REQUEST FOR PROPOSALS
ARCHITECTURAL DESIGN SERVICES
EASTERN MIDDLE SCHOOL MAJOR CAPITAL PROJECT

SCOPE OF WORK:	Architectural Design Services
PROJECT DESCRIPTION:	Replacement of Eastern Middle School
REQUEST FOR PROPOSAL ISSUED:	June 12, 2026
PRE-PROPOSAL SITE WALK:	June 17, 2026, 3:30 PM (not mandatory)
RFI DUE DATE:	June 24, 2026, 2:00 PM
PROPOSAL DUE DATE / TIME:	July 8, 2026, 2:00 PM
BOE APPROVAL / NTP:	August 20, 2026

Montgomery County Public Schools (MCPS) is seeking proposals from architectural firms to provide professional design and construction administration services for the Eastern Middle School Major Capital Project, located at 300 University Boulevard East, Silver Spring, MD.

The project involves designing a new middle school building with a capacity of 1,112 students (1,300 core). The existing school building will remain operational during construction and will be **demolished after the new facility is completed on the same site**. The selected Architectural firm shall provide comprehensive planning, design, permitting, bidding, construction administration, and close-out services.

The Proposal submissions package must include one (1) hardcopy of the proposal and one (1) electronic copy of the proposal on a USB drive in .pdf format, and a fixed design fee proposal must be included as part of the submission in a separate sealed envelope, shall be hand delivered to Montgomery County Public Schools, 45 W. Gude Drive, Main Lobby Bid Dropbox, Rockville, Maryland 20850, attention to Daniel Lee (Daniel_D_Lee@mcpsmd.org) no later than **July 8, 2026, 2:00 pm**.

All Requests for Information (RFI) shall be submitted to Daniel_D_Lee@mcpsmd.org, with a copy to Construction@mcpsmd.org by June 24, 2026, 2:00 pm. Contact shall be by email only**.** Responses to RFI questions and clarifications will be issued through a formal Addendum.

MCPS reserves the sole right, without incurring any liability, to change any aspect of the proposed procurement described above, including the right not to proceed with the procurement and/or the right to proceed in a different manner or on a different timeline than as described above.

MCPS reserves the right to waive any informality in any or all proposals, and to reject or accept any proposal or portion thereof. It is the intent of MCPS to identify the firm that can best meet the demands of the project while providing the best value and ensuring success. The dates listed in the RFP are target dates established by MCPS. MCPS reserves the right to modify the dates as it deems necessary.

PART 11 – ATTACHMENTS:

Attachment A – Offeror's Fee Proposal Form

Attachment B – Feasibility Study

Attachment C – Educational Specifications and Space Summary

Attachment D – MCPS Facility Design Guidelines (DRAFT)

Attachment E – MCPS Outline Specifications (DRAFT)

Attachment F – MSDE Submission Checklists (SD, DD, and CD phases)

Attachment G – MOU Between M-NCPPC and MCPS

Attachment H – Building Location and Site Plan (existing site plan, for information only)

Attachment J – AIA Document B101 Standard Form of Agreement Between Owner and Architect with MCPS Modifications (DRAFT)

PART 1 - OBJECTIVES

1. The objective of this Request for Proposals (RFP) is for the Board of Education of Montgomery County, herein referred to as Montgomery County Public Schools (MCPS), to independently evaluate, qualify, and select an architectural firm to provide design and construction administration for the replacement of Eastern Middle School located at 300 University Boulevard, Silver Spring, Maryland. All planned construction is contingent on the Montgomery County Council's approval of funding for this project.

2. Consideration will only be given to firms with the relevant quantitative experience, requisite skills, and successful history of similar commercial and industrial projects necessary to provide the required professional services. Companies are invited to submit their technical proposals in accordance with the requirements set forth herein.

3. Minority business enterprises (MBE) are encouraged to respond to this notice. MCPS is committed to the success of its minority business program. Architectural firms responding to this notice agree that they will make a good-faith effort to have not less than ten percent of the value of work under this RFP performed by minority or women-owned business firms, licensed in the respective discipline for the work performed, unless a formal waiver is requested and is granted.

4. It is imperative that the instructions in this technical proposal be followed. Incomplete submissions will be rejected.

5. Selection of an architectural firm to provide professional design services is not final until approved by the Montgomery County Board of Education.

6. The selected architectural firm will be expected to provide all work necessary in the pursuit of all regulatory approvals required to obtain proper building permits for the construction of the project.

7. Unsuccessful Offerors will be notified and provided the opportunity to request a debriefing. Requests for debriefing shall be submitted in writing to Montgomery County Public Schools, Department of Planning and Construction, 45 W. Gude Drive, Suite 4000, Rockville, MD 20850. A debriefing will be scheduled at the earliest practicable time following receipt of the written request. The debriefing shall be limited to a discussion of the unsuccessful Offeror's technical proposal and will identify areas in which the proposal was determined to be weak or deficient.

PART 2 – SUBMISSION OF QUALIFICATIONS

1. Offerors shall submit qualification information in accordance with the requirements identified herein. The MCPS Procurement Officer or their representative may, at their discretion, contact one or more Offerors during the evaluation process to clarify any entries submitted and may request additional information. Such additional information must be submitted to MCPS no later than five (5) days after the request.

2. The selection of an Offeror shall be based primarily on the information submitted as part of the Technical Proposal. MCPS accepts no responsibility for any expenses incurred in the proposal preparation requirements.

PART 3 - RIGHT TO WAIVE INFORMALITIES

The Board of Education reserves the right to waive any informalities or immaterial deviations in the Request for Proposals.

PART 4 - MISREPRESENTATION

If any Offeror knowingly makes a misrepresentation in submitting information to MCPS, or fails to provide all required information, such misrepresentation or omission will be sufficient grounds for rejection of its submission.

PART 5 – PROPOSAL WITHDRAWAL

A proposal may not be withdrawn after it is submitted to MCPS unless the offeror makes a written request to MCPS before the time set for receipt of proposals, or the offeror provides clear and convincing evidence that a mistake in the proposal has been made, and only then with the approval of the MCPS Procurement Office.

PART 6 – SCHEDULE OF EVENTS

The anticipated schedule of events related to this Request for Proposal is as follows:

Request for Proposal Issued:	June 12, 2026
Pre-Proposal Site Visit (not mandatory):	June 17, 2026, at 3:30 pm
RFI Due:	June 24, 2026, by 2:00 pm
RFI Responses:	July 2, 2026
Proposals Due:	July 8, 2026, by 2:00 pm
Notify Short Listed Firms:	July 20, 2026
Interviews:	August 4, 2026
BOE Approval / NTP:	August 20, 2026
Design Phase Dates:	
School Staff Meeting:	October 6, 2026, at 3:30 pm
Community Engagement Meeting #1:	October 6, 2026, at 7:00 pm
Community Engagement Meeting #2:	October 20, 2026, at 7:00 pm
Community Engagement Meeting #3	November 5, 2026 at 7:00 pm
Schematic Design (SD) Deliverable to MCPS:	November 17, 2026
Submit Schematic Design (SD) to BOE:	December 4, 2026
Present Schematic Design (SD) BOE:	January 14, 2027
Approval of Schematic Design (SD) by BOE:	January 28, 2027
Submit Schematic Design (SD) to IAC:	January 29, 2027
All Required Permits Shall be Obtained No Later Than:	May 31, 2028
Start Construction:	June 1, 2028
Substantial Completion of New School Building:	June 3, 2030
Complete Demolition of Existing School and Site Work:	July 1, 2031

(The dates listed above are target dates and subject to change at the discretion of MCPS.)

PART 7 – CONSTRUCTION BUDGET

The construction budget for the project is $110 million and is based on the prevailing wage scale for construction. The Architect/Engineers (A/E) shall adhere to and work within the construction budget and shall accomplish the design services required to permit the award of a contract and/ or agreement on a Guaranteed Maximum Price (GMP) using MCPS procedures for the construction of the facility designed at a price that does not exceed the construction budget as set forth. When the GMP received exceeds the estimated price, the Architect/Engineers shall perform such redesign and other services as are necessary to permit contract award within the budget limitation. These additional services shall be performed at no additional fee increase to MCPS.

PART 8 – SCOPE OF SERVICES

The work requested of the architectural and engineering (A/E) firm in executing this "Scope of Services" is to be performed under the direction of a licensed architect and professional engineer registered in the State of Maryland. The architecture firm shall provide a licensed professional architect on the project throughout all phases of the project. The scope of services will be set forth in the AIA Document B101 Standard Form of Agreement between Owner and Architect with MCPS modifications.

The A/E is to provide a design concept and documentation consistent with good architectural and engineering practices and in compliance with all applicable codes and standards. The A/E is fully responsible for the design, selection, and application of all materials, systems, components, processes, and methods documented in the final contract documents. The A/E will ensure that the final product is adequate for, but not in excess of, what is required to perform the intended function. It should be clearly understood that A/E design consultation extends through construction and beneficial building occupancy to final acceptance by the Board of Education.

The selected firm will be responsible for all phases of design, from schematic design to construction documents, cost estimates for each design phase, permitting, bid assistance, construction administration, on-site construction observation, and post-construction close-out, along with specified sustainability and regulatory requirements. Essential services include, but are not limited to, the following:

A. **Pre-Design & Feasibility Study Review:** Review the approved feasibility studies and educational specifications and implement them into the design.
B. **Planning and Engineering –** The Project will require the services of licensed professionals knowledgeable of State of Maryland and Montgomery County regulations and requirements concerning environmental remediation, development review, permitting, public improvements and infrastructure, fees, etc. The architect will be responsible for preparing all required plans and securing all necessary approvals to obtain all permits associated with the project.
C. **Preliminary Plan Presentation:** Prepare a preliminary plan brochure that summarizes the results of the Schematic Design phase, energy analysis, site analysis, cost summary, schedule, etc., utilizing the MCPS standard format for presentation to the members of the Board of Education.
D. **Design Phases:** Provide Schematic Design (SD), Design Development (DD), and Construction Documents (CD). Collaborate with CMR throughout all phases of design, value engineering, bid assistance, and construction through project close-out. Submit design plans, specifications, and cost estimates to MCPS and MSDE – IAC at each design phase for approval before moving into the next design phase. The design shall meet the requirements set forth in the Educational Specifications.

E. **Permitting:** Prepare all required plans and secure all necessary approvals required to obtain all permits associated with the project. Coordinate with the Montgomery County Dept. of Permitting Services, Maryland-National Capital Park and Planning Commission (MNCPPC) for Mandatory Referral and other regulatory agencies.
F. **Construction Administration:** Process submittals and change orders, site observations, RFI responses, approve application for payments, project close-out documents, and issuance of Substantial Completion Certificate.
G. **Design Schedule:** Develop and submit a Project Schedule in Gantt chart format with time/event relationship between each major activity and milestone, that includes the design phases, Mandatory Referral (MR), IAC submissions, AHJ approvals, permitting, etc., for the Owner's review and acceptance at the start of the Project.
H. **Cost Estimates**: Provide detailed cost estimates for each of the following design phases: Schematic Design, Design Development, and Construction Document.
I. **Community Engagement Meetings**: Conduct a minimum of four (4) community engagement meetings, including two (2) staff meetings, during the Schematic Design phase to receive feedback and gather inputs from the community, staff, and stakeholders on the proposed design options.
J. **Phased Demolition:** The new school must be constructed while the existing school remains operational. Once the new building is occupied, the scope includes the complete demolition of the existing school structