressurized leak test prior to shipment.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that the ratings and configurations of generator sets and auxiliary equipment are consistent with the indicated requirements.

C. Verify that rough-ins for field connections are in the proper locations.

DRAFT

D. Verify that mounting surfaces are ready to receive equipment.

E. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Perform work in accordance with **<<NECA 1>>** (general workmanship).

B. Install products in accordance with manufacturer's instructions.

C. Install generator sets and associated accessories in accordance with **<<NECA/EGSA 404>>**.

D. Arrange equipment to provide minimum clearances and required maintenance access.

E. Unless otherwise indicated, mount generator set on properly sized, minimum **<< 6 inch; or _____>>** high concrete pad constructed in accordance with Section **<< 033000; or _____>>**.

F. Provide required support and attachment in accordance with Section **<< 260529>>**.

G. Use manufacturer's recommended oil and coolant, suitable for the worst case ambient temperatures.

H. Provide diesel fuel piping and venting in accordance with Section **<< 231113; or _____>>**, where not factory installed.

I. Provide engine exhaust piping in accordance with Section **<< 235100; or _____>>**, where not factory installed.

1. Include piping expansion joints, piping insulation, thimble, condensation trap/drain, rain cap, hangers/supports, etc. as indicated or as required.
2. Do not exceed manufacturer's maximum back pressure requirements.

J. Do not insulate piping for engine components restricted by manufacturer.

K. Install exhaust silencer in accordance with Section **<< 235100; or _____>>**, where not factory installed.

L. Provide grounding and bonding in accordance with Section **<< 260526>>**.

M. Identify system wiring and components in accordance with Section **<< 260553>>**.

3.03 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Provide services of a manufacturer's authorized representative to **<< prepare and start systems and perform inspection and testing; or _____>>**. Include manufacturer's **<< detailed testing procedures; field reports; and _____>>** with submittals.

C. Notify **<<Owner>>** and **<<Architect>>** at least **<< two weeks; or _____>>** prior to scheduled inspections and tests.

D. Notify authorities having jurisdiction and comply with their requirements for scheduling inspections and tests and for observation by their personnel.

E. Provide all equipment, tools, and supplies required to accomplish inspection and testing, including load bank and fuel.

F. Preliminary inspection and testing to include, at a minimum:

1. Inspect each system component for damage and defects.
2. Verify tightness of mechanical and electrical connections are according to manufacturer's recommended torque settings.
3. Check for proper oil and coolant levels.

DRAFT

G. Prepare and start system in accordance with manufacturer's instructions.

H. Perform acceptance test in accordance with **<<NFPA 110>>**.

I. Provide field emissions testing where necessary for certification.

J. Sound Level Tests: Measure sound levels for compliance with specified requirements. Identify and report ambient noise conditions.

K. Correct defective work, adjust for proper operation, and retest until entire system complies with Contract Documents.

L. Submit detailed reports indicating inspection and testing results and corrective actions taken.

3.04 CLEANING

A. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish. Clean components internally using methods and materials recommended by the manufacturer.

3.05 CLOSEOUT ACTIVITIES

A. Demonstration: Demonstrate proper operation of system to **<<Owner>>**, and correct deficiencies or make adjustments as directed.

B. Training: Train **<<Owner>>**'s personnel on operation, adjustment, and maintenance of system.
   1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
   2. Provide minimum of two sessions of four consecutive hours of additional instruction time and training for each system specified in this section.

C. After successful acceptance test and just prior to Substantial Completion, replace air, oil, and fuel filters**<< and fill fuel storage tank; _____; or None - N/A>>**.

3.06 ACCEPTANCE TESTING

A. In addition to the factory and field tests required, peform a scheduled on-site test and demonstration of the completely installed generator before making final electrical connections.

B. Test shall be witness by the Owner's representative, and manufacturer's representative. Manufacturer's representative shall conduct demonstrations.

C. Provide and utilize load bank for testing. Load banks shall be capable of providing full load at 0.8 power factor.

D. Test procedures: Test the generator in accordance with NFPA 110 and as follows:
   1. Test the generator for at least two hours under full load, starting and stopping at least five times.
      a. The unit shall operate without undue noise or vibration, or excessive heating. Correct defects and retest until unit is operating satisfactorily.
      b. Demonstrate satisfactory operation of each feature required of the generator set and accessories.

3.07 PROTECTION

A. Protect installed engine generator system from subsequent construction operations.

3.08 MAINTENANCE

A. Provide to **<<Owner>><< a proposal as an alternate to the base bid,; at no extra cost,; _____; or None - N/A>>** a separate maintenance contract for the service and

DRAFT

maintenance of engine generator system for **<< two years; or _____>>** from date of Substantial Completion; Include a complete description of preventive maintenance, systematic examination, adjustment, inspection, and testing, with a detailed schedule.

B. Provide trouble call-back service upon notification by **<<Owner>>**:
   1. Provide on-site response within **<< 4 hours; or _____>>** of notification.
   2. Include allowance for call-back service during normal working hours at no extra cost to **<<Owner>>**.
   3. **<<Owner>>** will pay for call-back service outside of normal working hours on an hourly basis, based on actual time spent at site and not including travel time; include hourly rate and definition of normal working hours in maintenance contract.

END OF SECTION 263213

DRAFT

SECTION 263600
TRANSFER SWITCHES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Transfer switches for low-voltage (600 V and less) applications.

1.02 RELATED REQUIREMENTS

A. Section **<< 033000 - Cast-in-Place Concrete>>**: Concrete equipment pads.

B. Section **<< 142100 - Electric Traction Elevators>>**: For interface with transfer switch.

C. Section **<< 142400 - Hydraulic Elevators>>**: For interface with transfer switch.

D. Section **<< 260526 - Grounding and Bonding for Electrical Systems>>**.

E. Section **<< 260529 - Hangers and Supports for Electrical Systems>>**.

F. Section **<< 260553 - Identification for Electrical Systems>>**: Identification products and requirements.

G. Section **<< 260573 - Power System Studies>>**: Additional criteria for the selection of equipment specified in this section.

H. Section **<< 263213 - Engine Generators>>**: For interface with transfer switches.

1. Includes code requirements applicable to work of this section.
2. Includes additional testing requirements.
3. Includes related demonstration and training requirements.

1.03 REFERENCE STANDARDS

A. NECA 1 - Standard for Good Workmanship in Electrical Construction.

B. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

C. NEMA IA 10042-1 - Industrial Control and Systems Part 1: Electromechanical AC Transfer Switch Equipment.

D. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems.

E. NFPA 70 - National Electrical Code.

F. NFPA 110 - Standard for Emergency and Standby Power Systems.

G. UL 869A - Reference Standard for Service Equipment.

H. UL 1008 - Transfer Switch Equipment.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate compatibility of transfer switches to be installed with work provided under other sections or by others.
2. Coordinate the work with other trades to avoid placement of ductwork, piping, equipment, or other potential obstructions within the dedicated equipment spaces and working clearances required by **<<NFPA 70>>**.
3. Coordinate arrangement of equipment with the dimensions and clearance requirements of the actual equipment to be installed.

DRAFT

4. Coordinate the work with placement of supports, anchors, etc. required for mounting.
5. Notify **<<Architect>>** of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Preinstallation Meeting: Convene **<< one week; or _____>>** before starting work of this section; require attendance of all affected installers.

C. Where work of this section involves interruption of existing electrical service, arrange service interruption with **<<Owner>>**.

1.05 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>**, for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for each product, including ratings, configurations, dimensions, finishes, weights, service condition requirements, and installed features.

C. Shop Drawings: Include dimensioned plan views of this project's installation, and sections indicating locations of system components, required clearances, and field connection locations. Include system interconnection schematic diagrams showing all factory and field connections.

D. Certifications:
1. Product certificate(s) signed by manufacturer certifying that products furnished comply with requirements and that switches have been tested for applicable load ratings and short-circuit closing and withstand ratings.

E. Source quality control test reports.

F. Manufacturer’s detailed field testing procedures.

G. Executed Warranty: Submit documentation of final executed warranty completed in **<<Owner>>**'s name and registered with manufacturer.

1.06 QUALITY ASSURANCE

A. Comply with the following:
1. **<<NFPA 70>>** (National Electrical Code).
2. **<<NFPA 110>>** (Standard for Emergency and Standby Power Systems); meet requirements for system Level specified in Section **<< 263213>>**.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum **<< three; or _____>>** years**<< documented; _____; or None - N/A>>** experience.

C. Installer Qualifications: Company**<< specializing in performing the work of this section; _____; or None - N/A>>** with minimum **<< three; or _____>>** years**<< documented; _____; or None - N/A>>** experience with power transfer systems of similar size, type, and complexity**<< ; manufacturer's authorized installer; ; _____; or None - N/A>>**.

D. Maintenance Contractor Qualifications: **<< Same entity as installer or different entity with specified qualifications; Same entity as installer; or _____>>**.
1. Contract maintenance office located within **<< 200 miles; 100 miles; or ___ miles>>** of project site.

E. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

DRAFT

1.07 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store transfer switches in accordance with manufacturer's instructions.

B. Store in a clean, dry space. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.

C. Handle carefully in accordance with manufacturer's instructions to avoid damage to transfer switch components, enclosure, and finish.

1.08 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

1.09 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Provide minimum **<< one; two; five; or _____ >>** year manufacturer warranty covering repair or replacement due to defective materials or workmanship.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Transfer Switches:

1. ABB: www.electrification.us.abb.com/#sle.
2. Eaton Corporation: www.eaton.com/#sle.
3. Generac Power Systems: www.generac.com/industrial/#sle.
4. Rehlko: www.powersystems.rehlko.com/#sle.
5. Schneider Electric; ASCO Power Technologies: www.ascopower.com/#sle.
6. Source Limitations: Provide transfer switches and accessories produced by single manufacturer and obtained from single supplier.

2.02 TRANSFER SWITCHES

A. Provide complete power transfer system consisting of all required equipment, conduit, boxes, wiring, supports, accessories, system programming, etc. as necessary for a complete operating system that provides the functional intent indicated.

B. Provide products listed, classified, and labeled as suitable for the purpose intended.

C. Applications:

1. Utilize open transition transfer unless otherwise indicated or required.
2. Neutral Switching (Single Phase, Three Wire and Three Phase, Four Wire Systems):
   a. Unless otherwise indicated or required, provide solid (unswitched) neutral.
3. Provide signal before transfer contacts for transfer switches serving elevators.

D. Construction Type: **<< Either "contactor type" (open contact) or "breaker type" (enclosed contact) transfer switches complying with specified requirements are acceptable; Only "contactor type" (open contact) transfer switches are acceptable. Do not use "breaker type" (enclosed contact) transfer switches; Only "breaker type" (enclosed contact) transfer switches are acceptable. Do not use "contactor type" (open contact) transfer switches; or _____>>**.

E. Automatic Transfer Switch**<< Number _____; _____; or None - N/A>>**:

DRAFT

1. Transfer Switch Type: **<< As indicated on the drawings; Automatic transfer switch; Bypass/isolation automatic transfer switch; Service entrance rated automatic transfer switch; Service entrance rated bypass/isolation automatic transfer switch; or _____>>**.
2. Transition Configuration: **<< As indicated on the drawings; Open-transition (no neutral position); Open-transition (no neutral position), utilizing in-phase monitor; Delayed-transition (with neutral position); Closed-transition; or _____>>**.
3. Voltage: **<< As indicated on the drawings; or _____>>**.
4. Ampere Rating: **<< As indicated on the drawings; or _____>>**.
5. Neutral Configuration: **<< Solid neutral (unswitched), except as indicated; Switched neutral; No neutral; As indicated on the drawings; or _____>>**.

F. ----------

G. Use the following paragraphs to specify basis of design products from selected manufacturers or use the paragraphs above to specify generic, nonproprietary descriptions.

H. ----------

I. ----------

J. ----------

K. Use the following paragraphs to specify basis of design products from selected manufacturers or use the paragraphs above to specify generic, nonproprietary descriptions.

L. ----------

M. ----------

N. Manual Transfer Switch**<< Number _____; _____; or None - N/A>>**:
1. Voltage: **<< As indicated on the drawings; or _____>>**.
2. Ampere Rating: **<< As indicated on the drawings; or _____>>**.
3. Neutral Configuration: **<< Solid neutral (unswitched), except as indicated; Switched neutral; No neutral; As indicated on the drawings; or _____>>**.

O. ----------

P. Use the following paragraphs to specify basis of design products from selected manufacturers or use the paragraphs above to specify generic, nonproprietary descriptions.

Q. ----------

R. ----------

S. Comply with **<<NEMA IA 10042-1>>**, and list and label as complying with **<<UL 1008>>** for the classification of the intended application (e.g. emergency, optional standby).

T. Do not use double throw safety switches or other equipment not specifically designed for power transfer applications and listed as transfer switch equipment.

U. Load Classification: Classified for total system load (any combination of motor, electric discharge lamp, resistive, and tungsten lamp loads with tungsten lamp loads not exceeding 30 percent of the continuous current rating) unless otherwise indicated or required.

V. Switching Methods:
1. Open Transition:
   a. Provide break-before-make transfer without a neutral position that is not connected to either source, and with interlocks to prevent simultaneous connection of the load to both sources.

DRAFT

2. Obtain control power for transfer operation from line side of source to which the load is to be transferred.

W. Service Conditions: Provide transfer switches suitable for continuous operation at indicated ratings under the service conditions at the installed location.

X. Enclosures:
1. Environment Type per **<<NEMA EN 10250>>**: **<< Unless otherwise indicated, as specified for the following installation locations:; As indicated on the drawings.; or _____ .>>**
a. Indoor Clean, Dry Locations: **<< Type 1 or Type 12; or _____>>**.
b. Outdoor Locations: **<< Type 3R or Type 4; or _____>>**.
2. Provide lockable door(s)**<< for outdoor locations; where indicated; _____; or None - N/A>>**.
3. Finish: **<< Manufacturer's standard unless otherwise indicated; or _____>>**.

Y. Short Circuit Current Rating:
1. Withstand and Closing Rating: Provide transfer switches, when protected by the supply side overcurrent protective devices to be installed, with listed withstand and closing rating not less than the available fault current at the installed location as determined by short circuit study**<< performed in accordance with Section 260573; _____; or None - N/A>>**.

Z. Automatic Transfer Switches:
1. Description: Transfer switches with automatically initiated transfer between sources; electrically operated and mechanically held.
2. Control Functions:
a. Automatic mode.
b. Test Mode: Simulates failure of primary/normal source.
c. Voltage and Frequency Sensing:
1) Undervoltage sensing for each phase of primary/normal source; adjustable dropout/pickup settings.
2) Undervoltage sensing for alternate/emergency source; adjustable dropout/pickup settings.
3) Underfrequency sensing for alternate/emergency source; adjustable dropout/pickup settings.
d. Outputs:
1) Contacts for engine start/shutdown (except where direct generator communication interface is provided).
2) Auxiliary contacts; **<< one; two; or _____>>** set(s) for each switch position.
e. Adjustable Time Delays:
1) Engine generator start time delay; delays engine start signal to override momentary primary/normal source failures.
2) Transfer to alternate/emergency source time delay.
3) Retransfer to primary/normal source time delay.
4) Engine generator cooldown time delay; delays engine shutdown following retransfer to primary/normal source to permit generator to run unloaded for cooldown period.
f. In-Phase Monitor (Open Transition Transfer Switches): Monitors phase angle difference between sources for initiating in-phase transfer.

DRAFT

g. Engine Exerciser: Provides programmable scheduled exercising of engine generator selectable with or without transfer to load; provides memory retention during power outage.

3. Status Indications:
   a. Connected to alternate/emergency source.
   b. Connected to primary/normal source.
   c. Alternate/emergency source available.
4. Automatic Sequence of Operations:
   a. Upon failure of primary/normal source for a programmable time period (engine generator start time delay), initiate starting of engine generator where applicable.
   b. When alternate/emergency source is available, transfer load to alternate/emergency source after programmable time delay.
   c. When primary/normal source has been restored, retransfer to primary/normal source after a programmable time delay. Bypass time delay if alternate/emergency source fails and primary/normal source is available.
   d. Where applicable, initiate shutdown of engine generator after programmable engine cooldown time delay.

AA. Manual Transfer Switches:
1. Description: Transfer switches with manually initiated transfer between sources; mechanically operated and mechanically held.

BB. Service Entrance Rated Transfer Switches:
1. Furnished with integral disconnecting and overcurrent protective device on the primary/normal source and with ground-fault protection where indicated.
2. Listed and labeled as suitable for use as service equipment according to **<<UL 869A>>**.

CC. Interface with Other Work:
1. Interface with engine generators as specified in Section **<< 263213>>**.
2. Interface with elevators as specified in Section **<< 142100; or 142400>>**.
3. Interface with building automation system**<< as specified in Section _____; _____; or None - N/A>>**.

2.03 SOURCE QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Perform production tests on transfer switches at factory to verify operation and performance characteristics prior to shipment**<< . Include certified test report with submittals; or None - N/A>>**.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that the ratings and configurations of transfer switches are consistent with the indicated requirements.

C. Verify that rough-ins for field connections are in the proper locations.

D. Verify that mounting surfaces are ready to receive transfer switches.

E. Verify that conditions are satisfactory for installation prior to starting work.

DRAFT

3.02 INSTALLATION

A. Perform work in accordance with **<<NECA 1>>** (general workmanship).

B. Install products in accordance with manufacturer's instructions.

C. Arrange equipment to provide minimum clearances and required maintenance access.

D. Provide required support and attachment in accordance with Section **<< 260529>>**.

E. Install transfer switches plumb and level.

F. Unless otherwise indicated, mount floor-mounted transfer switches on properly sized **<< 3 inch; 4 inch; or _____>>** high concrete pad constructed in accordance with Section **<< 033000; or _____>>**.

G. Provide grounding and bonding in accordance with Section **<< 260526>>**.

H. Identify transfer switches and associated system wiring in accordance with Section **<< 260553>>**.

3.03 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Provide services of a manufacturer's authorized representative to **<< observe installation and assist in inspection and testing; prepare and start systems and perform inspection and testing; or _____>>**. Include manufacturer's **<< detailed testing procedures; field reports; and _____>>** with submittals.

C. Prepare and start system in accordance with manufacturer's instructions.

D. Automatic Transfer Switches:

1. Inspect and test in accordance with **<<NETA ATS>>**, except Section 4.
2. Perform inspections and tests listed in **<<NETA ATS>>**, Section 7.22.3. The insulation-resistance tests listed as optional are **<< not required; required, when approved by the manufacturer; or _____>>**.

E. Provide additional inspection and testing as required for completion of associated engine generator testing as specified in Section **<< 263213>>**.

F. Correct defective work, adjust for proper operation, and retest until entire system complies with Contract Documents.

3.04 CLEANING

A. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.05 CLOSEOUT ACTIVITIES

A. Demonstration: Demonstrate proper operation of transfer switches to **<<Owner>>**, and correct deficiencies or make adjustments as directed.

B. Training: Train **<<Owner>>**'s personnel on operation, adjustment, and maintenance of transfer switches.

1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.

C. Coordinate with related generator demonstration and training as specified in Section **<< 263213>>**.

DRAFT

3.06 PROTECTION

A. Protect installed transfer switches from subsequent construction operations.

END OF SECTION 263600

DRAFT

SECTION 264100
FACILITY LIGHTNING PROTECTION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. A complete lightning protection system for buildings as indicated on the drawings.

B. Grounding and bonding for lightning protection.

1.02 RELATED REQUIREMENTS

A. Section **<< 260526 - Grounding and Bonding for Electrical Systems>>**: Electrical system grounds.

B. Surge Protection for Wiring Systems: Specified in individual system requirements.

1.03 REFERENCE STANDARDS

A. NFPA 780 - Standard for the Installation of Lightning Protection Systems.

B. UL 96 - Lightning Protection Components.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination with Roofing Work: Ensure adequate attachment of strike terminals and conductors without damage to roofing. Coordinate with roofing manufacturer and installer.

B. Coordinate installation of lightning protection with installation of other building systems and components, including electrical wiring, supporting structures and building materials, metal bodies requiring bonding to lightning protection components, and building finishes.

C. Coordinate installation of counterpoise conductor and ground rods with installation of other buried systems and components.

D. Preinstallation Meeting: Convene meeting at least **<< at least two weeks; or _____>>** prior to commencement of work affected by lightning protection system requirements to discuss prerequisites and coordination required by other installers; require attendance by representatives of installers whose work will be affected.

1.05 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Shop Drawings: Indicate location and layout of air terminals, grounding electrodes, and bonding connections to structure and other metal objects. Include terminal, electrode, and conductor sizes, and connection and termination details.

1. Include engineering analysis of equalization of potential to metal bodies within structure.

C. Product Data: Provide dimensions and materials of each component, indication of testing agency listing, and installation instructions.

D. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

E. Installation Certification: Submit copy of certification agency's approval.

F. Operation and Maintenance Data: Provide recommended inspection and testing plan, including recommended intervals, to achieve periodic maintenance as recommended in **<<NFPA 780>>**; provide customized plan reflecting actual installation configuration with specific installed components identified.

DRAFT

G. Project Record Documents: Record actual locations of air terminals, grounding electrodes, bonding connections, and routing of system conductors in project record documents.

1.06 QUALITY ASSURANCE

A. Maintain **<< one copy; or _____ copies>>** of**<< each; _____; or None - N/A>>** referenced system design standard on site.

B. Install system under the supervision of the manufacturer's authorized and approved representative qualified as follows:
   1. Actively engaged in the installation of lightning protection systems.
   2. Having satisfactory record of performance, including providing adequate service, as demonstrated by at least 5 systems of the same type, and similar size and duty, which have performed for not less than 2 years.
   3. Certified Member in good standing of the Lightning Protection Institute.

C. Designer Qualifications: Person or entity, employed by installer, who specializes in lightning protection system design with**<< minimum three years; _____; or None - N/A>>** documented experience.

D. Electrical components, devices, and accessories: Comply with applicable requirements of NFPA 70

E. Comply with NFPA 780, UL 96, and UL 96A.

F. Installer Qualifications: Capable of providing specified certification of installed system.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Lightning Protection Components:
   1. Advanced Light
   2. East Coast Lightning Equipment Inc.
   3. Bonded Lightning Protection Systems, Inc.
   4. Advanced Lighting
   5.
   6. nVent ERICO**<< ; System 2000; ; _____; or None - N/A>>**: www.nvent.com/#sle.

2.02 LIGHTNING PROTECTION SYSTEM

A. Lightning Protection System: Provide complete system complying with **<<NFPA 780>>**, including air terminals, bonding, interconnecting conductors and grounding electrodes.
   1. Provide system that protects:
      a. Entire structure.
      b. Open air areas within **<< 100 feet; or _____ feet>>** of exterior walls at grade level.
      c. Open air areas within building footprint.
   2. Coordinate with other grounding and bonding systems specified.
   3. Provide copper, bronze, or stainless steel components, except where aluminum is allowed by **<<NFPA 780>>**.
   4. Provide system certified by **<< Underwriters Laboratories or Lightning Protection Institute; Underwriters Laboratories; Lightning Protection Institute; or _____>>**.

DRAFT

2.03 COMPONENTS

A. All Components: Complying with applicable requirements of **<<UL 96>>**.

B. Air terminals adn conductors: NFPA 780 Class 1 copper or aluminum, unless otherwise indicated.
   1. Air terminals: Blunt end. Air terminals shall be approved by Architect prior to installation.
   2. Stack-mounting air terminals: Solid copper.
   3. Air terminals installed on single-ply roof membrane: Designed for this application.
   4. Where conductors are underground, provide copper conductors and accessories.

C. Through-roof and through-wall connectors: Assembly for conductors passing through roof or wall penetrations to facilitate water-tight seal.

D. Ground rods, ground loop conductors, and concrete-encased electrods: Comply with Section 260526 and with standards referenced in this section.

E. Conduit: Schedule 40 PVC, minimum trade size 1 inch.

F. Surge Suppression: Provide a surge suppression device (SPD) at every system entrance location including power, communications, and low-voltage systems. SPDs shall be UL listed and comply with Section 264313.
   1. Power: Service entrance surge suppression at service distribution equipment.
   2. Communications systems: Surge suppression for communications services such as data, telephone, and cable television as specified in Division 27.
   3. Low-voltage systems: Surge suppression for low-voltage systems such as exterior wireless access points and exterior video surveillance as specified in Division 27 and 28.

G. Strike (Air) Terminals: **<< Copper; or Aluminum>><< , solid; or None - N/A>><< , with adhesive bases for single-ply roof installations; or None - N/A>>**.

H. Grounding Rods: **<< Solid copper; or Stainless steel>>**.

I. Ground Plate: Copper.

J. Conductors: **<< Copper; or Aluminum>><< cable; strip; solid rod; or ____>>**.

K. Connectors and Splicers: **<< Bronze; or Aluminum>>**.

PART 3 EXECUTION

3.01 INSTALLATION

A. Do not begin work until shop drawings have been approved. Notify Architect a minimum of 48 hours in advance of concealing lightning protection work.

B. Install in accordance with referenced system standards**<< and as required for specified certification; _____; or None - N/A>>**.

C. Install conductors with direct horizontal and downward paths from air terminals to ground connections. Avoid sharp bends and narrow loops; make no bends sharper than 90 degrees and minimum bending radius of 8 inches.

D. Conceal the following conductors unless otherwise indicated on drawings:
   1. Down conductors.
   2. Conductors inside building.
   3. Conductors in normal view from exterior locations at grade within 200 ft of building.
   4. Exposed conductors subject to damage.

DRAFT

E. Connect conductors using mechanical connectors or exothermic welding process; protect adjacent construction elements and finishes from damage.

F. Air terminals shall not extend less than 10 inches above the objects they are to protect.
   1. Air terminals on single-ply membrane roofing: Comply with adhesive manufacturer's written instructions.

G. Counterpoise conductors shall be buried a minimum of 24 inches below finished grade.

H. Structural steel framing elements may be used in lieu of down conductors at intervals not exceeding 100 feet around perimeter of the building or structure. Ensure continuity of steel framing and bond to lightning protection ground electrode system.

3.02 CORROSION PROTECTION

A. Do not combine materials that can form an electrolytic couple that will accelerate corrosion in the prescence of moisture unless moisture is permanently excluded from junction of such materials.

B. Install conductors in conduit or with protective coatings and where conditions would cause deterioration or corrosion of conductors.

3.03 GROUNDING AND BONDING

A. Provide equipment grounding and bonding connections sufficiently tight to ensure permanent and effective grounds and bonds.

3.04 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>** for additional requirements.

B. Perform visual inspection as specified in **<<NFPA 780>>** as if this were a periodic follow-up inspection.

C. Perform continuity testing as specified in **<<NFPA 780>>** as if this were testing for periodic maintenance.

D. Inspection: Provide an inspection by an inspector certified by LPI to obtain an LPI certification.
   1. Inspection shall be peformed in accordance with LPI-177, "Inspection Guide for Certified Systems". Submit one copy of LPI-177 and retain one copy at the site during construction.
   2. Document inspections on LPI forms. Submit one copy of each completed form.

E. Inspection: Provide an inspection by a UL field inspector certified by UL.
   1. Inspection shall be peformed in accordance with UL 96A and NFPA 780.

F. Ispection documents:
   1. Provide LPI Certification of the system. Obtain necessary LPI Master Installtion certificates with signatures, preparing and handling the necessary forms.
   2. Provide UL inspection and submit UL Master Label Certificate.

G. Obtain services of specified certification agency to provide inspection and certification of lightning protection system, including performance of other testing required by that agency.

END OF SECTION 264100

DRAFT

SECTION 264300
SURGE PROTECTIVE DEVICES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Surge protective devices (SPD) for the protection of electrical circuits from the effects of lightning-induced currents, substation switching transients, and internally generated transients resulting from inductive or capacitive load switching.

1.02 RELATED REQUIREMENTS

A. Section **<< 260526 - Grounding and Bonding for Electrical Systems>>**.

B. Section **<< 262413 - Switchboards>>**.

C. Section **<< 262416 - Panelboards>>**.

D. Section **<< 262419 - Motor-Control Centers>>**.

1.03 ABBREVIATIONS AND ACRONYMS

A. SPD: Surge Protective Device.

1.04 REFERENCE STANDARDS

A. NECA 1 - Standard for Good Workmanship in Electrical Construction.

B. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

C. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems.

D. NFPA 70 - National Electrical Code.

E. UL 1449 - Standard for Surge Protective Devices.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate size and location of overcurrent device compatible with the actual surge protective device and location to be installed. Notify **<<Architect>>** of any conflicts or deviations from Contract Documents to obtain direction prior to ordering equipment.

1.06 SUBMITTALS

A. Product Data: Include detailed component information, voltage, surge current ratings, repetitive surge current capacity, voltage protection rating (VPR) for all protection modes, maximum continuous operating voltage (MCOV), nominal discharge current (I-n), short circuit current rating (SCCR), connection means including any required external overcurrent protection, enclosure ratings, outline and support point dimensions, weight, service condition requirements, and installed features.

B. Certificates: Manufacturer's documentation of listing for compliance with the following standards:

1. **<<UL 1449>>**.
    a. Voltage protection rating (VPR)
    b. Maximum continuous operating voltage (MCOV).
2. **<<UL 1283>>** (for Type 2 SPDs).

DRAFT

C. Operation and Maintenance Data: Include information on status indicators and recommended maintenance procedures and intervals.

D. Warranty: Submit sample of manufacturer's warranty and documentation of final executed warranty completed in **<<Owner>>**'s name and registered with manufacturer.

1.07 QUALITY ASSURANCE

A. Comply with requirements of **<<NFPA 70>>**.

B. Each SPD shall be UL 1449 Third Edition listed and labeled.

1.08 DELIVERY, STORAGE, AND PROTECTION

A. Store in a clean, dry space in accordance with manufacturer's written instructions.

1.09 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

1.10 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Manufacturer's Warranty: Provide minimum ten year warranty covering repair or replacement of surge protective devices showing evidence of failure due to defective materials or workmanship.

C. Exclude surge protective devices from any clause limiting warranty responsibility for acts of nature, including lightning, stated elsewhere.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Field-Installed, Externally Mounted Surge Protective Devices:

1. Ditek Surge Protection: www.diteksurgeprotection.com
2. Advanced Protection Technologies
3. Eaton
4. Intermatic, Inc**<< ; _____; or None - N/A>>**: www.intermatic.com/#sle.
5. nVent ERICO**<< ; _____; or None - N/A>>**: www.nvent.com/#sle.
6. Schneider Electric**<< ; _____; or None - N/A>>**: www.se.com/#sle.
7. Surge Suppression, LLC (SSI)**<< ; _____; or None - N/A>>**: www.surgesuppression.com/#sle.

B. Source Limitations: Provide surge protective devices produced by single manufacturer and obtained from single supplier.

2.02 SURGE PROTECTIVE DEVICES - GENERAL REQUIREMENTS

A. Description: Factory-assembled surge protective devices (SPDs) for 60 Hz service; listed, classified, and labeled as suitable for the purpose intended; system voltage as indicated**<< on the drawings; _____; or None - N/A>>**.

B. Unless otherwise indicated, provide **<< field-installed, externally-mounted or factory-installed, internally-mouonted; field-installed, externally-mounted; factory-installed, internally-mounted; or _____>>** SPDs.

DRAFT

C. List and label as complying with **<<UL 1449>>**, Type 1 when connected on line side of service disconnect overcurrent device and Type 1 or 2 when connected on load side of service disconnect overcurrent device.

D. Suppression components shall be MOV based, serviceable

E. Protected Modes:
   1. Wye Systems: L-N, L-G, N-G, L-L.

F. **<<UL 1449>>** Voltage Protection Ratings (VPRs):
   1. 208Y/120V System Voltage: Not more than **<< 1,200 V; 1,000 V; 800 V; 700 V; or _____>>** for L-N, L-G, and N-G modes and **<< 1,500 V; 1,200 V; or _____>>** for L-L mode.
   2. 240/120V System Voltage: Not more than **<< 1,200 V; 1,000 V; 800 V; 700 V; or _____>>** for L-N, L-G, and N-G modes and **<< 1,500 V; 1,200 V; or _____>>** for L-L mode.
   3. 480Y/277V System Voltage: Not more than **<< 2,000 V; 1,500 V; 1,200 V; or _____>>** for L-N, L-G, and N-G modes and **<< 2,500 V; 2,000 V; or _____>>** for L-L mode.

G. **<<UL 1449>>** Maximum Continuous Operating Voltage (MCOV): Not less than 115% of nominal system voltage.

H. SPD shall be equipped with the following:
   1. Visual LED diagnostics, including a minimum of one green LED indicator pher phase, and one red service LED.
   2. Audible alarm with on/off silence function and diagnostic test function.

I. Enclosure Environment Type per **<<NEMA EN 10250>>**: **<< Unless otherwise indicated, as specified for the following installation locations:; As indicated on the drawings.; or _____ .>>**
   1. Indoor clean, dry locations: **<< Type 1; Type 12; or _____>>**.
   2. Outdoor locations: **<< Type 3R; Type 4X; or _____>>**.

J. Mounting for Field-installed, Externally Mounted SPDs: **<< Unless otherwise indicated, as specified for the following locations:; As indicated on the drawings.; or _____>>**
   1. Provide surface-mounted SPD where mounted **<< in non-public areas; adjacent to surface-mounted equipment; or _____>>**.
   2. Provide flush-mounted SPD where mounted **<< in public areas; adjacent to flush-mounted equipment; or _____>>**.

K. Equipment Containing Factory-installed, Internally Mounted SPDs: Listed and labeled as a complete assembly including SPD.
   1. Switchboards: See Section **<< 262413>>**.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that the service voltage and configuration marked on the SPD are consistent with the service voltage and configuration at the location to be installed.

C. Verify system grounding and bonding is in accordance with Section **<< 260526>>**, including bonding of neutral and ground for service entrance and separately derived systems where applicable. Do not energize SPD until deficiencies have been corrected.

DRAFT

D. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Perform work in accordance with **<<NECA 1>>** (general workmanship).

B. Install products in accordance with manufacturer's instructions.

C. Arrange equipment to provide minimum clearances in accordance with manufacturer's instructions and **<<NFPA 70>>**.

D. Unless indicated otherwise, connect service entrance surge protective device **<< on load side of service disconnect main overcurrent device; on line side of service disconnect main overcurrent device; or _____>>**.

E. Provide conductors with minimum ampacity **<< as indicated on the drawings; as required by NFPA 70; not less than manufacturer's recommended minimum conductor size; and _____>>**.

F. Install conductors between SPD and equipment terminations as short and straight as possible, not exceeding manufacturer's recommended maximum conductor length.**<< Breaker locations may be reasonably rearranged in order to provide leads as short and straight as possible.; or None - N/A>>** Twist conductors together to reduce inductance.

G. Do not energize SPD until bonding of neutral and ground for service entrance and separately derived systems is complete in accordance with Section **<< 260526>>** where applicable. Replace SPDs damaged by improper or missing neutral-ground bond.

H. Disconnect SPD prior to performing any high potential testing. Replace SPDs damaged by performing high potential testing with SPD connected.

3.03 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Inspect and test in accordance with **<<NETA ATS>>**, except Section 4.

C. Perform inspections and tests listed in **<<NETA ATS>>** Section 7.19.1.

3.04 CLEANING

A. Repair scratched or marred exterior surfaces to match original factory finish.

END OF SECTION 264300

DRAFT

SECTION 265100
INTERIOR LIGHTING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Interior luminaires.

B. Emergency lighting units.

C. Exit signs.

D. Drivers.

1.02 RELATED REQUIREMENTS

A. Section **<< 260529 - Hangers and Supports for Electrical Systems>>**.

B. Section **<< 260534 - Boxes for Electrical Systems>>**.

1.03 REFERENCE STANDARDS

A. NECA/IESNA 500 - Standard for Installing Indoor Lighting Systems.

B. NECA/IESNA 502 - Standard for Installing Industrial Lighting Systems.

C. NFPA 70 - National Electrical Code.

D. NFPA 101 - Life Safety Code.

E. UL 924 - Emergency Lighting and Power Equipment.

F. UL 1598 - Luminaires.

1.04 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>**, for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets including detailed information on luminaire construction, dimensions, ratings, finishes, mounting requirements, listings, service conditions, photometric performance, installed accessories, and ceiling compatibility; include model number nomenclature clearly marked with all proposed features.

1. Indicate dimensions and components for each luminaire that is not a standard product of the manufacturer.
2. Provide photometric calculations where luminaires are proposed for substitution.

C. Operation and Maintenance Data: Instructions for each product including information on replacement parts.

1.05 QUALITY ASSURANCE

A. Comply with requirements of **<<NFPA 70>>**.

B. UL label and local testing: As specified in Section 260500, Common Work Results for Electrical.

C. Fixtures, emergency lighting units, and accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to

D. NFPA 101 Compliance: Comply with visibility and luminance requirements for exit signs.

DRAFT

1.06 COORDINATION

A. Fixtures, mounting hardware, and trim: Coordinte layout and installation of lighting fixtures with ceiling system and

1.07 DELIVERY, STORAGE, AND PROTECTION

A. Deliver glassware and lamps in their original cartons, clearly labeled.

B. Keep products in original manufacturer's packaging and protect from damage until ready for installation.

1.08 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Provide 3-year manufacturer warranty for LED luminaires

C. Provide 5-year manufacturer warranty for LED drivers.

1. Special warranty period for LED drivers: Five years from date of manufacture, but not less than four years from date of substantial completion.

D. Provide **<< 5-year; 3-year; or _____>><< pro-rata; full; _____; or None - N/A>>** warranty for batteries for emergency lighting units.

E. Provide 10-year warranty for batteries for self-powered exit signs.

F. Provide 10-year warranty for batteries. Full warranty shall apply for first year, and prorated warranty for last nine years.

PART 2 PRODUCTS

2.01 LUMINAIRE TYPES

A. Basis of design: Furnish products as indicated in light fixture schedule included on the drawings.

B. Substitutions: Subject to complaince with requirements and per Division 01 specifications. Provide supporting documentation for each substitution, ensuring lighting design is equal or better, and that substitutions comply with the design criteria for this project.

C. Open protocol systems are only to be considered. Non-proprietary systems shall not be used. An example of an open protocol system is Bacnet IP protocols.

2.02 LUMINAIRES

A. Provide products that comply with requirements of **<<NFPA 70>>**.

B. Provide products that are listed and labeled as complying with **<<UL 1598>>**, where applicable.

C. Provide products listed, classified, and labeled as suitable for the purpose intended.

D. Unless otherwise indicated, provide complete luminaires including lamp(s) and all sockets, ballasts, reflectors, lenses, housings and other components required to position, energize and protect the lamp and distribute the light.

E. Unless specifically indicated to be excluded, provide all required conduit, boxes, wiring, connectors, hardware, supports, trims, accessories, etc. as necessary for a complete operating system.

F. Provide products suitable to withstand normal handling, installation, and service without any damage, distortion, corrosion, fading, discoloring, etc.

G. Metal parts: Free from burrs, sharp corners, and edges.

DRAFT

H. Doors, frames, and other internal access: Smoothly operating, free from light leakage under operating conditions, and arranged to permit relamping without use of tools. Arrange doors, frames, lenses, diffusers, and other pieces to prevent accidental falling during relamping and when secured in operating position.

I. Metal finishes: Painted after fixture fabrication.

J. Reflecting surfaces: Minimum reflectances as follows, unless otherwise indicated:
   1. White surfaces: 85 percent.
   2. Specular surfaces: 83 percent.
   3. Diffusing specular surfaces: 75 percent.
   4. Laminated silver metalized film: 90 percent.

K. Lenses, diffusers, covers, and globes: 100 percent virgin acrylic or annealed crystal glass, unless otherwise indicated, exactly as scheduled or specified in optical details and lighting characteristics.
   1. Plastic: High resistance to yellowing and other changes due to aging, exposture to heat, and ultravoilet radiation.
   2. Lens thickness: 0.125 inch minimum, unless greater thickness is indicated.

L. Wire guards:
   1. Wire guards: 14 gauge welded wire guard, four foot length, baked white enamel, 2 inch by 2 inch grid pattern mounted with four hinge-latch clips with captive knurled thumb screws.

2.03 EMERGENCY LIGHTING UNITS

A. Description: Emergency lighting units complying with **<<NFPA 101>><< and all applicable state and local codes; _____; or None - N/A>>**, and listed and labeled as complying with **<<UL 924>>**.

B. Operation: Upon interruption of normal power source or brownout condition exceeding 20 percent voltage drop from nominal, solid-state control automatically switches connected lamps to integral battery power for minimum of 90 minutes of rated emergency illumination, and automatically recharges battery upon restoration of normal power source.

C. Battery:
   1. Size battery to supply all connected lamps, including emergency remote heads where indicated.

D. Diagnostics: Provide power status indicator light and accessible integral test switch to manually activate emergency operation.

E. Provide low-voltage disconnect to prevent battery damage from deep discharge.

2.04 EXIT SIGNS

A. Description: Exit signs complying with **<<NFPA 101>><< and applicable state and local codes; _____; or None - N/A>>**, and listed and labeled as complying with **<<UL 924>>**.
   1. Number of Faces: Single- or double-face as indicated or as required for installed location.
   2. Directional Arrows: As indicated or as required for installed location.
   3. Exit signs shall meet the Energy Star Program requirements to operate on 5 W or less input power per face.
      a. Sign colors and lettering size: Comply with authorities having jurisdiction.

B. Powered Exit Signs: Internally illuminated with LEDs unless otherwise indicated.

DRAFT

1. Lamps for AC operation: Light-emitting diodes, 70,000 hours minimum rated lamp life.
2. Self-Powered Exit Signs:
   a. Operation: Upon interruption of normal power source or brownout condition exceeding 20 percent voltage drop from nominal, solid-state control automatically switches connected lamps to integral battery power for minimum of 90 minutes of rated emergency illumination, and automatically recharges battery upon restoration of normal power source.
   b. Battery: Sealed, maintenance-free, **<< nickel cadmium; or _____>>** unless otherwise indicated.
   c. Provide low-voltage disconnect to prevent battery damage from deep discharge.
   d. Self-Diagnostics: Provide units that self-monitor functionality and automatically perform testing required by **<<NFPA 101>><< where indicated; _____; or None - N/A>>**; provide indicator light(s) to report test and diagnostic status.

C. Accessories:
1. Provide compatible accessory high-impact polycarbonate vandal shields**<< where indicated; for exit signs located _____; or None - N/A>>**.
2. Provide compatible accessory wire guards**<< where indicated; for exit signs located _____; or None - N/A>>**.

2.05 LED DRIVERS

A. Driver shall operate from a 120-volt or 277-volt, 60-Hz input power source and be suitable for outputting power to 12-volt or 24-volt LED lamp sources, as required.

B. Drivers, where specified, shall be capable of being dimmed. Dimmable drivers shall be controlled by a Class 2 low-voltage 0-10 VDC controller.

C. Performance Criteria
1. Driver shall have a Class A sound rating.
2. Driver shall have a power factor (PF) greater than 0.90.
3. Driver shall have Total Harmonic Distortion (THD) of input current equal to or less than 20 percent.
4. Driver shall meet FCC and Title 47 CFR regulations for EMI/RFI.
5. Driver shall comply with ANSI C62.41 Class A requirements for transient protection.

2.06 EMERGENCY LIGHTING CONTROL TRANSFER RELAY DEVICE

A. Internal type (single fixture): Self-contained, modular unit mounted within fixture body. UL 924 listed as "emergency lighting equipment" and UL listed for field installation.
1. Operation: Upon interruption of normal power source, solid-state control automatically switches connected lamps to emergency power supply for minimum of 90 minutes of rated emergency illumination, and automatically recharges battery upon restoration of normal power source.
2. Capable of bypassing the local switching means when normal utility power has been lost.
3. Device shall consist of a test switch, normal power indicator light and an alternate power indicator light.
4. Rated for 120 through 277 volts AC, up to 3 amperes of lighting load.
5. Equal to Bodine, Model GTD.
6. Diagnostics: Provide accessible and visible multi-chromatic combination test switch/indicator light to display charge, test, and diagnostic status and to manually activate emergency operation.

DRAFT

B. External type (multiple fixtures): Self-contained, modular unit mounted within accessible ceiling. UL 1008 listed as "automatic transfer switch" and UL listed for field installation.
   1. Capable of bypassing the local switching means when normal utility power has been lost.
   2. Device shall consist of a remote test switch, normal power indicator light and an alternate power indicator light in a common faceplate. This remote indicating station shallbe mounted in an accoustical ceiling tile or drywall ceiling near the device whenever the location of the transfer relay device is obstructed from view.
   3. Rated for 120 through 277 volts AC, up to 20 amperes of lighting load.
   4. Equal to Bodine, Model GTD20A.

2.07 LAMPS

A. Lamps - General Requirements:
   1. Unless explicitly excluded, provide new, compatible, operable lamps in each luminaire.
   2. Verify compatibility of specified lamps with luminaires to be installed. Where lamps are not specified, provide lamps per luminaire manufacturer's recommendations.
   3. Minimum Efficiency: Provide lamps complying with all current applicable federal and state lamp efficiency standards.
   4. Color Temperature Consistency: Unless otherwise indicated, for each type of lamp furnish products which are consistent in perceived color temperature; with a tolerance of plus or minus 100K and within a range of three macadam ellipses. Noticeable color temperature variation between adjacent lighting fixtures shall be considered a failure to meet these specifications and shall be replaced at no cost to the owner. Replace lamps that are determined by the **<<Architect>>** to be inconsistent in perceived color temperature.
   5. Minimum performance characteristics:
      a. Life: Minimum lumen maintenance of L70 at 50,000 hours, as defined by IES LM-80.
      b. Lumen Output: Based on absolute photometry, lumens (total luminous flux exiting the physical luminaire), as specified on contract documents and schedules.
      c. Color Rendering Index: Rated at a minimum of 85.

2.08 FIXTURE SUPPORT COMPONENTS

A. Comply with Section 260529.

B. Single-stem hangers: 1/2-inch steel tubing with swival ball fitting and ceiling canopy. Finish same as fixture.

C. Twin-stem hangers: Two, 1/2-inch steel tubes with single canopy arranged to mount a single fixture. Finish same as

D. Ro

E. Hook hangers: Intergrated assembly matched to fixture and line voltage, and equipped with threaded

F. Aircraft cable support: Use cable, anchorages, and intermediate supports recommended by fixture manufacturer.

2.09 FINISHES

A. Fixtures: Manufacturer's standard, unless otherwise indicated.
   1. Paint finish: Applied after fabrication over corrosion-resistant treament or primer, free of defects.
   2. Metallic finish: Corrosion-resitant.

DRAFT

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that outlet boxes are installed in proper locations and at proper mounting heights and are properly sized to accommodate conductors in accordance with **<<NFPA 70>>**.

C. Verify that suitable support frames are installed where required.

D. Verify that branch circuit wiring installation is completed, tested, and ready for connection to luminaires.

E. Verify that conditions are satisfactory for installation prior to starting work.

3.02 PREPARATION

A. Provide extension rings to bring outlet boxes flush with finished surface.

B. Clean dirt, debris, plaster, and other foreign materials from outlet boxes.

C. Before ordering the light fixtures, consult with the installer of the ceiligns to ensure that the correct fixture trim is supplied and installed. Provide supports and accessories required for installation in each ceiling system.

D. Before ordering the light fixtures, verify the specified voltage with the voltage shown on the drawings, to ensure the correct voltage is supplied.

3.03 INSTALLATION

A. Coordinate locations of outlet boxes provided under Section **<< 260534>>** as required for installation of luminaires provided under this section.

B. Install products in accordance with manufacturer's instructions.

C. Install luminaires securely, in a neat and workmanlike manner, as specified in **<< NECA 500 (commercial lighting); NECA 502 (industrial lighting); and _____>>**.

D. Provide required support and attachment in accordance with Section **<< 260529>>**.

E. Install luminaires plumb and square and aligned with building lines and with adjacent luminaires.

F. Where a letter designating fixture type is adjacent to a row of fixtures, it shall be understood that all fixtures in the row shall be of this type, consisting of the largest length units in rows, availlable to achieve desired total length indicated. Where the catalog numbers of the LED fixtures refer to 4-foot units, 8-foot units may be used where applicable.

G. Install accessories furnished with each luminaire.

H. Bond products and metal accessories to branch circuit equipment grounding conductor.

I. Emergency Lighting Units:

J. Exit Signs:

K. Fluorescent Emergency Power Supply Units:

L. Install lamps in each luminaire.

3.04 FIXTURE SUPPORT

A. Support from building structure: Provide fasteners appropriate to the supporting substrate, and wire, jack chain, or rods as specified for particular fixture types below:

DRAFT

1. Provide channels bolted or welded between joists where required to obtain proper spacing for lighting supports.
2. Connections to joists or beams: Beam clamps. For wire supports, wrap wire securely around structural member.
3. Connections to concrete: Embedded, as specified in Section 260533 #.

B. In suspended plaster and drywall ceilings, fixtures may be supported fromthe suspended ceiling construction. Fasten box and fixture supports securely to suspension system. Where fixtures are surface mounted, cut neat holes in plaster as required for supports.

C. Recessed fixtures in suspended acoustical ceilings: Coordinate fixture installation with ceiling installers. Ensure that ceiling supports are located to clear fixtures.
1. Support from building structure: Use fasteners specified in Section 260533 #, and No. 10 wire.
a. Provide two supports for each individual LED fixture, one at each end of fixture. In continuous rows, install additional supports at each joint.

D. Lighting fixtures mounted in gymnasium with open bar joists: Attach to a structural channel attached to top of the joists with fixture mounted flush with the bottom of the joists, unless noted otherwise. Provide lenses with safety chains.

E. Surface mounted and stem-suspended LED fixtures on or below suspended acoustical ceilings: Supported from the building structure above with No. 10 wire.
1. Provide two supports for each individual lighting fixture, one at each end of fixture. In continuous rows, install an additional support at each joint.
2. Surface mounted fixtures mounted on low-density ceilings shall be provided with spacers where required.

F. Where it is necessary for a a fixture to be installed directly below an air duct, install two hanger rods, one on each side of the duct, bolted to a channel or angle suspended from the hangers below the duct, and support the fixtures from the suspended channel or angle.

3.05 ADJUSTING

A. Aim and position adjustable luminaires to achieve desired illumination as indicated or as directed by **<<Architect>>**. Secure locking fittings in place.

B. Aim and position adjustable emergency lighting unit lamps to achieve optimum illumination of egress path as required or as directed by **<<Architect>>** or authority having jurisdiction.

C. Exit Signs with Field-Selectable Directional Arrows: Set as indicated or as required to properly designate egress path as directed by **<<Architect>>** or authority having jurisdiction.

3.06 CLEANING

A. Clean surfaces according to **<< NECA 500 (commercial lighting); NECA 502 (industrial lighting); manufacturer's instructions; and _____>>** to remove dirt, fingerprints, paint, or other foreign material and restore finishes to match original factory finish.

END OF SECTION 265100

DRAFT

SECTION 265561
THEATRICAL LIGHTING SYSTEM

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Provide, install and test a complete lighting control system as specified herein for areas indicated in the contract documents.

B. Furnish all conduit, wire, connectors, hardware and other incidental items necessary for the complete and proper operation of the lighting control system.

C. Coordinate all work described in this section with all other applicable plans and specifications.

1.02 REFERENCE STANDARDS

A. IES LM-63 - Approved Method: IES Standard File Format for the Electronic Transfer of Photometric Data and Related Information.

B. NFPA 70 - National Electrical Code.

1.03 SYSTEM DESCRIPTION

A. The system shall be design for the control of architectural and theatrical lighting and shall consist of factory pre-wire dimming and processing rack enclosures containing relays, power supplies, circuit breakers, terminals and/or control electronics.

1. Provide a CAT 6 control system based on a LAN control approach with DNODE and LAN patching capability. Refer to TL drawings for additional details. ***** MCPS Standard *****

1.04 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>**, for submittal procedures.

B. Project Record Documents: Provide 6 sets of full system submittals. Submittals shall include the following:

1. Full system riser diagrams illustrating interconnection of system components, wiring requirements, back box sizes and any special installation considerations.
2. Full set of printed technical data sheets.
3. Detailed set of dimmer schedules.
4. Detailed set of circuit and control schedules, including a complete list of all deviations from specifications

C. Provide any additional manufacturer information, including equipment demonstation to verify compliance with specifications.

D. Provide a minimum of 14 days notice to owner to schedule training of staff to utilize

1.05 QUALITY ASSURANCE

A. Comply with requirements of **<<NFPA 70>>**.

B. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section who has been continuously engaged in the manufacturing of lighting control equipment for a minimum of ten years. All dimmer and cabinet fabrication shall take place in a U.S. manufacturing plant.

DRAFT

C. Products: Listed, classified, and labeled as suitable for the purpose intended. Proposed equipment shall be UL and C-UL listed, and/or CE marked (where applicable) and bear the appropriate labels.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. The equipment herein specified shall be manufatured by Electronic Theatre Controls.

B. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
   1. Alternative manufacturers shall be of equal quality and design.

C. Permission to bid does not imply acceptance of the manufacturer. It is the sole responsibility of the electrical contractor to ensure that any price quotations received, and submittals made are for controls systems that meet or exceed the contract documents.

D. Electronic component models shall be commercially available for at least one (1) year prior to bid or be approved by the Owner.

E. All equipment and material shall be new.

F. All equipment shall be UL listed or built to UL standards.

2.02 GENERAL

A. All equipment shall be professional grade and rated for continuous duty. Basic guidelines have been prepared with manufacturer names, makes and model numbers included as minimum performance requirements. These shall be satisified unless a variance (separate document) is submitted and approved by the Owner.

B. System shall be installed and configured for simplicity of operation, with user-friendly controls.

C. Product quantity shall be for a complete and fully operable system. If any quantities are given, Theater Lighting Contractor shall provide at least the given amount. Some of the product listed under this section may not be required to fulfill the work as outlined.

D. Regardless of the length or completeness of the descriptive paragraphs listed herein, each device shall meet the published manufacturer's specifications.

2.03 LIGHTING CONTROL COMPONENTS

A. Lighting Dimming and Control System.
   1. 48 Pole Sensor:
      a. Acceptable Product: Sensor IQ48
   2. 24 Pole Sensor:
      a. Acceptable Product: Sensor IQ24
   3. Circuit Breaker with Relay:
      a. Sensor IQ SM B20
   4. 48 Pole Surface Mount Door:
      a. Sensor IQ Door 120-48
   5. 24 Pole Surface Mount Door:
      a. Sensor IQ Door 120-24S
   6. 7" Touch Screen
      a. Acceptable Product: Paradigm P-TS7-4
   7. Touch Screen Backbox:

DRAFT

a. Acceptable Product: Paradigm P-LCD-FBB
8. Fader Station
   a. Acceptable Product: Paradigm PI1104-4
9. 1-gang Inspire Faceplate:
   a. Acceptable Product: Paradigm P-
10. Architectural Control Processor:
    a. Acceptable Product: Paradigm P-LCD-FBB
11. Station Power Module:
    a. Acceptable Product: Paradigm P-LCD-FBB
12. Wall Mount Enclosure:
    a. Acceptable Product: Paradigm P-LCD-FBB
13. 4-Port Gateway Enclosure:
    a. Acceptable Product: Paradigm P-LCD-FBB
14. 12-Port Opto-Splitter:
    a. Acceptable Product: Paradigm P-LCD-FBB
15. 48-Port Patch Panel:
    a. Acceptable Products:
       1) Tripp
       2) Hubbell
16. PoE Switch:

       1) Netgear
       2) Cisco
17. Wireless Access Point:
    a. Acceptable Products:
       1) Netgear
       2) Cisco
18. UPS:
    a.
       1) APC
       2) Middle Atlantic
19. DMX Control Unit
    a. Acceptable Product: ETC BSPS 6RD
20. 35RU Equipment Rack:
    a. Acceptable Product: Middle Atlantic DWR-35-26PD
21. 1-gang Surface Mount Box:
    a. Acceptable Product: ETC ECPB PB1
22. NET Plug-in Station:
    a. Acceptable Product: ETC ECPB NET
23. Emergency Control:
    a. Acceptable Product: ETC SC1008

B. CONSOLE
   1. Auditorium Console:

DRAFT

a. Acceptable Product: ETC GIO. Provide with dust cover. 24" Touch Screen Monitor (Qty: 2).

2. TV Studio Console:
   a. Accpetable Product: ETC XE-20-2K US. 24" Touch Screen Monitor (QTY: 1).

C. DISTRIBUTION
1. 1st and 2nd Electrics
   a. Acceptable Product: ETC 9956-(16AO/8)(16X/1)-X-XX
2. 3rd and 4th Electrics
   a. Acceptable Product: ETC 9956-(12AO/8)(12X/1)-X-XX
3. 10' Raceway
   a. Acceptable Product: ETC CSR10-3A/1-3X-X-111
   b. Provide with Hanger Bracket - ETC CSR HS WALL 111
4. 60' Raceway
   a. Acceptable Product: ETC CSR60-16A/4-16X-X-134
   b. Provide with Hanger Bracket - ETC HB CATWALK 134
5. 60' Raceway
   a. Acceptable Product: ETC CSR60-15A/4-15X-X-134
   b. Provide with Hanger Bracket - ETC HB CATWALK 134
6. TV Studio Outlet Box
   a. Acceptable Product: ETC 9102A-DMX

D. LIGHTING FIXTURES AND ACCESSORIES
1. Auditorium Fixture Types:
   a. Type A
2. TV Studio Fixture Types:
   a. Type A

DRAFT

PART 3 EXECUTION

3.01 INSTALLATION

A. It shall be the responsibility of the Electrical Contractor to receive and store the necessary materials and equipment for installation of the dimmer system. It is the intent of these contract documents to include everything required for proper and complete installation and operation of the dimming system, even though every item may not be specifically mentioned. The contractor shall deliver on a timely basis to other trades any equipment that must be installed during construction.

B. The Electrical Contractor shall be responsible for field measurements and coordinating physical size of all equipment with the architectural requirements of the spaces into which they are to be installed.

C. Install components in accordance with manufacturer's instructions and approved shop drawings.

D. All branch load circuits shall be live tested before connecting the loads to the dimmer system load terminals.

3.02 MANUFACTURER'S SERVICES

A. Upon completion of the installation, including testing of load circuits, the contractor shall notify the dimming system manufacturer that the system is available for formal checkout.

B. Notification shall be provided in wriring, a minimum of 14 days prior to the time factory-trained personnel are needed on the job site.

C. No power is to be applied to the dimming system unless specifically authorized by written instructions from the manufacturer.

D. The purchaser shall be liable for any return visits by the factory engineer as a result of incomplete or incorrect wiring.

E. Upon completion of the formal check-out, the factory engineer shall demonstrated operation and maintenance of the system to the owner's representatives. Training shall not exceed four working hours. Addit

3.03 WARRANTY

A. Manufacturer shall warrant products under normal use and service to be free from defects in materials and workmanship for a period of 2 years from date of delivery.

B. Warranty shall cover repair or replacement of such parts determined defective upon inspection.

C. Warranty does not cover any product or part of a product subject to accident, negligence, alteration, abuse or misuse. Warranty does not cover any accessories or parts not supplied by the manufacturer.

D. Warranty shall not cover any labor expended or materials sused to repair any equipment without manufacturer's prior written authorization.

END OF SECTION 265561

DRAFT

SECTION 265568
EXTERIOR ATHLETIC LIGHTING

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Sports lighting system using an LED lighting source for the following:
   1. Stadium football/soccer field.

1.02 REFERENCE STANDARDS

A. AASHTO LTS - Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals.

B. ASCE 7-10 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures.

C. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

D. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.

E. ASTM B695 - Standard Specification for Coatings of Zinc Mechanically Deposited on Iron and Steel.

F. ASTM C1107/C1107M - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink).

G. IEEE C62.41.2 - IEEE Recommended Practice on Characterization of Surges in Low-Voltage (1000 V and less) AC Power Circuits.

H. IES LM-5-04 - IESNA Guide for Photometric Measurements of Area and Sports Lighting Installments.

I. IES RP-6 - Recommended Practice: Lighting Sports and Recreational Areas.

J. NECA 1 - Standard for Good Workmanship in Electrical Construction.

K. NFPA 780 - Standard for the Installation of Lightning Protection Systems.

L. UL 96 - Lightning Protection Components.

M. UL 96A - Standard for Installation Requirements for Lightning Protection Systems.

DRAFT

1.03 SUBMITTALS

A. Product Data: For each type of lighting product.
   1. Include data on features, accessories, and finishes.
   2. Include physical description and dimensions of the luminaires.
   3. Include data on drivers, UL listing and recognition, ANSI certification, and Energy Independence and Security Act of 2007 compliance.
   4. Include data on LEDs, including life, output (lumens, CCT, and CRI), and energy-efficiency.

B. Shop Drawings:
   1. Include plans, elevations, sections, and mounting and attachment details.

2. Include details of luminaire assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

C. Product Schedule: For luminaires and LED light sources.

D. Coordination Drawings: Plans drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Luminaires.
2. Luminaire support structures.
3. Limits of athletic fields.
4. Proposed underground utilities and structures.
5. Existing underground utilities and structures.
6. Athletic field support structures.

E. Foundation Drawings: Stamped by a registered engineer in the State of Maryland. The foundation drawings shall list the moment, shear (horizontal) force, and axial (vertical) force at ground level for each pole.

F. Glare Control: Environmental glare impact scans showing the maximum candela from the field edge on a map of the surrounding area until 500 candelas or less is achieved.

G. Spill Scans: Indicating the amount of horizontal and vertical footcandles along the specified lines. Light levels shall be taken at 30-foot intervals along the boundary line. Readings shall be taken with the meter orientation at both horizontal and aimed towards the most intense bank of lights. Illumination level shall be measured in accordance with the IESNA LM-5-04 after 1 hour warm up.

H. Photometric Report: For luminaire types proposed showing horizontal and vertical axial candle power to demonstrate the capability of achieving the specified performance. Reports shall be certified by a qualified independent testing laboratory with a minimum of five years' experience or by a manufacturer's laboratory with a current accreditation under the National Voluntary Laboratory Accreditation Program for Energy Efficient Lighting Products. A summary of the horizontal and vertical aiming angles for each luminaire shall be included with the photometric report.

I. Life-Cycle Costs: 25-year life cycle cost calculation based on energy cost, lamp replacement cost, and general maintenance.

J. Field quality-control test reports.

K. Sample Warranty: For manufacturer's maintenance warranty and light levels warranty.

L. Operation and maintenance data.

M. LEED Submittal:
1. Product data:
a. Energy and Atmosphere (EA), Prerequisite "Minimum Energy Performance": For minimum energy performance.
b. Sustainable Sites (SS), Credit "Light Pollution Reduction": For light pollution reduction.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this project.

DRAFT

B. System components shall be UL listed for the appropriate application.

1.05 WARRANTY

A. Special Warranties:
   1. Maintenance Warranty: Manufacturer shall monitor the performance of the lighting system, including on/off status, hours of usage, and luminaire outage for 25 years from the date of equipment shipment. Warranty shall include preventative and spot maintenance, including parts and labor for 25 years from the date of equipment shipment. Parts and labor shall be covered such that individual luminaire outages will be repaired when the usage of any field is materially impacted. Owner agrees to check fuses in the event of a luminaire outage.
      a. Communication Costs: Maintenance warranty shall include communication costs for operating the controls and monitoring system for a period of 25 years.
   2. Light Levels Warranty: Manufacturer shall supply a signed warranty covering the entire system for 25 years from the date of shipment. Warranty shall guarantee that specified light levels do not drop below specified target values for a period of 25 years. Manufacturer shall maintain specifically-funded financial reserves to assure fulfillment of the warranty for the full term. Warranty shall not cover weather conditions and events such as lightning or hail damage, improper installation, vandalism or abuse, unauthorized repairs or alterations, or products made by other manufacturers.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Exterior Athletic Lighting Manufacturers:
   1. Basis-of-Design: Musco; Light-Structure System, with TLC for LED products.
   2. Sportsbeams Lighting, Inc.

2.02 LIGHTING PERFORMANCE

A. Illumination Levels and Design Factors: Playing surfaces shall be lit to an average target illumination level and uniformity as specified in the chart below. Lighting calculations shall be developed and field measurements taken on the grid spacing with the minimum number of grid points specified below. Appropriate light loss factors shall be applied and submitted for the basis of design. Average illumination level shall be measured in accordance with **<<IES LM-5-04>>**. Illumination levels shall not drop below desired target values in accordance to **<<IES RP-6>>** Page 2, "Maintained Average Illuminance" and shall be guaranteed for the full warranty period.

Area of Lighting	Average Target Illumination Levels	Maximum to Minimum Uniformity Ratio	Grid Points	Grid Spacing
Football/Soccer	50 footcandles	2.0 : 1.0	72 football 96 soccer	30' x 30'

B. Hours of Usage: Designs shall be based on the following hours of usage:

Area of Lighting	Annual Usage Hours	25-Year Usage Hours
Football/Soccer	300	7,500

C. Color: The lighting system shall have a minimum color temperature of 5700K and a CRI of 65.

DRAFT

D. Mounting Heights: To ensure proper aiming angles for reduced glare and to provide better playability, minimum mounting heights shall be as described below. Higher mounting heights may be required based on photometric report and ability to ensure the top of the field angle is a minimum of 10 degrees below horizontal. Please refer to published plans for mounting heights.

2.03 SYSTEM DESCRIPTION

A. Sports lighting system shall consist of the following:
   1. Galvanized steel poles and cross-arm assembly.
      a. Direct bury steel poles which utilize the extended portion of the steel shaft for their foundation will not be accepted due to potential for internal and external corrosive reaction to the soils and long term performance concerns.
   2. Concrete foundations:
      a. For a foundation using a pre-stressed concrete base embedded in concrete backfill, the concrete shall be air-entrained and have minimum compressive design strength of 3,000 PSI at 28 days. 3,000 PSI concrete specified for early pole erection; actual required minimum allowable concrete strength is 1,000 PSI. Piers and concrete backfill must bear on and against firm undisturbed soil.
      b. For anchor bolt foundations or foundations using a pre-stressed concrete base in a suspended pier or reinforced pier design, pole erection may occur after 7 days, or after a concrete sample from the same batch achieves certain strength.
   3. Drivers and Supporting Electrical Equipment:
      a. Remote drivers and supporting electrical equipment shall be mounted approximately 10 feet above grade in aluminum enclosures. The enclosures shall be touch-safe and include drivers and fusing with indicator lights on fuses to notify when a fuse is to be replaced for each luminaire. Disconnect per circuit for each pole structure will be located in the enclosure.
      b. Alternate: Integral drivers mounted at the top of the pole will require a pole mounted enclosure approximately 10 feet above grade. The enclosure shall include a disconnect per circuit and surge protection.
   4. Manufacturer shall provide surge protection at the pole equal to or greater than 40 kA for each line to ground (Common Mode) as recommended by **<<IEEE C62.41.2>>**.
   5. Wire harness complete with an abrasion protection sleeve, strain relief and plug-in connections for fast, trouble-free installation.
   6. Luminaires, visors, and cross-arm assemblies shall withstand 150 mph winds and maintain luminaire aiming alignment.
   7. Control cabinet to provide remote on-off control and monitoring of the lighting system. See Article below for further details.
   8. Manufacturer shall provide lightning protection grounding as defined by **<<NFPA 780>>** and be UL Listed per **<<UL 96>>** and **<<UL 96A>>**.
      a. Provide integrated grounding via concrete encased electrode grounding system.
      b. If grounding is not integrated into the structure, the manufacturer shall supply grounding electrodes, copper down conductors, and exothermic weld kits. Electrodes and conductors shall be sized as required by **<<NFPA 780>>**. The grounding electrode shall be minimum size of 5/8-inch diameter and 8 feet long, with a minimum of 10 feet embedment. Grounding electrode shall be connected to the structure by a grounding electrode conductor with a minimum size of 2 AWG for poles with 75 feet mounting height or less, and 2/0 AWG for poles with more than 75 feet mounting height.

DRAFT

B. Light Control Luminaires: Luminaires shall utilize spill light and glare control devices including, but not limited to, internal shields, louvers and external shields.

C. Criteria:

1. Environmental Light Control: Minimize spill light to adjoining properties and glare to the players, spectators, and neighbors.
2. Control and Monitoring: Provide remote on/off control for the sports lighting system. Fields shall be proactively monitored to detect luminaire outages over a 25-year life cycle. Communication and monitoring costs for 25-year period shall be included in the bid.

2.04 SYSTEM CONSTRUCTION

A. Manufacturing Requirements: Components shall be designed and manufactured as a system. Luminaires, wire harnesses, drivers and other enclosures shall be factory assembled, aimed, wired and tested.

B. Durability: Exposed components shall be constructed of corrosion resistant material and/or coated to help prevent corrosion. Exposed carbon steel shall be hot dip galvanized per **<<ASTM A123/A123M>>**. Exposed aluminum shall be powder coated with high performance polyester or anodized. Exterior reflective inserts shall be anodized, coated, and protected from direct environmental exposure to prevent reflective degradation or corrosion. Exposed hardware and fasteners shall be stainless steel of 18-8 grade or better, passivated and coated with aluminum-based thermosetting epoxy resin for protection against corrosion and stress corrosion cracking. Structural fasteners may be carbon steel and galvanized meeting **<<ASTM A153/A153M>>** and ISO/EN 1461 (for hot dipped galvanizing), or **<<ASTM B695>>** (for mechanical galvanizing). Wiring shall be enclosed within the cross-arms, pole, or electrical components enclosure.

2.05 ELECTRICAL

A. Electric Power Requirements for Exterior Athletic Lighting:

1. Electric Power: 480 volts, 3-phase.
2. Maximum Total Voltage Drop: Voltage drop to the disconnect switch located on the poles shall not exceed three percent of the rated voltage.

2.06 STRUCTURAL PARAMETERS

A. Wind Loads: Wind loads shall be based on the applicable version of the Maryland Building Code. Wind loads to be calculated using **<<ASCE 7-10>>**, with ultimate design wind speed and exposure category as indicated on Drawings.

B. Pole Structural Design: The stress analysis and safety factor of the poles shall conform to **<<AASHTO LTS>>**.

C. Foundation Design: The foundation design shall be based on soil parameters as outlined in the geotechnical report.

2.07 LIGHTING CONTROL

A. Instant On/Off Capabilities: System shall provide for instant on/off of luminaires.

B. Lighting contactor cabinet(s) shall be constructed of NEMA Type 4 aluminum, designed for easy installation with contactors, and labeled to match field diagrams and electrical design. Manual off-on-auto selector switches shall be provided.

C. Remote Monitoring System: System shall monitor lighting performance and notify manufacturer if individual luminaire outage is detected so that appropriate maintenance can be scheduled.

DRAFT

The controller shall determine switch position (manual or auto) and contractor status (open or closed).

D. Management Tools: Manufacturer shall provide a web-based database and dashboard tool of actual field usage and provide reports by facility and user group. Dashboard shall also show current status of luminaire outages, control operation and service. Mobile application shall be provided suitable for iOS and Android devices.

E. Hours of Usage: Manufacturer shall provide a means of tracking actual hours of usage for the field lighting system that is readily accessible to the owner.
   1. Cumulative hours: shall be tracked to show the total hours used by the facility.
   2. Report hours saved by using early off and push buttons by users.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the work.

B. Examine roughing-in for luminaire electrical and communications conduit to verify actual locations of connections before pole or luminaire installation.

C. Examine foundations for suitable conditions where luminaires will be installed.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Comply with **<<NECA 1>>**.

B. Wiring Method: Install cables in raceways, except when cables are installed within boxes and poles. Conceal raceways and cables.

C. Coordinate layout and installation of luminaires with other construction.

D. Install poles and other structural units level, plumb, and square.

E. Install luminaires at height and aiming angle as indicated on drawings.

F. Except for embedded structural members, grout void between pole base and foundation. Use **<<ASTM C1107/C1107M>>** non-shrinking or expanding concrete grout firmly packed in entire void space. Use a short piece of 1/2-inch diameter pipe to make a drain hole through grout. Arrange to drain condensation from interior of pole.

3.03 SOIL QUALITY CONTROL

A. Notify the Owner if soil conditions exist other than those on which the foundation design is based, or if the soil cannot be readily excavated.
   1. Submit engineered foundation embedment design by a registered engineer in the State of Maryland for soils other than specified soil conditions.
   2. Submit additional materials required to achieve alternate foundation; include excavation and removal of materials other than normal soils, such as rock, caliche, etc.

3.04 FIELD QUALITY CONTROL

A. Illumination Measurements: After installing sports lighting system and after electrical circuits have been energized, in the presence of the Owner or Owner's representative, perform proof-of-performance illumination field measurements and analysis for compliance with requirements.
   1. Football Fields: Measure a minimum of 90 points, equally spaced.

DRAFT

2. Make field measurements at established test points in areas of concern for spill light and glare.
3. Perform analysis to demonstrate correlation of field measurements with specified illumination quality and quantity values and corresponding computer-generated values that were submitted with engineered design documents. Submit a report of the analysis. For computer-generated values, use manufacturer's lamp lumens that are adjusted to lamp age at time of field testing.
4. The illumination field measurements shall be conducted in accordance with **<<IES LM-5-04>>**.

B. Correction of illumination deficiencies for playing areas: Make corrections to illumination quality or quantity, measured in field quality-control tests, that varies from specified illumination criteria by plus or minus 10 percent.
1. Add or replace luminaires; change mounting height and aiming; or install louvers, shields, or baffles.
2. If luminaires are added or mounting height is changed, revise aiming and recalculate and modify or replace support structures if indicated.
3. Do not replace luminaires with units of higher or lower wattage without Architect's approval.
4. Retest as specified above after repairs, adjustments, or replacements are made.
5. Report results in writing.

C. Correction of excessive illumination in spill-light-critical areas: If measurements indicate that specified limits for spill light are exceeded, make corrections to illumination quantity, measured in field quality-control tests that reduce levels to within specified maximum values.
1. Replace luminaires; change mounting heights and revise aiming; or install louvers, shields, or baffles.
2. Obtain Architect's approval to replace luminaires with units of higher or lower wattage.
3. If mounting height is changed, revise aiming and recalculate and modify or replace support structures if indicated.
4. Retest as specified above after repairs, adjustments, or replacements are made.
5. Report results in writing.

D. Sports lighting will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

F. Field Light Level Accountability:
1. Light levels shall be guaranteed not to fall below the target maintained light levels for the entire warranty period of 25 Years.
2. Perform similar illumination field measurements one year from the date of commissioning of the sports lighting system in the presence of the Owner or Owner's representative.
3. The contractor/manufacturer will be held responsible for changes needed to bring these fields back to compliance for light levels and uniformities. Contractor/manufacturer will be held responsible for any damage to the fields during these repairs.
4. Report results in writing.

N. UL 1598C - Light-Emitting Diode (LED) Retrofit Luminaire Conversion Kits.

O. UL 1993 - Self-Ballasted Lamps and Lamp Adapters.

P. UL 8750 - Light Emitting Diode (LED) Equipment for Use in Lighting Products.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

DRAFT

1. Coordinate placement of poles and associated foundations with utilities, curbs, sidewalks, trees, walls, fences, striping, etc. installed under other sections or by others. Coordinate elevation to obtain specified foundation height.
2. Notify **<<Architect>>** of any conflicts or deviations from Contract Documents to obtain direction prior to proceeding with work.

1.04 SUBMITTALS

A. Shop Drawings:
1. Include plans, elevations, sections, and mounting and attachment details.
2. Include details of luminaire assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.
4. Provide photometric calculations where luminaires are proposed for substitution**<< upon request; for substitutions; or None - N/A>>**.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets including detailed information on luminaire construction, dimensions, ratings, finishes, mounting requirements, listings, service conditions, photometric performance, weight, effective projected area (EPA), and installed accessories; include model number nomenclature clearly marked with all proposed features.
1. LED Luminaires:
a. Include estimated useful life, calculated based on **<<IES LM-80>>** test data.
b. Include **<<IES LM-79>>** test report**<< upon request; where indicated; for proposed substitutions; _____; or None - N/A>>**.
c. Arrange in order of luminaire designation.
d. Include data on features, accessories, and finishes.
e. Include physical description and dimensions of luminaire.
f. Include life, output (lumens, CCT, and CRI), and energy-efficiency data.
g. Photometric data and adjustment factors based on laboratory tests,
h. Means of attaching luminaires to supports and indication that the attachment is suitable for components involved.
i. Confirmation of compliance with Design Lighting Consortium (DLC) or ENERGY STAR product requirements.
2. Provide electronic files of photometric data**<< certified by a National Voluntary Laboratory Accreditation Program (NVLAP) lab or independent testing agency; certified by an independent testing agency; _____; or None - N/A>>** in **<<IES LM-63>>** standard format**<< upon request; where indicated; for proposed substitutions; _____; or None - N/A>>**.
3. Source: Include rated life and initial and mean lumen output.
4. Poles: Include information on maximum supported effective projected area (EPA) and weight for the design wind speed.

C. Samples:
1. Provide **<< one; or _____>>** sample(s) of each**<< specified; _____; or None - N/A>>** luminaire**<< where indicated; upon request; _____; or None - N/A>>**.

DRAFT

D. Certificates for Poles and Accessories: Manufacturer's documentation that products are suitable for the luminaires to be installed**<< and comply with designated structural design criteria; _____; or None - N/A>>**.

E. Field Quality Control Reports.
   1. Include test report indicating measured illumination levels.
   2. Include emergency lighting test reports.

F. Operation and Maintenance Data: Instructions for each product including information on replacement parts.

G. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.
   1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
   2. Extra Drivers: **<< Two; or _____>>** percent of total quantity installed for each type, but not less than **<< one; or _____>>** of each type.
   3. Extra Fuses: **<< Five; or _____>>** percent of total quantity installed for each type, but not less than **<< two; or _____>>** of each type.

H. Project Record Documents: Record actual connections and locations of pole foundations, luminaires, and any pull or junction boxes.

1.05 QUALITY ASSURANCE

A. Comply with requirements of **<<NFPA 70>>**.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum **<< three; five; or _____>>** years**<< documented; _____; or None - N/A>>** experience.

D. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Receive, handle, and store products according to **<<NECA/IESNA 501>>** and manufacturer's written instructions.

B. Keep products in original manufacturer's packaging and protect from damage until ready for installation.

C. Receive, handle, and store wood poles in accordance with **<<ANSI O5.1>>**.

1.07 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Manufacturer's standard form in which manufacturer agrees to repair or replace components that fail in materials or workmanship or from transient voltage surges, and the Contractor agrees to provide associated electrical work within the specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Failure equipment to operate, or to operate reliably.
      b. Damage of electronic components due to transient voltage surges.
   2. Warranty Period: Five years from date of Final Acceptance for material and labor.

DRAFT

1.08 SUBSTITUTIONS

A. In Lighting Fixture Schedule where titles below are column or row headings that introduce lists, the following requirements apply to product selection:
   1. Basis of Design Product: The design of each luminaire and its support is based on the first product named. Subject to compliance with requirements, provide either the named product or a comparable product by another manufacturer.

B. The lighting fixture layout indicated in the Contract Documents is based upon photometric data, quality, construction and appearance of fixtures listed in the lighting fixture schedule. Substitutions of listed fixtures are allowed provided the following is provided:
   1. Substitution package shall be submitted to Architect no later than fifteen (15) days prior to bid for review and approval.
   2. Provide all data for the substitution package in a table similar in format to the lighting fixture schedule on the drawings.
   3. Provide cut sheets of substitute fixtures with the various features highlighted.
   4. Architect has final functional and aesthetic approval on all substituted fixtures.
   5. Pre-bid approved will still be subject to the usual post bid submittal process and review.

PART 2 PRODUCTS

2.01 LUMINAIRES

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. NRTL Compliance: Luminaires shall be listed and labeled for indicated class and division of hazard by an NRTL.

C. UL Compliance: Comply with UL 1598 and listed for wet location.

D. CRI of minimum 70, CCT of 4100 K

E. L70 life of 50,000 hours.

F. ~~Lamps~~ Dimmable from 100 percent to 10 percent of maximum light output.

G. Internal driver.

H. Nominal Operating Voltage: Provide Universal Voltage (120V-277V) driver where possible. Otherwise provide per the drawings.

I. Source Limitations: For luminaires, obtain each color, grade, finish, type, and variety of luminaire from single source with resources to provide products of consistent quality in appearance and physical properties.

2.02 FINISHES

A. Variations in Finishes: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

B. Luminaire Finish: Manufacturer's standard paint applied to factory-assembled and -tested luminaire before shipping. Where indicated, match finish process and color of pole or support materials.

C. Factory-Applied Finish for Aluminum Luminaires: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

DRAFT

1. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
2. Natural Satin Finish: Provide fine, directional, medium satin polish (AA-M32); buff complying with AA-M20 requirements; and seal aluminum surfaces with clear, hard-coat wax.
3. Class I, Clear-Anodic Finish: AA-M32C22A41 (Mechanical Finish: Medium satin; Chemical Finish: Etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.

D. Factory-Applied Finish for Steel Luminaires: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
1. Surface Preparation: Clean surfaces to comply with SSPC-SP 1, to remove dirt, oil, grease, and other contaminants that could impair paint bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1 or SSPC-SP 8.
2. Exterior Surfaces: Manufacturer's standard finish consisting of one or more coats of primer and two finish coats of high-gloss, high-build polyurethane enamel.

2.03 POLES

A. All Poles:
1. Provide poles and associated support components suitable for the luminaire(s) and associated supports and accessories to be installed.
2. Structural Design Criteria:
a. Comply with **<< AASHTO LTS; or _____>>**.
b. Wind Load: Include effective projected area (EPA) of luminaire(s) and associated supports and accessories to be installed.
1) Design Wind Speed: **<< 110 miles per hour>><< , with gust factor of 1.3; , _____; or None - N/A>>**.
c. Dead Load: Include weight of proposed luminaire(s) and associated supports and accessories.
d. Include structural calculations demonstrating compliance with submittals.
3. Material, shape, finish, and height as indicated on the drawings.
4. Mounting: **<< Install on concrete foundation, height as indicated on the drawings; Install on _____ high concrete foundation; Direct bury; or _____>>**, unless otherwise indicated.
5. Unless otherwise indicated, provide with the following features/accessories:
a. Handhole located 18" above pole base unless otherwise indicated.
b. Anchor bolts with **<< leveling nuts; leveling shims; or _____>>**.
c. **<< Anchor base cover; Anchor bolt covers; or _____>>**.
d. Provision for pole-mounted weatherproof GFI receptacle**<< where indicated; _____; or None - N/A>>**.
e. Brackets where indicated.
f. Internal chain vibration dampener for poles over 25'-0" in height.

B. Metal Poles: Provide ground lug, accessible from **<< handhole; transformer base; or _____>>**.

DRAFT

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that outlet boxes are installed in proper locations and at proper mounting heights and are properly sized to accommodate conductors in accordance with **<<NFPA 70>>**.

C. Verify that suitable support frames are installed where required.

D. Verify that branch circuit wiring installation is completed, tested, and ready for connection to luminaires.

E. Verify that conditions are satisfactory for installation prior to starting work.

F. Verify existing and proposed utility structures prior to the start of wor

3.02 PREPARATION

A. Provide extension rings to bring outlet boxes flush with finished surface.

B. Clean dirt, debris, plaster, and other foreign materials from outlet boxes.

3.03 INSTALLATION

A. Coordinate locations of outlet boxes provided under Section **<< 260534>>** as required for installation of luminaires provided under this section.

B. Perform work in accordance with **<<NECA 1>>** (general workmanship).

C. Install products in accordance with manufacturer's instructions.

D. Install luminaires in accordance with **<<NECA/IESNA 501>>**.

E. Provide required support and attachment in accordance with Section **<< 260529>>**.

F. Fasten luminaire to structural support.

G. Install luminaires level, plumb, and square with finished grade unless otherwise indicated. Install luminaires at height and aiming angle as indicated on the drawings.

H. Adjust luminaires that require field adjustment or aiming. Include adjustment of photoelectric device to prevent false operation of relay by artifical light sources, favoring a north orientation.

I. Install luminaires plumb and square and aligned with building lines and with adjacent luminaires.

J. Recessed Luminaires:

1. Install trims tight to mounting surface with no visible light leakage.
2. Non-IC Rated Luminaires: Maintain required separation from insulation and combustible materials according to listing.

K. Wall-Mounted Luminaires: Unless otherwise indicated, specified mounting heights are to **<< center; bottom; or _____>>** of luminaire.

L. Pole-Mounted Luminaires:

1. Maintain the following minimum clearances:
   a. Comply with **<<IEEE C2>>**.
   b. Comply with utility company requirements.
2. Foundation-Mounted Poles:
   a. Provide cast-in-place concrete foundations for poles as indicated, in accordance with Section **<< 033000>>**.

DRAFT

1) Install anchor bolts plumb per template furnished by pole manufacturer.
2) Position conduits to enter pole shaft.

b. Install foundations plumb.

c. Install poles plumb, using **<< leveling nuts; shims; or _____>>** as required to adjust to plumb.

d. Tighten anchor bolt nuts to manufacturer's recommended torque.

e. Install non-shrink grout between pole anchor base and concrete foundation, leaving small channel for condensation drainage.

f. Install **<< anchor base covers; anchor bolt covers; or _____>>** as indicated.

3. Embedded Poles: Install poles plumb as indicated.

4. Grounding:

a. Bond **<< luminaires; metal accessories; metal poles; foundation reinforcement; and _____>>** to branch circuit equipment grounding conductor.

b. Provide **<< supplementary ground rod electrode; or _____>>** as specified in Section **<< 260526>>** at each pole bonded to grounding system as indicated.

5. Install separate service conductors**<< , 12 AWG copper,; , size as indicated on drawings,; , _____ ,; or None - N/A>>** from each luminaire down to handhole for connection to branch circuit conductors.

M. Bollard Luminaires:

1. Align units for optimum directional alignment of light distribution.
2. Install on concrete base with top 4 inches above finished grade or surface at luminaire location. Cast conduit into base, and shape base to match shape of bollard base. Finish by troweling and rubbing smooth.

N. Corrosion Prevention:

1. Aluminum: Do not use in contact with earth or concrete. When in direct contact with a dissimilar metal, protect aluminum by insulating fittings or treatment.
2. Steel Conduits: In concrete foundations, wrap conduit with 0.010-inch-thick, pipe-wrapping plastic tape applied with a 50 percent overlap.

O. Individual Ground-Mounted Luminaires:

1. Aim as indicated on Drawings.
2. Install on concrete base with top 4 inches above finished grade or surface at luminaire location. Cast conduit into base, and finish by troweling and rubbing smooth. Concrete materials, installation, and finishing are specified in **<< 033000>>**

P. Install accessories furnished with each luminaire.

3.04 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Inspect each product for damage, defects, and overall cleanliness. All components shall be fully installed/secured, all lenses shall be free from debris.

C. Operate each luminaire after installation and connection to verify proper operation.

D. Correct wiring deficiencies and repair or replace damaged or defective products. Repair or replace excessively noisy drivers as determined by **<<Architect>>**.

E. Measure illumination levels at night with calibrated meters**<< to verify compliance with performance requirements; _____; or None - N/A>><< . Record test results in written report to be included with submittals; _____; or None - N/A>>**. Test

DRAFT

emergency lighting units and power supplies. Interrupt power supply for amount of time luminaire is rated for to demonstrate proper operation upon loss of normal power. Verify transfer from normal power to emergency power and re-transfer to normal power. Prepare test report.

3.05 ADJUSTING

A. Aim and position adjustable luminaires to achieve desired illumination as indicated or as directed by **<<Architect>>**. Secure locking fittings in place.

B. Luminaires with Field-Rotatable Optics: Position optics according to manufacturer's instructions to achieve lighting distribution as indicated or as directed by **<<Architect>>**.

3.06 CLEANING

A. Clean surfaces according to **<<NECA/IESNA 501>>** and manufacturer's instructions to remove dirt, fingerprints, paint, or other foreign material and restore finishes to match original factory finish.

3.07 CLOSEOUT ACTIVITIES

A. See Section **<< 017800 - Closeout Submittals>>**, for closeout submittals.

B. See Section **<< 017900 - Demonstration and Training>>**, for additional requirements.

C. Demonstration: Demonstrate proper operation of luminaires to **<<Architect>>**, and correct deficiencies or make adjustments as directed.

3.08 PROTECTION

A. Protect installed luminaires from subsequent construction operations.

END OF SECTION 265600

DRAFT

SECTION 265613
LIGHTING POLES AND STANDARDS

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:
   1. Poles and accessories for support of luminaires.

1.03 DEFINITIONS

A. EPA: Equivalent projected area.

B. Luminaire: Complete lighting fixture.

C. Pole: Luminaire-supporting structure, including tower used for large-area illumination.

D. Standard: See "Pole."

1.04 REFERENCE STANDARDS

A. AASHTO LTS - Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals.

B. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.

C. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

D. ASTM A240/A240M - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.

E. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

F. ASTM F1554 - Standard Specification for Anchor Bolts, Steel, 36, 55, and 105-ksi Yield Strength.

G. SSPC-SP 1 - Solvent Cleaning.

H. SSPC-SP 5/NACE No.1 - White Metal Blast Cleaning.

1.05 ACTION SUBMITTALS

A. Product Data: For each pole, accessory, and luminaire-supporting and -lowering device, arranged as indicated.
   1. Include data on construction details, profiles, EPA, cable entrances, materials, dimensions, weight, rated design load, and ultimate strength of individual components.
   2. Include finishes for lighting poles and luminaire-supporting devices.
   3. Manufactured pole foundations.

B. Shop Drawings:
   1. Include plans, elevations, sections, and mounting and attachment details.

DRAFT

2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Detail fabrication and assembly of poles and pole accessories.
4. Foundation construction details, including material descriptions, dimensions, anchor bolts, support devices, and calculations, signed and sealed by a professional engineer licensed in the state of installation.
5. Anchor bolt templates keyed to specific poles and certified by manufacturer.
6. Method and procedure of pole installation. Include manufacturer's written installations.

1.06 INFORMATIONAL SUBMITTALS

A. Pole and Support Component Certificates: Signed by manufacturers of poles, certifying that products are designed for indicated load requirements according to **<<AASHTO LTS>>**-6-M and that load imposed by luminaire and attachments has been included in design. The certification shall be based on design calculations signed and sealed by a professional engineer.

B. Qualification Data: For Installer.

C. Source quality-control reports.

D. Field quality-control reports.

E. Sample Warranty: Manufacturer's standard warranty.

F. Soil test reports

1.07 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For poles to include in emergency, operation, and maintenance manuals.
   1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include pole inspection and repair procedures.

1.08 MAINTENANCE MATERIAL SUBMITTALS

A. Pole repair materials.

1.09 DELIVERY, STORAGE, AND HANDLING

A. Package aluminum poles for shipping according to ASTM B 660.

B. Store poles on decay-resistant skids at least **<< 12 inches>>** above grade and vegetation. Support poles to prevent distortion and arrange to provide free air circulation.

C. Retain factory-applied pole wrappings on metal poles until right before pole installation. Handle poles with web fabric straps.

1.10 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of pole(s) that fail in materials or workmanship; that corrode; or that fade, stain, perforate, erode, or chalk due to effects of weather or solar radiation within a specified warranty period. Manufacturer may exclude lightning damage, hail damage, vandalism, abuse, or unauthorized repairs from special warranty period.
   1. Warranty Period: Five years from date of Substantial Completion.
   2. Warranty Period for Corrosion Resistance: Five years from date of Substantial Completion.

DRAFT

3. Warranty Period for Color Retention: Five years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Structural Characteristics: Comply with **<<AASHTO LTS>>**-6-M.

B. Dead Load: Weight of luminaire and its horizontal and vertical supports, lowering devices, andIce Load: Load of 3 lbf/sq. ft., applied according to **<<AASHTO LTS>>**-6-M for applicable areas on the Ice Load Map.

C. Wind Load: Pressure of wind on pole and luminaire, calculated and applied according to **<<AASHTO LTS>>**-6-M.
   1. Basic wind speed for calculating wind load for poles **<< 50 feet>>** high or less is 100 mph.
      a. Wind Importance Factor: 1.0.
      b. Minimum Design Life: 25 years.
      c. Velocity Conversion Factor: 1.0.

D. Strength Analysis: For each pole, multiply the actual EPA of luminaires and brackets by a factor of 1.1 to obtain the EPA to be used in pole selection strength analysis.

E. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless-steel fasteners and mounting bolts unless otherwise indicated.

2.02 STEEL POLES

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products shall be as indicated on the drawings.

B. Source Limitations: Obtain poles from single manufacturer or producer.

C. Poles: Comply with **<<ASTM A240/A240M>>**, stainless steel with a minimum yield of **<< 55,000 psig>>**; one-piece construction up to **<< 40 feet>>** in height with access handhole in pole wall.
   1. Shape: Square, straight.
   2. Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.

D. Pole-Top Tenons: Fabricated to support luminaire or luminaires and brackets indicated, and securely fastened to pole top.

E. Fasteners: Stainless steel, size and type as determined by manufacturer. Corrosion-resistant items compatible with support components.
   1. Materials: Compatible with poles and standards as well as the substrates to which poles and standards are fastened and shall not cause galvanic action at contact points.
   2. Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after fabrication unless otherwise indicated.

F. Grounding and Bonding Lugs: Welded 1/2-inch threaded lug, complying with requirements in Section 260526 "Grounding and Bonding for Electrical Systems," listed for attaching grounding and bonding conductors of type and size indicated, and accessible through handhole.

G. Handhole: Oval shaped, with minimum clear opening of 2-1/2 by **<< 5 inches>>**, with cover secured by stainless-steel captive screws.

H. Cable Support Grip: Wire-mesh type with rotating attachment eye, sized for diameter of cable and rated for a minimum load equal to weight of supported load multiplied by a 5.0 safety factor.

DRAFT

I. Prime-Coat Finish: Manufacturer's standard prime-coat finish ready for field painting.

J. Galvanized Finish: After fabrication, hot-dip galvanize according to **<<ASTM A123/A123M>>**.

K. Factory-Painted Finish: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" recommendations for applying and designating finishes.

1. Surface Preparation: Clean surfaces according to **<<SSPC-SP 1>>** to remove dirt, oil, grease, and other contaminants that could impair paint bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, according to **<<SSPC-SP 5/NACE No.1>>** or SSPC-SP 8.
2. Interior Surfaces of Pole: One coat of bituminous paint, or otherwise treat for equal corrosion protection.
3. Exterior Surfaces: Manufacturer's standard finish consisting of one or more coats of primer and two finish coats of high gloss, high-build polyurethane enamel.
   a. Color: As selected by Architect from manufacturer's full range.

2.03 ALUMINUM POLES

A. Manufacturers: Subject to compliance with requirements, provide products as indicated on the drawings.

B. Poles: Seamless, extruded structural tube complying with **<<ASTM B221>>**, Alloy 6061-T6, with access handhole in in pole wall.

1. Shape: Square, straight.
2. Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.

C. Pole-Top Tenons: Fabricated to support luminaire or luminaires and brackets indicated, and securely fastened to pole top.

D. Grounding and Bonding Lugs: Bolted 1/2-inch threaded lug, complying with requirements in Section 260526 "Grounding and Bonding for Electrical Systems," listed for attaching grounding and bonding conductors of type and size listed in that Section, and accessible through handhole.

E. Fasteners: Stainless steel, size and type as determined by manufacturer. Corrosion-resistant items compatible with support components.

1. Materials: Compatible with poles and standards as well as to substrates to which poles and standards are fastened and shall not cause galvanic action at contact points.
2. Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after fabrication unless otherwise indicated.

F. Handhole: Oval shaped, with minimum clear opening of 2-1/2 by **<< 5 inches>>**, with cover secured by stainless-steel captive screws.

G. Prime-Coat Finish: Manufacturer's standard prime-coat finish ready for field painting.

H. Aluminum Finish: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" recommendations for applying and designating finishes.

1. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
2. Natural Satin Finish: Provide fine, directional, medium satin polish (AA-M32); buff complying with AA-M20 requirements; and seal aluminum surfaces with clear, hard-coat wax.

I. Factory-Painted Finish: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" recommendations for applying and designating finishes.

DRAFT

1. Surface Preparation: Clean surfaces to comply with **<<SSPC-SP 1>>** to remove dirt, oil, grease, and other contaminants that could impair paint bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, according to **<<SSPC-SP 5/NACE No.1>>** or SSPC-SP 8.
2. Interior Surfaces of Pole: One coat of bituminous paint, or otherwise treat for equal corrosion protection.
3. Exterior Surfaces: Manufacturer's standard finish consisting of one or more coats of primer and two finish coats of high-gloss, high-build polyurethane enamel.
   a. Color: As selected by Architect from manufacturer's full range.

2.04 POLE ACCESSORIES

A. Base Covers: Manufacturers' standard metal units, finished same as pole, and arranged to cover pole's mounting bolts and nuts.

2.05 MOUNTING HARDWARE

A. Anchor Bolts: Manufactured to **<<ASTM F1554>>**, Grade 55, with a minimum yield strength of **<< 55,000 psi>>**.
   1. Galvanizing: Hot dip galvanized according to ASTM A 153, Class C.
   2. Threading: Uniform National Coarse, Class 2A.

B. Nuts: ASTM A 563, Grade A, Heavy-Hex
   1. Galvanizing: Hot dip galvanized according to ASTM A 153, Class C.
   2. Four nuts provided per anchor bolt, shipped with nuts pre-assembled to the anchor bolts.

C. Washers: ASTM F 436, Type 1.
   1. Galvanizing: Hot dip galvanized according to ASTM A 153, Class C.
   2. Two washers provided per anchor bolt.

2.06 GENERAL FINISH REQUIREMENTS

A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

DRAFT

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine poles, luminaire-mounting devices, lowering devices, and pole accessories before installation. Components that are scratched, dented, marred, wet, moisture damaged, or visibly damaged are considered defective.

C. Examine roughing-in for foundation and conduit to verify actual locations of installation.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 POLE FOUNDATION

A. Concrete Pole Foundations: Cast in place, with anchor bolts to match pole-base flange. Structural steel complying with **<<ASTM A36/A36M>>** and hot-dip galvanized according to

<<ASTM A123/A123M>>; and with top-plate and mounting bolts to match pole-base flange and strength required to support pole, luminaire, and accessories. Concrete, reinforcement, and formwork are specified in Section 033000 "Cast-in-Place Concrete."

B. Pre-Cast Foundations: Factory fabricated, with structural steel complying with **<<ASTM A36/A36M>>** and hot-dip galvanized according to **<<ASTM A123/A123M>>**; and with top-plate and mounting bolts to match pole-base flange and strength required to support pole, luminaire, and accessories. Concrete, reinforcement, and formwork are specified in Section 033000 "Cast-in-Place Concrete."

C. Direct-Buried Poles with Concrete Backfill: Set poles in augered holes to depth below finished grade indicated on Drawings, but not less than as indicated. To ensure a plumb installation, continuously check pole orientation with plumb bob while tamping.
   1. Make holes **<< 6 inches>>** in diameter larger than pole diameter.
   2. Fill augered hole around pole with air-entrained concrete having a minimum compressive strength of **<< 3000 psi>>** at 28 days and finish in a dome above finished grade.
   3. Use a short piece of 1/2-inch diameter pipe to make a drain hole through grout. Arrange to drain condensation from interior of pole.
   4. Cure concrete a minimum of 72 hours before performing work on pole.

D. Anchor Bolts: Install plumb using manufacturer-supplied steel template, uniformly spaced.

3.03 POLE INSTALLATION

A. Alignment: Align pole foundations and poles for optimum directional alignment of luminaires and their mounting provisions on pole.

B. Clearances: Maintain the following minimum horizontal distances of poles from surface and underground features unless otherwise indicated on drawing.
   1. Fire Hydrants and Water Piping: **<< 60 inches>>**.
   2. Water, Gas, Electric, Communications, and Sewer Lines: **<< 10 feet>>**.
   3. Trees: **<< 15 feet>>** from tree trunk.

C. Concrete Pole Foundations: Set anchor bolts according to anchor-bolt templates furnished by pole manufacturer. Concrete materials, installation, and finishing requirements are specified in Section 033000 "Cast-in-Place Concrete."

D. Foundation-Mounted Poles: Mount pole with leveling nuts and tighten top nuts to torque level according to pole manufacturer's written instructions.
   1. Grout void between pole base and foundation. Use nonshrink or expanding concrete grout firmly packed to fill space.
   2. Install base covers unless otherwise indicated.
   3. Use a short piece of 1/2 -inch diameter pipe to make a drain hole through grout. Arrange to drain condensation from interior of pole.

E. Poles and Pole Foundations Set in Concrete-Paved Areas: Install poles with a minimum 6-inch-wide, unpaved gap between the pole or pole foundation and the edge of the adjacent concrete slab. Fill unpaved ring with pea gravel. Insert material to a level **<< 1 inch>>** below top of concrete slab.

F. Raise and set pole using web fabric slings (not chain or cable) at locations indicated by manufacturer.

3.04 CORROSION PREVENTION

A. Aluminum: Do not use in contact with earth or concrete. When in direct contact with a dissimilar metal, protect aluminum using insulating fittings or treatment.

DRAFT

B. Steel Conduits: Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems." In concrete foundations, wrap conduit with 0.010-inch-thick, pipe-wrapping plastic tape applied with a 50-percent overlap.

3.05 GROUNDING

A. Ground Metal Poles and Support Structures: Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."
   1. Install grounding electrode for each pole unless otherwise indicated.
   2. Install grounding conductor pigtail in the base for connecting luminaire to grounding system.

B. Ground Nonmetallic Poles and Support Structures: Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."
   1. Install grounding electrode for each pole.
   2. Install grounding conductor and conductor protector.
   3. Ground metallic components of pole accessories and foundation.

3.06 IDENTIFICATION

A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.07 FIELD QUALITY CONTROL

A. Special Inspections: Engage a qualified special inspector to perform the following special inspections:
   1. Inspect poles for nicks, mars, dents, scratches, and other damage.
   2. System function tests.

END OF SECTION 265613

DRAFT

SECTION 270533.13
CONDUIT FOR COMMUNICATIONS SYSTEMS

PART 1 GENERAL

1.01 REFERENCE TO OWNER'S GENERAL CONDITIONS

A. The Owner's/Project General Conditions shall be considered as part of this Specification. Unless this Section contains statements, which are more definitive or more restrictive than those contained in the Owner's General Conditions, this Specification shall not be interpreted as waiving or overruling any requirements expressed in the General Conditions documentation.

1.02 SECTION INCLUDES

A. Conduit.

B. Outlet boxes.

C. Floor boxes.

D. Galvanized steel rigid metal conduit (RMC).

1.03 RELATED REQUIREMENTS

A. General: Comply with all contract documents.

B. The Contractor shall coordinate with Electrical Contractor on raceway / junction box locations for equipment and routing of cables / raceway from equipment as well as terminal and pull boxes to system equipment racks and/or wall fields.

C.

D. Equipment and materials provided and installed by others, unless otherwise shown in this Section or the Drawings shall include, but are not limited to:

E. Section **<< 078400 - Firestopping>>**.

F. Section **<< 260533 - Conduit for Electrical Systems>>**.

G. Section **<< 270529 - Hangers and Supports for Communications Systems>>**.

H. Section 260526 - Grounding and Bonding for Electrical Systems #.

1.04 REFERENCE STANDARDS

A. ANSI C80.1 - American National Standard for Electrical Rigid Steel Conduit (ERSC).

B. BICSI ITSIMM - Information Technology Systems Installation Methods Manual (ITSIMM), 8th Edition.

C. BICSI TDMM - Telecommunications Distribution Methods Manual, 15th Edition.

D. NECA 1 - Standard for Good Workmanship in Electrical Construction.

E. NEMA FB 1 - Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit, Electrical Metallic Tubing, and Cable.

F. NFPA 70 - National Electrical Code.

G. NFPA 101 - Life Safety Code.
   1. NFPA 72 - National Fire Alarm and Signaling Code.

H. NFPA 72 - National Fire Alarm and Signaling Code.

I. TIA-568.0 - Generic Telecommunications Cabling for Customer Premises.

DRAFT

J. TIA-569 - Telecommunications Pathways and Spaces.

K. UL 6 - Electrical Rigid Metal Conduit-Steel.

L. UL 514B - Conduit, Tubing, and Cable Fittings.

1.05 ADMINISTRATIVE REQUIREMENTS

A. General Scope of Work Requirement: The Contractor shall provide box and conduit systems to support audiovisual connectivity as outlined in this Specification and the Contract Documents.
   1. Provide raceway and outlet box system suitable for installation of Audio, Video, Voice and Data-based systems equipment and cabling by others.

B. Coordination:
   1. Coordinate minimum sizes of conduits with actual type and quantity of cables to be installed.
   2. Coordinate arrangement of conduits with structural members, ductwork, piping, equipment and other potential conflicts.
   3. Verify exact conduit termination locations required for boxes, enclosures, and equipment.
   4. Coordinate work to provide roof penetrations that preserve integrity of roofing system and do not void roof warranty.
   5. Notify **<<Architect>>** of conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

C. Sequencing:
   1. Do not begin installation of communications cables until installation of conduit between termination points is complete.

1.06 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittals procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for conduits, fittings and floor boxes to be used on this project.

1.07 QUALITY ASSURANCE

A. Documents at Project Site: Maintain at project site one copy of **<< manufacturer's instructions; shop drawings; reference standard documents containing execution requirements; and _____>>**.

DRAFT

PART 2 PRODUCTS

2.01 MATERIALS

A. General: Conduits, raceways and boxes shall be constructed of the manufacturer's standard materials, as listed in published product information; types and sizes shall be as indicated or as required for both the installation and for NEC compliance.

B. Conduit and Raceways:
   1. Empty conduit, raceway, and outlet box system shall comply with both this Section as well as applicable electrical and telecommunications specification sections.
   2. Conduits shall be marked to identify the intended use. Color coding is acceptable while conduit numbering is preferred.
   3. Conduits shall be metallic EMT and/or IMC unless otherwise approved in writing.
   4. Conduits used for audiovisual shall not be less than 3/4" interior diameter.

5. All conduits shall have pull strings.
6. All conduit stub ups shall be reamed and have protective bushings installed.
7. Provide conduit sizes and connectivity as indicated on the audiovisual drawings.
8. Manufacturers:
   a. Allied Tube and Conduit.Wh
   b. Wheatland Tube.
   c. Republic Conduit.
   d. Wiremold.

C. Outlet Boxes:

D.

1.
2.
3.
4.
5.
6.
7.
8.
9.
   a.
   b.
   c.

E.

F.

DRAFT

2.02 CONDUIT APPLICATIONS

A. Do not use conduit and associated fittings for applications other than as permitted by **<<NFPA 70>>**, **<<TIA-569>>**, **<<BICSI ITSIMM>>**, **<<BICSI TDMM>>**, manufacturers' instructions, and product listing.

B. Unless otherwise indicated and where not otherwise restricted, use conduit types indicated for specified applications. Where more than one listed application applies, **<< comply with most restrictive requirements; or _____>>**. Where conduit type for particular application is not specified, **<< use galvanized steel rigid metal conduit; or _____>>**.

2.03 CONDUIT - GENERAL REQUIREMENTS

A. Comply with **<<NFPA 70>>** and **<<TIA-569>>**.

B. Provide conduit, fittings, supports, and accessories required for complete communications pathway.

C. Provide products listed, classified, and labeled as suitable for purpose intended.

D. Where conduit size is not indicated, size to comply with **<<NFPA 70>>**, **<<TIA-569>>**, and **<<BICSI TDMM>>**, but not less than applicable minimum size requirements specified. Where specified standards differ, comply with most stringent.

2.04 GALVANIZED STEEL RIGID METAL CONDUIT (RMC)

A. Description: **<<NFPA 70>>**, Type RMC galvanized steel rigid metal conduit complying with **<<ANSI C80.1>>** and listed and labeled as complying with **<<UL 6>>**.

B. Fittings:

1. Nonhazardous Locations: Use fittings complying with **<<NEMA FB 1>>** and listed and labeled as complying with **<<UL 514B>>** or **<<UL 6>>**.
2. Material: Use **<< steel; malleable iron; die cast zinc; or _____>>**.
3. Connectors and Couplings: Use **<< threaded fittings only. Threadless fittings, including set screw and compression/gland types, are not permitted; or _____>>**.
4. Conduit Bodies: Use only conduit bodies specifically designed for communications cabling. Standard conduit bodies designed for electrical raceways are not permitted.
   a. Comply with **<<TIA-568.0>>** minimum bend radius requirements for fiber optic cables.

END OF SECTION 270533.13

DRAFT

SECTION 270536
CABLE TRAYS FOR COMMUNICATIONS SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Metal cable tray systems:
   1. Metal ladder cable tray.
   2. Metal wire mesh/basket cable tray.

1.02 RELATED REQUIREMENTS

A. Section **<< 078400 - Firestopping>>**.

B. Section 260533 - Hangers and Supports for Communications Systems #.

C. Section **<< 270529 - Hangers and Supports for Communications Systems>>**.

1.03 REFERENCE STANDARDS

A. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

B. ASTM A1008/A1008M, Grade 33, Type 2.

C. ASTM A1011/A1011M, HSLAS, Grade 50, Class 1.

D. ASTM A510/A510M, Grade 1008.

E. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

F. ASTM B633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel.

G. BICSI ITSIMM - Information Technology Systems Installation Methods Manual (ITSIMM), 8th Edition.

H. NECA/BICSI 607 - Standard for Telecommunications Bonding and Grounding Planning and Installation Methods for Commercial Buildings.

I. NEMA BI-50016 - Cable Tray Installation Guidelines.

J. NEMA BI 50015 - Metal Cable Tray Systems.

K. NFPA 70 - National Electrical Code.

L. TIA-607 - Telecommunications Bonding and Grounding (Earthing) for Customer Premises.

1.04 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for cable tray system components and accessories. Include dimensions, materials, fabrication details, finishes, and span/load ratings.

C. Shop Drawings: Include dimensioned plan views and sections indicating proposed cable tray routing, required clearances, and locations and details of supports, fittings, building element penetrations, and equipment connections.

D. Project Record Documents: Record actual routing of cable tray and locations of supports.

DRAFT

1.05 QUALITY ASSURANCE

A. Comply with **<<NFPA 70>>**.

B. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with minimum **<< three; or _____>>** years**<< documented; _____; or None - N/A>>** experience.

1. Manufacturer shall be a member of NEMA.
2. Trays shall conform to NEMA Metal Cable Tray Standard Publication VE-1.
3. Manufacturer shall provide test reports witnessed by an independent testing laboratory of the "worst case" loading conditions outline in this specification and peformed in accordance with the latest revision of NEMA VE-1.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Cope/Atkore International.

B. Eaton B-Line, Inc.

C. Cablofil/Legrand.

D. Chalfant Manufacturing Company.

E. Mono-Systems, Inc.

F. M.P. Husky Corporation.

G. PW/Legrand.

2.02 CABLE TRAY SYSTEM - GENERAL REQUIREMENTS

A. Provide **<< new; modifications and additions to existing; or _____>>** cable tray system consisting of required components, fittings, supports, and accessories, as necessary for complete system.

B. Provide products listed, classified, and labeled as suitable for purpose intended.

C. Do not use cable tray for applications other than as permitted by **<<NFPA 70>>** and product listing/classification.

D. Provide cable tray system and associated components suitable for use at indicated span/load ratings under service conditions at installed location.

E. Unless otherwise indicated, specified span/load ratings are based on safety factor of 1.5 and working load only (i.e., no additional concentrated static load), with ratings for metal cable tray systems in accordance with **<<NEMA BI 50015>>**.

F. Unless otherwise indicated, specified load/fill depths and inside widths are nominal values, with values for metal cable tray systems in accordance with **<<NEMA BI 50015>>** including applicable allowable tolerances.

G. Source Limitations: Furnish cable tray system and associated components and accessories produced by **<< single manufacturer; same manufacturer as existing cable tray system; or _____>>** and obtained from single supplier.

2.03 METAL CABLE TRAY SYSTEMS

A. Comply with **<<NEMA BI 50015>>**.

B. Class Designation: Comply with NEMA VE 1, Class 12B.

DRAFT

C. Material/Finishes:
   1. Zinc Electroplated Steel: Comply with **<<ASTM B633>>**.
   2. Mill-Galvanized Before Fabrication (Pre-Galvanized) Steel: Comply with **<<ASTM A653/A653M>>**, G90 coating.

D. Metal Ladder Cable Tray**<< Type _____; _____; or None - N/A>>**:
   1. Material:
      a. Steel
         1) Straight Section and Fitting Side Rails and Rungs: Steel complies with the minimum mechanical properties of ASTM A1008/A1008M, Grade 33, Type 2.
         2) Steel Tray Splice Plates: ASTM A1011/A1011M, HSLAS, Grade 50, Class 1.
         3) Fasteners: Steel complies with the minimum mechanical properties of ASTM A510/A510M, Grade 1008.
         4) Finish: Hot-dipped galvanized after fabrication, comply with ASTM A123/A123M, Class B2.
         5) Hardware: Galvanized, ASTM B633.
      b. Aluminum
         1) Materials: Alloy 6063-T6 according to ANSI H35.1/H35.1M for extruded components, and Alloy 5052-H32 according to ANSI H35.1/H35.1M for fabricated parts.
         2) Hardware: Chromium-zinc-plated steel, ASTM F1136.
   2. Load/Fill Depth: 4 inches.
   3. Span/Load Rating: Capable of supporting a maximum cable load, with a safety factor of 1.5, plus a 200-lb concentrated load, when tested according to NEMA VE 1.
   4. Rung Spacing: 9 inches on center for straight lengths.
   5. Inside Width: 24 inches, unless otherwise indicated on the drawings.
   6. Inside Radius of Fittings: 24 inches.

E. Metal Wire Mesh/Basket Cable Tray**<< Type _____; _____; or None - N/A>>**:
   1. Material: Galvanized steel wire mesh, complying with NEMA VE 1.
      a. Straight Sections and Fittings: Steel complies with the minimum mechanical properties of ASTM A1008/A1008M, Grade 33, Type 2.
      b. Steel Tray Splice Plates: ASTM A1011A/A1011M, HSLAS, Grade 50, Class 1.
      c. Fasteners: Steel complies with the minimum mechanical properties of ASTM A510/A510M, Grade 1008.
      d. Finish: Hot-dipped galvanized after fabrication, complying with ASTM A123/A123M, Class B2.
      e. Hardware: Galvanized, ASTM B633.
   2. Tray Depth: 4 inches.
   3. Span/Load Rating: Capable of supporting a maximum cable load, with a safety factor of 1.5, plus a 200-lb concentrated load, when tested according to NEMA VE 1.
   4. Mesh Spacing: **<< 2 by 4 inches; _____ by _____ inches; or _____>>**.
   5. Tray Width: 12 inches minimum, unless otherwise indicated on drawings.

F. Hanger system:
   1. Ladder Cable Tray: Trapeze channel and threaded rods.
      a. Channel: Approximately 1.60 inches square and provided with appropriate fittings for attaching to the bottom of the cable tray and to the supporting rods.

DRAFT

b. Rods: Minimum 0.375 inch diameter with fittings to attach to the structure above.

2. Wire Mesh Cable Tray: Supports shall be center support hangers, trapeze hangers, or wall brackets.
   a. Trapeze hangers or center support hangers shall be supported by 0.25 inch or 0.375 inch diameter rods.

2.04 ACCESSORIES

A. Fittings: Tees, crosses, risers, elbows, and other fittings as indicated, of same materials and finishes as cable tray.

B. Barrier strips: Same materials and finishes as cable tray.

C. Cable tray supports and connectors, including bonding jumpers, as recommended by cable tray manufacturer.

2.05 SOURCE QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>** for additional requirements.

B. Metal Cable Tray: Perform factory design tests in accordance with **<<NEMA BI 50015>>**, including electrical continuity and load testing.

C. Test and inspect cable trays according to NEMA VE 1.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install cable tray system in accordance with the following. Where requirements differ, comply with most stringent.
   1. **<<NEMA BI-50016>>** (cable tray).

C. Unless otherwise indicated, arrange cable tray to be parallel or perpendicular to building lines.

D. Arrange cable tray to provide required clearances and maintain cable access.

E. Install cable tray plumb and level, with sections aligned and with horizontal runs at specified elevation.

F. Metal Wire Mesh/Basket Cable Tray: Field fabricate fittings in accordance with manufacturer's instructions, using only manufacturer-approved connectors classified for bonding.
   1. Inside Radius of Fittings: **<< 12 inches; 24 inches; 36 inches; As indicated on drawings; _____ inches; or _____>>**.

G. Cable Tray Movement Provisions:
   1. Provide expansion fittings where cable tray is subject to movement, including but not limited to:
      a. Where cable tray crosses structural joints intended for expansion.
      b. Long straight cable tray runs in accordance with **<<NEMA BI-50016>>**.
   2. Use expansion guides in lieu of hold-down clamps where prescribed in **<<NEMA BI-50016>>**.
   3. Set gaps for expansion fittings in accordance with **<<NEMA BI-50016>>**.

H. Cable Provisions:
   1. Use fixed barrier strips to maintain separation of cables as indicated and as required by **<<NFPA 70>>**.

DRAFT

2. Use drop-out fittings or bushings where cables exit cable tray as required to maintain minimum cable bending radius.
3. Use cable support fittings for long vertical cable tray runs with heavy cables.

I. Provide end closures at unconnected ends of cable tray runs.

J. Cable Tray Support:
1. Use manufacturer's recommended hangers and supports, located in accordance with **<<NEMA BI-50016>>**, **<<BICSI ITSIMM>>**, and manufacturer's requirements, but not exceeding specified span**<< unless otherwise approved by Engineer; _____; or None - N/A>>**. Provide required support and attachment where not furnished by cable tray manufacturer.
2. Provide independent support from building structure. Do not provide support from piping, ductwork, or other systems.

K. Grounding and Bonding Requirements:
1. Install cable tray grounding in accordance with the following. Where requirements differ, comply with the most stringent.
a. **<<NECA/BICSI 607>>** (telecommunications bonding and grounding).
b. **<<NEMA BI-50016>>** (cable tray).
c. **<<TIA-607>>** (generic telecommunications bonding and grounding).
d. NFPA 70.
e. Section 260526 - Grounding and Bonding #.
2. Metal Cable Tray Systems: Use suitable bonding jumpers or classified cable tray connectors to provide electrical continuity. Do not use classified cable tray connectors where cable tray sections have been modified, such as being bent, cut, or reshaped.

L. Penetrations: Install firestopping to preserve fire resistance rating of building elements.

M. Identification Requirements:

N. Install cable tray covers **<< where indicated.; where indicated and as follows:; or _____>>**

3.02 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>** for additional requirements.

B. Inspect cable tray system for damage and defects.

C. Repair cuts and abrasions in galvanized finishes using zinc-rich paint recommended by manufacturer. Replace components that exhibit signs of corrosion.

D. Correct deficiencies and replace damaged or defective cable tray system components.

END OF SECTION 270536

DRAFT

SECTION 275123
INTERCOMMUNICATIONS AND PROGRAM SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Furnish and install a centrally controlled complete and satisfactorily operating sound and intercommunications system within the building and around the building's perimeter as shown on the drawings and herein specified for: the pick-up, amplifcation, reproductino, and distribution of voice and/or music; intercommunications between areas; the distribution of program signals.

B. Intercom cable.

C. Provide an additional minimum of three gateways or 30% of the total system, whichever is greater, for all systems to account for future expansion.

1.02 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>**, for submittal procedures.

B. Product Data: For each item of equipment.

C. Manufacturer's Installation Instructions.

D. Project Record Documents: Accurately record actual locations of devices and wiring.

E. Maintenance Data: Include instructions for minor troubleshooting, preventive maintenance, and cleaning.

1.03 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this Section with minimum ten years of**<< documented; _____; or None - N/A>>** experience.

B. Supplier Qualifications: Company **<< authorized; or franchised>>** by manufacturer and specializing in supplying products specified in this Section with minimum five years**<< documented; _____; or None - N/A>>** experience.

C. Installer Qualifications: Company specializing in installing the products specified in this Section with minimum five years**<< documented; _____; or None - N/A>>** experience.

1.04 TRAINING

A. The Contractor shall furnish a minimum of 8 hours of technical service training to the Owner's technical staff uisng the factory service manuals previously specified.

B. The Contractor shall furnish 24 hours of operating and programming training to Owner's operating staff which shall be delivered in six, 4 hour sessions to be scheduled at the Owner's convenience over the warranty period.

C. Training specified herein shall be performed by a factory certified technician.

D. Provide all necessary materials, laptop, programs, and service tools for the PA system with training(s). The Owner must have access to TechSupport for the life of the materials.

1.05 DESCRIPTION OF OPERATION

DRAFT

A. Furnish and install a microprocessor-controlled voice communication system with low voltage wiring and equipment as shown on the drawings, and as herein specified to furnish a complete sound, program, distribution, and intercommunication system in the building.

B. System Capacity:
   1. It shall be possible to field program any Owner furnished telephone instrument to function as part of the sound and intercommunications system.
   2. Furnish and install one desk mounted Administrative Control Station (ACS) in the Communications Room.
   3. Provide a minimum of one conversation path for each programmed telephone instrument and/or Adminstrative Control Station (ACS).
   4. Room stations reporting to different programmed telephone instruments and/or an ACS shall be capable of calling simultaneously without interference.
   5. Programmed telephone instruments and/or an ACS calling to assigned rooms shall be capable of calling simultaneously without interference.
   6. The system shall be configured for ICB dial in access.

C. System Configuration:
   1. Programmed telephone instruments and/or an ACS shall receive calls from classrooms and other indicated areas as shown on the drawings.
   2. Classrooms and other areas indicated on the drawings shall contain a flush, wall mounted callback switch to signal the designated programmed telephone instrument and/or ACS.
   3. Classrooms, corridors, and other areas indicated on the drawings shall contain flush ceiling mounted speakers.
   4. Mechanical rooms and other similar type ares, and the building exterior shall contain surface mounted horn type speakers as indicated on the drawings.
   5. A hand-held microphone and a flush mounted microphone outlet shall be furnished and installed by this Contractor at the bus loading area. Keying this microphone shall automatically annunciate over the ALL CALL system without the assistance of an operator. Field verify exact location at bus loading area, prior to rough-in and installation.
   6. Desk-type microphones shall be furnished where shown on the drawings. keying one of these microphones shall automatically annunciatoe over the ALL CALL system without the assistance of an operator.

D. Calling sequence of operation:
   1. Classroom station calls shall initiate manually a preset status of call to the designated programmed telephone instrument and/or ACS.
   2. Programmed telephone instrument and/or ACS to classroom calls shall establish two-way voice communication with classrooms and/or any or other areas equipped with a loudspeaker.
   3. ACS to ACS, or programmed telephone instrument to ACS, or programmed telephone instrument to programmed telephone instrument calls shall establish a two-way telephone conversation.

1.06 SYSTEM PARAMETERS

A. The system central equipment shall provide at least two simultaneous open voice speech paths between programmed telephone instruments and/or administrative control stations and remote speakers within a sixteen-line group. Systems not providing multiple, simultaneou, unrestricted, amplified voice channels or systems offering multi-speech paths which are restrictive to less than simultaneous conversations per sixteen-line group shall be unacceptable.

DRAFT

1. The system shall provide user programmable room number assignment. Room number assignments shall be based on the actural room number assigned by the Owner, **NOT** the room numbers shown on the drawings.
2. The system shall provide for two, three, four, or five-digit alphanum

B. The basic system shall be capable of modular expansion to sixteen simultaneous open voice speech paths to a minimum of five hundered twelve stations.

C. The system shall provide at least two program distribution channels, each programmed and distributed from a programmed telephone instrument and/or an ACS.

D. The system shall have thirty-two user assigned groups of stations for zoned audio paging, class change signals, or program distributino with any station belonging to all zones, some zones or no zone.

E. The system shall allow for preselective access to ZONE and ALL CALL functions. This feature shall prevent unauthorized paging from programmed telephone instruments and/or an ACS.

F. The system shall be expandable in groups of sixteen stations and two simultaneous speech paths. The total basis system shall provide a minimum of twelve speech paths (links) total.

G. The system shall incorporate necessary circuitry to prevent monitoring of any classroom who call origination switch is in the privacy mode. The system shall be designed to operate with the most current types of privacy networks.

H. The system shall be capable of being programmed as directed by the Owner so that programmed telephone instrument and/or an ACS cannot monitor an activity within a room (regardless to whether that room is equipped with a privacy switch) over the loudspeaker. This programming shall **NOT** defeat the operation of the handset. Each of the room loudspeakers shall be programmed individually to allow or defeat monitoring of loudspeaker or group of loudspeakers.

I. The system shall provide remote program selection that shall allow a classroom to select or cancel program source. Intercom or paging functionsshall have priority over this function.

J. The sytem shall provide a "call announce" tone. This feature, if preselected by the user, shall provide a tone signal at the classroom speaker when called by a programmed telephone instrument and/or an ACS.

K. The system shall automatically provide a "pre-announce" tone. This feature, if preselected by the user, shall provide a repetitive tone signal at the classroom speaker when called by a programmed telephone instrument and/or an ACS to indicate the room is being monitored (supervisory tone).

L. The system shall provie the facilities so that a calling station can be placed in a HOLD status, freeing the progammed telephone instrument and/or ACS to perform other functions.

M. The system shall provide priority override capability to remote independent sound systems (auxiliary, auditorium, gymnasium, etc.) located inside the building. Independent sound systems located outside the building (baseball, football, stadium, etc.) shall not require priority override capabilities.

N. The system shall have the capability to operate with external paging amplifiers to increase audio output available for paging.

O. The system shall be equipped with control points outputs for activating outboard devices such as priority override relays on remote sound systems. These control point outputs shall be activated when the system is placed in the ALL PAGE mode.

P. The system shall provide a unique "pre-alert" tone to sound prior to the normal class change signal. This tone shall be programmable and may be repositioned, time wise as desired.

DRAFT

Q. The system shall contain an integral master clock and programmer which shall generate and distribute class change and/or program signals to **ALL** loudspeaker zones and be capable of performing the following functions:
   1. Provide 500 discrete time event entries for programming functions based upon:
      a. The time of day in hours and minutes.
      b. The day or combination of 7 days of the week on which the event is to occur.
      c. The selection of any one or any combination of 32 zones or 8 outputs to be activated.
      d. The selection of any one or combination of 16 schedules to allow for maximum flexibility due to special circumstances or seasonal changes.
      e. The selection of 16 user-progammable Event Tones. Event Tones are programmable from a library of 25 Tone Types.
      f. System shall have capabilities of visual aid for hearing impaired.
   2. Provide for Automatic Daylight Savings Time adjustment with Leap Year programming.
   3. Provide momentary contact closures for external device operation. Provide four inputs, four outputs, and four flex-puts.
      a. Inputs shall be programmable by the user to initiate any desired system activity (e.g. Page, Tone, Program, Event, System Reset, etc.).
      b. Outputs shall be programmable by user to activate during any desired system activity (e.g. Page, Tone, Program, Time of Day, etc.).
   4. Display the time of day in either twelve or twenty-four hour format at each Administrative Telephone.
   5. The system shall provide for an editing and review routine to permit the user to change and edit time events, zones, and schedules.
   6. The system shall allow pre-selected program material to be distributed according to pre-programmed schedules (i.e. March to Music, National Anthem, etc.).

R. The system shall be configured to provide optional music distributino during class change periods.

S. The system shall provide reception of AM or FM radio broadcasts and reproduction of recorded music or other program material from a built-in tuner, or compact disc player and shall provide distribution to any and or all speakers.

T. The systemshall reproduce standard compact disc recordings and distribute them to any or all speakers.

U. The system shall accept both input and output of an external tape recorder.

V. The system shall include individual bass and treble controls.

W. The system shall provide for a minimum of 16 spare loudspeaker zones.

X. The system shall accept a priority override signal to mute the system when the fire detection system activates the priority override function.

1.07 SYSTEM TEST AND ACCEPTANCE

A. Prior to final site visitation, and acceptance of each construction phase, conduct an operating test of the complete sound and intercommunications systems. The system shall test free from grounds, shorts, and other faults. Connections shall be thoroughly checked for mechanical and electrical connections. Equipment shall be demonstrated to operate in accordance with the requirements set forth in these specifications and as shown on the drawings.

DRAFT

B. Peform tests in the prescence of the Architect/Engineer and Owner. Furnish personnel and test instruments for use in the test. Test the sound level (dB) for each room for the appropriate room use. Test at the center of the room.

C. When the work on the entire sound and intercommunications system has been completed, and is ready for final review, demonstrate that the requirements of the Contract as it applies to this work have been carried out and that the system has been adjusted and operated in accordance therewith.

1.08 FIELD CONDITIONS

A. The existing sound and intercommunications, and program system shall remain in operation during the construction period, until the new system has been installed, tested, and ready for operation. After the new system has been placed in operation, the existing system shall be removed, as shown on the drawings.

1.09 WARRANTY

A. Deliver the work described herein in a first-class operating condition in every respect. Warrant the material, equipment, and workmanship furnished to be entirely free from defects. Any materials, equipment, or workmanship in which defects may develop before or during the warranty period shall be reparied or replaced at the Contractor's own expense. Refer to Division 01 for the start of the warranty period. Further warrant material, equipment and workmanship used in the installation, but not specifically mentioned in the contract documents, is the best of their respective kinds and that the construction and installation was performed in accordance with the best acceptabed standard practices in all details.

B. The manufacturer shall be prepared to offer a service contract for the maintenance of the system after the warranty period.

PART 2 PRODUCTS

2.01 MANUFACTURER

A. CareHawk/Dukane "StarCall" - basis of design.

B. Rauland; Telecenter U.

2.02 ADMINISTRATIVE CONTROL STATION

A. The Administrative Control Station (ACS) shall be desk mounted and contain a matching telephone handset with retractable coiled cord and conductive rubber button switches with clearly designated touch points. The housing shall be constructed of high impact flame-retardant plastic and shall terminate using RJ-45 modular telephone type jack. Additional features shall include:

1. Conductive rubber moisture sealed buttons.
2. 16-character alphanumeric LCD display.
3. Menu driven display.
4. Handset and hands-free intercom with a "Push-to-Talk" button for manual audio direction control in the hands-free mode.
5. Alphanumeric three, four or five-digit dialing.
6. Distinctive electronic ring signals.
7. 12 button keypad.
8. SPEAKER PHONE, TALK, ringer VOLUME UP/DOWN, EMERGENCY, TONE, PAGE, PROGRAM, MENU, and 8 additional user-programmable special functino keys.

DRAFT

9. Telephone type modular connector.
10. Sensitive loudspeaker.
11. Built-in condenser microphone.
12. Queing.
13. Data communications; local operating networks (LON), RS-485.
14. Telephone style headset with dynamic receiver and electret transmitter.
15. HOLD button.

B. The ACS shall provide the following functions and features:
1. User programmable two, three, four, or five-digit alphanumeric direct dialing assignment to the following locations: ACS to classroom speaker(s); ACS to programmed telephone instrument; or ACS to ACS.
2. The ACS shall employ membrane switches that shall provie the user with a positive feel of switch activation.
3. The ACS shall be equipped with a large 16 character LCD alphanumeric readout which shall provide the following:
a. Queuing of calling room numbers and telephones.
b. Sequential displays of calls "waiting" with no limit to the number of calls.
c. EMERGENCY, PRIORITY, and NORMAL calls shall be displayed in order received and according to their priority.
d. Display of the alphanumeric room number or location of the calling station.
e. Display of current time in 12 or 24 hour format in idle state.
f. Full menu driven display of operator function dialing.
g. Full menu driven display of menu prompting.

C. The ACS shall provide two modes of communicatino of classroom loudspeakers. Communications shall be via handset or microphone/speaker, activated by a hands-free speakerphone or built-in talk/listen switch.

D. Answering calls from loudspeaker locaitons shall be accomplished by picking up the handset or depressing the SPEAKERPHONE button.

E. Call-in from an ACS, programmed telephone instrument,or callback switch shall be displayed in the following manner:
1. The firstt call entered shall appear in the display window of the ACS that shall display the dial number of the calling station.
2. Any number of calls shall be stored in memory, up to the total capacity of the system with the quantity of those calls waiting displayed at the ACS.
3. NORMAL and lower level calls shall annunciate with the slower, repetitive rate, audio tone than EMERGENCY calls. Calls shall sort and stack automatically according to the preprogrammed priority level assignments. Each incoming call shall be automatically registered first in order of priority and then by order placed.
4. Calls that have been upgraded by the caller shall automatically move to the EMERGENCY level and appear in proper sequence.
5. EMERGENCY calls shall be distinguishable from NORMAL calls by designation and unique tone pattern. It shall be possible to visually or audibly determine whether the call-in is an emergency or normal call-in.
6. The ACS shall have the ability to forward its call-in coverage to another ACS or programmed telphone instrument. This shall be a manual operation or at a predetermined time, automatically forwarded.

DRAFT

7. It shall be possible to manually activate and sound the time tone event signal to any of the 32 multi-purpose zones from any ACS and/or programmed telephone instrument.
8. The ACS shall include a PROGRAM button for selection and distribution of each of the program channels to loudspeaker zones. The program channels shall be distributed via the ACS to a loudspeaker zone, a group of loudspeaker zones or all loudspeaker zones. it shall be possible to initiate changes to the distribution of the programs while program distribution is already in progress without haing to first defeat the curent distribution.

F. The ACS shall be provided with an interconnecting cord set with modular connectors at each end.

G. The system shall provide for transferring a call form the ACS to any other ACS and/or programmed telephone instrument.

H. The system shall be equipped with the necessary ports that shal allow diagnostics via any standard computer terminal and modem interface that shall allow remote engineering assistance from the system manufacturer.

I. The ACS shall provide for review of call-in coverage assignments to an ACS including review of identification numbers of remote stations assigned to either of the two programmed channels and review of which ACS is forwarding coverage.

J. An ACS which will meet this specification is DUKANE Model No. 7A1110.

2.03 CENTRAL EQUIPMENT

A. Furnish and install standard 19-inch floor mounted equipment rack(s) for housing central equipment. Furnished and install the central equipment in the rack(s). The central equipment shall consist of the following items of equipment in the quantities required to perform the specified functions:

1. DUKANE Model No. 110-3592 floor mounted equipment rack(s) of the quantity required to house all of the equipment listed herein. Each rack shall be complete with locking back door and pair of flush side panels.
2. DUKANE Model No. 110-3521A expanded central microprocessor card(s).
3. DUKANE Model No. 110-3524B basic audio routing card(s).
4. DUKANE Model No. 110-3527 and/or 110-3528 ACS card(s).
5. DUKANE Model No. 110-3530 and/or 110-3531 standard telephone card(s).
6. DUKANE Model No. 110-3544C intercom amplifier module.
7. DUKANE Model No. 110-3533A and/or 110-3534 16-line audio switching card(s). The quantity of boards to be provided shall provide for a minimum of 16 spare zones.
8. DUKANE Model No. 1A4125 125 watt power amplifier(s) and/or DUKANE Model No. 1A4250 250 watt power amplifier(s)
9. DUKANE Model No. 77A1000 communications modem.
10. ATLAS SOUNDOLIER Model No. ACS-1 power strip.

2.04 MICROPHONE PRE-AMPLIFIER

A. Furnish and install a remote microphone pre-amplifier for each desk mounted microphone. A remote microphone pre-amplifer that meets this specificaition is DUKANE Model No. 1A881, suitable for flush or surface mounting in a two-gang outlet box. Internal pre-amps located in head end shall be acceptable providing they have the capacity to handle microphone inputs shown on the drawings.

DRAFT

2.05 SYSTEM INTEGRITY AND MEMORY

A. The user programmable functions of the sound and intercommunicaitons ssytem shall be protected by a manufacturer supplied lithium battery with a life expectancy of at least 10 years.

2.06 TELEPHONE INTERFACE

A. The PBX/KSU interface shall be provided through a trunk interface card (TIC) and a standard telephone card. Each TIC shall support up to four trunks with sixteen trunks maximum. Each trunk shall be programmable as either incoming or outgoing or both. For incoming trunks, the system shall be able to direct a call to a user defined attendant telephoen or provide dial tone. For outgoing trunks, the system shall provide access to the trunk by dialing "8", "9" or both. If digit "9" is used to access an outgoing trunk, the system shall be able to automatically dial a second "9". Each trunk shall be the loop start type.

B. The interface connection to a PBX/KSU shall be made from the TIC trunk to a PBX/KSU extension to allow any system telephone to have access to all of the extension functionaliy of the PBX/KSU.

C. The interface connection from the PBX/KSU shall be made from the PBX/KSU trunk to an extension. This feature shall allow PBX/KSU telephones to have access to system extension features and shall aslo allow call-ins to be made from the loudspeaker zones to the PBX/KSU attendant console.

D. Connections to the telephone interface shall be the standard modular type USOC RJ11C connectors, one per line, and signal and data connections to the host system shall be multiple pin type connectors.

E. The telephone interface shall be FDD Part 68 registered for connection to the telephone network. The ringer equivalency shall be 0.70 db, for each line.

2.07 EQUIPMENT LOCATIONS

A. Furnish and install where shown on the drawings, wall mounted main and sub-distribution equipment locations consisting of fire resistant 3/4-inch thick plywood backboards and LEVITON Cat. No. 40066-M50 fifty pair "66" clip connecting blocks as detailed on the drawings.

2.08 ADMINISTRATIVE CONTROL STATION RECEPTACLES

A. Furnish and install where shown on the drawings....

2.09 CLASSROOM CALLBACK SWITCHES

A. Furnish and install where shown on the drainwgs, wall mounted callback switches for flush or surface mounting in a single gang outlet box, as noted on the drawings. The callback switches shall have the following features: one SPST momentary (spring-ation return push button) designated PUSH TO CALL; terminations shall be screw terminal type; and satin finished stainless steel cover plate. A classroom callback switch that meets this specification is DUKANE Model No. 9A1765.

2.10 FLUSH CEILING MOUNTED SPEAKER ASSEMBLIES

A. Furnish and install where shown on the drawings, flush 1 by 2 feet drop-in ceiling speaker assemblies consisting of a loudspeaker, backbox, and baffl. A speaker assembly that meets this specification is ATLAS SOUNDOLIER Model No. IS125SYS complete with 2 feet T-Bar.

B. For drywall type ceiling construction, furnish and install a flush ceiling mounted speaker assmbly. A speaker assembly that meets this specification is BOGEN Model No. CSD 1X2VRU.

DRAFT

2.11 SURFACE CEILING MOUNTED SPEAKER ASSEMBLIES

A. Furnish and install where shown on the drawings, surface mounted speaker assemblies consisting of an ATLAS SOUNDOLIER Model No. C5A-T72 loudspeaker and an ATLAS SOUNDOLIER Model No. Q428-SA backbox complete with regressed speaker grille and a matte white finish.

2.12 SURFACE WALL MOUNTED SPEAKER ASSEMBLIES

A. Furnish and install where shown on the drawings, surface mounted speaker/transformer/baffle assemblies (vandal resistant). With durable 14 gauge steel construction, impermeable security grille, 8-inch diameter speaker with a frequency response of 50HZ to 18kHz, factory wired 25/70.7-volt transformer with mutli power taps. An assembly that meets this specification is ATLAS SOUND Model No. VP14.

2.13 HORN TYPE SPEAKERS

A. Furnish and install where shown on the drawings, horn type speakers.

B. Horn type speakers shall be wall mounted and have the following characteristics: a full range power rating of 15 watts; frequency response of 600-14,000 Hz; 95 degree dispersion; power taps at .48, .94, 1.8, 7.5, and 15 watts, and grey baked expoxy finish. A horn type speaker that meets this specification is ATLAS SOUND Model APF-15T with VP161-APTF vandalproof square grille and 193-8-6 square recessed enclosure.

2.14 VOLUME CONTROLS

A. Furnish and install where shown on the drawings, wall mounted speaker volume controls.

B. Volume controls shall provide for control of area speaker volume on 25-volt or 70-volt speaker distribution lines controlling up to 10 watts of audio power. Attenuation shall be accomplished in 11 steps, including "0". The switch shall be a 12-position rotary type. Volume controls shall be complete with a stain finished, stainless steel coverplate and the know shall have a clearly visible white indicator line. The volume control shall mount in a single gang outlet box, flush or surface mounted as noted on the drawings. A volume control that meets this specification is ATLAS SOUND Model AT-10.

2.15 MICROPHONES

A. Furnish one unidirectional, dynamic, dual impedance microphone with the following features: freqency respons of 80 to 13,000 Hz; uniform cardioid polar pattern; built-in windscreen; shock mount; on-off switch with lockplate; and swivel adapter. A microphone that meets this specification is AKG Model No. D77S/XLR dynamic cardioid microphones. Furnish this microphone complete with a 25-foot connector cable with CANNON XLR connectors, and an ATLAS SOUNDOLIER Model MS-20 floor stand.

B. Furnish one dual impedance, controlled magnetic, desk mounted microphone with the following features; frequency response of 100 to 10,000 HZ; omni-directional polar pattern; high/low impedance selector switch; touch-to-talk control bar with lock-on operation; height adjustment; and a nondetachable,7-foot long, four conductor cable having two conductors shielded.

C. Furnish one bus call station hand-held communications type, noise-canceling, dynamic microphone with the following features: frequency response of 100 to 7,500 Hz; double pole, double throw touch-to-talk switch with spring return; wall clip; and a 6-foot lon, four conductor cable having two conductors shielded. A microphone that meets this specification is ASTATIC Model No. 611L complete with Model No. 40-315 mounting bracket.

DRAFT

2.16 MICROPHONE OUTLETS

A. Furnish and install whre shown on the drawings, wall mounted microphone outlets suitable for flush or surface mounting in single gang outlet box. Microphone outlets shall consist of a CANNON "XLR" series audio jacks of the type required so as to be compatible with the type of microphone cable connector furnished, and a stainless steel coverplate. A microphone outlet that meets this specification is CONQUEST AUDIO Cat. No. HP1-DF complete with a three-pin XLR.

2.17 SOUND AND INTERCOMMUNICATIONS SYSTEM CABLE

A. Furnish and install one, four conductor, No. 20 AWG stranded plenum rated cable with a temperature range for dry locations of -10 degrees C to 60 degrees C for each speaker zone having two twisted conductors shielded and two twisted conductors unshielded. A cable that meets this specification is WEST PENN Cat. No. 25359B or equal as manufactured by CONSULIDATED WIRE, GENERAL CABLE, PAIGE or TAPPAN.

B. Furnish and install stranded, No. 20 AWG, shielded, single twisted pair plenum rated cable with a temperature range for dry locations -10 degrees C to 60 degrees C for each microphone outlet. A cable that meets this specification is WEST PENN Cat. No. 25292B or equal as manufactured by CONSULIDATED WIRE, GENERAL CABLE, PAIG or TAPPAN.

C. Furnish and install three stranded, two pair, twisted, shielded, No. 22 AWG plenum rated cables with a temperature range for dry locations of -10 degrees C to 75 degrees C for each ACS. A cable that meets this specification is WEST PENN Cat. No. D253652 or equal as manufactured by CONSULIDATED WIRE, GENERAL CABLE, PAIGE or TAPPAN.

D. Furnish and install one, four conductor, No. 20 AWG stranded plenum rated cable having two twisted conductors, shielded (loudspeakers) and two twisted conductors unshielded (switch) with a temperature range for dry locations of -10 degrees C to 60 degress C for each callback switch. A cable that meets this specification is WEST PENN Cat. No. 25359B or equal as manufactured by CONSULIDATED WIRE, GENERAL CABLE, PAIGE or TAPPAN.

E. Furnish and install four conductor, No. 20 AWG stranded plenum rated cables with a temperature range for dry locations of -10 degrees C to 60 degrees C to each volume control having two twisted conductors shielded and two twisted conductors unshielded. A cable that meets this specification is WEST PENN Cat. No. 25359B or equal as manufactured by CONSULIDATED WIRE, GENERAL CABLE, PAIGE or TAPPAN.

F. Furnish and install the following cables for priority override for each independent sound system (i.e. auxiliary, auditorium, gymnasium, etc.) within the building:

1. One, two conductor No. 14 AWG stranded, plenum rated cable, unshield (contact or voltage trigger) with a temperature range for dry locations of -10 degrees C to 60 degrees C. A cable that meets this specification is WEST PENN Cat. No. 25226B or equal as manufactured by CONSULIDATED WIRE, GENERAL CABLE, PAIGE or TAPPAN.
2. One stranded, No. 18 AWG, shielded, single twisted pair, plenum rated (voice) with a temperature range for dry locations of -10 degrees C to 60 degrees C. A cable that meets this specificaiton is CONSULIDATED WIRE, GENERAL CABLE, PAIGE or TAPPAN.

2.18 AM/FM ANTENNA

A. Furnish and install a BLONDER-TONGUE Model No. BTY-FM-2 FM antenna with an AM whip and mixing circuit to augment the antenna built into the tuner. Furnish and install a weatherhead, rigid steel conduit mast, and two RG-59 plenum rated cables from antennas to the tuner located in the sound and intercommunications system equipment rack. Each antenna cable shall be installed complete with a PICO MACOM Cat. No. GRB-1HRL grounding block. Ground antenna in accordance with Section 260526 # and NFPA 70.

DRAFT

2.19 SOUND AND INTERCOMMUNICATIONS SYSTEM

PART 3 EXECUTION

3.01 RACK MOUNTED EQUIPMENT

A. Install with proper adapters, rack mounting kits, brackets, and closure panels for unused spaces. Interconnecting wiring shall be labeled, bundled, secured, and terminated in a neat and professional manner.

B. Plug in rack mounted equipment AC power cords into the mounted power strips.

3.02 ADMINISTRATIVE CONTROL STATIONS

A. ACS shall be wired to locations shown on the drawings and in specificaitons, provided with 12 feet of slack cable from the outlet point to the ACS.

3.03 ADMINISTRATIVE TELEPHONE RECEPTACLES

A. ACS receptacles shall be assembled and installed at mounting heights and locations indicated on the drawings, in outlet boxes appropriate for their location, wired ready for use.

3.04 SPEAKERS

A. Support flush ceiling mounted speaker assemblies from the building structure with a minimum of two steel wires. Ceiling baffles shall be finished flush with ceiling. The T-Bar shall be securely attached to the ceiling grad with pop-rivets at both ends. Flush ceiling mounted speakers shall be tapped at 0.5 watts, unless otherwise indicated.

B. Surface mounted speaker assemblies shall be securely fastened to the building structure with threaded rod or bolts as appropriate for the application. Surface mounted speakers shall be tapped for 0.5 watts, unless otherwise indicated.

C. Surface wall mounted speaker assemblies shall be securely fastened to the building structure with bolts appropriate for the application. Surface mounted speakers shall be tapped for 0.4 watts, unless otherwise indicated.

D. Horn type speakers shall be securely fastend to the building structure with threaded rods, bolts and/or bridging as required for the mounting location. Horn type speakers shall be tapped as directed by the Owner.

3.05 MICROPHONES

A. Unpack each microphone and assemble with cables and stands, and connect ready for operation. Microphones shown for permanent installatino shall be mounted in accordance with the drawings in a manner appropriated for the location.

3.06 MICROPHONE OUTLETS

A. Assemble microphone outlets and install, connect, and label as shown on the drawings.

3.07 CALL-BACK SWITCHES

A. Install callback switches at mounting heights and locations shown on the drawings, in outlet boxes appropriate for their location, wired ready for

3.08 FIELD WIRING

A. Sound and Intercommunications System:

DRAFT

1. Install vertical low voltage field wiring in conduit and/or surface metal raceway as indicated on drawings and specifcations. Conduit fill shall **not** exceed the conduit space capacity.
2. Install horizontal cables in areas without a ceiling or in areas without an accessible ceiling in 1/2-inch conduit. Conduit is **not** required in areas designated on the drawings as "Electrical/Communications" rooms or closets.
3. Install horizontal low voltage field wiring in areas with an accessible ceiling bundled together and run exposed above the ceilings. Bundles shall be supported by "J" hooks mounted **not** more than four feet on center. "J" hooks to be dedicated to the wiring specified in this specification section.
4. Horizontal low voltage field wiring shall be run at right angles to the building structure.
5. Horizontal low voltage field wiring shall be installed below the roof/floor structural supports (joists, beams, girders, etc.). Wiring installed between structural supports mentioned above and the roof or floor deck will not be acceptable.
6. Horizontal low voltage field wiring penetrations through new and/or existing walls shall be sleeved. Minimum sleeve size shall be 3/4-inch. Sleeves shall have bushings on both sides.
7. Low voltage field wiring shall be installed, terminated and labeled. Cables shall not be nicked, strained, or damaged during the pulling operation. Splices shall be permitted at equipment enclosures and junction boxes only. Splices shall utilize insulated crimp type connectors. Junction box covers shall be stenciled for distinct identification.
8. Microphone cabling shall be installed in accordance with the requirements of special cables, however terminations at connectors shall be solder connected.
9. Low voltage wiring shall be checked and tested, to ensure the system is free from grounds, opens, and shorts.
10. All work peformed shall be under the supervision of a factory accredited sound engineer. It shall be the responsibility of the sound engineer and Contractor to check and inspect the installation to the Owner's and Architect/Engineer's approval.

3.09 ANTENNA INSTALLATION

A. Bracket mount antenna above the roof at a location approved by the Architect or shown on the drawings. Install antenna cable back to the equipment rack and connect ready for operation.

B. Ground antenna to the secondary building ground system with one No. 10 AWG in 1/2-inch conduit.

3.10 ON-SITE AS-BUILT DRAWINGS

A. Provide one set of the sound and intercommunications systems supplier's as-built drawings for permanent use onsite. Laminate each page of these drawings; provide a rigid means for mounting such as a 1/4-inch thick by 2-inch wide x width of the drawings through bolted wood along the left edge of the drawings. Furnish and intsall hanging hooks on the back of the Communications Room door; and hang the bound set of drawings. Provide a full as-built set of drawings in PDF format on USB thumb drive to Owner at the completion of the project.

3.11 INSTALLATION

A. Install in accordance with manufacturer's instructions.

END OF SECTION 275123

DRAFT

SECTION 275129
RESCUE ASSISTANCE SIGNAL SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Area of rescue assistance emergency communication system and associated call stations, control stations, and accessories.
   1. Includes area of rescue assistance signage.

1.02 RELATED REQUIREMENTS

A. Section **<< 078400 - Firestopping>>**.

B. Section **<< 260526 - Grounding and Bonding for Electrical Systems>>**.

C. Section **<< 260533 - Conduit for Electrical Systems>>**.

D. Section **<< 260553 - Identification for Electrical Systems>>**: Identification products and requirements.

1.03 REFERENCE STANDARDS

A. 36 CFR 1191 - Americans with Disabilities Act (ADA) Accessibility Guidelines for Buildings and Facilities; Architectural Barriers Act (ABA) Accessibility Guidelines.

B. ADA Standards - 2010 ADA Standards for Accessible Design.

C. ICC (IBC) - International Building Code.

D. NECA 1 - Standard for Good Workmanship in Electrical Construction.

E. NFPA 70 - National Electrical Code.

F. NFPA 72 - National Fire Alarm and Signaling Code.

G. NFPA 101 - Life Safety Code.

H. UL 924 - Emergency Lighting and Power Equipment.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate the work with other trades to avoid placement of ductwork, piping, equipment or other potential obstructions within the spaces dedicated for area of rescue assistance system components.
   2. Coordinate the work with other installers to provide communication lines required for control station timed automatic connection to designated constantly attended monitoring location.
   3. Notify **<<Architect>>** of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Sequencing:
   1. Do not install call stations and control station(s) until final surface finishes and painting are complete.

1.05 SUBMITTALS

DRAFT

A. Product Data: Provide manufacturer's standard catalog pages and data sheets for each system component. Include configurations, standard wiring diagrams, dimensions, finishes, service condition requirements, and installed features.
   1. Design Data: Include standby battery calculations.
   2. Evidence of qualifications for installer.
   3. Evidence of qualifications for maintenance contractor (if different entity from installer).
   4. Specimen Warranty: Submit sample of manufacturer's warranty.

B. Field quality control test reports.

C. Operation and Maintenance Data: Include detailed information on system operation, equipment setup, replacement parts, and recommended maintenance procedures and intervals.
   1. Include contact information for entity that will be providing contract maintenance and trouble call-back service.

D. Executed Warranty: Submit documentation of final executed warranty completed in **<<Owner>>**'s name and registered with manufacturer.

E. Maintenance contracts.

F. Project Record Documents: Record actual locations of system components and installed wiring arrangements and routing.

1.06 QUALITY ASSURANCE

A. Comply with the following:
   1. **<<ADA Standards>>**.
   2. **<<ICC (IBC)>>** (International Building Code).
   3. **<<NFPA 70>>** (National Electrical Code).
   4. **<<NFPA 72>>** (National Fire Alarm and Signaling Code).
   5. **<<NFPA 101>>** (Life Safety Code).
   6. Applicable TIA/EIA standards.

B. Manufacturer Qualifications: Company engaged in manufacturing the products specified in this section with minimum **<< three; or _____>>** years**<< documented; _____; or None - N/A>>** experience.

C. Installer Qualifications: Company with minimum **<< three; or _____>>** years**<< documented; _____; or None - N/A>>** experience with similar area of rescue assistance systems and providing contract maintenance service as a regular part of their business**<< ; manufacturer's authorized installer; ; _____; or None - N/A>>**.
   1. Contract maintenance office located within **<< 200 miles; or ___ miles>>** of project site.

D. Maintenance Contractor Qualifications: **<< Same entity as installer; Same entity as installer or different entity with specified qualifications; or _____>>**.

E. Products: Listed, classified, and labeled as suitable for the purpose intended.

F. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

B. Store products in manufacturer's unopened packaging, keep dry and protect from damage until ready for installation.

DRAFT

1.08 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

1.09 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Provide minimum **<< one; or _____>>** year manufacturer warranty covering repair or replacement due to defective materials or workmanship.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturer: Talk-A-Phone

1. Source Limitations: Furnish system components and accessories produced by single manufacturer and obtained from single supplier.

2.02 AREA OF RESCUE ASSISTANCE COMMUNICATION SYSTEM

A. **<< Provide; Design and provide; or _____>> << new; modifications and additions to existing; or _____>>** area of rescue assistance communication system consisting of all required equipment, conduit, boxes, wiring, connectors, hardware, accessories, system programming, etc. as necessary for a complete operating system that provides the functional intent indicated.

B. System Description:

1. Call Stations: Located at each designated area of rescue assistance**<< as indicated on drawings, unless otherwise directed by authorities having jurisdiction; as directed by authorities having jurisdiction; _____; or None - N/A>>**.
2. Master Control Station: **<< New; Existing; or _____>>**, located **<< as indicated on drawings, unless otherwise directed by authorities having jurisdiction; as directed by authorities having jurisdiction; or _____>>**.
3. Provide secondary control stations **<< located as indicated on drawings.; in the following locations:; in locations to be determined. Provide allowance for _____ secondary control stations; or _____>>**
4. System battery backup is **<< required; not required; or _____>>**.
   a. Capacity: **<< _____; or 24 hours standby, 90 minutes full operation>>**.
5. Timed automatic connection to designated constantly attended monitoring location is **<< required; not required; or _____>>**.

C. System Operation:

1. When a call for assistance is initiated at call station:
   a. Provide audible and visual notification at call station to confirm that call has been placed.
   b. Provide audible and visual notification at control station(s) that call has been placed and annunciate the location of the call station/zone that initiated a call.
   c. Maintain visual notification of each call location at control station(s) until manually reset by control station operator.
   d. Maintain audible notification at control station(s) that call(s) have been placed until call is acknowledged by control station operator.

DRAFT

e. Maintain visual notification at call station until manually reset by control station operator.

2. When a call for assistance is acknowledged at control station:
   a. Provide visual notification at control station that call has been acknowledged.
   b. Provide visual notification at call station that call has been received.
   c. Establish two-way voice communication between call station and control station.
3. When a call has not been acknowledged during a programmed time delay to allow for local response, automatically initiate call **<< to listed remote monitoring station under contract with facility; or _____>>**, send signal identifying specific building, and establish two-way voice communication.

D. Call Stations:
1. Suitable for the environment where installed.
2. Finish: **<< Painted steel or stainless steel; Stainless steel; or _____>>**.
3. Mounting: **<< As indicated on drawings; Surface or flush-mounted; Surface-mounted; Flush-mounted; or _____>>**.
4. Provides means to initiate call for assistance.
5. Provides for distinct audible and visual notification to confirm that call has been placed and for distinct visual notification that call has been acknowledged.
6. Following initial call for assistance, provides for hands-free two-way communication with control stations.

E. Control Stations:
1. Suitable for the environment where installed.
2. Mounting: **<< As indicated on drawings; Surface or flush-mounted; Surface-mounted; Flush-mounted; or _____>>**.
3. Provides visual notification that system is operational.
4. Provides for distinct audible and visual notification of calls with annunciation of call station/zone locations.
5. Provides for two-way communication with selected call stations.
6. Provides for supervision of system wiring and provides distinct audible and visual notification of faults.
7. Audible Notification Sound Level: Not less than **<< 90 dB; or _____>>**.

F. Accessories:
1. Provide components as indicated or as required for a complete operating system.
2. Wiring: Provide manufacturer's recommended cables as indicated or as required for connections between system components, and in accordance with wiring methods indicated.
3. Signage:
   a. Illuminated Area of Rescue Assistance Signs: Complying with **<<NFPA 101>><< and all applicable state and local codes; _____; or None - N/A>>**, and listed and labeled as complying with **<<UL 924>>**.
   b. Call Station Instruction Signs: Raised character and Braille instructions complying with **<<ADA Standards>>**.

DRAFT

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that characteristics of system components are consistent with the indicated requirements.

C. Verify that mounting surfaces are ready to receive system components.

D. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Perform work in accordance with **<<NECA 1>>** (general workmanship).

B. Install products in accordance with manufacturer's instructions.

C. Mounting Heights:

1. Call Stations: **<< As indicated on drawings; Not exceeding _____ for forward reach and _____ for side reach in accordance with accessibility requirements; Comply with applicable accessibility requirements; or _____>>**.
2. Control Stations: **<< As indicated on drawings; Not exceeding _____ for forward reach and _____ for side reach in accordance with accessibility requirements; Comply with applicable accessibility requirements; or _____>>**

D. Wiring Method:

1. Installed in conduit in accordance with **<<NFPA 72>>** Level 2/Level 3 pathway survivability requirements.
   a. Exception: Buildings of less than 2-hour fire-rated construction that are fully protected by an automatic sprinkler system, where cables are installed in metal raceway or metal armored cables are utilized in accordance with **<<NFPA 72>>** Level 1 pathway survivability requirements.
2. Provide **<< Class A; Class B; Class N; or Class X>>** system wiring in accordance with **<<NFPA 72>>** pathway performance requirements.
3. Use listed plenum rated cables in spaces used for environmental air.
4. Conduit: Comply with Section **<< 260533; or _____>>**.
5. Conceal all cables unless specifically indicated to be exposed.

E. Provide grounding and bonding in accordance with Section **<< 260526; or _____>>**.

F. Install firestopping to preserve fire resistance rating of partitions and other elements, using materials and methods specified in Section **<< 078400; or _____>>**.

G. Identify system wiring and components in accordance with Section **<< 260553; or _____>>**.

H. Identify zones at control station(s) to indicate call station locations.

I. Provide required instructional signage at each call station.

3.03 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Test to verify wiring is free of shorts and grounds.

C. Prepare and start system in accordance with manufacturer's instructions.

D. Test system for proper operation.

DRAFT

E. Correct defective work, adjust for proper operation, and retest until entire system complies with Contract Documents.

F. Submit detailed reports indicating inspection and testing results and corrective actions taken.

3.04 CLEANING

A. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.05 CLOSEOUT ACTIVITIES

A. See Section **<< 017800 - Closeout Submittals>>**, for closeout submittals.

B. Demonstration: Demonstrate proper operation of system to **<<Owner>>**, and correct deficiencies or make adjustments as directed.

C. Training: Train **<<Owner>>**'s personnel on operation, adjustment, and maintenance of system.

1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.

3.06 PROTECTION

A. Protect installed system components from subsequent construction operations.

3.07 MAINTENANCE

A. Provide to **<<Owner>><< , a proposal as an alternate to the base bid,; , at no extra cost,; , _____ , ; or None - N/A>>** a separate maintenance contract for the service and maintenance of area of rescue assistance system for **<< one year; or _____>>** from date of Substantial Completion: Include a complete description of preventive maintenance, systematic examination, adjustment, cleaning, inspection, and testing, with a detailed schedule.

B. Provide trouble call-back service upon notification by **<<Owner>>**:

1. Include allowance for call-back service during normal working hours at no extra cost to **<<Owner>>**.
2. **<<Owner>>** will pay for call-back service outside of normal working hours on an hourly basis, based on actual time spent at site and not including travel time; include hourly rate and definition of normal working hours in maintenance contract.

C. Maintain an on-site log listing the date and time of each inspection and call-back visit, the condition of the system, nature of the trouble, correction performed, and parts replaced.

END OF SECTION 275129

DRAFT

SECTION 275129.17
TWO-WAY RADIO COMMUNICATION ENHANCEMENT SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Emergency responder communication enhancement system (ERCES) and associated components, including active equipment, battery secondary power source, passive components, and remote annunciator.

1.02 RELATED REQUIREMENTS

A. Section **<< 078400 - Firestopping; or _____>>**.

B. Section **<< 260526 - Grounding and Bonding for Electrical Systems; or _____>>**.

C. Section **<< 260553 - Identification for Electrical Systems; or _____>>**.

D. Section **<< 284600 - Fire Detection and Alarm; or _____>>**.

1.03 ABBREVIATIONS AND ACRONYMS

A. AHJ: Authorities having jurisdiction.

B. BDA: Bi-directional amplifier.

C. DAS: Distributed antenna system.

D. ECS: Emergency communications systems.

E. ERCES: Emergency responder communication enhancement system.

F. RF: Radio frequency.

G. UHF: Ultra high frequency.

H. VHF: Very high frequency.

1.04 DEFINITIONS

A. Bi-Directional Amplifier (BDA): Active RF-emitting device, wired with coaxial cables, for amplification of band-selective or multi-band RF signals via uplink to base station and via downlink from base station to portable two-way radios for enhanced signals and improved coverage; also referred to as analog or digital signal boosters.

B. Downlink: Transmission of signals from external source into building.

C. Fiber Distributed Antenna System (DAS) Master/Remote: Active RF-emitting device, wired with fiber-optic backbone, for distributing band-selective or multi-band RF signals via uplink to master/remote station and via downlink from master/remote station to portable two-way radio for enhanced signals and improved coverage.

D. Emergency Responder Communication Enhancement System (ERCES): In-building two-way communication system installed to enhance effective operation of radio communications systems for fire, emergency medical services, or law enforcement agencies within building or structure. System used by firefighters, police, and other emergency services personnel.

E. Public Safety/First Responder: Public safety or first responder agencies charged with responsibility of responding to emergency situations, including law enforcement departments, fire departments, and emergency medical services.

F. Uplink: Transmission of signals from inside building to external source.

DRAFT

1.05 REFERENCE STANDARDS

A. BICSI N1 - Installation Practices for Telecommunications and ICT Cabling and Related Cabling Infrastructure, 1st Edition.

B. ICC (IBC) - International Building Code.

C. ICC (IFC) - International Fire Code.

D. NECA 1 - Standard for Good Workmanship in Electrical Construction.

E. NECA 90 - Standard for Commissioning Building Electrical Systems.

F. NECA/BICSI 607 - Standard for Telecommunications Bonding and Grounding Planning and Installation Methods for Commercial Buildings.

G. NECA/FOA 301 - Standard for Installing and Testing Fiber Optic Cables.

H. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

I. NFPA 70 - National Electrical Code.

J. NFPA 72 - National Fire Alarm and Signaling Code.

K. NFPA 101 - Life Safety Code.

L. NFPA 780 - Standard for the Installation of Lightning Protection Systems.

M. NFPA 1225 - Standard for Emergency Services Communications.

N. UL 2524 - Emergency Responder Communication Enhancement Systems.

1.06 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Project Site:
    a. Coordinate with **<<Owner>>** to allow testing agency to enter property at reasonable time for field testing to confirm required level of radio coverage.
    b. Coordinate technical and operational criteria for design with AHJ and license holders, including required frequencies, radio site locations, effectiveness to radiate power from radio sites, maximum propagation delay in microseconds, and application types being used.
    c. Store technical and operational criteria with date marked, included with design documents at location approved by AHJ.
2. Installation Locations:
    a. Coordinate arrangement of communications equipment with dimensions and clearance requirements of equipment.
    b. Coordinate sizes and arrangement of supports and bases with equipment and components.
    c. Coordinate work to provide additional framing and materials required for installation.
    d. Coordinate work with placement of supports and anchors required for mounting.
    e. Verify exact conduit termination locations required for boxes, enclosures, and equipment.
    f. Notify **<<Architect>>** of conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.
3. Coordinate minimum sizes of conduits with actual type and quantity of cables.
4. Coordinate for power branch circuit protection and identification.
5. Coordinate listing requirements for fire-rated cables or assemblies.

DRAFT

6. Coordinate work to provide power for equipment at required locations.
7. Coordinate work to avoid placement of ductwork, piping, equipment, or other potential obstructions within spaces dedicated for ERCES components.
8. Coordination work with other sections, including fire alarm systems and associated communications cabling.
9. Coordinate roof component locations and pathway work with **<<Architect>>**. Provide roof penetrations that preserve integrity of roofing system and do not void roof warranty.
10. Coordinate integrated fire protection and life safety system tests in accordance with **<<NFPA 1225>>**.

B. Preinstallation Meetings: Require attendance of affected installers.
1. Convene **<< one week; or _____>>** prior to commencing work of this section. Review proposed routing, sequence of installation, and protection requirements for system.
2. Conduct preinstallation meetings to review design and operation of ERCES.
a. Highlight importance of proper authorizations, operation, and performance to avoid interfering with public safety radio networks.

Overview criteria for when equipment's transmitted power output is sufficient to require certification of frequency-licensing authority and associated restriction of installing or energizing prior to obtaining simultaneous written authorizations.

C. Sequencing:
1. Conduct meeting with facility representative to review equipment locations.
2. Obtain permits necessary for installation prior to commencement of work. Include permit costs and inspection fees.
3. Do not install active RF-emitting devices until AHJ and license holders concurrently provide prior written authorization.
4. Do not energize active RF-emitting devices until AHJ and license holders concurrently provide prior written authorization.
5. Verify naming convention for equipment identification prior to creation of final drawings, reports, and warning labels, where applicable.
6. Sequence work with affected installers to protect cabling (e.g., overspray painting, physical stress, and insulation damage or covering markings).
7. Do not connect cables on terminals before insulation resistance testing.

DRAFT

1.07 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. See Section **<< 016000 - Product Requirements>>** for additional provisions.

C. Include names of installers, **<<Owner>>**, and system classification information.

D. Product Data: Manufacturer's detailed product data sheet for each component, including wiring diagrams, and cabling or communications wiring length limitations. Catalog pages and product descriptions include ratings, dimensions, finishes, service conditions, and included features.

E. Shop Drawings: Submit installation documentation required for plan review and permitting by AHJ and frequency license holders, including floor plans showing locations of fire alarm system or other interconnects, enlarged drawn to identified scale plan view, and riser diagrams.
1. Show locations of components, circuits, and raceways; mark components with identifiers used in control unit programming.
2. Include elevations and details of proposed equipment arrangements.

3. Include system interconnection schematic riser diagram showing proposed and approved cable size and type; coordinated with floor plans and describing circuit class, survivability, and application-specific information required by **<<NFPA 72>>**.
4. Include typical wiring diagrams for devices, annunciators, and related ERCES equipment.
5. Include requirements and control diagrams for interfacing with other systems.
6. Detailed drawing of annunciators.

F. Certifications:
1. Certification by **<<Contractor>>** that system design complies with Contract Documents.

G. Design Documents: Submit information required for plan review and permitting by AHJ and frequency license holders, including floor plans, riser diagrams, and description of operation.
1. Include complete listing of software required.

H. Design Data:
1. Power supply calculations demonstrating adequate battery power.

I. RF Survey for ERCES:
1. Include RF measurement drawings for coverage areas and indicate relative RF field strength for each frequency band required.
2. Indicate passed or failed by area based on required technical parameters.

J. Signal booster registry for FCC requirements.

K. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

L. Inspection and Test Reports:
1. Submit inspection and test plan prior to closeout demonstration.
2. Submit documentation of satisfactory inspections and tests.

M. Operating and Maintenance Data:
1. Original copy of **<<NFPA 72>>** and **<<NFPA 1225>>**.
2. Complete set of specified design documents, as approved by AHJ and frequency license holders.
3. Additional printed set of project record documents and closeout documents, bound or filed in same manuals.
4. Contact information for firm providing contract maintenance and trouble call-back service.
5. List of recommended spare parts, tools, and instruments for testing.
6. Replacement parts list with current prices, and source of supply.
7. Detailed troubleshooting guide.
8. Preventive maintenance, inspection, and testing schedule complying with **<<NFPA 1225>>** and **<<ICC (IFC)>>**; provide printed copy and computer format acceptable to **<<Owner>>**.
9. Detailed but easy-to-read explanation of procedures requires recording of system trouble events by qualified personnel (e.g., when routine testing is being conducted for fire drills and when entering into contracts for building renovations).

N. Executed warranty.

1.08 QUALITY ASSURANCE

A. Comply with the following:
1. **<<ICC (IBC)>>**.

DRAFT

2. **<<ICC (IFC)>>**.
3. **<<NFPA 70>>**.
4. **<<NFPA 72>>**.
5. **<<NFPA 101>>**.
6. Code of Federal Regulations.

B. Unless Otherwise Approved by AHJ, Qualifications:
1. Provide qualifications as required by AHJ and frequency license holders.
2. Designer Qualifications:
a. Designer personnel maintains valid FCC-issued general radio operators license (GROL).
b. ERCES design performed by RF system designer.
c. Designer personnel certified and authorized by in-building active RF-emitting equipment manufacturer in requirements for installation and operation of their equipment.
3. Product Evaluation and Listing Organization Qualifications: Organization engaged in evaluation of products and services, including those recognized by OSHA as Nationally Recognized Testing Laboratory (NRTL), and acceptable to AHJ and frequency license holders.
a. Register signal booster specified Class A or Class B for applicable FCC requirements and provide proof in submittals:
4. Installer Qualifications: Company specializing in performing work of type specified and with at least **<< three; or _____ >>** years of**<< documented; _____; or None - N/A>>** experience and:
a. Installer personnel maintains valid FCC-issued general radio operators license (GROL).
b. Supervisors and Installers: Factory-certified by manufacturers of products.
c. Installer personnel certified and authorized by in-building active RF-emitting equipment manufacturer in accordance with requirements for installation and operation of their equipment.
5. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of type specified in this section.
a. Testing personnel certified and authorized by active RF-emitting equipment manufacturer in requirements for installation and operation of their equipment.

C. Approved ERCES and Related Cabling:
1. Provide system type as required by AHJ and frequency license holders.
2. Automatically Activated ERCES: Where negative impact to normal operations of facility occurs, automatic activation requires AHJ approval.
3. Permits: Provide construction and operational permits for active equipment.
4. Obtain written approval from frequency license holders that may be adversely impacted by ERCES, resulting in noise interference.

1.09 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Manufacturer Warranty: Provide **<< 1-year; 2-year; or _____>>** manufacturer warranty. Complete forms in **<<Owner>>**'s name and register with manufacturer.

DRAFT

PART 2 PRODUCTS

2.01 TWO-WAY RADIO COMMUNICATION ENHANCEMENT SYSTEMS

A. General Requirements:
   1. Provide **<< new; modifications and extensions to existing; or _____>>** ERCES consisting of equipment, conduit, cabinets, outlet boxes, wiring, connectors, hardware, supports, accessories, components, software, and system programming as required for complete operating system.
   2. Comply with the following; where requirements conflict, order of precedence of requirements is as listed:
      a. Requirements of AHJ.
      b. Applicable local codes.
      c. RF system design documents.
      d. Contract Documents.
      e. **<< _____>>**.
   3. Provide products listed, classified, and labeled as suitable for intended purpose.
   4. Monitor primary and secondary power sources for integrity in accordance with **<<NFPA 72>>**, **<<NFPA 1225>>**, and **<<ICC (IFC)>>**. For each RF-emitting device and active system component:
      a. Include monitoring for communications links.
      b. Provide automatic supervisory signals for malfunctions.
   5. Include integrated, remote, real-time monitoring and control capabilities.
   6. Provide repeaters, transmitters, optical-to-RF and RF-to-optical converters, and external filters contained in **<<NEMA EN 10250>>**, **<< Type 4; Type 4X; or _____>>** enclosures.

B. System Performance:
   1. Minimum Signal Strength:
      a. Entire Building: 95 percent.
      b. Designated Critical Areas: 99 percent.
      c. Downlink and Uplink Capability:
         1) Provide design for usable voice communication throughout coverage areas.
         2) Provide design to meet technical requirements of applications utilized by public safety system.
         3) Provide minimum delivered audio quality (DAQ) of 3.0 using narrowband analog, digital, or wideband LTE signals, or equivalent bit error rate (BER) or signal-to-interference-plus-noise ratio (SINR) applicable to technology for analog or digital signals.
   2. Communication Antenna Density: Design to minimize near-far effect and include ability to reduce gain conditions.

C. Capabilities:
   1. Capable of operating on frequencies licensed to public safety agencies in accordance with **<<ICC (IFC)>>**.
   2. Design system capable of modification or expansion if frequency changes are required by FCC or other frequency-licensing authorities or AHJ.

D. Nonpublic Amplification Safety Systems:

DRAFT

1. Design system for passive components to maintain 20 dB above system gain under operating conditions; maintain minimum 20 dB isolation of donor antenna from other inside antennas.
2. Suspend and correct systems that reduce performance or cause interference with ERCES. Obtain approved resolution from AHJ and frequency license holders.

E. Provide ERCES circuits and interconnects in accordance with **<<NFPA 70>>**.
   1. Comply with methods of interconnecting FACUs for automatic supervision in accordance with **<<NFPA 1225>>**, **<<NFPA 72>>**, and **<<NFPA 70>>**.
   2. Power Sources:
      a. Comply with requirements for power supplies of emergency systems in accordance with **<<NFPA 70>>**.
      b. Primary: **<< Dedicated branch circuits from facility power distribution system; or _____>>**.
      c. Secondary: Storage batteries with capacity to operate system for period specified by **<<ICC (IFC)>>**.
         1) Provide 12-hour standby for 100 percent system capacity or 2-hour standby when connected to site standby generator.
   3. Wiring and Wiring Methods:
      a. General Requirements:
         1) Comply with requirements for wiring and wiring methods in accordance with **<<NFPA 70>>**.
         2) Conductors and Cables Installed Exposed in Spaces Used for Environmental Air (only where specifically permitted): Plenum-rated, listed, and labeled as suitable for use in return air plenums.
         3) Special Occupancies: Comply with **<<NFPA 70>>**.
         4) Comply with **<<NFPA 70>>** for wire and cable for plenum, riser, general-purpose, limited-use, and underground applications.
      b. Fire-Rated Cables and Cable Systems:
         1) Performance alternative approved by AHJ.
         2) Provide cable fastening and listing requirements in accordance with **<<NFPA 70>>**. Provide indication of application, use cases, and product make and model for which listing applies.
         3) Provide additional classification suffix marking on cable system; observable by AHJ.

DRAFT

2.02 ACTIVE EQUIPMENT

A. Provide equipment listed and labeled as complying with agency listings and approval requirements as follows:
   1. Federal Communications Commission (FCC).
   2. Frequency license holders.
   3. Other radio licensing authorities.
   4. **<<ICC (IFC)>>**.
   5. **<<NFPA 70>>**.
   6. **<<NFPA 72>>**.
   7. **<<NFPA 1225>>**.
   8. **<<UL 2524>>**.

B. Enclosure: **<<NEMA EN 10250>>**, **<< Type 4; Type 4X; or _____>>**.

C. Provide modular design capable of scaling for future expansions. Utilize coax and **<< analog; digital; or _____>>** BDA or**<< single-mode; multi-mode; _____; or None - N/A>>** fiber optic and master-remote DAS design, or design utilizing combination with centralized control, for ERCES.

D. Support Multi-Band Operation:
   1. Provide **<< dedicated; dual-band (VHF/UHF); or _____>>** equipment for each frequency range indicated.

E. Active RF-Emitters and Repeaters: Provide devices that support associated FCC requirements for Class A or Class B operation, compatible for intended use in accordance with related ERCES equipment listings and manufacturer requirements.

F. Include built-in oscillation detection, interference protection, and gain control circuitry to reduce gain and maintain operation.
   1. Transmit supervisory signal when oscillations are detected.
   2. Automatic shutdown when uncorrectable oscillations occur.

2.03 BATTERY SECONDARY POWER SOURCE

A. Provide batteries, charger, circuit protection, and related components as complete system.

B. Provide equipment listed and labeled as complying with agency listings and approval requirements:
   1. Federal Communications Commission (FCC).
   2. Frequency license holders.
   3. Other radio licensing authorities.
   4. **<<ICC (IFC)>>**.
   5. **<<NFPA 70>>**.
   6. **<<NFPA 72>>**.
   7. **<<NFPA 1225>>**.
   8. **<<UL 2524>>**.

C. Enclosure Type:
   1. Batteries Requiring Venting: **<<NEMA EN 10250>>**, **<< Type 3R; or _____>>**.
   2. Batteries Not Requiring Venting: **<<NEMA EN 10250>>**, **<< Type 3R; Type 4; Type 4X; or _____>>**.

D. Provide battery secondary power source compatible for intended use and in accordance with related ERCES equipment listings and manufacturer requirements.

E. Provide power in accordance with **<<NFPA 70>>**, Chapter 7, (i.e., 10 seconds maximum) when primary power is outside of programmed settings.

2.04 PASSIVE COMPONENTS

A. Description: Provide passive component requirements in RF system design as required for complete system, including passive RF-emitters, design frequency range, gain values, radiation patterns or heat maps, voltage standing wave ratio, polarization, power handling, impedance, connector types, environmental ratings, device losses, isolation characteristics, signal rejection, component size, form factor, attenuation values, output accuracy, and thermal stability.

B. Provide passive components compatible for intended use in accordance with related ERCES equipment listings and manufacturer requirements for RF system design, including quantities necessary:

DRAFT

1. Donor antennas.
2. Service antennas.
3. Antenna discharge units as required by **<<NFPA 780>>** and **<<ICC (IFC)>>**.
4. Duplexers.
5. Notch filters.
6. Jumpers and connectors.
7. Tappers and splitters.

C. Enclosure Type:
1. External Filters: **<<NEMA EN 10250>>**, **<< Type 4; Type 4X; or _____>>**.

2.05 REMOTE ANNUNCIATOR

A. Provide equipment listed and labeled as complying with agency listings and approval requirements:
1. Federal Communications Commission (FCC).
2. Frequency license holders.
3. Other radio licensing authorities.
4. **<<ICC (IFC)>>**.
5. **<<NFPA 70>>**.
6. **<<NFPA 72>>**.
7. **<<NFPA 1225>>**.
8. **<<UL 2524>>**.

B. Provide remote annunciators or operational consoles with status of active equipment.

C. Include visual and labeled indications for system components and devices in accordance with **<<ICC (IFC)>>** and **<<NFPA 1225>>**.

D. Include necessary modules for monitoring communications link between in-building ERCES and fire alarm control unit (FACU) for integrity.

DRAFT

PART 3 EXECUTION

3.01 INSTALLATION

A. Concurrent Approvals Required:
1. Provide prior written approval from AHJ and frequency license holders of systems being enhanced.
2. Meet to review their established criteria for installation prior to beginning work.
3. Only frequency license holders have authority to permit powering and operating ERCES. Do not energize system before obtaining additional written approvals.
4. Include expiration date on written approvals, coincident with annual maintenance requirements.

B. Install products in accordance with **<<NFPA 1225>>**, **<<ICC (IFC)>>**, state and local codes, manufacturer's instructions, and as indicated on drawings and RF design documents.

C. Comply with the following:
1. **<<BICSI N1>>**.
2. **<<NECA 1>>**.
3. **<<NECA/FOA 301>>**.
4. **<<NECA/BICSI 607>>**.

5. **<<NFPA 70>>**; including requirements for mechanical execution of work.
6. **<<NFPA 72>>**.

D. ERCES Components:
1. **<<UL 2524>>** Listed and Labeled Equipment: Do not drill holes or field fabricate openings. Mark equipment front with identifier DO NOT DRILL INTO THIS CABINET label.
2. Donor Antenna Mounting:

E. Interconnects and Branch Circuits:
1. Provide grounding and bonding in accordance with **<<NFPA 70>>** Article 250, Chapter 8 Communications Systems, and manufacturer's recommendations.
2. Provide dedicated branch circuit for each battery system.
3. Identify system wiring, components, and overcurrent protective devices for branch circuits serving ERCES and related equipment.
4. Provide systems integration and interfacing with other work as required for complete ERCES.
5. Install firestopping to preserve fire resistance rating of partitions and other elements.

F. Troubleshooting and Installer Checks:
1. Field test connectivity periodically during installation process to avoid unexpected troubleshooting.
2. Do not energize system until deficiencies have been corrected.

3.02 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>** for additional requirements.

B. Approval Required Before Installation, Energizing, and Startup; Minimum **<< Two Weeks; or _____>>** Notice:
1. Frequency license holders.
2. **<<Architect>>**.
3. **<<Owner>>**.
4. AHJ.

C. Manufacturer Services: Provide services of manufacturer's field representative to **<< perform; observe and approve; direct; or _____>>** systems startup.

D. Prepare and start equipment and systems in accordance with manufacturers' instructions and recommendations.

E. Coordination of Other Tests and Inspections: Provide **<< access; and _____>>** to accommodate tests and inspections by independent testing agency employed by **<<Owner>>**.

F. Perform tests for cable insulation resistance and acceptance testing procedures in accordance with **<<ICC (IFC)>>** and **<<NFPA 1225>>**.
1. Use NICET-certified test equipment for system verifications.
2. Use calibrated portable radios of same make and latest model used by AHJ.
3. Use spectrum analyzer or similar for monitoring oscillations from RF-emitting or other system active equipment.
4. Measure gain values of every ERCES amplifier and review test results against baseline data kept on file for annual testing.
5. Test building coverage for emergency communication systems, inside and outside, to and from the building, for minimum radio coverage indicated in TWO-WAY RADIO COMMUNICATION ENHANCEMENT SYSTEMS under PART 2.

DRAFT

6. Divide Coverage For Testing, Options:
   a. Maximum **<< 20; 40; or _____>>** equal areas, per building floor. From center of area, use two-way communications to and from outside of building for interfacing with AHJ's public system.
      1) Comply with **<<NFPA 1225>>** and **<<ICC (IFC)>>** maximum square footage per area.
      2) Failing to communicate in more than one test area is failed acceptance test.
   b. Use radios for simultaneous voice quality checks; subjective by testing personnel. Position one radio within **<< 10 ft>>** to indoor antenna and second radio distance farthest away from indoor antenna. Both radios select different frequencies within same band for testing.
      1) Signal strength less than delivered audio quality (DAQ) of 3.0 is failed acceptance test.
7. Nonconforming Work:
   a. Repositioning test location for better test results not allowed.
   b. Alter system to meet coverage requirements and reacceptance test for compliance.

END OF SECTION 275129.17

DRAFT

SECTION 275140
GYMNASIUM SOUND REINFORCEMENT SYSTEM

PART 1 - GENERAL

1.01 SCOPE

A. The work covered under this section shall include furnishing and installing locally controlled complete and satisfactorily operating auxiliary stereo sound reinforcement system in the Gymnasium for the pickup, amplification, and reproduction of voice and/or music to associated loudspeakers.

1.02 SUBMITTALS

A. Product Data and Shop Drawings:
   1. Submit a complete list of equipment indicating the specific quantities to be provided by Contractor. The catalog or model number for each module of the system(s) shall be listed next to the quantities. This information shall be furnished in the front of the submittal.
   2. Submit a specific description of the system(s) describing each module and how it shall function in the system.
   3. Submit a specific drawing furnished of the (each) equipment rack. Each module shall be shown in its proper location with its terminal designations shown.
   4. Submit a data sheet for each module and device. The information shall be highlighted that applies to the particular module or device to be furnished.
   5. Submit a detailed diagram showing how to connect each device, indicating the exact final connection information.
   6. Submit a detailed set of floor plans for the area(s) where the (each) auxiliary sound system(s) is (are) to be installed. The plans shall show the locations of all equipment, loudspeakers, and devices and their required interconnections. The interconnections shown shall indicate the number, size, and type of wires as described in this specification. Loudspeakers shall be zoned as shown on the drawings. The layout of all auxiliary sound reinforcement system(s) equipment, devices, and conduit routing shall closely follow that shown on the drawings.

1.03 QUALITY ASSURANCE

A. All equipment specified herein shall be the product of a manufacturer of established reputation and experience who shall have produced similar apparatus for a period of at least ten years and who shall be able to refer to similar installations now rendering satisfactory service.

B. The auxiliary sound reinforcement system(s) shall be furnished by a factory authorized distributor certified to design, program, and service the system. The distributor must show evidence of successfully furnishing systems specified for at least five years

C. All equipment for this system shall be listed by Underwriters Laboratories, Inc. (UL), bear the UL label and shall be installed in accordance with all requirements of the National Electrical Code (NEC), state and local codes, and these Specifications.

D. The auxiliary sound reinforcement system(s) shall be furnished and installed by Contractor as shown on the drawings and as specified herein.

1.04 DOCUMENTATION

A. Contractor shall furnish to the Contractor, one set of "As Built" drawings depicting the complete field wiring system and component interconnections in the system equipment rack.

DRAFT

B. Contractor shall furnish to the Contractor four sets of factory operation and maintenance manuals. These manuals shall include factory service manuals with complete parts lists, wiring and component schematics including circuit diagrams, and all other information necessary for the proper operation and service maintenance of the system.

1.05 TRAINING

A. Contractor shall furnish eight hours of technical service training to the Owner's technical staff using the factory operation manuals previously specified.

B. Contractor shall furnish eight hours of operating and programming training to the Owner's operating staff which shall be delivered in two separate four hour sessions to be scheduled at the Owner's convenience over the two year warranty period.

C. All training specified herein shall be performed by a factory certified technician.

1.06 DESCRIPTION OF OPERATION

A. Each system shall provide for the distribution of voice and music to all associated loudspeakers.

B. Each system shall provide for the reproduction of MP3 and compact disc recordings and distribute them to all associated loudspeakers.

C. Each system shall provide for the input and output of an MP3 Player via two 0.14-inch jacks. One is to be mounted at the equipment rack and one is to be mounted remotely in a wallplate with a microphone jack.

D. Each system shall provide for individual bass and treble controls.

E. Each system shall provide a personal listening system for use by hearing impaired listeners.

F. Each Auxiliary sound reinforcement system shall accept a priority override signal to mute the system when the main building Sound and Intercommunications System activates the priority override function.

1.07 SYSTEM TEST AND ACCEPTANCE

A. Prior to the final site visitation, and acceptance of each construction phased spaces, ts Contractor shall conduct an operating test of each complete auxiliary sound reinforcement system. Each system shall test free from grounds, shorts, and other faults. All connections shall be checked for mechanical and electrical connection. All equipment shall be demonstrated to operate in accordance with the requirements set forth in these specifications and as shown on the drawings.

B. Contractor shall perform all tests in the presence of the Architect/Engineer. Contractor shall furnish all personnel and test instruments required for use in the test.

1.08 WARRANTY

A. Contractor shall deliver the work described herein in a first class operating condition in every respect. Contractor shall also warrant that the material, equipment, and workmanship shall be entirely free from defects. Any materials, equipment, or workmanship in which defects may develop before or during the warranty period shall be repaired or replaced at the Contractors own expense. Refer to Division 01 for the start of the warranty period. The contractor shall further warrant that all material, equipment, and workmanship used in the installation, but not specifically mentioned in the drawings and Specifications, is the best of their respective kinds and that the construction and installation was performed in accordance with the best accepted standard practices in all details.

DRAFT

B. The manufacturer shall be prepared to offer a service contract for the maintenance of the system beyond the warranty period.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. The auxiliary sound reinforcement system(s) equipment shall be manufactured by SOUNSPHERE, CROWN, PASO, BTX, ATLAS SOUND, WILLIAM SOUND, DENON, and SHURE, as listed.

2.02 AUXILIARY SOUND REINFORCEMENT SYSTEM EQUIPMENT RACKS

A. Contractor shall furnish and install sectional wall mounted auxiliary sound system equipment racks as shown on the drawings and herein specified. Each rack shall be ATLAS SOUND Model No. WMA24-23 with locking front door providing a minimum of forty-two vertical inches of standard nineteen inch wide rack mounting space. Each rack shall be complete with a cylinder lock and textured black finish. The following equipment shall be furnished and installed by Contractor in each rack:

1. One PASO Model No. DMS260P ten channel, digital mixer/preamplifier with 27/3501 Rack Mount Kit. One PASO Model No. PM01ML Mic/Line input module. The mixer shall be complete with treble and bass controls and shall be capable of phantom power service for condenser microphones.
2. One Denon Model No. DN-C615 rack mountable CD/MP3 Player. Contractor shall provide a wall-mounted controller adjacent to the auxiliary sound system rack for the CD/MP3 player specified above.
3. One CROWN Model No. COi 1000 dual channel amplifier with two hundred and seventy-five watts per channel at eight ohms. Amplifier shall be suitable for rack mounting.
4. One Atlas Sound Model No. ACRL-291 rack mountable power panel complete with eight switched outlets and surge protection.
5. Two Shure Model No. ULXS124/85-M1 complete wireless microphone systems, two Shure Model No. UA820C Remote Antennas, and one UA844US Wideband (470-900 MHz) Four-Way Active Antenna Splitter and Power distribution system.
6. One WILLIAMS SOUND Model No. PPA T35 personal listening system base station transmitter complete with WILLIAMS SOUND Model No. RPK 005 rack mounting kit and ANT 005 coaxial antenna.
7. Contractor shall furnish to the Owner's representative, twelve WILLIAMS SOUND Model No. PPA R35-8N, eight channel personal listening system receivers each complete with WILLIAMS SOUND Model No. EAR 013 single earbud, rechargeable batteries, and belt clip. Receiver shall be set to operating frequencies of 72.1 MHz (receiver channel 1).
8. Contractor shall furnish to the Owner's representative, one WILLIAMS SOUND Model No. CHG 3512 - Twelve-charger units for the personal listening system receivers.
9. One (1) Shure Model No. UA507 Rack Mount Kit for double receiver and two (2) UA820C Remote Antennas.

2.03 MICROPHONES

A. Contractor shall furnish a total of four Shure Model No. SM58S dynamic cardioid microphones. Each microphone shall be furnished by Contractor complete with a twenty five foot connector cord with CANNON XLR connectors.

B. Provide one Shure desk type 450 series 2.

DRAFT

2.04 MICROPHONE FLOOR STANDS

A. Contractor shall furnish a total of four Atlas Sound Model No. MS-20 adjustable microphone floor stands for each system.

2.05 MICROPHONE OUTLETS

A. Contractor shall furnish and install where shown on the drawings, flush or surface wall and/or ceiling mounted microphone outlets consisting of CANNON "XLR" series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, and a stainless steel coverplate. A microphone outlet, which meets this specification, is BTX Model No. PL-103F with 3 pin XLR. At least one microphone outlet shall also have, mounted to the faceplate, a 3.5 mm Stereo Input Jack.

2.06 LOUDSPEAKERS

A. Contractor shall furnish two Soundsphere speakers Model No. Q-8 with all required hardware for a complete installation. A TX100 line-matching transformer shall be provided for the Gymnasium speakers. Speakers shall be tapped at 70.7V and 100W.

2.07 FIELD WIRING

A. Contractor shall furnish and install field wiring for auxiliary sound systems loudspeakers as shown on the drawings. Wiring shall be two conductor, No. 16 AWG stranded cable. A cable that meets this specification is WEST PENN Cat. No.25225B or equal as manufactured by CONSOLIDATED ELECTRONIC WIRE AND CABLE, GENERAL CABLE, PAIGE, or TAPPAN.

B. Contractor shall furnish and install field wiring for microphone outlets as shown on the drawings. Wiring shall be two conductor, No. 20 AWG stranded and shielded cable. A cable that meets this specification is WEST PENN Cat. No. 25292 or equal as manufactured by CONSOLIDATED ELECTRONIC WIRE AND CABLE, GENERAL CABLE, PAIGE, or TAPPAN.

PART 3- EXECUTION

3.01 INSTALLATION

A. All low voltage wiring for the auxiliary sound reinforcement systems shall be installed by Contractor in 1/2-inch conduit as hereinbefore specified. All junction box covers shall be stenciled by Contractor for distinct identification. All conduits, device mounting boxes, junction boxes, and enclosures shall be securely fastened with appropriate fittings to insure a positive ground throughout each entire system.

B. All low voltage wiring connections shall be made by Contractor as directed by the manufacturer. Splices for circuits shall be made only in junction boxes and shall be crimp connected.

C. All wiring for the auxiliary sound reinforcement systems shall be checked and tested by Contractor to ensure the system is free from grounds, opens, and shorts.

D. All work shall be under the direct supervision of an accredited factory sound engineer. It shall be the responsibility of the sound engineer and Contractor to check and inspect this installation to the Architect/Engineer's approval.

3.02 RACK MOUNTED EQUIPMENT

A. The auxiliary sound reinforcement system(s) rack mounted equipment shall be installed by Contractor with the proper adapters, rack mounting kits, brackets, and closure panels for unused spaces. All interconnecting wiring shall be labeled, bundled, secured, and terminated by Contractor in a neat and professional manner.

DRAFT

B. All rack mounted equipment AC power cords shall be plugged into the mounted power strip by Contractor.

3.03 SPEAKER

A. Speaker assemblies shall be supported by Contractor from the building structure with a minimum of two steel wires.

3.04 MICROPHONES

A. Contractor shall unpack each microphone and assemble with cables and stands and connect ready for operation.

3.05 MICROPHONE OUTLETS

A. Contractor shall assemble microphone outlets and install, connect, and label as shown on the drawings.

END OF SECTION 275140

DRAFT

SECTION 275141
STUDENT DINING SOUND REINFORCEMENT SYSTEM

PART 1 - GENERAL

1.01 SCOPE

A. The work covered under this section shall include furnishing and installing locally controlled complete and satisfactorily operating auxiliary stereo sound reinforcement system in student dining for the pickup, amplification, and reproduction of voice and/or music.

1.02 SUBMITTALS

A. Product Data and Shop Drawings:
   1. Submit a complete list of equipment indicating the specific quantities to be provided by Contractor. The catalog or model number for each module of the system(s) shall be listed next to the quantities. This information shall be furnished in the front of the submittal.
   2. Submit a specific description of the system(s) describing each module and how it shall function in the system.
   3. Submit a specific drawing furnished of the (each) equipment rack. Each module shall be shown in its proper location with its terminal designations shown.
   4. Submit a data sheet for each module and device. The information shall be highlighted that applies to the particular module or device to be furnished.
   5. Submit a detailed diagram showing how to connect each device, indicating the exact final connection information.
   6. Submit a detailed set of floor plans for the area(s) where the (each) auxiliary sound system(s) is (are) to be installed. The plans shall show the locations of all equipment, loudspeakers, and devices and their required interconnections. The interconnections shown shall indicate the number, size, and type of wires as described in this specification. Loudspeakers shall be zoned as shown on the drawings. The layout of all auxiliary sound reinforcement system(s) equipment, devices, and conduit routing shall closely follow that shown on the drawings.

DRAFT

1.03 QUALITY ASSURANCE

A. All equipment specified herein shall be the product of a manufacturer of established reputation and experience who shall have produced similar apparatus for a period of at least ten years and who shall be able to refer to similar installations now rendering satisfactory service.

B. The auxiliary sound reinforcement system(s) shall be furnished by a factory authorized distributor certified to design, program, and service the system. The distributor must show evidence of successfully furnishing systems specified for at least five years

C. All equipment for this system shall be listed by Underwriters Laboratories, Inc. (UL), bear the UL label and shall be installed in accordance with all requirements of the National Electrical Code (NEC), state and local codes, and these Specifications.

D. The auxiliary sound reinforcement system(s) shall be furnished and installed by Contractor as shown on the drawings and as specified herein.

1.04 DOCUMENTATION

A. Contractor shall furnish one set of "As Built" drawings depicting the complete field wiring system and component interconnections in the system equipment rack.

B. Contractor shall furnish four sets of factory operation and maintenance manuals. These manuals shall include factory service manuals with complete parts lists, wiring and component schematics including circuit diagrams, and all other information necessary for the proper operation and service maintenance of the system.

1.05 TRAINING

A. Contractor shall furnish eight hours of technical service training to the Owner's technical staff using the factory operation manuals previously specified.

B. Contractor shall furnish eight hours of operating and programming training to the Owner's operating staff which shall be delivered in two separate four hour sessions to be scheduled at the Owner's convenience over the two year warranty period.

C. All training specified herein shall be performed by a factory certified technician.

1.06 DESCRIPTION OF OPERATION

A. Each system shall provide for the distribution of voice and music to all associated loudspeakers.

B. Each system shall provide for the reproduction of MP3 and compact disc recordings and distribute them to all associated loudspeakers.

C. Each system shall provide for the input and output of an MP3 Player via two **<< 0.14 inch>>** jacks. One is to be mounted at the equipment rack and one is to be mounted remotely in a wallplate with a microphone jack.

D. Each system shall provide for individual bass and treble controls.

E. Each system shall provide a personal listening system for use by hearing impaired listeners.

F. Each Auxiliary sound reinforcement system shall accept a priority override signal to mute the system when the main building Sound and Intercommunications System activates the priority override function.

1.07 SYSTEM TEST AND ACCEPTANCE

A. Prior to the final site visitation, and acceptance of each construction phased spaces, Contractor shall conduct an operating test of each complete auxiliary sound reinforcement system. Each system shall test free from grounds, shorts, and other faults. All connections shall be checked for mechanical and electrical connection. All equipment shall be demonstrated to operate in accordance with the requirements set forth in these specifications and as shown on the drawings.

B. Contractor shall perform all tests in the presence of the Architect/Engineer. Contractor shall furnish all personnel and test instruments required for use in the test.

1.08 WARRANTY

A. Contractor shall deliver the work described herein in a first class operating condition in every respect. Contractor shall also warrant that the material, equipment, and workmanship shall be entirely free from defects. Any materials, equipment, or workmanship in which defects may develop before or during the warranty period shall be repaired or replaced at the Contractors own expense. Refer to Division 01 for the start of the warranty period. The contractor shall further warrant that all material, equipment, and workmanship used in the installation, but not specifically mentioned in the drawings and Specifications, is the best of their respective kinds and that the construction and installation was performed in accordance with the best accepted standard practices in all details.

DRAFT

B. The manufacturer shall be prepared to offer a service contract for the maintenance of the system beyond the warranty period.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. The auxiliary sound reinforcement system(s) equipment shall be manufactured by CROWN, PASO, BTX, ATLAS SOUND, DENON, ELECTRO-VOICE, and SHURE, as listed.

2.02 AUXILIARY SOUND REINFORCEMENT SYSTEM EQUIPMENT RACKS

A. Contractor shall furnish and install sectional wall mounted auxiliary sound system equipment racks as shown on the drawings and herein specified. Each rack shall be ATLAS SOUND Model No. WMA24-23 with locking front door providing a minimum of forty-two vertical inches of standard nineteen inch wide rack mounting space. Each rack shall be complete with a cylinder lock and textured black finish. The following equipment shall be furnished and installed by Contractor in each rack:

1. One PASO Model No. DMS260P ten channel, digital mixer/preamplifier with 27/3501 Rack Mount Kit. One PASO Model No. PM01ML Mic/Line input module. The mixer shall be complete with treble and bass controls and shall be capable of phantom power service for condenser microphones.
2. One Denon Model No. DN-C615 rack mountable CD/MP3 Player.
3. One CROWN Model No. CDI 1000 dual channel amplifier with two hundred and seventy-five watts per channel at eight ohms. Amplifier shall be suitable for rack mounting.
4. One Atlas Sound Model No. ACRL-291 rack mountable power panel complete with eight switched outlets and surge protection.
5. One Williams Sound Model No. PPA T35 personal listening system base station transmitter complete with Williams Sound Model No. RPK 005 rack mounting kit and ANT 005 coaxial antenna.
6. Contractor shall furnish to the Owner's representative, twelve Williams Sound Model No. PPA R35-8N, eight channel personal listening system receivers each complete with Williams Sound Model No. EAR 013 single earbud, rechargeable batteries, and belt clip. Reciver shall be set to operating frequencies of 72.1 MHz (receiver channel 1).
7. Contractor shall furnish to the Owner's representative, one WILLIAMS SOUND Model No. CHG 3512 - Twelve-charger units for the personal listening system receivers.
8. Two Shure Model No. ULXS124/85-M1 complete wireless microphone systems, two Shure Model No. UA820C Remote Antennas, and one UA844US Wideband (470-900 MHz) Four-Way Active Antenna Splitter and Power distribution system.
9. One (1) Shure Model No. UA507 Rack Mount Kit for double receiver and two (2) UA820C Remote Antennas.

2.03 MICROPHONES

A. Contractor shall furnish a total of four Shure Model No. SM58S dynamic cardioid microphones. Each microphone shall be furnished by Contractor complete with a twenty five foot connector cord with CANNON XLR connectors.

2.04 MICROPHONE FLOOR STANDS

A. Contractor shall furnish a total of four Atlas Sound Model No. MS-20 adjustable microphone floor stands for each system.

DRAFT

2.05 MICROPHONE OUTLETS

A. Contractor shall furnish and install where shown on the drawings, flush or surface wall and/or ceiling mounted microphone outlets consisting of CANNON "XLR" series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, and a stainless steel coverplate. A microphone outlet, which meets this specification, is BTX Model No. PL-103F with 3 pin XLR. At least one microphone outlet shall also have a 3.5 mm Stereo Input Jack mounted to faceplate.

2.06 LOUDSPEAKERS

A. Contractor shall furnish two Electro-Voice speakers Model No. SX100 with all required hardware for a complete installation. Color shall be selected by the Architect.

2.07 FIELD WIRING

A. Contractor shall furnish and install field wiring for auxiliary sound system loudspeakers as shown on the drawings. Wiring shall be two conductor, No. 14 AWG stranded cable. A cable that meets this specification is WEST PENN Cat. No.25226B or equal as manufactured by CONSOLIDATED ELECTRONIC WIRE AND CABLE, GENERAL CABLE, PAIGE, or TAPPAN.

B. Contractor shall furnish and install field wiring for microphone outlets as shown on the drawings. Wiring shall be two conductor, No. 20 AWG stranded and shielded cable. A cable that meets this specification is WEST PENN Cat. No. 25292 or equal as manufactured by CONSOLIDATED ELECTRONIC WIRE AND CABLE, GENERAL CABLE, PAIGE, or TAPPAN.

PART 3 - EXECUTION

3.01 INSTALLATION

A. All low voltage wiring for the auxiliary sound reinforcement systems shall be installed by Contractor in 1/2-inch conduit as hereinbefore specified. All junction box covers shall be stenciled by Contractor for distinct identification. All conduits, device mounting boxes, junction boxes, and enclosures shall be securely fastened with appropriate fittings to insure a positive ground throughout each entire system.

B. All low voltage wiring connections shall be made by Contractor as directed by the manufacturer. Splices for circuits shall be made only in junction boxes and shall be crimp connected.

C. All wiring for the auxiliary sound reinforcement systems shall be checked and tested by Contractor to ensure the system is free from grounds, opens, and shorts.

D. All work shall be under the direct supervision of an accredited factory sound engineer. It shall be the responsibility of the sound engineer and Contractor to check and inspect this installation to the Architect/Engineer's approval.

3.02 RACK MOUNTED EQUIPMENT

A. The auxiliary sound reinforcement system(s) rack mounted equipment shall be installed by Contractor with the proper adapters, rack mounting kits, brackets, and closure panels for unused spaces. All interconnecting wiring shall be labeled, bundled, secured, and terminated by Contractor in a neat and professional manner.

B. All rack mounted equipment AC power cords shall be plugged into the mounted power strip by Contractor.

3.03 SPEAKER

A. Speaker assemblies shall be supported by Contractor from the building structure with a minimum of two steel wires.

DRAFT

3.04 MICROPHONES

A. Contractor shall unpack each microphone and assemble with cables and stands and connect ready for operation.

3.05 MICROPHONE OUTLETS

A. Contractor shall assemble microphone outlets and install, connect, and label as shown on the drawings.

END OF SECTION 275141

DRAFT

SECTION 275142
MUSIC ROOMS SOUND REINFORCEMENT SYSTEM

PART 1 - GENERAL

1.01 SCOPE

A. The work covered under this section shall include furnishing and installing a locally controlled complete and satisfactorily operating auxiliary stereo sound reinforcement system in each music room for the pickup, amplification, reproduction, and distribution of voice and/or music to associated speakers within each room.

1.02 SUBMITTALS

A. Product Data and Shop Drawings:
   1. Submit a complete list of equipment indicating the specific quantities to be provided by Contractor. The catalog or model number for each module of the system(s) shall be listed next to the quantities. This information shall be furnished in the front of the submittal.
   2. Submit a specific description of the system(s) describing each module and how it shall function in the system.
   3. Submit a specific drawing furnished of the (each) equipment rack. Each module shall be shown in its proper location with its terminal designations shown.
   4. Submit a data sheet for each module and device. The information shall be highlighted that applies to the particular module or device to be furnished.
   5. Submit a detailed diagram showing how to connect each device, indicating the exact final connection information.
   6. Submit a detailed set of floor plans for the area(s) where the (each) auxiliary sound system(s) is (are) to be installed. The plans shall show the locations of all equipment, loudspeakers, and devices and their required interconnections. The interconnections shown shall indicate the number, size, and type of wires as described in this specification. Loudspeakers shall be zoned as shown on the drawings. The layout of all auxiliary sound reinforcement system(s) equipment, devices, and conduit routing shall closely follow that shown on the drawings.

DRAFT

1.03 QUALITY ASSURANCE

A. All equipment specified herein shall be the product of a manufacturer of established reputation and experience who shall have produced similar apparatus for a period of at least ten years and who shall be able to refer to similar installations now rendering satisfactory service.

B. The Choral and Instrumental Music Rooms sound reinforcement systems shall be furnished by a factory authorized distributor certified to design, program, and service the system. The distributor must show evidence of successfully furnishing systems specified for at least five years.

C. All equipment for this system shall be listed by Underwriters Laboratories, Inc. (UL), bear the UL label and shall be installed in accordance with all requirements of the National Electrical Code (NEC), state and local codes, and these specifications.

D. The auxiliary sound reinforcement system(s) shall be furnished and installed by Contractor as shown on the drawings and as specified herein.

1.04 DOCUMENTATION

A. Contractor shall furnish one set of "As Built" drawings depicting the complete field wiring system and component interconnections in the system equipment rack.

B. Contractor shall furnish four sets of factory operation and maintenance manuals. These manuals shall include factory service manuals with complete parts lists, wiring and component schematics including circuit diagrams, and all other information necessary for the proper operation and service maintenance of the system.

1.05 TRAINING

A. Contractor shall furnish eight hours of technical service training to the Owner's technical staff using the factory operation manuals previously specified.

B. Contractor shall furnish eight hours of operating and programming training to the Owner's operating staff which shall be delivered in two separate four hour sessions to be scheduled at the Owner's convenience over the two year warranty period.

C. All training specified herein shall be performed by a factory certified technician.

1.06 DESCRIPTION OF OPERATION

A. Contractor shall furnish and install Choral and Instrumental Music Rooms sound reinforcement systems with all conduit, cable, outlets, devices, and equipment as shown on the drawings and as herein specified to furnish complete systems.

B. Each Choral and Instrumental Music Rooms sound reinforcement system shall provide for hte amplification and recording of music and voice, and the reproduction of recorded music or other program materials, and their distribution to all associated speakers within each Choral and Instrumental Music Room.

C. Each Choral and Instrumental Music Room sound reinforcement system shall accept both the input and output of an MP3 Player via DI Box.

D. Each Choral and Instrumental Music Room sound reinforcement system shall accept a priority override signal to mute the system when the main building Sound Intercommunications System and Fire Alarm System activates the priority override function.

1.07 SYSTEM TEST AND ACCEPTANCE

A. Prior to the final site visitation, and acceptance of each construction phased spaces, Contractor shall conduct an operating test of each complete auxiliary sound reinforcement system. Each system shall test free from grounds, shorts, and other faults. All connections shall be checked for mechanical and electrical connection. All equipment shall be demonstrated to operate in accordance with the requirements set forth in these specifications and as shown on the drawings.

B. Contractor shall perform all tests in the presence of the Architect/Engineer. Contractor shall furnish all personnel and test instruments required for use in the test.

1.08 WARRANTY

A. Contractor shall deliver the work described herein in a first class operating condition in every respect. Contractor shall also warrant that the material, equipment, and workmanship shall be entirely free from defects. Any materials, equipment, or workmanship in which defects may develop before or during the warranty period shall be repaired or replaced at the Contractor

B. s own expense. Refer to Division 01 for the start of the warranty period. The contractor shall further warrant that all material, equipment, and workmanship used in the installation, but not specifically mentioned in the drawings and Specifications, is the best of their respective kinds and that the construction and installation was performed in accordance with the best accepted standard practices in all details.

DRAFT

C. The manufacturer shall be prepared to offer a service contract for the maintenance of the system beyond the warranty period.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. The auxiliary sound reinforcement system(s) equipment shall be manufactured by AKG, CROWN, TASCAM, BTX, ATLAS SOUND, DENON, SHURE, and ELECTRO-VOICE, as listed.

2.02 AUXILIARY SOUND REINFORCEMENT SYSTEM EQUIPMENT RACKS

A. This Contractor shall furnish and install sectional wall mounted auxiliary sound system equipment racks as shown on the drawings and herein specified. Each rack shall be ATLAS SOUND Model No. WMA24-23 with locking front door providing a minimum of 42 vertical inches of standard 19 inch wide rack mounting space. Each rack shall be complete with a cylinder lock and textured black finish. The following equipment shall be furnished and installed by this Contractor in each rack:

1. One E-8 Soundcraft mixer with: eight mic/line and two stereo auxiliary inputs; three band equalization at low (63 Hz), mid (2.5 kHz), and high (12.5 kHz); trim and pan control; phantom power switch; left and right stereo output; subwoofer output; monitor output; effects input and output; left and right stereo tape outputs; headphone jack; and one Soundcraft Model No. P-S20001D-01 rack mounting kit.
2. One TASCAM Model No. CD-RW900SL rack mountable CD-R/RW player/recorder and MP3 player.
3. One Atlas Sound Model No. ACRL-291 rack mountable power panel complete with eight switched outlets and surge protection.
4. One Shure Model No. ULXS124/85-M1 complete wireless microphone system and one Shure Model No. UA820C Remote Antenna.
5. One Shure Model No. UA506 Rack Mount Kit for single receiver and one UA820C Remote Antenna.
6. IR Remote.

2.03 WALL MOUNTED STEREO SPEAKERS

A. Contractor shall provide, in each Choral and Instrumental Music Room where shown on Drawings, JBL Model No. EON510 enclosed wall mounted stereo speakers. The stereo speakers shall be internal bi-amplified crossover type with: 300 watt low frequency amp and 100 watt high frequenty (bi-amplified) amp; 15 inch low frequency transducer with neodymium magnet; 1.75 inch titanium compression driver; and a 90 x 60 directivity horn frequency range of 47 Hz to 18 kHz. Each stereo speaker shall be complete with on-stage stands SS7322B adjustable wall mounting bracke.

2.04 MICROPHONES

A. Contractor shall furnish two AKG Model No. D77S/XLR dynamic cardioid microphones for each Choral and Instrumental Music Room sound reinforcement system. Each microphone shall be furnished complete with a 25 foot connector cord with Cannon XLR connectors.

B. In the Choral Room, Contractor shall provide two AKG Model No. CHM21 hanging micropones at locations shown on the Drawings.

2.05 MICROPHONE FLOOR STANDS

A. Contractor shall furnish four Atlas Soundolier Model No. MS-20 microphone floor stands for each Choral and Instrumental Music Room sound reinforcement system.

DRAFT

B. Contractor shall provide four Atlas Soundolier Model No. PB15 microphone booms for each Choral and Instrumental Music Room sound reinforcement system.

2.06 MICROPHONE OUTLETS

A. Contractor shall provide, where shown on the drawings, flush or surface wall and/or ceiling mounted microphone outlets consisting of CANNON "XLR" series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, and a stainless steel coverplate. A microphone outlet, which meets this specification, is BTX Model No. PL-103F with 3 pin XLR. At least one microphone outlet shall also have a 3.5 mm Stereo Input Jack mounted to faceplate.

2.07 FIELD WIRING

A. Contractor shall provide one two-conductor, No 14 AWG strandad plenum rated cable with a temperature range for dry locations of minus 10 degrees C to 60 degrees C for each stereo speaker. A cable that meets this specification is WEST PENN Cat. No. 25226B or equal as manufactured by CONSOLIDATED ELECTRONIC WIRE AND CABLE, GENERAL CABLE, PAIGE, or TAPPAN.

B. Contractor shall provide one stranded No. 20 AWG, shielded, single twisted pair plenum rated cable with a temperature range for dry locations of minus 10 degrees C to 60 degrees C for each microphone outlet. A cable that meets this specification is WEST PENN Cat. No. 25292B or equal as manufactured by CONSOLIDATED ELECTRONIC WIRE AND CABLE, GENERAL CABLE, PAIGE, or TAPPAN.

2.08 DI BOX

A. Contractor shall furnish one DI Box equal with multi-input with one XLR output equal to Art AV Direct.

PART 3 - EXECUTION

3.01 INSTALLATION

A. All vertical low-voltage field wiring shall be installed by this Contractor in 1/2-inch conduit and/or surface metal raceway as shown on Drawings. Conduit fill shall not exceed the conduit space capacity.

B. All horizontal low-voltage field wiring to be installed in areas without a ceiling or in areas without an accessible ceiling shall be installed by Contractor in 1/2-inch conduit.

C. All horizontal low-voltage field wiring to be installed in areas with accessible ceilings shall be installed by Contractor bundled together and run exposed above the ceilings. Bundles shall be supported by "J" hooks mounted not more than four feet on center. "J" hooks shall be dedicated to the wiring specified in this specification section.

D. All horizontal low-voltage field wiring shall be run at right angles to the building structure.

E. All horizontal low-voltage field-wiring shall be installed below the roof/floor structural supports (joist, beams, girders, etc.). Wiring installed between the structural supports mentioned above and the roof or floor deck will not be acceptable.

F. All horizontal low-voltage field wiring penetrations through new and/or existing walls shall be sleeved. Minimum sleeve size shall be 3/4-inch. All sleeves shall be bushed both sides.

G. All low-voltage field wiring for the Choral and Instrumental Music Room sound reinforcement systems shall be furnished and installed by Contractor. All junction box covers shall be stenciled for distinct identification.

DRAFT

H. Contractor shall make all wiring connections as directed by the equipment manufacturer. Splices for circuits shall be made only in junction boxes and shall be crimp connected.

I. All Choral and Instrumental Music Room sound reinforcement system wiring shall be checked and tested by Contractor to ensure the system is free from grounds, opens, and shorts.

J. All work shall be under the supervision of a factory accredited sound engineer. It shall be the responsibility of the sound engineer and Contractor to check and inspect this installation to the Owner's and Architect/Engineer's approval.

3.02 RACK MOUNTED EQUIPMENT

A. Each Choral and Instrumental Music Room sound reinforcement system's rack mounted equipment shall be installed by Contractor with the proper adapters, rack mounting kits, brackets, and closure panels for unused spaces. All interconnecting wiring shall be labeled, bundled, secured, and terminated by Contractor in a neat and professional manner.

B. All rack mounted equipment AC power cords shall be plugged into the mounted power strip by Contractor.

3.03 SPEAKER

A. Wall mounted stereo speakers shall be securely fastened to the wall with adjustable wall brackets as specified.

B. Contractor shall provide a NEMA 5-20R duplex receptacle (as hereinbefore specified) at each stereo speaker location wheter shown on the drawings or not. Duplex receptacles shall be on their own circuit.

3.04 MICROPHONES

A. Contractor shall unpack each microphone and assemble with cables and stands and connect ready for operation. Microphones shown for permanent installation shall be installed by Contractor in accordance with drawings in manner appropriate for indicated locations.

3.05 MICROPHONE OUTLETS

A. Contractor shall assemble microphone outlets and install, connect, and label as shown on the drawings.

END OF SECTION 275142

DRAFT

SECTION 275143
WRESTLING, WEIGHT, AND FITNESS ROOMS SOUND REINFORCEMENT SYSTEM

PART 1 - GENERAL

1.01 SCOPE

A. The work covered under this section shall include furnishing and installing locally controlled complete and satisfactorily operating auxiliary stereo sound reinforcement system in Wrestling, Weight, and Fitness Rooms for the pickup, amplification, and reproduction of voice and/or music at remote locations.

1.02 SUBMITTALS

A. Product Data and Shop Drawings:
   1. Submit a complete list of equipment indicating the specific quantities to be furnished by this Contractor. The catalog or model number for each module of the system(s) shall be listed next to the quantities. This information shall be furnished in the front of the submittal.
   2. Submit a specific description of the system(s) describing each module and how it shall function in the system.
   3. Submit a specific drawing furnished of the (each) equipment rack. Each module shall be shown in its proper location with its terminal designations shown.
   4. Submit a data sheet for each module and device. The information shall be highlighted that applies to the particular module or device to be furnished.
   5. Submit a detailed diagram showing how to connect each device, indicating the exact final connection information.
   6. Submit a detailed set of floor plans for the area(s) where the (each) auxiliary sound system(s) is (are) to be installed. The plans shall show the locations of all equipment, loudspeakers, and devices and their required interconnections. The interconnections shown shall indicate the number, size, and type of wires as described in this specification. Loudspeakers shall be zoned as shown on the drawings. The layout of all auxiliary sound reinforcement system(s) equipment, devices, and conduit routing shall closely follow that shown on the drawings.

DRAFT

1.03 QUALITY ASSURANCE

A. All equipment specified herein shall be the product of a manufacturer of established reputation and experience who shall have produced similar apparatus for a period of at least ten years and who shall be able to refer to similar installations now rendering satisfactory service.

B. The auxiliary sound reinforcement system(s) shall be furnished by a factory authorized distributor certified to design, program, and service the system. The distributor must show evidence of successfully furnishing systems specified for at least five years

C. All equipment for this system shall be listed by Underwriters Laboratories, Inc. (UL), bear the UL label and shall be installed in accordance with all requirements of the National Electrical Code (NEC), state and local codes, and these Specifications.

D. The auxiliary sound reinforcement system(s) shall be furnished and installed by this Contractor as shown on the drawings and as specified herein.

1.04 DOCUMENTATION

A. This Contractor shall furnish to the Contractor, one set of "As Built" drawings depicting the complete field wiring system and component interconnections in the system equipment rack.

B. This Contractor shall furnish to the Contractor four sets of factory operation and maintenance manuals. These manuals shall include factory service manuals with complete parts lists, wiring and component schematics including circuit diagrams, and all other information necessary for the proper operation and service maintenance of the system.

1.05 TRAINING

A. This Contractor shall furnish eight hours of technical service training to the Owner's technical staff using the factory operation manuals previously specified.

B. This Contractor shall furnish eight hours of operating and programming training to the Owner's operating staff which shall be delivered in two separate four hour sessions to be scheduled at the Owner's convenience over the two year warranty period.

C. All training specified herein shall be performed by a factory certified technician.

1.06 DESCRIPTION OF OPERATION

A. Each system shall provide for the distribution of voice and music to all associated loudspeakers.

B. Each system shall provide for the reproduction of MP3 and compact disc recordings and distribute them to all associated loudspeakers.

C. Each system shall provide for the input and output of an MP3 Player via two 3.5 mm jacks. One is to be mounted at the equipment rack and one is to be mounted remotely in a wallplate with a microphone jack.

D. Each system shall provide for individual bass and treble controls.

E. Each system shall provide a personal listening system for use by hearing impaired listeners.

F. Each Auxiliary sound reinforcement system shall accept a priority override signal to mute the system when the main building Sound and Intercommunications System activates the priority override function.

1.07 SYSTEM TEST AND ACCEPTANCE

A. Prior to the final site visitation, and acceptance of each construction phased spaces, this Contractor shall conduct an operating test of each complete auxiliary sound reinforcement system. Each system shall test free from grounds, shorts, and other faults. All connections shall be checked for mechanical and electrical connection. All equipment shall be demonstrated to operate in accordance with the requirements set forth in these specifications and as shown on the drawings.

B. This Contractor shall perform all tests in the presence of the Architect/Engineer. This Contractor shall furnish all personnel and test instruments required for use in the test.

1.08 WARRANTY

A. This Contractor shall deliver the work described herein in a first class operating condition in every respect. This Contractor shall also warrant that the material, equipment, and workmanship shall be entirely free from defects. Any materials, equipment, or workmanship in which defects may develop before or during the warranty period shall be repaired or replaced at the Contractors own expense. Refer to Division 01 for the start of the warranty period. The contractor shall further warrant that all material, equipment, and workmanship used in the installation, but not specifically mentioned in the drawings and Specifications, is the best of their respective kinds and that the construction and installation was performed in accordance with the best accepted standard practices in all details.

DRAFT

B. The manufacturer shall be prepared to offer a service contract for the maintenance of the system beyond the warranty period.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. The auxiliary sound reinforcement system(s) equipment shall be manufactured by COMMUNITY, CROWN, PASO, BTX, ATLAS SOUND, WILLIAM SOUND, DENON, and SHURE, as listed.

2.02 AUXILIARY SOUND REINFORCEMENT SYSTEM EQUIPMENT RACKS

A. This Contractor shall furnish and install sectional wall mounted auxiliary sound system equipment racks as shown on the drawings and herein specified. Each rack shall be ATLAS SOUND Model No. WMA24-23 with locking front door providing a minimum of forty-two vertical inches of standard nineteen inch wide rack mounting space. Each rack shall be complete with a cylinder lock and textured black finish. The following equipment shall be furnished and installed by this Contractor in each rack:

1. One PASO Model No. DMS260P ten channel, digital mixer/preamplifier with 27/3501 Rack Mount Kit. One PASO Model No. PM01ML Mic/Line input module. The mixer shall be complete with treble and bass controls and shall be capable of phantom power service for condenser microphones.
2. One Denon Model No. DN-C615 rack mountable CD/MP3 Player. This contractor shall provide an IR remote controller for the CD/MP3 player specified above. The controller shall be Denon Model No. RC-U620 and shall have the sensor mounted on a wall plate.
3. Two CROWN Model No. CDI 1000 dual channel amplifiers with five hundred (500) watts per channel at 70.7V. Amplifier shall be suitable for rack mounting.
4. One Atlas Sound Model No. ACRL-291 rack mountable power panel complete with eight switched outlets and surge protection.
5. Two Shure Model No. ULXS124/85-M1 complete wireless microphone systems, two Shure Model No. UA820C Remote Antennas, and one UA844US Wideband (470-900 MHz) Four-Way Active Antenna Splitter and Power distribution system.
6. One (1) Shure Model No. UA507 Rack Mount Kit for single receiver and one UA820C Remote Antenna.

2.03 MICROPHONES

A. This Contractor shall furnish a total of two Shure Model No. SM58S dynamic cardioid microphones. Each microphone shall be furnished by this Contractor complete with a twenty five foot connector cord with CANNON XLR connectors.

2.04 MICROPHONE FLOOR STANDS

A. This Contractor shall furnish a total of two Atlas Sound Model No. MS-20 adjustable microphone floor stands for each system.

B. The Contractor shall furnish one Atlas Soundolier Model No. DS-14 microphone desk stand.

2.05 MICROPHONE OUTLETS

A. This Contractor shall furnish and install where shown on the drawings, flush or surface wall and/or ceiling mounted microphone outlets consisting of CANNON "XLR" series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, and a stainless steel coverplate. A microphone outlet, which meets this specification, is BTX

DRAFT

Model No. PL-103F with 3 pin XLR. At least one microphone outlet shall also have, mounted to the faceplate, a 3.5 mm Stereo Input Jack.

2.06 LOUDSPEAKERS

A. This Contractor shall furnish and install Community speakers Model No. R.5-99TZ with all required hardware for a complete installation. Speakers shall be tapped at 70.7V and 100W.

2.07 FIELD WIRING

A. This Contractor shall furnish and install field wiring for auxiliary sound systems loudspeakers as shown on the drawings. Wiring shall be two conductor, No. 14 AWG stranded cable. A cable that meets this specification is WEST PENN Cat. No.25226B or equal as manufactured by CONSOLIDATED ELECTRONIC WIRE AND CABLE, GENERAL CABLE, PAIGE, or TAPPAN.

B. This Contractor shall furnish and install field wiring for microphone outlets as shown on the drawings. Wiring shall be two conductor, No. 20 AWG stranded and shielded cable. A cable that meets this specification is WEST PENN Cat. No. 25292 or equal as manufactured by CONSOLIDATED ELECTRONIC WIRE AND CABLE, GENERAL CABLE, PAIGE, or TAPPAN.

PART 3- EXECUTION

3.01 INSTALLATION

A. All low voltage wiring for the auxiliary sound reinforcement systems shall be installed by this Contractor in 1/2-inch conduit as hereinbefore specified. All junction box covers shall be stenciled by this Contractor for distinct identification. All conduits, device mounting boxes, junction boxes, and enclosures shall be securely fastened with appropriate fittings to insure a positive ground throughout each entire system.

B. All low voltage wiring connections shall be made by this Contractor as directed by the manufacturer. Splices for circuits shall be made only in junction boxes and shall be crimp connected.

C. All wiring for the auxiliary sound reinforcement systems shall be checked and tested by this Contractor to ensure the system is free from grounds, opens, and shorts.

D. All work shall be under the direct supervision of an accredited factory sound engineer. It shall be the responsibility of the sound engineer and this Contractor to check and inspect this installation to the Architect/Engineer's approval.

3.02 RACK MOUNTED EQUIPMENT

A. The auxiliary sound reinforcement system(s) rack mounted equipment shall be installed by this Contractor with the proper adapters, rack mounting kits, brackets, and closure panels for unused spaces. All interconnecting wiring shall be labeled, bundled, secured, and terminated by this Contractor in a neat and professional manner.

B. All rack mounted equipment AC power cords shall be plugged into the mounted power strip by this Contractor.

3.03 SPEAKER

A. Speaker assemblies shall be supported by this Contractor from the building structure with a minimum of two steel wires.

3.04 MICROPHONES

A. This Contractor shall unpack each microphone and assemble with cables and stands and connect ready for operation.

DRAFT

3.05 MICROPHONE OUTLETS

A. This Contractor shall assemble microphone outlets and install, connect, and label as shown on the drawings.

END OF SECTION 275143

DRAFT

SECTION 275144
ATHLETIC FIELDS SOUND REINFORCEMENT SYSTEM

PART 1 - GENERAL

1.01 SCOPE

A. The work covered under this section shall include furnishing and installing locally controlled complete and satisfactorily operating Athletic Field sound reinforcement system for the pickup, amplification, reproduction, and distribution of voice and/or music to associated loudspeakers for each of the following: Baseball Field, Football Stadium, Softball Field, and Track and Field area.

1.02 SUBMITTALS

A. Product Data and Shop Drawings:
   1. Submit a complete list of equipment for each Athletic Field area indicating the specific quantities for each area. The catalog or model number for each module of the system(s) shall be listed next to the quantities. This information shall be furnished in the front of the submittal.
   2. Submit a specific description of each Athletic Field sound reinforcement system describing each module and how it shall function in the system.
   3. Submit a detailed set of plans at each Athletic Field area. The plans shall show the locations of all equipment, loudspeakers, and devices and their required interconnections. The interconnections shown shall indicate the number, size, and type of wires as described in this specification. The layout of all auxiliary sound reinforcement system(s) equipment, devices, and conduit routing shall closely follow that shown on the drawings.
   4. Submit a specific drawing of each Athletic Field sound reinforcement system equipment rack. Each module shall be shown in its proper location with its terminal designations shown.
   5. Submit a data sheet for each module and device. The information shall be highlighted that applies to the particular module or device to be furnished.
   6. Submit a detailed diagram showing how to connect each device, indicating the exact final connection information.
   7. Submit a detailed drawing showing how to mount speakers at each Athletic Field location, including necessary hardware and mounting devices.

DRAFT

1.03 QUALITY ASSURANCE

A. All equipment specified herein shall be the product of a manufacturer of established reputation and experience who shall have produced similar apparatus for a period of at least ten years and who shall be able to refer to similar installations now rendering satisfactory service.

B. The auxiliary sound reinforcement system(s) shall be furnished by a factory authorized distributor certified to design, program, and service the system. The distributor must show evidence of successfully furnishing systems specified for at least five years

C. All equipment for this system shall be listed by Underwriters Laboratories, Inc. (UL), bear the UL label and shall be installed in accordance with all requirements of the National Electrical Code (NEC), state and local codes, and these Specifications.

D. The auxiliary sound reinforcement system(s) shall be furnished and installed by Contractor as shown on the drawings and as specified herein.

1.04 DOCUMENTATION

A. Contractor shall furnish to the Contractor, one set of "As Built" drawings depicting the complete field wiring system and component interconnections in the system equipment rack.

B. Contractor shall furnish to the Contractor four sets of factory operation and maintenance manuals. These manuals shall include factory service manuals with complete parts lists, wiring and component schematics including circuit diagrams, and all other information necessary for the proper operation and service maintenance of the system.

1.05 TRAINING

A. Contractor shall furnish eight hours (total for all Athletic Fields) of technical service training to the Owner's technical staff using the factory operation manuals previously specified.

B. Contractor shall furnish eight hours (total for all Athletic Fields) of operating and programming training to the Owner's operating staff which shall be delivered in two separate four hour sessions to be scheduled at the Owner's convenience over the two year warranty period.

C. All training specified herein shall be performed by a factory certified technician.

1.06 DESCRIPTION OF OPERATION

A. Contractor shall furnish and install each Athletic Field sound reinforcement system with all conduit, wiring, outlets, and equipment as shown on the Drawings and as specified herein to provide a complete operational system.

B. Each Athletic Field sound reinforcement system shall provide for the amplification of music and voice, and the reproduction of recorded music or other program materials, and the distribution of voice and music to all associated loudspeakers.

C. Each Athletic Field sound reinforcement system shall provide a personal listening system for use by hearing impaired listeners.

1.07 SYSTEM TEST AND ACCEPTANCE

A. Prior to the final site visitation, and acceptance of each construction phased spaces, the Contractor shall conduct an operating test of each complete auxiliary sound reinforcement system. Each system shall test free from grounds, shorts, and other faults. All connections shall be checked for mechanical and electrical connection. All equipment shall be demonstrated to operate in accordance with the requirements set forth in these specifications and as shown on the drawings.

B. Contractor shall perform all tests in the presence of the Architect/Engineer. Contractor shall furnish all personnel and test instruments required for use in the test.

C. When the work on each Athletic Field sound reinforcement system has been completed and is ready for final review, this Contractor shall demonstrate that the requirements of the Contract as it applies to the work have been carried out and that each system has been adjusted and operated in accordance therewith.

1.08 WARRANTY

A. Contractor shall deliver the work described herein in a first class operating condition in every respect. Contractor shall also warrant that the material, equipment, and workmanship shall be entirely free from defects. Any materials, equipment, or workmanship in which defects may develop before or during the warranty period shall be repaired or replaced at the Contractors own expense. Refer to Division 01 for the start of the warranty period. The contractor shall further warrant that all material, equipment, and workmanship used in the installation, but not specifically mentioned in the drawings and Specifications, is the best of their respective kinds

DRAFT

and that the construction and installation was performed in accordance with the best accepted standard practices in all details.

B. The manufacturer shall be prepared to offer a service contract for the maintenance of the system beyond the warranty period.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. The auxiliary sound reinforcement system(s) equipment shall be manufactured by COMMUNITY, CROWN, PASO, BTX, ATLAS SOUND, WILLIAM SOUND, DENON, and SHURE, as listed.

2.02 FOOTBALL FIELD SOUND REINFORCEMENT SYSTEM

A. Equipment Rack:

1. This Contractor shall furnish and install a sectional wall mounted Football Field sound reinforcement system equipment rack as shown on the Drawings and as specified herein. The rack shall be ATLAS SOUNDOLIER Cat. No. WMA35-23 sectional wall mounting type with a textured black finish providing a minimum of sixty-one (61) inches of vertical rack mounting space. The rack shall be complete with a continuous piano hinged front door with a cylinder lock and handle. The following equipment shall be furnished and installed by this Contractor in the rack
   a. One (1) dual channel power amplifier (Home) suitable for rack mounting with a minimum rating of 2400 watts continuous sine wave per channel into a four (4) ohm output at twenty (20) Hz to twenty (20) kHz with a maximum 0.1 percent (0.1%) distortion. A power amplifier, which will meet this specification, is CROWN Model No. CTS-2000.
   b. One (1) dual channel power amplifier (Visitor) suitable for rack mounting with a minimum rating of 1200 watts continuous sine wave per channel into a four (4) ohm output at twenty (20) Hz to twenty (20) kHz with a maximum 0.1 percent (0.1%) distortion. A power amplifier, which will meet this specification, is CROWN Model No. CTS-1200.
   c. One (1) microphone mixer suitable for rack mounting with a minimum of eight (8) independently controlled microphone/line level input channels and a minimum of two (2) aux-level input mixing capability. The outputs shall be controlled by the master control. The mixer shall be complete with automatic gain control and shall be capable of phantom power service for condenser microphones. A microphone mixer which will meet this specification is SHURE Model No. SCM810.
   d. One (1) Denon Model No. DN-C615 rack mountable CD/MP3 Player. This contractor shall provide an IR remote controller for the CD/MP3 player specified above.
   e. One (1) WILLIAMS SOUND Model No. PPA T35 personal listening system base station transmitter complete with WILLIAMS SOUND Model No. RPK 005 rack mounting kit and ANT 005 coaxial antenna.
2. The Contractor shall furnish to the Owner's representative, twenty-four (24) WILLIAMS SOUND Model No. PPA-R35-8 (8) eight channel personal listening system receivers each complete with WILLIAMS SOUND Model No. EAR 013 single earbud, rechargeable batteries, and belt clip. Receiver shall be set to operating freqs. of 75.7 MHz (receiver channel 7).
   a. The Contractor shall furnish to the Owner's representative, two (2) WILLIAMS SOUND Model No. CHG 3512 twelve (12) charger unit for the personal listening system receivers.

DRAFT

b. One (1) Atlas Sound Model No. ACRL-291 rack mountable power panel complete with eight (8) switched outlets and surge protection.
c. One (1) ATLAS SOUNDOLIER Model No. ACS-1 AC power strip.
d. Two (2) Shure Model No. ULXS124/85-M1 complete wireless microphone systems, two (2) Shure Model No. UA820C Remote Antennas, and one (1) UA844US Wideband (470-900 MHz) Four-Way Active Antenna Splitter and Power distribution system.
e. One (1) Shure Model No. UA507 Rack Mount Kit for double receiver and 2 UA820C Remote Antennas.

B. Speaker Systems:
1. This Contractor shall furnish and install two (2), 3-way loudspeaker system (Home) with a frequency response of 250 Hz - 4 kHz and shall include a driver. A speaker, which will meet this Specification, is Community Model No. R2-474 complete with Community model no. R2YOKE mounting yoke kit.
2. This Contractor shall furnish and install one (1), 3-way loudspeaker system (Visitor) with a frequency response of 250 Hz - 4 kHz and shall include a driver. A speaker, which will meet this Specification, is Community Model No. R2-52 complete with Community model no. R2YOKE mounting yoke kit.

C. Microphones:
1. This Contractor shall furnish to the Owner's representative, four (4) AKG Model No. D77S/XLR dynamic cardioid microphones. Each complete with an ON/OFF switch. Each microphone shall be furnished by this Contractor complete with a twenty five (25) foot connector cord with CANNON XLR connectors.
2. This Contractor shall furnish to the Owner's representative, one (1) TOA Model No. WM-4200 dynamic cardioid wireless handheld microphone, and one (1) TOA Model No. WM-4300 lapel microphone with bodypack. Each complete with an ON/OFF switch and batteries.
3. Contractor shall provide one desk type microphones, Shure 450 series 2.

D. Microphone Stands:
1. This Contractor shall furnish to the Owner's representative, two (2) ATLAS SOUNDOLIER Model No. DS-14 microphone desk stands.
2. This Contractor shall furnish to the Owner's representative, two (2) Atlas Sound Model No. MS-20 microphone floor stands.

E. Microphone Outlets:
1. This Contractor shall furnish and install where shown on the Drawings, flush or surface (as indicated on the Drawings) wall mounted microphone outlets consisting of a CANNON "XLR" series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, and a stainless steel coverplate. A microphone outlet, which meets this Specification, is BTX Model No. PL-103F.

F. Cable:
1. This Contractor shall furnish and install speaker cable consisting of one (1) twisted pair, No. 12 AWG unshielded with a temperature range for dry locations of minus twenty-five (25) degrees C to one hundred five (105) degrees C and seventy-five (75) degrees C for wet locations. A cable that meets this Specification is WEST PENN Cat. No. AQ227 or equal as manufactured by CONSOLIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.
2. This Contractor shall furnish and install microphone cable consisting of one (1) twisted pair, No. 20 AWG shielded with a temperature range for dry locations of minus ten (10)

DRAFT

degrees C to seventy-five (75) degrees C. A cable that meets this Specification is WEST PENN Cat. No. 292 or equal as manufactured by CONSOLIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

2.03 TRACK AND FIELD AREA SOUND REINFORCEMENT SYSTEM

A. Equipment Rack:

1. This Contractor shall furnish and install a sectional wall mounted Baseball Field sound reinforcement system equipment rack as shown on the Drawings and as specified herein. The rack shall be ATLAS SOUNDOLIER Cat. No. WMA24-23 sectional wall mounting type with a textured black finish providing a minimum of forty-two (42) inches of vertical rack mounting space. The rack shall be complete with a continuous piano hinged front door with a cylinder lock and handle. The following equipment shall be furnished and installed by this Contractor in the rack:
   a. Two (2) dual channel power amplifier suitable for rack mounting with a minimum rating of 800 watts continuous sine wave per channel into a 70.7V output and a twenty (20) Hz to twenty (20) kHz frequency response with a maximum 0.1 percent (0.1%) distortion at 1 watt into a 4 ohm output. A power amplifier that will meet this specification is Crown Model No. CTs 1200.
   b. One (1) microphone mixer suitable for rack mounting with a minimum of eight (8) independently controlled microphone/line level input channels and a minimum of two (2) aux-level input mixing capability. The outputs shall be controlled by the master control. The mixer shall be complete with automatic gain control and shall be capable of phantom power service for condenser microphones. A microphone mixer which will meet this specification is SHURE Model No. SCM810.
   c. One (1) Denon Model No. DN-C615 rack mountable CD/MP3 Player. This contractor shall provide an IR remote controller for the CD/MP3 player specified above.
   d. One (1) Williams Sound Model No. PPA T35 personal listening system base station transmitter complete with Williams Sound Model No. RPK 005 rack mounting kit and ANT 005 coaxial antenna.
   e. The Contractor shall furnish to the Owner's representative, four (4) Williams Sound Model No. PPA-R35-8 (8) eight channel personal listening system receivers each complete with Williams Sound Model No. EAR 013 single earbud, rechargeable batteries, and belt clip. Receiver shall be set to operating freqs. of 72.1 MHz (receiver channel 1).
   f. The Contractor shall furnish to the Owner's representative, one (1) Williams Sound Model No. CHG 3512 twelve (12) charger unit for the personal listening system receivers.
   g. One (1) Atlas Sound Model No. ACRL-291 rack mountable power panel complete with eight (8) switched outlets and surge protection.
   h. One (1) Atlas Sound Model No. ACS-1 AC power strip.

B. Speaker Systems:

1. This Contractor shall furnish and install four (4), horn type loudspeakers of the compound diffraction design rated 15W to 120 watts, 70.0 volts with a frequency response of 90 Hz - 16 kHz and shall include a driver. A horn type loudspeaker that will meet this Specification is Community Model No. R.5-66T.

C. Microphones:

1. This Contractor shall furnish to the Owner's representative, one (1) AKG Model No. D77S/XLR dynamic cardioid microphones complete with an ON/OFF switch. The microphone shall be furnished by this Contractor complete with a twenty five (25) foot connector cord with CANNON XLR connectors.

DRAFT

D. Microphone Stand:
   1. This Contractor shall furnish to the Owner's representative, one (1) Atlas Sound Model No. DS-2 microphone desk stand.

E. Microphone Outlets:
   1. This Contractor shall furnish and install where shown on the Drawings, flush or surface (as indicated on the Drawings) wall mounted microphone outlets consisting of a CANNON "XLR" series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, and a stainless steel coverplate. A microphone outlet, which meets this Specification, is BTX Model No. PL-103F.

F. Cable:
   1. This Contractor shall furnish and install speaker cable consisting of one (1) twisted pair, No. 12 AWG unshielded with a temperature range for dry locations of minus twenty-five (25) degrees C to one hundred five (105) degrees C and seventy-five (75) degrees C for wet locations. A cable that meets this Specification is WEST PENN Cat. No. AQ227 or equal as manufactured by CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.
   2. This Contractor shall furnish and install microphone cable consisting of one (1) twisted pair, No. 20 AWG shielded with a temperature range for dry locations of minus ten (10) degrees C to seventy-five (75) degrees C. A cable that meets this Specification is WEST PENN Cat. No. 292 or equal as manufactured by CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

PART 3 - EXECUTION

3.01 INSTALLATION

A. All wiring for the Athletic Fields sound reinforcement systems shall be installed by this Contractor in conduit. All junction box covers shall be stenciled for distinct identification. All conduit, device mounting boxes, junction boxes, and enclosures shall be securely fastened with appropriate fittings to insure a positive ground throughout each entire system.

B. All wiring connections shall be made by Contractor as directed by the equipment manufacturer. Splices for circuits shall be made only in junction boxes and shall be crimp connected.

C. All wiring shall be checked and tested by Contractor to ensure the system is free from grounds, opens, and shorts.

D. All work shall be under the direct supervision of a factory accredited sound engineer. It shall be the responsibility of the sound engineer and Contractor to check and inspect this installation to the Architect/Engineer's approval.

3.02 RACK MOUNTED EQUIPMENT

A. Each Athletic Field sound reinforcement system's rack mounted equipment shall be installed by Contractor with the proper adapters, rack mounting kits, brackets, and closure panels for unused spaces. All interconnecting wiring shall be labeled, bundled, secured, and terminated by Contractor in a neat and professional manner.

B. All rack mounted equipment AC power cords shall be plugged into the rack-mounted power strip by Contractor.

3.03 SPEAKERS

A. The Contractor shall assemble and install all speakers as detailed on the Drawings.

DRAFT

3.04 MICROPHONES

A. Contractor shall unpack each microphone and assemble with cables and stands and connect ready for operation.

3.05 MICROPHONE OUTLETS

A. Contractor shall assemble microphone outlets and install, connect, and label as shown on the drawings.

3.06 REMOTE ANTENNA (WIRELESS SYSTEM)

A. The Contractor shall mount the remote antenna centered on the front of the football pressbox, facing the field, above the window area.

3.07 CABLES

A. All wiring and cable for the Athletic Field sound reinforcement systems shall be pulled continuously through conduits without splices or abrasions and shall be terminated at their appropriate devices as shown on the Drawings, as specified herein, and as directed by the system supplier. All cables shall be labeled. Input and output cabling shall not be installed in the same raceway.

B. Unless otherwise indicated, all Athletic Field sound reinforcement system cable shall be installed in heavy wall schedule 40 PVC conduit, minimum size 3/4, as specified herein.

END OF SECTION 275144

DRAFT

SECTION 280513
CONDUCTORS AND CABLES FOR ELECTRONIC SAFETY AND SECURITY

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract apply to this Section.

1.02 DEFINITIONS

A. BICSI: Building Industry Consulting Service International.

B. EMI: Electromagnetic interference.

C. IDC: Insulation displacement connector.

D. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control and signaling power-limited circuits.

E. Open Cabling: Passing telecommunications cabling through open space (e.g., between the studs of a wall cavity).

F. RCDD: Registered Communications Distribution Designer.

1.03 SUBMITTALS

A. Product Data: For each type of product indicated.
   1. For coaxial cable, include the following installation data for each type used:
      a. Nominal OD.
      b. Minimum bending radius.
      c. Maximum pulling tension.

B. Qualification Data: For qualified layout technician, installation supervisor, and field inspector.

C. Source quality-control reports.

D. Field quality-control reports.

E. Maintenance Data: For wire and cable to include in maintenance manuals.

1.04 QUALITY ASSURANCE

A. Testing Agency Qualifications: An NRTL.
   1. Testing Agency's Field Supervisor: Currently certified by BICSI as an RCDD to supervise on-site testing.

B. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   1. Flame-Spread Index: 25 or less.
   2. Smoke-Developed Index: 50 or less.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a third-party agency that shall be amongst those accredited by the IBC (International Building Code) and marked for intended location and application.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Test cables upon receipt at Project site.

DRAFT

1. Test optical fiber cable to determine the continuity of the strand end to end. Use optical-fiber flashlight or optical loss test set.
2. Test optical fiber cable on reels. Use an optical time domain reflectometer to verify the cable length and locate cable defects, splices, and connector; include the loss value of each. Retain test data and include the record in maintenance data.
3. Test each pair of UTP cable for open and short circuits.

1.06 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install UTP, optical fiber, and coaxial cables and connecting materials until wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

PART 2 PRODUCTS

2.01 PATHWAYS

A. Conduit and Boxes: Comply with requirements in Section **<< 260533>>**. Flexible metal conduit shall not be used.
   1. Outlet boxes shall be no smaller than **<< 2 inches>>** wide, **<< 3 inches>>** high, and **<< 2-1/2 inches>>** deep.

2.02 BACKBOARDS

A. Backboards: Plywood, fire-retardant treated, 3/4 by 48 by **<< 96 inches>>**. Comply with requirements for plywood backing panels in Section **<< 061000 - Rough Carpentry>>**.

2.03 RS-232 CABLE

A. Standard Cable: NFPA 70, Type CM.
   1. Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors.
   2. Polypropylene insulation.
   3. Individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage.
   4. PVC jacket.
   5. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
   6. Flame Resistance: Comply with UL 1581.

B. Plenum-Rated Cable: NFPA 70, Type CMP.
   1. Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors.
   2. Plastic insulation.
   3. Individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage.
   4. Plastic jacket.
   5. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
   6. Flame Resistance: Comply with NFPA 262.

2.04 RS-485 CABLE

A. Standard Cable: NFPA 70, Type CM or CMG.
   1. Paired, 2 pairs, twisted, No. 22 AWG, stranded (7x30) tinned copper conductors.
   2. PVC insulation.

DRAFT

3. Unshielded.
4. PVC jacket.
5. Flame Resistance: Comply with UL 1581.

B. Plenum-Rated Cable: NFPA 70, Type CMP.
1. Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors.
2. Fluorinated ethylene propylene insulation.
3. Unshielded.
4. Fluorinated ethylene propylene jacket.
5. Flame Resistance: NFPA 262, Flame Test.

2.05 LOW-VOLTAGE CONTROL CABLE

A. Paired Lock Cable: NFPA 70, Type CMG.
1. 1 pair, twisted, No. 16 AWG, stranded (19x29) tinned copper conductors.
2. PVC insulation.
3. Unshielded.
4. PVC jacket.
5. Flame Resistance: Comply with UL 1581.

B. Plenum-Rated, Paired Lock Cable: NFPA 70, Type CMP.
1. 1 pair, twisted, No. 16 AWG, stranded (19x29) tinned copper conductors.
2. PVC insulation.
3. Unshielded.
4. PVC jacket.
5. Flame Resistance: Comply with NFPA 262.

C. Paired Lock Cable: NFPA 70, Type CMG.
1. 1 pair, twisted, No. 18 AWG, stranded (19x30) tinned copper conductors.
2. PVC insulation.
3. Unshielded.
4. PVC jacket.
5. Flame Resistance: Comply with UL 1581.

D. Plenum-Rated, Paired Lock Cable: NFPA 70, Type CMP.
1. 1 pair, twisted, No. 18 AWG, stranded (19x30) tinned copper conductors.
2. Fluorinated ethylene propylene insulation.
3. Unshielded.
4. Plastic jacket.
5. Flame Resistance: NFPA 262, Flame Test.

2.06 CONTROL-CIRCUIT CONDUCTORS

A. Class 1 Control Circuits: Stranded copper, Type THHN-THWN, in raceway complying with UL 83.

B. Class 2 Control Circuits: Stranded copper, Type THHN-THWN, in raceway complying with UL 83.

C. Class 3 Remote-Control and Signal Circuits: Stranded copper, Type TW or TF, complying with UL 83.

DRAFT

2.07 FIRE ALARM WIRE AND CABLE

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Comtran Corp.
   2. Draka USA.
   3. Genesis Cable Products; Honeywell International, Inc.
   4. Rockbestos-Suprenant Cable Corporation.
   5. West Penn Wire/CDT; a division of Cable Design Technologies.

B. General Wire and Cable Requirements: NRTL listed and labeled as complying with NFPA 70, Article 760.

C. Signaling Line Circuits: Twisted, shielded pair, No. 18 AWG.
   1. Circuit Integrity Cable: Twisted shielded pair, NFPA 70, Article 760, Classification CI, for power-limited fire alarm signal service Type FPL. NRTL listed and labeled as complying with UL 1424 and UL 2196 for a 2-hour rating.

D. Non-Power-Limited Circuits: Solid-copper conductors with 600-V rated, 75 deg C, color-coded insulation.
   1. Low-Voltage Circuits: No. 14 AWG, minimum.
   2. Line-Voltage Circuits: No. 12 AWG, minimum.

2.08 IDENTIFICATION PRODUCTS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Brady Corporation
   2. HellermannTyton.
   3. Kroy LLC.
   4. Panduit Corp.

B. Comply with UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers.

C. Comply with requirements in Section **<< 260553 - Identification for Electrical Systems >>**

2.09 SOURCE QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to evaluate cables.

B. Factory test UTP and optical fiber cables on reels according to TIA/EIA-568-B.1.

C. Factory test UTP cables according to TIA/EIA-568-B.2.

D. Factory test multimode optical fiber cables according to TIA/EIA-526-14-A and TIA/EIA-568-B.3.

E. Factory sweep test coaxial cables at frequencies from 5 MHz to 1 GHz. Sweep test shall test the frequency response, or attenuation over frequency, of a cable by generating a voltage whose frequency is varied through the specified frequency range and graphing the results.

F. Cable will be considered defective if it does not pass tests and inspections.

G. Prepare test and inspection reports.

DRAFT

PART 3 EXECUTION

3.01 INSTALLATION OF PATHWAYS

A. Cable Trays: Comply with NEMA VE 2 and TIA/EIA-569-A-7.

B. Comply with TIA/EIA-569-A for pull-box sizing and length of conduit and number of bends between pull points.

C. Comply with requirements in Section **<< 260533 - Conduit for Electrical Systems>>** for installation of conduits and wireways.

D. Install manufactured conduit sweeps and long-radius elbows whenever possible.

E. Pathway Installation in Equipment Rooms:

1. Position conduit ends adjacent to a corner on backboard where a single piece of plywood is installed or in the corner of room where multiple sheets of plywood are installed around perimeter walls of room.
2. Install cable trays to route cables if conduits cannot be located in these positions.
3. Secure conduits to backboard when entering room from overhead.
4. Extend conduits **<< 3 inches>>** above finished floor.
5. Install metal conduits with grounding bushings and connect with grounding conductor to grounding system.

F. Backboards: Install backboards with 96-inch dimension vertical. Butt adjacent sheets tightly, and form smooth gap-free corners and joints.

3.02 INSTALLATION OF CONDUCTORS AND CABLES

A. Comply with NECA 1.

B. General Requirements for Cabling:

1. Comply with TIA/EIA-568-B.1.
2. Comply with BICSI ITSIM, Ch. 6, "Cable Termination Practices."
3. Install 110-style IDC termination hardware unless otherwise indicated.
4. Terminate all conductors; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, and cross-connect and patch panels.
5. Cables may not be spliced. Secure and support cables at intervals not exceeding **<< 30 inches>>** and not more than **<< 6 inches>>** from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
6. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIM, "Cabling Termination Practices" Chapter. Install lacing bars and distribution spools.
7. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
8. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps shall not be used for heating.
9. Pulling Cable: Comply with BICSI ITSIM, Ch. 4, "Pulling Cable." Monitor cable pull tensions.

C. UTP Cable Installation:

1. Comply with TIA/EIA-568-B.2.
2. Do not untwist UTP cables more than **<< 1/2 inch>>** from the point of termination to maintain cable geometry.

DRAFT

D. Optical Fiber Cable Installation:
   1. Comply with TIA/EIA-568-B.3.
   2. Cable shall be terminated on connecting hardware that is rack or cabinet mounted.

E. Open-Cable Installation:
   1. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.
   2. Suspend copper cable not in a wireway or pathway a minimum of **<< 8 inches>>** above ceilings by cable supports not more than **<< 60 inches>>** apart.
   3. Cable shall not be run through structural members or in contact with pipes, ducts, or other potentially damaging items.

F. Installation of Cable Routed Exposed under Raised Floors:
   1. Install plenum-rated cable only.
   2. Install cabling after the flooring system has been installed in raised floor areas.
   3. Coil cable **<< 72 inches>>** long shall be neatly coiled not less than **<< 12 inches>>** in diameter below each feed point.

G. Outdoor Coaxial Cable Installation:
   1. Install outdoor connections in enclosures complying with NEMA 250, Type 4X. Install corrosion-resistant connectors with properly designed O-rings to keep out moisture.
   2. Attach antenna lead-in cable to support structure at intervals not exceeding **<< 36 inches>>**.

H. Separation from EMI Sources:
   1. Comply with BICSI TDMM and TIA/EIA-569-A recommendations for separating unshielded copper voice and data communication cable from potential EMI sources, including electrical power lines and equipment.
   2. Separation between open communications cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment shall be as follows:
      a. Electrical Equipment Rating Less Than 2 kVA: A minimum of **<< 5 inches>>**.
      b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of **<< 12 inches>>**.
      c. Electrical Equipment Rating More Than 5 kVA: A minimum of **<< 24 inches>>**.
   3. Separation between communications cables in grounded metallic raceways and unshielded power lines or electrical equipment shall be as follows:
      a. Electrical Equipment Rating Less Than 2 kVA: A minimum of **<< 2-1/2 inches>>**.
      b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of **<< 6 inches>>**.
      c. Electrical Equipment Rating More Than 5 kVA: A minimum of **<< 12 inches>>**.
   4. Separation between communications cables in grounded metallic raceways and power lines and electrical equipment located in grounded metallic conduits or enclosures shall be as follows:
      a. Electrical Equipment Rating Less Than 2 kVA: No requirement.
      b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of **<< 3 inches>>**.
      c. Electrical Equipment Rating More Than 5 kVA: A minimum of **<< 6 inches>>**.
   5. Separation between Cables and Electrical Motors and Transformers, 5 kVA or HP and Larger: A minimum of **<< 48 inches>>**.
   6. Separation between Cables and Fluorescent Fixtures: A minimum of **<< 5 inches>>**.

3.03 FIRE ALARM WIRING INSTALLATION

A. Comply with NECA 1 and NFPA 72.

DRAFT

B. Wiring Method: Install wiring in metal raceway according to Section **<< 260533 - Conduit for Electrical Systems>>**.
   1. Install plenum cable in environmental air spaces, including plenum ceilings.
   2. Fire alarm circuits and equipment control wiring associated with the fire alarm system shall be installed in a dedicated raceway system. This system shall not be used for any other wire or cable.

C. Wiring Method:
   1. Cables and raceways used for fire alarm circuits, and equipment control wiring associated with the fire alarm system, may not contain any other wire or cable.
   2. Fire-Rated Cables: Use of 2-hour, fire-rated fire alarm cables, NFPA 70, Types MI and CI, is not permitted.
   3. Signaling Line Circuits: Power-limited fire alarm cables shall not be installed in the same cable or raceway as signaling line circuits.

D. Wiring within Enclosures: Separate power-limited and non-power-limited conductors as recommended by manufacturer. Install conductors parallel with or at right angles to sides and back of the enclosure. Bundle, lace, and train conductors to terminal points with no excess. Connect conductors that are terminated, spliced, or interrupted in any enclosure associated with the fire alarm system to terminal blocks. Mark each terminal according to the system's wiring diagrams. Make all connections with approved crimp-on terminal spade lugs, pressure-type terminal blocks, or plug connectors.

E. Cable Taps: Use numbered terminal strips in junction, pull, and outlet boxes, cabinets, or equipment enclosures where circuit connections are made.

F. Color-Coding: Color-code fire alarm conductors differently from the normal building power wiring. Use one color-code for alarm circuit wiring and another for supervisory circuits. Color-code audible alarm-indicating circuits differently from alarm-initiating circuits. Use different colors for visible alarm-indicating devices. Paint fire alarm system junction boxes and covers red.

G. Risers: Install at least two vertical cable risers to serve the fire alarm system. Separate risers in close proximity to each other with a minimum one-hour-rated wall, so the loss of one riser does not prevent the receipt or transmission of signals from other floors or zones.

H. Wiring to Remote Alarm Transmitting Device: 1-inch (25-mm) conduit between the fire alarm control panel and the transmitter. Install number of conductors and electrical supervision for connecting wiring as needed to suit monitoring function.

DRAFT

3.04 CONTROL-CIRCUIT CONDUCTORS

A. Minimum Conductor Sizes:
   1. Class 1 remote-control and signal circuits, No. 14 AWG.
   2. Class 2 low-energy, remote-control and signal circuits, No. 16 AWG.
   3. Class 3 low-energy, remote-control, alarm and signal circuits, No. 12 AWG.

3.05 CONNECTIONS

A. Comply with requirements in **<< 284600 - Fire Detection and Alarm>>** for connecting, terminating, and identifying wires and cables.

3.06 FIRESTOPPING

A. Comply with requirements in Section **<< 078400 - Firestopping>>**.

B. Comply with TIA/EIA-569-A, "Firestopping" Annex A.

C. Comply with BICSI TDMM, "Firestopping Systems" Article.

3.07 GROUNDING

A. For communications wiring, comply with ANSI-J-STD-607-A and with BICSI TDMM, "Grounding, Bonding, and Electrical Protection" Chapter.

B. For low-voltage wiring and cabling, comply with requirements in Section **<< 260526 - Grounding and Bonding for Electrical Systems>>**.

3.08 IDENTIFICATION

A. Identify system components, wiring, and cabling complying with TIA/EIA-606-A. Comply with requirements for identification specified in Section **<< 260553 - Identification for Electrical Systems>>**.

3.09 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Perform tests and inspections.

C. Tests and Inspections:

1. Visually inspect UTP and optical fiber cable jacket materials for UL or third-party certification markings. Inspect cabling terminations to confirm color-coding for pin assignments, and inspect cabling connections to confirm compliance with TIA/EIA-568-B.1.
2. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.
3. Test UTP cabling for DC loop resistance, shorts, opens, intermittent faults, and polarity between conductors. Test operation of shorting bars in connection blocks. Test cables after termination but not cross connection.
    a. Test instruments shall meet or exceed applicable requirements in TIA/EIA-568-B.2. Perform tests with a tester that complies with performance requirements in "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in "Measurement Accuracy (Informative)" Annex. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
4. Optical Fiber Cable Tests:
    a. Test instruments shall meet or exceed applicable requirements in TIA/EIA-568-B.1. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
    b. Link End-to-End Attenuation Tests:
        1) Multimode Link Measurements: Test at 850 or 1300 nm in 1 direction according to TIA/EIA-526-14-A, Method B, One Reference Jumper.
        2) Attenuation test results for links shall be less than 2.0 dB. Attenuation test results shall be less than that calculated according to equation in TIA/EIA-568-B.1.

D. Document data for each measurement. Print data for submittals in a summary report that is formatted using Table **<< 10.1 inch>>** BICSI TDMM as a guide, or transfer the data from the instrument to the computer, save as text files, print, and submit.

E. End-to-end cabling will be considered defective if it does not pass tests and inspections.

DRAFT

F. Prepare test and inspection reports.

END OF SECTION 280513

DRAFT

SECTION 284600
FIRE DETECTION AND ALARM

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Provide a complete, non-proprietary fire detection and alarm system with manual stations, detectors, notification appliances, controls and devices. ***** MCPS Standard *****

B. Costs of certification and testing, including tests required by NFPA 72, shall be included in the contract sum.

1.02 RELATED REQUIREMENTS

A. Section **<< 078400 - Firestopping>>**.

B. Section **<< 083323 - Overhead Coiling Doors>>**: Coiling fire doors for interface with fire alarm system.

C. Section **<< 083513.13 - Accordion Folding Doors>>**: Doors for interface with fire alarm system.

D. Section **<< 083513.23 - Accordion Folding Fire Doors>>**: Doors for interface with fire alarm system.

E. Section **<< 087100 - Door Hardware>>**:

1. Electrically-operated locks and electromagnetic door holders for interface with fire alarm system.
2. Fire department lock boxes with tamper switch monitored by fire alarm system.

F. Section **<< 142100 - Electric Traction Elevators>>**: For interface with fire alarm system.

G. Section **<< 142400 - Hydraulic Elevators>>**: For interface with fire alarm system.

H. Section **<< 211300 - Fire-Suppression Sprinkler Systems>>**: For interface with fire alarm system.

I. Section **<< 213000 - Fire Pumps>>**: For interface with fire alarm system.

J. Section **<< 233300 - Air Duct Accessories>>**: Smoke/fire dampers for interface with fire alarm system.

K. Section **<< 260519 - Low-Voltage Electrical Power Conductors and Cables>>**: For non-power-limited cables.

L. Section **<< 260526 - Grounding and Bonding for Electrical Systems>>**.

M. Section **<< 260534 - Boxes for Electrical Systems>>**.

N. Section **<< 275129 - Rescue Assistance Signal Systems>>**: Two-way emergency communication systems for areas of refuge/rescue assistance.

1.03 REFERENCE STANDARDS

A. NFPA 70 - National Electrical Code.

B. NFPA 72 - National Fire Alarm and Signaling Code.

C. NFPA 101 - Life Safety Code.

D. UL 864 - Control Units and Accessories for Fire Alarm Systems.

DRAFT

1.04 SYSTEM DESCRIPTION

A. Control of system: By the fire alarm control panel.

B. System supervision: Automatically detect and report open circuits, shorts, and grounds of wiring for initiating device, signaling line, and notification-appliance circuits.

C. Priority of signals: Automatic alarm response functions resulting from an alarm signal from one zone or device are not altered by subsequent alarm, supervisory, or trouble signals. An alarm signal is the highest priority. Supervisory and trouble signal shave second and third level priority. Higher priority sigals take precendence over signals of lower prior

D. Noninterference: A signal on one zone shall not prevent the receipt of signals fro

E. System reset: All zones are manuall resettable from the FACP

F. Transmission to remote alarm receiving station.

G. System alarm capability during circuit fault conditions: System wiring and circuit arrangement prevent alarm capability reduction when a single ground occurs in an initiating device circuit, signal line circuit, or notification appliance circuit.

H. Loss of primary power at the FACP initiates a trouble signal at the FACP. The FACP indicates when the fire alarm system is operating on the secondary power supply.

I. Basic alarm performance requirements: Unless otherwise indicated, operation of a manual station, automatica alarm operation of a smoke or heat detector, operation of a carbon monoxide detector, or operation of sprinkler flow switch, initiates the following:

1. Notification appliance operation.
2. Identificaiton at the FACP and the remote annunciator of the zone and device originating the alarm.
3. Release of fire and smoke doors held open by magnetic door holders. Confirm exact operation of system with Fire Marshal. There are different requirements betwen elementary, middle and high schools.
4. Operation of duct smoke detectors shall initiate a supervisory signal and shutdown of fans and other air-handling equipment serving zone where alarm was initiated.
5. Operation of carbon monoxide detector shall initiate a distinct local alarm signal and signal the BAS system.
6. Recording of the event in the system memory.
7. Initiate the transmission of alarm to the Owner's remote alarm receiving station.
8. CO2 detectors are to transmit a supervisory signal to the fire alarm system.

J. In addition to functions mentioned above, elevator smoke detectors shall perform elevator recall functions in accordance with ANSI requirements. Elevator heat detectors shall activate the shunt trip breakers.

K. Upon activation of alarm signal, the system shall override any intercommunications sound system, public address sound system, theatrical sound system, or local sound system.

L. Fire and smoke doors held open by magnetic door holders shall only be released by automatic operation of smoke detectors at the respective location. Confirm with AHJ/Fire Marshal for requirements, as they pertain to elementary, middle and high school projects.

M. Alarm silencing, system reset and indication: Controlled by switches in the FACP and the remote annunciator.

1. Silencing-switch operation halts alarm operation of notification appliances and activates an "alarm silence" light. Display of identity of the alarm zone or device is retained.

DRAFT

2. Subsequent alarm signals from other devices or zones reactivate notification appliances until silencing switch is operated again.
3. When alarm-initiating devices return to normal and system reset switch is operated, notification appliances operate again until alarm silence switch is reset. System reset shall be controlled only at the FACP.

N. Remote detector sensitivity adjustment: Manipulation of controls at the FACP causes the selection of specific addressable, analog smoke detectors for adjustment, display of their current status and sensitivity settings, and control of changes in those settings. Same controls can be used to program repetitive, schedule, automated changes in sensitivity of specific detectors. Sensitivity adjustments and sensitivity-adjustment schedule changes are recorded in system memory.

O. Removal of an alarm-initiating device or a notification appliance initiates the following:
1. Transmission of trouble signal to remote alarm receiving station.

P. FACP alphanumeric display: Plan-English-language descriptions of alarm, supervisory, and trouble events; and addresses and locations of alarm-initiating or supervisory devices originating the report. Display monitoring actions, system and component status, system commands, programming informaiton, and data from the system's historical memory.

1.05 SUBMITTALS

A. General:
1. Comply with Division 01. When approved, no variation will be permitted except with written approval from the Architect.
2. Submit to the AHJ and to the Architect for review and approval.

B. Comply with **<<NFPA 72>>** chapter "Documentation," including noting names of installers, owners, and system classification information.

C. Shop Drawings: Submit installation documentation required for plan review and permitting by AHJ, including floor plans showing locations of fire alarm system components, enlarged drawn to identified scale plan view, and riser diagrams.
1. Floor plans indicating final equipment and device locations, along with raceway routes.
2. System operation description: Detailed description for this project, including method of operation and supervision of each type of circuit and sequence of operations for manually and automatically initiated system inputs and outputs. Manufacturer's standard descriptions for generic systems are not acceptable.
3. Details of remote annunciator graphic display.
4. Wiring diagrams and riser diagrams.

D. Product data: Schedule and each type of system component, including dimensioned plans and elevations showing minimum clearances and installed features and devices. Include UL listings.

E. Battery calculations.

F. Provide a complete project record drawings as specified in Division 01, showing the locaitons of all the outlets, cable taps, cable routes, and other components installed. Drawings shall be made part of Operation and Maintenance Manuals.

G. Certificaitons:
1. UL Certificate of Compliance of system supplier as specified in "Quality Assurance" below
2. Fire and smoke detection system inspecition and test report, completed by the factory representative, endorsed by the Owner and the factory representative, including test data, detector locations and serial numbers, a summary of maintenance performed,

DRAFT

recommendations for relocation or addition of detectors, final action regarding these recommednations, and system certification.

1.06 QUALITY ASSURANCE

A. System and equipment shall be UL listed. Each major component shall bear the manufacturer's name and catalog number.

B. UL labels and local testing (if required): As specified in *Section 280500 Common Work Results for Electronic Safety and Security*.

C. Single-source responsibility: Obtain system components from a single source that assumes responsibility for their compatibility.

D. Qualifications of system supplier and installer:
   1. Staff shall consist of at least one NICET Level III Technician or a professional enginer registered in Maryland.
   2. Has installed at least ten systems of the type specified which have performed satisfactorily for not less than two years.
   3. Maintains a facility with sufficient stock of spare parts.
   4. Shall respond within 24 hours of notification, to correct system failure or malfunction. During the project correction period as defined in General Conditions and in Section 260500, perform such corrections at no addition to the contract sum.

E. Factory-authorized service representative: Trained and certified by the manufacturer of the system, and experienced in the installation and operation of the type of system included in the work.

F. Comply with NFPA 72, applicable local codes, and regulations and requirements of the AHJ. Montgomery County is the local code authority.

1.07 INSPECTIONS AND SERVICE CONTRACT

A. During the general project correction period, every six months starting six months after substantial completion, a third party shall inspect and test the system.
   1. Submit written reports to the Owner and Architect, describing test results, including defects found and how they have been corrected, and listing components replaced.

1.08 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

B. Do not exceed maximum ambient temperature requirements for batteries at any time, which reduces battery service life. Replace batteries exposed to temperatures in excess of manufacturer's requirements.

C. Do not install or otherwise handle thermoplastic-insulated conductors at temperatures lower than **<< 14 degrees F>>**, unless otherwise permitted by manufacturer's instructions. When installation below this temperature is unavoidable, notify **<<Architect>>** and obtain direction before proceeding with work.

D. Existing Conditions:
   1. Existing Fire Alarm System: **<< Remove existing system completely after new system is fully operational and tested; Remove existing components indicated and incorporate remaining components into new system; or _____>>**. Comply with **<<NFPA 70>>**.

DRAFT

a. Maintain existing under warranty as if new; do not take existing portions of system out of service until new portions are fully operational, tested, and connected.

2. Modifications to Existing System:
   a. Remove inactive or abandoned cables and components from existing fire alarm system**<< , except as indicated; mark "NOT IN SERVICE" for remaining; or None - N/A>>**.
   b. Remove unused existing components and materials from site and dispose according to local and federal requirements.
   c. Remove accessible portion of abandoned cables unless tagged with identification product suitable to withstand based on installed environment.

1.09 WARRANTY

A. Fire Alarm Control Units and Accessory Equipment: Provide minimum **<< 3-year; or _____>>** manufacturer warranty covering repair or replacement due to defective materials or workmanship.

PART 2 PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Subject to compliance with requirements, provide a non-proprietary system by one of the following manufacturers:
   1. Honeywell: Fire-Lite Alarms.
   2. Honeywell: Notifier.
   3. Honeywell: Silent Knight.
   4. Carrier: Edwards EST.
   5. System Sensor.

2.02 FIRE ALARM CONTROL PANEL (FACP)

A. Fire Alarm System Interfaces and Control Functions:
   1. **<<UL 864>>** listed unless otherwise indicated.

B. Cabinet: Lockable steel enclosure. Arrange interior components so operations required for testing or normal maintenance of the system are performed from the front of the enclosure. If more than one unit is requierd to form a complete control panel, fabricate with matching modular unit enclosure to accommodate components and to allow ample gutter space for field wiring and interconnecting panels.
   1. Mounting: Surface.

C. Alarm and supervisory systems: Modules replaceable without removal of field wiring.

D. Control modules: Include types and capacities required to perform all functions of fire alarm systems.

E. Indications: Local, visible, and audible signals announce alarm, supervisory, and trouble conditions. Each type of audible alarm has a different sound.

F. Resetting controls: Prevent the resetting of alarm, supervisory, or trouble signals while the alarm or trouble condition still exists.

G. Alphanumeric display and system controls: Arranged for interface between human operator at the FACP and addressable system components, including annunciation, supervision and control.

DRAFT

1. Display: A minimum of 80 characters; alarm, supervisory, and component status messages; and indicate control commands to be entered into the system for control of smoke detector sensitivity and other parameters.
2. Keypad: Arranged to permit entry and execution of programming, display, and control commands.
3. Provide pass code protected door holder, strobe and horn bypass. Contact Owner's electronic supervisor to coordinate pass code. *** **MCPS Standard** ***

2.03 EMERGENCY POWER SUPPLY

A. General: Components include nickel-cadmium battery, charger, and an automatic transfer switch.
   1. Battery normal life expectancy: 20 years minimum.

B. Battery capacity: a minimum of 4 hours of supervisory power with 15 minutes of general alarm capability at end of 4 hours.

C. Battery charger: Solid-state, fully automatic, variable-charging-rate type. Provide capacity for 150 percent of the connected system load while maintaining batteries at full charge. If batteries are fully discharged, the charger recharges them completely within four hours. Charger output is supervised as part of system power supply supervision.

D. Integral automatic transfer switch: Transfers the load to the battery without loss of signals or status indications when normal power fails.

2.04 ONE-WAY VOICE COMMUNICATION

A. The system shall have one-way voice communication and tone-generating capabilities. The voice messaging system shall be of the same manufacturer as the control panel.

B. Central audio control module: Alarm message or tone generation and microphone connections with continuous supervision and identification of the type of failure should a problem occur. (e.g. main microphone trouble, tone trouble). Audio outputs shall have individual gain control.

C. Hand-held, push-to-talk microphone: Recessed within a protective panel-mounted enclosure, noise-canceling communication type with a frequency range of 200 Hz to 4000 Hz, equipped with a self-winding five-foot coiled cable. An LED indicator shall indicate the microphone push-to-talk button has been pressed and speaker circuits are ready for transmission. The microphone shall be supervised for disconnection.

D. Audio control switch and indication module: To provie manual access to audio operations for authorized personnel. Include a phone page select switch, tone select switch, tape select switch, and "Audio trouble Reset switch". These switches and associated LED indicators shall be supervised for disarrangement or failure.

E. Audio power amplifiers: Furnisehd with a self-contained filtered 24 Vdc power supply, transformer, and amplifier monitor circuits. The amplifier shall provide a 25-V rms output with a frequency response of 120 Hz to 12,000 Hz. Provide sufficient amplification to operate all systems simultaneously plus 10 percent spare capacity.

F. Backup amplifier: Capable of automatically replacing any failed amplifier.

G. Speaker circuits: Capable of supplying 25-V rms audio power from the system amplifiers. Provide supervision for open, short, or ground fault conditions; individual and distinct trouble indications for each fault; and one circuit for each zone or area of distinct communication.

H. Digitized tones: For alarm (slow whoop) and auxiliary requirements (wail, horn, chime, and others).

DRAFT

I. Pre-recorded digitized voice message capability: Automatically transmitted to occupants during alarm conditions.
   1. The automatic message player shall not rely on a tape or other mechanical means of transmitting the evacuation message.
   2. Provide a standard evacuation message, and message transmitter capable of transmitting a custom message up to 30 seconds long. A self-contained speaker shall provide testing of the message without disturbing the occupants of the facility. Provide system to provide up to two languages

J. Automatic voice evacuation sequence:
   1. Alarm tone shall sound for a maximum of 15 seconds, followed by automatic preselected voice evacuation messages. At the end of each voice evacuation message, the alarm tone shall resume. The alarm tones shall sound alternately until the Alarm Silence Switch at the FACP has been operated.
   2. Audible alarm operations (speaker circuit selection and alarm tone and voice messgae timing variations) shall be activated by the system software so that changes to the evacuation sequence can be made by authorized personnel without any component rewiring.

K. Manual voice paging sequence:
   1. The system shall allow voice paging. Upon activation of speaker manual control switch, attention-getting beeps shall sound over the speakers indicating an impending voice message.
   2. Voice message: Operator shall be able to make announcements via the push-to-talk paging microphone.

2.05 REMOTE ANNUNCIATOR AND GRAPHIC DISPLAY

A. Remote annunciator: Flush-mounted liquid crystal display (LCD) annunciator.
   1. Display: Supervised, back-lit, LCD with no fewer than 4 lines with 20 characters per line.
      a. Back lighting shall turn off after 4 minutes when there is no switch activity and no unacknowledged message.
      b. The first event of the highest priority shall capture the display, so that arriving firefighters can view the first alarm event immediately.
      c. Provide additional alarm supervisory trouble LED for future expansion.
      d. Descriptions below are intended to provide means for interface. See project SOOs, narrative, and input/output matrix for execution requirements.
      e. Provide initiating devices, interfaces, and control functions for emergency control function interfaces in accordance with **<<NFPA 72>>**.
   2. Key operated switched:
      a. Alarm silence.
      b. Trouble silence.
      c. Test.

B. Description: Duplicate annunciator functions of the FACP for alarm, supervisory, and trouble indications. Also duplicate manual switching functions of the FACP, including alarm silence, trouble silencing, and test.
   1. Mounting: Recessed cabinet, NEMA 250, Type 1.

C. Graphic display: As shown on the drawings, panel indicating the building floor plan with a "You are here" note and zone and device locations, permanently marked on panel surface.

DRAFT

1. Mounting: Integral with lamp-type annunciator, with individual lamps in locations shown. Provide additional blank spaces for future expansion.
2. Dimensions: 24 inches wide by 20 inches high, minimum.

2.06 MANUAL PULL STATIONS

A. Description: Fabricated of metal or plastic, and finished in red with molded, raised-letter operating instructions of contrasting color.
   1. Dual-action mechanism initiates an alarm.
   2. Station reset: Key operated only; double pole, double throw; switch rated for the voltage and current at which it operates.
   3. Integral addressable module: Arranged to communicate manual-station status (normal, alarm, or trouble) to the fire alarm control panel.
   4. False alarm protector: Tamperproof clear polycarbonate shield in a frame that fits over the pull station. When the shield is lifted to gain access to the pull station, a warning horn shall sound. Include 9-V dc alkaline battery.

2.07 SMOKE DETECTORS

A. General: UL 268A listed. Include the following features:
   1. Operating voltage: 24-V dc, nominal.
   2. Self-restoring: Detectors shall not require resetting or readjustment after actuation to restore them to normal operation.
   3. Plug-in arrangement: Detector and associated electronic components are mounted in a module that connects in a tamper-resistant manner to a fixed based with a twist-locking plug connection. Terminals in the fixed base accept building wiring.
   4. Integral visual-indicating light: LED type. Indicates detector has operated.
   5. Sensitivity: Can be tested and adjusted in-place after installation.
   6. Integral addressable module: Arranged to communicate detector status (normal, alarm, or trouble) to the fire alarm control panel.
   7. Remote controllability: Unless otherwise indicated, detectors are analog-addressable type, individually monitored at the fire alarm control panel for calibration, sensitivity, and alarm condition, and individually adjustable for sensitivity from the fire alarm control panel.
      a. Detectors which will be installed in ducts or other concealed locations shall be capable of being tested from an indicating and test station specified below.

B. Photoelectric smoke detectors: Include the following features:
   1. Sensor: LED or infrared light source with matching silicon-cell receiver.
   2. Detector sensitivity: Between 2.5 and 3.5 percent/foot smoke obscuration when tested according to UL 268A.
   3. Integral thermal detector: Fixed-temperature type with 135 deg F setting.

C. Duct smoke detector: Photoelectric type.
   1. Sampling tube: Design and dimensions as recommended by the manufacturer for teh specific duct size, air velocity, and installation conditions where applied.
   2. Relay fan shutdown: Contacts rated to interrupt fan motor circuit. Control circuit shall always be energized. If needed, provide an applicable relay.

2.08 OTHER DETECTORS

A. Heat detector, fixed-temperature type:
   1. Actuated by temperature that exceeds a fixted temperature of the following:

DRAFT

a. Elevator shaft and elevator machine room: 135 degrees F.

2. Mounting:
   a. Adapter plate for outlet box mounting.
   b. Plug-in or twist-lock base, interchangeable with smoke detector bases.
3. Integral addressable module: Arranged to communicate detector status (normal, alarm, or trouble) to the FACP.

B. Carbon monoxide detector:
1. General: Carbon monoxide detector listed for connection to fire-alarm system.
   a. Mounting: Adapter plate for outlet mounting.
   b. Field testable by introducing test carbon monoxide into the sensing cell.
   c. Integral addressable module: Arranged to communicate detector status (normal, alarm, or trouble) to the fire alarm system.
   d. Intelligent sounder base capable of generating an audible Temp 4 pattern for CO alarm indication.
   e. Detector shall have separate addressable relay module or relay base for connection to building automatiion system (BAS) to report alarm and trouble conditions.
   f. Detector shall send trouble alarm when nearing end-of-life, power supply problems, or internal faults.
   g. Comply with UL 2075.
   h. Locate, mount, and wire according to manufacturer's written instructions.
   i. Test button simulates an alarm condition.

DRAFT

2.09 CONCEALED DETECTOR INDICATING AND TEST STATION

A. Description: Flush-mounted, single-gang station for each duct smoke detector an other detector that is not readily visible, with indicating light and test switch.

B. Indicating light: Flashes when the associated device is in an alarm or trouble mode.

C. Test switch: Forces detector into alarm, allowing test of outputs programmed to occur following alarm initiation at devices.

D. Device plate: Reading SMOKE DETECTOR ABOVE CEILING, or other test as appropriate. Confirm exact wording with Owner.

2.10 NOTIFICATION APPLIANCES

A. Description: Equipped for mounting as indicated and have screw terminals for system connections.
1. Combination devices: Factory-integrated audible and visible devices ina single-mounting assembly.
2. Confirm finish color of devices with Architect and Owner; red finish with white letters or white finish with red letters.

B. Visible alarm devices: Synchronized xenon strobe lights listed under UL 1971 with clear or nominal white polycarbonate lens. Mount lens on an aluminum faceplate. The word "FIRE" is engraved in minimum 1-inch high letters on a removable sleeve on the lens.
1. Rated light output: multi-candela rating, minimum 15cd to 110cd.
2. Strobe leads: Factory connected to screw terminals.

C. Speakers:
1. UL 1480 listed.

2. Sound output: Minimum of 84 dBA at 10 feet when tapped at 0.5 watt, and maximum of 87 dBA at 10 feet. Taps shall be available at 0.25, 0.5, 1, and 2 watts.
3. 25 or 70.7 V rms.
4. Mounting: Flush or surface mountable; bi-directional as indicated, with sealed back.
5. Operation: From standard signaling circuits or addressable single or mult-zone I/O modules.

D. Combination speaker/strobe units: Speaker and visible alarm device as specified above, mounted in a fire retardant, high-impact, white polycarbonate housing suitable for flush or surface mounting.
1. Speaker: Tapped at 0.5 watts; 25 V rms.

2.11 FIRE ALARM NOTIFICATION BOOSTER

A. Power supply booster designed to extend power available to

B. Enclosure: Steel, with lockable front panel allowing access to all interior components, surface mounted.

C. Functions: Contains circuits to monitor and charge batteries, control and supervise 4 Class B appliance circuits, and monitor two controlling inputs from external sources.
1. Configurable to operate at any one of three signaling rates, or to follow the main panel's notification appliance circuit.
2. Trouble contact with 16-second delay.

D. Batteries: Two, sized for a minimum of 4 hours of standby followed by 15 minutes of alarm.

E. Indicators: LEDs, one for each circuit, one for battery supervision, one for ground fault, and one for power.

2.12 MAGNETIC DOOR HOLDERS

A. Description: Units are equipped for wall or floor mounting as indicated and are complete with matching door plate.
1. Electromagnet: Requires no more than 3 W to develop 25-lbf holding force.
2. Wall mounted units: Flush mounted, unless otherwise indicated.
3. Rating: 12/24 V DC.

B. Material and finish: Match door hardware.

2.13 ADDRESSABLE INTERFACE DEVICE

A. Monitor module: Microelectronic monitor module listed for use in providing a system address for external alarm-initiating devices with normal open contacts.
1. Dual circuit, intelligent, signaling circuit interface module.

B. Control module: Microelectronic control relay module listed for use in providing control to external appliances or equipment shutdown and to circuit breaker shunt trip for power shutdown.
1. One Form C (SPDT) dry relay contact rated at 2 amps and 24V DC.

C. Isolator module: Microelectronic fault isolator module listed for isolating and removing a fault from a data circuit while allowing the remaining data loop to continue operating.
1. Protect loop system against wire-to-wire short circuits by isolating section of loop and permitting other loop sections to continue to operate.

D. Non-addressable control relay: Isolation relay for control of HVAC unit contactors and magnetic door holders, UL 864 listed.

DRAFT

1. Construction: Sealed, non-removable, with terminations to pressure-type screw terminals.
2. Rating: Use with circuits up to 240 V AC at 7 amps inductive.

2.14 WIRE AND WIRING SYSTEM

A. Non-power-limited circuits: Solid copper conductors with 600V rated 75 degree C, color coded insulation.
   1. Low-voltage circuits: No. 16 AWG, minimum.
   2. Line-voltage circuits: No. 12 AWG, minimum.

B. Power-limited circuits: NFPA 70, Types FPL, FPLR, or FPLP, as recommended by manufacturer.

C. Wiring System: Class B in accordance with NFPA 72.

D. Survivability: Circuits necessary for the operation of notification applicances shall be protected by a 2-hour fire-rated cable system or a 2-hour fire-rated enclosure.

E. Type MC fire alarm cable: Equal to AFC Cable Systems FPLP metal-clad, multi-conductor, fire alarm and control cable.
   1. Ratings:
      a. Plenum rated.
      b. Approved for use as fixed wiring concealed in building.
      c. Maximum operating temperaturess:
         1) 105 degrees C dry for FPLP applications at nominal voltage ratings 300V and less.
         2) 90 degrees C dry for MC cable installations at nominal voltage ratings of 600V and less.
      d. UL listed for penetrations of wall and floor assemblies of gypsum wallboard, concrete, and concrete masonry wth 1-, 2-, and 3-hour fire ratings.
   2. Shield over conductor assemply: Laminated aluminum and mylar tape and tinned copper drain wire.
      a. Drain wire: Minimum No. 18 AWG, in contact with aluminum shield.
   3. Listed in accordance with UL 1596:
      a. Insulated or bare grounding conductor in accordance with Table 6.3, cabled with the circuit conductors and identified in compliance with Section 35.
      b. Galvanized steel armor, red, applied over inner cable assembly with positive interlock conforming to the requirements of Section 12.
      c. Tested in accordance with applicable requirements.

2.15 PERIPHERAL EQUIPMENT

A. Alarm reporting device: A digital communicator shall report an alarm or trouble condition. It shall notify Owner's fire alarm monitoring service and one or more facilities personnel. Provide unit compatible with the Owner's monitoring service.

B. Sprinkler flow and tamper switches: Specified in fire suppression sprinkler system specifications. Provide a monitor module for addressing each device. Unit shall mount on 4-inch square, 2.5-inch deep back box.
   a. Provide monitoring of interconnected systems. Coordinate notification appliance alternate markings as indicated on drawings.

DRAFT

PART 3 EXECUTION

3.01 INSTALLATION, GENERAL

A. Factory-authorized service representative, as required in "Quality Assurance" in Part 1 above, shall supervise installation, software documentation, adjustment, preliinary testing, final testing, and certification of the system, and provide the operating instructions.

B. Provide wiring, conduit, and outlet boxes required for the complete system, in accordance with system manufacturer's instructions and with the requirements specified in Division 26 for wiring, conduit, and boxes. Provide 12 inches of slack at each outlet.

1. Install wiring in conduit, except where noted on drawings to provide Type MC fire alarm cable.
2. Install Type MC fire alarm cable within concealed ceiling spaces and within drywall partitions, in accordance with Article 330 of the National Electric Code (NFPA 70).
3. Identification: Paint fire alarm junction box covers red.

C. Wires, cables, conduits, and wiring connections are specified in Division 26, Electrical. Include in the work of this section, wiring, conduits, and equipment connections complying with the requirements of Division 26, so that the fire alarm system will function as specified and indicated on the drawings.

D. Wiring: Free from grounds or crosses between conductors.

1. Identification: Color code wiring, not duplicating building wiring colors. Tag each wire at each junction point.

E. Final connections between equipment and the wiring system shall be made under the direction and supervision of the qualified supplier.

F. Provide 20 percent spare capacity for each notification appliance circuit.

G. Locate 135 degrees F rated heat detectors in elevator shafts and elevator machine rooms within 18 inches of sprinklers.

3.02 INSTALLATION, FIRE ALARM NOTIFICATION BOOSTER

A. Provide number of notification power supply boosters required for a complete fire alarm system.

B. Utilize a single pole, 20 amp circuit breaker in a 120V electrical panelboard to make electrical connection to each power supply booster.

1. Circuit breakers shall match and shall be compatible with the other breakers in the panelboard.

C. Branch circuits from panelboards to each notification power supply booster: Two No. 12 wires and one No. 12 ground in conduit, no less than 0.75 inch trade size, unless otherwise indicated.

D. Install conduits and wiring as specified in Sections 260519 and 260533.

E. Provide smoke detector above each power supply booster.

3.03 INTERFACE WITH OTHER WORK

A. Furnish duct smoke detectors to be installed as part of ductwork specified in Division 2

B. Coordinate with installation of flow and tamper switches in fire suppression sprinkler system.

C. Coordinate with sprinkler contractor for number and locations of sprinklers in elevator shafts and elevator machine rooms.

D. Coordinate locations of control modules for connections to sound systems override.

DRAFT

3.04 CARBON MONOXIDE DETECTORS

A. Provide carbon monoxide detectors where fuel fired equipment are present. Provide addressable relay for connection to BAS (building automation system).

3.05 LOCATIONS OF FIRE ALARM EQUIPMENT

A. Locate the annunciator and other associated equipment as shown on the drawings.

B. Visual indicating appliances: Install where shown on the drawings. If field conditions require variation from drawings, do not violate ADA requirements, including, but not limited to, the following:

1. Any room or space required to have a visual appliance, including corridors or hallways: No place shall be more than 50 feet from the indicating appliance in the horizontal plane.
2. Rooms and spaces exceeding 100 feet in one dimension, without obstructions 6 feet above the finished floor: Indicating appliances may be placed around the perimeter, spaced approximately 100 feet apart.

C. Mount indicating and test station for concealed smoke detectors near ceiling under detector. Text engraved on plate shall be descriptive of the device identified.

D. Provide a smoke detector at each fire alarm panel location, including but not limited to main control, auxiliary control, and power panels.

3.06 INSPECTION, TEST, ADJUSTMENT AND REPORT

A. Furnish equipment and appliances for testing the complete system during progress of the work and after completion of the installation, including a megger test of wiring. The tests generally shall demonstrate the following:

1. Circuits are continuous and free from
2. Circuits are free from unspecified grounds.
3. Resistance to ground of non-grounded circuits is not less than one megohm.
4. Circuits are properly connected in accordance with the applicable wiring diagrams.
5. Each detector operates correctly.
6. Detectors are correctly located and sufficient in number.

B. Defects or omissions observed during general and system tests shall be repaired as quickly as possible and the tests reconducted.

C. Submit report as required in Part 1 above.

3.07 OPERATING INSTRUCTIONS

A. Furnish the necessary technicians, skilled workers, and helpers to operate the electrical systems and equipment of the entire project for one 8-hour day.

B. Where specified in technical sections, provide longer periods required for specialized equipment.

C. Instruct the Owner or designated personnel in operation, maintenance, lubrication, and adjustment of systems and equipment.

D. The Operating and Maintenance Manual shall be available at the time of the instructions for use by instructors and Owner personnel.

E. Schedule the general and specialized instruction periods for a time agreed upon by the Owner and Engineer of record.

DRAFT

F. Provide at least 8 hours of additional instruction time for the systems and equipment specified in this section, consisting of 2 periods of 4 consecutive hours, during a period of not more than 60 days.

3.08 INSTALLATION

A. Install field-devices, components, FACU and related equipment, and accessories in accordance with the following:

3.09 INSPECTION AND TESTING FOR COMPLETION

3.10 CLOSEOUT ACTIVITIES

A. See Section **<< 017800 - Closeout Submittals>>** for additional submittals.

B. See Section **<< 017900 - Demonstration and Training>>** for additional requirements.

C. Closeout Demonstration: Demonstrate operation of all functions to **<<Owner>>**.
   1. Be prepared to conduct any of required tests.
   2. Have minimum **<< one; or _____>>** copy of operation and maintenance data,**<< preliminary; _____; or None - N/A>>** copy of project record drawings, input/output matrix, and operator instruction chart(s) available during demonstration.
   3. Have authorized technical representative of FACU manufacturer present during demonstration.
   4. Demonstration may be combined with inspection and testing required by AHJ; notify AHJ with enough time to schedule demonstration.
   5. Repeat demonstration until successful.

D. Submit electronic copies of tests on a USB thumb drive to Owner.

E. Provide an electronic copy of the fire alarm control panel programming upon the completion on a USB thumb drive to Owner.

F. Substantial Completion of project cannot be achieved until inspection and testing is successful and the following:
   1. Approved operating and maintenance data has been delivered.
   2. All aspects of operation have been demonstrated to **<<Owner>>**.
   3. Final acceptance of fire alarm system has been given by AHJ.

G. Project record documents:
   1. Maintain onsite one set of record documents; record actual revision to the work of this division. The record set of documents shall be in electronic form, and stored on a USB flash drive for uploading to a server. All electronic files shall be book marked and searchable. ***** MCPS Standard ***** The record set of drawings shall contain, at a minimum, the following:
      a. Contract Drawings.
         1) As-built drawings shall be digital drawings, not scans. ***** MCPS Standard *****
      b. Specifications.
         1) The specifications shall be sectioned out to reduce file sizes. Confirm requirements with Paul Geisler. ***** MCPS Standard *****
      c. Addenda.
      d. Change Orders and other Modifications to the Contract.
      e. Reviewed shop drawings, product data, and samples.
   2. Maintain

DRAFT

3.11 MAINTENANCE

A. Provide to **<<Owner>>**, at no extra cost, written maintenance contract for **<< entire manufacturer's warranty period; 2 years; or ____>>**, to include work described below.

B. Perform routine inspection, testing, and preventive maintenance required by **<<NFPA 72>>**, including:
   1. Maintenance of fire safety interface and supervisory devices connected to fire alarm system.
   2. Repairs required, unless due to improper use, accidents, or negligence beyond control of maintenance contractor.
   3. Record keeping required by **<<NFPA 72>>** and AHJ.

C. Provide trouble call-back service upon notification by **<<Owner>>**:
   1. Provide on-site response within **<< two hours; or _____>>** of notification.
   2. Include allowance for call-back service during normal working hours at no extra cost to **<<Owner>>**.
   3. **<<Owner>>** will pay for call-back service outside of normal working hours on hourly basis, based on actual time spent at site and not including travel time; include hourly rate and definition of normal working hours in maintenance contract.

D. Provide complete description of preventive maintenance, systematic examination, adjustment, cleaning, inspection, and testing, with detailed schedule.

E. Provide all necessary materials, laptop, programs and service tools for fire alarm system with training(s). The Owner must have access to TechSupport for the life of the materials.

F. Maintain on-site log listing date and time of each inspection and call-back visit, condition of system, nature of trouble, correction performed, and parts replaced. Submit duplicate of each log entry to **<<Owner>>**'s representative upon completion of site visit.

G. Comply with **<<Owner>>**'s requirements for access to facility and security.

END OF SECTION 284600

DRAFT

SECTION 311000
SITE CLEARING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Clearing and grubbing.

B. Selective removal and trimming.

C. Earth stripping and stockpiling.

D. Repair and restoration.

E. Debris removal.

1.02 RELATED REQUIREMENTS

A. Section **<< 024100 - Demolition>>**: Removal of built elements and utilities.

B. Section **<< 026500 - Underground Storage Tank Removal>>**.

C. Section **<< 312323 - Fill>>**: Material for filling holes, pits, and excavations generated as result of removal operations.

D. Section **<< 329300 - Plants>>**: Relocation of existing trees, shrubs, and other plants; pruning.

1.03 REFERENCE STANDARDS

A. Maryland Department of the Envinronment Standards and Specifications for Soil Erosion and Sediment Control, current edition.

B. Terms and conditions of the Final Forest Conservation Plan, Tree Save Plan or other Landscape Credit Plans as approved by the Authority having Jurisdiction.

C. ANSI A300 Part 1 - American National Standard for Tree Care Operations - Tree, Shrub, and Other Woody Plant Management - Standard Practices (Pruning).

D. ANSI A300 Part 5 - American National Standard for Tree Care Operations – Tree, Shrub and Other Woody Plant Maintenance Standard Practices (Management of Trees and Shrubs During Site Planning, Site Development, and Construction).

E. ANSI Z133 - American National Standard for Arboricultural Operations - Safety Requirements.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Pre-Construction Meeting: Convene prework meeting**<< one week; at least one week; _____; or None - N/A>>** prior to start of work of this section; require attendance by affected personnel, Arborist, Authority having jurisdiction Inspector, and Architect.

B. Sequencing: Ensure utility disconnections are in orderly and expeditious manner.

1.05 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Site Plan:

1. Indicate vegetation removal limits.
2. Indicate areas for temporary construction and field offices.

C. Clearing Firm Qualification Statement: Documentation of specialized experience.

DRAFT

D. Existing Conditions Report: Written documentation of vegetation to remain, see Section **<< 013000 - Administrative Requirements>>**.

E. Photographs: Photographic documentation of existing vegetation.

F. Documention of legal off-site disposal areas. Obtain required federal, state, county, or local approvals for off-site borrow areas or waste sites if located on private property and/or Maryland Department of the Environment approval if on State or Federal property. Furnish documentation of such local approvals in advance of any off-site borrow operations to the Owner.

1. Final Payment will be retained until all off-site permits are submitted to the Owner.

1.06 QUALITY ASSURANCE

A. Clearing Firm Qualifications: Company specializing in performing work of type specified and with at least **<< five; or _____>>** years of**<< documented; _____; or None - N/A>>** experience.

B. Trimming or Pruning Qualifications: Tree Care Industry Association (TCIA) **<< accredited company; utility contractor accredited company; Certified Treecare Safety Professional; or _____>>**.

1.07 FIELD CONDITIONS

A. Ambient Conditions: Terminate work during hazardous environmental conditions according to **<<29 CFR 1910.266>>**.

B. Existing Utilities: Locations of existing utilities are approximate. Locations have been determined from field survey, public utility records and Owner records.

1. Contractor shall be responsible for contacting "Miss Utility" and Owner or controlling agencies of existing utilities within construction area for verification of locations, prior to beginning of work.
   a. On-Site Utilities shall be marked by Contractor according to ASCE Quality Level 'B'.
   b. Contractor shall test pit all proposed utility crossings prior to the start of any utility installation. Provide results as a shop drawing to the Architect.
2. Contractor shall be responsible for coordination of utility relocation or removal by others with phases of construction activities.

C. Traffic: Conduct site-clearing operations to ensure minimum interference with roads, streets, walks, and other adjacent occupied or used facilities. Do not close or obstruct streets, walks, or other occupied or used facilities without permission from authorities having jurisdiction.

D. Temporary Erosion and Sediment Control: Comply with other requirements specified in Section **<< 015713 - Temporary Erosion and Sediment Control>>**.

E. Protect improvements on adjoining properties and on Owner's property.

F. Restore damaged improvements to original condition, as acceptable to property Owners.

G. Protection of Existing Trees and Vegetation: Employ and provide services of an appropriately Licensed Maryland Arborist at no additional cost to Owner, when necessary, that appropriate measures are implemented to ensure continued health of and protect existing trees and vegetation indicated to remain in place. Protect existing trees and vegetation indicated to remain in place protected against unnecessary cutting, breaking or skinning of roots, skinning or bruising of bark, smothering of trees by stockpiling construction materials or excavated materials within drip line, excess foot or vehicular traffic, or parking of vehicles within drip line. Provide temporary guards to protect trees and vegetation to be left standing. Clearing operations are to be conducted in strict accordance with requirements of approved Final Forest

DRAFT

Conservation Plan, Tree Save Plan or other landscape credit plan for project. As directed by the Arborist these measures may include the following at no additional cost to the Owner:

1. Water trees and other vegetation indicated to remain during clearing and subsequent construction operations within limits of Contract work as required maintaining health during construction operations.
2. Provide protection for roots over 1-1/2 inch in diameter that are cut during construction operations. Coat cut faces with emulsified asphalt or other acceptable coating formulated to use on damaged plant tissues. Temporarily cover exposed roots with wet burlap to prevent roots from drying out; cover with earth as soon as possible.
3. Repair or replace trees and vegetation to remain that are damaged during construction operations in a manner acceptable to Architect. Employ a licensed Arborist to repair damage to trees and shrubs.
4. Replace trees that cannot be repaired and restored to full-growth status, as determined by arborist.

H. Salvageable Improvements: Carefully remove items indicated to be salvaged and, unless directed otherwise, store on Owner's premises where indicated or directed.

PART 2 PRODUCTS

2.01 MATERIALS

A. Tree Wound Compound: Application capable of sealing vegetation wounds and grafts.

B. Temporary Tree Protection Fencing: Provide "Temporary Tree Protection" for trees indicated to remain, and as required for existing trees beyond indicated "Clearing and Grading Limits". Install as indicated as noted on the approved plans, or as directed by the Inspector.

C. Fence Posts: Install posts, spaced no more than 10 feet on center, by driving plumb to one-third post height above grade. Stretch fence fabric between posts and fasten securely to steel posts with tie wire.

1. Steel "T" or "U" channel, with punched or riveted lugs for fence attachment.
2. Weight: 1.33 pounds per linear foot
3. Length: 66 inches
4. Bottom End Shape: Pointed
5. Finish: Rust inhibitive primer paint

D. Fence Fabric: 14 Gauge 2 inch X 4 inch Welded Wire Fence.

1. Fabric Height: Three (3) Feet

E. Tree Proectection Signage: Provide in accordance with the approved Forest Conservation or Tree Save Plans.

PART 3 EXECUTION

3.01 EXAMINATION

A. Comply with additional requirements specified in Section **<< 017000 - Execution and Closeout Requirements>>**.

B. Identify potential runoff areas.

C. Construction Fencing: See Section **<< 015000 - Temporary Facilities and Controls>>**.

D. Boundary Demarcations: See Section **<< 017123 - Field Engineering>>**.

E. Identify potential dust sources.

DRAFT

F. Identify preexisting debris, junk, and trash on-site.

3.02 PREPARATION

A. Coordinate work with utility companies; notify before starting work and comply with local requirements; obtain required permits.

B. Protect existing utilities to remain from damage.

C. Do not disrupt public utilities without permit from authority having jurisdiction.

D. Protect existing structures and other elements that are to remain.

E. Protect existing vegetation to remain from damage and monitor according to **<<ANSI A300 Part 5>>**.

1. Photograph vegetation with documentation indicating data, time, weather, and brief description of health condition.

F. Install sedimentation barriers according to Section **<< 015713 - Temporary Erosion and Sediment Control>>**.

G. Develop dust remediation controls and methods in accordance with local ordinances.

H. Remove preexisting debris, junk, and trash on-site.

3.03 CLEARING AND GRUBBING

A. Clearing: Cut trees, stumps, shrubs, downed timber, and other vegetation for removal within identified area**<< as indicated on drawings; _____; or None - N/A>>** according to **<<29 CFR 1910.266>>**. Follow recommendations of **<<ANSI Z133>>** and best local practices for species involved.

B. Do not remove or damage vegetation beyond limits indicated on drawings.

C. In areas where vegetation must be removed but no construction will occur remove vegetation with minimum subsoil disturbance.

D. Grubbing: Remove stumps, roots, buried timber, and other vegetation minimum depth **<< 12 inches (30 cm); or _____ inches (_____ cm)>>** from ground. Remove rocks 2 1/2" diameter minimum depth **<< 6 inches (15 cm); or 12 inches (30 cm)>>** from ground.

3.04 SELECTIVE REMOVAL AND TRIMMING

A. Selective Removal: Individual tree and shrub identified for removal**<< as indicated on drawings; _____; or None - N/A>>** according to **<<29 CFR 1910.266>>**.

1. Includes trees, stumps, shrubs, downed timber, and other vegetation identified for removal as indicated on drawings.
2. Fell trees away from vegetation identified to remain.
3. **<< Grind; Pull; or _____>>** stumps, remove roots, buried timber, and other vegetation identified for removal **<< 12 inches (30 cm); or _____ inches (_____ cm)>>**, minimum depth, from ground. Remove rocks 2 1/2" diameter **<< 6 inches (15 cm); or 12 inches (30 cm)>>**, minimum depth, from ground.
4. Fill holes left by removal of stumps and roots, using suitable fill material, with top surface neat in appearance and matching existing grade.

B. Selective Trimming: Individual limbs and branches cut back according to **<<ANSI A300 Part 1>>** identified for removal**<< as indicated on drawings; _____; or None - N/A>>**. Follow recommendations of **<<ANSI Z133>>** and best local practices for species involved.

1. Prune dead branches and balance overall appearance; see Section **<< 329300>>**.

DRAFT

3.05 EARTH STRIPPING AND STOCKPILING

A. Stripping:
   1. Remove topsoil within identified area:
      a. According to soil report.

B. Stockpiling:
   1. Place topsoil in identified areas**<< as indicated on drawings; _____; or None - N/A>>**:
      a. Protect piles from erosion.
      b. Vegetatively stabilize any stockpiles to remain exposed over seven (7) calendar days.
      c. Stockpile areas shall be encompassed with silt fence.
   2. Cut sod into portable sections for undamaged removal.
   3. Record topsoil depth at rate of **<< five; or _____>>** measurements per **<< acre>>** or within each identified area**<< as indicated on drawings; _____; or None - N/A>>**.

3.06 REPAIR AND RESTORATION

A. Remaining Existing Facilities, Utilities, and Site Features: If damaged due to this work, repair or replace to original condition.
   1. Outside removal limits.
      a. **<< 4 inches (10 cm); 6 inches (15 cm); or _____ inches (_____ cm)>>** deep.

B. Vegetation: Replace damaged or destroyed vegetation identified to remain**<< as indicated on drawings; _____; or None - N/A>>** at no cost to **<<Owner>>**:

C. Apply tree wound compound according to manufacturer's recommendations.
   a. According to depth measurements.
   2. Remove topsoil within identified area as indicated on drawings.

3.07 DEBRIS REMOVAL

A. Remove debris, junk, and trash from site.

B. Leave site in clean condition, ready for subsequent work.

C. Clean up spillage and windblown debris from public and private lands.

D. Burning is not permitted on Owner’s property.

3.08 CLEANING

A. See Section **<< 017000 - Execution and Closeout Requirements>>** for additional requirements.

B. Remove unused stockpiled subsoil. Grade stockpile area to prevent standing water.

C. Leave site clean and ready to receive work.

END OF SECTION 311000

DRAFT

SECTION 311005
SITE DEMOLITION

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. The General Conditions, Supplementary Conditions and Division 1, General Requirements, are a part of this section.

1.02 RELATED SECTIONS

A. Section 017419 “Construction Waste Management and Disposal”

B. Section 024100 “Demolition”

C. Section 311000 “Site Clearing”

D. Section 312000 "Earthmoving"

E. Division 26 "Electrical".

1.03 DESCRIPTION OF WORK

A. This section specifies demolition of existing site elements improvements and underground utilities. Removal and disposal, off site, of all portions of existing site items indicated (drives, parking surfaces, etc.)

1.04 CODES AND REGULATORY REQUIREMENTS

A. For existing flammable liquid storage tanks refer to National Fire Protection Association (NFPA).

B. Code of Maryland Regulations, Section 26.10.01; State of Maryland, Department of the Environment, Title 26, Subtitle 10, "Oil Pollution and Tank Management".

C. Comply with all applicable federal, state and local disposal requirements and regulations for material removed from site.

D. Recycle, compost and/or salvage plants and demolition waste in accordance with Section 017419 “Construction Waste Management and Disposal” requirements.

E. Comply with permits, approved plans and conditions thereof.

F. Comply with terms and conditions of approved Final Forest Conservation Plan, Tree Save Plan or other Landscape Credit Plans.

G. Comply with governing EPA notification regulations before starting demolition.

H. Comply with hauling and disposal regulations of authorities having jurisdiction.

1.05 PROJECT CONDITIONS

A. Owner Responsibility: Owner assumes no responsibility for actual conditions of areas to be demolished. Conditions existing at time of bid will be maintained by Owner as far as is practical.

B. Storage or sale of removed items or materials will not be permitted.

C. Existing Utilities: Locations of existing utilities are approximate. Locations have been determined from field survey, public utility records and Owner records.

1. Contractor shall be responsible for contacting "Miss Utility", Owner or controlling agencies of existing utilities within construction area for verification of locations and marking of utilities, prior to beginning of work.

DRAFT

a. On-Site Utilities shall be marked by Contractor according to ASCE Quality Level 'B'.

2. Contractor shall be responsible for coordination of utility relocation or removal by others with phases of construction activities.

D. Existing Subsurface Conditions: Verify existing pavement materials and respective thicknesses during prebid inspection. Obtain written authorization from Owner before conducting test hole explorations of existing pavements within project site. All test holes shall be patched to match existing conditions to the satisfaction of the Owner.

E. Traffic: Obtain written authorization from local jurisdiction, adjacent property Owners and Owner prior to obstructing vehicular traffic and parking areas. Obtain written authorization from local jurisdiction prior to obstructing public rights-of-way and easements.

F. No tree removal or site clearing other than specifically noted on the Contract drawings shall be performed without written consent of local Forest Conservation Inspector and Owner.

G. Blasting will not be permitted.

1.06 SUBMITTALS

A. General: Submit each item according to Conditions of Contract and Division 1 Specification Sections, for information only, unless otherwise indicated.

B. Qualifications for proposed demolition firm.

C. Proposed dust-control measures in accordance with local codes.

D. Proposed noise-control measures in accordance with local codes.

E. Schedule of selective demolition activities indicating the following:

1. Detailed sequence of selective demolition and removal work, with starting and ending dates for each activity.
2. Interruption of utility services.
3. Coordination for shutoff, capping, and continuation of utility services.

F. Photographs or videos, sufficiently detailed, of existing conditions of adjoining construction and site improvements that might be misconstrued as damage caused by selective demolition operations.

G. Record drawings at Project closeout according to Section 017000 "Execution and Closeout Requirements."

1. Identify and accurately locate capped utilities and other subsurface structural, electrical, or mechanical conditions.

H. Landfill records showing receipt and acceptance of hazardous wastes by a landfill facility licensed to accept hazardous wastes.

1.07 QUALITY ASSURANCE

A. Demolition firm qualifications: Engage an experienced demolition firm that has successfully completed at least five years of local demolition work similar to that indicated for this project.

B. Regulatory Requirements: Comply with applicable codes and regulatory requirements. Refer to Paragraph 1.4 of this section.

C. Submit written advanced notification to public utility companies as required by respective utility purveyor, but no less than one week prior to planned work, for disconnection of active utilities.

DRAFT

1.08 DEFINITIONS

A. Demolition: Complete removal and legal off-site disposal of existing facilities specified or indicated.

B. Salvage: Complete removal, by methods, which prevent damage or destruction of any items indicated to be relocated (or salvaged) and subsequent relocation and reinstallation in an area designated by Owner.

C. Remove and Salvage: Items indicated to be removed and salvaged remain Owner's property. Remove, clean, and pack or crate items to protect against damage. Identify contents of containers and deliver to Owner's designated storage area.

D. Remove and Reinstall: Remove items indicated; clean, service, and otherwise prepare for reuse; store and protect against damage. Reinstall items in locations indicated.

E. Existing to Remain: Protect construction indicated to remain against damage and soiling during demolition. When permitted by Architect, items may be removed to a suitable, protected storage location during selective demolition and then cleaned and reinstalled in original locations.

1.09 MATERIALS OWNERSHIP

A. Except for items or materials indicated to be reused, salvaged, reinstalled, or otherwise indicated to remain Owner's property, demolished materials shall become Contractor's property and shall be removed from site with further disposition at Contractor's option.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.01 PROTECTION AND RESTORATION

A. Refer to Section 311000 "Site Clearing" and Section 312000 "Earthmoving".

B. Existing Facilities: Protect existing facilities and structures designated to remain, temporarily or permanently, from damage during demolition or construction activities. Repair items damaged during demolition or construction activities to their original condition or replace with new. Do not overload structural elements or pavements to remain. Provide new supports and reinforcement for existing construction weakened by demolition and/or removal work. Repairs, reinforcement or structural replacement shall be approved by Architect or Owner's Representative.

C. Existing Utility Services: The locations of underground utility services are approximate and are taken from Owner's record information and record information provided by utility companies. Protect existing utility services designated to remain temporarily or permanently, or to be relocated or removed by others. Contractor shall sequence demolition and construction activities to minimize utility service interruptions to existing facilities to remain. Where removal of existing utility services is required for other site construction, provide temporary covering of exposed areas, and temporary service or connections for utilities until permanent utility service replacements are completed.

1. Contractor shall coordinate with affected utility companies to determine extent of relocation work to be done by others.
2. Contractor shall coordinate utility relocation or removal by others with phases of construction activity.

DRAFT

3.02 EXISTING SITE IMPROVEMENTS DEMOLITION

A. Existing Pavements: Demolish existing pavements including stone sub-base, regardless of pavement thickness, to limits indicated at no increase to Contract Sum. Neatly saw cut existing bituminous concrete pavement to straight, smooth and sharp edges perpendicular to pavement surface.

B. Existing Sidewalks and Curbing: Demolish existing sidewalks and curbing to limits indicated, unless nearest expansion joint is less than six (6) feet from indicated limits of removal. In that case, remove existing concrete to nearest expansion joint beyond indicated demolition limits at no increase to the Contract Sum. Neatly saw cut existing cement concrete curbing, to limits indicated, to smooth, clean and sharp edges perpendicular to top and face of curbing.

1. Contractor's Option: Remove existing concrete curbing and sidewalk to nearest expansion joint beyond demolition limits indicated at no increase to Contract Sum.

C. Existing Entrances and Aprons: Demolish existing entrances and aprons indicated.

D. Miscellaneous: Demolish existing fencing indicated, including posts, footings and related appurtenances. Demolish additional miscellaneous existing site improvements indicated, specified and required to construct project.

3.03 EXISTING OVERHEAD UTILITY DEMOLITION

A. Existing overhead electrical service facilities will be removed by the responsible Power Company. Contractor shall contact appropriate power company to schedule and arrange for payment for removals.

B. Existing overhead telecommunication facilities will be removed by responsible Telecommunication Company. Contractor shall contact Telecommunication Company to schedule and arrange for payment for removals.

C. Existing overhead cable service facilities will be removed by responsible Cable. Contractor shall contact Cable Company to schedule and arrange for payment for removals.

3.04 EXISTING UNDERGROUND UTILITY DEMOLITION

A. Excavate and expose existing underground utilities and related structures designated for, or as required to implement, removal. For excavation operations refer to Section 331000 "Utility Standards". Remove existing utility structure castings. Backfill excavations, upon completion of utility demolition operations. For backfill operations refer to Section 331000 "Utility Standards".

B. Place detectable markers to indicate location of disconnected services. Identify service lines and capping locations on project record documents.

C. EXISTING UNDERGROUND STORAGE TANKS:

D. Demolish existing tanks in accordance with NFPA Standard No. 30, Appendix C, Code of Maryland Regulations, Section 26.10.10, all local jurisdictional requirements, and as noted on the drawings. Pump out and remove liquid from each tank. Flush tanks with clean water to remove residue. Purge tanks of all vapors. Excavate and expose tank pipe connections. Disconnect and remove pipe connections and related equipment pipe connections and related equipment (e.g. pipe vaults, etc.). Remove empty tanks and test excavation for contaminated soils. Immediately inform Soils Engineer, Owner's Representative, and Architect if contaminated soils are discovered. Do not begin contaminated soil removal operations until written authorization is obtained from the Soils Engineer, Owner's Representative, or Architect and measurements are obtained. Any contaminated soils discovered shall be removed and disposed of off-site in accordance with all applicable Federal, State and local requirements. Backfill excavations as specified in Section 331000 "Utility Standards". Payment for contaminated soil removal, disposal and backfill to be by Change Order.

DRAFT

E. If contaminated soils are found, the Contractor shall provide soil testing for contaminants. These tests shall be conducted prior to any excavation, periodically at differing soil elevations during excavation, and as a final check after excavations are completed. Forward all test results to the Owner's Representative and Architect. The Contractor shall prepare and file all materials required by Federal, State and local jurisdictions, including, but not limited to, the Initial Notification Form, the Initial Abatement Measure Report, and the Site Characterization Report. The Contractor shall protect the excavated area from flooding. The Contractor shall stockpile contaminated soils to prevent contamination of surrounding soils. Once excavation is complete, stockpiled soils shall be measured by the Soils Engineer or Owner's Representative prior to removal.

F. Before final disposition of excavated tanks, retest for vapors and, if necessary, purge again. Contractor shall make holes or openings in tanks to render unfit for further use.

3.05 MAINTENANCE

A. Refer to Section 312000 "Earthmoving".

3.06 SALVAGE MATERIALS

A. Carefully remove items designated for Salvage, or "Remove and Relocate", to avoid damage. Store site items indicated for salvage, or "Remove and Relocate", to prevent damage during construction. Relocate items as indicated on site plan or as directed in field by Owner's Representative. Contractor shall replace salvage items damaged during removal, storage or relocation operations at no increase to Contract Sum.

3.07 WASTE MANAGEMENT

A. Transport demolition waste materials from project site to legal offsite waste disposal areas. Document legal offsite waste disposal areas.

B. Recyclable/salvageable/compostable site-clearing materials to be recycled, salvaged, or chipped/composted in accordance with Section 017419 “Construction Waste Management and Disposal” requirements.

END OF SECTION 311005

DRAFT

SECTION 312000
EARTH MOVING

PART 1 GENERAL

1.01 RELATED DRAWINGS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, and Division 1, Specification Sections, apply to Work in this section.

1.02 DESCRIPTION OF WORK

A. Section specifies materials, equipment and Work required to perform earthwork and grading operations for site development including:
   1. Rough grading.
   2. Sediment control measures.
   3. Excavation of materials and disposal of unsuitable materials.
   4. Footing and foundation trenches and pits.
   5. Stability of excavations.
   6. Removal of water.
   7. Filling, backfilling and compacting.
   8. Finish grading.
   9. Trenching and backfilling for piped utilities.
   10. Porous fill under concrete slabs.
   11. Testing and inspections.

DRAFT

1.03 RELATED SECTIONS

A. Section 311000 "Site Clearing"

B. Section 311005 "Site Demolition"

C. Section 312500 “Erosion and Sedimentation Control”

D. Section 315000 “Excavation Support and Protection”

E. Section 329305 “Lawns and Grasses”

F. Section 329500 “Trees, Shrubs and Groundcovers”.

1.04 CODES AND REGULATORY REQUIREMENTS

A. Contractor shall comply with applicable requirements of governing agencies and/or authorities having jurisdiction.

B. Latest edition of Maryland Department of Transportation, State Highway Administration, Standard Specifications for Construction and Materials and approved addenda, except Method of Measurement and Basis of Payment, are controlling specifications for Work within State rights-of-way.

C. Latest Montgomery County Department of Transportation standards and specifications for Work in County rights-of-way and on County property.

D. Latest City of Rockville Standard Specifications for Work in City right-of-way.

E. Latest City of Gaithersburg Standard Specifications for Work in City right-of-way.

1.05 EXAMINATION OF SITE DOCUMENTS

A. Plans, surveys, measurements, and dimensions under which Work will be performed are believed to be correct. Examine both site and documents and report inconsistencies to Architect prior to beginning Work.

1.06 SPECIAL REQUIREMENTS

A. Topsoil Removal: No topsoil shall be removed from site without Owner's permission and fill material shall be subject to approval of Geotechnical/Soils Engineer and as further approved by both Architect and Owner.

B. Soil Erosion and Sediment Control: Implement and maintain soil erosion and sediment control measures and conduct activities in accordance with approved permit drawings. Arrange for and secure required inspections and approvals and provide documentation of same.

C. Layout and Grades: Layout lines and grade Work in accordance with Contract Documents. Establish permanent benchmarks determined by a Maryland Registered Land Surveyor or Professional Engineer. Maintain established bounds and benchmarks and replace, as directed, any which are destroyed or disturbed.

D. Maintenance of Traffic: Do not close or obstruct any street, sidewalk, alley or passageway unless specifically designated to be closed or obstructed on Contract drawings.

E. Cleaning of Paved Surfaces: Clean and maintain paved roadways, sidewalks, and public thoroughfares on or adjacent to Job Site of dirt, earth and debris spillage from equipment involved in connection with Work at all times.

F. Existing Utilities:
   1. Locate existing underground utilities in areas of Work per ASCE Quality Level 'B'. All proposed utility crossings are to be located by test pit. If utilities are to remain in place, provide adequate means of support and protection during earthwork operations. Notify Miss Utility 48 hours prior to excavation.
   2. Should uncharted or incorrectly charted piping or other utilities be encountered during excavation, consult utility Owner immediately for directions. Cooperate with Owner and utility companies in keeping respective services and facilities in operation. Repair damaged utilities to satisfaction of utility Owner.
   3. Do not interrupt existing utilities serving facilities occupied and used by Owner or others, during occupied hours, except when permitted in writing by Owner and then only after acceptable temporary utility services have been provided/if required.
   4. Provide minimum of 48-hour notice to Owner and receive written notice to proceed before interrupting any utility.
   5. Demolish and completely remove from site existing underground utilities indicated to be removed. Coordinate with utility companies for shut off of services if lines are active.
   6. Underground pipes greater than 4-inches in diameter that are indicated to be abandoned in place shall be filled with flow-able fill and permanently sealed at both ends. Pipe fill operation to be witnessed by the geotechnical engineer before concealment. The abandoned pipe must be shown on the approved as-builts prior to final payment.

G. Seismic Survey Agency: The contractor shall employ an independent testing agency, acceptable to authorities having jurisdiction, experienced in seismic surveys procedures to perform the following services:
   1. Report operations, and procedures that will prevent damage to site improvements and structures on Project site and adjacent properties.
   2. Seismographic monitoring during rock removal operations.

DRAFT

1.07 DEFINITIONS

A. Excavation: Removal of earth materials to sub-grade elevations indicated or specified.

B. Over-Excavation: Removal of earth materials, beyond sub-grade elevations indicated or specified, without written authorization from Architect.

C. Unsuitable Earth/Material: Defined as topsoil, organic soils, stone greater than 2” (in any direction), rock fragments, ice, snow, construction debris, shrink-swell soils, existing fill, and other material judged unsuitable by geotechnical engineer and material so classified in geotechnical report and soft or unstable earth materials (e.g. muck, soft clays, organic soils, peat, etc.), not meeting requirements of Section 2.1.B.

D. Unclassified Excavation: Defined as complete removal of materials encountered during excavation including rocks, organic materials, slabs, debris, concrete, paving, slabs etc. All excavation is unclassified to design subgrade.

E. Fill: Placement of earth materials over existing ground surfaces to sub-grade elevations indicated or specified.

F. Backfill: Placement of earth materials in excavations to sub-grade elevations indicated or specified.

G. Soils Engineer: Shall be a Professional Engineer, currently registered in State of Maryland, or shall be an authorized representative of such an engineer.

H. Trench: Defined as an excavation having vertical sides of any length in which width is not more than 10-feet and whose depth exceeds its width.

I. Unauthorized Excavation: Defined as removal of materials beyond indicated sub-grade elevations or dimensions saving and, excepting required undercutting, without specific direction of Owner or Architect. Unauthorized excavation, as well as remedial Work directed by Construction Manager or General Contractor, shall be at Contractor’s expense.

J. Finished Grade: Defined as required final grade elevations indicated. Spot elevations shall be given uniformed slopes between points for which finished grades are indicated or between such points and existing established grades.

K. Subgrade: Defined as required surface of subsoil, borrow fill or compacted fill. Surface is immediately beneath site improvements, including but not limited to: utilities, specially dimensioned fill, paving, loam or other surfacing material. See Section 329305, “Lawns and Grasses” for preparation of landscape areas.

L. Structure: Defined, within this scope of the Work, to include buildings, foundations, concrete slabs, curbs and gutters, site improvements, and other man-made stationary features occurring above or below ground surface.

1.08 REFERENCE STANDARDS

A. ASTM D698 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft3 (600 kN-m/m3)).

B. ASTM D1557 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft3 (2,700 kN-m/m3)).

C. ASTM D1883 - Standard Test Method for California Bearing Ratio (CBR) of Laboratory-Compacted Soils.

D. ASTM D2487 - Standard Practice for Classification of Soils for Engineering Purposes (Unified Soil Classification System).

E. ASTM D5268 - Standard Specification for Topsoil Used for Landscaping and Construction Purposes.

DRAFT

1.09 SUBMITTALS

A. Density Test Results: Contractor shall submit copies of results of specified density testing to Owner's Representative for review and approval.

B. Submit location of product manufacture and of harvest, extraction/recovery of primary raw materials.

C. Submit recycled-content data, designating percentages of post-consumer and post-industrial recycled material.

D. Product Samples: Submit samples of borrowed material and structural fill material to Soils Engineer. Sample size to be fifty pounds. Number of samples to be determined by Soils Engineer. Contractor shall deliver samples to Soils Engineer’s testing laboratory.

E. Test Reports-Excavating: Testing and inspection service will submit following reports directly to Architect from testing services, with copy to Contractor and Owner’s representative.
   1. Test reports on borrow material.
   2. Verification of each footing sub-grade.
   3. Field density test reports.
   4. One optimum moisture-maximum density curve for each type of soil encountered, but not less than one curve for each 1,000 cubic yards of any particular soil encountered.
   5. Report of actual unconfined compressive strength and/or results of bearing.

F. Documentation of Acceptance of Limits of Disturbance from the Sediment Control Inspector and Forest Conservation Inspector.

G. Documentation from Forest Conservation Inspector that site has been prepared and tree protection measures have been installed in accordance with approved Final Forest Conservation or Tree Save Plan.
   1. Copies of inspection reports and violation notices. Payment of monthly requisitions will be held without copies of inspections reports and any violation notices.

H. Inspection Certification that on-site topsoil has been screened on-site and meets the requirements of this specification.

I. Playfield Topsoil Submittals:
   1. Manufacturer's and/or source data for all materials including soils.
   2. Certified chemical and mechanical analysis of samples of topsoil, existing soil, soil mixes, soil amendments and organic compost materials used in making of soil mixes.
   3. Submit a list of equipment anticipated for each type of soil work: decompaction, blending, unloading materials, handling and installation.
   4. Samples provided by the Contractor shall be typical of material to be delivered to the site and shall provide an accurate indication of color, texture, and the organic make-up of the material. Submit three (3) pound samples of the following:
      a. Organic Matter: one (1) sample of each type of organic matter to be used.
      b. Imported Off-Site Soil Prior to Amendment: one (1) sample.
      c. Amended Off-Site Soil: one (1) sample.
   5. Submit for approval the name of the company that will be testing the soil for approval.
   6. Submit all soil tests for all soil to be obtained from both on-site, off-site, and prepared soil.
   7. Submit fertilizer and soil amendment plan for approval. This plan shall be based on the results of the soil testing and meeting the required soil parameters.

DRAFT

1.10 PROJECT CONDITIONS

A. Existing Subsurface Conditions: Refer to Section 023000 “Subsurface Explorations”. All excavation materials shall be “unclassified”.

B. Existing Utilities: Locations of existing utilities are approximate. Locations have been determined from field survey, public utility records and Owner records.
   1. Contractor shall be responsible for contacting "Miss Utility", Owner or controlling agencies of existing utilities within construction area for verification of locations, prior to beginning of Work.
   2. Contractor shall be responsible for coordination of utility relocation or removal by others with phases of construction activities.

1.11 TESTING AND INSPECTIONS

A. The Owner shall be responsible for providing a Maryland Registered Professional Soils Engineer for required testing and inspections.

B. Services of the Soils Engineer will not necessarily be on a full-time basis, but will include the number of visits and tests required to observe the performance of all earthwork under this Section. If in the opinion of the Soils Engineer, any work performed under this Section does not meet the technical or design requirements stipulated for the work, the Contractor shall make all necessary readjustments to his/her approval.

C. All earthwork procedures shall be performed in the presence of the Soils Engineer. Give adequate (24 hours) notice when Soils Engineer’s services are required.

D. Earthwork procedures shall be performed in presence of Soils Engineer. Make all submittals in accordance with Submittals article above.

1.12 CONSTRUCTION SURVEYS

A. Provide survey equipment and a duly licensed Maryland Professional Land Surveyor for construction surveys. Provide stakes required to perform earthwork operations to sub-grade elevations indicated or specified.

B. All construction stakeout shall be per Section 107 of the most current Maryland Department of Transportation, State Highway Administration, Standard Specifications for Construction and Materials.

1.13 EARTHWORK BALANCE

A. Perform earthwork operations regardless of actual quantities encountered.
   1. Excess materials shall be legally disposed of off project property.
   2. Off-site borrow, including topsoil, shall be provided at no increase to Contract Sum.

PART 2 PRODUCTS

2.01 MATERIALS

A. Provide products manufactured of primary raw materials harvested, extracted/recovered within a 500-mile radius of project site.

B. Some on-site soils may be suitable for use as structural fill or general fill. Contractor shall provide adequate test data indicating such soils meet requirements of section prior to placement.

C. Fill material shall be free of deleterious matter such as ice, snow, organics, building rubble, construction debris, shrink-swell soils and rock greater than 2-inches in diameter.

DRAFT

D. Definitions:
   1. Satisfactory/suitable soils are defined as those complying with **<<ASTM D2487>>** soil classification groups ML, SM, SC, GC, GP, or GM except where modified by geotechnical report.
      a. Soils shall have a liquid limit less than 40 and a plasticity index less than 20.
      b. Soils shall have a minimum CBR value of 3.0 and swell shall be less than 1 percent in accordance with **<<ASTM D1883>>** when compacted to 98% compaction per **<<ASTM D1557>>**.
   2. Unsatisfactory soil materials are defined as those not meeting requirements above. Unacceptable fill materials include topsoil, organics (OH, OL), high plasticity silts and clays (MH, CH), and those specified in geotechnical report.

E. Structural Fill: Provide satisfactory/suitable soils, compacted – in-place, to support site improvements and pavement sections.

F. Dense-graded aggregate base for asphalt pavement support shall meet requirements of GA Base per latest edition of Maryland Department of Transportation, Standard Specifications for Construction and Materials and subsequently approved addenda thereto. Dense-graded aggregate base shall be compacted to at least 95 percent of maximum dry density per **<<ASTM D698>>** (AASHTO T-99).

G. Crushed Stone/Washed Gravel Floor Slab Moisture Barrier / Drainage Fill: MDOT-SHA Size No. 57 aggregate.

H. General Fill: Satisfactory/suitable on-site or borrow material compacted in place for general site grading.

I. Sub-base Fill Material: Natural or artificially graded mixture of natural or crushed gravel, crushed stone, natural or crushed sand and as noted on drawings.

J. Drainage Fill: Washed (to be inspected and certified by the geotechnical engineer), evenly graded mixture of crushed stone, or crushed or uncrushed gravel, with 100 percent passing a 1-1/2 inch sieve and not more than 5 percent passing a No. 4 sieve.

K. Fill Materials: Soils used as fill materials shall have Unified Soils Classification (ASTM D 2487) of ML or more granular but shall exclude highly plastic clays or silts (MH-CH), and well-graded gravel (GW). Soil material for fill shall be free of organic matter or debris, waste materials, frozen materials, vegetable matter and rock or stones exceeding 2-1/2 inches in dimension. No more than 15 percent of rocks or lumps shall be larger than 2-1/2 inches in dimension. Materials shall be non-frost susceptible soils and shall have a liquid limit of less than 40 and a plasticity index of less than 20. Altering moisture contents to obtain adequate degrees of compaction shall be performed at no additional cost to Owner.
   1. Fill material used within the top 12 inches of fill shall be free of rocks or stones exceeding two inches in any dimension.
      a. For all playfields, the top 12 inches shall be SM or more granular screened soil, but not GW.
   2. Recycled concrete RC-6 may, at Contractor's discretion for temporary on-site road, but must be completely removed from the site at the end of construction.

L. Backfill Material: As indicated for fill material.

M. Borrow Material: Off-site borrow, if required, shall be as specified for Fill Materials. Obtain and transport borrowed material at no increase to Contract Sum.

N. Product Handling:
   1. Take means necessary to protect materials of this Section before, during, and after installation and to protect installed Work of other trades. In event of damage to these

DRAFT

items, immediately make repairs or replacements necessary to approval of Architect and at no additional cost to Owner.

2. Take means necessary to control dust on and near Work if caused by Contractor's operation during performance of Work of this Section and if resulting from condition in which Contractor leaves site. Dust controls shall be performed in accordance with authority having jurisdiction requirements.
3. Locate all active utilities traversing site or areas of off-site Work and protect from damage.

O. Excavation Materials:
1. Classification of Material: All Materials to be excavated on this project are unclassified excavations to subgrade.
2. Differing Conditions below Subgrade: Should, during progress of Work, rock or physical conditions substantially differing from those described in project Geotechnical Report and generally recognized as being inherent in Work of such character be encountered, immediately notify Architect of conditions before they are disturbed.
3. Excess Excavation Materials: Excess materials resulting from excavating operations and not used backfilling shall become property of Contractor and shall be legally disposed of off-site using approved methods to legal disposal sites. No on-site burying will be permitted.

P. Sand: Sand shall be clean and free from silt, clay, sticks and other foreign material complying with gradation requirements in ASTM C 33 for fine aggregate.
1. Sand for stormwater management facilities must be washed natural sand.

Q. Rock: Rock material in beds, ledges, unstratified masses, conglomerate deposits, and boulders of rock material 3/4 cu. yd. or more in volume that exceed a standard penetration resistance of 100 blows/2 inches when tested by an independent geotechnical testing agency, according to ASTM D 1586. For field determinations, rock is defined as material that cannot be removed by certain sized piece of equipment as follows:
1. Rock excavating equipment for open cut excavation shall be the equivalent to Caterpillar Model No. D-8N, heavy duty track-type tractor, rated at not less than 285 hp flywheel power and equipped with a single-shank hydraulic ripper, capable of exerting not less than 45,000 lbs. breakout force.
2. Rock excavating equipment for footings, trenches, and pits shall be equivalent to Caterpillar Model No. 21D-LC track-type hydraulic excavator, equipped with a 42” wide short-tip radius rock bucket, rated at not less than 120 hp flywheel power with bucket curling force of not less than 25,000 lbs. and stick-crowd force of not less than 18,000 lbs.

DRAFT

2.02 TOPSOIL FOR PLANTING AND LAWNS

A. Topsoil stockpiled for re-use (if any) shall be approved prior to incorporation in Work. If quantity of stockpiled topsoil is insufficient, provide additional topsoil as required.

B. No topsoil is to be removed from site without Owner’s permission.

C. Prior to re-use on-site, stockpiled topsoil shall be screened and inspected by geotechnical engineer for compliance with specifications. Make amendments to existing topsoil as required to comply with this section. Geotechnical engineer shall inspect and certify topsoil prior to its re-use on-site.

D. Existing or imported topsoil shall be a fertile, friable, sandy loam containing organic matter of 2 percent or greater and shall be capable of sustaining vigorous plant growth. Topsoil shall consist of 60-75 percent sand, 15-30 percent silt, and a maximum of 5 percent clay. It shall be free of add-mixture of subsoil, and contain no stones, lumps, clods of hard earth, slag, cinders, sticks, plants or their roots, trash or other extraneous materials greater than 1” in dimension.

Topsoil must also be free of plant parts of Mugwort, Bermuda grass, Quack grass, Johnson grass, nut sedge, poison ivy, Canada thistle, or others as specified. Topsoil shall not be used for planting operations while in a frozen or muddy condition. Topsoil sources shall be tested by a recognized laboratory at expense of Contractor for pH, soil texture and soluble salts. Test results must be presented to Landscape Architect prior to placement of topsoil on site. Topsoil shall contain between 3 percent and 7 percent decomposed organic determined by loss on ignition on moisture-free samples dried in accordance with current methods of Association of Official Agricultural Chemists.

E. Acceptable soil test results:
   1. pH Range: 5.8 - 7.0.
   2. Organic Matter: 3% - 7%.
   3. Magnesium (Mg): 100+ units.
   4. Phosphorus (P205): 150+ units.
   5. Potassium (K20): 120+ units.
   6. Soluble Salts/Conductivity: Not to exceed 450 ppm/0.9 mmhos/cm (in soil); not to exceed 300 ppm/2.5 mmhos/cm (in high organic mix).
   7. Boron: Not to exceed 3 lbs./acre.
   8. Manganese: Not to exceed 50 lbs./acre.

2.03 TOPSOIL FOR PLAYFIELDS

A. Soil amendments may be used to amend the soil to meet specified requirements. Soil amendments and rates of application are to be determined based on soil test results. Specific recommendations for the type of amendments can be found in the Landscape Specification Guidelines by the Landscape Contractors Association of MD, DC, and VA (most recent edition).
   1. Sulfur: Sulfur for adjustment of soil pH shall be an unadulterated flower of sulfur.
   2. Lime: Ground or pulverized limestone, which contains a maximum of 50 percent total oxides. In addition, Solu-Cal can also be used to correct pH.
   3. Organic Matter: To increase organic matter based on soil test results, the following materials can be used:
      a. Compost shall be made from yard trimmings, such as leaves, grass clippings and pruning that have been properly composted, are mature and have been sieved through a 3/4-inch screen.
      b. Compost shall be free of trash and contain no toxic substances harmful to plant growth.
      c. Compost testing shall include a Solvita Compost Maturity Test on a fresh compost samples per testing instructions and have an CMI >6.0. The soluble salt contents shall be between 1-4 dS/m.
      d. Compost should have between 35% and 50% organic matter, pH between 6.2 and 7.2, total organic carbon above 20%, carbon to nitrogen ratio between 12:1 and 20:1 and heavy metals within acceptable range.
   4. Fertilizer: Fertilizer analysis and rate of application shall be determined based on soil test results. Fertilizer shall be uniform in composition, free flowing and suitable for application with approved equipment. The fertilizer requirements shall be reviewed by a certified Maryland Fertilizer Applicator. All fertilization shall meet Maryland’s Lawn Fertilizer Law.
   5. Sand: The sand shall meet the specification per ASTM F2396 for sand type, particle size distribution and shape. The contractor shall supply independent testing to verify compliance with ASTM F2396.

B. Delivery, Storage, and Handling:

DRAFT

1. Package materials will be delivered in manufacturers' unopened containers or bundles; they will be identified with name, brand, type, weight, and analysis. Packaged materials will be stored in a manner that will prevent damage or intrusion of foreign matter. Any material that becomes contaminated will be removed from the job site.
2. Organic amendments will not be delivered or installed excessively wet or frozen.
3. Delivery location, stockpile locations and schedule will be coordinated with the Owner prior to delivery. Soils will be protected from eroding while stockpiled on site.
4. Bulk materials will be stabilized after delivery according to the Sediment Control Plan.

PART 3 EXECUTION

3.01 GENERAL

A. Familiarization and General Information:
   1. Prior to beginning Work, become thoroughly familiar with site, site conditions and portions of Work specified in this section.
   2. Contractor shall conduct operations and execute Work in such fashion as not to preclude or obstruct required on-going operations of Owner and site occupant. Contractor shall immediately repair damages to buildings, streets, site improvements and utilities at no expense to Owner.
   3. Data on indicated subsurface conditions as specified in geotechnical report, provided by Owner, are not intended as representations or warranties of accuracy or continuity between soil borings. It is expressly understood that Owner will not be responsible for interpretations or conclusions drawn by Contractor. Data are made available for convenience of Contractor. Additional test borings and other exploratory operations may be made by Contractor at no cost to Owner.
   4. Should uncharted, or incorrectly charted, piping or other utilities be encountered during excavation, consult utility Owner immediately for directions. Cooperate with Owner and utility companies in keeping respective services and facilities in operation. Repair damaged utilities to satisfaction of utility Owner.

B. Blasting: Not permitted.

C. Backfilling prior to approvals:
   1. Do not allow or cause any Work to be performed, installed, covered up or enclosed by Work of this section prior to required inspections, tests, and approvals. Contractor is solely responsible for arranging and securing required inspections, tests and approvals.
   2. Should Work be enclosed or covered up before it has been approved, Contractor shall uncover such Work at no additional cost to Owner.
   3. After Work has been completely inspected, tested, and approved, make repairs and replacements necessary to restore Work to condition in which it was found at time of uncovering, at no additional cost to Owner.

3.02 CLEARING & SITE PREPARATION

A. Before start of construction, all topsoil, organic soils, soils mixed with excessive amounts of roots or other organic materials, and all soft, loose, excessively wet or frozen soils shall be removed from building and pavement areas and including at least 5-ft. offsets outside building and pavement lines.

B. Stockpile suitable materials, topsoil etc. on-site for reuse.

C. Prepare site for construction by removing topsoil, and existing loose, soft, wet, organic, or otherwise unsuitable materials encountered within building construction limits which shall

DRAFT

extend approximately ten feet beyond actual building and paving lines. Tree stumps shall be removed in their entirety. Stockpile topsoil in well-drained piles in locations as approved by Architect for later use. The entire stripped area shall be proof rolled utilizing a heavily loaded dump truck or other pneumatic-tired vehicle of similar size and weight in presence of Soils Engineer. Proof rolling shall not be performed during or following wet weather conditions. Any unsuitable materials shall be removed and replaced as directed by Soils Engineer.

D. Remove and dispose of materials resulting from site stripping, and on-site materials not acceptable for use as structural fill in an approved and lawful manner.

3.03 GRADING AND TOPSOIL INSTALLATION

A. Topsoil is to be screened on-site and certified for conformance to specifications by geotechnical/soils engineer prior to placement or spreading of topsoil on site.

B. Uniformly grade areas covered by project, including transition areas. Finished surface to be smooth, compacted and free from irregular surface changes. Ditches and swales to readily drain as shown on plans and be free of humps or hollows.

C. Grading tolerances (note that positive drainage must be maintained):
   1. Rough Grade:
      a. Building, Paved, and Sidewalk Areas: Plus or minus 0.1 foot.
      b. Landscaped Areas: Plus or minus 0.3 foot.
      c. Athletic Fields: Plus or minus 0.2 foot.
   2. Finish Grade:
      a. Builiding, Paved, and Sidewalk Areas: Plus or minus 0.05 foot*.
      b. Landscaped Areas: Plus or minus 0.1 foot.
      c. Athletic Fields: Plus or minus 0.4 foot*.

      *Tolerance shall not relieve Contractor from complying with ADA maximum slope requirements.

D. Topsoil Installation for Lawns and Landscape Areas:
   1. Topsoil mixture shall not to be spread until underground pipe work and fine sub-grading is completed to satisfaction of Owner in accordance with drawings.
   2. Immediately prior to dumping and spreading topsoil mixture, subsurface shall be loosened by disking or by scarifying to depth of at least 5 inches to permit thorough bonding. Fine grade all areas to be topsoiled to new contour grades, less topsoil mixture depth.
   3. Add together a mixture of two-thirds sandy loam topsoil and one-third organic matter by volume to a depth of 4 inches and rototill into subsoil. During spreading operation, this mixture shall be raked and stones in excess of one inch in diameter and rubbish shall be removed.
   4. The topsoil mixture shall have a minimum thickness of six inches after natural settlement and light rolling and shall conform to grades and elevations as shown on plans. Do not place topsoil mixture when muddy or frozen conditions exist.
   5. Topsoil mixture shall be spread on areas to be sodded or seeded.

E. Topsoil Installation for Playfields:
   1. Commencement of work will not begin until all submittals have been approved. This includes but not limited to soil testing results and recommendations.
   2. All areas to receive topsoil shall be free of construction debris, refuse, compressible or decayable materials, stones greater than two inches and standing water to a depth of 12 inches for landscape areas and 6 inches for lawn areas.

DRAFT

3. Do not place fill when fill materials are wet, frozen or not at the optimum moisture content for proper compaction. Adjust subgrade levels as required to ensure that planting and lawn areas have adequate drainage. Installation of all utilities and irrigation mainlines shall be completed prior to beginning topsoil work.
4. After the rough grade of the existing soil is accepted by the Owner, the Contractor shall perform soil tests as specified and submit test results and soil amendment recommendations.
5. The Contractor shall install soil amendments over the existing soil as approved. Soil amendments shall be tilled into the soil to loosen existing soil to a depth of 12 inches; excavation is not required. Rake the area smooth and compact the subsoil not to exceed 85 percent compaction per ASTM D698. Level and regrade planting bed prior to installation of topsoil.
6. Topsoil shall be amended to meet the criteria of this section. Soil may be blended on or off-site. Soil to be blended on-site, the amendments shall be blended into soil by layering the soil and soil amendments in alternating thin layers (not to exceed six inches) and mixing them uniformly as each layer is added.
7. Blending should be performed using a commercial soil blending equipment designed for this purpose.
8. Fill excavated areas with topsoil amended to meet the criteria of this section. Soil shall be placed in successive lifts no thicker than six inches and compacted with hand- operated equipment to a maximum dry density of 85 percent per ASTM D698. Over compaction of fills, which would be detrimental to planting objectives, shall be corrected by loosening fills through tilling or other means and recompacting to specified limits at no additional cost
9. The soil shall not be tilled or amended when the soil's moisture level is above field capacity or when soil is frozen.
10. If at any stage the soil is left exposed to weather conditions, the Owner may require decompaction so to meet the requirements of this specification at no expense.
11. For soil preparation in critical root zone areas of existing trees, all work must be done by hand with shovels and rakes, unless otherwise approved in writing by the Forest Conservation Inspector.

3.04 FILL MATERIAL

A. Fill material, imported or on-site, shall be free of organic inclusions, such as tree roots, frozen materials debris, cinders, or other deleterious materials. Fill material shall be approved by Soils Engineer and shall be ML or SM per **<<ASTM D2487>>**. Fill material shall not contain rocks and lumps greater than 6 inches in dimension and not more than 15% of rocks and lumps shall be greater than 2-1/2 inches in dimension. Altering moisture contents to obtain adequate degrees of compaction shall be performed at no additional cost to Owner.

B. Fill material shall be subject to approval of Soils Engineer and as further approved by Owner and Architect.

3.05 PROOF-ROLLING

A. After site clearing and cutting of excavation areas, cleared and cut sub-grades shall be proof-rolled with a fully loaded 10-ton dump-truck in presence of Contractor's testing agency and Owner's Representative. Proof-roll two complete coverages of building and pavement areas. Soft, loose, or unsuitable areas shall be removed and replaced with suitable compacted material.

DRAFT

3.06 PROTECTION AND RESTORATION

A. General: Provide protection to prevent settlement, movement, undermining of or erosion to existing site improvements, existing utilities, existing buildings, new site improvements, new buildings and new utilities.

B. Do not permit heavy equipment to pass over any utility until a minimum cover as required by code and manufacturers' recommendations, whichever is more stringent, is placed over the top of utility.

C. Restore damage resulting from lack of protection or improper installation of protective measures or careless execution of construction activities at no increase to Contract Sum. Restoration Work to be approved by Soils Engineer and Owner's Representative.

D. Protect structures, utilities, curbs, paving and trees indicated to remain, and other facilities in areas of Work. Barricade open excavations and provide warning lights from dusk to dawn each day in accordance with OSHA requirements. Use barrier gates and orange cones with yellow traffic tape to block off area of construction.

E. Freezing Temperature: Make no excavations to full depth indicated when freezing temperature may be expected, unless footings or slabs can be placed immediately after excavation has been completed. Protect bottom from frost if placing of concrete is delayed. Should protection fail, remove frozen materials and replace with concrete or gravel fill, as directed. Protect newly placed footings from frost penetration below bottom of footing.

F. Barricade Open Excavations occurring as part of Work; post with warning lights. Operate warning lights as recommended by authorities having jurisdiction and OSHA requirements.

G. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by earthwork operations.

H. Perform Excavation, within critical root zone of large trees to remain, by hand and protect root system from damage or dry out to greatest extent possible. Maintain moist condition for root system and cover exposed roots with burlap. Paint root cuts of 1-inch diameter and larger with emulsified asphalt tree paint.

3.07 MEASUREMENT AND PAYMENT

A. Unanticipated Soil Conditions: If unsuitable bearing materials are encountered at subgrade, extend excavation deeper and replace excavated material as directed by the Geotechnical Engineer.

B. If part of excavation is extended, through error, beyond depth and dimensions indicated or specified, Contractor shall provide suitable compacted fill or concrete where directed by Geotechnical Engineer up to required level at Contractor's expense.

C. Excavation and removal of unsuitable materials below sub-grades or as required by Contract Documents will be paid for as an extra in accordance with the unit prices provided in the contract documents, only after removal of materials has been authorized by Owner. Quantities of excavation and removal involving an extra or other adjustment of Contract Sum are subject to measurement, verification, and approval by the Owner's Representative and the Geotechnical Engineer, prior to removal of materials. Volume shall be established from dimensions of cut. Such dimensions shall be submitted to Owner's representative by Contractor for record.

3.08 EXISTING UTILITIES

DRAFT

A. Notify public utility companies, 48 hours prior to start of earthwork operations. Verify and mark horizontal utility locations prior to start of earthwork operation. Manually excavate and expose utilities as earthwork operations approach marked locations.

B. Immediately notify Owner's Representative or Architect in event horizontal or vertical utility locations differ from locations indicated. Provide horizontal and vertical details of utility locations as directed by Owner's Representative or Architect. Conflicts with construction are to be determined by Owner's Representative or Architect. Payment for correction of unforeseen conflicts with construction shall be by change order.

C. Coordinate public utility relocation Work required for public utilities conflicting with construction. Owner's Representative or Architect will provide directions and details required to relocate utilities conflicting with construction.

D. Do not disconnect or interrupt existing utilities serving existing facilities to remain without notification and authorization of Architect or Owner's representatives.

3.09 DEWATERING

A. Perform in accordance with Section 312319 "Dewatering".

3.10 EXCAVATION

A. Excavation Classifications:
   1. Excavate materials encountered to sub-grade elevations indicated or specified. Excavation is unclassified to subgrade. Excavate materials regardless of character of the materials encountered, at no increase to Contract Sum. Remove substrate materials required to achieve proper sub-base, including, but not limited to: soils, organics, abandoned structures, rock, etc.

B. General:
   1. Excavate to lines, elevations, and limits indicated on plans and in specifications plus sufficient distance and space to permit erection of forms, shoring and inspections. Placing of concrete footings or foundations on existing fill is not permitted. Remove all existing fill below foundations. Fill any excess cuts under footings and foundation with structural fill. Excavate as required, regardless of type, condition, or moisture content of material encountered. If suitable bearings for foundations are not encountered at depths indicated, immediately notify Architect, protect excavation, and do not proceed further until instructions are given. Exposure of footing sub-grade shall be kept to a minimum. Footing concrete shall be placed on same day of excavation. If excavation must remain open overnight or if rainfall or other precipitation is eminent, protect sub-grade with a 2- to 4-inch-thick mud mat and other protection devices to ensure that excavation remains dry.
      a. Remove existing man-placed fill in areas of addition and replace with satisfactory/suitable compacted fill.
      b. Remove existing foundations and structures in areas of excavation and replace with satisfactory/suitable compacted fill.
      c. The Contractor's testing agency shall evaluate suitability of sub-grades including those for building and wall footings, building slabs, below-grade structures and pavement areas and certify suitability prior to further construction.

C. Excavation for Footings, Foundations, Slabs and Pavements:
   1. Grade site so as to prevent water from entering footing excavations and/or ponding on floor sub-grades. Protect excavations from exposure to direct rainfall.
   2. Contractor shall undercut, repair and restore damaged/unprotected sub-grades at no additional cost to Owner.

DRAFT

3. Extend all sub-grade undercuts at least five (5') feet outside building foundation, footing, slab and pavement lines.

D. Excavation for Utility Trenches:
   1. Dig trenches to the uniform width required for particular item to be installed, sufficiently wide to provide ample Working room. Provide 6 to 9 inches of clearance on both sides of pipe or conduit, or as required by the utility purveyor.
   2. Excavate trenches to depth indicated or required. Carry depth of trenches for piping to establish indicated flow lines and invert elevations. Beyond building perimeter, keep bottoms of trenches sufficiently below finish grade to avoid freeze-ups.
   3. Where rock is encountered at subgrade, carry excavation 6 inches below required elevation and suitable backfill as approved by the geotechnical engineer prior to installation of pipe.
   4. Grade bottoms of trenches as indicated, notching under pipe bells to provide solid bearing for entire body of pipe.

E. Backfill of Trenches:
   1. Provide suitable compacted material, backfill and/or approved on-site soil material backfill in accordance with detail(s) shown on drawings.
   2. Backfill trenches with concrete where trench excavations pass within 18 inches of column or wall footings and which are carried below bottom of such footings, or which pass under wall footings. Place concrete to level of bottom of adjacent footing.
   3. Do not backfill trenches until tests and inspections have been made and backfilling authorized by Architect/Engineer. Use care in backfilling to avoid damage or displacement of pipe systems.

F. Stability of Excavations:
   1. Slope sides of excavations to comply with local codes and ordinances having jurisdiction. Shore and brace where sloping is not possible because of space restrictions or stability of material excavated.

3.11 EXCESS WATER CONTROL

A. Unfavorable Weather:
   1. Do not place, spread, or roll fill material during unfavorable weather conditions.
   2. Do not resume operations until moisture content and fill density are acceptable to Contractor's testing agency.
   3. Protect all open excavations as well as slab on grade, sub-grade from damage due to rain or runoff.

B. Flooding:
   1. Provide berms or channels to prevent flooding of sub-grade. Promptly remove water collecting in depressions

C. Softened Sub-grade:
   1. Where soil has been softened or eroded by flooding or placement during unfavorable weather, remove damaged areas and recompact or replace with suitable material as required to ensure properly stabilized sub-grade. Replaced or recompacted sub-grades shall be certified as being satisfactory by Contractors Testing agency.

D. Dewatering:
   1. Provide and maintain during construction, ample means and devices to promptly remove and dispose of water from every source entering excavations or other parts of Work.

DRAFT

3.12 SUB-GRADE PREPARATION

A. Sub-grade Preparation: Upon completion of excavation activities, exposed sub-grade should be proof-rolled utilizing a heavily loaded dump truck or other pneumatic-tired vehicle of similar size and weight, in presence of Soils Engineer. Proof-rolling shall not be performed during or following wet weather conditions. Unsuitable materials discovered during proof-rolling operations shall be removed and replaced as specified below. Upon completion of proof-rolling activities and approval of sub-grade by Soils Engineer, exposed sub-grade shall be further prepared as follows:
   1. Unpaved Areas: Scarify sub-grade to six-inch depth prior to topsoil placement.
   2. Paved Areas: Scarify sub-grade to twelve-inch depth and compact to 95 percent maximum dry density. Density test methods: ASTM D 698. Remove unsuitable earth, exhibiting excessive weaving during compaction operations, as specified.

3.13 FILL AND COMPACTION

A. Fill and Excavation Requirements:
   1. Fill or excavate as required under items of constructions as follows:
      a. In planting areas, sub-grade shall be 12 inches below finish grades with 12 inches of topsoil applied over sub-grade. In lawn areas, sub-grade shall be 6 inches below finished grades with 6 inches of topsoil applied over sub-grade.
         1) In athletic and playfields (baseball, softball, soccer, etc.) subgrade shall be 12 inches below finished grade with 6 inches of screened soil containing no material greater than 1/2-inch and 6 inches of topsoil over the 6 inches of screened material.
         2) Skinned Infields: subgrade shall be 12 inches below finished grade with 7 inches of screened soil containing no material greater than 1/2-inch and 5 inches of infield mix over the 7 inches of screened material.
      b. Under concrete sidewalks, sub-grade shall be to bottom of granular fills under sidewalks.
      c. Under floor slabs on grade, sub-grade shall be at underside of stone or washed gravel moisture barrier below bottom of slab.
      d. Under building foundations, sub-grade shall be to bottom of footing. Place compacted structural fill to bottom of footing where required, due to undercutting.
      e. Under pavement sections, sub-grade shall be to bottom of base course or graded aggregate base.
      f. In areas with existing fill materials, sub-grade shall be to bottom of fill. Compacted structural fills shall be used to bring such areas back to required elevations
   2. Construct fills at location and to lines and grades required. Use sheepsfoot rollers, rubber-tired rollers, or other equipment capable of obtaining required density in placing fills. Use power tampers or hand tampers to compact material in areas where rollers are impractical to use.

B. Backfilling and Compaction:
   1. Fill placing operation shall be such that materials when compacted will be blended sufficiently to meet compaction requirements. Suitability of materials is subject to Architect's approval. Dump successive loads of materials, then spread and mix to give horizontal layer of not more than eight inches in loose thickness.
   2. Do not roll or compact fill material until layer of material has uniform moisture content within two percentage points of optimum moisture content and which will keep under action of rollers, and material in each layer of fill, while being compacted by rolling or

DRAFT

tamping equipment, maintained as nearly as practical at that degree of moisture content which is optimum for obtaining required compaction.

3. Material having moisture content too high for proper compaction, should be modified by aeration until moisture content is lowered to point where satisfactory compaction may be obtained.
4. If moisture of fill material is too low, add water to material and thoroughly mix by blading and disking to produce uniform and satisfactory moisture content. In applying water, do not use jets having sufficient force to wash out fine material. Water or aerate fill material, as necessary, and thoroughly mix to obtain a moisture content which will permit proper compaction but remain within +/- 2 percent of optimum moisture content as determined by ASTM D698.
5. After sub-grade has been approved by Soils Engineer, spread specified fill material in horizontal layers not to exceed 8 inches in loose thickness.
6. During placement and compaction of fill, scarify and bench existing sub-grades so that a seak plane can not be formed between new fill and existing sub-grade soils. Existing soils shall be scarified to depths of at least 6 inches, and benching generally shall be provided for every 5 ft. height of new fill placed.
7. Do not begin backfilling until construction below finish grade has been approved, forms removed, and excavations cleaned of trash and debris. Bring backfill to required grades. Do not place backfill in wet or frozen areas. Do not operate compaction equipment exceeding 3,000 pounds in dead weight for spreading and compacting closer to foundations, curbs, or walls than a distance equal to height of backfill above top of structural members or height of wall; compact area remaining by power-driven hand tampers suitable for material being compacted. Do not place backfills against walls prior to 7 days after completion of walls.
8. After material has been brought to uniform and satisfactory moisture content, compact fill material to maximum dry density requirements specified below.

Zone	Maximum Dry Density Required (%)	Specification
Top 18” of fill placed below foundation and slabs.	100	**<<ASTM D698>>**
Fill areas within building, 10’ from building perimeter, and paved areas	95	**<<ASTM D698>>**
Back fill at retaining walls	90	ASTM D698
Other site grading	90	**<<ASTM D698>>**

1. Special care should be taken in compacting structural fill at interface with natural soils to ensure uniformity of settlement at transition between fill and natural ground.

C. Compaction Testing and Monitoring:

1. Fill placed in building, pavement, and utility excavations shall be tested in accordance with ASTM D 1556 (Sand Cone Method), or ASTM D 2922, or ASTM D 3017 (Nuclear Method) to verify density and moisture content. A minimum of one test per 2,000 square feet of material placed in building areas should be performed on each lift. A minimum of one test per 5,000 square feet of material placed in parking areas should be performed on each

DRAFT

lift. A minimum of one test per 100 linear feet of material placed in footings and utility trenches should be performed on each lift. However, no fewer than three tests per day should be performed on each lift.

3.14 OVER-EXCAVATION

A. Correct over-excavated areas as directed by Soils Engineer. Remove unsuitable earth encountered as a direct result of over-excavation. Excavate and dispose of all unsuitable earth. Correct excavated area as directed.

3.15 UNSUITABLE EARTH

A. Immediately notify Owner's Representative or Architect and Soils Engineer in event unsuitable earth below subgrade is encountered during earthwork or subsequent construction operations beyond limit of excavation and grading specified in this section. Stop Work within immediate area of unsuitable earth. Do not remove unsuitable earth until written authorization is obtained from Owner's Representative and proper measurements are obtained. Excavate and dispose of unsuitable earth upon receipt of written authorization from Owner's Representative. Backfill excavated area as specified. Payment for unsuitable earth removal and associated backfill operations below design grade to be by change order.

3.16 EXCAVATED MATERIAL STORAGE AND DISPOSAL

A. General:
   1. Excavation is unclassified to subgrade. Remove substrate materials required to achieve proper sub-base, including, but not limited to: soils, organics, abandoned structures, rock, etc.
   2. Excavate to lines, elevations, and limits indicated on drawings and specifications plus sufficient distance and space to permit erection of forms, shoring and inspections. Placing of concrete footings or foundations on existing fill is not permitted. Remove all existing fill below foundations. Fill any excess cuts under footings and foundation with structural fill. Excavate as required, regardless of type, condition, or moisture content of material encountered. If suitable bearings for foundations are not encountered at depths indicated, immediately notify Architect, protect excavation, and do not proceed further until instructions are given. Exposure of footing sub-grade shall be kept to a minimum. Footing concrete shall be placed on same day of excavation. If excavation must remain open overnight or if rainfall or other precipitation is eminent, protect sub-grade with a 2- to 4-inch-thick mud mat and other protection devices to ensure that excavation remains dry.
      a. Remove existing man-placed fill in areas of addition and replace with satisfactory/suitable compacted fill.
      b. Remove existing foundations and structures in areas of excavation and replace with satisfactory/suitable compacted fill.
      c. Contractor's testing agency shall evaluate suitability of sub-grades including those for building and wall footings, building slabs, below-grade structures and pavement areas and certify suitability prior to further construction.

B. Stockpile select excavated materials required for fill and/or backfill operations. Stockpile locations to be approved by Owner's Representative or Architect. Shape and grade stockpiles to prevent ponding of surface water. Temporarily stabilize stockpiles as specified on Drawings. Dispose of excess excavation materials as specified.

C. Excess excavated material shall be legally disposed of by removal from project site.

D. Site Clearing Debris, Rubble, and Unsuitable Soils: Remove and legally dispose of excavated materials not suitable for re-use on-site as fill or backfill, site clearing debris and rubble resulting from clearing grading and removal operations to an approved off-site disposal area.

DRAFT

E. Suitable Soils/Materials: Soils and materials suitable for re-use on-site shall remain on job site.

F. Stockpiling of Excavated Materials suitable for re-use on-site will be permitted where convenient on-site and does not interfere with Work. Stockpiling shall be performed in accordance with approved sediment control plans. In event that stockpiled materials are rendered unsuitable for re-use on-site, Contractor shall remove all unsuitable materials from site and replace same with suitable soils at no additional cost to Owner.

3.17 EARTH FILL

A. Existing Ground Surface Preparation: Remove vegetation and topsoil as specified in Section 311000 "Site Clearing". Proofroll exposed sub-grade utilizing a heavily loaded dump truck or other pneumatic-tired vehicle of similar size and weight, in the presence of Soils Engineer. Proofrolling shall not be performed during or following wet weather conditions.

B. Existing Sub-grade Preparation: Remove unsuitable earth, upon completion of clearing and proofrolling operations, as specified. Continuously bench existing slopes exceeding four feet horizontal to one foot vertical. Bench sufficiently to accommodate earthmoving and compaction equipment and meet requirements of Maryland Department of the Environment Standards and Specifications for Soil and Erosion Control. Select material, removed as a result of benching operations, may be used for fill and/or backfill as specified.
   1. Unpaved Areas: Scarify existing sub-grade to six-inch depth and compact to 92 percent maximum dry density. Density test method: ASTM D698.
   2. Paved Areas: Scarify existing sub-grade to twelve-inch depth and compact to 98 percent maximum dry density. Density test method: ASTM D698. Remove unsuitable earth, exhibiting excessive weaving during compaction operations, as specified.

C. Fill Placement: Do not place fill material on frozen or muddy sub-grades.
   1. Unpaved Areas: Place fill material in loose lifts not exceeding eight-inches.
   2. Paved Areas: Place fill material in loose lifts not exceeding eight-inches.

D. Fill Compaction and Moisture Control: Obtain compaction with approved compaction equipment. Provide compaction equipment of proper size and in proper mechanical operating condition. Fill material shall be moisture conditioned to within two percent of optimum moisture content.
   1. Unpaved Areas: Compact each lift to 92 percent maximum dry density. Density test method: ASTM D698.
   2. Paved Areas: Compact each lift to 98 percent maximum dry density. Density test method: ASTM D698.
      a. Control moisture during placement and compaction operations. Remove and replace or scarify and aerate excessively moist material until required moisture content is obtained. Moisten excessively dry material by applying measured amounts of water uniformly to fill material until required moisture content is obtained.

3.18 EARTH BACKFILL

A. General: Backfill excavations as promptly as Work permits, but not until completion of inspection, testing and approval by Soils Engineer.

B. Placement and Compaction: Do not place backfill on frozen or muddy sub-grades.
   1. Unpaved Areas: Place backfill material in loose lifts not exceeding twelve inches. Compact each lift to 92 percent maximum dry density. Density test method: ASTM D698.
   2. Paved Areas: Place backfill material in loose lifts not exceeding eight inches. Compact each lift to 98 percent maximum dry density. Density test method: ASTM D698.

DRAFT

3. All material to be moisture conditioned to within two percent of optimum moisture content.

3.19 GRADING

A. General: Grade unpaved and paved areas to smooth and uniform surfaces and to prevent ponding of surface water.
   1. Unpaved Areas: Grade slopes exceeding four feet horizontal to one foot vertical, to smooth and uniformly rounded surfaces.
   2. Paved Areas: Grade paved area sub-grades to lines, elevations and sections indicated or specified.

3.20 MAINTENANCE, PROTECTION, AND REMEDIAL WORK:

A. Protection of Graded Areas: Protect newly graded areas from traffic and erosion. Keep free of trash and debris. Repair and re-establish grades in settled, eroded, and rutted areas to specified tolerances.

B. Protection of Existing Conditions: Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, under-mining, washout, and other hazards created by earthwork operation. Protect all trees shown or scheduled to remain. Comply with tree protection requirements specified in Section 311000 – Site Clearing.

C. Maintenance of Erosion and Sediment Control Measures: Protect and maintain erosion and sediment controls throughout duration of Project until removal is authorized by Sediment Control Inspector. Comply with any directives for maintenance of, or modifications to, these measures issued by Inspector.

D. Reconditioning Compacted Areas: Where completed compacted areas are disturbed by subsequent construction operations or adverse weather, scarify surface, reshape, and compact to required density prior to further construction at no additional cost to Owner.

E. Settling: Where settling is measurable or observable at excavated areas during general project warranty period, remove surface (pavement, lawn, or other finish), add backfill material, compact, and replace surface treatment. Restore appearance, quality, and condition of surface or finish to match adjacent Work, and eliminate of restoration to greatest extent possible.

F. Clean-Up: Thoroughly clean entire Job Site of trash and other debris. Haul materials away and dispose of off-site in an approved manner.

G. Maintain all paved access roads in a clean and dust free condition during earthwork or subsequent construction operations. Clean trucks and equipment, removing mud and debris, prior to entering project site access roads and public right-of-way.

H. Maintain completed areas of project site free of trash and debris. Scarify, regrade and recompact sub-grades damaged or disturbed by adverse weather, soil erosion, settlement and subsequent construction operations.

3.21 TESTING

A. Conduct following tests:
   1. Laboratory Density Tests:
      a. Test Method: As specified.
      b. Test Interval: One test per each 15,000 square feet, or fraction thereof, of each lift of fill or backfill compacted by other than hand-operated machines, and 1 per each 5,000 square feet, etc., for areas done by hand-operated machines.
   2. In-Place Field Density Tests:
      a. Test Method: ASTM D1556 or ASTM D2167.

DRAFT

b. Density Required: As specified.

c. Test Interval: One test per 2,000 square feet, or fraction thereof, of compacted subgrade, or of each lift of fill or backfill compacted by other than hand-operated machines, and 1 per 1000 square feet, etc., for each lift of fill or backfill compacted by hand-operated machines

B. Correct Work not conforming to specified densities as directed by Soils Engineer, at no increase to Contract Sum.

C. Testing for Topsoil on Playfields:

1. Each soil test shall determine soil texture (mechanical analysis), pH, magnesium, phosphorus, potassium, soluble salts, total calcium, nitrogen, and percent organic matter. If the soil is sandy, it shall also be tested for boron. Soil test results shall include laboratory recommendations for soil amendments to correct deficiencies and accomplish planting objectives. Follow recommendation of ASTM D5268, Landscape Specification Guidelines, latest edition, Landscape Contractors Association of Maryland, Virginia, and The District of Columbia, and provide course of action based on their recommendation. The Contractor shall submit plans with the soil test results showing the locations of all soil tests. Incomplete test results and plans will be rejected and shall be redone at the Contractor's expense.
2. Soils provided from off-site sources: Obtain one soil test for each soil source per 500 cubic yards of soil and submit soil test results and soil amendment recommendations for review and acceptance prior to distributing and amending soil.
3. Existing stockpiled topsoil to be redistributed on site: Obtain one soil test per 500 cubic yards of soil prior to application. Submit soil test results and soil amendment recommendations for review and acceptance prior to redistributing and amending soil.
4. Pavement or stone removal areas: Obtain one composite soil test per 10,000 square feet of subsoil material, or at least one composite test for each separate excavated area.
5. Where existing soil to remain in place: Obtain one composite soil test for each isolated bed area. Submit one composite soil test per 20,000 square feet.
6. After final soil preparation: Obtain ten (10) additional soil samples shall be taken at random from planting and lawn areas throughout the site. The Owner shall determine locations of tests. These samples shall not be composite samples of different areas and are to ensure that soils have been amended properly prior to planting or installation of lawn. Submit soil test results for review. If it is apparent that soils have not been amended as specified or protected from contamination, areas not in compliance with specified requirements shall be reworked and retested as required until soils meet specified requirements. All rework and retesting shall be at the Contractor's expense.

DRAFT

3.22 WASTE MANAGEMENT

A. Recycle or salvage waste earthwork materials in accordance with Division 1 "Construction Waste Management" requirements.

B. Completely remove from Site and dispose of in a legal manner debris and excess material resulting from Work of this Section. No topsoil shall be removed from the site unless approved by the Owner.

END OF SECTION 312000

SECTION 312005
BUILDING EARTHWORK

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract including General and Supplementary Conditions and Division 1, specification sections, apply to work of this section.

1.02 DESCRIPTION OF WORK

A. Section specifies materials, equipment and work required to perform building earthwork operations.

1.03 TESTING AND INSPECTIONS

A. Refer to Section 312000 "Earthmoving".

B. Earthwork procedures shall be performed in presence of Soils Engineer. Give adequate (24 hours) notice when Soils Engineer’s services are required. Soils Engineer's duties will include, but not be limited to the following:

1. Observation, testing, and approval of sub-grade for footings before placement of concrete.
2. Observation and approval of floor sub-grade and fill placement before placement of underfloor granular base.
3. Testing of proposed import fill material and verification of correlation of import material to laboratory test samples. Test results shall be forwarded to the seeding and sodding Contractor.
4. Verification of removal of sediment from sediment control basins and testing of sub-grade in basins prior to fill placement.

1.04 RELATED SECTIONS

A. Refer to Section 311000 "Site Clearing", Section 31 20 00 "Earthmoving".

1.05 CODES:

A. Refer to Section 312000 "Earthmoving ".

1.06 STANDARDS:

A. Refer to Section 312000 "Earthmoving ".

1.07 SUBMITTALS

A. Refer to Section 312000 "Earthmoving " and as noted.

B. Product Samples: Submit samples of borrowed material and structural fill material to Soils Engineer. Sample size to be fifty pounds. Number of samples to be determined by Soils Engineer. Contractor shall deliver samples to Soils Engineer’s testing laboratory.

1.08 DEFINITIONS

A. Refer to Section 312000 "Earthmoving".

1.09 REFERENCE STANDARDS

A. ASTM D698 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft3 (600 kN-m/m3)).

DRAFT

B. ASTM D2487 - Standard Practice for Classification of Soils for Engineering Purposes (Unified Soil Classification System).

1.10 PROJECT CONDITIONS

A. Refer to Section 312000 "Earthmoving".

1.11 CONSTRUCTION SURVEYS

A. Refer to Section 312000 "Earthmoving".

PART 2 PRODUCTS

2.01 MATERIALS

A. Fill Material: **<<ASTM D2487>>**, Unified Soils Classification SM or better. Liquid limit not to exceed forty (40). Plasticity Index not to exceed twenty (20). Maximum particle size to be 2-1/2 inches. Free of debris, organic materials, waste materials and frozen materials. Obtain and transport fill materials from project site or borrow areas at no increase to Contract Sum.

B. Samples: Submit fill material samples for testing and approval to Soils Engineer. Do not place fill until written approval is obtained. Sample approval will not relieve Contractor of responsibility to have material placed conform to approved samples.

C. Porous Fill: ASTM C 33 Coarse Aggregate, size number 467 **<< 1-1/2 inch>>** to No. 4), blast furnace slag prohibited.

1. Size to be AASHTO M 43, size 57.

D. Backfill Material: Refer to Section 312000 "Earthmoving".

PART 3 EXECUTION

3.01 PROTECTION AND RESTORATION

A. Refer to Section 312000 "Earthmoving" and as noted. Provide support systems (e.g. sheeting, shoring, sheet piling, cribbing, etc.) at no increase to Contract Sum. Protect footing, foundation and slab sub-grades, with insulating materials, to prevent frost penetration. Restore sub-grades damaged from the lack of protection. Restoration work as directed by the Soils Engineer.

3.02 DEWATERING

A. Refer to Section 312000 "Earthmoving" and as noted. Perform building earthwork operations to prevent water accumulations detrimental to stability of footing and foundation sub-grades.

3.03 EXCAVATION

A. Refer to Section 312000 "Earthmoving" and as noted.

B. Foundation Excavation: Excavate to footing and foundation elevations indicated or specified. Extend excavations horizontally beyond footings and foundations to permit formwork placement and removal, support system placement and removal, foundation drainage system installation, building utility installations, waterproofing and inspection. Do not place concrete until completion of inspections, testing and approval by Soils Engineer. Trim and shape excavations by manual methods, prior to concrete placement.

C. Slab Excavation: Excavate to slab sub-grade elevations indicated or specified. Excavate slab sub-grades to smooth and even surfaces, free of voids and depressions. Prepare exposed sub-grades as specified for paved areas, Section 312000 "Earthmoving". Do not place concrete or porous fill until completion of inspection, testing and approval by Soils Engineer. Inspection,

DRAFT

testing and approval of sub-grade shall be performed immediately prior to placement of porous fill and concrete.

D. Below Slab Utility Excavation: Refer to Section 331000 "Utility Standards" and as noted.
   1. Trench width below and 12 inches above top of utility not to exceed 12-inch clearance on each side of utility, unless otherwise specified by the utility purveyor.

3.04 OVER-EXCAVATION

A. Refer to Section 312000 "Earthmoving " except as noted. Correct over-excavated areas as directed by the Soils Engineer or Owner's Representative.

3.05 UNSUITABLE EARTH BELOW SUB-GRADE

A. Refer to Section 312000 "Earthmoving" except as noted. Soils Engineer shall determine the least costly restoration method.

B. Payment for unsuitable earth removal below sub-grade and associated restoration operations will be by Change Order.

3.06 EXCAVATED MATERIAL STORAGE

A. Refer to Section 312000 "Earthmoving".

3.07 FILL

A. Refer to Section 312000 "Earthmoving", except as noted.

B. Earth Fill: Prepare exposed sub-grades as specified for paved areas, Section 312000 "Earthmoving". Place fill material in loose lifts not exceeding eight inches and at moisture content within plus or minus two percentage points of optimum moisture content, and compact to 95 percent maximum dry density. Top 18 inches below foundations and slabs shall be compacted to 98 percent maximum dry density. Density test method: **<<ASTM D698>>**.
   1. Compacted fill material shall extend at least ten feet beyond building lines for lateral support.
   2. Do not place concrete or porous fill until completion of inspection, testing and approval by the Soils Engineer. Inspection, testing and approval of sub-grade shall be performed immediately prior to placement of porous fill and concrete.

C. Porous Fill: Upon approval of prepared sub-grade, place porous fill in uniform lifts and compact to 70 percent relative density.

3.08 BACKFILL

A. Refer to Section 312000 "Earthmoving". Place and compact backfill as specified for fill, except as noted.

B. Backfill excavations as promptly as work permits, but not until completion of formwork removal, foundation drainage system installation, building utility installations, waterproofing, termite treatment, trash and debris removal, support system removal, temporary and/or permanent wall bracing installation, and inspection and approval by Soils Engineer.

C. Exercise care in placement of backfill material adjacent to structure. Place backfill evenly and in a manner to prevent wedging action against structure. Place backfill uniformly around structure in lifts of equal elevation. Correct damage from improper backfilling operations, as directed by Soils Engineer or Owner's Representative, at no increase to Contract Sum.

D. Backfill placement operations to be tested and approved by Soils Engineer.

DRAFT

3.09 TESTING

A. Refer to Section 312000 "Earthmoving" and as noted.

B. Foundation Sub-grade Testing: For each stratum of soil, on which foundations will be placed, conduct one test to verify required design bearing capacities. Conduct a minimum of one test beneath each wall. Subsequent verification and approval of each foundation sub-grade may be based on a visual comparison of each sub-grade with related tested strata. Additional testing shall be conducted as required by Soils Engineer.

3.10 MAINTENANCE

A. Refer to Section 312000 "Earthmoving" and as noted.

B. Tests, inspections, and approvals specified will be conducted in accordance with applicable Division One Sections regarding "Testing Services".

END OF SECTION 312005

DRAFT

SECTION 312319
DEWATERING

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General Conditions and Division 1 through Division 33, apply to work of this Section.

1.02 SUMMARY

A. Section includes construction dewatering.

1.03 RELATED WORK

A. Section 311000 Site Clearing

B. Section 312000 Earthmoving

1.04 PERFORMANCE REQUIREMENTS

A. Dewatering Performance: Design, furnish, install, test, operate, monitor, and maintain dewatering system of sufficient scope, size, and capacity to control hydrostatic pressures and to lower, control, remove, and dispose of groundwater and permit excavation and construction to proceed on dry, stable subgrades.

1.05 SUBMITTALS

A. Shop Drawings: For dewatering system. Show arrangement, locations, and details of wells and well points; locations of risers, headers, filters, pumps, power units, discharge lines, piezometers, and flow-measuring devices; and means of discharge, control of sediment, and disposal of water.

B. Delegated-Design Submittal: For dewatering system indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.06 QUALITY ASSURANCE

A. Regulatory Requirements: Comply with Montgomery County Standards and governing EPA notification regulations before beginning dewatering. Comply with hauling and disposal regulations of authorities having jurisdiction.

B. Preinstallation Conference: Conduct conference at Project site.

1.07 PROJECT CONDITIONS

A. Survey Work: Engage a Maryland Registered land surveyor to survey adjacent existing buildings, structures, and site improvements, establishing exact elevations at fixed points to act as benchmarks. Clearly identify benchmarks and record existing elevations.

1. During dewatering, regularly resurvey benchmarks, maintaining an accurate log of surveyed elevations for comparison with original elevations. Promptly notify Architect if changes in elevations occur or if cracks, sags, or other damage is evident in adjacent construction.

DRAFT

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 INSTALLATION

A. Provide temporary grading to facilitate dewatering and control of surface water.

B. Monitor dewatering systems continuously.

C. Protect and maintain temporary erosion and sedimentation controls, during dewatering operations.

D. Install dewatering system utilizing wells, well points, or similar methods complete with pump equipment, standby power and pumps, filter material gradation, valves, appurtenances, water disposal, and surface-water controls.

1. Space well points or wells at intervals required to provide sufficient dewatering.
2. Use filters or other means to prevent pumping of fine sands or silts from the subsurface.

E. Before excavating below ground-water level, place system into operation to lower water to specified levels. Operate system continuously until drains, sewers, and structures have been constructed and fill materials have been placed or until dewatering is no longer required.

F. Provide an adequate system to lower and control ground water to permit excavation, construction of structures, and placement of fill materials on dry subgrades. Install sufficient dewatering equipment to drain water-bearing strata above and below bottom of foundations, drains, sewers, and other excavations.

1. Do not permit open-sump pumping, which leads to loss of fines, soil piping, subgrade softening, and slope instability.

G. Reduce hydrostatic head in water-bearing strata below subgrade elevations of foundations, drains, sewers, and other excavations.

1. Maintain piezometric water level a minimum of 24 inches below surface of excavation.

H. Provide standby equipment on site, installed and available for immediate operation, to maintain dewatering on continuous basis if any part of system becomes inadequate or fails. If dewatering requirements are not satisfied due to inadequacy or failure of dewatering system, restore damaged structures and foundation soils at no additional expense to Owner.

1. Remove dewatering system from Project site on completion of dewatering. Plug or fill well holes with sand or cut off and cap wells a minimum of 36 inches below overlying construction.

END OF SECTION 312319

DRAFT

SECTION 312500
EROSION AND SEDIMENT CONTROL

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1, Specification Sections apply to work in this section.

1.02 DESCRIPTION OF WORK

A. This section specifies materials and work required to construct soil erosion and sediment control measures.

1.03 RELATED WORK

A. Section 311000 "Site Clearing"

B. Section 312000 "Earthmoving"

C. Section 329500 "Lawns and Grasses"

D. Section 331000 "Utility Standards"

E. Section 331005 "Water Distribution System"

F. Section 334100 "Storm Drainage"

1.04 CODES

A. Comply with State of Maryland Code, COMAR 26.17.01.

B. Comply with Montgomery Code, Chapter 19, Article I, “Erosion and Sediment Control”.

C. Comply with City of Rockville Code, Chapter 19, Article V, “Sediment Control Code”.

D. Comply with City of Gaithersburg Code, Chapter 8, Articles I, II and IV, “Erosion and Sediment Control and Stormwater Management and Illicit Discharge Detection, Connection and Elimination Code”.

1.05 STANDARDS

A. Maryland Standards and Specifications for Soil Erosion and Sediment Control, current edition.

B. Maryland Department of Transportation, State Highway Administration, Standard Specifications for Construction and Materials, Section 308.

C. Montgomery County Department of Permitting Services Standards for Erosion and Sediment Control.

D. City of Rockville Construction Standards and Details.

E. City of Gaithersburg Construction Standards and Details.

1.06 PROJECT CONDITIONS:

A. Refer to Section 310000 "Earthwork" and as noted.

B. Controls: Provide controls required to prevent soil, silt, sediment, or debris from flowing onto adjacent or downstream properties, prior to or in conjunction with demolition, earthwork, and utility excavation operations.

DRAFT

C. Temporary Soil Stabilization: Temporarily stabilize all areas, not permanently constructed upon within 7 calendar days, after completion of clearing and earthwork operations. Temporarily stabilize topsoil and earth stockpiles and control diversions within 7 calendar days after completion of initial earthwork operations.

D. Limitations: Temporarily stabilize soil with mulch, as specified, when no seeding date is applicable.

E. Permanent Vegetation: Immediately stabilize backfilled utility trenches located beyond "Clearing and Grading Limits" indicated and completed unpaved areas as specified in Section 329305 "Lawns and Grasses".

PART 2 PRODUCTS

2.01 GENERAL

A. Products shall be in accordance with standards specified, and as noted on the drawings.

2.02 SUBMITTALS

A. Provide submittals for all materials used for sediment control as shown on the plans.

PART 3 EXECUTION

3.01 FIELD PROCEDURES, INSTALLATION, AND REMOVAL

A. Upon approval of the construction contract and issuance of the Notice to Proceed, the Owner will approve the Contractor to stake out the Limits of Disturbance (LOD) and then arrange a pre-construction meeting between Sediment Control Inspection Staff, the Contractor, Owner, and any other required county, state, or jurisdictional personnel.

B. The Contractor will be provided with copies of the Sediment Control Permit and all other required permits at this time and must keep a copy of each permit on site at all times. Any printing of drawings for the inspectors is the responsibility of the Contractor.

C. The Contractor shall not start any construction prior to this meeting.

D. Contractor shall review and understand Sequence of Construction and present any concerns to Owner and Architect prior to start of work.

E. Installation of sediment controls shall begin only after the Sediment Control Inspector has granted approval and shall include any modifications to the approved Sediment Control Plan that the Sediment Control Inspector has required. Contractor is responsible for proper installation of all controls and coordinate field adjustments to ensure functioning throughout construction.

F. All subsequent notifications for inspection and coordination with the Sediment Inspector are the responsibility of the Contractor. Events requiring Sediment Control inspection and approval include, but may not be limited to start of grading, compliance with warning notices, lifting of stop work orders for violations, start of temporary or permanent stabilization, removal of Sediment Control facilities, and any other pertinent events noted in the plans or specifications.

G. Grading shall be accomplished throughout the entire project such that: existing surface drainage pathways and existing pipe/culvert conveyance systems outside of the LOD are not impacted; hazardous conditions are not created; erosive conditions are not created outside of the LOD as a result of site work; and uncontrolled sediment will not pass or collect into existing drainage systems and their downstream tributaries.

H. The Contractor shall be aware of current onsite graded conditions and ensure that sequence of site work and drainage area delineations comply with the approved sediment control plans. The

DRAFT

Contractor shall ensure all disturbed and unstabilized drainage areas are properly conveyed to the sediment control device specified on the approved sediment control plans. The Contractor shall identify offsite drainage patterns and ensure LOD crossings of drainage paths are appropriately stabilized and/or clean water conveyances around work areas are established during construction.

I. Maintenance and repair of all sediment control facilities shall be the responsibility of the Contractor. The Contractor shall inspect and properly maintain all sediment control facilities at the end of each working day to ensure that the sediment control device will not be overburdened by sediment-laden runoff during storm events. Sediment Control Inspector will also conduct regular inspections of the facilities and inform the contractor of any required maintenance and/or repairs.

J. Infiltration or porous structures such as porous asphalt, porous concrete, concrete pavers, and stone trenches shall be protected and kept clean at all times from dirt and debris after installation and until final approval by the Sediment Control Inspector and Owner. The contractor shall, at a minimum, sweep, vacuum, and use hand blowers at regular intervals to comply with this requirement.

K. The Contractor is required to perform weekly inspections of all sediment controls on the entire site as well as after every rain or snow event, as part of the MDE/WMA NPDES NOI general permit requirements. All findings shall be documented on the MDE inspection forms provided at the pre-construction meeting. The completed inspection forms shall remain on-site at all times and be accessible to all who ask to review these documents.

L. The Sediment Control Inspector may require the Contractor to install additional sediment controls to improve sediment removal without impacting the functioning of the approved Sediment Control Plan. Examples of additional controls including installing a second row of silt/super silt fence and installing erosion control matting to disturbed areas.

M. Dust and Airborne Contaminates Control: The Contractor shall provide water as necessary to reduce airborne dust when directed by the Sediment Control Inspector and Owner, at no additional cost.

N. The Contractor shall ensure that all public and private roads used by construction equipment are maintained in safe conditions and kept clean of sediment and debris. Sediment shall be removed from truck tires via stabilized construction entrances, tire wash racks, or by other acceptable methods before leaving the construction site. Routine maintenance shall be performed on the roadways as necessary, including sweeping, vacuuming, or other acceptable methods and as directed by the Owner.

O. When washing construction equipment, rinsate shall be directed towards approved-sediment control devices. Rinsate from equipment that is used to handle and transport concrete shall be directed towards watertight concrete washout structures per design criteria and details in Section H-6 of the MDE Sediment and Erosion Control manual, current edition.

P. Removal of sediment control facilities:
   1. Once the project has been completed, and all disturbed areas have been stabilized as called for in the plans, the Contractor shall contact the Sediment Control Inspector for approval to remove the sediment control features. Note that seeded areas must have a visible stand of vegetation prior to this inspection.
   2. When permitted, the Contractor shall remove all sediment control features and regrade such areas to proposed designed grades and seed and/or sod them as required.

DRAFT

Q. CLEANING: Clean improvements and facilities, damaged by hydraulic seed application overspray, as directed by the Architect and Owner.

END OF SECTION 312500

DRAFT

SECTION 313116
TERMITE CONTROL

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract including the General and Supplementary Conditions and Division 1, specification sections, apply to work of this section.

1.02 RELATED WORK

A. Refer to Section 312000 "Earthmoving".

1.03 DESCRIPTION OF WORK

A. This section specifies application of Termite Control soil treatment prior to placement of concrete floor slabs, foundation walls or grade beams.

1.04 QUALITY ASSURANCE

A. Applicator's Qualifications: Applicators shall be registered or licensed where required by State or County jurisdictions.

1.05 WARRANTY

A. On final acceptance, furnish the Owner's Representative with a written guarantee, executed by the Applicator and the Contractor, stating application was made in accordance with this specification, and certifying that the applied soil termiticide treatment will prevent infestation of subterranean termites.

B. Guarantee effectiveness of treatment for not less than five years.

C. Guarantee to correct damage caused by termite infestations in treated areas, within the five-year guarantee period. If subterranean termite activity is discovered during the guarantee period, the Contractor will re-treat the soil and repair or replace damage caused by the termite infestation.

1.06 STANDARDS

A. United States Department of Agriculture Federal Insecticide, Fungicide and Rodenticide Act.

B. The formulation of all soil poisons, insecticides, fungicides, etc. shall be registered under the Act and shall be registered with the appropriate agency of the State of Maryland.

1.07 SUBMITTALS

A. Submit manufacturer's written mixing and application instructions.

B. Submit typewritten detailed description of termite treatment program to, and obtain approval from, the local jurisdiction prior to implementation.

C. Submit evidence of compliance with Federal and State regulations.

1.08 PROJECT CONDITIONS

A. Protect occupied portions of existing structures to remain from fumes and vapors from application of the termite treatment.

DRAFT

PART 2 PRODUCTS

2.01 SOIL TREATMENT SOLUTIONS:

A. General: Use an emulsible, concentrated termiticide that dilutes with water, specially formulated to prevent termite infestation. Fuel oil will not be permitted as a dilutent. Use only soil treatment solutions that are not harmful to plants.

B. Provide a solution consisting one of the following chemical elements:
   1. Premise, Bayer.
   2. Permathrin:
      a. Dragnet.
   3. Cypermethrine:
      a. Prevail FT, FMC Corp.
      b. Dermon, ICI Americas, Inc.
   4. Fenvalerate:
      a. Gold Coast Tribute, Du Pont
   5. Isofenphose:
      a. Pryfon, Mobay Corp.
   6. Or approved equal

C. Mixes: Dilute with water to concentration level recommended by the manufacturer. Follow manufacturer's written mixing instructions.

PART 3 EXECUTION

3.01 INSPECTION

A. Verify that soil is in friable condition with moisture content low enough to permit absorption of toxicant solution. Remove any foreign matter which could decrease effectiveness of treatment.

B. Do not apply soil treatment until excavating, filling and grading operations are complete, except as otherwise required.

C. Do not apply soil treatment to frozen or excessively wet soils or during inclement weather.

3.02 APPLICATION

A. Apply soil treatment to areas beneath concrete floor slabs on grade or fill, suspended slab structures, at hollow masonry foundations and grade beams and along interior and exterior sides of foundation walls and grade beams.

B. Apply soil treatment at expansion joints, control joints and all areas where slabs will be penetrated.

C. Do not apply soil treatment solution until excavating

3.03 RATE OF APPLICATION

A. Surface Preparation: Remove foreign matter which could decrease effectiveness of treatment on areas to be treated. Loosen, rake and level soil to be treated, except previously compacted areas under slabs and foundations. Toxicants may be applied before placement of compacted fill under slabs, if recommended by toxicant manufacturer.

B. Application Rates: Apply soil treatment solution as follows:

C. Under slab-on-grade structures, treat soil before concrete slabs are placed, using the following rates of application:

DRAFT

1. Apply 4 gallons of chemical solution per 10 linear feet to soil in critical area under slab, including entire inside perimeter inside of foundation walls, along both sides of interior partition walls, around plumbing pipes and electric conduit penetrating slab, and around interior column footers.
2. Apply one gallon of chemical solution per **<< 10 sq feet>>** as an overall treatment under slab and attached slab areas where fill is soil or unwashed gravel. Apply one and one half gallons of chemical solution per 10 square feet to areas where fill is washed gravel or other coarse absorbent material.
3. Apply 4 gallons of chemical solution per 10 linear feet of trench, for each foot of depth from grade to footing, along outside edge of building. Dig a trench six inches to eight inches along outside of foundation to a depth of not less than 12 inches. Punch holes to top of footing at not more than 12 inches on center and apply chemical solution. Mix chemical solution with the soil as it is being replaced in trench.

D. Under crawl-space and basement structures, treat soil along exterior and interior walls of foundations with shallow footings as specified above for exterior of slab-on-grade structures.

E. At hollow masonry foundations or grade beams, treat voids at rate of 2 gallons per 10 linear feet, poured directly into the hollow spaces.

F. At expansion joints, control joints, and areas where slabs will be penetrated, apply at a rate of 4 gallons per 10 linear feet of penetration.

G. Post signs in areas of application to warn workers that soil termiticide treatment has been applied. Remove signs when areas are covered by other construction.

H. Re-apply soil treatment solution to areas disturbed by subsequent excavation, landscape grading, or other construction activities following application.

END OF SECTION 313116

DRAFT

SECTION 315000
EXCAVATION SUPPORT AND PROTECTION

PART 1 GENERAL

1.01 SUMMARY

A. Work of this section includes sheeting and shoring and bracing.

1.02 RELATED SECTIONS

A. Section 311000: Site Clearing

B. Section 312000: Earthmoving

1.03 SYSTEM DESCRIPTION DESIGN REQUIREMENTS

A. Shoring systems shall be designed to safely and adequately prevent collapse of adjacent materials and permit construction of Work to arrangement shown on Contract Documents.

B. B Secure approvals, including those of local governmental agencies having jurisdiction.

C. Analyze site conditions. Make supplemental investigations as needed for proper design of shoring.

1.04 QUALITY ASSURANCE SUBMITTALS FOR DESIGN DATA

A. Prepare and submit design drawings and calculations showing analysis of work to be performed, including horizontal support for shoring.

B. Drawings shall include methods, equipment and work procedures.

1. Include plans, elevations, sections, and details.
2. Show arrangement, locations, and details of soldier piles, piling, lagging, tiebacks, bracing, and other components of excavation support and protection system according to engineering design.
3. Indicate type and location of waterproofing.
4. Include a written plan for excavation support and protection, including sequence of construction of support and protection coordinated with progress of excavation.

C. Contractor is responsible for obtaining all permits or approvals from authorities having jurisdiction for the installation of the shoring. Documentation of these permits/approvals shall be provided to the owner prior to starting work.

1.05 QUALITY ASSURANCE

A. Qualifications

1. Bracing and shoring drawings shall be prepared by a registered professional engineer, licensed to practice in the State of Maryland. Drawings and calculations shall bear seal of Professional Engineer registered in the State of Maryland.
2. Personnel performing installation shall be trained or qualified in techniques and procedures of shoring installation with a minimum of three (3) years' successful experience in such installation.
3. Installation shall be performed under supervision of a Professional Engineer registered in the State of Maryland, experienced in this type of work.

B. Regulatory Requirements: Conform to requirements of Occupational Safety and Health Administration (OSHA) as well as measures accepted as standards of industry.

DRAFT

C. Certifications: Upon completion of shoring, submit a letter signed and sealed by design engineer stating that, to best of his or her knowledge, systems were constructed in compliance with design drawings and calculations.

1.06 SUBMITTALS

A. For products having recycled content, documentation indicating percentages by weight of pre-consumer and post-consumer recycled content. Include statement indicating cost of each product with recycled content.

B. For products having regional material content, documentation indicating location of manufacture and location of extraction, recovery or harvest of primary raw materials. Include statement indicating cost of each product with regional material content.

C. Chain-of-custody certificates certifying that products specified to be made from certified wood comply with forest certification requirements. Include vendor invoice indicating Chain of Custody number and wood products listed per requirements Section 016000 Product Requirements.

PART 2 PRODUCTS

2.01 MATERIALS

A. Materials shall be selected and furnished to perform in compliance with design criteria.

B. Structural Steel Shapes and Plates: ASTM A36 or ASTM A572. Steel shall be of American manufacturer, new and free from defects in strength, durability, appearance and function.

1. Recycled Content: Provide steel with minimum 90 percent total recycled content, including at least 60 percent post-consumer recycled content.
2. Regional Materials: Provide steel manufactured and of primary raw materials extracted or recovered within 500-mile radius of Project Site.

C. Forest Certification: Provide wood products made from forests certified by an FSC-accredited certification body. All non-FSC wood in assemblies with FSC-certified wood shall meet the FSC Controlled Wood (CW) criteria.

PART 3 EXECUTION

3.01 EXAMINATION

A. Site Verification of Conditions: Prior to commencing work of this Section, check and verify governing dimensions and elevations, including field measurements of existing or adjoining work on which this work is dependent to assure proper fit and clearances between new and existing structures.

3.02 PREPARATION

A. Protection

1. Protect and support water, sewer, gas, and other pipes and electrical conduits encountered and immediately notify persons, companies or governmental agencies, granting them ample opportunity to take such additional precautions as they may deem necessary.
2. Cut and cap street connections encountered in excavating along curb lines in compliance with local jurisdiction requirements. Mark locations of capped utilities so they may be subsequently located and reconnected as needed.

DRAFT

3. Damage to adjacent properties, streets, sidewalks and utilities caused by work under this Section shall be repaired, restored to original condition, or replaced at no additional expense to Owner.

B. Coordination
1. Prepare a photographic or video survey of existing crack conditions in adjacent facilities and other conditions of structures prior to commencing work.
2. Maintain free flow of pedestrian and vehicular traffic to and from adjacent properties at levels existing prior to start of work and as described in Section 311000 “Site Clearing”.
3. Interior bracing shall be arranged to offer no interference with formwork for new construction.
4. Provide sufficient quantity of materials on hand at all times for protection of Work and for use in event of emergency.
5. Setting of formwork, reinforcing and placement of concrete shall be in compliance with requirements described in other related Sections of this Project Manual.
6. Provide pumps and other equipment as necessary to dewater excavations for shoring operations.

C. Sheeting
1. Provide sheeting of proper lengths and section needed, and anchor or brace to resist earth and hydrostatic pressures and superimposed loads from adjacent structures and/or construction equipment.
2. Install sheeting plumb and true, to lines and locations as indicated on design submittal drawings. Sheeting shall be used to form concrete walls and shall be located and driven to ensure that no part of sheeting is within outline of permanent construction.
3. Sheeting retaining earth on which support and stability of existing structures is dependent shall be left in place at completion of Work.

D. Shoring
1. Locate shoring at distances away from new construction sufficient to allow working room and observation of construction.
2. Shoring shall be set clear of permanent footings, walls and other structural features.
3. Shoring shall be installed to retain earth under surcharges, including such loads as weight of construction materials and equipment, vibration, snow, rainwater, water absorption by soils, and temporary construction.
4. Extend shoring as high as necessary to allow for construction of foundation walls and for berming to divert water run-off. Depth of shoring shall be as deep as necessary to brace excavation to ultimate depth.
5. Shoring supporting formwork may not be left in place upon written approval by the Owner’s Representative.

3.03 RESTORATION

A. Remove temporary protective installations upon completion of shoring operations.
1. Contractors option: Remove excavation support and protection systems to a minimum depth of 36 inches below overlying construction and abandon remainder. This will need approval from the permit authority. Denial from the permit authority will require the complete removal at no additional cost to the contract.
2. Fill voids immediately with approved backfill compacted to density specified in Section 312000 "Earthmoving."
3. Repair or replace, as approved by Architect, adjacent work damaged or displaced by removing excavation support and protection systems.

DRAFT

B. Repair damage to structures caused by shoring operations and restore surfaces to original or better condition.

3.04 CLEANING

A. Remove debris and excess earth resulting from shoring operations as it accumulates. Do not store debris on site or permit debris to be scattered over site.

3.05 FIELD QUALITY CONTROL

A. Owner will engage an independent inspection agency to perform field quality control inspections.

END OF SECTION 315000

DRAFT

SECTION 321216
HOT-MIXED ASPHALT PAVEMENT

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. AASHTO T 180 - Standard Method of Test for Moisture-Density Relations of Soils Using a 4.54-kg (10-lb) Rammer and a 457-mm (18-in.) Drop.

B. ASTM D698 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft3 (600 kN-m/m3)).

C. ASTM D1557 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft3 (2,700 kN-m/m3)).

1.02 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1, Specification Sections, apply to work in this section.

1.03 DESCRIPTION OF WORK

A. Section specifies materials and work required to construct new asphalt pavement over prepared sub-base, asphalt curbing, asphalt walks and overlay existing asphalt pavement.

1.04 RELATED SECTIONS

A. Refer to Section 311000 "Site Clearing"

B. Section 311005 "Site Demolition"

C. Section 312000 "Earthmoving"

D. Section 321610 "Concrete Curbing"

1.05 CODES AND STANDARDS

A. Comply with latest edition of Maryland Department of Transportation, State Highway Administration, Standard Specifications for Construction and Materials, and approved addenda, except Method of Measurement and Basis of Payment.

B. Work in County rights-of-way shall comply with latest Montgomery County, Maryland Department of Transportation standards and specifications.

C. Work in City of Rockville rights-of-way shall comply with latest City of Rockville Standard Specifications for work in City right-of-way.

D. Work in City of Gaithersburg rights-of-way shall comply with latest City of Gaithersburg Standard Specifications for work in City right-of-way.

1.06 SUBMITTALS

A. Products:

1. Submit asphalt plant mix formula, for each course specified. Mix formula to include percentage of aggregate passing each sieve size, percentage of bituminous material added to aggregate and mix temperature.
2. Submit certificates, signed by producer or manufacturer and Contractor, stating that base course material and asphalt comply and meet or exceed standards of this specification.

DRAFT

3. Submit results of testing specified for review by Architect, Owner's Representative and required jurisdictional inspectors.
4. Submit location of product manufacture and of extraction/recovery of primary raw materials.
5. Submit recycled-content data, designating percentages of pre- and post-consumer and post-industrial recycled materials.

1.07 PRODUCT DELIVERY AND STORAGE

A. Asphalt mixtures: Delivery temperature not to exceed 25 degrees F below plant mix temperature.

1.08 PROJECT CONDITIONS

A. Existing Asphalt Pavements: Verify existing pavement conditions (e.g. deteriorated surface, joints, etc.) during pre-bid inspection.

B. Traffic: Maintain vehicular traffic during pavement construction operations.

C. Limitations: Do not proceed with pavement construction until underground utility construction is complete. Do not proceed with asphalt placement operations until adjacent or adjoining Portland cement concrete curb construction is complete. Do not place bituminous materials when ambient air temperature is below 40 degrees F or air temperature has been below 35 degrees F for 12 or more consecutive hours. Do not place materials from 15 November to 01 March without written authorization from Architect.

D. Construction Surveys: Establish and maintain required lines and elevations. Retain services of a Maryland Registered Land Surveyor to provide combined horizontal and vertical alignment stakes for road base construction.
   1. Paved area base alignment stake horizontal interval: 50-foot maximum stations at centerline and both edges to finished base elevations.

DRAFT

PART 2 PRODUCTS

2.01 MATERIALS

A. General: Provide products manufactured and of raw materials extracted/recovered within a 500-mile radius of Project Site.

B. Sub-base Course: SHA Graded Aggregate Base: Section 901.01 – Table 901A.

C. Asphalt Base (Binder) Course: SHA Hot Mix Asphalt Superpave: Section 901.01, and 904.02. Gradation shall be as shown on approved drawings.

D. Tack Coat: SHA cut-back asphalt: Section 504.03.04, M 81 or M 82.

E. Overlay Binder Coat: Asphalt cement: AASHTO MP-1, penetration grade 80-100.

F. Overlay Protective Membrane: "Petromat MPG" protective membrane manufactured by Somax; or approved equal.

G. Overlay Protective Membrane Strips: "Rapid Repair System" fiber reinforced mastic strips, manufactured by Tensar or approved equal.

H. Asphalt Surface Course: SHA Hot Mix Asphalt Superpave: Section 901.01, and 904.01. Gradation shall be as shown on approved drawings.

I. Asphalt Surface Course for Athletic Courts and Paved Play Areas: SHA Hot Mix Asphalt Superpave: Sections 901.01, 904.01 and 904. Gradation shall be at 4.75mm

J. Joint Sealant: SHA Section 911.01.

PART 3 EXECUTION

3.01 PROTECTION AND RESTORATION

A. Asphalt Pavement: Protect improvements and facilities during tack coat and overlay binder coat applications to prevent overspray damage. Protect completed surface from damage. Do not permit heavy equipment or rollers on completed surface. Do not permit vehicular traffic on surface for 24 hours after completion. Restore damaged pavement as directed by Owner's Representative or Architect, at no increase to Contract Sum.

3.02 SUB-GRADE PREPARATION

A. Paved Areas: Refer to Section 312000 "Earthmoving" and as noted.

B. Proof-roll prepared sub-grade to check for unstable areas and areas requiring additional compaction. Do not begin work until deficient sub-grade areas have been corrected and are ready to receive paving.

C. Verify sub-grade compaction and elevations and correct discrepancies before proceeding with base construction. Verify utility casting elevations and reset or adjust to meet flush with finished pavement surface. Do not place base material/sub-base material on frozen or muddy sub-grade.

D. Place aggregate base on prepared sub-grade as soon as possible after grading operations are completed.

E. Aggregate Base Material: Place Aggregate base material in loose layers not exceeding 6 inches nor less than 3 inches to a finished thickness 6 inch compacted depth. Spread, shape and compact all aggregate base materials deposited on sub-grade during same day. Fill areas to contours and elevations using unfrozen materials.

1. Compact aggregate base material to not less than 95 percent of maximum density at optimum moisture content plus or minus 3 percent in accordance with **<<AASHTO T 180>>**.

3.03 PLACING HOT-MIX ASPHALT PAVEMENT

A. General: Place Hot-Mixed asphalt mixture on prepared surface, spread and strike off. Spread mixture at minimum temperature of 225 degrees F. Place areas inaccessible to equipment by hand. Place each course to require grade, cross-section, and compacted thickness.

B. Exercise care in applying bituminous materials to avoid smearing of adjoining concrete surfaces. Remove and clean or replace damaged surfaces at no additional cost to Owner.

C. Paver Placing: Place in strips not less than 10 feet wide, unless otherwise acceptable to Architect and/or Owner. After first strip has been placed and rolled, place succeeding strips and extend rolling to overlap previous strips. Complete base course for a section before placing surface course.

1. Immediately correct surface irregularities in finish course behind paver. Remove excess material forming high spots with shovel or lute.

D. Base Course: Provide 4 inch minimum compacted thickness, except as otherwise indicated on the drawings, conforming to grade, cross-section, finish thickness and density as indicated.

E. Surface Course: Provide 2 inch minimum compacted thickness, except as otherwise indicated on the drawings, compacted with a roller weighing not less than 6-tons.

F. Joints: Make joints between old and new pavements, or between successive days' Work, to ensure continuous bond between adjoining work. Construct joints to have same texture, density, and smoothness as other sections of hot-mixed asphalt course. Clean contact surfaces and apply tack coat.

DRAFT

1. Both longitudinal and transverse joints in successive courses shall be staggered so that one is not above the other. Stagger transverse joints by the length of the paver. Stagger longitudinal joints at least 6 inches.

3.04 ROLLING

A. General: Begin rolling when mixture will bear roller weight without excessive displacement.

B. Compact mixture with hot hand tampers or vibrating plate compactors in areas inaccessible to rollers.

C. Breakdown Rolling: Accomplish breakdown or initial rolling immediately following rolling of joints and outside edge. Check surface after breakdown rolling and repair displaced areas by loosening and filling, if required, with hot material.

D. Second Rolling: Follow breakdown rolling as soon as possible, while mixture is hot. Continue second rolling until mixture has been evenly compacted.

E. Finish Rolling: Perform finish rolling while mixture is still warm enough for removal of roller marks. Continue rolling until roller marks are eliminated, and course has attained 95 percent laboratory density.

F. Patching: Remove and replace paving areas mixed with foreign materials and defective areas. Cut out such areas and fill with fresh, hot hot-mixed asphalt. Compact by rolling to specified surface density and smoothness.

G. Protection: After final rolling, do not permit vehicular traffic on pavement until it has cooled and hardened.

H. Erect barricades to protect paving from traffic until mixture has cooled enough not to become marked.

3.05 TRAFFIC LANE AND GAME LINE MARKINGS

A. Cleaning: Sweep and clean surface to eliminate loose material and dust.

B. Do not apply marking paint until layout and placement have been verified with Architect.

C. Apply paint with mechanical equipment to produce uniform straight edges. Apply at manufacturer's recommended rates to provide minimum 15 mils dry thickness.

D. Except where noted otherwise, parking lines shall be white in color (understriping for after-hours parking shall be blue).

3.06 SUBBASE COURSE

A. Place sub-base course material on prepared sub-grade in one uniform layer to depth required to produce compacted thickness indicated. Shape material, to sections and elevations indicated with blade grader and compact with pneumatic tired rollers in accordance with Section 312000 "Earthmoving". Control moisture content of base course material to within 2 percent of optimum during compaction operations. Compaction Standard: **<<ASTM D698>>**. Proof roll sub-base course with 8-ton tandem steel wheel roller and correct irregularities.

3.07 ASPHALT BASE COURSE

A. Sub-base Course Surface Preparation: Apply tack coat material to previously placed asphalt base course, existing pavement, curbing, utility castings and any structure abutting or projecting into paved area.

B. Base Course Placement: Place asphalt in layers not exceeding four inches in compacted depth to total depth required to produce compacted thickness indicated. Place material with mechanical self-powered pavers capable of maintaining required line and grade. Place

DRAFT

material by approved manual methods in areas inaccessible to self-powered pavers. Temperature of material shall be not less than 225 degrees F at the time of placement.

C. Base Course Compaction: Compaction operations shall begin immediately following placement of base course material, and shall consist of breakdown, intermediate and finish rolling. Material shall be compacted in accordance with Section 312000 “Earthmoving”. In-place compaction shall be completed before material cools below 185 degrees F. Use self-powered tandem steel wheel rollers. Use power driven trench rollers in areas inaccessible to self-powered equipment. Begin rolling longitudinally at low side or edge and proceed toward high side or crown. Overlap successive roller trips one half-roller width. Do not terminate alternate roller trips at same location. Continue finish rolling until 98 percent to 102 percent theoretical maximum density is obtained and all roller marks are eliminated. Density test method: AASHTO T-230.

3.08 ASPHALT SURFACE COURSE AND OVERLAY

A. General: Provide overlay protective membrane treatment where indicated, or as directed by the Owner’s Representative. Provide overlay protective membrane strips over long, running cracks or pavement joints except in areas where overlay protective membrane is indicated on the drawings or as field directed by the Owner or Architect.

B. Asphalt Base Course Surface Preparation: Remove loose material from surface before applying tack coat. Apply tack coat material uniformly to surface at a rate of 0.10 gallon per square yard. Allow tack coat to cure as long as required to properly set but not less than 12 hours.

C. Existing Asphalt Pavement Preparation: Clean and dry pavement, with compressed air, removing debris, dust, foreign materials and moisture.

1. Obtain pavement preparation approval, from Architect prior to overlay binder coat application. Apply overlay binder coat material uniformly to prepared asphalt surface. Apply at a rate of 0.25 gallon per square yard. For long running cracks or joints in existing pavement surface where overlay protective membrane strips will be used, apply overlay binder coat material to a width of approximately two feet so as to span existing cracks or joints. Adjust application rate, based on existing pavement relative porosity, at no increase to Contract Sum. Apply overlay binder coat material at 300 degrees F minimum to 350 degrees F maximum.
2. Lay down overlay protective membrane, on cured overlay binder coat, in accordance with manufacturer's installation instructions and as noted. Transverse joint overlap to be 12 inches, "shingled" in direction of paving to prevent edge pick-up by the pavers. Longitudinal joint overlap to be six inches. Cut and piece membrane to fit irregular shaped areas (e.g. access road intersections, curb returns, etc.). Obtain pavement preparation approval from Owner or Architect prior to tack coat application.
3. Lay down overlay protective membrane strips on cured overlay binder coat, in accordance with manufacturer's installation instructions and as noted. Unroll overlay protective membrane strips, aligned with pavement joints, and seat in tacky overlay binder coat material by brooming, so as to span existing pavement joints. Blot excess overlay binder coat materials on edges of membrane strips with sand blanket. Cut and piece membrane to fit irregular shaped areas (e.g. access road intersections, curb returns, etc.). Obtain pavement preparation approval from Owner or Architect prior to tack coat application.
4. Apply tack coat material uniformly to prepared asphalt surface. Apply at rate of minimum of 0.05 gallon per square yard and a maximum of 0.15 gallon per square yard. Tack coat to cure as long as required to properly set, but not less than 12 hours.
5. Prepare existing asphalt pavement, as indicated and specified, at no increase to Contract Sum.

DRAFT

D. Surface Course and Overlay Placement: Place asphalt, in one uniform layer, to depth required to produce compacted thickness indicated. Place with mechanical self-powered pavers capable of maintaining required line and grade. Place and spread asphalt by approved manual methods in areas inaccessible to self-powered pavers. Temperature of the material shall be not less than 225 degrees F at time of placement. Contractor shall provide certification for temperature of the placed material for record. Should the certification not be provided the asphalt may need to be removed and replaced at no additional cost to the Owner.

E. Surface Course and Overlay Compaction: Compaction operations shall begin immediately following placement of surface course material, and shall consist of joint, breakdown, intermediate and finish rolling. In-place compaction shall be completed before material cools below 185 degrees F. Use power driven trench rollers in areas inaccessible to self-powered rollers. Begin rolling longitudinally at low side or edge and proceed toward high side or crown. Overlap successive roller trips, one-half roller width. Do not terminate alternate trips at same point. Continue finish rolling until 98 percent to 102 percent theoretical maximum density is obtained and all roller marks are eliminated. Density test method: AASHTO T 230.

3.09 JOINT SEALING

A. Completely seal and fill joints along existing and new pavement and curbing interface with joint sealant.

3.10 TESTING

A. General: Correct work not conforming to specified tolerances as directed by Owner's Representative or Architect, at no increase to Contract Sum.

B. Thickness Tests: Conduct sub-base, base and surface course thickness tests and provide test area restoration upon completion. Tolerance not less than 1/2-inch from compacted thickness indicated. Test locations are random and to be determined by Owner's Representative or Architect. Regardless of paved area size, at least one test shall be performed for each newly paved area. Thickness testing shall be performed by Ground Penetrating Radar (GPR) only, pavement cores will not be allowed.

C. Smoothness Tests: Conduct surface course smoothness tests. Tolerance not to exceed 1/8-inch between any two surface contacts on 10-foot straightedge. Test locations are random and to be determined by Owner or Civil Engineer. Regardless of paved area size, at least one test shall be performed for each newly paved area.

D. Laboratory Density Tests: Conduct sub-grade, sub-base and base course laboratory density tests. Density testing shall be performed by individuals certified to perform asphalt testing. Test method: **<<ASTM D1557>>**. Test interval to be determined by Owner's Representative or Architect, but no less than one test for each newly paved area and/or one test per 1000 feet of roadway shall be performed.

1. Provide test area restoration.

E. Field Density Tests: Conduct sub-grade, sub-base and base course in-place field density tests. Density testing shall be performed by individuals certified to perform asphalt testing. Test method: ASTM D1556 or ASTM D2167. Test locations are random and to be determined by Owner's Representative or Architect, but no less than one test for each newly paved area and/or one test per 1000 feet of roadway shall be performed.

1. Provide test area restoration.

3.11 CLEANING

A. Clean improvements and facilities damaged by tack coat overspray as directed by Owner or Architect.

DRAFT

3.12 WASTE MANAGEMENT

A. Recycle waste materials in accordance with Section 017419 “Construction Waste Management and Disposal” requirements.

END OF SECTION 321216

DRAFT

SECTION 321220
ROAD AND PARKING ACCESSORIES

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1, Specification Sections, apply to work in this section.

1.02 DESCRIPTION OF WORK

A. Section specifies materials and work required to apply, install, and construct miscellaneous road and parking accessories.

1.03 RELATED SECTIONS

A. Refer to Section 31 20 00 "Earthmoving", and Section 32 16 10 "Concrete Curbing".

1.04 STANDARDS

A. Maryland Department of Transportation State Highway Administration's current "Standard Specifications for Construction Materials", latest edition.

B. "Manual on uniform Traffic Control Devices for Streets and Highways", US Department of Transportation, latest edition.

C. "Maryland Manual on uniform Traffic Control Devices ", Maryland Department of Transportation State Highway Administration, latest edition.

1.05 SUBMITTALS

A. Products:

1. Submit manufacturer's specifications and application instructions for pavement marking paint.
2. Submit manufacturer's descriptive literature for road and parking area signs.

1.06 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Deliver paint to project site in original unopened containers bearing manufacturer's label.

B. Store paint in tightly covered containers.

1.07 PROJECT CONDITIONS

A. Maintain vehicular and pedestrian traffic during pavement marking operations. Do not apply paint when ambient air temperature is below 50 deg. F, relative humidity exceeds 85%, wind exceeds 20 miles per hour, or pavement surface temperature is below 50 deg. F.

B. Contractor shall notify Fire Marshal within 48 hours of completion of fire lane signage installation to schedule site inspection for approval.

C. Line stripes at handicapped parking spaces shall be painted yellow.

D. All other on-site striping shall be white.

DRAFT

PART 2 PRODUCTS

2.01 MATERIALS

A. Pavement Marking: AASHTO M 248, type I, non-reflective paint, colors as noted. Materials used in the Public Right-of-Way shall be Type B, Class I, Thermoplastic alkyd. Materials used in Public Right-of-Way shall be approved by Montgomery County Department of Transportation, Traffic Engineering prior to installation. Colors shall be:
   1. Standard Parking Spaces: White
   2. Bus Stacking Spaces: White
   3. Handicapped Parking Spaces: Yellow
   4. Traffic Lanes: Yellow
   5. Afterhours Parking Spaces: Blue

B. Road and Parking Area Signs:
   1. Handicapped Parking Area and Fire Lane Signs: In accordance with Montgomery County Department of Transportation standards, and the MUTCD.
   2. Stop Signs shall be 30 inch by 30 inch signs.

C. Traffic Control Signs:
   1. Traffic control signs in accordance with Montgomery County Department of Transportations standards, the MUTCD, and as indicated.

D. Sign Posts: Square Galvanized ‘break-away’ steel post with 5/16 by two inch steel nuts and bolts and galvanized steel washers.

E. Wheel Stops: Wheel stops shall be precast concrete “Elevation Type I” in accordance with Maryland Department of Transportation - State Highway Administration standards.
   1. Only concrete wheel stops will be accepted.

PART 3 EXECUTION

3.01 PAVEMENT MARKING

A. Surface Preparation: Clean pavement surfaces, removing grease, oil, mud, and foreign materials.

B. Preparation for New Pavement Markings: Lay out markings to dimensions and line widths indicated and specified. Bituminous concrete pavement to cool and set five calendar days prior to paint application. Do not apply marking materials to wet or damp pavement surfaces. Do not apply marking materials until pavement marking removal paint has set and hardened. Surfaces to set an additional eight hours after appearing dry.

C. Application: Apply paint to width and length of pavement marking lines indicated, and as noted. Apply paint with spray equipment and/or conventional traffic line striping equipment, and in accordance with paint manufacturer's recommendations, to produce markings parallel and with sharp line edges, uniform in cross section and with line widths as indicated or specified. Minimum application rate to be 100 feet per gallon.
   1. Lay out and apply paint for universal handicapped space symbols in accordance with standard practice and as directed by Architect or Owner.

D. Protection and Restoration: Protect completed paint marking from damage. Do not permit vehicular or pedestrian traffic on completed marking until paint has set and hardened. Restore damaged paint marking as directed by Architect.

DRAFT

3.02 ROAD AND PARKING AREA SIGNS

A. Sign Locations: Locations of various sign types shall be as indicated on Construction Drawings and as directed by Owner and Architect. Contractor shall provide and install indicated and selected signs at no increase to Contract Sum.

B. Post Installation: Excavate post footing to 12 inch diameter and 30 inch depth. Place and consolidate concrete in footing excavation. Install post and assembled sign in concrete plumb to 1/4-inch in 10 feet and 24 inch depth. Provide bracing to prevent movement. Slope concrete surface one inch with outside edges flush with finished grade and trowel to smooth finish. Contractor shall allow concrete footings to cure a minimum of 14 calendar days before removing bracing.

3.03 WHEEL STOPS

A. Wheel-Stops: Install per MDOT-SHA requirement. Wheel stop shall be centered in space and be placed no closer than three feet to end of space.

END OF SECTION 321220

DRAFT

SECTION 321600
CONCRETE WALKS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM C642 - Standard Test Method for Density, Absorption, and Voids in Hardened Concrete.

1.02 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1, Specification Sections apply to work in this section.

1.03 DESCRIPTION OF WORK

A. Section specifies materials and work required to construct Portland cement concrete walks.

1.04 RELATED SECTIONS

A. Section 312000 "Earthmoving"

B. Section 321610 "Concrete Curbing"

1.05 STANDARDS

A. Maryland Department of Transportation State Highway Administration's current "Standard Specifications for Construction and Materials".

B. Montgomery County, Department of Transportation's current "Design Standards".

1.06 SUBMITTALS

A. Contractor shall construct eight linear feet of typical concrete walk in the presence of the Owner’s Representative, with a control joint. No additional concrete walk may be constructed until sample is inspected and approved by the Owner.

B. Submit location of product manufacture and of extraction/recovery of primary raw materials.

C. Submit recycled-content data, designating percentages of post-consumer and post-industrial recycled material.

D. Submit certification of FSC-certified sustainably harvested wood formwork materials, if applicable.

1.07 PROJECT CONDITIONS

A. Traffic: Maintain pedestrian traffic during walk construction operations.

B. Limitations:

1. Underground Utilities: Do not proceed with concrete construction until underground utility construction is complete.
2. Curbing: Do not proceed with concrete walk construction until adjacent or adjoining curb construction is complete.
3. Environmental: Refer to Section 331000 "Utility Standards".

DRAFT

PART 2 PRODUCTS

2.01 MATERIALS

A. General: Provide products manufactured and of raw materials extracted/recovered within a 500-mile radius of the Project Site.

B. Gravel Base: MDOT-SHA 'GA Base'.

C. Concrete:
   1. Per MDOT-SHA Mix number 06.
   2. Maximum 50 percent GGBF slag replacement for Portland cement, per MDOT-SHA Specification 902.06.05

D. Joint Materials: Expansion and Isolation Joints: ASTM D 994, bituminous preformed joint filler, 3/8-inch thick.

E. Forms: Steel or wood for straight or tangent walks. Non-rented wood materials shall be FSC-certified sustainably harvested.

F. Curing Materials: Liquid Membrane in accordance with MDOT-SHA Standards and Specifications for Construction and Materials section 902.07.03.

G. Form Release Compound: Non-staining, zero-VOC, 100 percent biodegradable made from plant-based oils and approved by Architect.

H. Joint Caps: All Construction, Expansion and Isolation Joints shall be topped with Vinylex Removable Cap Strip (Vinylex Corporation, www.vinylexwaterstop.com), or approved equal, and sealed with a polyurethane sealant.
   1. Joints between curbing and concrete walks shall require sealant.
   2. Remove joint cap prior to caulking joint.

I. Concrete sealer: Provide on all exterior concrete sidewalks and pavement. Provide a clear, exterior, water-based, 40% alkylalkoxysilane penetrating sealer providing protection against moisture intrusion, freeze/thaw cycles, and chloride intrusion. Sealer shall meet NCHRP 244 (Series II and IV), **<<ASTM C642>>** (48-hours: 0.42%; 50-Days: 1.2%), ASTM C672 (100 cycles and 0 scaling), and AASHTO T295 & T260. Application and Installation shall be per manufacturers recommendations.
   1. The application must be performed by a contractor with minimum 5-years' experience in application of specified product on projects of similar size and scope and acceptable to the product manufacturer.

J. Concrete Finishing Broom: Utilize brooms specifically used for concrete. 2.9" bristles.

PART 3 EXECUTION

3.01 PROTECTION AND RESTORATION

A. Concrete: Protect completed concrete from damage. Restore damaged concrete as directed by Owner's Representative or Architect.

3.02 SUBGRADE PREPARATION

A. Paved Areas: Section 312000 "Earthmoving" and as noted. Verify sub-grade elevations and compaction and correct discrepancies before proceeding with construction. Verify utility casting elevations and reset or adjust to meet flush with finished concrete surface. Remove loose material from sub-grade prior to gravel base placement.

DRAFT

3.03 GRAVEL BASE PLACEMENT

A. Place and compact gravel base on prepared sub-grade to depth indicated. Remove debris from surface of gravel base prior to placement of concrete. Do not place gravel base material on frozen or muddy sub-grade.

3.04 FORMS

A. Clean and coat forms with form release compound, prior to use. Install forms to lines, grades and elevations indicated or as specified. Brace forms to prevent movement during concrete placement.

3.05 EXPANSION JOINTS

A. Install expansion joints at maximum 25-foot intervals or as indicated. Install expansion joints, adjacent to curbing, opposite curbing joints and as indicated. Place expansion joints perpendicular to concrete surface and with top edge 1/4-inch **<< 1/4 inch>>** below concrete surface.

3.06 ISOLATION JOINTS

A. Install isolation joints where concrete abuts buildings, existing walk sections, utility structures, and concrete curb. Place isolation joints with top edge 1/4-inch below concrete surface.

3.07 CONTRACTION JOINTS (SCORE LINES)

A. Sidewalks: Provide Contraction joints at five-foot intervals or as indicated on the drawings. Form Contraction joints with 3/4-inch jointing tool, tooled to 1/3 depth.

B. Concrete Paving: Joints shall be saw-cut.

3.08 CONCRETE PLACEMENT

A. Sample Approval: No concrete walks may be constructed until sample section has been inspected and approved by Owner's Representative.

B. General: Place concrete in forms in one uniform layer. Consolidate concrete by tamping, spading, or vibrating to prevent honeycombing. Place and consolidate concrete carefully to prevent dislocation of joint materials.

C. Placement of concrete for walking surfaces shall be in strict accordance with American's with Disabilities Act requirements, current edition. Sidewalks that are installed that do not comply with these requirements shall be removed and replaced at no additional cost to the Owner. The Contractor shall immediately bring any identified design deviations from the ADA standards to the attention of the Owner and Architect prior to installation.

1. Maximum cross slope of 2%
2. Maximum running slope of 5%
3. Maximum running slope for ramps 8.33% (maximum rise of 30", between landings)

3.09 FINISHING

A. General: Draw a fine hair concrete broom across concrete surface. Where longitudinal grade exceeds five percent, use a coarse texture finish by drawing a stiff bristle broom across concrete surface. Do not add water to finish. Do not wet broom to finish. After screeding and bull floating allow surface water to recede into concrete prior to any other work on the concrete surface.

DRAFT

B. After concrete has cured, and with permission of Owner's representative, remove joint cap and provide joint filler (color to match concrete) that spans the expansion joint to prevent surface water from entering joint.

3.10 CURING

A. Apply curing compound in accordance with Manufacturer's recommendations.

3.11 CLEANING AND SEALING

A. All sidewalks shall be pressure washed prior to occupancy. Do not wash sidewalks within 28 days of installation. Pressure wash with a 15-25 degree fan nozzle, with a pressure of 2500-3000psi. Provide a mild detergent mix.

B. After sidewalks are completely dry, apply concrete sealer.

3.12 TESTING

A. General: Correct work not conforming to tolerances as directed by Owner's Representative or Architect, at no increase to Contract Sum.

B. Walk Horizontal Alignment Test: Tolerance not to exceed 1/2-inch between any two contacts on 10-foot straightedge, except along horizontal curves. Test locations random and determined by Owner's Representative or Architect. Test observation by Owner's Representative or Architect is required.

C. Walk Surface Smoothness Test: Tolerance not to exceed 3/8-inchbetween any two surface contacts on 10-foot straightedge. Test locations are random and determined by the Owner's Representative or the Architect. Test observation by the Owner's Representative or the Architect is required.

3.13 WASTE MANAGEMENT

A. Recycle waste materials in accordance with Section 017419 "Construction Waste Management and Disposal" requirements.

END OF SECTION 321600

DRAFT

SECTION 321610
CONCRETE CURBING

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 and Specification Sections apply to work in this section.

1.02 DESCRIPTION OF WORK

A. Section specifies materials and work required to construct Portland cement concrete curbing.

1.03 RELATED SECTIONS

A. Section 312000 "Earthmoving"

B. Section 321600 "Concrete Walks".

1.04 STANDARDS

A. Maryland Department of Transportation State Highway Administration's current "Standard Specifications for Construction and Materials".

B. Montgomery County, Department of Transportation's current "Design Standards".

1.05 SUBMITTALS

A. Submit cut sheets for construction of curb in public right-of-way to and obtain approval from governing jurisdiction and Architect prior to curb construction.

B. Contractor shall construct eight linear feet of typical concrete curb-and-gutter in the presence of the Owner's Representative, with a control joint. No additional concrete curbing may be constructed until sample is inspected and approved by the Owner's Representative.

1.06 PROJECT CONDITIONS

A. Traffic: Maintain vehicular and pedestrian traffic during curb construction operations.

B. Limitations:

1. Environmental: Refer to Section 331000 "Utility Standards".
2. Underground Utilities: Refer to Section 321600 "Concrete Walks".

1.07 CONSTRUCTION SURVEYS

A. Retain services of a Maryland Registered Land Surveyor to provide combined horizontal and vertical alignment stakes for curb construction within public right of way. Horizontal stake interval 25 feet maximum.

B. Provide combined horizontal and vertical alignment stakes for project site curb construction. Horizontal stake interval **<< 25 feet>>** maximum.

PART 2 PRODUCTS

2.01 MATERIALS

A. Concrete: MDOT-SHA Mix No. 6.

B. Joint Materials: Expansion and isolation joints: ASTM D 994, bituminous preformed joint filler, 1/2-inch thick.

DRAFT

C. Forms: For straight or tangent curbing use steel or wood. For curved curbing use flexible spring steel or laminated wood.

D. Curing Material: Refer to Section 321600 "Concrete Walks".

E. Stone Base: Refer to Section 321600 "Concrete Walks".

PART 3 EXECUTION

3.01 PROTECTION AND RESTORATION

A. Refer to Section 321600 "Concrete Walks".

3.02 SUBGRADE PREPARATION

A. Refer to Section 321600 "Concrete Walks".

3.03 FORMS

A. Refer to Section 321600 "Concrete Walks", and as noted.

B. Form curbing to standards indicated and specified.

3.04 EXPANSION JOINTS

A. Refer to Section 321600 "Concrete Walks" and as noted.

B. Install expansion joints at maximum 25-foot intervals or as indicated. Place expansion joints perpendicular to surface and curbing face. Place combination curb and gutter expansion joints, with top edge 1/2-inch below gutter surface.

3.05 ISOLATION JOINTS

A. Refer to Section 321600 "Concrete Walks".

3.06 CONTRACTION JOINTS

A. Refer to Section 321600 "Concrete Walks" and as noted.

B. Provide Contraction joints, perpendicular to surface and face of curbing, at 10 foot intervals. Place Contraction joints at points where curved and tangent sections of curbing meet. Place Contraction joints with removable form spreader places. Contractor’s option: Score joints to 1-1/4 inch depth. Sawcut joints are not acceptable.

3.07 CONCRETE PLACEMENT

A. Refer to Section 321600 "Concrete Walks".

B. For Curbs that are directly adjacent to handicap accessible parking or walkways, the gutter pan shall meet slope requirements as outlined in 321600 "Concrete Walks", unless otherwise noted on the drawings.

3.08 FINISHING

A. Strike off top surfaces of curbing to top of forms and to smooth and uniform texture. Strip curb face forms when concrete takes initial set. Trowel curb face to smooth and uniform texture. Finish top surfaces and curb face to fine texture by drawing a soft bristle brush longitudinally along curb. Finish edges of curbing with edging tool having a radius as indicated. Maintain forms, except curb face forms, in place 12 hours after concrete placement. Correct defects (e.g., holes, honeycomb areas, broken edges, etc.) upon removal of remaining forms, with cement mortar. Finish contraction joints with 1/4-inch radius edging tool. Finish curbing joints to clean and true edges. Maintain curbing surfaces moist during finishing operations.

DRAFT

B. Curing: Refer to Section 321600 "Concrete Walks".

C. Protection: Contractor shall protect concrete curbs from damage, effacing, etc. during construction. Contractor shall remove and replace any curb damaged, effaced and/or marred during construction at no additional cost to Owner.

END OF SECTION 321610

DRAFT

SECTION 321800
ATHLETIC FIELD CONSTRUCTION

PART 1 GENERAL

1.01 DESCRIPTION

A. This technical provision is for the construction of new athletic fields: rectangular, circular and diamond.

1.02 REFERENCE STANDARDS

A. ASTM D698 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft3 (600 kN-m/m3)).

B. ASTM F1632 - Standard Test Method for Particle Size Analysis and Sand Shape Grading of Golf Course Putting Green and Sports Field Rootzone Mixes.

C. ASTM F2396 - Standard Guide for Construction of High Performance Sand-Based Roozones for Athletic Fields.

D. Landscape Specification Guidelines, Landscape Contractors Association, MD, DC, and VA, Latest Version

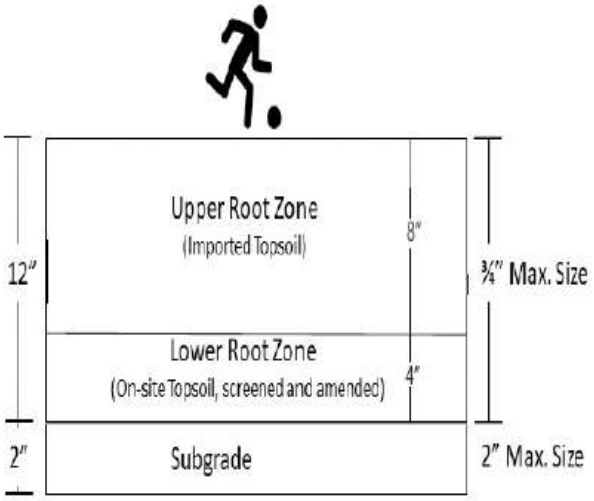
E. Maryland's Lawn Fertilizer Law - Mda.maryland.gov/Pages/fertilizer.aspx

F. M-NCPPC Maryland-National Capital Park and Planning Commission.

G. Specification 329220 "Seeding and Sodding For Turfed Areas"

H. Specification 321800 "Athletic Field Construction"

I. Specification 312000 "Earthmoving"



1.03 DEFINITIONS

A. Upper Root Zone is the top 8 inches of imported topsoil (3/4-inch maximum dia. debris)

B. Lower Root Zone is 4 inches of imported or mixed on site screened topsoil (3/4-inch maximum dia. debris)

C. Subgrade is the decompacted existing subsoil (2 inches maximum dia. Debris in top 2 inches; 12" decompact)

DRAFT

DRAFT

1.04 MATERIALS

A. The sand shall meet the specifications per ASTM F2396 for sand type, particle size distribution and shape. The contractor shall supply independent testing to verify compliance with ASTM F2396. The sand shall be < 3mm particle size.

B. Soil amendments may be used to amend the soil to meet specified requirements. Soil amendments and rates of application are to be determined based on soil test results. Specific recommendations for the type of amendments can be found in the Landscape Specification Guidelines by the Landscape Contractors Association of MD, DC, and VA (most recent edition). All soil amendments must be tested whether the topsoil is made on site or imported pre-mixed.

C. Sulfur: Sulfur for adjustment of soil pH shall be an unadulterated flower of sulfur.

D. Lime: Ground or pulverized limestone, which contains a maximum of 50 percent total oxides. In addition, Solu-Cal can also be used to correct pH.

E. Compost:

1. Compost shall be made from yard trimmings, such as leaves, grass clippings and prunings that have been properly composted, and have been sieved through a 3/4-inch screen.
2. Compost shall be free of trash and contain no toxic substances harmful to plant growth.
3. Compost testing shall include a Solvita Compost Maturity Test on a fresh compost sample per testing instructions and have a CMI >6.0. The soluble salt contents shall be between 1-4 dS/m.
4. Compost should have between 35% and 50% organic matter, pH between 6.2 and 7.2, total organic carbon above 20%, carbon to nitrogen ratio between 12:1 and 20:1 and heavy metals within acceptable range. Compost testing will be performed on both compost brought to the site but also any used in pre-mixed soil.
    a. Fertilizer shall be uniform in composition, free flowing and suitable for application with approved equipment. Fertilizer analysis, recommendations and rate of application shall be determined based on soil test results by a certified Maryland Fertilizer Applicator. All fertilization shall meet Maryland's Lawn Fertilizer Law.

F. Upper Rootzone

1. The upper rootzone shall be imported topsoil that is uniform in color and texture. It must be fully mixed and prepared offsite and meet the following:

TEST PROPERTY	TEST VALUE AND AMENDMENT			
Prohibited Weeds	Free of plants or plant parts of Bermuda grass, Quack grass, Johnson grass, Nutsedge, Poison Ivy, Phragmites, Cattail, Reed Canary Grass, Canada thistle, or any noxious weeds.			
Debris	Soil shall be free of cinders, stones, slag, coarse fragments, gravel, sticks, trash, roots, and other debris over 3/4-inch.			
Grading Analysis	Sieve Size			Passing by Weight Minimum %
	3/4-inch			100
	No. 4			90
	No. 10			80
Textural Analysis	Particle		% Passing by Weight	
	Size	mm	Minimum	Maximum
	Sand	2.0 – 0.050	62	75
	Silt	0.050 – 0.002	10	25
	Clay	less than 0.002	10	18
Soil pH	Shall be based on the specific plant requirements but will be within the range of 6.0-6.5.			
Organic Matter	Shall be between 3-6%			
Nutrient Content	The acceptable amount of Magnesium shall be 17.5 ppm; Phosphorous shall be 50 ppm; and Potassium shall be 42.5 ppm.			
Soluble Salts	Soluble salts shall not exceed four (4) mmhos/cm, Calcium levels shall not exceed 2,000 parts per million.			
Harmful Materials	The soil shall contain no substances harmful to plant growth.			

DRAFT

G. Lower Root Zone

1. The lower rootzone shall be uniform in color and texture and must meet the same requirements of the Upper Rootzone. It can be the same imported material as the upper root zone or be created by on site mixing of amendments into existing soil.

H. Turf seed must meet requirements of Section 329220 Seeding and Sodding for Turf Areas.

I. Packaged materials will be delivered in manufacturer's unopened container or bundles; they will be identified with name, brand, type, weight, and analysis. Packaged materials will be stored in a manner that will prevent damage or intrusion of foreign matter. Any material that becomes contaminated will be removed from the job site and replaced.

J. Organic amendments shall not be delivered or installed excessively wet or frozen.

K. Delivery location, stockpile locations and schedule will be coordinated with the Owner prior to delivery. Soils will be protected from eroding while stockpiled on site.

L. Equipment: Any specialized grading and deep ripping equipment shall be designed to minimize compaction of prepared subgrade and athletic field soil mix. Vehicle weight should not exceed 19,000 lbs. All equipment will be approved by the Owner prior to bringing to the site.
   1. The grader must be equipped with dual laser pickup, dual laser grade range mode, and the laser pickup shall operate the blade elevation controls automatically once they are locked on the laser beam. Each of the two laser pickups will operate only one end of the grader blade respectively. The laser source shall be capable of accuracy to two places of a percent (i.e., 1.23% of grade) and shall be capable of operating either the positive or negative angle of configuration without physically moving the laser source head.
   2. The deep ripping equipment shall have mounted metal tines spaced approximately one (1) foot apart and extending to a minimum depth of twelve (12) inches and shall be used to deconsolidate the soil.

M. Water: Potable water from fresh water sources, free of injurious chemicals and other toxic substances harmful to plant life.

N. Skinned Infield: Material free of any stones greater than 1/4-inch, in general conformance with ASTM F2107, and conforming to the following:
   1. Sieve Analysis:

Size	Percent Passing
#4	100.0
#10	89.5
#20	85.9
#40	79.6
#60	64.2
#100	45.2
#200	38.4

   2. It shall contain no organic matter and meet the following mechanical analysis:

Soil Type	Soil Size	Percent Passing
Sand	2.0 mm - 0.05 mm	62% - 75%
Silt	0.05 mm - 0.002 mm	10% - 25%
Clay	Less than 0.002 mm	10% - 18%

   3. Skinned infield mix shall be selected from the following manufacturers:
      a. Martin Marietta –Infield Mix
   4. New Enterprise Stone & Lime Co., Inc. – Original Diamond-Tex
      a. Turface Athletics – Turface SAF Diamond Mix
   5. Calcined Clay: Approved material from the following manufacturers:
      a. Diamond Pro – Diamond Pro® Infield Conditioner
      b. Pro's Choice – Soilmaster®
      c. Turface Athletics – Turface MVP
   6. Mound and Home Plate Clays: Approved material from the following manufacturers:
      a. Diamong Pro – Diamond Pro Home Plat Clay
      b. Stabilizer Solutions – Hilltopper Mound Clay
      c. Turface Athletics – Mound & Plate All-Purpose Packing Clay

O. Warning Track: Stone dust, washed, grading size 10 per AASHTO M 43, in general conformance with ASTM F2270.

DRAFT

1.05 SUBMITTALS

A. Contractor shall supply specified information in Quality Assurance article above.

B. The Contractor must also submit the following information:
   1. Manufacturers and/or source data for all materials including soils.
   2. State of Maryland licenses for Certified Fertilizer Applicators and Certified Pesticide Applicators for personnel performing that work.
   3. Certified mechanical, and chemical analysis of samples of onsite and imported topsoil, sand, soil amendments and organic compost materials used in making the rootzone.
   4. Final Rootzone sample and soil tests.
      a. Submit nutrient management plan (fertilizer and pH adjustments) for acceptance. This plan shall be based on the results of the soil testing and meeting the required soil parameters. The soil tests and nutrient management plan must be reviewed and approved by a certified Maryland Fertilizer Applicator. This management plan shall be for both the initial soil preparation and all subsequent fertilization/pH adjustment during the maintenance period.

C. Submit schedules for watering, mowing, and Integrated Pest Management (IPM).

D. Submit a list of equipment anticipated for soil work, unloading materials, handling and installation and maintenance without over compacting the field. In addition, equipment for watering and mowing must be submitted based upon requirements for the Work and actual, in-site soils conditions observed after topsoil removal.

E. Submit soil tests for all soil to be obtained from both on-site, off-site, and soil mixes for acceptance. Obtain one soil test for each soil source per 300 cubic yards of soil. Allow a minimum of four weeks for independent testing by the Owner as required by the Owner.

F. Submit seed manufacturer's certificate of purity and guarantees of germination in accordance. Seed must be Maryland Certified Seed. Maryland Certified Seed tag must be present on the bags when brought to the site. The tags will be provided when the seed is placed.

G. Samples provided by the Contractor shall be typical of material to be delivered to the site and shall provide an accurate indication of color, texture, and the organic make-up of the material. Submit three-pound samples of the following, as relevant:
   1. Organic compost material
   2. Sand
   3. Imported Upper Rootzone Material

DRAFT

1.06 QUALITY ASSURANCE

A. The Contractor or subcontractor must supply evidence of having successfully completed construction or reconstruction of a minimum of ten (10) fields in the last three (3) years are to that meet National Collegiate Athletic Association (NCAA) requirements, or alternatively shall be a Certified Sports Field Manager (CSFM) from the Sport Turf Manager's Association (STMA). All personnel performing fertilization and pesticide application work shall be Certified Fertilizer Applicators or Certified Pesticide Applicators by the State of Maryland.

B. The Contractor must also supply evidence of having maintained the degree of accuracy as indicated in this specification and in the Commission's excavation, filling and grading specifications.

C. The Contractor must supply a list of three (3) references for work done in the last three (3) years. Photographs of completed field should also be submitted.

D. If construction of a Bermuda field is required as part of the project, the Contractor must provide a reference and photographs of at least two (2) Bermuda fields completed.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.01 CONSTRUCTION

A. Commencement
   1. The Contractor shall notify the Owner at least ten (10) calendar days prior to each stage of field construction. The areas and conditions where the fields are to be installed will be examined, and the Contractor will notify of conditions detrimental to proper and timely completion of work. Work will not proceed until unsatisfactory conditions are corrected to allow proper installation of work.
   2. Determine location of all underground utilities prior to soil work. Existing utilities, paving, vegetation, and other facilities will be protected from damage caused by soil installation operations. All damaged areas, facilities and materials shall be restored, repaired or replaced as directed by the Owner at the Contractor's expense.
      a. Commencement of work will not begin until all submittals have been approved. This includes but is not limited to soil testing results and recommendations.

B. Working Conditions: All work on the athletic fields including excavation to subgrade, root zone placement, deconsolidation, and amendment operations shall be performed when soil moisture and weather conditions are suitable and shall cease when conditions are unsuitable as directed by the Owner.

C. Subgrade
   1. Perform excavation and grading to establish the subgrade elevation, which shall be twelve (12) inches lower than final grade, unless construction documents specify a different depth. All surface elevations shall be laser graded and uniform, smooth, and free from irregular surfaces.
   2. Deconsolidation of Subgrade.
      a. The compaction of the top six (6) inches of subgrade shall not exceed 90%. If the subgrade is compacted fill or the native soil exceeds 90%, deconsolidation must be performed. The minimum compaction should be 85% and may require rolling to obtain uniform compaction.
   3. Deep ripping equipment: The soil should be ripped making a minimum of three (3) passes in one direction and three (3) additional passes in an approximately perpendicular direction to ensure soil is thoroughly mixed and friable.
   4. Deep ripping of the sub-soil shall take place under suitable soil moisture conditions, and strict care must be taken to avoid re-compaction of the newly ripped soil. Appropriate soil moisture condition of the ripped soil can be identified by rolling the soil (at different depths where the ripping will occur) between hands. If a long ribbon (4 inches) forms easily, then the soil is too moist. If no ribbon can be formed, or if the soil is too hard to reform, then the soil is too dry.
   5. If the soil fails to deconsolidate in the manner desired for subsequent work, additional passes and/or other measures may be required as directed by the Owner.
   6. Debris Removal: After deconsolidation, the contractor shall remove stones and debris larger than 2 inches from the top two inches of subgrade using a combination of equipment and manual means.
   7. Testing/Approval: The Contractor shall provide sufficient notice to avoid undue delay in the continuation of work. The subgrade shall be inspected and approved by the Owner for proper elevation, compaction and disking and debris removal prior to placement of topsoil.

DRAFT

The contractor shall provide sufficient notice to avoid undue delay in the continuation of work.

8. Contractor's third-party surveyor shall perform independent subgrade survey and submit an electronic file in PDF and CAD versions a 3D surface and 0.5' contours to confirm compliance with contract specifications; spot elevations shall be shown and labelled.
9. Finished Subgrade: Following subgrade survey, correct any observed or suspected high and low points after checking by using a ten (10) foot straight edge. The tolerance will be 1/2-inch or less in 25 feet in any direction on a 20-foot grid. Any detectable high or low points must be remedied.
10. Compaction: The contractor shall secure the services of an independent testing agency using nuclear density testing to verify that the compaction levels are between 85 - 90%. The testing shall be performed at a minimum of ten locations, to be determined by the Owner. If the compaction levels exceed 90%, retesting must occur after deconsolidation work has been performed.
11. The subgrade must meet all requirements as stated and no further work can continue without written permission by the Owner.

D. Lower Rootzone

1. Lower Rootzone shall be placed and spread over the deconsolidated subgrade. The subgrade shall remain deconsolidated and pitched relating to the final grade throughout the placing of soil to ensure the field drainage as designed.
2. The soil will be placed in two lifts. The first lift is 2 inch depth placed on the subgrade. The top 2 inches of subgrade and 2 inches of lower rootzone soil will be mixed using a tiller to achieve a homogeneous mixture. After mixing, the next 2 inches of soil can be placed.
3. Use box blade or other appropriate mechanical attachments specifically designed to properly compact individual topsoil lifts in the manner described above. Compaction should be to a maximum dry density of 85% and a minimum of 80%.
4. The Lower Rootzone must meet all requirements as stated and no further work can continue without written permission by Owner.

3.02 UPPER ROOTZONE

A. Upper rootzone shall be placed and spread over the lower root zone to achieve a depth of eight (8) inches or as specified in the contract documents. It is important that the lower rootzone remains deconsolidated and pitched relating to the final grade throughout the placing of the soil to ensure the field drainage as designed.

   a. The soil will be placed in multiple lifts. The first lift is 2 inch depth placed on the lower root zone. The top 2 inches of upper root zone and 2 inches of lower rootzone soil will be mixed using a tiller to achieve a homogeneous texture. After mixing, the next layer of soil can be placed.

B. Use box blade or other appropriate mechanical attachments specifically designed to properly compact individual topsoil lifts in the manner described above. Compaction should be to a maximum dry density of 85% and a minimum of 80%. The contractor shall secure the services of an independent testing agency using nuclear density testing to verify that the compaction levels are between 80 - 85%. The testing shall be performed at a minimum of ten locations, to be determined by the Owner. If the compaction levels exceed 85%, retesting must occur after deconsolidation work has been performed.

C. The contractor shall employ a third-party surveyor to perform independent, final grading survey to confirm conformance to contract specifications. The contractor shall perform an as-built survey based on a 10 foot grid or in random locations as requested by the Owner, who should be notified in advance and present when the survey is performed. Any observed or suspected high and low points shall be checked using a 10 foot straight edge. If deemed necessary by the

DRAFT

Owner, additional survey information may be required for final grading approval. The Contractor shall submit an electronic file in both PDF and CAD versions with a three-dimensional surface and 0.5' contours to confirm compliance with contract specifications. Spot elevations shall be shown and labelled.

D. Grading Tolerance: The playing surface shall be graded to a general tolerance of 1/4-inch. The finished elevation tolerances shall be 1/4-inch for every 10 feet of linear direction.

E. Remedy for Low Points: Contractor is responsible for providing extra root zone mix to fill in any low spots at no additional cost to the Owner.

F. Remedy for over-compaction: Care must be taken not to over-compact any of the soil layers. Should over-compacting occur, the Contractor shall be required to de-compact the soil by loosening through tilling or other means and re-compacting to specified limits, at no additional cost to the Owner.

   a. For rectangular fields, field soil density tests to prevent compaction are required, a minimum of ten (10) over the field area as designated by the Owner are required to certify that the soil is not over-compacted and meets the requirements of this specification.

   b. For diamonds, a total of nine (9) field soil density tests over grass area for a skimmed infield and a total of fourteen (14) for diamonds with grass infield. Soils shall not be tilled or amended when the soil's moisture level is above field capacity or when soil is frozen.

G. Soil Testing: A minimum of five (5) in-situ soil test sites over the athletic field soil area shall be performed and Soil amendments shall be added to ensure proper limits for Magnesium, Phosphorus, Potassium, Calcium, Nitrogen, Soluble salts, Sulfur, Lime, and soil pH. Analysis and rate of application shall be determined based on soil test results conducted by a state laboratory or recognized commercial laboratory before seeding begins. The Contractor's certified nutrient management specialist should provide nutrient recommendations that reflect the Maryland's Lawn Fertilizer Law. All recommendations shall be approved by the Owner.

H. Turf establishment shall not begin until all conditions are met for the Upper Rootzone. Written permission is required from the Owner.

I. Seeding shall conform to Section 329220 Seeding and Sodding for Turf Areas. The Contractor shall be responsible to have adequate water available at the site prior to and during installation of seed, unless otherwise stated, and shall ensure and take proper care during seed installation not to cause over-compaction of underlying soils, i.e.: only low impact equipment permitted on the field after upper rootzone mix is in place.

J. No temporary seed will be placed on the graded field unless otherwise directed by the Owner unless required to comply with MDE Erosion and Sediment Control Standards. Straw mulch shall not be used on the athletic field soil.

K. Watering: During and after seed germination, regular watering must be performed. Submit a watering schedule for approval by the Owner. See Section 329220 Seeding and Sodding for Turf Areas on watering requirements. During the first 2-3 weeks (dependent on seed germination), the seed shall be kept moist to allow for germination.

L. Any additional seeding or sodding on the field that is recommended by the Owner will be provided at no cost to the Owner. The Contractor is responsible for providing extra topsoil and sand mix to fill in any low spots and establish turf at no cost to the Owner. The Contractor is also responsible for repair of any damaged areas due to changes or adjustments to the irrigation heads.

M. Mowing: Submit a mowing schedule for approval by the Owner. Changes can be made with the approval of the Owner. Mowing height should be determined based on best practices for a

DRAFT

particular species and variety. At no time, should more than 1/3 of the grass leaf be removed at one time. In general, during the growing season, cool season grass should be kept between 2.5 to 3.0 inch height and warm season grasses at 0.75 to 1.25 inch height.

N. Acceptance: The field will only be accepted once the entire surface has 95% grass coverage. The field shall be level with no high or low spots and graded as shown in the construction documents. In addition, no rocks greater than 3/4-inch diameter may be in the 12 inch root zone. The grass must be free of any weeds.

O. Maintenance and Grow-In Period: After the field grass is growing and being maintained by the Contractor to provide proper growth and vigor, the Owner will perform a final inspection and once accepted, the Contractor will be responsible for maintenance of the fields for a minimum period of 18 weeks during growing season. During this 18-week period, regular aftercare maintenance must be performed by the Contractor on the field which will include but not be limited to regular mowing, IPM program and watering. The Contractor is responsible for providing extra topsoil meeting the original root zone requirements or top-dressing sand, as approved by the Owner, to fill in any low spots and reseed these areas at no additional cost to the Owner.

P. Skinned Infield

1. Once finish grades of the field are established, determine and mark the arc of the infield. This is to be done based on the placement location of the new home plate and pitching rubber location.
2. Using lightweight equipment, excavate infield to a depth of 2 inches. Excavated materials shall be utilized elsewhere on site as approved by the testing agency or removed from the site and disposed of by the contractor at no additional cost.
3. Excavated infield is then to be loosened by means using lightweight equipment mounted with a power rake another 2 inches for a total depth of 4 inches total. Resulting rocks and debris 1/2-inch diameter and greater are to be removed and disposed of off-site.
4. The “lip” area (the edge between the dirt and the grass) shall be installed in such a manner as to create a smooth transition between the skinned infield and the outfield grass. If the “lip” is unsatisfactory, this may entail removing up to 6 feet of sod, re-grading the “lip” area and replacing the sod with MD certified tall fescue and shall be at no additional cost to the owner.
5. Install new infield mix material 2-1/2 inches thick minimum.
6. The infield shall be laser graded at slopes shown on the plans.
7. Install 3-tons of calcined clay. This is to be mixed into the top 1-1/2 inches\ **<< 1-1/2 inches>>**.
8. The infield shall then be rolled tight with a 3-ton static roller.
9. The wear areas at the pitcher’s mound and the home plate area are to be constructed with special clays. They are to be a minimum of 4-inch thick, if using loose bagged material and 2-1/2 inch thick if using formed clay bricks.
10. A 1/4-inch final light top dressing of calcined clay is to be applied to infield and then rolled tight with a 3-ton static roller.

Q. WARNING TRACK

1. On prepared subgrade, install French Drain Subsurface Drainage.
2. Install geotextile to prevent future weed migration.
3. Install drainage course in 2 inch lifts and compact to 85 percent of the maximum dry unit weight according to **<<ASTM D698>>**.

DRAFT

4. Install Warning Track material in 2 inch lifts and compact each to 85 percent of the maximum dry unity weight according to **<<ASTM D698>>**.

END OF SECTION 321800

DRAFT

SECTION 321813
SYNTHETIC GRASS SURFACING

PART 1 GENERAL

1.01 SUMMARY

A. This section includes the synthetic turf playing field surfacing and associated components, including, but not limited to the following
   1. Earthwork and Compaction
   2. Geotextile Fabric
   3. Drainage Piping
   4. Cleanouts
   5. Gravel Drainage Layer
   6. Infilled Synthetic Turf for Playing Fields
   7. Turf Edge Curbs and Fasteners
   8. Sports Equipment Installation

1.02 REFERENCE STANDARDS

A. ASTM D1335 - Standard Test Method for Tuft Bind of Pile Yarn Floor Coverings.

B. ASTM D2859 - Standard Test Method for Ignition Characteristics of Finished Textile Floor Covering Materials.

C. ASTM D5034 - Standard Test Method for Breaking Strength and Elongation of Textile Fabrics (Grab Test).

D. ASTM D5823 - Standard Test Method for Tuft Height of Pile Floor Coverings.

E. ISO 9000 - Quality Management Systems -- Fundamentals and Vocabulary.

F. ISO 14001 - Environmental Management Systems — Requirements with Guidance for Use.

G. ISO/IEC 17025 - General Requirements for the Competence of Testing and Calibration Laboratories.

DRAFT

1.03 SCOPE OF WORK

A. Work included in this Section shall involve the furnishing of all the necessary design plans in accordance with these specifications, local and state permits, skilled labor, materials, aggregate material testing, and all the equipment necessary for the conversion of an existing natural turf playing field to a complete, new, vertically draining, infilled synthetic turf playing field system. The Scope of Work shall include, but is not specifically limited to, the following:
   1. The Owner will be fully responsible for providing all the necessary professional land surveying boundary and topographic scope of services prior to commencement with any design scope of services. Construction stakeout is to be provided by the Contractor.
   2. The Owner shall retain a professional geotechnical engineering firm to conduct a minimum of 5 soil borings within the area of the new synthetic turf playing field.
   3. The Owner shall be responsible for all fees at the time of permitting review submission.
   4. The Contractor shall provide a full set of construction design documents prepared by a Maryland licensed professional engineer specializing in fully functional infilled synthetic turf athletic playing field conversion systems.
   5. Demolition and haul-off of the existing turf surface and subgrade preparation to meet tolerances described herein.

6. Construct the drainage profiles in accordance with the approved design required for positive drainage.
7. Modification of existing drainage structures to accommodate the new drainage discharge configuration.
8. Review and certification of previous work performed by others (if demolition and subgrade preparation is not provided by this Contractor), specifically related to the work indicated in this section.
9. Provision for compaction of subgrade.
10. Installation of the subgrade drainage collection system.
11. Installation of the granular base layer to meet tolerances described herein.
12. Installation of sports equipment as required per sport.
13. Installation of the infilled synthetic turf system.
14. Installation of all inlaid or tufted lines, logos, and borders.
15. Provision of samples per specifications.
16. Provision of extra turf materials for future repairs.
17. Provide maintenance training, equipment, and repair manuals as well as warranty package per the specifications.
18. Provide preventative maintenance grooming during two (2) scheduled on-site visits each year of the warranty period.
19. Provide annual playing surface performance testing as delineated in Section 1.8 Quality Control
20. All material testing indicated herein shall be paid for by the Contractor.

DRAFT

1.04 REFERENCES

      o. F 1015-03 – Relative Abrasiveness of Synthetic Turf Playing Surfaces

1.05 SYSTEM DESCRIPTION

A. General: Synthetic Turf Surfacing System shall be comprised of a subsurface drainage system, aggregate drainage base layer, containment curb with perimeter nailer to secure turf, and synthetic grass with infill material.

1. Components are to include, but are not limited to:
    a. Earthwork Requirements:
        1) Excavation, trenching, grading, filling, backfilling, compaction.
        2) Graded and compacted subgrade
        3) Disposal of spoil materials.
    b. Subdrainage System:
        1) Geotextile Fabric.
        2) Gravel drainage aggregate material.
        3) Lateral drain pipe (if indicated), collector pipe, and watertight connections.
    c. Aggregate Drainage Base Layer: Aggregate drainage base installed over geotextile fabric and flat panel drains (if indicated). Thickness of base layer to be as per plan details, compacted over properly prepared subgrade.
    d. Perimeter Turf Fastener:
        1) Pressure treated wood or a composite/synthetic wood 2” x 4” nailers.
        2) Fasten as necessary to concrete curb, foundation or structural elements, per Construction Documents.
    e. Infilled Synthetic Turf

B. Performance: Synthetic turf playing field system shall comply with the following performance criteria:
    1. Initial GMax (ASTM F 355): Shall not exceed 135 G’s, nor be less than 90 G’s when tested in accordance with ASTM Test Method F-1936
        a. GMax shall not change more than 10% at any one location through the end of the warranty period.
        b. At no time in the life of the warranty period shall the GMax exceed 165 G’s.
    2. Percolation (ASTM F 2898):
        a. Gravel Drainage Aggregate Layer: 150 inches per hour minimum.
        b. Finished Topping Stone Aggregate Layer: 50 inches per hour minimum.
        c. Finished Playing Field Surface with Infill: 12 inches per hour minimum.

1.06 SUBMITTALS REQUIRED WITH BID

A. Design-Build Synthetic Turf Surfacing System Contractor Qualifications:
    1. The Contractor shall provide a written document describing its history and experience with this particular type of design-build project. Provide the number of years of experience and number of similar projects.
    2. The Contractor shall provide a list of any current or past legal actions including, but is not specifically limited to, litigation or mediation over the last 10 years for any portion of the system failures, and or workmanship.
    3. The Contractor shall provide proof of a Certified Field Builder designation from the American Sports Builders Association (ASBA) as a direct employee to be qualified for this project.
    4. The Contractor shall provide proof of a licensed Professional Engineer on staff, and confirmation the employee is licensed and in good standing in the jurisdiction of the project location, to be qualified for this project.
    5. Provide field locations, client contact (name, address, phone number), type of synthetic turf product installed, date of installation, and general contractor (if used) for a minimum of 10 competition synthetic turf football, lacrosse, or soccer installations in the last 3 years.

DRAFT

6. The Contractor shall provide resumes and certifications for all staff to be assigned to the project.
7. The Contractor shall provide a list of sub-contractors to be under the direct responsibility of the Contractor in association with the construction of this project.

B. Product Samples:
1. Synthetic Turf: one (1) 12” X 12” loose sample of the turf with perforated backing intact. Include third party test reports.
2. Synthetic Turf and Infill: Provide one (1) sample of turf system material in an 11-inch x 7-inch containerized condition resembling the installed condition as closely as possible.
3. Infill Mixture: One (1) pound (bag) of each proposed infill material. Include toxic analysis from a third-party testing laboratory.

C. Project Schedule: Provide a work schedule for all work described in these documents. The schedule is to be updated and submitted as progress continues through the completion of the project.

D. Schematic Design Documents and 3D Renderings: Provide Schematic Design Documents and 3D renderings that detail the visual design intent and proposed facility improvements. 2D Renderings will not be acceptable.

E. Sample Warranty: Provide a copy of its pre-paid 3rd party insurance policy. This policy must have an annual aggregate amount of no less than $60 million, and a per incident limit of no less than $7 million per claim. The third-party insurer must have an AM Best rating of A++ or better.

1.07 SUBMITTALS REQUIRED AFTER NOTICE TO PROCEED

A. Design Documents: During the design phase, the following submittals are required to be submitted for review and approval by Owner and local permitting authorities prior to proceeding to the next phase of design.
1. 60% Construction Documents
2. 100% Construction Documents
3. Shop Drawings: Field layouts / striping plans, including all field line dimensions, markings, and colors. Logos, end zone letters, and any other graphics to be included on the field.

B. Product Data: Provide complete product data and test reports for each product option proposed. Test reports at a minimum shall include the following:
1. ASTM D-5848 – pile height, tuft spacing, face weight, and total weight
2. **<<ASTM D1335>>** – tuft Bind
3. **<<ASTM D5034>>** – grab tear breaking strength
4. **<<ASTM D2859>>** – flammability (pill test)
5. ASTM F-1551 – water permeability

C. Synthetic Turf Product Pre-Shipment Test Data: Provide to the Owner certified copies of the pre-shipment test results delineated in paragraph 1.8 Quality Control. All tests shall be certified by an independent (third-party) testing laboratory experienced with the testing of synthetic turf. The qualifications of the testing laboratory to be utilized for the submittal and pre-shipment testing shall be submitted to the Owner for approval. Rolls with samples that do not gain approval shall not be shipped.

D. Compaction Test Data: Provide to the Owner certified copies of the Compaction test results delineated in paragraph 1.8 Quality Control.

E. Drainage and Finishing Topping Gravel Aggregate Test Data: Provide to the Owner certified copies of the Drainage and Finishing Topping Gravel Aggregate test results delineated in

DRAFT

paragraph 1.8 Quality Control. Gravel test results shall be approved by the Owner prior to the delivery of material to the site.

F. Grade Verification Surveys: Submit to the Owner grade verification surveys as delineated in paragraph 1.8 Quality Control. Grade verification surveys shall be approved by the Owner prior to proceeding to the next phase of construction.

G. Gravel Layer Percolation Test Data: Provide to the Owner certified copies of percolation test results delineated in paragraph 1.8 Quality Control.

H. Proof of Positive Drainage: Provide to the Owner copies of the surveys as delineated in paragraph 1.8 Quality Control.

I. Finished Playing Field Test Data: Provide to the Owner certified copies of Finished Playing Field Test results as delineated in paragraph 1.8 Quality Control.

J. Project Warranty: Provide to the Owner copies of Owner & Maintenance Manual, Warranty, and other required items as delineated in paragraph 1.9 Warranty.

1.08 QUALITY ASSURANCE

A. Synthetic Turf Surfacing System Contractor Qualifications: The Contractor chosen to perform the work described in this Specification shall comply with the following:
   1. The Contractor shall provide proof of a Certified Field Builder designation from the American Sports Builders Association (ASBA) on staff.
   2. The Contractor shall provide proof of a licensed Professional Engineer on staff, and confirmation the employee is licensed and in good standing in the jurisdiction of the project location.
   3. Provide field locations, client contact (name, address, phone number), type of synthetic turf product installed, date of installation, and general contractor (if used) for a minimum of 10 competition synthetic turf football, lacrosse, or soccer installations in the last 3 years.

B. Synthetic Turf Manufacturer - defined as:
   1. A company specializing in the design and manufacturing of infilled turf systems with not less than ten (10) years documented experience.
   2. The Synthetic Turf Manufacturer must have been in business under the same ownership for at least ten (10) years, and shall have been installing similar sports fields for that entire period.
   3. Manufacturer shall have an experienced technical services professional who is available during the course of the work to meet with the Owner and/or Design Professional.

C. Synthetic Turf Manufacturer’s Experience Requirements:
   1. The Synthetic Turf Manufacturer shall have the experience of at least one hundred (100) acceptable installations of full-size fields (minimum 65,000 sq. ft.) in the United States within the past twelve (12) months of tufted, polyethylene grass-like fabrics with infill. Submit a list of all applicable installations with the bid. The Synthetic Turf Manufacturer shall have the experience of one hundred (100) acceptable installations (minimum 65,000 sq. ft.) of fields that are at least eight (8) years old. Submit a list of all applicable installations with the bid.
   2. The Synthetic Turf Manufacturer shall have the experience of fifty (50) acceptable installations of the specific fiber system specified. Submit a list of all applicable installations with the bid.
   3. The Synthetic Turf Manufacturer must be a certified member of the Synthetic Turf Council in good standing.
   4. The Synthetic Turf Manufacturer must have and operate its own extensive research and development laboratory. This laboratory must include testing devices for the following

DRAFT

tests: Yarn Tensile Strength, Yarn Elongation, Tuft Bind, Grab Tear Strength, Seam Strength, g- max, Force Reduction, Vertical Deformation, Ball Roll, Ball Rebound, Rotational Resistance, Linear Traction, Relative Abrasive Index, UV Resistance, Flammability, and Simulated Aging.

5. Manufacturer must have an ISO 17025 Accredited Laboratory in place at the time of manufacturing to verify product standards and quality. Manufactures without an ISO 17025 Accredited Laboratory will not be accepted.
6. Testing of the synthetic turf system is mandatory and must be provided from a laboratory that is accredited by the NVLAP. Testing from laboratories that are not NVLAP accredited will not be accepted. The National Institute of Standards and Technology (NIST) is part of the U.S. Department of Commerce and administers the National Voluntary Laboratory Accreditation Program (NVLAP). Accreditation requirements are established in accordance with the U.S. Code of Federal Regulations (CFR, Title 15, Part 285), National Voluntary Laboratory Accreditation Program, and encompass the requirements of **<<ISO/IEC 17025>>**.
7. The Synthetic Turf Manufacturer must have manufactured and installed fields at every level of competition, including high school, college and professional.
8. The Synthetic Turf Manufacturer must have at least five (5) NCAA Division 1 fields, (2) NFL game fields and two (2) MLB fields currently installed.
9. The Synthetic Turf Manufacturer must not have had more than (5) five fields replaced, under warranty, during the past five (5) years.
10. The Synthetic Turf Manufacturer must be vertically integrated including in-house tufting, polyethylene monofilament extrusion, in-house coating, polyurethane compounding, manufacture own primary backing, in-house yarn texturizing, ability and flexibility to tuft various gauge widths and have the ability to recycle used/old fields.
11. The Synthetic Turf Manufacturer must have a fully integrated quality system, directly based on and compliant with **<<ISO 9000>>**, **<<ISO 14001>>** and OHSAS 18001 international standards.
12. The Synthetic Turf System Vendor shall have the capability to remove, reclaim and recycle the synthetic turf system at the end of its useful life.
13. The Synthetic Turf System Vendor must provide documentation outlining their product lifetime recycle / reuse program that is currently in place. A minimum of 5 fields must have been used in this process. All material must demonstrate the capability to reuse in a product that employs a cradle-to-cradle design. Reuse or other diversion plans that do not include production of a new and useful product will not be considered.
14. The Synthetic Turf Manufacturer must have the ability, under certain color number limitations, to tuft in logos, watermarks, lines, hashmarks and other designs into the body of the field, end zones, sidelines or D zones.
15. Synthetic turf system shall comply with all EPA, CSPC, and all other relevant regulatory agency requirements.

D. The Contractor shall be responsible for the protection of the synthetic turf playing field system through Substantial Completion. Damages caused by construction activities shall be immediately corrected at no additional cost to the Owner.

E. Grade Control System: Grading of both the final subgrade and the aggregate drainage base shall be performed with equipment utilizing a Universal Total Station (UTS) 3D grade control system. GPS or 2D grade control systems will not be acceptable.

1.09 QUALITY CONTROL

DRAFT

A. Subgrade Compaction Testing: Modified Proctor (ASTM D 1557). Compaction testing shall be performed to determine the compacted density of the fill materials. Testing regimen to be as recommended by Owner's geotechnical testing agent.
   1. Number of Tests: A minimum of 9 locations representative of the entire playing field area per vertical lift.
   2. Failings: If, based on the testing and observation agency reports and observations, compacted subgrade or fills are found to be below specified density, provide additional compaction and testing in accordance with specifications.

B. Synthetic Turf Pre-Shipment Requirements: Prior to shipment of the synthetic turf materials to the job site, a 7' x 11" sample from every fifth roll shall be randomly sampled and tested by an independent testing laboratory experienced with testing synthetic turf materials. The testing laboratory shall be completely independent with no ties to the turf manufacturer. The testing shall include the following:
   1. Pile composition and denier
   2. Pile weight
   3. Total Weight
   4. Pile height
   5. Primary & Secondary backing weight
   6. Permeability
   7. Tuft bind (without infill)
   8. Grab/tear strength (length/width)

C. Gravel Drainage and Finishing Topping Gravel Test Data: The gravel drainage material shall be submitted to and approved by a qualified third-party independent testing laboratory for conformance to the specifications. All costs associated with the testing of gravel materials shall be borne by the Contractor.
   1. Phase I Testing: Prior to Construction, submit a one-gallon sample of each type of gravel for testing to establish baseline specification for the remainder of the construction process. A sample is to be tested for:
      a. Gradation – ASTM C 136
      b. Resistance to Degradation – ASTM D 6928 or LA Abrasion & Sulfate Soundness
      c. Bridging Characteristics
      d. Infiltration Rate
   2. Phase II Testing: During Construction, a one-gallon sample of each type of gravel shall be submitted for testing as follows:
      a. A one-gallon sample from the first and every subsequent 500-ton lot of each type of gravel shall be submitted and tested for:
         1) Gradation – ASTM C 136
         2) Resistance to Degradation – ASTM D 6928 or LA Abrasion & Sulfate Soundness
         3) Infiltration Rate.

D. Grade Verification Surveys: Provide as-built topographic surveys with gridded spot elevations spaced at 25 feet on center at the following milestones to display compliance with the intended grades and tolerances of each layer.
   1. Final Subgrade: 1/2-inch over 25 feet in each direction.
   2. Top of Finishing Topping Stone Gravel: 1/4-inch over 25 feet in each direction.
   3. Finished Grade of Synthetic turf (Post-Infill): 1/4-inch over 25 feet in each direction.

DRAFT

E. Gravel Layer Percolation Testing: Upon completion of the installation of the Base and Finishing Gravel layers, percolation testing (ASTM F2898) is to be conducted on the finished gravel layer. Testing shall occur at a minimum of 9 locations representing the entire playing field area.

F. Proof of Positive Drainage: Upon completion of the installation of subdrainage piping, provide an as-built survey with spot elevations at the inverts of all collector pipe connections to structures, bends and/or cleanouts, displaying compliance with the slopes indicated on the playing field subdrainage plans.

G. Finished Playing Surface Testing:
   1. Impact Attenuation (ASTM F 355): GMax
   2. Infill Depth: Measurements are taken at a minimum of 9 locations representative of the entire playing field.
   3. Force Reduction
   4. Percolation
   5. Infill Level
   6. Pile Height
   7. Tuft Bind
   8. Rotational Resistance
   9. Deformation

1.10 WARRANTY

A. Complete Synthetic Turf Surfacing System Warranty: Warranty shall cover, in general, the usability of the turf surface, accessories, use characteristics, drainage performance, and suitability of the installation. All items covered by the warranty are to be replaced or repaired with new materials, including installation at the sole expense of the warranting Contractor for the period of (8) years to the Owner, for the designated uses, commencing with the date of Substantial Completion.

B. Warranty of Synthetic Turf Surfacing System:
   1. The following are inclusive of the term “Synthetic Turf Surfacing System” for provisions of the warranty:
      a. Synthetic turf product as specified and represented by the Turf Manufacturer/Vendor including seams and adhesives.
      b. All materials and products specified.
      c. Materials and working functions of the drainage system.
      d. Final grade tolerances to one-quarter inch over 25 feet in any direction.
      e. Include installation and workmanship.
      f. Must not be limited to the amount of annual usage.
      g. Must include a pre-paid 3rd party insurance policy. This policy must have an annual aggregate amount of no less than $60 million, and a per incident limit of no less than $7 million per claim. The third party insurer must have an AM Best rating of A++ or better.
   2. The Synthetic Turf Manufacturer and Contractor shall warrant to the Owner that the synthetic turf materials shall not fade, fail, shrink, wrinkle, or reflect excessive wear, and shall, at their sole expense and cost, replace such areas of the synthetic turf system not performing to these standards for the life of the Warranty. In the event the Synthetic Turf System does not retain its fiber height or shock absorbency and is consequently no longer serviceable during the warranty period, then any such portion of the turf that is no longer serviceable shall be repaired or replaced.

DRAFT

a. The term “Not Fade” in the context of this warranty shall mean that the synthetic turf material shall remain a uniform shade of green, or other color installed, with no significant loss of color.

3. The Contractor warrants to the Owner that the permeable Synthetic Turf System shall drain vertically a minimum of 12 inches per hour without visible surface ponding, during a normal rain event.
4. These warranties and the Contractor’s obligations hereunder are expressly conditioned upon:
   a. The Owner making all minor repairs to the synthetic turf system upon the discovery of the need for such repairs in accordance with the turf manufacturer’s repair manual.
   b. The Owner maintaining and properly caring for the synthetic turf system in accordance with the Manufacturer/Contractor maintenance manual(s) and instructions.
   c. The Owner complying with the dynamic and static load specifications established by the Manufacturer and/or Contractor.
5. Prior to acceptance and/or occupancy by the Owner, the Contractor shall provide training to the owner on the operation and maintenance of turf grooming equipment provided.

1.11 EXTRA MATERIALS

A. Furnish to the Owner extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Turf for Future Repairs: The following are minimum areas for the extra synthetic turf to be provided by the Contractor to the Owner:
      a. Each Green Colored Turf: 250 sq. ft.
      b. White Turf: 100 l.f. of 4” wide lines
      c. Additional Used Colors: 20 sq. ft. each
   2. Infill Materials: 1 Ton each

PART 2 PRODUCTS

2.01 GENERAL

A. General: the synthetic turf system shall be a synthetic turf system manufactured in the United States and shall meet or exceed all guidelines established herein, or for characteristics not specifically stated, shall meet or exceed all guidelines published by the Synthetic Turf Council. The turf system shall consist of a synthetic grass-like surface pile, which shall be tufted into a synthetic backing. All backing layers and coatings shall be firmly bonded together. Coating material must be completely cured and bonded to the other backing layers. Synthetic turf panels or rolls that do not meet the requirements of this specification will be rejected. The entire system shall be resistant to weather, insects, rot, mildew, and fungus growth, and shall be non-allergenic and non-toxic. The entire system shall be constructed to maximize dimensional stability, to resist damage and normal wear and tear from its designated use, and to minimize ultraviolet and extreme heat degradation. All adhesives used in bonding the system together shall be resistant to moisture, bacterial and fungal attacks, and resistant to ultraviolet rays at any point in the system.

2.02 AGGREGATE DRAINAGE BASE SYSTEM

A. Geotextile Subgrade Liner: Permeable nonwoven filter fabric consisting of long-chain synthetic polymers; Minimum weight of 3.5 oz / SY. Acceptable Products:
   1. TenCate Geosynthetics Mirafi 140N

DRAFT

2. US Fabrics US120NW
3. Pre-Bid Approved Equivalents

B. Subdrain Laterals / Flat Panel Drains: Flat panel composite drains to be 12 inch wide by minimum 1-inch thick (nominally) strip drain consisting of a 3-dimensional high-flow, high compressive strength HDPE core wrapped or oblong corrugated pipe with internal bracing, thermally bonded with a geotextile filter fabric wrap. Acceptable Products:
1. AdvanEDGE 12 as manufactured by Advanced Drainage Systems (ADS)
2. Hydraway HY211
3. Pre-Bid Approved Equivalents

C. Drainage & Aggregate Drainage Base Material: Shall consist of a mechanically crushed limestone or granite, or other durable hard stone, angular and elongated in nature, that meets the following criteria:
1. Material shall not exceed 18 percent loss of materials as determined by the following test methods:
   a. Micro-Deval (ASTM D7428-15)
   b. Alternate Testing
      1) Sulfate Soundness: Shall not exceed 12 percent loss of materials using magnesium sulfate (ASTM C88).
      2) LA Abrasion: Shall be less than 40 (ASTM C131).
2. Unacceptable Materials : Soft limestone and shale, sea shells or shell fragments, rounded or river stone.
3. Aggregate from multiple quarry sources shall not be used in a single playing field area.
4. Infiltration Rates:
   a. Base Layer Aggregate: ≥ 150 inches per hour
   b. Finish Topping Stone Aggregate: 50 inches per hour
   c. The overall porosity of the composite aggregate drainage base layer shall be greater than 25% when compacted and saturated.
5. Bridging Characteristics:
   a. 3 < (D50 Base Stone / D50 Finish Stone) < 6
   b. (D85 Finish Stone / D15 Base Stone) ??? 2
6. The aggregate(s) shall conform within reasonable tolerances to the following gradation chart using ASTM Method C136.

Sieve Size	Base Layer Aggregate AASHTO No. 57 Percent Passing	Finish / Topping Aggregate AASHTO No. 89 Percent Passing
1.5 inch	100	
1 inch	95 - 100	
3/4-inch		
1/2 inch	25 - 80	100
3/8-inch		90 - 100
#4	0-10	20-55
#8	0-5	5-30
#16	0	0 - 10
#50	0	0 - 5

DRAFT

2.03 SYNTHETIC TURF SURFACING

A. Products: Shaw Sports Turf - GAME ON, or Pre-Bid Approved Equivalent.

B. Materials:

1. Shall be tufted, polyethylene, grass-like fabric coated with a secondary backing of high-grade polyurethane. Refer to grid in table below. The two fibers specified in this grid shall be tufted through the same needle in a grass-like fabric to a finished pile-height also specified in the grid.
2. All components and their installation method shall be designed and manufactured for use on outdoor athletic fields. The materials as hereinafter specified should be able to withstand exposure in all climates, be resistant to insect infestation, rot, fungus, mildew, ultraviolet light and heat degradation, and shall have the basic characteristics of flow-through drainage, allowing free movement of surface runoff through the synthetic turf fabric where such water may flow to the existing base and into the field drainage system.
3. The finished playing surface shall appear as mowed grass and shall resist abrasion and cutting from normal use.
4. The polyethylene pile yarn shall be a proven athletic caliber yarn designed specifically for outdoor use and stabilized to resist the effect of ultraviolet degradation, heat, foot traffic, water, and airborne pollutants.
5. The system shall be tufted at the pile height and gauge listed in specification grid, refer to grid in section shown in table below.
6. The Primary Backing must be a multi-layer backing, contain UV stabilizers and must pass 3000 hours of QUV A testing, refer to grid in table below.
7. The Secondary Backing of high-grade polyurethane shall be applied to the Primary Backing. Secondary Backing adds resistance to water degradation and strengthens grip on fibers, refer to grid in table below.
8. The backing shall allow for drainage. Partially coated backings or latex coating materials shall not be acceptable.
9. Within the parameters of capability, lines, hash marks, numbers and logo details will be tufted into each panel so that inlays are not/less necessary.

	Polyethelene	
Pile Yarn	Monofilament/Slit Film	METHOD
Linear Density (Denier)	14,000	ASTM D 1577
Yarn Thickness Mono/Slit	100/110 microns	ASTM D 3218
Pile Weight****	42 oz./yd^2	ASTM D 5848
Finished Pile Height****	2.0	**<<ASTM D5823>>**
Product Weight (total)***	62 oz./yd^2	ASTM D 5848
Primary Backing Weight****	6 oz./yd^2	ASTM D 5848
Secondary Coating Weight+	14 oz./yd^2	ASTM D 5848
Fabric Width	15’ (4.57m)	ASTM D 5793
Tuft Gauge	1/2”	ASTM D 5793
Grab Tear Strength Avg.	> 200 lb.-F	**<<ASTM D5034>>**
Tuft Bind (Avg.)	> 10 lb.-F	**<<ASTM D1335>>**
Infilltrometer	> 25	ASTM D3885

Except where noted the above specifications are nominal.

* Values are +/- 8%. ***Values are +/- 10 oz. ****Values are +/- 5%. +Values are +/- 3 oz./yd2.

DRAFT

10. NaturalPlay Performance Infill
    a. Infill shall adhere
        1) Shall be equivalent to NaturalPlay provided by Shaw Sports Turf, 185 S. Industrial Blvd. Calhoun, GA 30701.
        2) If the Contractor wishes to provide an equivalent, he/she shall provide information prior to the bid illustrating equivalent performance characteristics of the shock pad.
        3) The following criteria shall be met:
            (a) 100% natural combination of coconut husks and fiber with highly rounded shells from black and English walnuts.
            (b) Balanced particle sizes distribution.
            (c) Superior cooling capabilities.
            (d) Perform well in all 7 playability metrics
            (e) 12-18 Mesh.
            (f) 0.2764 gr/cc density
11. Shock pad material is a required addition with organic, alternative infill. Suggested pad materials specification in grid in section 2.02 J. Pad must provide proper g-max.
    a. Performance Shock Pad shall adhere
        1) Shall be equivalent to NXTPlay, manufactured by Shaw Sports Turf, 185 S. Industrial Blvd. Calhoun, GA 30701.
        2) Product must carry a twenty-five (25) year warranty and cover the cost to replace or repair the turf in the affected area in the event of product failure.
        3) If the Contractor wishes to provide an equivalent, he/she shall provide information prior to the bid illustrating equivalent performance characteristics of the shock pad.
        4) The following performance criteria shall be met:
            (a) Performance shock pad shall be 16 mm thick.
            (b) Product shall drain at greater than 170 inches per hour.
            (c) Warranty shall be 25 years or more and cover the cost to replace or repair the turf in the affected area in the event of product failure.
            (d) Product must contain 30-50% recycled turf material.
            (e) Product shall contain 80% recycled content.
            (f) Product shall be manufactured in the United States of America.
            (g) Product must come in rolls. Panels or pieces will not be accepted.
            (h) Shock pad shall provide an end of life cycle option for synthetic turf materials that guarantees the turf will avoid any landfills by converting to a new useful product. Reuse or other diversion plans that do not include production of a new and useful product will not be considered.

DRAFT

2.04 TURF EDGE FASTENERS

A. Turf Edge Fasteners: to be comprised of pressure treated lumber or a composite/synthetic wood 2” x 4” (nominal) nailer board attached to the perimeter concrete curbing, or structure, in an approved mechanical manner. Treated lumber used as nailer board shall have “Ground Contact” designation from the manufacturer.

2.05 SPORTS EQUIPMENT INSTALLATION

A. Football Goal Post and Standards (NFHS):

1. Goalpost MODELGP835HSPL by Sportsfield Specialties, Inc. Or approved equal
2. Powder Coat Finish. Color as approved by Owner.
3. Access Frame Kit Model: by Sportsfield Specialties, Inc. Or approved equal
4. Goal Post Pad Color to be selected by Owner

B. Soccer Goals and Standards (NFHS)
1. Portable Soccer Goals: Sportsfield Specialties, Inc. Or approved equal; SG824RS Regulation Round Faced Soccer Goal with Skids. With the SG2SGP Soccer Goal Clamp, It is recommended the back bar of the soccer goal is weighted down with (6 quantity) Saddle Sandbags. Standard Color: White Net.

2.06 SYNTHETIC TURF MAINTENANCE EQUIPMENT

A. New Grooming Equipment: Provide tow-behind maintenance and/or grooming equipment per manufacturer's recommendation.

PART 3 EXECUTION

3.01 EARTHWORK EXECUTION

A. General: Remove material of every nature or description encountered in obtaining required lines and grades. Excavate and/or place and compact fill to provide for elevation(s) required by drawings.

B. Establish required lines, levels, contours, and datum.

C. Remove vegetation, debris, unsuitable soil materials, obstructions, and deleterious materials from the surface prior to placement of fill materials.

D. Prior to placing fill materials over undisturbed material, scarify to a minimum depth of six inches.

E. Place backfill and fill materials in lifts not more than six inches in loose depth. Before compaction of subgrade, moisten or aerate each layer as necessary to provide optimum moisture content to facilitate compaction to the required density. Do not place backfill or fill material on surfaces that are muddy, frozen, or contain frost or ice.

F. Compact each layer to 95% proctor density (ASTM D 1557).

G. Failings: If, based on the testing and observation agency reports and observations, compacted subgrade or fills are found to be below specified density, provide additional compaction and testing in accordance with specifications.

H. Place backfill and fill materials evenly adjacent to structures, piping, or conduit to required elevations. Prevent wedging action of backfill against structures or displacement of piping or conduit by carrying material uniformly around structure, piping, or conduit to approximately the same elevation in each lift.

I. Moisture Control: Where subgrade soil material must be moisture conditioned before compaction, uniformly apply water to the surface of the subgrade or layer of soil material. Apply water in minimum quantity as necessary to prevent free water from appearing on the surface during or subsequent to compaction operations.
1. Remove and replace, or scarify and air dry, soil material that is too wet to permit compaction to specified density.

J. Subgrade Grading: Shape surface of areas under gravel drainage material to line, grade, and cross-section, with finish surface not more than 1/2-inch in 25 feet either direction above or below required subgrade elevation. At no point shall two adjacent spot elevations vary by more

DRAFT

than one-half inch. All grading to be performed with equipment utilizing a Universal Total Station (UTS) 3D grade control system.

K. Contractor to provide an as-built survey of the finished subgrade with spot elevations at 25 feet on center for Owner review.

L. Contractor's Geotechnical Testing Consultant to provide compaction & density reports for Owner review upon completion of subgrade preparation.

M. The Contractor shall bear sole responsibility for the stability and performance of the subgrade throughout the warranty period. Any fluctuation in the subgrade resulting in failure of the finish grade of the playing surface to meet specified tolerances will be immediately corrected by the Contractor at no additional cost to the Owner.

N. The Contractor shall not proceed with drainage system trenching operations or installation of gravel drainage blanket until all subgrade geotechnical tests and certified surveys have been reviewed and approved by the Engineer or Owner.

3.02 FIELD DRAINAGE INSTALLATION

A. Drainage System Trenching: Dig trenches to depth and width indicated on the Construction Drawings. Abnormal conditions such as large cobbles or unstable conditions that may cause the trench to lose integrity shall be reported to the Owner immediately. Excavate trenches to a uniform width and sufficiently wide to provide ample working room.

1. Excavate trenches and conduit to the depth indicated or required to establish indicated slope and invert elevations and to support the bottom of pipe or conduit on undisturbed soil.
2. Only perform trenching, drainage pipe installation, and backfilling operations that can be completed in one day. Exposed trenches that collapse due to rain or other occurrences shall be widened and filled as specified or refilled with subgrade materials, compacted, and retrenched.
3. Compact the bottoms of all trenches to the density described in the placement and compaction of this section. The Owner has the option of observing the general trenching operation and will not observe the entire process for approval to backfill the remaining trench areas.
4. All cuttings and spoil from trenching are to be removed from the facility. Cuttings may not be left in place or spread across the subgrade.

B. Installation of Geotextile Fabric: Place geotextile fabric according to manufacturer specifications.

1. Install geotextile fabric on the bottom and sides of trenches. Extend fabric a minimum of 12 inches past each side of the top of the trench on top of the subgrade.

C. Laying Pipe Materials: Provide full bearing for each pipe section throughout its length with drainage fill material to true grades and alignment and continuous slope in direction of flow.

1. Lay perforated/slotted pipe in accordance with pipe manufacturer's recommendations. Provide collars and couplings as required.
2. Lateral pipe connections to collector piping are to be completed with the manufacturer's recommended pipe outlet and connection fittings.

D. Clean Outs: Clean-out lid shall be set flush with the top of finishing gravel, or as indicated on the drawings. Cleanouts are to be encased in a minimum four-inch (4") width concrete collar to provide for turf attachment.

DRAFT

3.03 AGGREGATE DRAINAGE BASE INSTALLATION:

A. Geotextile / Flat Panel Drains / Base Aggregate Placement: Place base aggregate layer only after subgrade has been graded and compacted to proper density and has been determined to be within acceptable grading tolerances as required in Quality Control article above.
   1. Place geotextile subgrade liner on subgrade free of rocks, depressions, voids, or irregularities that may damage the liner. Overlap joints a minimum of 12 inches and overlap in direction of surface flow. Only place liner over area that can be covered sufficiently with flat panel drains and base aggregate within a short period of time to prevent liner from being lifted or damaged by wind.
   2. Install flat panel drains over the placed geotextile subgrade liner as per spacing and pattern shown on the Construction Drawings.
   3. Care shall be taken as to not disturb the geotextile fabric during base aggregate installation. A minimum of four inches (4”) of base aggregate shall be maintained between the geotextile fabric and the wheels of trucks or spreading equipment. Construction equipment such as dozer blades, shall not make direct contact with the geotextile fabric. If tears occur in the geotextile fabric during the spreading of base aggregate, remove aggregate over the damaged section and replace or repair geotextile liner prior to continuing base aggregate installation operations.
   4. All grading to be performed with equipment utilizing a Universal Total Station (UTS) 3D grade control system.
   5. When the aggregate spreading is completed, the surface shall be compacted by a 3-5 ton roller.
   6. The base aggregate surface shall be left in a firm but not over-compacted as to protect the porosity and drainage capabilities of the aggregate profile.

B. Finish / Topping Aggregate Placement: Place finish / topping aggregate material over the base aggregate in a single layer, to the elevations indicated on the drawings.
   1. After the aggregate drainage base has been uniformly spread throughout the surface, the surface shall receive a final laser-controlled finished grade. This process shall be accomplished utilizing a Universal Total Station (UTS) 3D grade control system. GPS or 2D grade control systems will not be acceptable.
   2. After placement of finish / topping aggregate, the surface is to be rolled with a steel- wheel tandem roller to achieve planarity at the elevation indicated, and meet grading tolerances as described below.

C. Drainage Layer Grading Tolerances: Shape surface of gravel drainage layer to line, grade, and cross-section, with finish surface not more than 1/4-inch in 25 feet either direction above or below required elevation. At no point shall two adjacent spot elevations vary by more than one-quarter inch.

D. Aggregate Drainage Base Survey: Contractor to provide an as-built survey of the finished aggregate drainage base surface with spot elevations at maximum 25 feet on center.

E. Aggregate Base Layer Warranty: The Contractor shall bear sole responsibility for the stability and performance of the aggregate drainage layer throughout the warranty period. Any fluctuation in the gravel drainage layer resulting in failure of the finish grade of the playing surface to meet specified tolerances will be immediately corrected by the Contractor.

3.04 SYNTHETIC TURF PRE-INSTALLATION EXAMINATION

A. Contractor to examine substrates, areas, and conditions where the playing surface is to be installed for compliance with requirements for conditions affecting the performance of the installed playing surface.

DRAFT

1. Verify that substrates for placing playing surface are firm; dry; clean; free from oil, and waxy films.
2. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located under the playing field surface has been completed before installing the synthetic turf system.
3. Verify that joints and cracks in substrates will not adversely affect the installed playing surface.
4. Verify ambient temperatures are in compliance with the manufacturer's recommendations for installation.

B. Acceptance of Aggregate Drainage Base Installation: The Contractor, or his installation subcontractor, shall perform an inspection of the completed aggregate drainage base and stipulate acceptance of the aggregate drainage base prior to the installation of the infilled synthetic turf system. Stipulation shall include:
1. Acceptance of the subbase construction finished surface as totally suitable for the application of work specified in this section.
2. Verification and certification of the infiltration and permeability rates of the aggregate section per the specified requirements – 50 inches per hour minimum.
3. Final grade to be within 1/4-inch, or 0.02 feet, of proposed grades, when surveyed on a 25 foot grid.

C. Do not proceed with installation until unsatisfactory conditions have been corrected.

D. Inspection of Materials: Prior to installation and immediately upon delivery of synthetic turf system materials to the project site, the Contractor shall inspect materials as follows:
1. For damaged or defective items.
2. Measure turf pile height of each roll.
3. Measure backing perforation diameter and spacing.
4. Reject damaged materials and all materials out of tolerance with the specifications.

3.05 SYNTHETIC TURF INSTALLATION

A. Immediately prior to installation of the synthetic turf, the base shall be thoroughly cleaned of all foreign material, soil, and any other substances that may be detrimental to the permeability and the installation of the turf system.

B. Over the aggregate base layer, install synthetic turf carpet in accordance with manufacturer's written instructions. Seams shall be sewn with thread especially made for the carpet materials, or glued, bonded, or welded according to the manufacturer's written instructions.

C. Synthetic turf rolls shall begin with the longest perpendicular cross-field distance and should following the following procedures:
1. No head seams shall be permitted in the inbound playing surfaces unless required for field markings or logos.
2. All visible wrinkles shall be stretched out before seaming.
3. Yard Lines and field marking should be straight and set with precision.

D. Synthetic turf edge shall be mechanically fastened to the installed turf edge fastener per manufacturer's instructions and per the drawing details.

E. Special care shall be taken not to disturb the finish grade of approved aggregate base layer during synthetic turf carpet installation.

DRAFT

F. Bonding of Material Surface: The bonding or fastening of all system material components shall provide a permanent, tight, secure, and hazard-free athletic playing surface. System material components include:
   1. Bonding and/or sewing of all seams and inlaid lines and markings.
   2. Bonding and seaming must maintain their integrity for the total length of the warranty period.

G. All turf seams shall be bonded with supplemental backing material or sewn with high strength polyester fiber cord.
   1. All sewn seams shall be brushed to provide full coverage of fiber over the thread.
   2. All bonded/glued seams shall be brushed to eliminate adhesive materials from turf fibers.
   3. All seams shall be flat, tight, and permanent with no separation or fraying.
   4. Seams shall be rolled with weighted roller to ensure adhesion.
   5. Synthetic turf yarn fabric that is trapped or glued between seams shall be freed from the seams by hand or other approved method to an upright position prior to the commencement of brushing and top-dressing synthetic grass rolls by the manufacturer wherever possible.

3.06 LINES AND MARKINGS INSTALLATION:

A. Field markings shall be provided with the initial installation of the surfacing system. Provide lines and markings in conformance with these specifications. Layouts shall be accurately surveyed and marked prior to installation.

B. If overlapping backing materials are utilized for the inlaid lines and markings, the backing material shall be perforated after gluing and prior to installation of the infill material.

C. Installation of inlays: All inlaid markings shall be installed per the Turf Manufacturer's recommendations.

3.07 ADHESIVE AND INFILL MATERIAL INSTALLATION GUIDELINES

A. Environmental Conditions: Do not apply adhesive materials or infill material when:
   1. Ambient air temperature is below 40 degrees F.
   2. Material temperatures are below 40 degrees F.
   3. Rain is falling or pending
   4. Conditions exist or are pending that will be unsuitable to the installation of the system.

B. Remove debris from turf installation prior to installation of infill materials.

C. Inspect seams and inlays for secure bonding. Bonded seams and inlays shall be properly cured before infill is installed.

D. Pre-Infill Inspection: Contractor and Owner to inspect the synthetic turf playing surface for acceptance prior to the infill installation process. All seams, inlays, and edges shall be inspected to be free of trapped fibers, adhesive bonding, loose edges, and gaps in inlays. Contractor shall make all repairs necessary prior to commencement of infill installation.

E. Vibrate and brush infill materials into synthetic turf at the rate and depth recommended by the manufacturer. Infill material shall be applied in a dry condition, and only when the turf is dry. It shall be applied in uniform layers throughout the installation.

F. Post Installation Inspection: Immediately after installation, inspect project area for uniformity of color of turf, field lines and markings, insert installations, and edge details. Contractor to immediately correct all non-conforming items.

DRAFT

3.08 CLEANING AND PROTECTION

A. Remove all excess materials of all types; equipment, debris, etc. from the site daily, immediately after completion of the work. Remove all stains and other blemishes from all finished surfaces. Leave work in clean, new appearing condition, ready for use by Owner.

B. All reasonable precautions shall be made by the Contractor to protect all installed material and finished work from damage during installation and until acceptance of the work by the Owner. Any material damaged prior to final acceptance by the Owner due to the Contractor's negligence shall be replaced at no cost to the Owner.

END OF SECTION 321813

DRAFT

SECTION 321820
SITE ATHLETIC EQUIPMENT

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM D1335 - Standard Test Method for Tuft Bind of Pile Yarn Floor Coverings.

B. ASTM D2859 - Standard Test Method for Ignition Characteristics of Finished Textile Floor Covering Materials.

1.02 RELATED DOCUMENTS

A. Drawings and general provisions of the contract, including General and Supplementary Conditions and Division 1, Specification Sections, apply to work in this section.

1.03 DESCRIPTION OF WORK

A. This section specifies materials and work required to install new athletic court and track-and-field equipment and to construct new athletic court, track surfacing and artificial turf football/soccer field surfacing systems on prepared asphalt pavement bases for courts and track events, and on prepared subgrade for baseball fields and football/soccer fields.

B. Furnish all labor, materials, tools and equipment necessary to install all artificial grass field turf as indicated on the plans and as specified herein. The installation of all new materials shall be performed in strict accordance with the manufacturer's installation instructions and in accordance with all approved shop drawings.

C. Perimeter edge details required for the system shall be as detailed and recommended by the Manufacturer, and as approved by the Owner.

1.04 RELATED WORK

A. Refer to Division One for LEED coordination and documentation requirements, Section 310000 “Earthwork and Grading”, Section 321200 "Asphalt Pavement", Section 323100 "Chain Link Fencing" and Section 330500 “Utility Standards”.

B. References:

1. National Asphalt Pavement Association (NAPA)
2. USA Track & Field (USATF)
3. U.S. Tennis Court and Track Builders Association
4. National Federation of State High School Associations (NFHSA)
5. International Association of Athletics Federation (IAAF)
6. American Sports Builders Association (ASBA)
7. NCAA Football Rules and Interpretations and/National Federation Rules; FIFA Rules and Regulations, current edition.

1.05 QUALITY ASSURANCE

A. For installation of athletic court and track equipment and/or surfacing systems use only thoroughly trained and experienced personnel, completely familiar with specified products, the manufacturer's recommended methods of installation, and the requirements of this work.

B. Asphalt surface shall comply with the guidelines of the ASBA and NAPA for surface planarity and density.

DRAFT

C. All liquid materials shall be from a single source and manufactured for the purpose of resilient track construction.

D. The contractor shall record the batch number of each product used on the site and maintain it throughout the warranty period.

E. The contractor shall provide the owner an estimate of the volume of each liquid product and the weight of the rubber granule to be used on site.

F. The installer shall be an Authorized Applicator of the specified surface system.

G. The manufacturer's representative shall be available to help resolve material issues.

H. All manufacturer's warranties shall pass to the Owner.

I. Artificial Turf System construction shall be provided by a Contractor with a minimum of 5 completed field installations, providing specific installations with the exact name of the product, contacts names, addresses, telephone numbers, age of the installation and type of infill material for the following types:

1. Soccer pitch and football fields of 65,000 square feet or more, of the exact specified material, including the infill material and fiber, in play for at least 5 years with the same manufacturer, fiber and company they are proposing for this field.

J. The Artificial Turf System Contractor shall provide information proving the experience level of the project supervisor, who shall be a current employee of the contractor, shall be skilled in the performance of his duties, shall have a minimum of 18 months experience in supervising similar sized projects, and shall have installed the proposed product at least twice.

1. The designated Supervisory Personnel on the project must be certified, in writing, by the Turf Manufacturer, as competent in the installation of this material, including sewing seams and proper installation of the infill mixture.

K. The Artificial Turf System Manufacturer shall have a representative on site to certify the entire installation and Warranty compliance on the turf itself.

L. Prior to the beginning of installation, the Installer of the synthetic turf shall inspect the sub-base and accept in writing the sub-base surface planarity (tolerance to grade).

M. All construction shall be performed in strict accordance with written instructions of the surfacing and equipment Manufacturers.

DRAFT

1.06 SUBMITTALS

A. Submit manufacturer's specifications, catalog information and installation instructions for selected equipment and court, track and field surfacing systems.

B. Submit certified design details for softball foul line netting system support poles, showing construction details for the poles and foundations, designed for the required height and loading. Pole details shall be certified by a registered professional engineer.

C. Submit certified design details for manufacturer's recommended installation and foundation requirements for ground sleeve model ballstopper system and other cage system support poles, showing construction details for the poles and foundations, designed for the required height and loading. Pole and foundation details shall be certified by a registered professional engineer.

D. Submit certificates, signed by Contractor, that the installers of the equipment and/or court, track and field surfacing systems have a minimum of five (5) years experience in the installation of athletic equipment and/or court, track and field surface treatments.

E. Submit certificates stating that the Track and Field surfacing system installer is a builder member of the ASBA, and that the surfacing system manufacturer is a member of the ASBA.

F. Submit Authorized Applicator certificate from the Track and Field surface system manufacturer.

G. Submit certificate from the manufacturer of the binders and coatings stating that the materials have been produced specifically for the use in sports surfacing construction.

H. Submit a complete list of materials intended to be used in the construction of the running track system. All liquid quantities will be prior to dilution.

I. Submit current material safety data sheets (MSDS) for the liquid components.

J. Submit a 3”X5” representative sample of the Track and Field surfacing system to be installed with appropriate labeling for identification.

K. Submit a test report that the Track and Field surfacing system has been tested to IAAF standards for force reduction and modified vertical deformation. Force reduction shall be 35-50%. Modified vertical deformation shall be 0.6-1.8 mm.

L. Submit one sample, a minimum of 4x4 inches in size each, illustrating details of the finished artificial turf product.

M. Submit certified copies of independent laboratory reports on ASTM tests as follows for the synthetic grass carpet:

1. Pile Height, Face Width and Total Fabric Weight, Primary & Secondary Backing Weights, ASTM D418 or D5848.
2. Tuft Bind, **<<ASTM D1335>>**.
3. Grab Tear Strength, ASTM D1682 or D5034
4. Pill Burn Test, **<<ASTM D2859>>**.
5. Impact Attenuation, Gmax < 135 at installation

N. Submit recycled content certificates for paving materials and artificial turf materials in accordance with LEED requirements.

O. Submit certificates for the locations of manufacturers of the materials in accordance with LEED requirements.

P. Product substitution: If other than the product specified, the contractor shall submit at least 7 days prior to the bid date a complete type written list of proposed substitutions with sufficient data, drawings, samples and literature to demonstrate that the proposed substitution is of equal quality and utility to that originally specified. Information must include a QUV test of at least 1,000 hours and IAAF test information for the system to be installed.

DRAFT

1.07 WARRANTIES

A. Provide Manufacturer's standard warranty on main support components to cover structural failure due to corrosion, deterioration or defects in workmanship.

B. Provide track surface Manufacturer's standard warranty covering defects in materials and workmanship for a period of not less than 5 years.

1.08 PRODUCT DELIVERY AND STORAGE

A. Deliver court and track surfacing products to the project site in unopened containers with labels attached. Store and handle to prevent damage or contamination.

B. Store material in accordance with manufacturer’s specifications and MSDS.

C. All surfacing materials shall be non-flammable.

D. Deliver and store athletic equipment in a manner to prevent damage during handling and storage. Damaged items will be replaced at no increase to the Contract sum.

E. Deliver Artificial Turf System products to project site in wrapped condition, when appropriate. Store products under cover when elevated above grade.

1.09 PROJECT CONDITIONS

A. Coordination Requirements: Contractor shall coordinate construction of fencing systems around athletic courts and track, and installation of other athletic court, track and artificial turf football/soccer field facilities with the requirements of court, track and artificial turf football/soccer field base or surface construction.

1. Fencing fabric shall be loosely hung on finished fence posts approximately one foot above the finished court surface, with a minimum opening of **<< 20 feet>>** left in the fencing for entrance of surfacing application equipment. Fencing shall be permanently placed after completion and curing of court surfacing system.
2. All athletic court facilities, such as backstops, goals, net posts, net ties, etc. shall be completely installed prior to beginning construction of court surfacing system.
3. Contractor shall carefully coordinate construction of all football/soccer field facilities, including goals and Lacrosse ballstopper system, with the artificial turf installer and with the Owner's Representative. Install foundations and sleeves prior to installation of artificial turf.

PART 2 PRODUCTS

2.01 ATHLETIC EQUIPMENT

A. Basketball Backstop System: Backstop, Pole and Goal system shall be as manufactured by AALCO, Model G66-901S with rectangular fiberglass backboard, or Model G66-601 with fan-shaped fiberglass backboard (Owner's choice), or approved equal.

1. All backstops shall have safety pin in post to prevent backstop slippage.
2. Provide system complete with goal hoop and net.
3. Quantity and location as indicated.

B. Basketball Goals: Backstop, Pole and Goal system shall be the PR77 Mega Duty Playground System as Manufactured by Bison, Inc. (www.bisoninc.com), or approved equal.

1. Backboards shall have 10-year limited warranty.
2. Goals shall be Heavy Duty Flex / Breakaway Goals, with unconditional lifetime replacement warranty.
3. Provide Steel Net for the Goal.
4. All backstops shall have safety pin in post to prevent backstop slippage.
5. Quantity and location as indicated.

C. Baseball/Softball Backstops: As manufactured by Anchor Fence/Master Halco (www.masterhalco.com), or by AALCO, Model BSBO-12, or approved equal.

1. Wire mesh shall be 2-inch chain link, 6 gauge minimum on lower panels, 9-gauge minimum on roof panels.
2. Quantity and location as indicated.

D. Baseball/Softball Foul Poles: Manufactured by Sportsfield Specialties, Inc., or approved equal. Install in accordance with Manufacturer's recommendations. Bottom of foul pole wing shall be even with the top of the outfield fence. Foul poles shall have padding manufactured by Beacon Athletics or approved equal, color to be selected by architect.

E. Softball Foul Line Netting System:

DRAFT

1. Netting manufactured by Carron Net Company, Inc., P.O. Box 177, Two Rivers, Wisconsin, Phone 1-800-558-7768. Net shall be No. 77702 Flexabar Nylon Mesh, weather treated, colored green, with 5/8-inch rope binding on all edges, or approved equal. Mesh size shall be 1-3/4 inch. Net length shall be sufficient so that top shall be attached along suspension cable at 30 feet above grade, and bottom of net shall be attached to top of 10-foot high chain link perimeter fencing along the edge of the baseball field. Where no perimeter fence is required, netting shall be long enough to be attached to a ground cable run between support poles.
2. Support poles shall be structural wooden telephone poles, pressure treated with chromated copper arsenate, type C (CCA-C), length suitable for suspending net at a height of 30 feet above grade, or as otherwise directed by Owner's Representative..
3. Suspension cable, and ground cable where required, shall be 1/4-inc**<< 1/4 inch>>** prestressed aircraft cable, and as recommended by the net manufacturer.
4. Suspension hardware, consisting of "S" hooks, turnbuckles and hog-rings shall be as recommended by net manufacturer, and shall be galvanized. Net tie-down lacing shall be nylon lacing cord, as recommended by the net manufacturer.
5. Contractor's Option: Complete 30-foot tall Straight Ball Safety System featuring 6-inch diameter aluminum poles and heavy duty black #36 nylon mesh netting with 1-3/4 inch squares, as manufactured by Sportsfield Specialties Inc., Delhi, New York, Phone: 888-975-3343, e-mail: www.sportsfieldspecialties.com.
   a. Upright Posts Fabricated with 6" SCH 40 Aluminum Pipe:
      1) Height Above Ground equal to system height plus 1Ft (for hardware)
      2) Aluminum Mill Finish (TFBSS6XXP Powder Coated)
   b. Upright Post Ground Sleeves Fabricated with 7in OD (6.782in ID) Steel:
      1) 30.0-60.0 Feet in Length
      2) Steel Tube
      3) Aluminum Ground Sleeve Caps
   c. Ball Safety Net:
      1) Height x Length Specified by Customer
      2) #36 Black Nylon 1-3/4" Mesh
      3) Tethers 2X net height + 5Ft
   d. Accessories:
      1) Stainless Steel Assembly Hardware
      2) Shell Block Pulley System
      3) 9.0 inch Net Guide Rings
      4) Black Vinyl Coated Wire Rope

F. Tennis Steel Nets: Manufactured by Flex-L-Link, or by B.S.N. Sports, P.O. Box 7726, Dallas Texas, 1-800-527-7510, or approved equal.
   1. Quantity and location as indicated.

G. Tennis Net Supports, Tie Down Anchors, Etc.: Manufactured by B.S.N. Sports, P.O. Box 7726, Dallas Texas, 1-800-527-7510, or approved equal.
   1. Posts shall be Pronet tennis posts, 3 **<< 1/2 inch>>** galvanized steel, with 2 coats of surface paint.
   2. Provide "Safety Ratchet Reel" and all required hooks, caps and other installation hardware as required, by the same manufacturer.
   3. Quantity and location as indicated.

DRAFT

H. Batting Cage System: Frames, netting and support system as manufactured by B.S.N. Sports, P.O. Box 7726, Dallas Texas, 1-800-527-7510, or Sportsfield Specialties, P.O. Box 231, Delhi, NY, 1-888-975-3343 (www.sportsfieldspecialties.com), or approved equal.
   1. Provide system components for baseball batting cage with minimum dimensions 70' long by 14' wide by 12' high, and softball batting cage with minimum dimensions 55’ long by 14’ wide by 12’ high.
   2. Netting shall be Nyothene Weather Treated Black #530 Knotless, 1-3/4 inch mesh (30 Thread), system no. BBT #514B, or equivalent.
   3. Frames and suspension system shall be manufacturer's standard outdoor unit design for permanent installation. Frame pipe shall be 2-3/8 inch heavy wall galvanized steel pipe, or 4-inch O.D. 1/8-inch wall aluminum tubing.
   4. Location as indicated.

I. Discus Throwing Ring System: Provide complete Discus Throw system including throwing ring and surrounding cage.
   1. Throwing Ring: Aluminum throwing circle, 8-foot to 8-foot, 2-1/2 inch diameter, preformed and designed for simple formation of concrete throwing pads that are recessed 3/4-inch, meeting all NCAA and IAAF rules. As manufactured by Aluminum Athletic Equipment, West Conshohocken, PA, 1-610-825-6565, or Sportsfield Specialties, P.O. Box 231, Delhi, NY, 1.888-975-3343, (www.sportsfieldspecialties.com), or approved equal.
   2. Discus Cage: Standard discus cage meeting or exceeding the designed application as set forth by the NFHS, NCAA, and IAAF. Discus Cage shall be as manufactured by Aluminum Athletic Equipment, West Conshohocken, PA, 1-610-825-6565, or Sportsfield Specialties, P.O. Box 231, Delhi, NY, 1.888-975-3343, (www.sportsfieldspecialties.com), or approved equal. Cage members shall be 4 in Schedule 40 aluminum poles featuring a 36 inch rolled offset, with Aluminum Mill finish. Standard cage nets shall be 14 feet above ground with #36 nylon for Discus application. Aluminum ground sleeves shall be included to allow for a semi-permanent design that may be removed as required.
      a. Ground Sleeves shall be fabricated with 4.30 in OD Aluminum Tube, minimum 30-inch length, with Aluminum Mill finish.
      b. Ground Sleeves shall be furnished with Ground Sleeve Caps.
      c. Discus Cage Netting shall be #36 Black Nylon 1-3/4 inch Mesh, 14 feet high by 54 feet length, with six (6) 33 foot tethers with loop ends.
      d. Provide full hardware kit including stainless steel assembly bolts, shell block pulley system and galvanized steel rope cleats.

J. Shot-Put Throwing Ring: Aluminum throwing circle, 7-foot diameter, preformed and designed for simple formation of concrete throwing pads that are recessed 3/4-inch, meeting all NCAA and IAAF rules. As manufactured by Aluminum Athletic Equipment, West Conshohocken, PA, 1-610-825-6565, or Sportsfield Specialties, P.O. Box 231, Delhi, NY, 1.888-975-3343, (www.sportsfieldspecialties.com), or approved equal.

K. Shot-Put Toe Board: Cast aluminum Toe Board meeting all NCAA and IAAF rules, matching recessed or non-recessed throwing circle indicated or specified. Toe board assemble shall be designed to be easily installed and removed for storage. As manufactured by Aluminum Athletic Equipment, West Conshohocken, PA, 1-610-825-6565, or Sportsfield Specialties, P.O. Box 231, Delhi, NY, 1.888-975-3343, (www.sportsfieldspecialties.com), or approved equal.

L. Long-Jump/Triple-Jump Take-Off Systems: Provide complete take-off system meeting all IAAF, NHSF and NCAA requirements and rules, with foundation tray constructed of 1/4-inch galvanized rust-resistant steel. Take-off board shall be designed to be removable for storage. System shall be as manufactured by Aluminum Athletic Equipment, West Conshohocken, PA, 1-610-825-6565, or by Sportsfield Specialties, P.O. Box 231, Delhi, NY, 1.888-975-3343

DRAFT

(www.sportsfieldspecialties.com), or by UCS, Orangeburg, NY, 1-914-365-2333, or approved equal.

M. Football Goal Post: Provide single-post, slingshot design goal meeting all NFSHSA specifications (and designed for easy removal and re-installation). Goal post shall have an 8-foot offset in the gooseneck, designed for use with a soccer goal on the back of the endzone line. Provide complete goal installation system (including ground sleeve cap) as manufactured by Jaypro Sports, Inc., Waterford, CT., 1-860-447-3001 (permanent installation), by Sportsfield Specialties, P.O. Box 231, Delhi, NY, 1.888-975-3343 (www.sportsfieldspecialties.com), or by KWIKGOAL, Quakertown, PA, 1-215-536-2200 (removable installation) or approved equal.

N. Ground Sleeve Model Lacrosse Ballstopper System: Shall be as manufactured by AAE (Aluminum Athletic Equipment Co.), Royersford, PA., 1-800-523-5471, or approved equal.

1. AAE Model # HBS-1:
    a. Posts shall be straight uprights, 2-3/8" O.D. x 12'-6" long, 6063T6 aluminum extrusion with three pre-drilled heights at 9'-6"H, 10'-0"H and 10'-6"H. Posts to be spaced evenly approximately every 20 feet or less. Posts shall be designed so that as the nets expand over time, the higher holes can be used by moving the hardware. The poles shall have pre-drilled holes at the bottom of the posts for net attachment with hardware.
    b. Ground Sleeves: shall be 2-7/8 inch O.D. (2-1/2 inch I.D.) x 3/16-inch wall x 24 inches long, 6063T6 aluminum extrusion, and shall include LD polyethylene plugs with removable tabs.
    c. Net: Shall be 9'-6" high, #N361, 1-3/4" square black UV-treated knotted nylon net, 360-pound tensile strength, 1/4-inch MFP rope border all 4 sides, plus a 1/4-inch MFP rope border 6 inch offset from bottom of net for additional net to stop balls from going under, pre-attached sewn in 3/16-inch diameter galvanized clear coated cable.
    d. Tamper-Proof Ground Sleeve Plug: Model #GSP-2.50, UHMV tapered plug with removal slot, accessory plug for use when system is removed at end of season.
    e. Ground Sleve Plug Removal Tool: Model GSP-RT, stainless steel removal tool to be used with the GSP-2.50 Plug.

2.02 SCOREBOARDS

A. Scoreboards: Provide scoreboards in locations shown on drawings. Scoreboards shall be per Daktronics, or approved equal.

1. Baseball and Softball Scoreboard –BA-2005-21, Outdoor Baseball Scoreboard; Amber LED Digits; AS-5000 Controller. Provide 0A-1196-0039 battery power option. Provide hard-sided carrying case for AS-5000 controller. Provide Team Name in place of Home caption. Provide 24"x20' non-backlit sponsor/identification pane.
2. Football: MS-2009-21, with LED Option, Electronic Captions, ID Panel, and Arch Truss (DA-1001-25, with 50% lettering logo and screen backing). Provide battery power option for radio controlled All Sport consoles. Provide hard sided carrying case. Provide MS-2009-11/21 Sponsor/Logo Decoration. Provide TNMC LED Message center. Provide 8x32-34 mm Electronic captions for 18' and 25' long scoreboard. Provide 30"x25' non-backlit sponsor identification panel
3. Track: DVXMC, 120 x 375 (15.85mm) Outdoor Message Display. Provide Galaxy Message center and Sportsound 500HD sound cabinet (fixed rack) with SSR-100 Audio control system, to include two body packs, and one microphone.

B. Mounting: Boards shall be securely mounted in accordance with manufacturer's recommendations. Football Stadium to be 20' maximum to bottom of scoreboard; Soccer practice, baseball and softball field boards to be 14' maximum to bottom of scoreboard.

DRAFT

C. Provide a year warranty for all scoreboards

D. Scoreboard poles shall have padding manufactured by Beacon Athletics or approved equal, color to be selected by architect.

2.03 PLAYER/TEAM BENCHES

A. Benches: Portable and permanent aluminum sideline benches with backs, as manufactured by Whitlam Paint Company, (www.whitlampaint.com), or approved equal. Provide portable (at football field) and permanent (at softball team areas and tennis courts) manufacturer's standard aluminum-plank team/player benches. Provide in manufacturer's maximum lengths to accommodate two 120-foot long benches at the football field, and the required length as indicated at the softball field dugouts. Install football field benches centered on midfield on each side of the football field. Install softball team benches as indicated.

1. Benches at tennis courts shall be 15 feet long (provide 2), permanent embedded installation.

2.04 TENNIS COURT SURFACING MATERIALS

A. Acceptable Systems: Provide a surfacing system by one of the following manufacturer's. Owner's Representative shall approve system and manufacturer prior to delivery of the system materials to the project site.

1. Copeland Latex-ite by American Tennis Courts, Inc.
2. Nova by Nova Sports, Framingham, Mass.
3. Court Masters by Sealmarters, Inc., Sandusky, Ohio

B. Any substituted system must be submitted for approval by the Owner's Representative.

C. Colors: Shall be as selected or confirmed by the Owner's Representative. Generally a green overall surface with red out-of-bounds lines and white court lines.

2.05 BASKETBALL COURT SURFACING MATERIALS

A. Surfacing shall consist of painted white lines on the finished asphalt pavement surface. Finished asphalt surface shall set and cool for a minimum of five days prior to application of line paint.

1. Court line painting templates/scheme shall be approved by the Owner's Representative prior to application of paint.

2.06 SOFTBALL DIAMOND SKINNED INFIELD SURFACING MATERIALS

A. Skinned Infield Soil Mix: Shall be a high-quality prepared mixture specifically formulated for skinned infields, with a mix of approximately 60% pulverized Red Clay and 40% sand, such as:

1. Regular Diamond Mix, by Dependable Sand Stone & Recycling, Easton, MD, 410-822-6363.
2. "Baseball Diamond Mix", as manufactured by Egypt Farms, White Marsh, Maryland, 410-335-3700 (http://www.egyptfarms.com)
3. "Diamond Dirt" Infield Mix as manufactured by Turf & Dirt, Hagerstown, Maryland, 410-952-5027, or approved equal.
4. Mix shall be free of crushed glass and any particles larger than 1/4" in any dimension.
5. For substitutions, Contractor shall submit a sample with a specification sheet for approval by the Owner's Representative.

DRAFT

2.07 SOFTBALL DIAMOND WARNING TRACK MATERIALS

A. Warning Track Gravel Mix: Shall be a high-quality prepared gravel mixture specifically formulated for ball field warning tracks, as manufactured by Dependable Sand Stone & Recycling, Easton, MD, 410-822-6363, or by Egypt Farms, White Marsh, Maryland, 410-335-3700 (http://www.egyptfarms.com), or by Turf & Dirt, Hagerstown, Maryland, 410-952-5027, or approved equal.

2.08 TRACK AND FIELD EVENT SURFACING SYSTEM MATERIALS

A. Furnish and install a Plexitrac® Running Track “Lightning” polyresin resilient surfacing system, as manufactured by California Products Corporation on the accepted asphalt pavement.

B. Product substitution: If other than the product specified, the Contractor shall submit to the Owner’s Representative at least 7 days prior to the bid date a complete type written list of proposed substitutions with sufficient data, drawings, samples and literature to demonstrate that the proposed substitution is of equal quality and utility to that originally specified. Information must include a QUV test of at least 1,000 hours and IAAF test information for the system to be installed.

C. Any materials used must be an emulsion/water based product. Any products which require solvents such as MEK, Butyl Cellusolve or Acetone for clean up or mixing are not acceptable.

D. Materials must have a VOC less than 150g/lt. for binder products. Top coats shall have a VOC of less than 100g/lt. measured by EPA method 24.

E. Materials may not have a flash point of less than 200°F.

F. Court Patch Binder: Shall comply with Specification 10.14 of California Products Corporation. 100% Acrylic resin blended with Portland Cement and Silica Sand
   1. Percent solids by weight (minimum): 46%.
   2. Weight: 8.7-8.9 lbs./gallon.

G. CP-4125: Latex emulsion Primer. SBR emulsion
   1. Percent solids by weight (minimum): 50%.
   2. Weight: 8.35 lbs./gallon.

H. Plexitrac Binder: Shall comply with Specification 10.73 of California Products Corporation.
   1. High Viscosity Polyresin Blend, Color shall be Black.
   2. Percent solids by weight (minimum): 44.7%.
   3. Weight: 8.47 lbs./gallon.

I. Plexicolor Pigment: Water-borne dispersed pigment for enhanced color. Color shall be Black.

J. Plexitrac Coating: Shall comply with Specification 10.70 of California Products Corporation
   1. Highly Pigment Polyresin Top Coat, Color shall be Black.
   2. Percent solids by weight (minimum): 47.4%.
   3. Weight: 8.45 lbs./gallon.

K. Line Paint: Shall comply with Specification 10.4 of California Products Corporation.
   1. 100% Acrylic Resin containing no alkyds or vinyl copolymer constituents.
   2. Percent solids by weight (minimum): 53.1%.
   3. Weight: 11.6 lbs./gallon.

L. Rubber Granules: Specifically gradated 1-3MM SBR and/or EPDM particles for job mixing with the Plexitrac Binder.

M. Water: The water to be used in the mixture must be fresh and potable.

DRAFT

N. Colors: Surface base color shall be Black. Line marking colors shall be in accordance with track and field standards, or as otherwise directed by the Owners' Representative.

2.09 ARTIFICIAL TURF SYSTEM

A. Provide per Section 321813.

B. Field Colors and Striping: The artificial turf field shall have five (5) sports inlaid into the green fabric. The Contractor shall coordinate with the Owner's Representative for samples used at other Schools. The field line layout and dimensions shall meet the current National Federation of State High School Associations guidelines. The sports and colors shall include:

1. Football (white)
2. Soccer (red)
3. Field Hockey (orange)
4. Boy's Lacrosse (yellow)
5. Girl's Lacrosse (blue)

C. Edge Detail: Provide an anchoring edge around the field perimeter in accordance with the artificial turf system manufacturer's recommendations and as noted. The edge shall normally be a 6-inch by 12-inch poured concrete curb. An exception may be made, by the artificial turf system Contractor, for the high school stadium field surrounded by a running track. The Contractor shall provide a full description and drawings of the edge detail for approval by the Owner's Representative and the Architect.

1. The edge detail shall be installed around the entire perimeter of the excavated field area prior to the installation of the stone to insure immediate play after installation without uprooting or disturbing the surrounding features.

D. Field Groomer: Provide the Owner with field grooming equipment in accordance with the artificial turf manufacturer's standards and recommendations, including a towing mechanism compatible with a field utility vehicle. Grooming device shall be a towed brush/rake designed to restore turf and infill to like-new conditions, relieve compaction, evenly redistribute fill material and lift the pile, leaving the fibers in an upright position.

2.10 TRACK ELECTRONIC STARTING GUN AND TIMING SYSTEM

A. Furnish and install a Competition Elite all-inclusive, single-camera, color photo finish starting and timing system as manufactured by Lynx System Developers, Inc., Haverhill, MA, 978-556-9780 (http://www.finishlynx.com).

B. The Contractor shall provide all necessary power and signal components to assure a complete and functioning system, positioned and installed in accordance with manufacturer's standards and specifications.

C. System shall be fully compliant with I.A.A.F. Rule 165:15 (2004-2005 Edition).

2.11 GRAVEL:

A. Gravel Base: Gravel Base shown or specified for athletic equipment shall be MSHA Graded Aggregate Base (GAB) material, Section 901.01.

B. Gravel Drainage Material: Stone shall be MDSHA, size 57 Coarse Aggregate, Section 901.01.

C. Geotextile Fabric (Filter Cloth): "Typar", manufactured by Remay Incorporated, Nashville, Tennessee, type 3341 or approved equal.

1. Contractor's Option: "Mirafi 140 N", manufactured by Mirafi Incorporated, Charlotte, North Carolina, or equal, as approved by the Soils Engineer (Owner's Representative) (Architect).

DRAFT

2. Quality: Free of defects or flaws which affect strength or filtering properties.

PART 3 EXECUTION

3.01 INSPECTION

A. Installer and Owner's Representative shall examine the area and conditions under which the track and field equipment and surfacing will be installed. Do not proceed until all conditions which would be detrimental to the installation are corrected.

3.02 PROTECTION AND RESTORATION

A. Protect all improvements and facilities during installation of court surfacing systems to prevent overspray damage.

B. Protect completed surface from damage. Prevent access to the finished courts for the amount of time recommended by the surfacing system manufacturer, plus 24 hours. Restore damaged surfaces as directed by the Architect or Owner's Representative, at no increase to the Contract sum.

3.03 ATHLETIC EQUIPMENT

A. General: Install athletic equipment in accordance with manufacturer's written installation instructions, recommendations, and as indicated.

1. Contractor shall assure that all support members have sufficient bury depth and footing size to provide adequate support and protection against movement. Submit shop drawings for the footing designs for the batting cage system and the baseball foul line netting system.

B. Softball Foul Line Netting System: Bottom of netting shall extend a distance of no less than 12 inches below the top of the field perimeter fencing. Attach the bottom of the netting directly to the inside face of the chain link fencing fabric, along the top of the fence, with galvanized "hog-rings" or with nylon lacing. Space ties at 24 inches.

C. Football Goals and Ground Sleeve Lacrosse Ballstopper System: Coordinate installation and construction with artificial turf football/soccer field construction and the Owner’s Representative. All sleeves shall be set plumb and true to line and grade in Class B concrete per manufacturer’s recommendations. Provide certifications indicating that equipment has been tested and adjusted to conform to specified standards. Provide operating and maintenance instruction and manuals to Owner’s Representative.

3.04 ATHLETIC COURT BASE PREPARATION

A. Verify finished condition of prepared base pavements. Finished asphalt paved surface shall cure a minimum of 30 days prior to construction of court surfacing system. Clean and dry prepared asphalt pavement surface, with compressed air, removing debris, dust, foreign materials and moisture, prior to beginning construction of surfacing system.

B. Do not begin surfacing system construction until base paving has been accepted by the Architect or the Owner's Representative.

C. Verify that all fence posts have been installed and all bracing has been removed, all other athletic court facilities are completely installed, and that court fencing is properly prepared as specified above.

3.05 COURT SURFACING SYSTEM CONSTRUCTION

A. All work shall be done in strict accordance with manufacturer's written installation instructions.

DRAFT

B. Flood prepared asphalt pavement surface with water in the presence of the Owner's Representative. Any areas holding water over 1/8" deep shall be leveled.

C. Complete construction of court surfacing systems in strict accordance with manufacturer's written installation instructions.

3.06 SKINNED INFIELD CONSTRUCTION

A. Subgrade Preparation: Verify subgrade elevations and correct discrepancies. Rake and remove stones exceeding **<< 1/4 inches>>** in any dimension.

B. Baseball Diamond Mix Placement: Place and uniformly spread the baseball diamond mix over prepared subgrade to an average depth of 4 to **<< 6 inches>>**. Lightly compact the finished installation. Do not place on frozen, muddy or excessively wet subgrade.

3.07 WARNING TRACK CONSTRUCTION

A. Excavation in the areas to receive Warning Track shall include removal of all soil, sod, roots, etc. to a depth of six inches below finished grade.

B. Verify subgrade elevations and correct discrepancies. Rake and remove stones exceeding 1/2 inch in any dimension.

C. Place filter cloth on prepared subgrade and extend up the walls of the excavation to the finished top of the gravel.

D. Warning Track Mix Placement: Place and uniformly spread the Warning Track mix over the installed filter cloth to a consistent depth of 6 inches. Lightly compact the finished installation. Do not place on frozen, muddy or excessively wet subgrade.

3.08 TRACK AND FIELD EVENT SURFACING SYSTEM CONSTRUCTION

A. All work shall be done in strict accordance with manufacturer's written installation instructions.

B. Weather Limitations:
   1. Ambient and surface temperatures must be 50 degrees F and rising.
   2. Installation should not be conducted during rainfall or when rainfall is imminent.
   3. Do not apply when surface temperature is in excess of 140 degrees F.

C. Surface Preparation:
   1. New asphalt shall be allowed to cure for a minimum of 14 days prior to the application of any surfacing materials.
   2. The surface must be thoroughly cleaned of all loose dirt and debris.
   3. Prior to the application of resilient surface materials, the entire surface shall be flooded and checked for depressions or irregularities in the asphalt. Any puddle area covering a nickel shall be marked and repaired with Court Patch Binder, according to California Products Specification 10.14. After patching, the asphalt surface shall not vary more than 1/4-inch in 10 feet, measured in any direction. Any depressions 1/4-inch or greater, shall be leveled using patch materials indicated. Slopes shall meet the guidelines of the ASBA and NFHS.

D. After curing and preparation the asphalt shall be primed/tack coated with CP-4125 at the rate of 0.04 gal/sy. by means of a dual diaphragm Weldon pump and spray unit. Do not allow material to puddle on the asphalt surface.

E. Apply dry 1-3 MM Black SBR to the tack coated surface by mechanical spreader or by hand. Avoid leaving dry rubber granules more than one layer thick.

DRAFT

F. Apply Plexitrac Binder at the rate of one gallon per 18 lbs. of Black SBR granule by means of an air diaphragm pump. Care should be taken to uniformly spray the granule so they are fully encapsulated.

G. Apply additional layers of Black SBR granule and Plexitrac Binder until the specified thickness and weight of Black rubber has been applied. Each dry layer should be raked by hand to insure uniformity of thickness and density. In no case should a rubber layer be greater than 2.5 lbs./square yard prior to Plexitrac Binder Application.

H. Apply dry 1-3 Black EPDM granule at the rate not more than 2.5 lbs./sy. Additional layers and spray coats shall be applied to achieve the specified 1/2-inch thickness. Usually this is achieved in 5 lifts.

I. Apply Plexitrac Binder at the rate of one gallon for 25 lbs. of 1-3 MM Black EPDM granule. Add 5 gallons of Plexitrac pigment to each 55 gallon drum of Plexitrac Binder for added UV stability.

J. Prior to application of the UV protective coatings and line marking, the surface shall be tested for the required depth using SMG FT-3 Floor Tester depth gauge. The running track oval shall be tested in no less than 100 locations. The tests shall be performed at the center of both the outer and inner lane, as well as, the center of the oval. If at least 80% of the readings do not meet the required depth, additional layers of rubber and binder will be applied until the proper depth has been achieved.

K. Apply Plexitrac coating at the total rate of .1 gallon per square yard. Product shall be applied in two applications by an air diaphragm pump spray unit. One application shall be applied clockwise, the other counter clockwise.

L. Marking and Measurements: Wait 48 hours after surface completion before applying line marking. The installer shall:

1. Locate and establish all radius points.
2. Establish and set all necessary control points.
3. Layout all lines and markings to tolerances set forth by ASBA and governing body requirements.
4. Prepare all necessary drawings.
5. Provide all computations and measurements in organized form.
6. Establish all locations on the curves using a Transit or Theodolite capable of reading direct to 20 seconds.
7. Identify all markings, where appropriate, by painting the identification directly onto the track surface in 4-inch letters just below or in front of each mark in the right hand portion of the lane.
8. Paint all of the large, 3 feet high, lane numbers in two (2) colors, utilizing shadowed backgrounds.
9. All lines shall receive sufficient paint to assure complete opacity and uniformity of color.
10. Paints shall be used directly from original containers and shall be thinned only when hot temperatures dictate thinning for smooth applications.
11. Amount of paint used shall be as recommended by the manufacturer.
12. The paint used shall be a 100% acrylic latex line paint, Plexicolor Line paint, made especially for the painting of lines on sports surfaces
13. All measurements shall be made by competent, experienced and fully qualified personnel.
14. Upon completion of the track markings, a licensed professional engineer or registered land surveyor shall furnish an acceptable letter of or certificate of, accuracy to the Owner attesting to the accuracy of the track markings and measurements. This will also include copies of the computations, calculations and drawings that were used to obtain this

DRAFT

accuracy. The Engineer or Surveyor should affix their stamp to the drawing and the certificate.

15. The markings shall include all events and marks required or recommended by the National Federation of State High Schools, the NCAA, or the I.A.A.F dependent on the end use of the facility.

M. Protection:
1. During construction the owner is responsible for limiting access of non-construction personnel to the site.
2. The owner shall coordinate any irrigation of fields with the installation contractor.
3. The installer shall protect curbs, fences and other structures from overspray.

N. Cleanup:
1. Remove all containers, surplus and debris and dispose of in accordance with local, state and Federal regulation.
2. Remove all spills and overruns.
3. Leave site in a clean and orderly condition.

O. Long-Jump / Triple Jump:
1. Take-off boards for men's runway shall be spaced in accordance with normal track standards, or at 12 feet, 32 feet, 36 feet, and 40 feet.
2. Take-off boards for women's runway shall be spaced in accordance with normal track standards, or at 8 feet, 12 feet, 32 feet, and 36 feet.
3. Track Contractor shall pour polyurethane surface material into the take-off board trays and cut out to be used as a tray cover when the jumping surface is not in use. Polyurethane cutout shall be made to be flush with the runway.

3.09 TRACK ELECTRONIC STARTING GUN AND TIMING SYSTEM

A. Install in accordance with manufacturer's written installation specifications.

B. Coordinate with Track construction to assure that installation will not disrupt construction of track base or surfacing courses, or cause damage to Track color coating.

3.10 ARTIFICIAL TURF SYSTEM CONSTRUCTION

A. Provide per Section 321813.

B. Field Colors and Striping: The artificial turf field shall have five (5) sports inlaid into the green fabric in a manner recommended by the Manufacturer of the turf. The procedure shall not include cutting the backing of the turf fabric. The Contractor shall coordinate with the Owner's Representative for samples used at other Schools. The field line layout and dimensions shall meet the current National Federation of State High School Associations guidelines. The sports and colors shall include:
1. Football (white)
2. Soccer (red)
3. Field Hockey (orange)
4. Boy's Lacrosse (yellow)
5. Girl's Lacrosse (blue)

C. Maintenance Service: The Contractor shall train the Owner's staff within two weeks after the installation is complete regarding the proper use of the artificial turf manufacturer's recommended grooming equipment.

DRAFT

3.11 CLEANING

A. Clean improvements and facilities damaged by surfacing system application as directed by the Architect or the Owner's Representative.

B. Protect installed artificial turf from subsequent construction operations.

C. Contractor shall provide the labor, supplies, and equipment as necessary for final cleaning of surfaces and installed items.

D. All usable remnants of new material shall become the property of the Owner.

E. The Contractor shall keep the area clean throughout the project and clear of debris.

F. Surfaces, recesses, enclosures, etc., shall be cleaned as necessary to leave the work area in a clean, immaculate condition ready for immediate occupancy and use by the Owner.

END OF SECTION 321820

DRAFT

SECTION 321823
SYNTHETIC RUNNING TRACK SURFACE

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General Conditions and Division One through Division Two Specification Sections, apply to Work of this Section.

1.02 RELATED SECTIONS

A. Section 321216 – Hot-Mixed Asphalt Paving

B. Section 323113 - Chain Link Fences and Gates

1.03 REFERENCE STANDARD

A. Applicable standards and details of Maryland Department of Transportation "Standards and Specifications."

1.04 WORK DESCRIPTION

A. Construct synthetic running track surface as indicated on civil drawings. Work of this section shall include following:

1. Excavation and preparation of sub-grade for area designated to receive track surfacing. Legally dispose of excess materials offsite.
2. Construction of a suitable base for track surfacing.
3. Construction of track surfacing, including lane striping.
4. Perimeter fencing is covered under Section 323113.

B. Track surfacing shall be uniform in thickness, texture, and color, in accordance with grades, cross sections, and pitch required by Drawings, and free of all depressions and ridges.

1.05 SUBMITTALS

A. Submit running track surfacing manufacturer's product data, catalog cuts, application specifications, maintenance information and office samples.

1.06 QUALITY ASSURANCE

A. Installer of running track shall be certified by approved manufacturer, and shall use only workmen who are trained and experienced in installation of track surface.

B. Running Track: Finished system shall meet following criteria:

1. Force Reduction: 30 percent to 50 percent, inclusive.
2. Modified Vertical Deformation: 0.6mm to 1.8mm, inclusive.
3. Resistant to scuffing and shedding of granules.

C. Single Source Responsibility: Track surfacing materials shall be supplied by one manufacturer. Track and field event surfacing and equipment construction shall be provided by a Contractor with a minimum of 5 years experience in construction of similar projects.

D. Construction shall be performed in strict accordance with written instructions of surfacing and equipment Manufacturers.

DRAFT

1.07 WARRANTY:

A. Provide a minimum one (1) year warranty, covering materials and installation. Contractor shall repair or replace defective surface, at no cost to Owner during warranty period.

PART 2 PRODUCTS

2.01 RUNNING TRACK SURFACING

A. Running Track Surfacing: Provide vented latex surface consisting of a mixture of uniformly graded Styrene Butadiene Resin (SBR) base and intermediate layer rubber granules and EPDM surface layer rubber buffings, bound together with SBR polymer binder having a minimum of 50 percent resin solids content. Nominal thickness: 3/8 inch. Gradation of granules: Between 1 and 6 millimeters containing less than 4 percent dust when retained on a number 30 sieve.
   1. Approved Manufacturers:
      a. "Reflex-CT" Vented Latex Running Track Surface, American Tennis Courts, Inc., Baltimore, Maryland (basis of specification)
      b. "MaxflexBL," Precision Sports Surfaces, Inc., Charlottesville, Virginia.
      c. Pre-bid approved substitution in accordance with Section 01630.

B. Marking Paint: 100 percent acrylic line marking paint approved by the track surface manufacturer.

C. Track Surface Base: Asphalt Track Surface Base Course: SHA Hot Mix Asphalt Superpave: Section 901.01, 904.01 and 904. over 4 inch SHA Hot Mix Asphalt Superpave Base Course: SHA Sections 901.01, 904.01 and 904 (gradations shall be as shown on approved drawings) over 8 inch SHA Graded Aggregate Base Section 901.01 – Table B compacted to 95 percent proctor density and cement treated.

D. Any substituted system must be submitted for approval by the Owner's Representative.

E. Colors: Surface base color shall be black. Line marking colors shall be in accordance with track and field standards, or as otherwise directed by the Owners' representative.

DRAFT

PART 3 EXECUTION

3.01 INSPECTION

A. Examine areas and conditions under which Work of this Section shall be installed. Correct conditions detrimental to proper completion of Work. Do not proceed until unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Fill excavated areas to minimum depths of stone and bituminous concrete base as indicated in PART 2. Base shall be allowed to cure for a minimum of fourteen (14) days prior to application of running track surface. Base shall be clean, dry, free draining, and free of foreign materials.

B. Verify weather conditions before beginning installation of track surface. Do not place track materials when ambient nighttime temperature is expected to fall below 50 degrees F.

3.03 INSTALLATION

A. Once base has cured, and prior to installation of track surface, apply a prime coat of manufacturer's approved binder (one (1) part water to one (1) part binder). Apply in rate (gallons per yard) as specified by Manufacturer. Asphalt emulsions are not acceptable.

B. Base Layer: Evenly apply rubber granules manually or by means of mechanical spreader, at rate specified by Manufacturer. Base layer shall be saturated with approved binder, mixed and spray-applied in accordance with Manufacturer's specifications. Allow this layer to cure for a minimum of twenty-four (24) hours under dry weather conditions.

C. Apply second and third layers of rubber granules, installed in same manner as base layer, at rate as specified by Manufacturer. Saturate this layer with approved binder.

D. Surface Course: Apply rubber buffings in number of applications and rates (2.6 pounds per square yard) as required by Manufacturer's specifications. Final surface layer shall be pigmented black.

E. Line Marking:
   1. Using approved line marking paint, install all striping in accordance with National Federation of High Schools for 400 meter running surfaces. Required striping, including event markings and lane numbers, shall receive two (2) coats of paint.
   2. Lane striping shall be based on 42 inch lane widths measured center to center of lane lines.

3.04 POST CONSTRUCTION TESTING AND ACCEPTANCE

A. Finished running track surface shall be uniform in thickness and texture. Thickness shall meet Manufacturer's minimum recommended thickness. Owner reserves right to perform thickness testing, and if found non-compliant, require Contractor to install additional courses until recommended minimum is achieved. Owner also reserves right to reject installation based on non-uniform distribution of granule sizes.

3.05 PROTECTION

A. Protect running track surfaces from damage by work of other trades until accepted by Owner.

3.06 CLEAN UP

A. Remove all excess materials and debris associated with Work of this Section from project area and legally dispose of offsite.

END OF SECTION 321823

DRAFT

SECTION 323113
CHAIN LINK FENCING AND GATES

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM F668 - Standard Specification for Polyvinyl Chloride (PVC), Polyolefin and Other Polymer-Coated Steel Chain Link Fence Fabric.

1.02 RELATED DOCUMENTS

A. Drawings and General Provisions of Contract, including the General Conditions and other Division 1 Specification Sections, apply to the work of this Section.

1.03 DESCRIPTION OF WORK

A. Materials and Work Required to Construct Chain Link Fence and Gates and Related Accessories.

1.04 RELATED SECTIONS

A. Section 312000: “Earthmoving”

B. Section 321610: “Concrete Curbing”

C. Section 321216: “Hot-Mixed Asphalt Pavement”.

1.05 CODES

A. Existing Underground Utilities: Refer to Section 312000 "Earthmoving".

1.06 STANDARDS

A. Installation shall be per chain link manufacturer’s standards (CLFMI).

1.07 SUBMITTALS

A. Submit manufacturer's descriptive literature, specifications and installation instructions for chain link fence and gates.

1. Include location of product manufacture.

B. Submit samples of vinyl-coated fabric 12 by 24 inches.

C. Warranty:

1. Submit typewritten vinyl coated fence warranty signed by Manufacturer and Contractor.

1.08 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Deliver chain link fencing to Project Site in original unopened containers bearing manufacturer's label.

1.09 QUALITY ASSURANCE

A. Provide complete fencing (of each type) produced by a single manufacturer.

1.10 PROJECT CONDITIONS

A. Refer to Section 312000 "Earthmoving" and as noted.

B. Limitations: Do not proceed with fencing installation until underground utility, bituminous concrete pavement and concrete curb and gutter construction is complete.

DRAFT

1.11 WARRANTY

A. Warrant vinyl coated fencing for 10 years against peeling, cracking, and corrosion.

1.12 CONSTRUCTION SURVEYS

A. Retain the services of a registered land surveyor or professional engineer to provide horizontal alignment stakes for fencing located adjacent to site property lines. Horizontal stake interval 50 feet maximum, and at all angle points along property line.

B. Provide horizontal alignment stakes for project site fencing. Horizontal stake interval 50 feet maximum and at all corner points.

PART 2 PRODUCTS

2.01 CHAIN LINK FENCING

A. Acceptable Manufacturers, giving preference to products manufactured within a 500-mile radius of Project Site:
   1. Hercules Fence of Maryland, LLC
   2. Long Fence, Inc.
   3. Other pre-bid approved manufacturer(s) meeting the requirements of this Specification Section will be considered in accordance with Specification Section 012500: Substitutions Procedures.

B. General: Posts, rails, braces, and bracing assemblies shall be high tensile steel pipe, cold-rolled and electric resistance welded from steel conforming to ASTM A 569, and hot-dip galvanized to ASTM A 525 G-90 zinc weight both inside and outside pipe.

C. Finish: Outsides shall receive a conversion coating and fusion bonded polyester powder coating equivalent to "Lifecoat LCX" by P & H Tube. Coating color shall be black.
   1. Fencing except Tennis Courts shall have bottom tension wire.
   2. Fencing shall have continuous top rail.

D. Fabric: 9-gauge (0.148-inch) core size, finished steel wires, galvanized in accordance with ASTM A 641-71a. Finish shall be thermally bonded PVC over galvanized steel, Class 2B, in accordance with **<<ASTM F668>>**. Coating color shall be black. Fabric shall have 2-inch diamond mesh pattern, except where otherwise noted, with top and bottom selvages knuckled.
   1. Tennis Court, Basketball Court, and Playfield Fencing: Mesh size shall be 1-3/4 inches. Tennis Court and Basketball Court fencing shall have top rail, mid-rail, and bottom rail.
   2. Fences on top of retaining walls: Mesh size shall be 1-inch.

E. Posts, Rails and Braces:
   1. Terminal Posts (Corner Posts): Up to 6 feet: 2.375-inch O.D.; over 6 feet: 2.875-inch O.D.
   2. Line Posts: Up to 6 feet: 1.90-inch O.D.; over 6 feet: 2.375-inch O.D.
   3. Gate Posts (Hinge Posts): Leaf widths up to 6 feet: 2.875-inch O.D.; leaf widths 6 feet to 13 feet: 4-inch O.D.
   4. Top Rail and Bottom Rail: Manufacturer’s longest lengths, with expansion couplings (approximately 6 inches long) for each joint. Provide means of attaching top rail securely to each corner, end, and pull post.
   5. Terminal and Gate Post Bracing Assemblies: Manufacturer’s standard adjustable brace at end posts and at both sides of corner and pull posts, with horizontal brace located at mid-height of fabric. Use same material as top rail for braces. Brace line posts with 0.375-inch diameter rod and adjustable tightener.
   6. Mid-Rail: Provide mid-rail on all fences that are 6’ and taller.

DRAFT

7. Stretcher Bars: One-piece lengths equal to full height of fabric, with minimum cross section of 3/16" x 3/4". Provide one stretcher bar at each end post and two for each corner and pull post, except where fabric is integrally woven into post.

F. Gates:
1. Gate framing shall be 2-inch square aluminum tube with fabric installed inside frame. “J” bolts shall not be used.
2. Hinges shall be Manufacturer’s standards.
3. Latches shall be butterfly type.
4. Height shall match adjacent fencing fabric, leaf swings 180 degrees.

G. Bottom Tension Wire: 7-gauge, O.D. = 0.177-inch core size, with PVC coating.

H. Post Tops (Caps): Weathertight closure caps, dome type, at each post, with openings to permit passage of top rails.

I. Hardware and Accessories: Galvanized per ASTM A 152 with manufacturer’s standard polyvinyl chloride (PVC) plastic resin finish over galvanizing, not less than 10 mils**<< 10 mil>>** thick.

2.02 CHAIN LINK FENCING HEIGHTS

A. Heights shall be as indicated or as specified:
1. Fencing around tennis courts shall be 10'-0" high.
2. Fencing around basketball courts shall be 8’-0” high, unless otherwise noted.

2.03 CONCRETE

A. Maryland Department of Transportation State Highway Administration Mix 3 for post foundations.

B. Maryland Department of Transportation State Highway Administration Mix 6 for no-mow strips.

2.04 NO-MOW STRIPS

A. Provide concrete no-mow strips along all playfield fencing.

B. No-mow strips shall be 12 inches wide and centered along the fence.

2.05 PANIC BARS

A. Provide Panic Bar hardware on all gates that are part of an enclosed fence area.

B. Panic Bars do not need to be connected to an alarm, unless noted otherwise on the drawings.

C. Installation needs to be approved by the Fire Marshal prior to occupancy. Contractor shall arrange for inspection.

PART 3 EXECUTION

3.01 PROTECTION AND RESTORATION

A. Refer to Section 312000 "Earthmoving" and as noted.

B. Existing Utilities: Verify utility locations prior to fencing excavation operation. Adjust horizontal fencing alignment to avoid utilities at no increase to Contract Sum.

3.02 GRADING

A. Grade fence lines to smooth and uniform surfaces, free of depressions and high spots exceeding four inches in ten feet.

DRAFT

3.03 CHAIN LINK FENCING

A. General: Install in accordance with Manufacturer's installation instructions and as noted. Install corner posts at horizontal alignment changes exceeding 30 degrees. Install line posts at intervals not exceeding ten feet. Install gateposts on both sides of gate opening.

B. Post Installation:

1. Excavate post footings to minimum 18-inch diameters and 39-inch depths or as otherwise indicated.
2. Place and consolidate concrete in footing excavations. Install posts in concrete plumb to 1/4 inch in 10 feet. Provide bracing to prevent movement. Embed line post in concrete to 18 inches, terminal, and gate posts to 24 inches. Slope exposed concrete footing surface one inch with outside edge flush with ground surface. Trowel exposed concrete footing surface to smooth finish. Contractor shall allow concrete footings to cure a minimum of 14 calendar days before removing bracing or performing subsequent fencing operations.
3. Post foundations within grass areas shall be slightly raised above finish grade and sloped to drain away from the post
4. Post foundations adjacent to paved areas shall be flush with the finish surface, and sloped away from the post.

C. Terminal and Gate Post Bracing Assemblies, Truss Rods and Tighteners and Tension Wire and Post Tops: Install in accordance with Manufacturer's installation instructions and as specified.

D. Fabric: Each span shall be attached independently at pull and corner posts. Ends of fabric rolls and other section to be spliced shall be joined by weaving a single strand of fabric wire into ends of fabric to create a continuous pattern of mesh. Fabric shall be stretched taut and securely fastened to each post and rail. Fastenings at ends, gates, corners, and pull posts shall be with stretcher bars and metal bands.

3.04 MAINTENANCE

A. Refer to Section 312000 "Earthmoving".

END OF SECTION 323113

DRAFT

SECTION 323119
ORNAMENTAL STEEL FENCING

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

B. ASTM B117 - Standard Practice for Operating Salt Spray (Fog) Apparatus.

C. ASTM D523 - Standard Test Method for Specular Gloss.

D. ASTM D714 - Standard Test Method for Evaluating Degree of Blistering of Paints.

E. ASTM D1654 - Standard Test Method for Evaluation of Painted or Coated Specimens Subjected to Corrosive Environments.

F. ASTM D2244 - Standard Practice for Calculation of Color Tolerances and Color Differences from Instrumentally Measured Color Coordinates.

G. ASTM D2794 - Standard Test Method for Resistance of Organic Coatings to the Effects of Rapid Deformation (Impact).

H. ASTM D3359 - Standard Test Methods for Rating Adhesion by Tape Test.

I. ASTM F2408 - Standard Specification for Ornamental Fences Employing Galvanized Steel Tubular Pickets.

1.02 WORK INCLUDED

A. The contractor shall provide all labor, materials and appurtenances necessary for installation of the welded ornamental steel fence and gate system defined herein.

1.03 SYSTEM DESCRIPTION

A. The manufacturer shall supply a total fence system of Montage II® welded ornamental steel, Majestic design, by Ameristar Fence Products, Inc., of Tulsa, Oklahoma; or pre-bid approved equal. The system shall include all components (i.e., panels, posts, gates and hardware) required.

1.04 SUBMITTALS

A. Product Data: Submit manufacturer's product data, specifications, and installation instructions, including panels, posts, gates and hardware.

B. Shop Drawings: Submit shop drawings including the following:

1. Plans and elevations showing fence, post, and gate locations in relationship to surrounding buildings and site features.
2. Anchoring details and location of anchorage.

1.05 QUALITY ASSURANCE

A. The contractor shall provide laborers and supervisors who are thoroughly familiar with the type of construction involved and materials and techniques specified.

1.06 PRODUCT HANDLING AND STORAGE

DRAFT

A. Upon receipt at the job site, all materials shall be checked to ensure that no damage occurred during shipping or handling. Materials shall be stored in such a manner to ensure proper ventilation and drainage, and to protect against damage, weather, vandalism and theft.

1.07 WARRANTY

A. Provide manufacturer's standard 10-year warranty for materials.

B. Provide 2-year warranty for installation.

PART 2 PRODUCTS

2.01 MANUFACTURER

A. The fence system shall conform to Montage II Welded ornamental steel Majestic design, flush bottom rail treatment, 3-Rail style, manufactured by Ameristar Fence Products, Inc., of Tulsa, Oklahoma; or pre-bid approved equal.

2.02 MATERIAL

A. Steel material for fence panels and posts shall conform to the requirements of **<<ASTM A653/A653M>>**, with a minimum yield strength of 45,000 psi and a minimum zinc (hot-dip galvanized) coating weight of 0.90 oz/ft^2 (276 g/m^2), Coating Designation G-90. A minimum of 62% of the steel material shall be derived from recycled scrap metal.

B. Material for pickets shall be 1" square x 14 Ga. tubing. The rails shall be steel channel, 1.75" x 1.75" x .105". Picket holes in the rail shall be spaced 4.715" o.c. Fence posts and gate posts shall meet the minimum size requirements of Table 1.

2.03 FABRICATION

A. Pickets, rails and posts shall be pre-cut to specified lengths. Rails shall be pre- punched to accept pickets.

B. Pickets shall be inserted into the pre-punched holes in the rails and shall be aligned to standard spacing using a specially calibrated alignment fixture. The aligned pickets and rails shall be joined at each picket-to-rail intersection by Ameristar's proprietary fusion welding process, thus completing the rigid panel assembly.

C. The manufactured panels and posts shall be subjected to an inline electrodeposition coating (E-Coat) process consisting of a multi-stage pretreatment/wash (with zinc phosphate), followed by a duplex application of an epoxy primer and an acrylic top- coat. The minimum cumulative coating thickness of epoxy and acrylic shall be 2 mils. The color shall be black. The coated panels and posts shall be capable of meeting the performance requirements for each quality characteristic shown in Table 2.

D. The manufactured fence system shall be capable of meeting the vertical load, horizontal load, and infill performance requirements for Industrial weight fences under **<<ASTM F2408>>**.

E. Swing gates shall be fabricated using 1.75" x 14ga Forerunner double channel rail, 2" sq. x 11ga. gate ends, and 1" sq. x 14ga. pickets. Gates that exceed 6' in width will have a 1.75" sq. x 14ga. intermediate upright. All rail and upright intersections shall be joined by welding. All picket and rail intersections shall also be joined by welding. Gusset plates will be welded at each upright to rail intersection. Cable kits will be pro- vided for additional trussing for all gates leaves over 6'.

DRAFT

PART 3 EXECUTION

3.01 PREPARATION

A. All new installation shall be laid out by the contractor in accordance with the approved shop drawings.

3.02 FENCE INSTALLATION

A. Fence post shall be spaced according to Table 3, plus or minus 1/2-inch. For installations that must be raked to follow sloping grades, the post spacing dimension must be measured along the grade. Fence panels shall be attached to posts with brackets supplied by the manufacturer. Posts shall be set in concrete footers having a minimum depth of 36 inches. Posts setting by other methods such as plated posts or grouted core-drilled footers are permissible only if shown by engineering analysis to be sufficient in strength for the in- tended application.

3.03 FENCE INSTALLATION MAINTENANCE

A. When cutting/drilling rails or posts adhere to the following steps to seal the exposed steel surfaces;
   1. Remove all metal shavings from cut area.
   2. Apply zinc-rich primer to thoroughly cover cut edge and/or drilled hole; let dry.
   3. Apply 2 coats of custom finish paint matching fence color.

3.04 GATE INSTALLATION

A. Gate posts shall be spaced according to the manufacturers' gate drawings, dependent on standard out-to-out gate leaf dimensions and gate hardware selected. Type and quantity of gate hinges shall be based on the application, weight, height, and number of gate cycles. The manufacturers' gate drawings shall identify the necessary gate hardware re- quired for the application. Gate hardware shall be provided by the manufacturer of the gate and shall be installed per manufacturer's recommendations.

3.05 CLEANING

A. The contractor shall clean the jobsite of excess materials; post-hole excavations shall be removed.

Table 1 – Minimum Sizes for Montage II Posts

Fence Posts	Panel Height
2-1/2" x 12 Ga.	Up to & Including 6' Height
3" x 12 Ga.	Over 6' Up to & Including 8' Height

DRAFT

SECTION 323223
PRECAST MODULAR BLOCK RETAINING WALLS

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes precast concrete modular retaining walls, without soil reinforcement as noted in the civil drawings. Three precast concrete modular block manufacturers used as a basis of design are as follows:
   1. Redi-Rock:
      a. 46” wide by 18” high
      b. Kingstone stone texture (for pricing purposes only, Architect to select pattern)
   2. Stone Strong:
      a. 2’, 4’ or 8’ wide by 18” high
      b. Tennessee foothills pattern (for pricing purposes only, Architect to select pattern)
   3. Equivalent product may be submitted.
   4. If soil reinforcing with grid is required or is more efficient, notify engineer for approval prior to bidding.

B. Related Requirements:
   1. Section 312000 "Earthmoving" for excavation and backfill behind retaining walls.

1.02 REFERENCE STANDARDS

A. ASTM D698 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft3 (600 kN-m/m3)).

B. ASTM D4751 - Standard Test Methods for Determining Apparent Opening Size of a Geotextile.

C. ASTM E329 - Standard Specification for Agencies Engaged in Construction Inspection, Testing, or Special Inspection.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Precast modular block system brochure.
   2. Precast modular block concrete test results including compressive strength tests, air content, and slump.
   3. Geotextile fabric liner.

B. Samples: For each color and texture of concrete unit specified.

C. Shop Drawing Submittal: For precast concrete modular retaining walls.
   1. Retaining wall design calculations, signed and sealed by the manufacturer’s engineer.
   2. Retaining wall construction shop drawings, signed and sealed by the manufacturer’s engineer (licensed in the State of Maryland).
      a. Include sections and plan views indicating the plan layout, height, backfill slope, and construction details.
      b. Include sufficient information to show grading and drainage of the site is understood.
      c. Indicate that soil information in the supplemental geotechnical report and structural drawings is being utilized in design (soil bearing pressure, soil shear capacity, etc.).

DRAFT

1.04 INFORMATIONAL SUBMITTALS

A. Contractor Qualifications: Retaining wall installer shall provide documentation showing experience on similar sized wall projects constructed in the past three (3) years.

B. Research/Evaluation Reports: For modular retaining wall units and soil reinforcement, from ICC-ES.

C. Preconstruction test reports.

D. Field quality-control reports.

1.05 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to **<<ASTM E329>>** for testing indicated.

B. Bearing subgrade and backfill shall be tested by the testing agency for compliance with the shop drawing requirements for material properties and proper compaction.

C. Samples: Provide precast concrete block face shell samples for stain color and texture approval.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Basis of Design: Design of precast concrete modular retaining walls is based on products indicated in Section 1.01A. If comparable products of another manufacturer are proposed, provide design catalog to architect to select block size, shape, stain color, and surface pattern.

B. Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design precast concrete modular retaining walls.

C. Compliance Review: Qualified professional engineer responsible for precast concrete modular retaining wall design shall review and approve submittals and source and field quality-control reports for compliance of materials and construction with design.

D. Structural Performance: Engineering design shall be based on the loads listed in the structural drawing.

2.02 PRECAST CONCRETE RETAINING WALL BLOCKS

A. Concrete Units:

1. Wall units shall conform to ASTM C1776 - Standard Specification for Wet-Cast Precast Modular Retaining Wall Units.
2. Concrete for precast modular blocks shall have a minimum 28-day compressive strength of 4,500 psi. Entrained air content shall be between 5% and 7%.
3. Units shall be reinforced according to manufacturer’s requirements. All reinforcing shall have a minimum yield strength of 60 ksi. Minimum clear cover to reinforcement shall be 1-1/2 inches.
4. The face pattern shall be selected from the manufacturer’s standard molds. See Section 1.1A for preliminary selection of textures/patterns.
5. The color of the units shall be natural gray. A concrete stain shall be field applied to color the units as specified by the Engineer or Owner per Section 2.02C below.

B. Geogrid: If geogrid reinforcement is required, it shall be as shown in the plans or as detailed in the shop drawings. Substitution of a different type of geogrid shall not be allowed unless approved of the Architect/Engineer or Owner after submittal of shop drawings and test data.

DRAFT

C. Color: Manufacturer to recommend stain color and to submit to Architect. Final stain will be selected by Architect from manufacturer's full range.

D. Shape and Texture: Provide units matching basic shape, dimensions, and face texture of basis-of-design product.

2.03 INSTALLATION MATERIALS

A. Pins and Clips: Product supplied by modular retaining wall unit manufacturer for use with units provided, made from nondegrading material (polymer reinforced with glass fibers, e.g.).

B. Cap Adhesive: Product supplied or recommended by precast concrete modular retaining wall unit manufacturer for adhering cap units to units below.

C. Drainage Fill: Coarse crushed stone or gravel with requirements in Section 312000 "Earthmoving" for drainage course.

D. Impervious Cap: Clayey gravel and sand mixture capable of compacting to a dense state.

E. Drainage Geotextile: Nonwoven needle-punched geotextile, manufactured for subsurface drainage applications, made from polyolefins or polyesters; with elongation greater than 50 percent.

1. Apparent Opening Size: No. 70 to 100 (0.212- to 0.150-mm) sieve, maximum; **<<ASTM D4751>>**.
2. Minimum Grab Tensile Strength: 110 lb (49.9 kg); ASTM D4632.

PART 3 EXECUTION

3.01 RETAINING WALL INSTALLATION

A. General: Place units according to precast concrete modular retaining wall unit manufacturer's written instructions.

1. Lay units in bond pattern recommended for the units selected.
2. Form corners and ends by using special precast concrete corner or end units.

B. Wall Base: Provide concrete pad footing as noted in the Structural drawings.

1. Contractor’s Option: Granular Pad with Filter Fabric. If permitted by the manufacturer’s design engineer, in lieu of a concrete pad, a dense graded crushed aggregate pad may be utilized. The Granular Pad must be separated from the drainage backfill above by a soil separating filter fabric. Compact base material to thickness indicated and with not less than 95 percent maximum dry unit weight according to **<<ASTM D698>>**.

C. First Course: Place first course of precast concrete modular retaining wall units for full length of wall. Place units in firm contact with each other, properly aligned and level.

1. If Contractor’s Wall Base Option is used, tamp units into leveling base as necessary to bring tops of units into a level plane.

D. Subsequent Courses: Remove excess fill and debris from tops of units in course below. Place units in firm contact and properly aligned.

1. If precast units require unit fill, see Section 3.02.
2. Use standard minimum batter unless noted otherwise in the Structural drawings.

E. Cap Units: Place cap units and secure with cap adhesive.

3.02 FILL PLACEMENT

A. General: Comply with requirements in Structural drawings and with precast concrete modular retaining wall unit manufacturer's written instructions.

DRAFT

B. Fill voids between and within units with drainage fill. Place fill as each course of units is laid.

C. Place, spread, and compact drainage fill and soil fill in uniform lifts for full width and length of embankment as wall is laid. Place and compact fills without disturbing alignment of units. Where both sides of wall are indicated to be filled, place fills on both sides at same time. Begin at wall, place and spread fills toward embankment.
   1. Use only hand-operated compaction equipment within 48 inches of wall, or one-half of height above bottom of wall, whichever is greater.
   2. Compact reinforced-soil fill to not less than 95 percent maximum dry unit weight according to **<<ASTM D698>>**.
      a. In areas where only hand-operated compaction equipment is allowed, compact fills to not less than 90 percent maximum dry unit weight according to **<<ASTM D698>>**.
   3. Compact nonreinforced-soil fill to comply with Section 312000 "Earthmoving."

D. Place drainage geotextile against back of wall, and place layer of drainage fill at least 24 inches wide behind drainage geotextile to within 12 inches of finished grade. Place another layer of drainage geotextile between drainage fill below and impervious soil fill above.

E. Place impervious fill over top edge of drainage fill layer.

3.03 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Comply with requirements in Section 312000 "Earthmoving" for field quality control.
   1. In each compacted backfill layer, perform at least one field in-place compaction test for each 24 inches of fill depth and each 50 feet or less of precast concrete modular retaining wall length.

END OF SECTION 323223

DRAFT

SECTION 329000
TREE CONSERVATION

PART 1 GENERAL

1.01 DESCRIPTION

A. This section specifies labor, materials, and equipment and services necessary for and reasonably incidental to preservation, protection and care of trees as shown on Drawings, specified, or directed.

1.02 QUALITY ASSURANCE

A. Methods for tree preservation and protection shall conform to details shown on Drawings and pertinent nationally recognized standards.

B. Contractor shall during pre-construction activities, construction activities and post-construction activities employ an ISA (International Society of Arboriculture) certified Arborist & Licensed Tree Expert (LTE), and Maryland Qualified Tree Expert, referred to in this specification as “Arborist,” with a minimum of two years experience in tree preservation. Contractor shall submit documentation that Arborist has these qualifications.

C. An experienced tree service company that has successfully completed temporary tree and plant protection work similar to that required for this Project and that will assign an experienced, qualified Arborist to Project Site during execution of Work.

D. Existing Conditions of trees and plantings to remain shall be documented to establish preconstruction conditions that might be misconstrued as damage by construction activities. Include photographs, plans and notation to indicate damage conditions of each tree or other plant designated to remain.

E. Arborist shall be on-site when Work is being performed in vicinity of trees to supervise implementation of procedures for tree protection, to monitor tree health during construction operations and installation of pipes, curbs, sidewalks, etc and to supervise repair of damages after construction.

F. It shall be Contractor's responsibility to diligently pursue approval of Forest Conservation or Tree Save Plan implementation from Forest Conservation Inspector, and to correct punch list inspection items, prior to Owner’s occupancy of new construction.

DRAFT

1.03 SUBMITTALS

A. Provide written report by a certified Arborist identifying root, trunk, and canopy evaluations of trees, which are in potential conflict with construction to determine detailed corrective measures. Provide specifications from Arborist for individual tree protection and maintenance as required for trees and plants identified to be saved on Drawings.

B. Provide written report by a certified Arborist indicating best methods of construction, which will minimize impact on critical root zone within limits of disturbance of trees marked to be saved.

PART 2 PRODUCTS

2.01 TREE PROTECTION DEVICE

A. Provide in accordance with the approved Forest Conservation Plan or Tree Save Plan, and as indicated.

B. Fence Posts: Steel "T" or "U" channel, with punched or riveted lugs for fence attachment.
   1. Weight: 1.33 pounds per linear foot.

2. Length: 66 inches.
3. Bottom End Shape: Pointed.
4. Finish: Rust inhibitive primer paint.

C. Fence Fabric: 14 Gauge 2-inch x 4-inch Welded Wire Fence.
1. Fabric Height: Four feet, minimum.

D. Specimen Tree, Forest Conservation & Forestation Signage: Shop-fabricated, rigid plastic or metal sheet with attachment holes prepunched and reinforced; legibly printed with nonfading lettering and as follows:
1. Size and Text as required by the approved Forest Conservation or Tree Save Plan.
2. Lettering as required by the approved Forest Conservation or Tree Save Plan.

E. Forest Conservation Signage: Signage to meet current Authority Having Jurisdiction requirements. Signs should be placed at least 1 for every 100'. Prior to installation, flag locations for MCPS and Authority Having Jurisdiction approval.

2.02 SOIL AMENDMENTS

A. Suitable organic matter: See Section 329305, “Lawns and Grasses”.

B. Special soil mixture: See Section 329305, “Lawns and Grasses”.

PART 3 EXECUTION

3.01 PRECONSTRUCTION ACTIVITIES

A. Meetings shall be held in accordance with Forest Conservation Plan or Tree Save Plan. Contractor is responsible for organizing meetings of required participants and providing meeting minutes within three days for the pre-construction meeting.

B. Limits of disturbance shall be located and flagged by Contractor in field prior to stress reduction or construction activities. Limits of Disturbance shall be placed outside of critical root zones of trees to be preserved wherever possible.

C. As shown on Approved Drawings, and with approval from the Inspector, trees which are to be preserved shall have their roots pruned. Roots shall be cleanly cut to a depth of at least 24 inches using a vibratory plow (cable laying machine), tooth-chain trencher, or other acceptable equipment. Fill trench immediately with soil mixture herein described and pack to eliminate air pockets. If trenches remain open for longer than 24 hours, roots must be pruned again. Temporarily support and protect roots from damage until they are permanently redirected and covered with soil. Cover exposed roots with burlap and water regularly.
1. Root pruning at edge of protection zone will take place 12 inches outside of Limits of Disturbance or as directed by Inspector and Arborist, by cleanly cutting roots.
2. Root pruning within Limits of Disturbance shall be performed by excavating to a depth of required excavation to minimize damage to root systems. Use narrow-tine spading forks, comb soil to expose roots, and cleanly cut roots as close to excavation as possible.

D. Fertilize trees in construction area at rate specified by soil sample analysis for root zones impacted by not root pruned. Apply fertilizer to entire critical root zone out to root pruning trench. Water critical root zone immediately after applying fertilizer to saturate top 6 inches of soil.

E. Mulch 4 inches deep comprised of weed-free straw, woodchips, shredded bark, or leaves shall be applied in critical root zone adjacent to pruning trench. Mulching shall not extend farther than 20 feet from pruning trench. Moisture monitoring is to take place during construction.

F. Prune branches that are affected by construction as directed by Arborist.

DRAFT

G. Trees which are dead or dying or are in poor condition prior to start of construction shall be flagged and recorded on plan. Notify Inspector immediately for possible removal or repair.

H. Tree Protection Fence:
   1. Tree Preservation Areas shall be surrounded by fence as detailed on plan or required by Inspector at pre-construction meeting.
   2. Boundaries of fencing shall be staked, flagged, and approved prior to installation.
   3. Fencing shall be installed prior to construction activities.
   4. Fences shall be firmly anchored at a spacing no greater than eight (8) feet and constructed in a manner which precludes sagging.
   5. Fencing shall be maintained in a good condition and promptly repaired or restored as situation warrants.

3.02 CONSTRUCTION PHASE

A. On-site decisions regarding conditions or activities which may be injurious to health of trees in vicinity of construction area shall be made in consultation with specified Arborist and carried out with approval by the Forest Conservation Inspector.

B. Excavated and backfill material shall not be placed or side cast outside of Limits of Disturbance within critical root zones of trees to be preserved.

C. Construction equipment shall not be driven into or through protected trees, nor shall swinging cranes or backhoes be allowed in their canopies.

D. There shall be no stacking or storing supplies outside of Limits of Disturbance within critical root zones of trees to be preserved.

E. Trees to be removed shall be taken out without damaging protected trees.

F. There shall be no burning in or close to protected trees.

G. Changing site grades causing drainage to flow into or to collect near protected trees shall be prohibited. Grading shall take place outside critical root zone of trees to be protected.

H. Equipment shall be kept outside fencing.

I. In event of drought, protected trees shall be monitored for signs of stress and watered as needed or as directed by Arborist.

J. Certified Arborist shall also monitor trees to be preserved for other conditions or activities not mentioned above which may be injurious to their health.

3.03 POST-CONSTRUCTION ACTIVITIES

A. Repair & Care of Tree Damages:
   1. Ends of additional roots damaged or cut during construction phase of Project which have not already been pruned and dressed at outset of Project shall be cut off smoothly. Then peat moss or other suitable organic matter shall be added to backfill material at a ratio of 1-part organic matter to 6 parts backfill. Fill and pack around roots to avoid air spaces. Restore grades to preconstruction elevations.
   2. Damaged limbs and dead limbs shall be removed if a safety hazard or if injurious to health of tree. Tree crown reduction procedures may be employed to promote health of a tree and shall be performed by a certified Arborist.
   3. If a tree is wounded during construction, under direction of Arborist, wounds should be cleaned, torn bark cut, and if possible, wounds dressed in a shape like a vertical ellipse, to facilitate rapid healing. Pruning knife shall be sharp and clean.

DRAFT

4. Unless directed otherwise by Arborist, any compacted soil within critical root zone of trees to be preserved shall be mechanically aerated to a depth of twelve inches at 24 inches on center. Aerate 10 feet beyond drip line and no closer than 36 inche **<< 36 inches>>** to tree trunk.
5. Arborist shall inspect and review trees for a period of time as outlined on the approved forest conservation plan following completion of construction. After completion of construction, Arborist shall perform pruning on trees to remove any damaged, dead, interfering, and objectionable limbs. Arborist shall selectively thin trees to properly shape canopy, reduce wind resistance and possibility of storm damage.

3.04 REMOVAL OF TEMPORARY STRUCTURES

A. Remove temporary fencing, with approval from MCPS and Inspector.

B. Stabilize disturbed areas in accordance with Contract Documents.

END OF SECTION 329000

DRAFT

SECTION 329305
LAWNS AND GRASSES

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of Contract including General and Supplementary Conditions and Division 1 through 33, Specifications Section, apply to Work in this section.

1.02 DESCRIPTION OF WORK

A. Section specifies materials, equipment and Work required to perform seeding and sodding operations.

1.03 RELATED WORK

A. Section 311000 "Site Clearing"

B. Section 312000 "Earthmoving"

C. Section 329500 "Trees, Shrubs and Groundcover"

1.04 STANDARDS

A. Maryland Department of the Environment Erosion and Sediment Control Handbook.

B. Maryland Standards and Specifications for Soil Erosion and Sediment Control, current edition.

C. MDOT-SHA Standards and Specifications Manual, current edition.

D. Federal Seed Act.

E. American Sod Producers Association (ASPA) and Maryland Certified.

F. Any fertilizers applied onsite must follow University of Maryland recommendations and soil samples. Anyone applying fertilizer must be certified or under supervision of a certified applicator.

1.05 SUBMITTALS

A. Submit certificates, signed by producer and contractor, stating that soil amendments, seed and sod comply with this specification.

B. Upon request, submit square yard of sod to project site for inspection by Architect and owner’s representative.

C. Submit statement of certification from local nursery from which sod shall be obtained.

D. Certificates to include following:

1. Limestone: Type, percentage of calcium magnesium carbonates or oxides, and gradation.
2. Fertilizer: Type and analysis.
3. Sod: Mixture percentages and classification.

E. Submit copy of laboratory test results and soil amendment recommendations for review by the Architect and the Owner’s Representative.

F. Submit the name and qualifications of a Professional Lawn Care Firm to perform lawn maintenance during the maintenance period. The firm shall be one whose primary business is lawn care. The firm must be approved by the Owner prior to completion of sod installation.

DRAFT

G. Submit a proposed Lawn Maintenance Plan, detailing scheduled maintenance and compliance with the requirements of this specification. The plan shall include the name and location of the selected professional lawn care firm that will be performing the maintenance.

1.06 PRODUCT DELIVERY AND STORAGE

A. Sod: Deliver sod in time for planting within 24 hours of harvesting. Protect from breakage and drying. Harvest, deliver, store, and handle sod in compliance with the requirements of TPI's "Specifications for Turfgrass Sod Materials," and "Specifications for Turfgrass Sod Transplanting and Installation" contained in the "Guidelines Specifications to Turfgrass Sodding."

B. Bulk Material: Accompany each delivery of bulk fertilizers and soil amendments with appropriate certificates. Provide erosion control measures to prevent erosion or displacement of bulk materials, discharge of soil-bearing water runoff, and airborne dust reaching adjacent properties, water conveyance systems, or walkways.

C. Storage: Store products in accordance with producer's recommendations. Store seed in dry locations. Store sod by stacking roots to roots and grass to grass, protected from exposure to wind, sun, and freezing temperatures.

1.07 PROJECT CONDITIONS

A. Sod Requirements: Sod shall be required on all areas of the site.

B. Limitations:

1. Site and Utility Construction: Do not proceed with lawn preparation until site and utility construction is complete.
2. Environmental: Do not proceed with lawn preparation when ambient air temperature is below 32° F.
3. Sodding: Deliver and install sod within 24 hours of harvesting. Do not use dormant or frozen sod.

1.08 QUALITY ASSURANCE

A. All sod shall be transplanted within 24 hours from the time it is harvested, unless stacked at the project site in a manner approved by the Owner's Representative. Stacked sod shall be kept moist and protected from exposure to wind and sun. Any sod permitted to dry out shall be rejected.

B. Plant only during periods of favorable weather when conditions are suitable. Do not place sod at any time temperature is below freezing. No frozen sod shall be used, and no seed or sod shall be placed on frozen, powder-dry, or excessively wet soil.

C. Soil amendments and rate of application shall be determined by laboratory test on soil.

1. Areas to be seeded or sodded shall have a soil pH range of 5.8 - 7.0. Contractor shall be responsible for ensuring correct soil pH.
2. Test pH level in at least five equidistant locations on the site. Review with the Owner's Representative or Architect who will determine whether the average soil pH value is within acceptable range. If existing soil pH is adequate, no soil amendments are required.
3. If average pH value is greater than 7.0, add a commercial grade sulfur at rate derived from lab test, over area to be seeded.
4. If average soil pH value is less than 5.8, then agricultural limestone shall be applied at rate derived from lab test.

DRAFT

1.09 GUARANTEE

A. Guarantee that at end of ninety (90) days after sodding, a healthy first-class lawn shall exist.

PART 2 PRODUCTS

2.01 TOPSOIL

A. Topsoil: Refer to Section 312000 "Earthmoving".

2.02 SOD

A. Sod: Shall be free of disease, soil borne insects, clover, broadleaf weeds, and noxious weeds. Sod shall be considered free of such weeds if less than 2 such plants are found per 100 square feet of area.
   1. Classification: Maryland "Certified Sod" nursery grown in nearby area, well rooted, free from disease, defects, insect infestation, or any unhealthy or abnormal condition, and free of weeds.
   2. Sod that is grown with any type of plastic netting in the root zone, field net, will not be acceptable for placement anywhere on site. Sod that is transplanted as big roll sod that is wrapped with plastic netting, sold wrap, to help in transport must have plastic removed at installation.
   3. Mixture:
      a. General Site: Tall Fescue (Drought Tolerant, Full Sun Mixture)
         1) Certified Tall Fescue Cultivars, a mixture of at least two different types - 95%
         2) Certified Kentucky Bluegrass - 5%
      b. Playfields: Bermuda Grass
   4. Sod shall be relatively free of thatch. Thatch buildup which significantly detracts from the appearance of the sod may be sufficient cause for rejection.
   5. Submit statement giving locations of property from which sod is to be obtained and submit square yard sample of sod to site if requested.
   6. Sod shall conform to the approved sample. Non-conforming sod shall be removed from the project site and replaced at no increase to the contract sum.
   7. Sod shall have been mowed prior to stripping and have been maintained for a minimum of three months at or near height of final clipping at nursery. Maximum height 2-1/2 inches.
   8. Sod shall be machine stripped at a uniform soil thickness of 3/4-inch thick, excluding top growth and thatch.
   9. Pad sizes shall be supplier's standard width and length. Maximum allowable deviation from supplier's standard sizes shall be 5%. Broken pads or pads with uneven ends will not be acceptable.
   10. Root development to be such that standard size pieces of sod will support their own weight and retain their size and shape when suspended vertically from a firm grasp on uppermost 10% of the pad area.
   11. Under moderate moisture conditions, pad weight not to exceed 7 pounds per square foot. Minimum pad weight not less than 4 pounds per square foot.

2.03 MISCELLANEOUS PRODUCTS

A. Mulch for Seeding (Fiber Mulch):
   1. Unweathered and unchopped small grain straw, free of noxious weeds. Biodegradable, dyed wood, cellulose fiber mulch, non-toxic, free of plant growth or germination inhibitors, maximum moisture content 15%, pH range 4.5 to 6.5.

DRAFT

2. Contractor's Option: Paper Fiber Mulch, manufactured of recycled paper products, by Central Fiber Corporation, Wellesville, Kansas. Type: “Second Nature” or approved equal.
3. Contractor's Option: Fiber Mulch manufactured by Weyerhaeuser Company, Tacoma, Washington. Type: “Silva-Fiber” or approved equal.

B. Fiber Mulch Anchoring Products:
1. Organic Binder manufactured by Grass Growers, Plain Field, New Jersey. Type "Terra Tack I” or approved equal.
a. Organic Binder Mixture: One-part organic binder to 20 parts water.
2. Contractor's Option: Synthetic binder additive manufactured by American Hoechst Corporation, Summerville, New Jersey. Type: “Curosol AH” or approved equal.

C. Straw Mulch: Air dried, clean, mildew and seed free salt hay.

D. Tackifier: Non-asphatic, colloidal tackifier, recommended by biber-mulch manufacturer for slurry application, non-toxic and free of plant growth or germination inhibitors.

E. Hydroseeding Equipment: Provide equipment with agitation system, which maintains mixture of solids in complete suspension and spray nozzles, which produce even distribution of slurry mixture.

F. Sod Stakes: Biodegradable, softwood; 1/2 by 1 by 8 inches.

G. Water: Refer to Section 0150000 "Temporary Facilities and Controls" and as noted. Obtain water from approved source and transport to the project site, in the event public water supply shortage occurs and moratorium is adopted, at no increase to contract sum.

PART 3 EXECUTION

3.01 FINISH GRADE

A. Refer to Section 312000 "Earthmoving”.

3.02 APPLICATION OF SOIL AMENDMENTS

A. If soil amendments are required, apply at specified rates. Bond topsoil mix to subgrade and mix soil amendments uniformly into topsoil by tilling, disking, or harrowing to five-inch depth. Adjacent to existing trees, adjust depth to avoid disturbances of tree roots.

3.03 FERTILIZING

A. Incorporate fertilizer with soil in same manner as lime and apply and incorporate with soil simultaneously with liming operations. Type of fertilizer and rate of application shall be as specified by testing.

3.04 SUBGRADE PREPARATION

A. Unpaved areas, Section 312000 "Earthmoving" and as noted.

B. Verify subgrade elevations and correct discrepancies. Mow, rake, and remove temporary stabilization provided to control soil erosion. Apply soil amendments at rate indicated by the soil analysis recommendations. Mix amendments uniformly into subgrade, and break up subgrade by tilling, disking, or harrowing to five-inch depth. Rake subgrade, removing debris and stones exceeding one inches in any dimension.

3.05 TOPSOIL MIX PLACEMENT

A. See Section 312000 "Earthmoving”.

DRAFT

B. Where sod is to be placed, topsoil depth shall be decreased by 1" to 1 ½" to allow for the thickness of the sod mat.

3.06 HYDRAULIC SEEDING (FOR TEMPORARY STABILIZATION ONLY)

A. Protect improvements and facilities during hydroseed application to prevent over-spray damage. Restore lawns, damaged by construction operations, as directed by the Owner's Representative or the Architect.

B. Subgrade Preparation: See Section 312000 "Earthmoving."

C. Topsoil Mix Placement: See Section 312000 "Earthmoving."

D. Hydraulic Seeding: Mix specified seed, fertilizer, and fiber mulch in water, using equipment specifically designed for hydroseed applications. Continue mixing until uniformly blended into homogeneous slurry suitable for hydraulic application.
   1. Mix slurry with nonasphaltic tackifier.

E. Slurry Preparation: Slurry mixture for 1,000-gallon tank:
   1. Seed Mixture: Set for minimum application rate of 450 pounds per acre or 95 pounds per tankful.
   2. Fertilizer: 182 pounds.
   3. Fiber Mulch: 310 pounds.
   4. Binder Additive: 20 gallons.
   5. Water: Fill tank.

F. Proportionally adjust mixture quantities for tanks of different capacities.

G. Slurry Application: Apply slurry uniformly to all areas to be seeded in a one-step process. Hydraulic application rate shall be 110 gallons per 1000 square feet and at a rate so that mulch component is deposited at not less than 1500 lbs/acre dry weight, and seed component is deposited at not less than the specified seed sowing rate. Application dates shall be 01 March to 15 May and 15 August to 31 October. Apply slurry mixture uniformly to prepared topsoil, in one continuous hydraulic operation. Do not begin hydraulic application until completion of topsoil preparation.

3.07 SODDING

A. Sod Installation:
   1. All sod shall be transplanted within 24 hours from the time it is harvested, unless stacked at its destination in a manner approved by the Owner's Representative. Stacked sod shall be kept moist and protected from exposure to air and sun, and from freezing. Any sod permitted to dry out shall be rejected whenever, in the judgment of the Owner's Representative or the Architect, it's survival after placement is doubtful. No payment will be made for rejected sod. In no event shall more than forty-eight (48) hours lapse between cutting and planting of sod.
   2. Do not place sod at any time temperature is below freezing. No frozen sod shall be used, and no sod shall be placed on frozen, powder-dry, or excessively wet soil.
   3. Lightly moisten prepared topsoil mix, in the event ambient air temperature exceeds 90° F, during installation.
   4. Sod shall be lifted from trucks or stacks by hand. Begin installation with first row in straight line (e.g., walk edge, curb, etc.). Install, subsequent rows parallel to first row, with tight joints. Stagger lateral joints one-half pad length. Do not stretch or overlap joints.
   5. Sod shall be laid smooth, edge to edge, with staggered joints and immediately pressed firmly into contact with sod bed by rolling to eliminate air pockets. True and even surface

DRAFT

shall be provided to ensure knitting without displacement of sod or deformation of surfaces of sodded areas. In ditches or swales, sold shall be placed with longer dimension perpendicular to flow of water in ditch.

6. Slopes (exceeding 4 feet horizontal to 1 foot vertical): Begin installation with first row at top of slope and parallel to slope contour. Install subsequent rows parallel to first row. Set and drive sod stakes flush with top of sod. Use two stakes per square yard or as directed by the Owner or the Architect.
7. Moisten sod immediately after installation. Compact sod upon completion of installation with light rollers and thoroughly water.
8. Following compaction, screened topsoil of good quality shall be used to fill cracks, and excess soil worked into grass with rakes or other suitable equipment. Grass shall not be smothered with excess fill soil. Exposed edges of sod shall be buried flush with adjacent soil.
9. Adequate water and watering equipment must be on hand before sodding begins, and sod shall be kept moist until root system adheres to underlying soil, and sod becomes established and is accepted by the Owner or the Architect.

3.08 CLEANING

A. Clean improvements and facilities damaged by hydraulic seed application over-spray as directed by the Owner’s Representative or the Architect.

3.09 ACCEPTANCE

A. Acceptance of sodded areas shall not be considered until the approximate date the Fall school session begins. Planted areas shall be properly maintained from the time of planting or placing of sod until one year beyond the acceptance date.

B. The contractor shall request in writing an on-site inspection with the Architect and Owner to determine acceptability.
   1. A stand of grass shall be deemed acceptable if after a minimum of sixty (60) days, there is a uniform stand. (95% germination minimum) of weed free turf composed of the specified grasses with an average height of 3" and no bare spots.

C. Upon written request from Contractor, at least ten days before date of inspection, Owner or Architect will perform an inspection of seeded and sodded areas.

D. After inspection, list of deficiencies or omissions requiring correction will be proposed. Items shall be corrected and are subject to same guarantee and final inspection until found acceptable. Be responsible for continued maintenance of that portion of the lawn which, after ninety days, has not been accepted by Owner.

E. Notwithstanding punch list items, Owner will certify in writing substantial completion of lawns and acceptance of work. Upon completion, reinspection of repairs or renewals necessary, Owner will assume responsibility for continued maintenance of lawn.

3.10 WARRANTY/MAINTENANCE

A. Ensure the establishment of a healthy, first-class lawn. Be responsible for all maintenance, protection, and repair until Owner accepts planted area. Include watering, rolling, fertilizing, and mowing.

B. Maintenance shall be performed by a professional lawn care firm, whose primary business is lawn care. The Contractor shall submit the name of the lawn care firm to the Owner for approval.

DRAFT

C. Maintenance and protection of seeded and sodded areas shall continue until Owner accepts lawn. Barriers, sign, and/or flags shall be used on established pedestrian circulation ways as determined by Owner to indicate areas where trespassing is not allowed.

D. During the maintenance period repair or re-work washouts, dry areas, dead areas, or erosion. Repair damage by vandalism at no cost.

E. Warranty and maintenance shall be simultaneous for one (1) year after acceptance. All turf and lawn plantings shall be alive and in satisfactory growth at the end of the warranty period.

F. The following shall be included as a part of the contractors one-year maintenance agreement
   1. Periodic sampling of soil to monitor and maintain a pH of 6.8 (+/- 0.5).
   2. Mowing/Edging:
      a. Mow lawn and turf areas as necessary to maintain a grass height between 2-1/2- to 3-1/2-inches throughout the mowing season and remove grass clippings during or immediately after mowing, if needed to preclude clumping or thick deposits of clippings that may damage the turf. Regular mowing at three (3) inch height and before four (4) inch growth occurs, will preclude the need for clippings removal. Maintain a high-quality cut, sharpened mower blade. Mowing to be completed between 6:00 a.m. and 6:00 p.m. on any day except Saturdays, Sundays, and holidays. Coordinate with school schedule.
      b. Trim around all obstacles, raking excessive grass clippings and removing debris from walks, curbs, and parking areas. NOTE: Weed eaters shall not be used to trim around trees with smooth bark in the trunk area.
      c. Edge all sidewalks, curbs, and paved areas once every other mowing and remove debris from edging operations and sweep paved areas clean upon completion of work. NOTE: Caution shall be used to avoid flying debris, and safety glasses shall be worn during this operation.
   3. Provide nine (9) monthly (Dec, Jan, and Feb exempt) turf inspections and reviews to be completed by a qualified turf agronomist.
   4. Contractor shall irrigate all the seeded/sodded site areas to ensure continuous growth throughout the growing season. The contractor shall furnish water and necessary irrigation equipment.

END OF SECTION 329305

DRAFT

SECTION 329500
TREES, SHRUBS AND GROUNDCOVER

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 through 33, Specification Sections apply to work in this section.

1.02 DESCRIPTION OF WORK

A. Section specifies materials and work required to perform landscape planting and related site landscaping operations.

1.03 RELATED SECTIONS

A. Section 312000 "Earthmoving”

B. Section 329305, "Lawns and Grasses".

1.04 STANDARDS

A. American Joint Committee on Horticultural Nomenclature - 1942 Edition of Standardized Plant Names (SPN).

B. American Association of Nurserymen - American Standard for Nursery Stock, latest edition

C. MDOT-SHA Standards and Specifications Manual, current edition

D. MDE Erosion and Sediment Control Handbook

1.05 JOB CONDITIONS

A. Prior to beginning work, Contractor is required to schedule and attend an on-site meeting with Owner and Architect, to verify site conditions and scope of Work.

B. Complete landscape work as rapidly as portions of Site become available, working in cooperation with Contractor and within seasonal limitations for each kind of landscape Work required.

C. Utilities: Determine location of underground utilities and perform work in a manner that will avoid possible damage. Hand excavate, as required. Maintain grade stakes set by others until removal is authorized.

D. Excavation: When conditions detrimental to plant growth are encountered, such as rubble fill, adverse drainage conditions, or obstructions, notify Architect or Owner before planting.

E. Coordination with Lawns: Refer to Section 329305. Plant trees and shrubs after final grades are established and prior to seeding and sodding. If planting of trees and shrubs occurs after seeding and sodding, protect lawn areas and promptly repair damage to lawns resulting from planting operations.

F. Extent of landscape development Work is shown on Drawings, schedules, and specified herein.

G. Work shall include, but not necessarily be limited to following:

1. Disposal of unused excavated material from planting excavations only.
2. Furnishing, protecting, and planting trees and shrubs of specified types and sizes.
3. Pruning, trimming, feeding, and mulching trees where trees are marked to be saved.
4. Mulching new planting stock.

DRAFT

5. Staking new planting stock.
6. Watering new planting stock.
7. Furnishing and installing portable drip irrigation bags at each new tree.
8. Providing mulched areas for pedestrian walkways.
9. Providing timber edging along disturbed play areas and pedestrian walkways

H. Sub-grade elevations: Excavation, filling, and grading required to establish elevations shown on drawings are specified elsewhere. Refer to Section 312000 "Earthmoving”.

1.06 QUALITY ASSURANCE

A. Experience: Landscaping Contractor shall have been in related Work for a minimum of three (3) years.

B. Subcontracted landscape Work to a single firm specializing in landscape Work and with a record of satisfactory performance on similar projects.

C. Installer is required to maintain an experienced full-time supervisor on Project site while Work is in progress.

D. Installer shall be a member in good standing with Professional Landcare Network or American Nursery and Landscape Association.

E. Quality Control:
1. Comply with sizing and grading standards of latest edition of "American Standard for Nursery Stock". A plant shall be dimensioned as it stands in its natural position.
2. Plants shall be nursery grown under climatic conditions similar to those in locality of Project for a minimum of 2 years.
3. Stock furnished shall be at least the minimum size indicated. Provide plants indicated with a measurement range so that only a maximum of 50 percent are of the minimum size indicated and 50 percent are of the maximum size indicated.
4. Plants will be inspected and approved at place of installation, for compliance with specification requirements for quality, size, and type of specimen.

DRAFT

1.07 DELIVERY, STORAGE AND HANDLING

A. Packaged Materials: Deliver materials in original packaging showing weight, analysis, and name of Manufacturer. Protect materials from deterioration during delivery and storage on Site.

B. Trees and Shrubs: Provide freshly dug trees and shrubs. Do not prune prior to delivery. Do not bend or bind-tie trees or shrubs in manner to damage bark, break branches or destroy natural shape. Provide protective covering during delivery.

C. Deliver trees and shrubs after preparation for planting have been completed, and plant immediately. If planting is delayed more than 6 hours after delivery, set trees and shrubs in shade, protect from weather extremes and mechanical damage, and keep rootball moist.

1.08 SPECIAL PROJECT WARRANTY

A. It shall be the Contractor's responsibility to water, fertilize and otherwise maintain plant materials in healthy condition, free of stress and insect infestation, until such time as landscaping is formally accepted in writing by Owner. One-year warranty shall not commence until such formal notice is given by Inspector.

B. Warranty new trees and shrubs for a period of one year after date of Inspector's acceptance, against defects including death and unsatisfactory growth, except for defects resulting from neglect by Owner, abuse or damage by others, or unusual phenomena or incidents which are beyond Landscape Installer's control.

C. Remove and replace unsatisfactory trees or plants or those found to be dead or in unhealthy condition during warranty period. Make replacements during growth season following end of warranty period. Replace in kind and size specified and plant in accordance with this Section.

1.09 SUBMITTALS

A. Submit name and qualifications of Professional Landscape Firm to perform Landscape installations and plant maintenance during maintenance period. Firm must be approved by Owner prior to beginning landscape Work.

B. Submit a proposed Planting Maintenance Plan, detailing scheduled maintenance and compliance with requirements of this Specification. Plan shall include name and location of selected professional Landscape firm that will be performing maintenance.

C. Maintenance Instructions: Submit typewritten instructions prior to expiration of required maintenance period(s) to be used by Owner for maintenance of landscape work for one full year after termination of maintenance period.

D. Submit Manufacturer’s catalog information and installation instructions for flexible plastic landscape edging and mulch for pedestrian walkways.

E. Submit Manufacturer’s catalog information and installation instructions for portable drip irrigation bags for new trees.

1.10 GUARANTEE

A. Guarantee trees for a period of one year from date of acceptance by Owner, against defects including death and unsatisfactory growth, except for defects resulting from neglect by Owner, abuse or damage by others, unusual phenomena or incidents which are beyond Contractor's control.

B. Remove trees found to be dead or in unhealthy condition during guarantee period. Make replacements during growth season following end of guarantee period. Furnish and plant replacements which comply with requirements shown and specified. Also replace trees which are in doubtful condition at end of guarantee period unless, in opinion of Owner, it is advisable to extend guarantee period for a full-growing season. Owner will make another inspection at end of guarantee period, to determine acceptance or rejection. Only one replacement will be required at end of guarantee period, except for losses or replacements due to failure to comply with specified requirements. At end of guarantee period, Contractor shall remove stakes, guy wires and tree wrappings unless otherwise approved.

1.11 CERTIFICATES

A. Certificates of inspection shall accompany invoices for each shipment of plants as required by law for transportation. Submit certificates to Owner prior to acceptance of materials. Inspection by federal or local governments at place of growth does not preclude rejection of plants at Project Site.

PART 2 PRODUCTS

2.01 TOPSOIL

A. Refer to Section 312000 "Earthmoving.”

2.02 PLANTS

A. Plants shall be true to species and variety specified and nursery-grown in accordance with good horticultural practice under climatic conditions similar to those in locality of Project for at least two years. Plants shall have been root-pruned within last two years and freshly dug. No

DRAFT

heeled-in plants or plants from cold storage will be accepted. Unless specifically noted otherwise, plants shall be symmetrical or equal specimen quality, sound, healthy, vigorous, well-branched and densely foliated when in leaf, free of disease, insects, eggs, or larvae, and have healthy, well developed root systems. Plants shall be free from physical damage or conditions that will prevent thriving growth. Plant materials shall be classified as per "American Standard for Nursery Stock", as adopted by American Association of Nurserymen. Plant materials not meeting this standard shall be rejected.

1. Conform to requirements of plant list.
2. Plant materials shall be nursery growth stock.
3. Trees shall be well branched, with full crown.
4. Each plant shall be free from disease, insect infestation, and dead branches.
5. Each plant shall be balled and burlapped (B&B), with rootball fully intact.
6. Substitutions may be made only after submission of evidence substantiating to Architect's and Owner's satisfaction, non-availability of specified plant items and only if approved by Architect.
7. Substitutions may be made only with Architect or Owner's approval, at same price as unavailable contract item or at lower, approved price with a credit provided.

B. Plants shall conform to measurements indicated, except larger plants may be used if approved by Architect. Larger plants shall not increase the Contract price. If larger plants are approved, the root ball shall be increased in proportion to the size of the plant. Plants that meet measurements, but do not possess a normal balance between height and spread, will be rejected.

2.03 TREES

A. Trees shall be measured when branches are in their normal position. Height and spread dimensions specified refer to main body of plant and not from branch tip to top. Caliper measurement shall be taken at a point on trunk six inches above natural ground line for trees up to four inches in caliper and at a point twelve inches above natural ground line for trees over four inches in caliper.

B. No part of the trunk shall be conspicuously crooked as compared with normal trees of same variety. Trunk shall be free from sunscald, frost cracks, or wounds resulting from abrasions, fire, or other causes. No pruning wounds shall be present having a diameter exceeding two inches, and such wounds must show vigorous bark on edges.

2.04 SHRUBS

A. Shrubs shall meet the requirements for spread or height indicated. Measurements for height shall be taken from the ground level to average height of top of shrub, not the longest branch. Thickness of each shrub shall correspond to trade classification "No. 1". Thin plants will not be accepted. Side branches must be generous, well twigged, and plant as a whole, well bushed to ground. Plants shall be in a moist, vigorous condition, free from dead wood, bruises, or other root or branch injuries.

2.05 PORTABLE DRIP IRRIGATION BAGS

A. Portable drip irrigation bags shall be UV treated polyethylene bags, reinforced with nylon webbing, with nominal capacity of 20 gallons. Bags shall be designed to be connected together to form larger units for larger trees, if needed. Bags shall be designed to be easily filled with a standard garden hose, and to release water into root ball of tree over sufficient time to prevent runoff. Drip irrigation bags shall be “Treegator” bags, as manufactured by Spectrum Products, Inc., Raleigh, North Carolina, 1-866-treegator (web page treegator.com), or approved equal.

DRAFT

2.06 MISCELLANEOUS MATERIALS

A. Topsoil: Refer to Section 312000 "Earthmoving".

B. Sand: Refer to Section 312000 "Earthmoving".

C. Organic Matter: Refer to Section 329305 "Lawns and Grasses".

D. Planting Soil Mix: Planting soil mix shall be composed of 60 percent topsoil, 30 percent organic matter and 10 percent sand. Make adjustments based on soils report and recommendations.

E. Anti-desiccant: "Wiltpruf", Manufactured by Nursery Specialty Products, Inc., Greenwich, Connecticut, or approved equal.

F. Fertilizer: Refer to Section 329305, "Lawns and Grasses". Fertilizer shall be uniform in composition, dry and free flowing, delivered to Site in original, unopened containers, bearing Manufacturer's guaranteed analysis. Fertilizer, which becomes caked or otherwise damaged, making it unsuitable for use, will not be accepted. Composition shall be Nitrogen, and potassium in amounts recommended in soil reports from a qualified soil-testing laboratory.

G. Stakes for supporting trees: Hardwood stakes two by two inches, structurally sound, at length indicated on plans, rough sawn stakes are acceptable if free from long slivers, bark, or other defects.

H. Wires for guying trees: No. 12 gauge pliable galvanized steel. Webbing shall be UV resistant polypropylene or nylon webbing with brass grommets. Guy cables shall be five strand, 3/16-inch diameter, galvanized steel cable, with zinc coated turnbuckles, a minimum of **<< 3 inches>>** long with two 3/8-inch galvanized eyebolts.

I. Mulch: Shall consist of sound, non-decomposed double shredded hardwood bark, free of branches, twigs, leaves, chunks of bark, soil, or injurious materials.

J. Mulch for Grade Protection: as specified in Section 329305 "Lawns and Grasses".

2.07 DIGGING AND HANDLING OF PLANT MATERIALS

A. Apply anti-desiccant to plant materials in full leaf immediately before digging, providing an adequate film over trunks, branches, twigs, and foliage. Dig balled and burlapped (B and B) plants with firm, natural balls of earth, of diameter not less than that recommended by American Standard for Nursery Stock, and of sufficient depth to include fibrous and feeding roots. Plants moved with a ball will not be accepted if ball is cracked or broken before or during planting operations.

DRAFT

PART 3 EXECUTION

3.01 PLANTING OPERATIONS

A. No planting will be permitted while ground surface or prepared backfill is frozen.

B. Lay out individual tree and shrub locations and areas for multiple plantings. Location of planting pits shall be staked out and multiple planting areas outlined by Contractor prior to excavation and shall be approved by Owner before planting operations can proceed. Make minor adjustments as may be requested. Prior to excavation of planting areas or plant pits, ascertain location of electrical cables, conduits, utility lines, and gas supply lines so that proper precautions may be taken not to disturb or damage any sub-surface improvements. In event sub-surface improvements are uncovered, arrange to relocate plant material. Failure to follow this procedure will require Contractor to make all requisite repairs to damaged utility lines at no increase to Contract Sum. Circular pits with vertical sides shall be excavated for plants. Diameter of pits shall be twice width of ball for ball sizes up to two feet. For ball sizes over two feet, width of pit shall be at least two feet greater than diameter of ball. Depth of pits for trees

and shrubs shall be enough to accommodate ball or roots when plant is set to finished grade. Bottom of root ball shall rest on firm sub-grade soil.

C. Planting beds shall be prepared by either of following methods:
   1. Excavate and dispose of 12 inches of existing soil from planting bed area and backfill with prepared planting soil mix to a depth of 18 inches, scarifying subsoil to prevent two distinct layers of soil.
   2. Amend the existing soil by adding 24 cubic feet of organic matter and make adjustments based upon soils report and recommendations per 100 square feet of surface area, thoroughly mixing to a depth of 18 inches.
   3. Prepare in accordance with Drawings and dispose of soil removed from hole.

D. Protect plants at times from sun or drying winds. Plants that cannot be planted immediately on delivery shall be kept in shade, well protected with soil, mulch or other acceptable material and kept well-watered. Plants shall not remain unplanted for longer than three days after delivery. Plants shall be lifted and handled from bottom of ball only.

E. Set plants at same relationship to finished grade as they bore to ground from which they were dug. Plants shall be set plumb and braced rigidly in position until prepared planting soil mix has been tamped solidly around all and roots.

F. Cut and remove ropes, strings, containers and/or wrapping from ball without damaging root ball or plant. Do not use planting stock if root ball is cracked or broken before or during digging operation.

G. Plant pits shall be backfilled with equal portions of prepared planting soil mix and existing subsoil immediately after placing plants in pits. When plant pits have been backfilled approximately 2/3 full, water thoroughly eliminating air pockets. After watering, install planting soil mix to top of pit and repeat watering.

H. Form saucer or water basins at least four inches deep with diameter equal to that of plant ball. Mulch shall be placed on all tree pits and shrub beds within 24 hours after planting and shall be applied to a uniform depth as indicated on planting detail. Thoroughly water plants immediately after planting and mulching

I. Guy with stakes as described in articl 3.02A.

J. Prune as described in article 3.02B.

K. Plant material beds shall be neatly edged to lines indicated, with a clean line between soil of plant bed and lawn grass surface.

L. Provide and install portable drip irrigation bags at each new tree. Provide single unit bags (20-gallon) for trees with 1-inch to 4-inch trunks and combine bags to form a 50-gallon set for trees with 4-inch to 8-inch trunks. Install in accordance with Manufacturer’s instructions. Fill bags and begin scheduled maintenance.
   1. Bags shall be kept full and checked every day to confirm they are filled with water.

3.02 STAKING AND PRUNING

A. Staking shall be completed immediately after planting. Plants shall stand plumb after staking. Stake trees as indicated. Stakes shall be equally spaced about each tree and driven vertically into ground to a depth of 2-1/2 to 3 feet in such manner as not to injure ball or roots. Trees shall be fastened to each stake at a height of about five feet by means of two strands of #12 galvanized steel wires. Stakes shall be uniform in height and placed according to diameter of tree trunk as follows:
   1. 2 inches or less: 1 stake.
   2. 2 to 3 inches: 2 stakes.

DRAFT

3. 3 to 6 inches: 3 stakes.

B. Stake trees as indicated immediately after planting and maintain stakes and wires until acceptance.

C. Prune plants only at time of planting and according to standard horticultural practice to reserve natural shape of plant. Remove dead wood, suckers and broken or badly bruised branches. Remove only dead, broken or rubbing branches on flowering and specimen trees and shrubs. Use only clean, sharp tools. Do not apply pruning paint to wounds.

3.03 CLEANUP AND PROTECTION

A. During landscape work, keep adjacent paved areas clean, and work area in an orderly condition.

B. Protect landscape work and materials from damage due to landscape operations, operations by other Contractors and trades and trespassers. Maintain protection during installation and maintenance periods. Treat, repair or replace damaged landscape work as directed.

3.04 MAINTENANCE

A. Contractor shall maintain plants in healthy condition. Contractor's maintenance responsibilities shall consist of pruning, watering, fertilizing, cultivating, weeding, mulching, tightening and repairing of staking, setting plants to proper grades or upright position, restoration of planting saucer, and furnishing and applying sprays or other items as are necessary to keep planting free of insects and disease and in thriving condition.

B. Maintenance shall begin immediately after each plant is planted and shall continue for a period of 60 days from the date of acceptance by Owner.

3.05 INSPECTION AND ACCEPTANCE

A. Written notices requesting inspections shall be submitted to Owner 10 days prior to anticipate inspection dates.

B. Contractor shall notify Owner when planting is completed and shall request an inspection to determine whether or not plant material is acceptable as to size, quality, meeting specifications, and in a healthy growing condition. If materials are acceptable, a written notice will be provided by Owner stating that guarantee period begins from date of acceptance.

C. Where inspected landscape work does not comply with requirements, replace rejected work and continue specified maintenance until reinspected by Architect and Owner and found to be acceptable. Remove rejected plants and materials from project site and replace them with healthy specimens.

D. It shall be Contractor's responsibility to diligently pursue approval of regulatory landscaping from the Forest Conservation Inspector, and to correct punch list inspection items, prior to Owner’s occupancy.

END OF SECTION 329500

DRAFT

SECTION 330840
COMMISSIONING STORMWATER UTILITIES

PART 1 GENERAL

1.01 SUMMARY

A. This section includes requirements for commissioning of stormwater management and storm drainage systems.
   1. Commissioning is a third-party quality assurance process. It does not take the place of or duplicate the Contractor's quality control services required per Section 014000 "Quality Requirements" or other quality control testing or inspections required in individual Sections and normally the responsibility of the Contractor.
   2. Stormwater Management Commissioning: It will be the responsibility of the General Contractor and/or the Construction Manager to hire the Civil Engineer of Record and the Geotechnical Engineer of Record to perform and document any and all inspections, observations, as-built surveys and measurements required to prepare complete and accurate stormwater management as-built plans, provide required certifications and obtain approval thereof from the authority having jurisdiction.
      a. Required services include, but are not limited to, providing and certifying the accuracy and correctness of all information and as-built plans in strict conformance with the most current applicable as-built record drawing plan review checklist.
      b. These services must be performed by and/or under the direct supervision of the Civil Engineer of Record and the Geotechnical Engineer of Record and must be based upon direct observations and information obtained in the field by and/or under their direct supervision.

B. Related Sections:
   1. Section 334100 "Storm Drainage".

C. Scheduling
   1. Notify Civil Engineer of Record or Geotechnical Engineer of Record when inspections are required, with at least 48-hours notice being required.
      a. Notices with less than 48-hours notice may result in additional costs to the Contractor by the Engineer.
   2. Representative of Engineer must be present to inspect stormwater management facilities.

DRAFT

PART 2 PRODUCTS

2.01 TESTING EQUIPMENT

A. General: Provide test equipment, instrumentation, and tools necessary to perform testing. Use test equipment and instrumentation that has been calibrated, certified, and properly maintained.

PART 2 EXECUTION

3.01 CIVIL ENGINEER OF RECORD AND GEOTECHNICAL ENGINEER OF RECORD RESPONSIBILITIES

A. Meetings:
   1. Attend stormwater management pre-construction meetings.
   2. Attend as-built pre-submission meeting arranged by the General Contractor and/or the Construction Manager.

B. The Civil Engineer of Record and the Geotechnical Engineer of Record shall confirm and document to the Owner, via physical measurement and survey, that all pipes, structures, and facilities have been set to the approved final design grade prior to being backfilled. In the event that the structures have not been set to the approved elevations and configuration, the General Contractor and/or the Construction Manager shall remove and reset the structure and/or pipes to the approved elevations and provide the appropriate documentation of that work at no additional cost.

C. The Civil Engineer of Record shall provide to the Owner electronic files, in pdf format, of all submittals and of all review comments received from the authorities having jurisdiction.

D. Checklists: The Civil Engineer of Record and the Geotechnical Engineer of Record shall sign off on a record set of documents provided by the General Contractor and/or the Construction Manager after each successful inspection.

3.02 CONTRACTOR RESPONSIBILITIES

A. Meetings:
   1. Attend stormwater management pre-construction meetings.
   2. Prior to the Civil Engineer of Record submitting any as-built documentation, the General Contractor and/or the Construction Manager shall arrange and attend a site meeting with the Civil Engineer of Record, the Sediment Control Inspector and the Owner to observe the stormwater management facilities and site conditions/stabilization and to obtain Stormwater Inspector approval to submit as-built documents and certifications to authority having jurisdiction for review. All required documentation will be submitted for review within forty-five (45) calendar days of that meeting.

B. Checklists: The General Contractor and/or the Construction Manager shall maintain on a record set of documents for signature by the Civil Engineer of Record and the Geotechnical Engineer of Record after each successful inspection.

C. The General Contractor and/or the Construction Manager shall collect and provide any and all supporting certifications required by the Civil Engineer of Record and the Geotechnical Engineer of Record to satisfy all authority having jurisdiction checklist requirements. The General Contractor and/or the Construction Manager shall provide certifications from suppliers for materials used in the construction of the stormwater facilities:
   1. Material tickets and certifications including: planting media, sand, stone, underdrain pipe, root barrier geotextile, geotextile, porous paving concrete, soil stabilization matting, riprap, plants, etc.
      a. To be provided in one document by the contractor at the end of construction.
   2. Media composition certification within 90 days of installation, and certified geotechnical reports
   3. Porous paving concrete testing reports
   4. Concrete and Steel Certificates for concrete (poured in place or precast) stormwater management structures.
   5. Vegetative Roof Planting Tickets, including certification indicating actual square footage installed.
   6. Complete Inspection check-off lists

D. The General Contractor and/or the Construction Manager shall be responsible for any and all costs, damages and delays arising from or in connection with corrective measures, re-designs, re-approvals, re-reviews, and the like required for as-built approval thereof by the authority having jurisdiction.

DRAFT

E. The General Contractor and/or the Construction Manager shall provide the following documentation to the Owner in hard copy and electronic format.
   1. Date/time-stamped digital (.jpg) photographs documenting the chronology of the construction of all stormwater management facilities (including vegetative roof if applicable) from beginning to end. This shall include a photo of each layer of media installed in stormwater facilities.
   2. Electronic files, AutoCAD and/or .pdf format, of the stormwater management facilities as-built construction including, but not limited to, authority having jurisdiction signed/approved as-built certifications and the like.

3.03 DEVIATIONS AND CORRECTIONS

A. Under no circumstances shall any construction or materials deviate from the approved stormwater management/sediment control plans without prior approval of the Civil Engineer of Record and the authority having jurisdiction.

B. Any changes to the designs or construction shown on the approved stormwater management plans must be appropriately pre-approved and permitted by the Civil Engineer of Record and authority having jurisdiction prior to being implemented in the field and/or submitted for review and approval as an as-built condition. Changes in design will require the General Contractor and/or the Construction Manager to hire the Civil Engineer of Record to implement at no additional cost to the Owner.

C. Any and all corrections, either to plans or construction, identified during review of the as-built documents shall be made, re-inspected and corrected as-built documentation must be re-certified by the Civil Engineer of Record and re-submitted to the authority having jurisdiction such that final as-built approval will be obtained within two (2) weeks of the Civil Engineer of Record's receipt of authority having jurisdiction comments on the initial submittal at no additional cost to the Owner. Any fees to be paid by the General Contractor and/or the Construction Manager at no additional cost to the Owner.

3.04 FINAL INSPECTION

A. Once the as-builts are approved, the Civil Engineer of Record shall provide a pdf copy of the approved as-builts to the General Contractor and/or the Construction Manager. The General Contractor and/or the Construction Manager shall make a hard copy of the approved as-builts and provide it to the Inspector during a final inspection arranged for by the General Contractor and/or the Construction Manager.

B. The General Contractor and/or the Construction Manager shall make any adjustments to the stormwater facilities as requested by the Inspector at no additional cost to the Owner.

C. After the Inspector has accepted the stormwater facilities, the General Contractor and/or the Construction Manager shall contract with a Montgomery County Department of Environmental Protection (MCDEP) approved Inspector to perform a confined space certification of the stormwater facilities. Coordinate final Cleaning of the system with the inspector.
   1. Deficiencies noted during the inspection shall be corrected by the General Contractor and/or the Construction Manager at no additional cost to the Owner.

3.05 CLEANING

A. Clean all storm drains by flushing with water and removing sheeting, bracing, shoring, forms, soil sediment, concrete, or other debris manually or by vacuum truck as directed by Engineer prior to testing. Material shall not be flushed to an off-site storm drain system or to any stormwater management facility. All debris removed from the drains, including the flushing water, shall be legally disposed of off-site.

DRAFT

B. Video Inspection
   1. Video inspection of all new and rehabilitated storm sewers shall be conducted by the Contractor, at their own expense.
   2. Inspection Procedure:
      a. Prior to video inspection, the drain will be cleaned by the Contractor to remove all debris and sediment. Sufficient water shall be run through the pipe so as to saturate any potential low spots so that they may be detected during inspection.
      b. The inspection will be performed with closed circuit video equipment.
      c. The inspection will begin at one end of the project and will continue in the same direction until the inspection is complete.
      d. All lateral connections and other observations shall be inspected at right angles utilizing the pan and tilt capabilities of the camera.
   3. Low spots (bellies) in excess of 1” for pipe diameters 18” or less and 5% of the pipe diameter for pipes 24” and larger shall be considered unacceptable. If unacceptable low spots exist, as indicated by standing water during video inspection, the contractor shall remove and replace defective installations as necessary and re-inspect at their cost.

3.06 MAINTENANCE

A. The General Contractor and/or the Construction Manager shall be responsible for maintenance of all stormwater management facilities until the facilities have been accepted by the MCDEP Inspector.
   1. Maintenance shall be in accordance with authority having jurisdiction and MDE requirements, including weeding.

PART 4 CIVIL ENGINEER PROPOSAL

4.01 SCOPE OF WORK

A. The Civil Engineer will perform a one-time field run survey of the installed stormwater management facilities as can be accessed. Civil Engineer will make recommendations for any required modifications or corrections to resolve any witnessed discrepancies between the design and as-built drawings. The General Contractor and/or the Construction Manager will be responsible for implementing these modifications and corrections to the as-built / installed stormwater management structures. Lastly, the Civil Engineer will perform inspection services at periodic events as stipulated on the drawings. The General Contractor and/or the Construction Manager will be responsible for providing any OSHA required equipment, and any required testing equipment during said inspections. The Civil Engineer will be reimbursed for any failed or unprepared inspections on a per-visit basis. The Civil Engineer has assumed that this project will require no more than _____ inspections (this amount includes any inspection: passed, failed, or unprepared inspections). The Civil Engineer will be reimbursed for any inspections that exceed this amount on a per visit basis by the General Contractor and/or the Construction Manager.

4.02 ENGINEERING CHARGES

A. Civil Engineer’s compensation for the services outlined above will be a fixed fee of $__ (_____ dollars), based on the scope listed above.
   1. The following is a breakdown of the fee:

      SWM Inspections $_____
      SWM As-Built Survey $_____
      SWM As-Builts – Engineering $_____

DRAFT

TOTAL $_____

2. Additional inspections beyond those outlined above will be billed at $___ (___dollars) per inspection.
3. A non-refundable, initial payment of $____ (____ dollars) is required prior to the commencement of any work by the Civil Engineer on this project. Payment shall be submitted with the original signed copy of this proposal. Civil Engineer will invoice for the work in progress. Payment of the invoices for progress billings of work being performed on monthly basis shall be due within 30 days of the date of the invoice. The retainer credit will be applied to the final payment of the invoice.
4. The Civil Engineer's fee is not subject to any retention for the progress billings or until the project is closed out.

END OF SECTION 330840

DRAFT

SECTION 331000
UTILITY STANDARDS

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions, and Division 1, Specification Sections apply to work in this section.

1.02 DESCRIPTION OF WORK

A. Section specifies materials, work and standards for site and utility construction materials and work.

1.03 RELATED SECTIONS

A. Section 312000 "Earthmoving"

B. Section 331005 “Water Distribution System”

C. Section 333000 “Sanitary Sewerage”

D. Section 334100 "Storm Drainage "

E. Division 22 "Plumbing”

1.04 STANDARDS

A. Washington Suburban Sanitary Commission's (WSSC) current "General Conditions and Standard Specifications".

B. City of Rockville current Water and Sewer Standards.

C. Maryland Department of Transportation - State Highway Administration current “Standard Specifications for Construction and Materials,” measurement and payment clauses do not apply.

D. American Concrete Institute (ACI).

E. Other utility purveyors’ standards as applicable. Contractor to coordinate with other utility purveyors.

F. Montgomery County Department of Permitting Services Requirements as applicable.

1.05 SUBMITTALS

A. Products:

1. Submit typewritten list of selected products, when options are specified, within 10 calendar days after Contract execution. Submit detailed shop drawings of utility modifications required by selection of options.
2. Submit manufacturer's descriptive literature of structure castings.
3. Submit Portland cement concrete mix design formula for each class specified.
4. Submit certificates, signed by manufacturer or producer and Contractor, stating the following comply with this specification:
    a. Portland cement.
    b. Fine aggregates.
    c. Coarse aggregates.
    d. Portland cement concrete.

DRAFT

e. Concrete masonry units.
f. Brick.
g. Foundation materials.
h. Bedding materials.

5. Submit shop drawings, of the following, indicating concrete reinforcement locations, size, and placement:
   a. Cast in place reinforced concrete structures.
   b. Pre-cast reinforced concrete structures.
6. Submit location of product manufacture and of extraction/recovery of primary raw materials.
7. Submit recycled-content data, designating percentages of post-consumer and post-industrial recycled material.
8. Submit certification of FSC-certified sustainably harvested wood formwork materials, if applicable.

B. Compaction Equipment: Submit compaction equipment data prior to start of controlled fill earthwork operations.

C. Testing: Submit test reports of testing specified.

D. “As-Built” Plans: Submit “as-built” plans for water, sanitary sewer, storm drainage, and stormwater management systems within 60 days of achieving substantial completion. Submit to Owner and to controlling utility agencies as required.

1.06 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Delivery: Schedule delivery operations to avoid unnecessary re-handling.

B. Storage:
1. General: Store in accordance with manufacturer's recommendations and as noted.
2. Portland cement: Store on platforms above ground and protect from adverse environmental conditions.
3. Aggregates: Store to prevent foreign material contamination.
4. Utility Joint Materials and Lubricants: Store in cool and dry location free of oil, grease, excessive heat, and direct sunrays.

C. Handling:
1. General: Comply with manufacturer's recommendations and as noted.
2. Aggregates: Handle to prevent segregation.
3. Pre-cast Concrete Structures: Handle to prevent damage. Utilize lifting holes provided by structure manufacturer.

1.07 DEFINITIONS

A. Refer to Section 312000 "Earthmoving".

1.08 REFERENCE STANDARDS

A. ASTM C32 - Standard Specification for Sewer and Manhole Brick (Made from Clay or Shale).

B. ASTM C55 - Standard Specification for Dry-Cast Concrete Building Brick.

C. ASTM C443 - Standard Specification for Joints for Concrete Pipe and Manholes, Using Rubber Gaskets.

D. ASTM C858 - Standard Specification for Underground Precast Concrete Utility Structures.

DRAFT

E. ASTM D698 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft3 (600 kN-m/m3)).

F. ASTM D1557 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft3 (2,700 kN-m/m3)).

1.09 PROJECT CONDITIONS

A. Refer to Section 312000 "Earthmoving" and as noted.

B. Traffic: Maintain pedestrian and vehicular traffic during utility construction operations.

C. Environmental Limitations: Do not place Portland cement products or erect masonry when ambient air temperature is below 40 degrees Fahrenheit or air temperature has been below 35 degrees Fahrenheit for three or more consecutive days or between 15 November and 01 March without written authorization from Owner or Architect.

D. Certifications, Inspections and As-Built Documents: Contractor shall provide "as-built" plans of on-site water, sanitary sewer service and storm sewer work by a State of Maryland Licensed Surveyor, or Professional Engineer. Contractor shall notify Architect within 15 calendar days of signing Contract identity of Licensed Surveyor or Registered P.E. who will certify as-built water and sewer plan. Show any changes and include ties for location of valves, bends, manholes, fire hydrants, and laterals accompanied by qualifying air test date and certification of compliance.

E. Stormwater Management As-Built Inspections, Certifications and As-Builts: See Section 330840 “Commissioning of Stormwater Utilities”.

PART 2 PRODUCTS

2.01 MATERIALS

A. Provide products manufactured of primary raw materials extracted/recovered within a 500-mile radius of Project Site.

B. Portland Cement Concrete: MDOT-SHA Section 902, Portland Cement Concrete and Related Products.

1. Water: Clean and free of oil, acid and injurious amounts of vegetable matter, alkalis, and salts. River, stream, or lake water is prohibited.
2. Forms: Wood, steel or as specified. Form materials to produce smooth surfaces, free of irregularities. Nonrented wood formwork shall be made of FSC-certified sustainably harvested wood materials.

C. Mixes:

1. Class "A" Concrete: MDOT-SHA Mix No. 4, Table 902 A. 28-Day compressive strength 3500 P.S.I. Maximum 50 percent GGBF slag replacement for Portland cement, per MDOT-SHA Specification 902.06.05.
2. Class "B" Concrete: MDOT-SHA Mix No. 3, Table 902 A. 28-Day compressive strength 3500 P.S.I. Maximum 50 percent GGBF slag replacement for Portland cement, per MDOT-SHA Specification 902.06.05.

D. Concrete Reinforcements:

1. Steel bars: ASTM A 615, Grade 60, deformed, designation as indicated or specified. Minimum 99 percent recycled content, of which minimum 60 percent shall be post-consumer, and the remainder may be post-industrial material.
2. Steel Wire Mesh: ASTM A 185 welded wire mesh, roll type, size as indicated or specified.

E. Brick:

DRAFT

1. Type A: **<<ASTM C55>>** Concrete Building Brick, type I, grade N, standard manufacture size.
2. Type B: **<<ASTM C32>>** Clay or Shale Brick, grade SS or as specified, solid, 2-1/4 by 3-3/4 by **<< 8 inches>>**.

F. Cement Mortar: SHA Section 902.05, Masonry Cement.
   1. Water: As specified for Portland cement concrete.

G. Cast-in-Place Reinforced Concrete Structures:
   1. Structure Bases: Class "B" Portland Cement Concrete.
   2. Structure Walls and Top Slabs: Class "A" Portland Cement Concrete.
   3. Concrete Reinforcement, Structural Steel, Structure Castings and Appurtenances: As indicated and specified.

H. Pre-Cast Reinforced Concrete Structures:
   1. Square and Rectangular Structures: **<<ASTM C858>>**.
   2. Structural Design Loading: **<<ASTM C858>>**, live load designation A-16.
   3. Circular Structures: ASTM C 478.
   4. Structure Joints: **<<ASTM C443>>**.

I. Foundation Materials:
   1. Type I: ASTM C 33 Coarse Aggregate, size No. 8 **<< 3/8 inch>>** to No. 8).
   2. Type II: MDOT-SHA Coarse Aggregate Size No. 57 stone (1 **<< 1/2 inch>>** to No. 8).
   3. Type III: Earth material free of debris, waste materials, frozen materials, vegetable matter, clay, rocks, or stones exceeding **<< 1 inch>>** in any dimension. Obtain Type III material from on-site excavations or off-site borrow areas approved by Soils Engineer.

J. Bedding Materials:
   1. Type A: ASTM C 33 Fine Aggregate.
   2. Type B: ASTM C 33 Coarse Aggregate, size No. 6 **<< 1 inch>>** to No. 4).
      a. Contractor's Option: MDOT-SHA Coarse Aggregate Size No. 57 stone (1 1/2 to No. 8.)
   3. Type C: Earth material free of debris, waste materials, frozen materials, vegetable matter, clay and rocks or stones exceeding one inch in dimension.

K. Bedding Material Schedule:
   1. Storm drainage system: Type B, or as per manufacturers' recommendations.
   2. Water Distribution System: W.S.S.C. Standards, City of Rockville Standards or Type A if there are no standards.
   3. Sanitary Sewer System: W.S.S.C. Standards, City of Rockville Standards or Type B if there are no standards.
   4. All other utilities: Type C.

L. Backfill Materials: As specified for Fill or Backfill, Section 02100 "Earthwork and Grading", and as noted.
   1. Utility Trenches:
      a. Phase I: Earth material free of debris, waste materials, frozen materials, vegetable matter and rock or stones exceeding one inch in any dimension.
      b. Phase II: Earth material free of debris, waste material, frozen material, vegetable matter and rock or stones exceeding one inch in dimension.

DRAFT

2. Utility Structures: Earth material free of debris, waste material, frozen material, vegetable matter and rock or stones exceeding two inches in any dimension. Obtain backfill material from the following: Excavated material approved by Soils Engineer or Owner.

PART 3 EXECUTION

3.01 PROTECTION AND RESTORATION

A. Refer to Section 312000 "Earthmoving" and as noted.

B. General: Provide support systems (e.g., sheeting, shoring, sheet piling, cribbing, etc.) at no increase to Contract Sum. Cut off timber when using timber support systems above top of utility to prevent utility displacement. Exercise care when using trench shields or boxes during shield movement to prevent utility displacement.

3.02 EXISTING UTILITIES

A. Refer to Section 312000 "Earthmoving", and as noted. Contractor shall notify "Miss Utility" at least 48 hours prior to start of construction.

B. Provide test pits at existing utility crossings well in advance of system construction. Verify utility inverts for review by Architect or Owner to determine potential conflicts prior to start of system construction.

3.03 DEWATERING

A. Refer to Section 312000 "Earthmoving".

3.04 EXCAVATION

A. Refer to Section 312000 "Earthmoving" and as noted.

B. Trench Excavation: Open cut method or as specified. Excavate materials encountered to sub-grade elevations indicated or specified.

1. Trench width below top of utility not to exceed the following clearances on each side of utility:

Utility Exterior Width, Diameter or Span	Clearance
1 thru 30 inches	24 inches
30 inches and higher	36 inches

2. Excavate utility trenches to following depths:
   a. Circular storm drainage pipe: Six inches below bottom of pipe.
   b. Water distribution pipe: W.S.S.C. Standards or four inches below bottom of pipe, whichever is greater.
   c. Sanitary sewer pipe: W.S.S.C. Standards or six inches below bottom of pipe.
   d. All other utilities: Bottom of utility.

C. Structure Excavation:

1. Utility structure excavation to produce a minimum 12-inch clearance between exterior structure walls and excavation walls or support systems.
2. Extend excavation to following:
   a. Cast in place reinforced concrete structures: Minimum Six inches beyond structure base.
   b. Pre-cast reinforced concrete structures: Minimum Six inches below bottom of pre-cast structure base.

DRAFT

c. Pre-cast reinforced concrete structure with cast in place concrete base: Bottom of structure base.
d. Masonry structures: Bottom of structure base.

3.05 OVER-EXCAVATION

A. Refer to Section 312000 "Earthmoving", except as noted.
B. Utility Trenches:
   1. Correct over-excavation of water distribution, storm drainage, and gravity flow sanitary sewer systems by backfilling over-excavated trenches with Type II foundation (Type B bedding) material and compacting.
   2. Correct over-excavation of other utilities by backfilling over-excavated trenches with Type III foundation (Type C bedding) material and compacting.
   3. Place material in loose lifts not exceeding eight inches. Compact each lift to 98 percent maximum dry density. Density test method: **<<ASTM D698>>**.
C. Structures: Correct utility structure over-excavation by backfilling over-excavation with Type II foundation (Type B bedding) material and compacting.
   1. Place material in loose lifts not exceeding eight inches. Compact each lift to 98 percent maximum dry density. Density test method: **<<ASTM D698>>**.

3.06 UNSUITABLE EARTH

A. Refer to Section 312000 "Earthmoving", except as noted.
B. Restore unsuitable earth excavation as specified for over-excavation.

3.07 EXCAVATED MATERIAL STORAGE

A. Refer to Section 312000 "Earthmoving" and as noted.
B. Stockpile select excavated materials required for backfill operations.

3.08 PORTLAND CEMENT CONCRETE CONSTRUCTION

A. Mixing:
   1. Ready-Mixed Concrete: ASTM C 94.
   2. Project Site Batch Mixing: ACI 301, Chapter 7.
B. Formwork: ACI 301, Chapter 4.
C. Reinforcement: ACI 301, Chapter 5.
D. Joints and Embedded Items: ACI 301, Chapter 6.
E. Placement: ACI 301, Chapter 8.
F. Surface Defects: ACI 301, Chapter 9.
G. Finishes: ACI 301. Non-Exposed: Section 10.2.1. Exposed: Section 10.2.2.
H. Curing and Protection: ACI 301, Chapter 12.
I. Cold Weather Concreting: ACI 306R.
J. Hot Weather Concreting: ACI 305R.

3.09 STRUCTURES

A. Cast in Place Reinforced Concrete Structures: Construct cast in place concrete structures as indicated and specified.

DRAFT

B. Pre-cast Reinforced Concrete Structures:
   1. Pre-cast structure base: Place Type I foundation material, on excavation sub-grade, to bottom of structure base and compact to 98 percent of maximum dry density by **<<ASTM D698>>**. Install pre-cast structure base, on compacted foundation material, level to **<< 1/8 inch>>** in **<< 5 feet>>**. Clean and lubricate structure joints, immediately prior to installation, in accordance with manufacturer's recommendation. Install pre-cast reinforced structure sections, on structure base, plumb to **<< 1/4 inch>>** in **<< 10 feet>>**. Position structure sections on previously installed section and push joints tightly together. Position concrete top slabs on structure as indicated. Plug lifting holes with cement mortar. Install frames and covers to finished grade with bricks and cement mortar.

C. Masonry Structures:
   1. Erect structure walls with masonry materials specified. Wet each masonry unit thoroughly before placement. Shove each unit into place in full bed of cement mortar. Horizontal and vertical joints not to exceed **<< 1/2 inch>>**.
   2. Bond and Coursing: Brick Masonry - Common Bond.
   3. Fill joints completely with cement mortar. Fit masonry units tightly around utilities projecting through structure walls. Space, set and bond structure appurtenances as indicated or specified during masonry erection. Point up interior structure joints and clean removing excess cement mortar. Parge exterior structure walls with 1/2-inch-thick cement mortar and finish with smooth trowel. Masonry construction tolerances not to exceed **<< 1/4 inch>>** in **<< 10 feet>>** vertical from plumb.

3.10 BEDDING

A. Storm drainage pipe: Place bedding material, on excavated trench sub-grade to bottom of pipe and compact. Upon completion of pipe installation, place, and compact bedding material to springline of pipe.

B. Other Utilities: Bedding not required. Install utilities on excavated trench sub-grade as indicated or specified.

3.11 BACKFILL

A. Backfill utility trenches in two consecutive phases as follows, or as specified by the utility purveyor, whichever is more stringent:
   1. Phase I - Backfill to 12-inch depth above top of utility. Place backfill material in loose lifts not exceeding six inches. Compact each lift to 98 percent maximum dry density. Density test method: **<<ASTM D698>>**.
   2. Phase II - Unpaved Areas: Place backfill material to grade in loose lifts not exceeding **<< 24 inches>>**. Compact each lift to 90 percent maximum dry density. Density test method: **<<ASTM D698>>**
   3. Phase II - Paved Areas: Place backfill material to grade in loose lifts not exceeding eight inches. Compact each lift to 98 percent maximum dry density. Density test method: **<<ASTM D698>>**.

B. Backfill utility structures as follows: Place backfill material carefully and in loose lifts not exceeding **<< 12 inches>>** in depth. Compact each lift to 95 percent maximum dry density. Density test method: **<<ASTM D1557>>**. Do not backfill masonry structures until cement mortar parge attains initial set.

3.12 EXCAVATED MATERIAL DISPOSAL

A. Refer to Section 312000 "Earthmoving".

DRAFT

3.13 WASTE MANAGEMENT

A. Recycle waste materials in accordance with Section 017419 “Construction Waste Management and Disposal” requirements.

END OF SECTION 331000

DRAFT

SECTION 333000
SANITARY SEWERAGE

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM D2321 - Standard Practice for Underground Installation of Thermoplastic Pipe for Sewers and Other Gravity-Flow Applications.

B. ASTM F477 - Standard Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.

1.02 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions, and Division 1, Specification Sections apply to work in this section.

1.03 DESCRIPTION OF WORK

A. Section specifies materials and work required to construct gravity flow sanitary sewer system.

1.04 RELATED SECTIONS

A. Section 31 20 00 "Earthmoving"

B. Section 33 10 00 "Utility Standards"

C. Section 33 41 00 "Storm Drainage"

D. Division 22 "Plumbing".

1.05 STANDARDS

A. Refer to Section 331000 "Utility Standards", and as noted.

B. Washington Suburban Sanitary Commission's (WSSC) current "General Conditions and Standard Specifications" and "Standard Details".

C. Washington Suburban Sanitary Commission's current "Regulations Governing Installation of Plumbing and Sewer Cleaning in Washington Suburban Sanitary District".

D. Washington Suburban Sanitary Commission's current "Plumbing and Gasfitting Regulations.

E. City of Rockville current Water and Sewer Standards.

1.06 SUBMITTALS

A. Refer to Section 331000 "Utility Standards" and as noted.

B. Products: Submit product manufacturer's specifications and installation instructions and certificates of compliance signed by manufacturer and Contractor stating that products comply with this specification to Architect. Certificates of compliance must be notarized, signed by an officer of Manufacturer, and shall include Project Contract Number or On-site number, job location, Contractor’s name, types, classes and strengths of pipe and fittings, and Manufacturer’s name.

C. Options: Submit typewritten list of selected products when options are specified within 10 calendar days after Contract execution. Submit detailed shop drawings of system modifications required by selection of options.

D. Submit shop drawings of precast structures indicating concrete reinforcement location, size and placement.

DRAFT

E. Submit As-built drawings to Architect, prior to submission to authority having jurisdiction. As-builts must conform to current authority having jurisdiction as-built requirements. Contractor responsible for all review, and re-review fees required by authority having jurisdiction for processing of the as-builts.

F. Service Connection Permit: Contractor shall submit to Architect all items required by authority having jurisdiction to obtain a Service Connection Permit including but not limited to: All required Bonds, Letter indicating Utility Contractor, and Certificate of Insurance. It is the responsibility of the contractor to confirm the bond amount with authority having jurisdiction prior to application of the Service Connection Permit. Architect will obtain Service Connection Permit once all these items are received.

1.07 PRODUCT, DELIVERY, STORAGE AND HANDLING

A. Refer to Section 331000 "Utility Standards".

1.08 PROJECT CONDITIONS

A. Refer to Section 331000 "Utility Standards" and as noted.

B. Existing Sanitary Sewer System: Provide, install, operate and maintain pumps and related equipment required to divert sewage (bypass pumping) during system construction. Extend pump discharge lines to existing sanitary sewer structures. Surface flow is prohibited.

C. Traffic: Maintain vehicular and pedestrian traffic during system construction.

1.09 CONSTRUCTION SURVEYS

A. Provide survey equipment and qualified personnel for construction surveys. Provide combined horizontal and vertical alignment stakes for system construction. Horizontal stake interval to be 25 feet maximum and at structures. Provide construction cut sheet preparation as required.

PART 2 PRODUCTS

2.01 MATERIALS

A. All materials shall meet authority having jurisdiction standards and shall meet most current applicable requirements indicated.

B. Polyvinyl Chloride (PVC) Pipe: Standards indicated as indicated on the drawings.
   1. Pipe Joints: ASTM D 3212 bell and spigot type, with flexible elastomeric gasket seals. Gaskets shall meet requirements of **<<ASTM F477>>**.
   2. Fittings shall be as indicated and required.

C. Cleanouts: authority having jurisdiction standards indicated.
   1. Cleanouts For Use in Paved Walk Areas: Refer to Section 334100 "Storm Drainage", and as noted.
      a. Expansion Joint: ASTM D 994, bituminous preformed joint filler, 1/2-inch thick.
   2. Furnish Owner with one cleanout wrench.

D. Structures: Authority having jurisdiction standards specified and indicated.

E. Foundation and Bedding Materials: Refer to Section 331000 "Utility Standards".

F. Concrete: Refer to Section 331000 "Utility Standards".

G. Miscellaneous Products:

DRAFT

1. Underground identification type manufactured by Allen Systems, Houston, Texas. "Detectatape" type, three inches wide, marked "Caution Sewer Line Buried Below", "Safety Green" color.

PART 3 EXECUTION

3.01 DEWATERING, EXCAVATION, OVER-EXCAVATION AND UNSUITABLE EARTH:

A. Refer to Section 331000 "Utility Standards".

3.02 EXISTING SYSTEM CONNECTION

A. Notify authority having jurisdiction no less than 48 hours prior to start of system construction.

B. Excavate and expose existing pipe at connection location indicated. Adjust connection location, as required, in event of conflicts with existing pipe joints. Neatly cut existing pipe and prepare cut end as required for connection with new pipe. Make connections with existing pipe using fittings designed for purpose, in accordance with manufacturer's installation instructions.

3.03 PIPE

A. General: Install in accordance with manufacturer's installation instructions and as noted. Inspect each pipe laying length and pipe joint materials for defects. Remove defective products from project site. Install pipe to horizontal and vertical alignment indicated. Begin with installation at lowest system elevation and proceed up-grade. Field cut pipe only where required to complete structure-to-structure closures, install fittings or as specified. Cut pipe to smooth square end with equipment designed for cutting pipe.

B. Polyvinyl Chloride (PVC) Pipe: Install pipe in accordance with **<<ASTM D2321>>**, manufacturer's installation instructions, and as noted.

1. Install with pipe spigot end pointing in flow direction. Begin installation of pipe, with vertical gradient exceeding 10 percent, at lowest elevation and proceed up-grade. Clean bell and spigot interior and exterior surfaces, removing oil, grit and foreign matter. Lubricate pipe ends and gasket in accordance with manufacturer's instructions. Position each laying length of previously installed pipe and manually push joint tightly together.
2. Field Pipe Cutting: Shape spigot end of cut pipe to resemble manufactured spigot end, with a pipe-beveling tool designed for PVC pipe. Copy the full insertion mark provided on manufactured spigot end onto prepared field cut end.

3.04 EXISTING PIPE/STRUCTURE CONSTRUCTION

A. Excavate and expose existing pipe at structure location indicated. Adjust structure location as directed by Architect or Owner in event existing pipe joint interferes with structure walls, or as required to obtain required invert, at no increase to Contract Sum. Manually excavate below existing pipe prior to structure base placement. Place concrete structure base and construct structure as specified. Neatly cut and remove upper half of existing pipe and construct invert flow channel.

3.05 STRUCTURES

A. Refer to Section 331000 "Utility Standards" and as noted.

B. Pipe Connections: Install pipe opening sleeves in accordance with manufacturer's installation instructions. Neatly cut pipes flush with interior structure walls except as otherwise indicated or specified.

C. Structure Joints: Apply liberal coat of joint coating material to each structure section joint in accordance with manufacturer's application instructions.

DRAFT

D. Invert Flow Channels: Construct invert flow channels smooth and semicircular in shape. Shape channels with horizontal circular curve radii as large as structure will permit. Neatly form channels in structure base with bricks and cement mortar.

3.06 CLEANOUTS

A. Refer to Section 334100 "Storm Drainage", and as noted.

B. Install cleanouts in accordance with manufacturer's installation instructions and as indicated.
   1. Construct concrete pads of Class "A" concrete as indicated.
   2. Cleanouts in paved walk shall be installed without a concrete pad. Top shall be cast into and set flush with finished walk surface.

3.07 BACKFILL

A. Refer to Section 331000 "Utility Standards", and as noted.

B. Sanitary Sewer mains must be inspected by Engineer of Record prior to completion of backfill operations. Contractor shall provide a minimum of 48 hours notice to Engineer of Record before completion of backfill operations.

C. Underground Identification Tape: Install tape during backfill operations. Tape shall be centered over pipe, located 12 inches above top of pipe.

3.08 SYSTEM TESTING

A. Provide equipment, materials and labor required to test system. Conduct low pressure air tests in accordance with authority having jurisdiction standards. Provide a minimum of 48 hours notification of planned testing. Test observation by authority having jurisdiction personnel.

B. Repair or replace defective products and system construction, which fails tests as directed by local jurisdiction approving agency. Provide additional corrective work and retesting until system is approved and accepted. Provide corrective work and retesting at no increase to Contract Sum.

3.09 SYSTEM INSPECTION

A. Provide additional corrective work, determined necessary by video inspection, as specified for system testing.

B. Video Inspection:
   1. Video inspection of all new and rehabilitated sewers shall be conducted by the Contractor, at their own expense.
   2. Inspection Procedure:
      a. Prior to video inspection, the sewers will be cleaned by the Contractor to remove all debris and sediment. Sufficient water shall be run through the pipe so as to saturate any potential low spots so that they may be detected during inspection.
      b. The inspection will be performed with closed circuit video equipment.
      c. The inspection will begin at one end of the project and will continue in the same direction until the inspection is complete.
      d. All lateral connections and other observations shall be inspected at right angles utilizing the pan and tilt capabilities of the camera.

DRAFT

3. Low spots (bellies) in excess of 1 inch shall be considered unacceptable. If unacceptable low spots exist, as indicated by standing water during video inspection, the contractor shall remove and replace defective installations as necessary and re-inspect at their cost.

END OF SECTION 333000

DRAFT

SECTION 334100
STORM DRAINAGE

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM C76 - Standard Specification for Reinforced Concrete Culvert, Storm Drain, and Sewer Pipe.

B. ASTM C443 - Standard Specification for Joints for Concrete Pipe and Manholes, Using Rubber Gaskets.

C. ASTM D2321 - Standard Practice for Underground Installation of Thermoplastic Pipe for Sewers and Other Gravity-Flow Applications.

D. ASTM D2466 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 40.

E. ASTM F477 - Standard Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.

1.02 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract including the General and Supplementary Conditions and Division 1, Specifications Section, apply to work in this section.

1.03 DESCRIPTION OF WORK

A. This section specifies materials and work required to construct storm drainage system.

1.04 RELATED WORK

A. Section 311000 "Site Clearing"

B. Section 312000 "Earthmoving"

C. Section 331000 "Utility Standards"

D. Section 321600 "Concrete Walks"

E. Section 330840 “Commissioning of Storm Water Utilities”

F. Division 22 "Plumbing".

1.05 STANDARDS

A. Washington Suburban Sanitary Commission (WSSC) current "General Conditions and Standard Specifications" and "Standard Details".

B. Montgomery County Department of Transportation current "Design Standards".

C. Maryland Department of Transportation State Highway Administration current "Standard Specifications for Construction and Materials".

D. Maryland Standards and Specifications for Soil Erosion and Sediment Control, current edition.

E. City of Rockville current Water and Sewer Standards.

F. American Concrete Pipe Association (ACPA).

1.06 SUBMITTALS

A. Products:

DRAFT

1. Submit certificate signed by manufacturer and contractor stating that pipe and pipe joint materials comply with this specification.
2. Submit shop drawings of pre-cast reinforced structures and cast in place reinforced concrete structures indicating location, size and placement of concrete reinforcement.

1.07 PROJECT CONDITIONS

A. Refer to Section 312000 "Earthmoving" and as noted.

B. Existing Storm Drainage System: Provide, install, operate and maintain pumps and related equipment required to divert storm water during system construction.

C. Traffic: Maintain pedestrian and vehicular traffic during system construction.

D. As-Built Documents:
   1. Refer to Section 331000 “Utility Standards."

1.08 CONSTRUCTION SURVEYS

A. Provide survey equipment and qualified personnel for construction surveys. Provide combined horizontal and vertical alignment stakes for system construction. Horizontal stake interval to be **<< 25 feet>>** maximum and at all structures. Provide construction cut sheet preparation as required.

1.09 TESTING AND INSPECTIONS FOR BACKFILL

A. Refer to Section 312000 “Earthmoving”.

PART 2 PRODUCTS

2.01 MATERIALS

A. Polyvinyl Chloride (PVC) Pipe: **<<ASTM D2466>>**, Schedule 40 PVC gravity sewer pipe, size as indicated, standard manufacture laying length.
   1. Pipe Joints: ASTM D 3212, bell and spigot type, with flexible elastomeric gasket seals. Gaskets shall meet the requirements of **<<ASTM F477>>**.
   2. Fittings shall be as indicated and required.

B. Concrete Pipe: **<<ASTM C76>>**, Class IV, standard manufacture laying length.
   1. Pipe Joints: Rubber gaskets, **<<ASTM C443>>** with vegetable oil soap joint lubricant.
   2. Mortar Joints: Modified tongue and groove pipe with cement mortar.

C. Corrugated Steel Pipe: ASTM A 819 and AASHTO M 274 Aluminized Steel Type 2 pipe, corrugations and thickness as specified on plans.
   1. Pipe Joints: Shall be watertight joints, made with bands gaskets as specified on plans.

D. High Density Polyethylene Pipe: ADS Type N-12, or approved equal.
   1. Pipe Joints: All joints must meet a modified ASTM 3212 at 3.5-psi held for 10 minutes as certified by an independent testing laboratory.
   2. Pipe Joints: Plastic Cement Welding Solvents shall have a VOC content not to exceed 250 g/l.

E. Structures: Standards specified and as indicated.

F. Structure Castings: MDOT-SHA or Montgomery County Standards.
   1. Grates for storm drain inlets with grate tops shall be waffle shaped for wheelchair and bicycle safety. Slots shall not exceed ADA Guidelines.

DRAFT

G. Filter Fabric: "Mirafi 140N" manufactured by Mirafi Incorporated, Charlotte, North Carolina. Contractor's Option: "Typar", type 3341 manufactured by Remay Incorporated, Nashville, Tennessee, or approved equal.
   1. Quality: Free of defects of flaws, which affect strength or filtering properties.

H. Cleanouts:
   1. Cleanout Ferrules and Plugs: Josam Series No. 58540 with cast iron body and bronze countersunk flanged plug. Size matching pipe size indicated. Contractor shall provide Owner with two "T" handles for recessed plugs.
   2. Cleanouts For Use in Paved Walk Areas: Josam Series No. 58360 adjustable floor cleanout with cast iron body and bronze plug and top. Size matching pipe size indicated. Contractor shall provide Owner with one cleanout wrench.
      a. Expansion Joint: ASTM D 994, bituminous preformed joint filler, **<< 1/2 inch>>** thick.
   3. Fittings: Shall be as specified for PVC pipe (for pipe materials indicated).

I. Sand: ASTM C33 Fine Aggregate.

J. Concrete: Refer to Section 331000 "Utility Standards".

K. Reinforcing Steel and Hardware: Refer to Section 331000 "Utility Standards", and as noted:
   1. Size and type of steel and hardware shall be as indicated.
   2. Exposed reinforcing steel shall be hot dip galvanized, ASTM A 767, Coating Class I.
   3. Hardware shall be hot dip galvanized, ASTM A 153.

L. Miscellaneous Products
   1. Underground identification tape manufactured by Allen Systems, Houston, Texas. Tape shall be three inches wide, "Detectatape" type, "Safety Green" color, and marked "Caution Sewer Line Buried Below".

PART 3 EXECUTION

3.01 DEWATERING, EXCAVATION, OVER-EXCAVATION AND UNSUITABLE EARTH:

A. Refer to Section 331000 "Utility Standards".

3.02 CONNECTIONS TO EXISTING SYSTEM

A. For structure construction over existing pipe, excavate and expose existing pipe at structure location indicated. Adjust structure location as directed by the Owner's Representative in the event existing pipe joint interferes with structure walls, at no increase to Contract Sum. Manually excavate below existing pipe prior to structure base placement. Place concrete base and construct structure as specified. Neatly cut and remove upper half of existing pipe and construct invert flow channel.

B. For pipe connections to existing structures, excavate and expose existing structure. Cut and remove portion of existing structure wall required for pipe connection. Install pipe, through existing structure wall, flush with interior wall surface. Remove portion of existing invert flow channel required for connection and reconstruct as specified. Fill joint between pipe and existing structure wall with cement mortar.

3.03 PIPE

A. General: Install in accordance with manufacturer's installation instructions and as noted. Inspect each pipe laying length and pipe joint materials for defects. Remove defective products from project site. Install pipe to horizontal and vertical alignment indicated. Begin installation at

DRAFT

lowest system elevation and proceed up-grade. Field cut pipe only where required to complete structure-to-structure closures, install fittings or as specified. Cut pipe to smooth square end.

B. Concrete Pipe: Install with tongue end of pipe pointing in direction of flow. Clean and thoroughly wet joints immediately prior to joining pipe. Apply thick liberal coat of mastic to groove and tongue. Position each laying length in previously installed pipe and pull joint tightly together with mechanical device designed for pipe jointing.
   1. Clean interior of each joint removing excess cement mortar and finish flush with surface. Fill exterior upper half of pipe joint with cement mortar.

C. Polyvinyl Chloride (PVC) Pipe: Install pipe in accordance with **<<ASTM D2321>>**, manufacturer's installation instructions, and as noted.
   1. Install with pipe spigot end pointing in flow direction. Begin installation of pipe, with vertical gradient exceeding 10 percent, at lowest elevation and proceed up-grade. Clean bell and spigot interior and exterior surfaces, removing oil, grit and foreign matter. Lubricate pipe ends and gasket in accordance with manufacturer's instructions. Position each laying length of previously installed pipe and manually push joint tightly together.
   2. Field Pipe Cutting: Shape spigot end of cut pipe to resemble manufactured spigot end, with a pipe-beveling tool designed for PVC pipe. Copy the full insertion mark provided on the manufactured spigot end onto the prepared field cut end.

D. High Density Polyethylene Pipe: Install and Bed in accordance with manufacturer’s recommendations.

3.04 CLEANOUTS

A. Refer to Section 331000 "Utility Standards" and as noted.

B. Install cleanouts and construct concrete pads of Class "A" concrete as indicated.

C. Cleanout in paved walk area shall be installed without a concrete pad. Top shall be cast into and set flush with finished walk surface.

3.05 STRUCTURES

A. Refer to Section 331000 "Utility Standards" and as noted. Neatly cut pipes flush with interior structure walls. Construct invert flow channels smooth and semicircular in shape. Shape channels with horizontal circular curves, with radii as large as structure will permit or as indicated. Neatly form channels in structure base with bricks and cement mortar. Provide steps in structures exceeding **<< 3.0 feet>>** in depth. Vertical step spacing per standards specified.

3.06 BACKFILL

A. Refer to Section 331000 "Utility Standards", and as noted.

B. Polyvinyl Chloride (PVC) Pipe: Conduct backfill operations when pipe temperature is below 60 degrees Fahrenheit or during early morning hours to prevent excessive contraction.

C. Underground Identification Tape: Install during backfill operations. Center tape horizontally over pipe, **<< 12 inches>>** above top of pipe.

3.07 SYSTEM INSPECTION

A. Provide additional corrective work, determined necessary by video inspection, as specified for system testing.

B. Video Inspection
   1. Video inspection of all new and rehabilitated drains shall be conducted by the Contractor, at their own expense.

DRAFT

2. Inspection Procedure:
   a. Prior to video inspection, the drains will be cleaned by the Contractor to remove all debris and sediment. Sufficient water shall be run through the pipe so as to saturate any potential low spots so that they may be detected during inspection.
   b. The inspection will be performed with closed circuit video equipment.
   c. The inspection will begin at one end of the project and will continue in the same direction until the inspection is complete.
   d. All lateral connections and other observations shall be inspected at right angles utilizing the pan and tilt capabilities of the camera.
3. Low spots (bellies) in excess of 1” for pipe diameters 18” or less and 5% of the pipe diameter for pipes 24” and larger shall be considered unacceptable. If unacceptable low spots exist, as indicated by standing water during video inspection, the contractor shall remove and replace defective installations as necessary and re-inspect at their cost.

3.08 WASTE MANAGEMENT

A. Recycle waste materials in accordance with Section 017419 “Construction Waste Management and Disposal” requirements.

END OF SECTION 334100

DRAFT

Attachment F – MSDE Submission Checklists (SD, DD, and CD)

Maryland State Department of Education (MSDE) School Facilities Branch (SFB)

MSDE/IAC SUBMISSION CHECKLIST

for State-Supported or Forward-Funded Projects

Date Submitted to the IAC:	**Revision/s Date/s:**

CHECKLISTS ATTACHED:

• Construction Document (CD) Submission

Email All Submission and Responses to:
myron.mason@maryland.gov and *iac.pscp@maryland.gov*
Address to: Mr. Fred D. Mason III
School Facilities Branch Chief, IAC State Dept of Education Section
Maryland State Department of Education, 200 West Baltimore Street, Baltimore MD 21201

SUBMISSION GUIDELINES & TERMS:
□ **State-Supported** means Project has State Approval of Local Planning or Funding.
□ **Forward-Funded** means Project will be or has been requested for State Approval as part of the CIP Process.
□ **Locally-Funded** means Project will only ever be funded locally with no intention to receive State funds. □ **APG** = *Administrative Procedures Guide* of the Interagency Commission on School Construction (IAC) found at *http://iac.maryland.gov/APG/revisedapgindex.cfm*.

Colored Key Floor Plans

Provide plan diagrams that distinguish placement of the items listed in the table below and please fill in the table.

Notes: LEA can use their own colors and hatching or follow those below, but must use the same descriptions shown and provide a legend.

1. All of the colored key floor plans must be labeled with room names, room numbers and room areas.
2. Teaching Stations in Color Coded Plans must match the Teaching Stations indicated in the Space Summary.
3. CTE and SE Teaching Stations shall be confirmed by the LEA's Facility Planners, where LEA has a separate planning division.

	ALL GRADE LEVELS	
	Cooperative Use Space (SBHC, Before/After Care, Rec & Parks, PTA, Childcare Center, etc) Highlight only those spaces in the LEA request for CUS Funding.	Combined CUS nsf #:
	Special Education (SE) Teaching Stations greater than 500 nsf and not serving as resource support rooms and not regional.	Total # of Teaching Stations:#
	Special Education (SE) Teaching Stations (same as above) except serve a Regional SE Program (may serve students outside of their regular school attendance area)	Total # of Teaching Stations:#
	Alternative Ed Teaching Stations (DEFINITION) greater than 500 nsf in primary schools and greater than 550 nsf in secondary schools.	Total # of Teaching Stations:#
	PRIMARY SCHOOLS	
	Pre-Kindergarten Classrooms	Total # of Teaching Stations:#
	Kindergarten Classrooms:	Total # of Teaching Stations:#
	Grade 1-5 General Education Classrooms:	Total # of Teaching Stations:#
	SECONDARY SCHOOLS	
	High Schools Career & Technology Education (CTE) Instructional Spaces. Clarify when adjacent lab and classroom spaces serve as only one teaching station with one instructor.	Total # of Teaching Stations:#
	Gym & Auxiliary Gyms in Secondary schools (Note placement of divider curtains if separate teaching areas).	Total # of Teaching Stations:#
	All other secondary school level teaching stations (greater than 550 nsf)	Total # of Teaching Stations:#

Checklist for State-Supported or Forward-Funded Projects

CONSTRUCTION DOCUMENTS (CD) SUBMISSION TO MSDE/IAC

TABS: DEFINITION: TAB refers to a multi-page PDF file and shall be named per the File name convention. ***File name convention example: ParksideES-repl-SD-Tab1-Scope Descriptions-2020.10.07.***
Each document listed below should have a bookmark identifying it in the pdf document. ***For example, Tab#1 should have applicable bookmarks like: Transmittal checklist, LEA response, IAC form 202.1, NSF Summary, and so on.***

TAB #1 - Scope Descriptions:

☐ Transmittal that includes checklist
☐ LEA Response to MSDE DD Review Letter (if applicable & not provided previously)
☐ NSF Summary of Spaces with comparison to the Ed Spec program
☐ Narrative Descriptions if changed from DDs
☐ High Performance narrative, LEED scorecard, or Green Building Plan, if applicable

TAB #2 - IAC/PSCP Signed Forms:

☐ Form 303.1 Construction Document Submission
☐ Form 303.2 Construction Document Analysis
☐ Form 302.4 Cost Estimate Summary & Worksheets (Updated)
☐ Form IG.5.1 MBE Goal Setting Model Analysis

TAB #3 - Engineering Reports & Calculations:

☐ Updated Structural Calculations
☐ Updated Mechanical Calculations
☐ Updated Electrical Calculations & Power Requirements

TAB #4 - Construction Specifications:

☐ Construction Specifications - Divisions 0 & 1 Front-end portion (includes Bid Form, MBE and Prevailing Wage Rates requirements, Allowances and Alternates Sections)
☐ Construction Specifications – Civil & Geotechnical Report
☐ Construction Specifications – Architectural
☐ Construction Specifications – Structural, MEP, & Other

TAB #5 - Construction Drawings (95-100% Complete):

Please Split the TAB 5 into the following

☐ **TAB 5A** Site Drawings

☐ **Tab 5B** Colored Key Floor Plans distinguishing Cooperative Use Spaces, type and # of Teaching Stations Architectural, Interior & Kitchen Drawings,

☐ **TAB 5C** Structural Drawings, MEP Drawings and all others

MSDE/IAC SUBMISSION FILE NAMING CONVENTION

The Naming Convention is applicable only when the documents are submitted separately in exceptional cases. When Documents are submitted in TABs, Please see the TAB requirements.

1. All files should start with School name and indicate phase of submission– see File Naming Conventions below.
2. If multiple items in one PDF file (for example, all IAC forms) then organize PDF with tabs for each component.
3. Multiple items in one file should all be of the same size – do not mix 8 ½”x11” documents with largescale 24”x36” + drawings.

File naming should follow in this order: School Name -Type Project - PHASE - Type Files - DATE

Example: ParksideMS-Repl-SD-DWGS-2020.10.07

School Name	Level	Type Project	-	PHASE	-	Type File	-	DATE
Parkside	ES	New		EdSpec		Trans (=Transmittal)		2020.10.07 (Year. Month. Day)
Kennedy (only last name needed for people-named schools)	K-8	Repl		FS (Feasibility Study)		Report		
	MS	Add		SD		IAC Forms (Such as Form 201, Form 303, etc)		
	6-12	AddReno		DD		NSF Summary (Space Summary)		
	HS	Reno		CD		TCO (=Total Cost of Ownership)		
	CTE	LR (=Limited Reno)		BID (Bid drawings if different then CD submission)		DWGS Civil DWGS Arch DWGS Struc DWGS MEP		

	SE (If Special Education Center)	OSE (=Open Space Enclosure)		AWD (Bid Award Submission materials)		Resp Ltr (= Response letter)		
		Systemic? ROOF HVAC		AB (=As Builts)		CALC ELE CALC Mech CALC Struct CALC HP (=Calculations,High Performance, such as the Solar Study)

Checklist for State-Supported or Forward-Funded Projects

DESIGN DEVELOPMENT (DD) SUBMISSION TO MSDE/IAC

TABS: DEFINITION: TAB refers to a multi-page PDF file and shall be named per the File name convention. ***File name convention example: ParksideES-repl-SD-Tab1-Scope Descriptions-2020.10.07.***
Each document listed below should have a bookmark identifying it in the pdf document. ***For example, Tab#1 should have applicable bookmarks like: Transmittal checklist, LEA response, IAC form 202.1, NSF Summary, and so on.***

TAB #1 - Scope Descriptions:

☐ Transmittal includes checklist
☐ LEA Response to MSDE SD Review Letter (if applicable & not provided previously)
☐ NSF Summary of Spaces with comparison to the Ed Spec program
☐ Narrative Descriptions (All Design Disciplines)
☐ High Performance narrative, LEED scorecard, or Green Building Plan, if applicable
☐ If local board of education has determined that the facility will serve as an emergency management shelter, provide plan diagram of areas to serve this purpose in the school and correspondence with Maryland Emergency Management Agency (MEMA).

TAB #2 - IAC/PSCP Signed Forms:

☐ Form 302.1 - Design Development Document Submission
☐ Form 302.2 - Life Cycle Cost Analysis Summary
☐ Form 302.3 - Design Development Document Analysis
☐ Form 302.4 Cost Estimate Summary & Worksheets

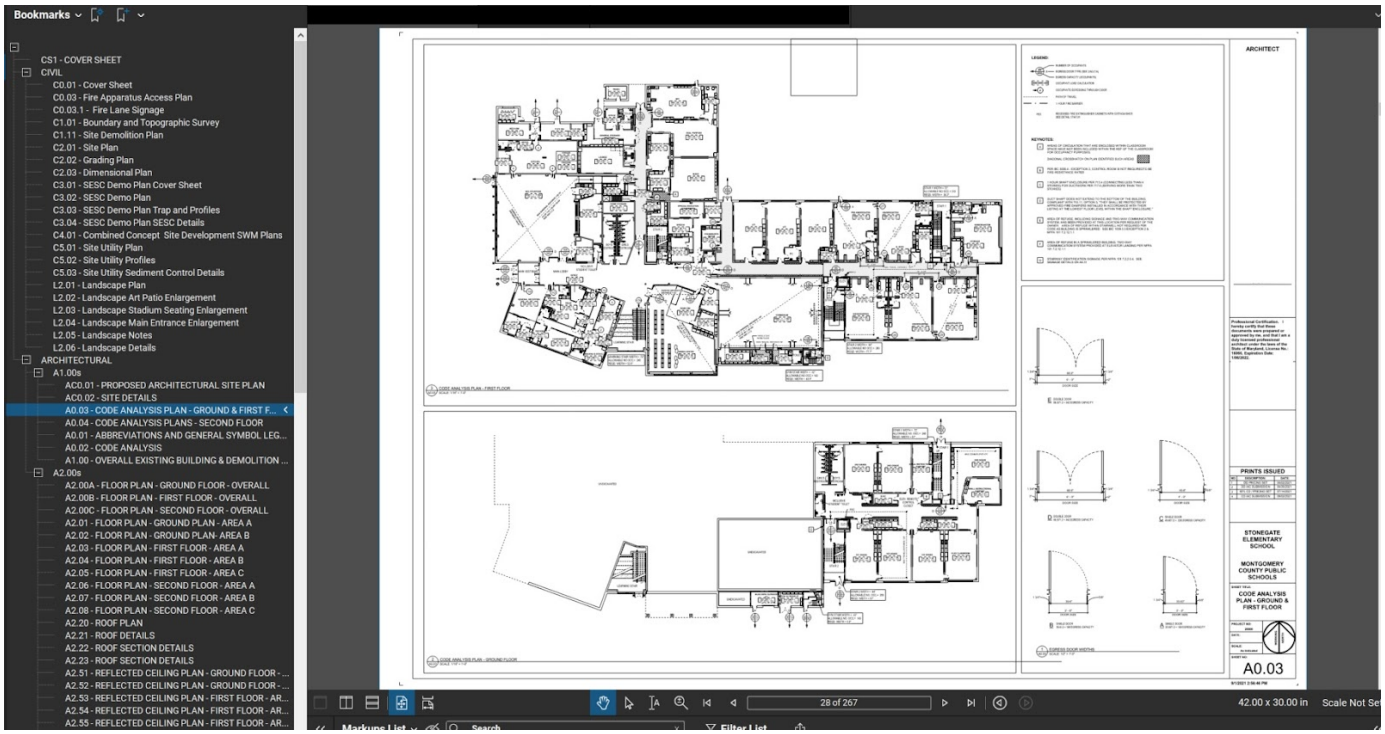
TAB #3 - Engineering Reports & Calculations:

☐ Local Soils Conservation Service Approval Letter (if applicable)
☐ Structural Calculations
☐ Mechanical Life Cycle Cost Analysis (Comparison of 4 systems)
☐ Mechanical Calculations
☐ Electrical Calculations & Power Requirements (including: Load & Demand Analysis, Load Analysis for Standby Power Systems, Lighting Power Budget and Lightening Risk Assessment)
☐ Energy Consumption Certification Letter
☐ If new, replacement, or renovation projects, provide Use of Solar Technologies Evaluation (i.e.; photovoltaic or solar water heating) that includes life cycle costs and reports findings of what is recommended.

TAB #4 - Specifications:

☐ Outline Construction Specifications
☐ List of Alternates
☐ Geotechnical Report

TAB #5 - DD Drawings:



If the PDF file size for all the drawings listed below is less than 100MB; drawings can be combined into a single file, with bookmarks. Otherwise split the TAB5 as following

☐ Site Drawings

☐ Colored Key Floor Plans distinguishing Cooperative Use Spaces and # of Teaching Stations. (Please include # of teaching stations along with the legend) Architectural (includes furniture and equipment layouts, quarter scale toilet room layouts; preliminary code analysis & list of applicable codes)

☐ Structural, MEP Drawings and all others.

Checklist for State-Supported or Forward-Funded Projects

SCHEMATIC DESIGN (SD) SUBMISSION TO MSDE/IAC

TABS: DEFINITION: TAB refers to a multi-page PDF file and shall be named per the File name convention. ***File name convention example: ParksideES-repl-SD-Tab1-Scope Descriptions-2020.10.07.***
Each document listed below should have a bookmark identifying it in the pdf document. ***For example, Tab#1 should have applicable bookmarks like: Transmittal checklist, LEA response, IAC form 202.1, NSF Summary, and so on.***

TAB #1 - Scope Descriptions (in PDF Form):

☐ Transmittal includes checklist

☐ LEA Response to MSDE Ed Spec Review Letter (if applicable & not provided previously)

☐ IAC Form 202.1 for Schematic Design Submissions (which includes Type Project, Date of site approval by the IAC, date of Educational Specifications review, State approved capacity, Name of Architect)

☐ Project Brochure includes:

1. Narrative Descriptions (All Design Disciplines)
2. Intended capacity and core capacity if master planning addition(s) in the future. Clarification how many teaching station to bring building up to core and where will be located on site
3. High Performance narrative, LEED scorecard, or Green Building Plan, if applicable • Project schedule
4. Estimated cost of construction
5. List of applicable codes

☐ NSF Summary of Spaces with comparison to the Ed Spec program requirements. Include GSF Total, and NSF/GSF efficiency %.

☐ Educational specifications amendments, if any

☐ Total Cost Of Ownership (TCO)-PDF

TAB #2 – Support Material:

☐ If have Regional Special Education program that is new, has increased in size, or has a change in program delivery alter, provide approval letter from MSDE Division of Special Education/Early Intervention Services (DSE/EIS) or letter asking support of DSE/EIS

☐ If a high school with new or changed CTE programs, provide approval letter from MSDE Division of Career and College Readiness (DCCR) and *Attachment 1 - Facilities Utilization Table* from the application request or letter asking support of DCCR.

☐ If facility built before 1960 or is listed as Category I or II in Attachment A of the Programmatic Agreement between the Maryland Historical Trust (MHT) and the IAC, provide a copy of

the MHT's determination if the project effects an historic property. The project review process and submission form are provided at: https://mht.maryland.gov/projectreview.shtml

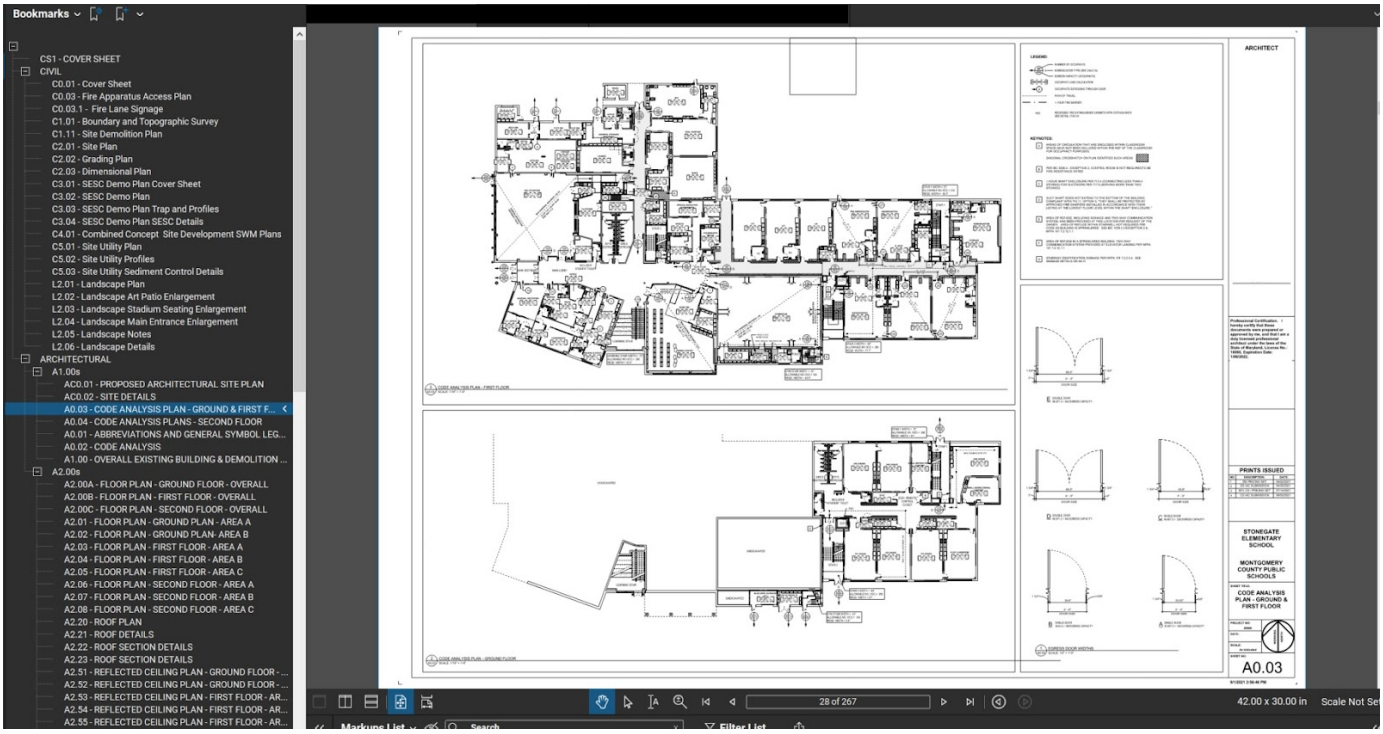
TAB #3 - SD Drawings:

☐ Colored Key Floor Plans with Stipulated Legend distinguishing Cooperative Use Spaces, Type and Number of Teaching Stations

☐ Site Drawings and architectural drawings are required at SDs

☐ Drawings: Existing & Proposed Site Plan (40th scale min.), if applicable.

☐ For renovation projects include existing site and floor plans as well as GSF totals for renovation and demolition areas.



☐ Drawings: SD drawings should be scaled drawings (⅛" minimum). Properly bookmarked and labelled. In case the file size is big, drawings can be divided by volumes for DD and CD drawings.

Excel Documents: Please provide the following documents also in an Excel format.

☐ NSF Summary of Spaces with comparison to the Ed Spec program requirements. Include GSF Total, and NSF/GSF efficiency %.

☐ Total Cost Of Ownership (TCO)

Thumbnail indicating Bookmarked PDF:

Attachment G – MOU Between M-NCPPC and MCPS

MEMORANDUM OF UNDERSTANDING BETWEEN MONTGOMERY COUNTY PUBLIC SCHOOLS AND THE MARYLAND-NATIONAL CAPITAL PARK AND PLANNING COMMISSION REGARDING RESPECTIVE PLANNING PROCESSES

THIS MEMORANDUM OF UNDERSTANDING ("MOU") is entered into as of November 30, 2023 (the "Effective Date") by and between MONTGOMERY COUNTY PUBLIC SCHOOLS, a system of public schools operated by the Board of Education of Montgomery County (hereinafter referred to as "MCPS"), and the MARYLAND-NATIONAL CAPITAL PARK AND PLANNING COMMISSION (hereinafter referred to as the "Commission") on behalf of the MONTGOMERY COUNTY PLANNING DEPARTMENT (hereinafter referred to as "Planning") and the MONTGOMERY COUNTY PARKS DEPARTMENT (hereinafter referred to as "Parks"), each referred to individually as a "Party" and collectively as the "Parties." For good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, Parties agree as follows:

ARTICLE I: PURPOSE AND IDENTIFICATION OF PARTIES

This MOU represents an agreement between MCPS and the Commission, concerning the coordination of roles and responsibilities to be undertaken by each party while conducting certain policy, planning and development processes. The Montgomery County Planning Board and Board of Education have review and approval authority described by law and are not included in or subject to this MOU.

ARTICLE II: COMMISSION MASTER AND SECTOR PLANNING PROCESS

A. Roles and Responsibilities

This article describes the roles and responsibilities of Planning and MCPS as it relates to the coordination of efforts in a Commission master plan process.

Roles

Planning is the Lead Agency in the administration, engagement, development, quality assurance, and production of all deliverables through all phases of the master plan process. Planning will have final approval of all engagement, communications, and deliverables (as described below).

MCPS will provide support and collaborate in the engagement, development, quality assurance, and production of applicable deliverables through various phases of the master planning process.

Responsibilities

Planning maintains ultimate responsibility for and control of all plan elements through all phases of the master plan process, except after the Planning Board public hearing and subsequent preparation of the Planning Board Draft Plan, when the Planning Board asserts ultimate control, and again after delivery of the Planning Board Draft Plan to the County Council, when the County Council asserts ultimate control.

MCPS will actively engage with Planning during the master plan development process as a partner agency and key stakeholder for public schools, assisting with outreach efforts, sharing data for existing conditions analyses, and providing input on recommendations relevant to schools.

B. Plan Stages, Expectations, and Desired Outcome

The table below identifies the MCPS roles and responsibilities within the Commission master plan process. MCPS commits to fulfilling these roles and Planning commits to engaging MCPS staff accordingly.

Master Plan Stage	MCPS Roles and Responsibilities	Desired Outcomes
Kick-Off / Scope of Work	• Identify staff to represent MCPS as needed throughout master plan process. • Participate in meeting w/master plan team to discuss: – MCPS's short-term plans and long-term aspirations for the general vicinity; – whether specific school site(s) should be included within Plan boundary; – interest/demand for additional school sites.	• Long-term school planning efforts are initiated. Direction of MCPS capital planning is set forth beyond limitations of CIP funding and incorporated into Planning's master plan efforts.
Listening	• Assist with reaching stakeholders at individual Plan area schools as appropriate (staff, students, PTA, etc.). • If there are community comments received through Planning staff's outreach efforts that are more relevant to MCPS's operations, assist in transmitting to appropriate department or staff.	• School communities are recognized as key stakeholders and their input is actively sought after for consideration. • Input collected from community that is outside the jurisdiction of Planning is not lost.
Existing Conditions	• Confirm list of nearby schools to be included in collective trend analysis. • Provide latest enrollment and projections data as they become available. • Review sites identified and provide input/feedback regarding suitability, constraints, etc.	• Planning's existing conditions analysis approach for public schools is in alignment with MCPS's capital and non-capital priorities or strategies. • MCPS is involved in potential school site considerations at earliest opportunity.

Visioning and Preliminary Recommendations	• Review and confirm recommendations relevant to MCPS. • Participate in meeting(s) with Planning and relevant stakeholders to discuss potential site options in Plan area that may include: – adaptive reuse school facility; – possible program integration with institution or employer based in plan area for co-location opportunity; – additional school sites. • Proactively communicate expectations of candidate site(s) with relevant stakeholders.	• The estimated enrollment impacts of the preliminary land use and housing recommendations are acknowledged as potential factors for change in existing enrollment trends and reflected in MCPS's educational facilities strategies, as appropriate. • MCPS is engaged in potential school site acquisition discussions and process early on for better implementation.
Working Draft	• Review language of working draft and provide feedback as necessary.	• MCPS is in general agreement with plan language and recommendations regarding schools.
Planning Board and Council Work Sessions	• Prepare to participate in work session to respond to Planning Board/Council if deemed necessary.	• MCPS is available to actively engage in dialogue if/when a schools-related issue is discussed during Work Sessions.
Plan Implementation	• When a school site recommended by a master plan is ready to be dedicated, MCPS will be actively engaged throughout the process to ensure the site is transferred in an acceptable condition for MCPS to take possession of the site.	• School sites that are dedicated to MCPS as a result of a master plan recommendation are transferred in a condition suitable for use as a school facility.

C. Schedule

For each master plan, Planning's master planning staff will lay out a meeting and communication plan appropriate to the specific context and agreed to by MCPS to coordinate the joint efforts and process.

ARTICLE III: COMMISSION PARK PLANNING PROCESS

A. Roles and Responsibilities

This article describes the roles and responsibilities of Parks and MCPS as it relates to the coordination of efforts in a Commission park planning process.

Roles

Parks is the Lead Agency in the administration, engagement, development, quality assurance, and production of all deliverables through all phases of the park planning process. Parks will have final approval of all engagement, communications, and deliverables (as described below).

MCPS will provide support and collaborate in the engagement, development, quality assurance, and production of applicable deliverables through various phases of the park planning process.

Responsibilities

Opportunities for MCPS and Parks collaboration occur throughout the park planning and development process. Early and consistent communication and coordination helps align priorities and facilitates implementation.

B. Processes, Expectations, and Desired Outcome

The tables below identify the MCPS roles and responsibilities within the Commission park planning process. MCPS commits to fulfilling these roles and Parks commits to engaging MCPS staff accordingly. The first table describes the Parks Planning Process and the roles and responsibility for MCPS. The second table describes steps related to proposed school projects that impact parkland.

Parks Planning Process	MCPS Roles and Responsibilities	Desired Outcomes
Parks, Recreation, and Open Space Plan (PROS)	• Provide/confirm information for fields inventory High School Student Survey (done in 2021).	• School-related park needs are incorporated in systematic planning.
Planning Master Plans and Sector Plans	• Identify park locations that would serve MCPS students, including sites adjacent to MCPS schools. (also see Article II)	• Park and school needs are considered in tandem.
Park-Specific Plans (e.g. Park Master Plans)	• **Existing Conditions:** Provide input into existing park use by MCPS schools and students. • **Visioning:** Identify anticipated future needs. • **Recommendations:** Review recommendations.	• School-related park needs are considered in park planning.

Process for Projects Impacting Parkland	MCPS Roles and Responsibilities	Desired Outcomes
Concept Review	• Submit preliminary concept for project that impacts parkland.	• Key considerations, challenges, and opportunities are identified early to make implementation easier.
Park Permit	• Receive an approved Park Permit prior to construction.	• Project meets requirements and is implemented.

C. Schedule

For future PROS plans and any park-specific plan, Parks staff will lay out a meeting and communication plan appropriate to the specific context and plan and work with MCPS to coordinate the joint efforts and process.

The schedule for school projects that impact parkland is initiated by MCPS and will proceed according to the school planning, and parks concept review and park permitting processes.

ARTICLE IV: MCPS CAPITAL PROJECT PROCESS

A. Roles and Responsibilities

This article describes the roles and responsibilities of Planning, Parks and MCPS as it relates to the coordination of efforts in the MCPS capital project process.

Roles

MCPS is the Lead Agency in the administration, engagement, development, quality assurance, and production of all deliverables through all phases of the school capital project process, with the exception of the mandatory referral process, which is detailed separately in Article V, MCPS will have responsibility for all engagement, communications, and deliverables (as described below) pertaining to the school capital project process.

Planning and Parks will provide support and collaborate in the engagement and development of deliverables, as applicable, through various phases of the school capital project process.

Responsibilities

MCPS maintains ultimate responsibility for and control of all plan elements through all phases of the school planning process. Opportunities for Planning and Parks collaboration occur throughout the feasibility planning process to be inclusive of current county policies and initiatives when in alignment with MCPS requirements and policies. MCPS will keep open communication and coordination with Planning and Parks to implement agency goals to the maximum extent possible.

B. Process Phases, Expectations, and Desired Outcome

The table below identifies the Planning and Parks roles and responsibilities within the MCPS school capital project process. Planning and Parks commit to fulfilling these roles and MCPS commits to engaging Planning and Parks staff accordingly.

School Capital Project Phase	Planning and Parks Roles and Responsibilities	Desired Outcomes
Facility Planning	• Participate in feasibility study meetings for projects approved for facility planning in adopted CIP. • Provide residential development information in specific areas/cluster associated with the feasibility study. • Provide input regarding MCPS site related specifications. • Provide feedback on community comments/concerns/issues shared during the facility planning process.	• Key considerations, challenges, and opportunities are identified early in the facility planning process. • Incorporate residential development information to identify possible future growth in the specific service areas being studied.

Planning and Design Feasibility	• Provide all restrictions, issues and policies that may impact a proposed site selection. • Review preliminary concepts through an interactive Development Review Committee working session to identify site specific impacts: – regulatory restrictions; – environmental protection; – utility infrastructure; – transportation infrastructure; – county policies; – permitting agencies.	• Facilitate initial design approach. • Identify priorities and coordinate a unified best project approach. • Coordinated options for establishing project budgets based on agency goals.
Mandatory Referral	(see Article V)	(see Article V)
Construction	• Where applicable, participate in review of field construction and elements.	• Improve acceptance process at completion of project.

C. Schedule

For each feasibility study MCPS will lay out a meeting and communication plan appropriate to the specific context. Planning and Parks will coordinate the joint efforts with all agencies as identified in the Development Review Committee for a detailed collaborative work session.

ARTICLE V: MANDATORY REFERRAL PROCESS

A. Roles and Responsibilities

This article describes the roles and responsibilities of Planning, Parks and MCPS as it relates to the coordination of efforts in the mandatory referral process, which is a distinct component of the larger school capital project process described in Article IV.

Roles

During the mandatory referral process Planning is the Lead Agency in the mandatory referral review and in the production of all deliverables to the Planning Board. Planning will have final approval of all engagement, communications, and deliverables (as described below) pertaining to the mandatory referral process.

MCPS will provide support and collaborate in the engagement, development, quality assurance, and production of applicable deliverables through various phases of the mandatory referral process.

Responsibilities

Planning maintains ultimate responsibility for navigating the mandatory referral process through Planning Board review. Planning will engage MCPS in the review process, providing opportunities for MCPS to revise plans as applicable, and as allowed within the mandatory referral rules and requirements. Planning will prepare timely comments on the development application for Planning Board review and transmit the Planning Board's comments to MCPS. Planning will participate in the MCPS presentation of the Planning Board's comments to the Board of Education.

MCPS will provide timely responses to Planning comments. MCPS will provide written responses to Planning Board comments and address issues raised in Planning Board comments, as practical. When not practical, MCPS's written responses will explain why solutions are not practical. MCPS will present the comments of the Planning Board to the Board of Education and invite Planning staff to participate in that presentation.

B. Process Phases, Expectations, and Desired Outcome

MCPS roles and responsibilities within the Planning mandatory referral process. MCPS commits to fulfilling these roles and Planning commits to engaging MCPS staff accordingly. Planning and Parks will prioritize and expeditiously process all submissions at the highest priority and work in partnership with MCPS to provide prompt reviews and approvals.

The phases outlined below are based on the collaborative planning process produced by the School Design Work Group (see Attachment A), which aims to implement earlier and more frequent coordination in a manner that preemptively resolves conflicting needs for school sites, leading to a smoother and more efficient Mandatory Referral review and an endorsement of school projects by the Planning Board. Each phase identifies several milestones in the earlier stages leading up to the Mandatory Referral review that provide opportunities for agencies to collaboratively explore the feasibility of various aspects of school projects, examine related countywide initiatives and Capital Improvements Program planning, review conceptual options, and resolve potential issues. It does not alter the legal requirements of the Mandatory Referral review and/or the Forest Conservation Plan review itself.

Mandatory Referral Stage	MCPS Roles and Responsibilities	Desired Outcomes
Pre-Planning & Feasibility	• Arrange joint meetings with Planning, Parks and other agencies to understand master plans and county initiatives relevant to potential school projects. • If considering a new school, evaluate potential sites per Montgomery County Board of Education Policy FAA, Educational Facilities Planning.	• Better understanding of each agency's goals and initiatives. • Funding is secured - potential joint agency funding efforts are explored, and support for additional Council funding is established if needed.
Schematic Design	• Coordinate meetings and collaborate with Planning and other relevant agencies as needed for each of the following steps: – NRI/FSD Submission for Planning Approval; – Schematic Design (Community Outreach); – DPS Consultation; – Concept Plan Submittal for DRC Review; – Preliminary Plan Presentation to BOE.	• Board of Education approval to move project forward.

Post Concept Plan	• Coordinate with Planning and other relevant agencies for preparation and submittal of requirements for the following steps: – Draft Forest Conservation Plan (FCP) + Concept Storm Water Management Plan Submittal; – Revisions and Detailed Plan Development.	• Comments from Concept Plan are incorporated into design development stages as applicable.
Mandatory Referral (MR)	• Collaborate with Planning and other relevant agencies as needed for a streamlined process during each of the following steps: – Mandatory Referral + Forest Conservation Plan Public Notice; – Mandatory Referral + Forest Conservation Plan Application; – Agency Recommendation Letters; – Pre-Staff Report; – Staff Report Posting + Planning Board Hearing; – Post-Approval Documentation.	• Project receives Planning Board approval. Any feedback received is included in design or coordinated further with Planning staff. • All necessary post-approval documents are processed and provided in a timely manner.

MCPS and M-NCPPC Planning Processes MOU Attachment "A"

Collaborative Planning Process by School Design Workgroup

A collaborative planning approach for Montgomery County Public Schools' Projects

This proposed collaborative planning process is produced by the School Design Work Group (Work Group), an interagency partnership between Montgomery County Public Schools (MCPS), Montgomery Planning, Montgomery Parks, Montgomery County Department of Transportation (MCDOT), and Montgomery County Department of Permitting Services (MCDPS). Following discussions between the Planning Board and the Board of Education, staff from both agencies were encouraged to work more collaboratively. The Work Group has developed this framework of best practices for school design to advance shared goals for safety, Vision Zero, civic and sustainable design, efficient circulation, equitable access to school sites, fiscally smart infrastructure and timely, streamlined regulatory review. The Work Group met monthly for over a year to produce this proposal. This is a working document and should be revisited and updated as needed to better meet evolving needs and priorities.

This proposed process does not alter the legal requirements of the Mandatory Referral (MR) review. Instead, it identifies several milestones in the earlier stages leading up to the MR review that provide opportunities for various agencies to collaboratively explore the feasibility of various school projects, examine related countywide initiatives and CIP planning, review conceptual options, and resolve potential issues. An overarching goal is to utilize earlier and frequent coordination in a manner that preemptively resolves conflicting needs for school sites, leading to a smoother and more efficient MR review and a strong endorsement of school projects by the Planning Board.

Stage	Description	Desired Outcomes
PRE-PLANNING & FEASIBILITY STAGE		
Initial CIP planning	**Coordinate trends in MCPS as well as potential policy impacts.** **(May-June)** **Review M-NCPPC masterplans and initiatives and explore strategy to implement recommendations related to potential future school projects.** **Review MCDPS and MCDOT plans that will impact future work.** **If considering a new school, MCPS to evaluate potential new school sites per Montgomery County Board of Education Policy FAA, Educational Facilities Planning.**	**Combined staff to coordinate and gain an understanding of each agency's goals.** **Representatives from internal stakeholders to be present to provide input.** **Stakeholders to be aware of potential projects and effects on each agency's policy.** **Engagement and feedback to identify a site for a new school.**

Planning for Project and Initiative Funding Requests	**Review countywide initiatives and related infrastructure projects that require funding.**	**Each agency to define work that may be incorporated into planning and explore potential joint agency funding efforts.**
Pre-Planning for Feasibility Studies	**Create a working draft NRI/FSD and Site Survey for each project being reviewed for feasibility study.**	**Establish existing conditions.** • Establish buildable areas and identify physical and environmental constraints.
Feasibility Study (Planning Stage)	**Once a school facility project is added to the Capital Improvement Program MCPS to engage the services of an architect.** • Joint meeting with MCPS, MCPS consultants, M-NCPPC, MCDPS, MCDOT, and Parks. ○ MCPS Union representation to attend and share project specific needs • Review facility parameters, including enrollment, size, site access, physical constraints, parking and transit requirements, recreation requirements, applicable Master Plan and Functional Plan recommendations, (e.g. Pedestrian and Bicycle Master Plans). • Review transportation impacts and determine the appropriate documents that will be needed such as a traffic study, traffic statement etc. • Review Climate Action Plan • Assessment of the site per MCPS requirements.	**Meeting with MCPS and M-NCPPC to establish potential design goals.** **Meeting to establish and understand restrictions and implementation of related infrastructure improvements.** • M-NCPPC to provide MCPS with an overview of applicable Master Plan and Functional Plan recommendations, Vision Zero considerations, Parks, Recreation and Open Space Plan (PROS), urban design priorities, known environmental features and recreation needs, especially athletic fields. • MCPS to share constraints and proposed programmatic elements. • Establish potential concepts with a general idea of building footprints, vehicle and non-motorized circulation, stormwater management strategy and open space design.
Feasibility Study (Community Outreach)	**Meeting(s) with community to review Feasibility level diagrams of concepts.** • MCPS to begin the community engagement process. • M-NCPPC to attend meetings to hear community comments.	**MCPS to gather input from school community as well as broader civic community.** • Share general ideas of building footprints, pedestrian, bike and vehicle circulation, stormwater management strategy and open space design. • MCPS to gain an understanding of community concerns. • Determine a cost estimate for the base MCPS project and provide costs associated with related county initiatives as line items.

Board Briefing	**Joint annual presentation to Boards to review coordination efforts and outcome of the feasibility studies for all projects.** **Share cost estimates for base project and additional items.**	**Provide Board members an update on joint efforts and gain support to establish need of additional County Council funding, if required.**
CIP Planning / Request	**Project specific budgets that incorporate each agency's goals and objectives.**	**Review and update the Feasibility Study report.** **Secure funding.**
SCHEMATIC DESIGN STAGE		
Submit NRI/FSD for planning approval	**MCPS to submit NRI/FSD for M-NCPPC approval for projects that receive funding in the CIP and are moving forward beyond the feasibility study.**	**Gain approval of NRI/FSD to commence schematic design.**
Schematic Design (Community Outreach)	**Meetings with community to review Schematic designs.** • MCPS to continue the community engagement process. • M-NCPPC to attend meetings to hear community comments.	**MCPS to gather input from school community as well as broader civic community.** • Share ideas of building footprints, massing, pedestrian, bike and vehicle circulation, stormwater management strategy and open space design. • MCPS to refine each concept. • Determine a preferred concept to develop and present to BOE for approval. • Update cost estimates.
DPS consultation	**Meet with all departments of DPS to review plans.**	**Identify areas of concern related to Building, Fire Access, Infrastructure, and Land Development.**
MCPS to submit Concept Plan for review by DRC	**Interagency DRC to review the current plan with MCPS design team.** • MCPS, MCPS consultants, M-NCPPC, MCDPS, MCDOT, and Parks joint meeting. • PEPCO, WSSC and SHA to review and comment if applicable, including scope of traffic analysis. • Verify previous goals and modify as necessary. • Review proposed concepts from design team.	**To revisit the previous plan(s) and confirm the previous goals.** **Agencies to provide input on the submitted Concept.** • Verify the proposed plan, identify the criteria of MCPS while being mindful of M-NCPPC, MCDPS, MCDOT and Parks. • Review and address concerns that may still need to be addressed.

MCPS Board Presentation of Preliminary Plans	**MCPS presentation to the BOE to review outcome and coordination.** • Attendance of M-NCPPC planning staff as a joint coordination. • Identify any additional infrastructure needs uncovered during Concept Plan review.	**Approval of BOE to move project forward.**
POST CONCEPT PLAN STAGE		
Submit Draft Forest Conservation Plan (FCP) + Concept Stormwater Management Plan (SWM) Plan	• MCPS submits initial FCP, including preliminary locations of SWM facilities. Include any variance requests and justification if specimen trees are impacted. • MCPS submits Concept SWM plan to DPS. (DEP, DOT P&P) • Est. 6 to 8 weeks	• MCDPS to review the Concept SWM Plan and provide comments to MCPS. • Planning staff to review the Preliminary FCP and provide comments to MCPS. • Establish preliminary limits of disturbance (LOD) and start drafting process for easement documents.
Revise + Develop Detailed Plans	• MCPS consultants to prepare architectural, engineering and landscape drawings for the Mandatory Referral application. • MCPS consultants to submit traffic impact study or traffic statement. (30-day review by M-NCPPC, MCDOT and SHA)	• MCPS to incorporate comments as applicable from Concept Plan and update designs. • MCPS consultants to develop detailed drawings through design development stages based on comments from Concept Plan, FCP review and SWM review. • Finalize the limits of disturbance (LOD).
MANDATORY REFERRAL (MR) STAGE		
Mandatory Referral + Forest Conservation Plan Public Notice	• M-NCPPC to publicly notice the FCP application and the Mandatory Referral hearing. • MCPS to publicly notice the FCP and post the signs. • FCP sign posting must occur before the application is accepted. Written notice must be sent no more than five days after the application is accepted.	• Notify the public of the submittal of the MR and FCP. • MCPS consultants to finalize drawings. • Finalize the MR package.
Mandatory Referral + Forest Conservation Plan Application	• MCPS to submit the MR and FCP for review, including storm drain analysis where applicable. • 60-day MR review period including DRC and Planning Board Hearing.	• Provide complete information for review by various agencies. • Agencies to provide any remaining detailed comments to MCPS during the review period. • MCPS to incorporate applicable comments and resubmit within the 60-day MR window.
Agency Recommendation Letters	• MCDPS and MCDOT to provide recommendation letters for the Mandatory Referral.	• MCDOT and MCDPS provide Planning staff with necessary recommendation letters to complete the MR review. • Planning Department prepares staff report.

Pre-Staff Report	• Prior to posting staff report, MCPS and M-NCPPC to meet regularly to review recommendations and comments. • Planning Staff to share with MCPS final recommendations included in the staff report prior to posting.	• MCPS and M-NCPPC to confirm there are no outstanding items. • MCPS and M-NCPPC to coordinate on items that will require additional efforts in a collaborative manner.
Staff Report Posted + Planning Board Hearing	• Planning staff posts staff report two weeks prior to Planning Board hearing (or one week prior if no FCP review is required). • All agencies to attend the Planning Board hearing.	• Gain Planning Board approval. • MCPS to coordinate feedback from the Planning Board and include in design documents or coordinate further with staff as necessary.
Post-Approval Documentation	**Within two weeks of Planning Board hearing, Planning Board letter of recommendation and FCP resolution to be sent to MCPS.** • MCPS to record easements or pay a fee-in-lieu within 6 weeks of signed FCP through the following Forest Conservation Easement Approval Process: • MCPS sends a draft for review to Planning once the easement area is determined. (Note: This step may be initiated by MCPS while the MR review is ongoing to expedite the process.) • Planning reviews the draft and approves it. MCPS obtains signatures while waiting for the Final FCP to be certified. • MCPS submits final signed document to Planning electronically for approval. The Final FCP must be certified and attached to the easement before electronic approval is given. • MCPS receives electronic approval and records the easement. • Once MCPS submits the easement for recordation or pays a fee-in-lieu, construction work may begin with a pre-construction meeting, staking of the LOD, and tree and easement protection. As soon as the document is officially recorded in the Land Records, MCPS sends an electronic copy of the recorded document to Planning for their records.	**Ensure all necessary post-approval documents are processed and provided to MCPS and M-NCPPC in a timely manner.**

AIA® Document B101® – 2017

Standard Form of Agreement Between Owner and Architect

AGREEMENT made as of the day of in the year
(In words, indicate day, month and year.)

BETWEEN the Architect's client identified as the Owner:
(Name, legal status, address and other information)

and the Architect:
(Name, legal status, address and other information)

for the following Project:
(Name, location and detailed description)

The Owner and Architect agree as follows.

ADDITIONS AND DELETIONS:
The author of this document may have revised the text of the original AIA standard form. An *Additions and Deletions Report* that notes revisions to the standard form text is available from the author and should be reviewed. A vertical line in the left margin of this document indicates where the author has added to or deleted from the original AIA text.

This document has important legal consequences. Consultation with an attorney is encouraged with respect to its completion or modification.

ELECTRONIC COPYING of any portion of this AIA® Document to another electronic file is prohibited and constitutes a violation of copyright laws as set forth in the footer of this document.

ARTICLE 1 INITIAL INFORMATION

§ 1.1 This Agreement is based on the Initial Information set forth in this Section 1.1.
(For each item in this section, insert the information or a statement such as "not applicable" or "unknown at time of execution.")

§ 1.1.1 The Owner's program for the Project:
(Insert the Owner's program, identify documentation that establishes the Owner's program, or state the manner in which the program will be developed.)

§ 1.1.2 The Project's physical characteristics:
(Identify or describe pertinent information about the Project's physical characteristics, such as size; location; dimensions; geotechnical reports; site boundaries; topographic surveys; traffic and utility studies; availability of public and private utilities and services; legal description of the site, etc.)

§ 1.1.3 The Owner's budget for the Cost of the Work, as defined in Section 6.1:
(Provide total and, if known, a line item breakdown.)

§ 1.1.4 The Owner's anticipated design and construction milestone dates:

AIA Document B101 – 2017. Copyright © 1974, 1978, 1987, 1997, 2007 and 2017. All rights reserved. User Notes: (640e2aedf442e4498d0967f7)

.1 Design phase milestone dates, if any:

.2 Construction commencement date:

.3 Substantial Completion date or dates:

.4 Other milestone dates:

§ 1.1.5 The Owner intends the following procurement and delivery method for the Project:
(Identify method such as competitive bid or negotiated contract, as well as any requirements for accelerated or fast-track design and construction, multiple bid packages, or phased construction.)

§ 1.1.6 The Owner's anticipated Sustainable Objective for the Project:
(Identify and describe the Owner's Sustainable Objective for the Project, if any.)

§ 1.1.6.1 If the Owner identifies a Sustainable Objective, the Owner and Architect shall complete and incorporate AIA Document E204™–2017, Sustainable Projects Exhibit, into this Agreement to define the terms, conditions and services related to the Owner's Sustainable Objective. If E204–2017 is incorporated into this agreement, the Owner and Architect shall incorporate the completed E204–2017 into the agreements with the consultants and contractors performing services or Work in any way associated with the Sustainable Objective.

§ 1.1.7 The Owner identifies the following representative in accordance with Section 5.3:
(List name, address, and other contact information.)

§ 1.1.8 The persons or entities, in addition to the Owner's representative, who are required to review the Architect's submittals to the Owner are as follows:
(List name, address, and other contact information.)

§ 1.1.9 The Owner shall retain the following consultants and contractors:
(List name, legal status, address, and other contact information.)

.1 Geotechnical Engineer:

AIA Document B101 – 2017. Copyright © 1974, 1978, 1987, 1997, 2007 and 2017. All rights reserved. To report copyright violations, e-mail docinfo@aiacontracts.com.
User Notes: (640e2aedf442e4498d0967f7)

.2 Civil Engineer:

.3 Other, if any:
(List any other consultants and contractors retained by the Owner.)

§ 1.1.10 The Architect identifies the following representative in accordance with Section 2.3:
(List name, address, and other contact information.)

§ 1.1.11 The Architect shall retain the consultants identified in Sections 1.1.11.1 and 1.1.11.2:
(List name, legal status, address, and other contact information.)

§ 1.1.11.1 Consultants retained under Basic Services:

.1 Structural Engineer:

.2 Mechanical Engineer:

.3 Electrical Engineer:

§ 1.1.11.2 Consultants retained under Supplemental Services:

§ 1.1.12 Other Initial Information on which the Agreement is based:

§ 1.2 The Owner and Architect may rely on the Initial Information. Both parties, however, recognize that the Initial Information may materially change and, in that event, the Owner and the Architect shall appropriately adjust the Architect's services, schedule for the Architect's services, and the Architect's compensation. The Owner shall adjust the Owner's budget for the Cost of the Work and the Owner's anticipated design and construction milestones, as necessary, to accommodate material changes in the Initial Information.

§ 1.3 The parties shall agree upon written protocols governing the transmission and use of, and reliance on, Instruments of Service or any other information or documentation in digital form.

§ 1.3.1 Any use of, or reliance on, all or a portion of a building information model without agreement to written protocols governing the use of, and reliance on, the information contained in the model shall be at the using or relying party's sole risk and without liability to the other party and its contractors or consultants, the authors of, or contributors to, the building information model, and each of their agents and employees.

ARTICLE 2 ARCHITECT'S RESPONSIBILITIES

§ 2.1 The Architect shall provide professional services as set forth in this Agreement. The Architect represents that it is properly licensed in the jurisdiction where the Project is located to provide the services required by this Agreement, or shall cause such services to be performed by appropriately licensed design professionals.

§ 2.2 The Architect shall perform its services consistent with the professional skill and care ordinarily provided by architects practicing in the same or similar locality under the same or similar circumstances. The Architect shall perform its services as expeditiously as is consistent with such professional skill and care and the orderly progress of the Project.

§ 2.3 The Architect shall identify a representative authorized to act on behalf of the Architect with respect to the Project.

§ 2.4 Except with the Owner's knowledge and consent, the Architect shall not engage in any activity, or accept any employment, interest or contribution that would reasonably appear to compromise the Architect's professional judgment with respect to this Project.

§ 2.5 The Architect shall maintain the following insurance until termination of this Agreement. If any of the requirements set forth below are in addition to the types and limits the Architect normally maintains, the Owner shall pay the Architect as set forth in Section 11.9.

§ 2.5.1 Commercial General Liability with policy limits of not less than ($) for each occurrence and ($) in the aggregate for bodily injury and property damage.

§ 2.5.2 Automobile Liability covering vehicles owned, and non-owned vehicles used, by the Architect with policy limits of not less than ($) per accident for bodily injury, death of any person, and property damage arising out of the ownership, maintenance and use of those motor vehicles, along with any other statutorily required automobile coverage.

§ 2.5.3 The Architect may achieve the required limits and coverage for Commercial General Liability and Automobile

AIA Document B101 – 2017. Copyright © 1974, 1978, 1987, 1997, 2007 and 2017. All rights reserved. Liability through a combination of primary and excess or umbrella liability insurance, provided such primary and excess or umbrella liability insurance policies result in the same or greater coverage as the coverages required under Sections 2.5.1 and 2.5.2, and in no event shall any excess or umbrella liability insurance provide narrower coverage than the primary policy. The excess policy shall not require the exhaustion of the underlying limits only through the actual payment by the underlying insurers.

§ 2.5.4 Workers' Compensation at statutory limits.

§ 2.5.5 Employers' Liability with policy limits not less than ($) each accident, ($) each employee, and ($) policy limit.

§ 2.5.6 Professional Liability covering negligent acts, errors and omissions in the performance of professional services with policy limits of not less than ($) per claim and ($) in the aggregate.

§ 2.5.7 Additional Insured Obligations. To the fullest extent permitted by law, the Architect shall cause the primary and excess or umbrella policies for Commercial General Liability and Automobile Liability to include the Owner as an additional insured for claims caused in whole or in part by the Architect's negligent acts or omissions. The additional insured coverage shall be primary and non-contributory to any of the Owner's insurance policies and shall apply to both ongoing and completed operations.

§ 2.5.8 The Architect shall provide certificates of insurance to the Owner that evidence compliance with the requirements in this Section 2.5.

ARTICLE 3 SCOPE OF ARCHITECT'S BASIC SERVICES

§ 3.1 The Architect's Basic Services consist of those described in this Article 3 and include usual and customary structural, mechanical, and electrical engineering services. Services not set forth in this Article 3 are Supplemental or Additional Services.

§ 3.1.1 The Architect shall manage the Architect's services, research applicable design criteria, attend Project meetings, communicate with members of the Project team, and report progress to the Owner.

§ 3.1.2 The Architect shall coordinate its services with those services provided by the Owner and the Owner's consultants. The Architect shall be entitled to rely on, and shall not be responsible for, the accuracy, completeness, and timeliness of, services and information furnished by the Owner and the Owner's consultants. The Architect shall provide prompt written notice to the Owner if the Architect becomes aware of any error, omission, or inconsistency in such services or information.

§ 3.1.3 As soon as practicable after the date of this Agreement, the Architect shall submit for the Owner's approval a schedule for the performance of the Architect's services. The schedule initially shall include anticipated dates for the commencement of construction and for Substantial Completion of the Work as set forth in the Initial Information. The schedule shall include allowances for periods of time required for the Owner's review, for the performance of the Owner's consultants, and for approval of submissions by authorities having jurisdiction over the Project. Once approved by the Owner, time limits established by the schedule shall not, except for reasonable cause, be exceeded by the Architect or Owner. With the Owner's approval, the Architect shall adjust the schedule, if necessary, as the Project proceeds until the commencement of construction.

§ 3.1.4 The Architect shall not be responsible for an Owner's directive or substitution, or for the Owner's acceptance of non-conforming Work, made or given without the Architect's written approval.

§ 3.1.5 The Architect shall contact governmental authorities required to approve the Construction Documents and entities providing utility services to the Project. The Architect shall respond to applicable design requirements imposed by those authorities and entities.

§ 3.1.6 The Architect shall assist the Owner in connection with the Owner's responsibility for filing documents required for the approval of governmental authorities having jurisdiction over the Project.

§ 3.2 Schematic Design Phase Services

§ 3.2.1 The Architect shall review the program and other information furnished by the Owner, and shall review laws, codes, and regulations applicable to the Architect's services.

§ 3.2.2 The Architect shall prepare a preliminary evaluation of the Owner's program, schedule, budget for the Cost of the Work, Project site, the proposed procurement and delivery method, and other Initial Information, each in terms of the other, to ascertain the requirements of the Project. The Architect shall notify the Owner of (1) any inconsistencies discovered in the information, and (2) other information or consulting services that may be reasonably needed for the Project.

§ 3.2.3 The Architect shall present its preliminary evaluation to the Owner and shall discuss with the Owner alternative approaches to design and construction of the Project. The Architect shall reach an understanding with the Owner regarding the requirements of the Project.

§ 3.2.4 Based on the Project requirements agreed upon with the Owner, the Architect shall prepare and present, for the Owner's approval, a preliminary design illustrating the scale and relationship of the Project components.

§ 3.2.5 Based on the Owner's approval of the preliminary design, the Architect shall prepare Schematic Design Documents for the Owner's approval. The Schematic Design Documents shall consist of drawings and other documents including a site plan, if appropriate, and preliminary building plans, sections and elevations; and may include some combination of study models, perspective sketches, or digital representations. Preliminary selections of major building systems and construction materials shall be noted on the drawings or described in writing.

§ 3.2.5.1 The Architect shall consider sustainable design alternatives, such as material choices and building orientation, together with other considerations based on program and aesthetics, in developing a design that is consistent with the Owner's program, schedule and budget for the Cost of the Work. The Owner may obtain more advanced sustainable design services as a Supplemental Service under Section 4.1.1.

§ 3.2.5.2 The Architect shall consider the value of alternative materials, building systems and equipment, together with other considerations based on program and aesthetics, in developing a design for the Project that is consistent with the Owner's program, schedule, and budget for the Cost of the Work.

§ 3.2.6 The Architect shall submit to the Owner an estimate of the Cost of the Work prepared in accordance with Section 6.3.

§ 3.2.7 The Architect shall submit the Schematic Design Documents to the Owner, and request the Owner's approval.

§ 3.3 Design Development Phase Services

§ 3.3.1 Based on the Owner's approval of the Schematic Design Documents, and on the Owner's authorization of any adjustments in the Project requirements and the budget for the Cost of the Work, the Architect shall prepare Design Development Documents for the Owner's approval. The Design Development Documents shall illustrate and describe the development of the approved Schematic Design Documents and shall consist of drawings and other documents including plans, sections, elevations, typical construction details, and diagrammatic layouts of building systems to fix and describe the size and character of the Project as to architectural, structural, mechanical and electrical systems, and other appropriate elements. The Design Development Documents shall also include outline specifications that identify major materials and systems and establish, in general, their quality levels.

§ 3.3.2 The Architect shall update the estimate of the Cost of the Work prepared in accordance with Section 6.3.

§ 3.3.3 The Architect shall submit the Design Development Documents to the Owner, advise the Owner of any adjustments to the estimate of the Cost of the Work, and request the Owner's approval.

§ 3.4 Construction Documents Phase Services

§ 3.4.1 Based on the Owner's approval of the Design Development Documents, and on the Owner's authorization of any adjustments in the Project requirements and the budget for the Cost of the Work, the Architect shall prepare Construction Documents for the Owner's approval. The Construction Documents shall illustrate and describe the further development of the approved Design Development Documents and shall consist of Drawings and Specifications setting forth in detail the

quality levels and performance criteria of materials and systems and other requirements for the construction of the Work. The Owner and Architect acknowledge that, in order to perform the Work, the Contractor will provide additional information, including Shop Drawings, Product Data, Samples and other similar submittals, which the Architect shall review in accordance with Section 3.6.4.

§ 3.4.2 The Architect shall incorporate the design requirements of governmental authorities having jurisdiction over the Project into the Construction Documents.

§ 3.4.3 During the development of the Construction Documents, the Architect shall assist the Owner in the development and preparation of (1) procurement information that describes the time, place, and conditions of bidding, including bidding or proposal forms; (2) the form of agreement between the Owner and Contractor; and (3) the Conditions of the Contract for Construction (General, Supplementary and other Conditions). The Architect shall also compile a project manual that includes the Conditions of the Contract for Construction and Specifications, and may include bidding requirements and sample forms.

§ 3.4.4 The Architect shall update the estimate for the Cost of the Work prepared in accordance with Section 6.3.

§ 3.4.5 The Architect shall submit the Construction Documents to the Owner, advise the Owner of any adjustments to the estimate of the Cost of the Work, take any action required under Section 6.5, and request the Owner's approval.

§ 3.5 Procurement Phase Services

§ 3.5.1 General

The Architect shall assist the Owner in establishing a list of prospective contractors. Following the Owner's approval of the Construction Documents, the Architect shall assist the Owner in (1) obtaining either competitive bids or negotiated proposals; (2) confirming responsiveness of bids or proposals; (3) determining the successful bid or proposal, if any; and, (4) awarding and preparing contracts for construction.

§ 3.5.2 Competitive Bidding

§ 3.5.2.1 Bidding Documents shall consist of bidding requirements and proposed Contract Documents.

§ 3.5.2.2 The Architect shall assist the Owner in bidding the Project by:

- **.1** facilitating the distribution of Bidding Documents to prospective bidders;
- **.2** organizing and conducting a pre-bid conference for prospective bidders;
- **.3** preparing responses to questions from prospective bidders and providing clarifications and interpretations of the Bidding Documents to the prospective bidders in the form of addenda; and,
- **.4** organizing and conducting the opening of the bids, and subsequently documenting and distributing the bidding results, as directed by the Owner.

§ 3.5.2.3 If the Bidding Documents permit substitutions, upon the Owner's written authorization, the Architect shall, as an Additional Service, consider requests for substitutions and prepare and distribute addenda identifying approved substitutions to all prospective bidders.

§ 3.5.3 Negotiated Proposals

§ 3.5.3.1 Proposal Documents shall consist of proposal requirements and proposed Contract Documents.

§ 3.5.3.2 The Architect shall assist the Owner in obtaining proposals by:

- **.1** facilitating the distribution of Proposal Documents for distribution to prospective contractors and requesting their return upon completion of the negotiation process;
- **.2** organizing and participating in selection interviews with prospective contractors;
- **.3** preparing responses to questions from prospective contractors and providing clarifications and interpretations of the Proposal Documents to the prospective contractors in the form of addenda; and,
- **.4** participating in negotiations with prospective contractors, and subsequently preparing a summary report of the negotiation results, as directed by the Owner.

§ 3.5.3.3 If the Proposal Documents permit substitutions, upon the Owner's written authorization, the Architect shall, as an

Additional Service, consider requests for substitutions and prepare and distribute addenda identifying approved substitutions to all prospective contractors.

§ 3.6 Construction Phase Services

§ 3.6.1 General

§ 3.6.1.1 The Architect shall provide administration of the Contract between the Owner and the Contractor as set forth below and in AIA Document A201™–2017, General Conditions of the Contract for Construction. If the Owner and Contractor modify AIA Document A201–2017, those modifications shall not affect the Architect's services under this Agreement unless the Owner and the Architect amend this Agreement.

§ 3.6.1.2 The Architect shall advise and consult with the Owner during the Construction Phase Services. The Architect shall have authority to act on behalf of the Owner only to the extent provided in this Agreement. The Architect shall not have control over, charge of, or responsibility for the construction means, methods, techniques, sequences or procedures, or for safety precautions and programs in connection with the Work, nor shall the Architect be responsible for the Contractor's failure to perform the Work in accordance with the requirements of the Contract Documents. The Architect shall be responsible for the Architect's negligent acts or omissions, but shall not have control over or charge of, and shall not be responsible for, acts or omissions of the Contractor or of any other persons or entities performing portions of the Work.

§ 3.6.1.3 Subject to Section 4.2 and except as provided in Section 3.6.6.5, the Architect's responsibility to provide Construction Phase Services commences with the award of the Contract for Construction and terminates on the date the Architect issues the final Certificate for Payment.

§ 3.6.2 Evaluations of the Work

§ 3.6.2.1 The Architect shall visit the site at intervals appropriate to the stage of construction, or as otherwise required in Section 4.2.3, to become generally familiar with the progress and quality of the portion of the Work completed, and to determine, in general, if the Work observed is being performed in a manner indicating that the Work, when fully completed, will be in accordance with the Contract Documents. However, the Architect shall not be required to make exhaustive or continuous on-site inspections to check the quality or quantity of the Work. On the basis of the site visits, the Architect shall keep the Owner reasonably informed about the progress and quality of the portion of the Work completed, and promptly report to the Owner (1) known deviations from the Contract Documents, (2) known deviations from the most recent construction schedule submitted by the Contractor, and (3) defects and deficiencies observed in the Work.

§ 3.6.2.2 The Architect has the authority to reject Work that does not conform to the Contract Documents. Whenever the Architect considers it necessary or advisable, the Architect shall have the authority to require inspection or testing of the Work in accordance with the provisions of the Contract Documents, whether or not the Work is fabricated, installed or completed. However, neither this authority of the Architect nor a decision made in good faith either to exercise or not to exercise such authority shall give rise to a duty or responsibility of the Architect to the Contractor, Subcontractors, suppliers, their agents or employees, or other persons or entities performing portions of the Work.

§ 3.6.2.3 The Architect shall interpret and decide matters concerning performance under, and requirements of, the Contract Documents on written request of either the Owner or Contractor. The Architect's response to such requests shall be made in writing within any time limits agreed upon or otherwise with reasonable promptness.

§ 3.6.2.4 Interpretations and decisions of the Architect shall be consistent with the intent of, and reasonably inferable from, the Contract Documents and shall be in writing or in the form of drawings. When making such interpretations and decisions, the Architect shall endeavor to secure faithful performance by both Owner and Contractor, shall not show partiality to either, and shall not be liable for results of interpretations or decisions rendered in good faith. The Architect's decisions on matters relating to aesthetic effect shall be final if consistent with the intent expressed in the Contract Documents.

§ 3.6.2.5 Unless the Owner and Contractor designate another person to serve as an Initial Decision Maker, as that term is defined in AIA Document A201–2017, the Architect shall render initial decisions on Claims between the Owner and Contractor as provided in the Contract Documents.

§ 3.6.3 Certificates for Payment to Contractor

§ 3.6.3.1 The Architect shall review and certify the amounts due the Contractor and shall issue certificates in such amounts.

AIA Document B101 – 2017. Copyright © 1974, 1978, 1987, 1997, 2007 and 2017. All rights reserved. To report copyright violations, e-mail docinfo@aiacontracts.com.
User Notes: (640e2aedf442e4498d0967f7)

The Architect's certification for payment shall constitute a representation to the Owner, based on the Architect's evaluation of the Work as provided in Section 3.6.2 and on the data comprising the Contractor's Application for Payment, that, to the best of the Architect's knowledge, information and belief, the Work has progressed to the point indicated, the quality of the Work is in accordance with the Contract Documents, and that the Contractor is entitled to payment in the amount certified. The foregoing representations are subject to (1) an evaluation of the Work for conformance with the Contract Documents upon Substantial Completion, (2) results of subsequent tests and inspections, (3) correction of minor deviations from the Contract Documents prior to completion, and (4) specific qualifications expressed by the Architect.

§ 3.6.3.2 The issuance of a Certificate for Payment shall not be a representation that the Architect has (1) made exhaustive or continuous on-site inspections to check the quality or quantity of the Work, (2) reviewed construction means, methods, techniques, sequences or procedures, (3) reviewed copies of requisitions received from Subcontractors and suppliers and other data requested by the Owner to substantiate the Contractor's right to payment, or (4) ascertained how or for what purpose the Contractor has used money previously paid on account of the Contract Sum.

§ 3.6.3.3 The Architect shall maintain a record of the Applications and Certificates for Payment.

§ 3.6.4 Submittals

§ 3.6.4.1 The Architect shall review the Contractor's submittal schedule and shall not unreasonably delay or withhold approval of the schedule. The Architect's action in reviewing submittals shall be taken in accordance with the approved submittal schedule or, in the absence of an approved submittal schedule, with reasonable promptness while allowing sufficient time, in the Architect's professional judgment, to permit adequate review.

§ 3.6.4.2 The Architect shall review and approve, or take other appropriate action upon, the Contractor's submittals such as Shop Drawings, Product Data and Samples, but only for the limited purpose of checking for conformance with information given and the design concept expressed in the Contract Documents. Review of such submittals is not for the purpose of determining the accuracy and completeness of other information such as dimensions, quantities, and installation or performance of equipment or systems, which are the Contractor's responsibility. The Architect's review shall not constitute approval of safety precautions or construction means, methods, techniques, sequences or procedures. The Architect's approval of a specific item shall not indicate approval of an assembly of which the item is a component.

§ 3.6.4.3 If the Contract Documents specifically require the Contractor to provide professional design services or certifications by a design professional related to systems, materials, or equipment, the Architect shall specify the appropriate performance and design criteria that such services must satisfy. The Architect shall review and take appropriate action on Shop Drawings and other submittals related to the Work designed or certified by the Contractor's design professional, provided the submittals bear such professional's seal and signature when submitted to the Architect. The Architect's review shall be for the limited purpose of checking for conformance with information given and the design concept expressed in the Contract Documents. The Architect shall be entitled to rely upon, and shall not be responsible for, the adequacy and accuracy of the services, certifications, and approvals performed or provided by such design professionals.

§ 3.6.4.4 Subject to Section 4.2, the Architect shall review and respond to requests for information about the Contract Documents. The Architect shall set forth, in the Contract Documents, the requirements for requests for information. Requests for information shall include, at a minimum, a detailed written statement that indicates the specific Drawings or Specifications in need of clarification and the nature of the clarification requested. The Architect's response to such requests shall be made in writing within any time limits agreed upon, or otherwise with reasonable promptness. If appropriate, the Architect shall prepare and issue supplemental Drawings and Specifications in response to the requests for information.

§ 3.6.4.5 The Architect shall maintain a record of submittals and copies of submittals supplied by the Contractor in accordance with the requirements of the Contract Documents.

§ 3.6.5 Changes in the Work

§ 3.6.5.1 The Architect may order minor changes in the Work that are consistent with the intent of the Contract Documents and do not involve an adjustment in the Contract Sum or an extension of the Contract Time. Subject to Section 4.2, the Architect shall prepare Change Orders and Construction Change Directives for the Owner's approval and execution in accordance with the Contract Documents.

AIA Document B101 – 2017. Copyright © 1974, 1978, 1987, 1997, 2007 and 2017. All rights reserved. User Notes: (640e2aedf442e4498d0967f7)

§ 3.6.5.2 The Architect shall maintain records relative to changes in the Work.

§ 3.6.6 Project Completion

§ 3.6.6.1 The Architect shall:

.1 conduct inspections to determine the date or dates of Substantial Completion and the date of final completion;

.2 issue Certificates of Substantial Completion;

.3 forward to the Owner, for the Owner's review and records, written warranties and related documents required by the Contract Documents and received from the Contractor; and,

.4 issue a final Certificate for Payment based upon a final inspection indicating that, to the best of the Architect's knowledge, information, and belief, the Work complies with the requirements of the Contract Documents.

§ 3.6.6.2 The Architect's inspections shall be conducted with the Owner to check conformance of the Work with the requirements of the Contract Documents and to verify the accuracy and completeness of the list submitted by the Contractor of Work to be completed or corrected.

§ 3.6.6.3 When Substantial Completion has been achieved, the Architect shall inform the Owner about the balance of the Contract Sum remaining to be paid the Contractor, including the amount to be retained from the Contract Sum, if any, for final completion or correction of the Work.

§ 3.6.6.4 The Architect shall forward to the Owner the following information received from the Contractor: (1) consent of surety or sureties, if any, to reduction in or partial release of retainage or the making of final payment; (2) affidavits, receipts, releases and waivers of liens, or bonds indemnifying the Owner against liens; and (3) any other documentation required of the Contractor under the Contract Documents.

§ 3.6.6.5 Upon request of the Owner, and prior to the expiration of one year from the date of Substantial Completion, the Architect shall, without additional compensation, conduct a meeting with the Owner to review the facility operations and performance.

ARTICLE 4 SUPPLEMENTAL AND ADDITIONAL SERVICES

§ 4.1 Supplemental Services

§ 4.1.1 The services listed below are not included in Basic Services but may be required for the Project. The Architect shall provide the listed Supplemental Services only if specifically designated in the table below as the Architect's responsibility, and the Owner shall compensate the Architect as provided in Section 11.2. Unless otherwise specifically addressed in this Agreement, if neither the Owner nor the Architect is designated, the parties agree that the listed Supplemental Service is not being provided for the Project.

(Designate the Architect's Supplemental Services and the Owner's Supplemental Services required for the Project by indicating whether the Architect or Owner shall be responsible for providing the identified Supplemental Service. Insert a description of the Supplemental Services in Section 4.1.2 below or attach the description of services as an exhibit to this Agreement.)

§ 4.1.1.29 Other services provided by specialty Consultants	
§ 4.1.1.30 Other Supplemental Services	

§ 4.1.2 Description of Supplemental Services

§ 4.1.2.1 A description of each Supplemental Service identified in Section 4.1.1 as the Architect's responsibility is provided below.

(Describe in detail the Architect's Supplemental Services identified in Section 4.1.1 or, if set forth in an exhibit, identify the exhibit. The AIA publishes a number of Standard Form of Architect's Services documents that can be included as an exhibit to describe the Architect's Supplemental Services.)

§ 4.1.2.2 A description of each Supplemental Service identified in Section 4.1.1 as the Owner's responsibility is provided below.

(Describe in detail the Owner's Supplemental Services identified in Section 4.1.1 or, if set forth in an exhibit, identify the exhibit.)

§ 4.1.3 If the Owner identified a Sustainable Objective in Article 1, the Architect shall provide, as a Supplemental Service, the Sustainability Services required in AIA Document E204™–2017, Sustainable Projects Exhibit, attached to this Agreement. The Owner shall compensate the Architect as provided in Section 11.2.

§ 4.2 Architect's Additional Services

The Architect may provide Additional Services after execution of this Agreement without invalidating the Agreement. Except for services required due to the fault of the Architect, any Additional Services provided in accordance with this Section 4.2

User Notes: (640e2aedf442e4498d0967f7)

shall entitle the Architect to compensation pursuant to Section 11.3 and an appropriate adjustment in the Architect's schedule.

§ 4.2.1 Upon recognizing the need to perform the following Additional Services, the Architect shall notify the Owner with reasonable promptness and explain the facts and circumstances giving rise to the need. The Architect shall not proceed to provide the following Additional Services until the Architect receives the Owner's written authorization:

.1 Services necessitated by a change in the Initial Information, previous instructions or approvals given by the Owner, or a material change in the Project including size, quality, complexity, the Owner's schedule or budget for Cost of the Work, or procurement or delivery method;

.2 Services necessitated by the enactment or revision of codes, laws, or regulations, including changing or editing previously prepared Instruments of Service;

.3 Changing or editing previously prepared Instruments of Service necessitated by official interpretations of applicable codes, laws or regulations that are either (a) contrary to specific interpretations by the applicable authorities having jurisdiction made prior to the issuance of the building permit, or (b) contrary to requirements of the Instruments of Service when those Instruments of Service were prepared in accordance with the applicable standard of care;

.4 Services necessitated by decisions of the Owner not rendered in a timely manner or any other failure of performance on the part of the Owner or the Owner's consultants or contractors;

.5 Preparing digital models or other design documentation for transmission to the Owner's consultants and contractors, or to other Owner-authorized recipients;

.6 Preparation of design and documentation for alternate bid or proposal requests proposed by the Owner;

.7 Preparation for, and attendance at, a public presentation, meeting or hearing;

.8 Preparation for, and attendance at, a dispute resolution proceeding or legal proceeding, except where the Architect is party thereto;

.9 Evaluation of the qualifications of entities providing bids or proposals;

.10 Consultation concerning replacement of Work resulting from fire or other cause during construction; or,

.11 Assistance to the Initial Decision Maker, if other than the Architect.

§ 4.2.2 To avoid delay in the Construction Phase, the Architect shall provide the following Additional Services, notify the Owner with reasonable promptness, and explain the facts and circumstances giving rise to the need. If, upon receipt of the Architect's notice, the Owner determines that all or parts of the services are not required, the Owner shall give prompt written notice to the Architect of the Owner's determination. The Owner shall compensate the Architect for the services provided prior to the Architect's receipt of the Owner's notice.

.1 Reviewing a Contractor's submittal out of sequence from the submittal schedule approved by the Architect;

.2 Responding to the Contractor's requests for information that are not prepared in accordance with the Contract Documents or where such information is available to the Contractor from a careful study and comparison of the Contract Documents, field conditions, other Owner-provided information, Contractor-prepared coordination drawings, or prior Project correspondence or documentation;

.3 Preparing Change Orders and Construction Change Directives that require evaluation of Contractor's proposals and supporting data, or the preparation or revision of Instruments of Service;

.4 Evaluating an extensive number of Claims as the Initial Decision Maker; or,

.5 Evaluating substitutions proposed by the Owner or Contractor and making subsequent revisions to Instruments of Service resulting therefrom.

§ 4.2.3 The Architect shall provide Construction Phase Services exceeding the limits set forth below as Additional Services. When the limits below are reached, the Architect shall notify the Owner:

.1 ( ) reviews of each Shop Drawing, Product Data item, sample and similar submittals of the Contractor

.2 ( ) visits to the site by the Architect during construction

.3 ( ) inspections for any portion of the Work to determine whether such portion of the Work is substantially complete in accordance with the requirements of the Contract Documents

.4 ( ) inspections for any portion of the Work to determine final completion.

§ 4.2.4 Except for services required under Section 3.6.6.5 and those services that do not exceed the limits set forth in Section 4.2.3, Construction Phase Services provided more than 60 days after (1) the date of Substantial Completion of the Work or (2) the initial date of Substantial Completion identified in the agreement between the Owner and Contractor, whichever is earlier,

shall be compensated as Additional Services to the extent the Architect incurs additional cost in providing those Construction Phase Services.

§ 4.2.5 If the services covered by this Agreement have not been completed within ( ) months of the date of this Agreement, through no fault of the Architect, extension of the Architect's services beyond that time shall be compensated as Additional Services.

ARTICLE 5 OWNER'S RESPONSIBILITIES

§ 5.1 Unless otherwise provided for under this Agreement, the Owner shall provide information in a timely manner regarding requirements for and limitations on the Project, including a written program, which shall set forth the Owner's objectives; schedule; constraints and criteria, including space requirements and relationships; flexibility; expandability; special equipment; systems; and site requirements.

§ 5.2 The Owner shall establish the Owner's budget for the Project, including (1) the budget for the Cost of the Work as defined in Section 6.1; (2) the Owner's other costs; and, (3) reasonable contingencies related to all of these costs. The Owner shall update the Owner's budget for the Project as necessary throughout the duration of the Project until final completion. If the Owner significantly increases or decreases the Owner's budget for the Cost of the Work, the Owner shall notify the Architect. The Owner and the Architect shall thereafter agree to a corresponding change in the Project's scope and quality.

§ 5.3 The Owner shall identify a representative authorized to act on the Owner's behalf with respect to the Project. The Owner shall render decisions and approve the Architect's submittals in a timely manner in order to avoid unreasonable delay in the orderly and sequential progress of the Architect's services.

§ 5.4 The Owner shall furnish surveys to describe physical characteristics, legal limitations and utility locations for the site of the Project, and a written legal description of the site. The surveys and legal information shall include, as applicable, grades and lines of streets, alleys, pavements and adjoining property and structures; designated wetlands; adjacent drainage; rights-of-way, restrictions, easements, encroachments, zoning, deed restrictions, boundaries and contours of the site; locations, dimensions, and other necessary data with respect to existing buildings, other improvements and trees; and information concerning available utility services and lines, both public and private, above and below grade, including inverts and depths. All the information on the survey shall be referenced to a Project benchmark.

§ 5.5 The Owner shall furnish services of geotechnical engineers, which may include test borings, test pits, determinations of soil bearing values, percolation tests, evaluations of hazardous materials, seismic evaluation, ground corrosion tests and resistivity tests, including necessary operations for anticipating subsoil conditions, with written reports and appropriate recommendations.

§ 5.6 The Owner shall provide the Supplemental Services designated as the Owner's responsibility in Section 4.1.1.

§ 5.7 If the Owner identified a Sustainable Objective in Article 1, the Owner shall fulfill its responsibilities as required in AIA Document E204™–2017, Sustainable Projects Exhibit, attached to this Agreement.

§ 5.8 The Owner shall coordinate the services of its own consultants with those services provided by the Architect. Upon the Architect's request, the Owner shall furnish copies of the scope of services in the contracts between the Owner and the Owner's consultants. The Owner shall furnish the services of consultants other than those designated as the responsibility of the Architect in this Agreement, or authorize the Architect to furnish them as an Additional Service, when the Architect requests such services and demonstrates that they are reasonably required by the scope of the Project. The Owner shall require that its consultants and contractors maintain insurance, including professional liability insurance, as appropriate to the services or work provided.

§ 5.9 The Owner shall furnish tests, inspections and reports required by law or the Contract Documents, such as structural, mechanical, and chemical tests, tests for air and water pollution, and tests for hazardous materials.

§ 5.10 The Owner shall furnish all legal, insurance and accounting services, including auditing services, that may be reasonably necessary at any time for the Project to meet the Owner's needs and interests.

User Notes: (640e2aedf442e4498d0967f7)

§ 5.11 The Owner shall provide prompt written notice to the Architect if the Owner becomes aware of any fault or defect in the Project, including errors, omissions or inconsistencies in the Architect's Instruments of Service.

§ 5.12 The Owner shall include the Architect in all communications with the Contractor that relate to or affect the Architect's services or professional responsibilities. The Owner shall promptly notify the Architect of the substance of any direct communications between the Owner and the Contractor otherwise relating to the Project. Communications by and with the Architect's consultants shall be through the Architect.

§ 5.13 Before executing the Contract for Construction, the Owner shall coordinate the Architect's duties and responsibilities set forth in the Contract for Construction with the Architect's services set forth in this Agreement. The Owner shall provide the Architect a copy of the executed agreement between the Owner and Contractor, including the General Conditions of the Contract for Construction.

§ 5.14 The Owner shall provide the Architect access to the Project site prior to commencement of the Work and shall obligate the Contractor to provide the Architect access to the Work wherever it is in preparation or progress.

§ 5.15 Within 15 days after receipt of a written request from the Architect, the Owner shall furnish the requested information as necessary and relevant for the Architect to evaluate, give notice of, or enforce lien rights.

ARTICLE 6 COST OF THE WORK

§ 6.1 For purposes of this Agreement, the Cost of the Work shall be the total cost to the Owner to construct all elements of the Project designed or specified by the Architect and shall include contractors' general conditions costs, overhead and profit. The Cost of the Work also includes the reasonable value of labor, materials, and equipment, donated to, or otherwise furnished by, the Owner. The Cost of the Work does not include the compensation of the Architect; the costs of the land, rights-of-way, financing, or contingencies for changes in the Work; or other costs that are the responsibility of the Owner.

§ 6.2 The Owner's budget for the Cost of the Work is provided in Initial Information, and shall be adjusted throughout the Project as required under Sections 5.2, 6.4 and 6.5. Evaluations of the Owner's budget for the Cost of the Work, and the preliminary estimate of the Cost of the Work and updated estimates of the Cost of the Work, prepared by the Architect, represent the Architect's judgment as a design professional. It is recognized, however, that neither the Architect nor the Owner has control over the cost of labor, materials, or equipment; the Contractor's methods of determining bid prices; or competitive bidding, market, or negotiating conditions. Accordingly, the Architect cannot and does not warrant or represent that bids or negotiated prices will not vary from the Owner's budget for the Cost of the Work, or from any estimate of the Cost of the Work, or evaluation, prepared or agreed to by the Architect.

§ 6.3 In preparing estimates of the Cost of Work, the Architect shall be permitted to include contingencies for design, bidding, and price escalation; to determine what materials, equipment, component systems, and types of construction are to be included in the Contract Documents; to recommend reasonable adjustments in the program and scope of the Project; and to include design alternates as may be necessary to adjust the estimated Cost of the Work to meet the Owner's budget. The Architect's estimate of the Cost of the Work shall be based on current area, volume or similar conceptual estimating techniques. If the Owner requires a detailed estimate of the Cost of the Work, the Architect shall provide such an estimate, if identified as the Architect's responsibility in Section 4.1.1, as a Supplemental Service.

§ 6.4 If, through no fault of the Architect, the Procurement Phase has not commenced within 90 days after the Architect submits the Construction Documents to the Owner, the Owner's budget for the Cost of the Work shall be adjusted to reflect changes in the general level of prices in the applicable construction market.

§ 6.5 If at any time the Architect's estimate of the Cost of the Work exceeds the Owner's budget for the Cost of the Work, the Architect shall make appropriate recommendations to the Owner to adjust the Project's size, quality, or budget for the Cost of the Work, and the Owner shall cooperate with the Architect in making such adjustments.

§ 6.6 If the Owner's budget for the Cost of the Work at the conclusion of the Construction Documents Phase Services is exceeded by the lowest bona fide bid or negotiated proposal, the Owner shall

.1 give written approval of an increase in the budget for the Cost of the Work;

.2 authorize rebidding or renegotiating of the Project within a reasonable time;

.3 terminate in accordance with Section 9.5;

.4 in consultation with the Architect, revise the Project program, scope, or quality as required to reduce the Cost of the Work; or,

.5 implement any other mutually acceptable alternative.

§ 6.7 If the Owner chooses to proceed under Section 6.6.4, the Architect shall modify the Construction Documents as necessary to comply with the Owner's budget for the Cost of the Work at the conclusion of the Construction Documents Phase Services, or the budget as adjusted under Section 6.6.1. If the Owner requires the Architect to modify the Construction Documents because the lowest bona fide bid or negotiated proposal exceeds the Owner's budget for the Cost of the Work due to market conditions the Architect could not reasonably anticipate, the Owner shall compensate the Architect for the modifications as an Additional Service pursuant to Section 11.3; otherwise the Architect's services for modifying the Construction Documents shall be without additional compensation. In any event, the Architect's modification of the Construction Documents shall be the limit of the Architect's responsibility under this Article 6.

ARTICLE 7 COPYRIGHTS AND LICENSES

§ 7.1 The Architect and the Owner warrant that in transmitting Instruments of Service, or any other information, the transmitting party is the copyright owner of such information or has permission from the copyright owner to transmit such information for its use on the Project.

§ 7.2 The Architect and the Architect's consultants shall be deemed the authors and owners of their respective Instruments of Service, including the Drawings and Specifications, and shall retain all common law, statutory and other reserved rights, including copyrights. Submission or distribution of Instruments of Service to meet official regulatory requirements or for similar purposes in connection with the Project is not to be construed as publication in derogation of the reserved rights of the Architect and the Architect's consultants.

§ 7.3 The Architect grants to the Owner a nonexclusive license to use the Architect's Instruments of Service solely and exclusively for purposes of constructing, using, maintaining, altering and adding to the Project, provided that the Owner substantially performs its obligations under this Agreement, including prompt payment of all sums due pursuant to Article 9 and Article 11. The Architect shall obtain similar nonexclusive licenses from the Architect's consultants consistent with this Agreement. The license granted under this section permits the Owner to authorize the Contractor, Subcontractors, Sub-subcontractors, and suppliers, as well as the Owner's consultants and separate contractors, to reproduce applicable portions of the Instruments of Service, subject to any protocols established pursuant to Section 1.3, solely and exclusively for use in performing services or construction for the Project. If the Architect rightfully terminates this Agreement for cause as provided in Section 9.4, the license granted in this Section 7.3 shall terminate.

§ 7.3.1 In the event the Owner uses the Instruments of Service without retaining the authors of the Instruments of Service, the Owner releases the Architect and Architect's consultant(s) from all claims and causes of action arising from such uses. The Owner, to the extent permitted by law, further agrees to indemnify and hold harmless the Architect and its consultants from all costs and expenses, including the cost of defense, related to claims and causes of action asserted by any third person or entity to the extent such costs and expenses arise from the Owner's use of the Instruments of Service under this Section 7.3.1. The terms of this Section 7.3.1 shall not apply if the Owner rightfully terminates this Agreement for cause under Section 9.4.

§ 7.4 Except for the licenses granted in this Article 7, no other license or right shall be deemed granted or implied under this Agreement. The Owner shall not assign, delegate, sublicense, pledge or otherwise transfer any license granted herein to another party without the prior written agreement of the Architect. Any unauthorized use of the Instruments of Service shall be at the Owner's sole risk and without liability to the Architect and the Architect's consultants.

§ 7.5 Except as otherwise stated in Section 7.3, the provisions of this Article 7 shall survive the termination of this Agreement.

ARTICLE 8 CLAIMS AND DISPUTES

§ 8.1 General

§ 8.1.1 The Owner and Architect shall commence all claims and causes of action against the other and arising out of or related to this Agreement, whether in contract, tort, or otherwise, in accordance with the requirements of the binding dispute resolution method selected in this Agreement and within the period specified by applicable law, but in any case not more than 10 years after the date of Substantial Completion of the Work. The Owner and Architect waive all claims and causes of action

AIA Document B101 – 2017. Copyright © 1974, 1978, 1987, 1997, 2007 and 2017. All rights reserved. To report copyright violations, e-mail docinfo@aiacontracts.com.
User Notes: (640e2aedf442e4498d0967f7)

not commenced in accordance with this Section 8.1.1.

§ 8.1.2 To the extent damages are covered by property insurance, the Owner and Architect waive all rights against each other and against the contractors, consultants, agents, and employees of the other for damages, except such rights as they may have to the proceeds of such insurance as set forth in AIA Document A201–2017, General Conditions of the Contract for Construction. The Owner or the Architect, as appropriate, shall require of the contractors, consultants, agents, and employees of any of them, similar waivers in favor of the other parties enumerated herein.

§ 8.1.3 The Architect and Owner waive consequential damages for claims, disputes, or other matters in question, arising out of or relating to this Agreement. This mutual waiver is applicable, without limitation, to all consequential damages due to either party's termination of this Agreement, except as specifically provided in Section 9.7.

§ 8.2 Mediation

§ 8.2.1 Any claim, dispute or other matter in question arising out of or related to this Agreement shall be subject to mediation as a condition precedent to binding dispute resolution. If such matter relates to or is the subject of a lien arising out of the Architect's services, the Architect may proceed in accordance with applicable law to comply with the lien notice or filing deadlines prior to resolution of the matter by mediation or by binding dispute resolution.

§ 8.2.2 The Owner and Architect shall endeavor to resolve claims, disputes and other matters in question between them by mediation, which, unless the parties mutually agree otherwise, shall be administered by the American Arbitration Association in accordance with its Construction Industry Mediation Procedures in effect on the date of this Agreement. A request for mediation shall be made in writing, delivered to the other party to this Agreement, and filed with the person or entity administering the mediation. The request may be made concurrently with the filing of a complaint or other appropriate demand for binding dispute resolution but, in such event, mediation shall proceed in advance of binding dispute resolution proceedings, which shall be stayed pending mediation for a period of 60 days from the date of filing, unless stayed for a longer period by agreement of the parties or court order. If an arbitration proceeding is stayed pursuant to this section, the parties may nonetheless proceed to the selection of the arbitrator(s) and agree upon a schedule for later proceedings.

§ 8.2.3 The parties shall share the mediator's fee and any filing fees equally. The mediation shall be held in the place where the Project is located, unless another location is mutually agreed upon. Agreements reached in mediation shall be enforceable as settlement agreements in any court having jurisdiction thereof.

§ 8.2.4 If the parties do not resolve a dispute through mediation pursuant to this Section 8.2, the method of binding dispute resolution shall be the following:
(Check the appropriate box.)

[ ] Arbitration pursuant to Section 8.3 of this Agreement

[ ] Litigation in a court of competent jurisdiction

[ ] Other: *(Specify)*

If the Owner and Architect do not select a method of binding dispute resolution, or do not subsequently agree in writing to a binding dispute resolution method other than litigation, the dispute will be resolved in a court of competent jurisdiction.

§ 8.3 Arbitration

§ 8.3.1 If the parties have selected arbitration as the method for binding dispute resolution in this Agreement, any claim, dispute or other matter in question arising out of or related to this Agreement subject to, but not resolved by, mediation shall be subject to arbitration, which, unless the parties mutually agree otherwise, shall be administered by the American Arbitration Association in accordance with its Construction Industry Arbitration Rules in effect on the date of this Agreement. A demand for arbitration shall be made in writing, delivered to the other party to this Agreement, and filed with the person or entity administering the arbitration.

User Notes: (640e2aedf442e4498d0967f7)

§ 8.3.1.1 A demand for arbitration shall be made no earlier than concurrently with the filing of a request for mediation, but in no event shall it be made after the date when the institution of legal or equitable proceedings based on the claim, dispute or other matter in question would be barred by the applicable statute of limitations. For statute of limitations purposes, receipt of a written demand for arbitration by the person or entity administering the arbitration shall constitute the institution of legal or equitable proceedings based on the claim, dispute or other matter in question.

§ 8.3.2 The foregoing agreement to arbitrate, and other agreements to arbitrate with an additional person or entity duly consented to by parties to this Agreement, shall be specifically enforceable in accordance with applicable law in any court having jurisdiction thereof.

§ 8.3.3 The award rendered by the arbitrator(s) shall be final, and judgment may be entered upon it in accordance with applicable law in any court having jurisdiction thereof.

§ 8.3.4 Consolidation or Joinder

§ 8.3.4.1 Either party, at its sole discretion, may consolidate an arbitration conducted under this Agreement with any other arbitration to which it is a party provided that (1) the arbitration agreement governing the other arbitration permits consolidation; (2) the arbitrations to be consolidated substantially involve common questions of law or fact; and (3) the arbitrations employ materially similar procedural rules and methods for selecting arbitrator(s).

§ 8.3.4.2 Either party, at its sole discretion, may include by joinder persons or entities substantially involved in a common question of law or fact whose presence is required if complete relief is to be accorded in arbitration, provided that the party sought to be joined consents in writing to such joinder. Consent to arbitration involving an additional person or entity shall not constitute consent to arbitration of any claim, dispute or other matter in question not described in the written consent.

§ 8.3.4.3 The Owner and Architect grant to any person or entity made a party to an arbitration conducted under this Section 8.3, whether by joinder or consolidation, the same rights of joinder and consolidation as the Owner and Architect under this Agreement.

§ 8.4 The provisions of this Article 8 shall survive the termination of this Agreement.

ARTICLE 9 TERMINATION OR SUSPENSION

§ 9.1 If the Owner fails to make payments to the Architect in accordance with this Agreement, such failure shall be considered substantial nonperformance and cause for termination or, at the Architect's option, cause for suspension of performance of services under this Agreement. If the Architect elects to suspend services, the Architect shall give seven days' written notice to the Owner before suspending services. In the event of a suspension of services, the Architect shall have no liability to the Owner for delay or damage caused the Owner because of such suspension of services. Before resuming services, the Owner shall pay the Architect all sums due prior to suspension and any expenses incurred in the interruption and resumption of the Architect's services. The Architect's fees for the remaining services and the time schedules shall be equitably adjusted.

§ 9.2 If the Owner suspends the Project, the Architect shall be compensated for services performed prior to notice of such suspension. When the Project is resumed, the Architect shall be compensated for expenses incurred in the interruption and resumption of the Architect's services. The Architect's fees for the remaining services and the time schedules shall be equitably adjusted.

§ 9.3 If the Owner suspends the Project for more than 90 cumulative days for reasons other than the fault of the Architect, the Architect may terminate this Agreement by giving not less than seven days' written notice.

§ 9.4 Either party may terminate this Agreement upon not less than seven days' written notice should the other party fail substantially to perform in accordance with the terms of this Agreement through no fault of the party initiating the termination.

§ 9.5 The Owner may terminate this Agreement upon not less than seven days' written notice to the Architect for the Owner's convenience and without cause.

§ 9.6 If the Owner terminates this Agreement for its convenience pursuant to Section 9.5, or the Architect terminates this

Agreement pursuant to Section 9.3, the Owner shall compensate the Architect for services performed prior to termination, Reimbursable Expenses incurred, and costs attributable to termination, including the costs attributable to the Architect's termination of consultant agreements.

§ 9.7 In addition to any amounts paid under Section 9.6, if the Owner terminates this Agreement for its convenience pursuant to Section 9.5, or the Architect terminates this Agreement pursuant to Section 9.3, the Owner shall pay to the Architect the following fees:
(Set forth below the amount of any termination or licensing fee, or the method for determining any termination or licensing fee.)

.1 Termination Fee:

.2 Licensing Fee if the Owner intends to continue using the Architect's Instruments of Service:

§ 9.8 Except as otherwise expressly provided herein, this Agreement shall terminate one year from the date of Substantial Completion.

§ 9.9 The Owner's rights to use the Architect's Instruments of Service in the event of a termination of this Agreement are set forth in Article 7 and Section 9.7.

ARTICLE 10 MISCELLANEOUS PROVISIONS

§ 10.1 This Agreement shall be governed by the law of the place where the Project is located, excluding that jurisdiction's choice of law rules. If the parties have selected arbitration as the method of binding dispute resolution, the Federal Arbitration Act shall govern Section 8.3.

§ 10.2 Terms in this Agreement shall have the same meaning as those in AIA Document A201–2017, General Conditions of the Contract for Construction.

§ 10.3 The Owner and Architect, respectively, bind themselves, their agents, successors, assigns, and legal representatives to this Agreement. Neither the Owner nor the Architect shall assign this Agreement without the written consent of the other, except that the Owner may assign this Agreement to a lender providing financing for the Project if the lender agrees to assume the Owner's rights and obligations under this Agreement, including any payments due to the Architect by the Owner prior to the assignment.

§ 10.4 If the Owner requests the Architect to execute certificates, the proposed language of such certificates shall be submitted to the Architect for review at least 14 days prior to the requested dates of execution. If the Owner requests the Architect to execute consents reasonably required to facilitate assignment to a lender, the Architect shall execute all such consents that are consistent with this Agreement, provided the proposed consent is submitted to the Architect for review at least 14 days prior to execution. The Architect shall not be required to execute certificates or consents that would require knowledge, services, or responsibilities beyond the scope of this Agreement.

§ 10.5 Nothing contained in this Agreement shall create a contractual relationship with, or a cause of action in favor of, a third party against either the Owner or Architect.

§ 10.6 Unless otherwise required in this Agreement, the Architect shall have no responsibility for the discovery, presence, handling, removal or disposal of, or exposure of persons to, hazardous materials or toxic substances in any form at the Project site.

§ 10.7 The Architect shall have the right to include photographic or artistic representations of the design of the Project among the Architect's promotional and professional materials. The Architect shall be given reasonable access to the completed Project to make such representations. However, the Architect's materials shall not include the Owner's confidential or

proprietary information if the Owner has previously advised the Architect in writing of the specific information considered by the Owner to be confidential or proprietary. The Owner shall provide professional credit for the Architect in the Owner's promotional materials for the Project. This Section 10.7 shall survive the termination of this Agreement unless the Owner terminates this Agreement for cause pursuant to Section 9.4.

§ 10.8 If the Architect or Owner receives information specifically designated as "confidential" or "business proprietary," the receiving party shall keep such information strictly confidential and shall not disclose it to any other person except as set forth in Section 10.8.1. This Section 10.8 shall survive the termination of this Agreement.

§ 10.8.1 The receiving party may disclose "confidential" or "business proprietary" information after 7 days' notice to the other party, when required by law, arbitrator's order, or court order, including a subpoena or other form of compulsory legal process issued by a court or governmental entity, or to the extent such information is reasonably necessary for the receiving party to defend itself in any dispute. The receiving party may also disclose such information to its employees, consultants, or contractors in order to perform services or work solely and exclusively for the Project, provided those employees, consultants and contractors are subject to the restrictions on the disclosure and use of such information as set forth in this Section 10.8.

§ 10.9 The invalidity of any provision of the Agreement shall not invalidate the Agreement or its remaining provisions. If it is determined that any provision of the Agreement violates any law, or is otherwise invalid or unenforceable, then that provision shall be revised to the extent necessary to make that provision legal and enforceable. In such case the Agreement shall be construed, to the fullest extent permitted by law, to give effect to the parties' intentions and purposes in executing the Agreement.

ARTICLE 11 COMPENSATION

§ 11.1 For the Architect's Basic Services described under Article 3, the Owner shall compensate the Architect as follows:

.1 Stipulated Sum
(Insert amount)

.2 Percentage Basis
(Insert percentage value)

( ) % of the Owner's budget for the Cost of the Work, as calculated in accordance with Section 11.6.

.3 Other
(Describe the method of compensation)

§ 11.2 For the Architect's Supplemental Services designated in Section 4.1.1 and for any Sustainability Services required pursuant to Section 4.1.3, the Owner shall compensate the Architect as follows:
(Insert amount of, or basis for, compensation. If necessary, list specific services to which particular methods of compensation apply.)

§ 11.3 For Additional Services that may arise during the course of the Project, including those under Section 4.2, the Owner shall compensate the Architect as follows:
(Insert amount of, or basis for, compensation.)

§ 11.4 Compensation for Supplemental and Additional Services of the Architect's consultants when not included in Section 11.2 or 11.3, shall be the amount invoiced to the Architect plus percent (%), or as follows:
(Insert amount of, or basis for computing, Architect's consultants' compensation for Supplemental or Additional Services.)

§ 11.5 When compensation for Basic Services is based on a stipulated sum or a percentage basis, the proportion of compensation for each phase of services shall be as follows:

Schematic Design Phase	percent (	%)
Design Development Phase	percent (	%)
Construction Documents Phase	percent (	%)
Procurement Phase	percent (	%)
Construction Phase	percent (	%)
Total Basic Compensation	one hundred percent	(100.00 %)

§ 11.6 When compensation identified in Section 11.1 is on a percentage basis, progress payments for each phase of Basic Services shall be calculated by multiplying the percentages identified in this Article by the Owner's most recent budget for the Cost of the Work. Compensation paid in previous progress payments shall not be adjusted based on subsequent updates to the Owner's budget for the Cost of the Work.

§ 11.6.1 When compensation is on a percentage basis and any portions of the Project are deleted or otherwise not constructed, compensation for those portions of the Project shall be payable to the extent services are performed on those portions. The Architect shall be entitled to compensation in accordance with this Agreement for all services performed whether or not the Construction Phase is commenced.

§ 11.7 The hourly billing rates for services of the Architect and the Architect's consultants are set forth below. The rates shall be adjusted in accordance with the Architect's and Architect's consultants' normal review practices.
(If applicable, attach an exhibit of hourly billing rates or insert them below.)

Employee or Category	Rate ($0.00)

§ 11.8 Compensation for Reimbursable Expenses
§ 11.8.1 Reimbursable Expenses are in addition to compensation for Basic, Supplemental, and Additional Services and include expenses incurred by the Architect and the Architect's consultants directly related to the Project, as follows:

.1 Transportation and authorized out-of-town travel and subsistence;
.2 Long distance services, dedicated data and communication services, teleconferences, Project web sites, and extranets;
.3 Permitting and other fees required by authorities having jurisdiction over the Project;
.4 Printing, reproductions, plots, and standard form documents;
.5 Postage, handling, and delivery;
.6 Expense of overtime work requiring higher than regular rates, if authorized in advance by the Owner;
.7 Renderings, physical models, mock-ups, professional photography, and presentation materials requested by the Owner or required for the Project;
.8 If required by the Owner, and with the Owner's prior written approval, the Architect's consultants' expenses of professional liability insurance dedicated exclusively to this Project, or the expense of additional insurance coverage or limits in excess of that normally maintained by the Architect's consultants;
.9 All taxes levied on professional services and on reimbursable expenses;
.10 Site office expenses;
.11 Registration fees and any other fees charged by the Certifying Authority or by other entities as necessary to

achieve the Sustainable Objective; and,

.12 Other similar Project-related expenditures.

§ 11.8.2 For Reimbursable Expenses the compensation shall be the expenses incurred by the Architect and the Architect's consultants plus percent (%) of the expenses incurred.

§ 11.9 Architect's Insurance. If the types and limits of coverage required in Section 2.5 are in addition to the types and limits the Architect normally maintains, the Owner shall pay the Architect for the additional costs incurred by the Architect for the additional coverages as set forth below:

(Insert the additional coverages the Architect is required to obtain in order to satisfy the requirements set forth in Section 2.5, and for which the Owner shall reimburse the Architect.)

§ 11.10 Payments to the Architect

§ 11.10.1 Initial Payments

§ 11.10.1.1 An initial payment of ($) shall be made upon execution of this Agreement and is the minimum payment under this Agreement. It shall be credited to the Owner's account in the final invoice.

§ 11.10.1.2 If a Sustainability Certification is part of the Sustainable Objective, an initial payment to the Architect of ($) shall be made upon execution of this Agreement for registration fees and other fees payable to the Certifying Authority and necessary to achieve the Sustainability Certification. The Architect's payments to the Certifying Authority shall be credited to the Owner's account at the time the expense is incurred.

§ 11.10.2 Progress Payments

§ 11.10.2.1 Unless otherwise agreed, payments for services shall be made monthly in proportion to services performed. Payments are due and payable upon presentation of the Architect's invoice. Amounts unpaid ( ) days after the invoice date shall bear interest at the rate entered below, or in the absence thereof at the legal rate prevailing from time to time at the principal place of business of the Architect.

(Insert rate of monthly or annual interest agreed upon.)

%

§ 11.10.2.2 The Owner shall not withhold amounts from the Architect's compensation to impose a penalty or liquidated damages on the Architect, or to offset sums requested by or paid to contractors for the cost of changes in the Work, unless the Architect agrees or has been found liable for the amounts in a binding dispute resolution proceeding.

§ 11.10.2.3 Records of Reimbursable Expenses, expenses pertaining to Supplemental and Additional Services, and services performed on the basis of hourly rates shall be available to the Owner at mutually convenient times.

ARTICLE 12 SPECIAL TERMS AND CONDITIONS

Special terms and conditions that modify this Agreement are as follows:

(Include other terms and conditions applicable to this Agreement.)

ARTICLE 13 SCOPE OF THE AGREEMENT

§ 13.1 This Agreement represents the entire and integrated agreement between the Owner and the Architect and supersedes all prior negotiations, representations or agreements, either written or oral. This Agreement may be amended only by written instrument signed by both the Owner and Architect.

§ 13.2 This Agreement is comprised of the following documents identified below:

.1 AIA Document B101™–2017, Standard Form Agreement Between Owner and Architect

.2 Building Information Modeling Exhibit, if completed:
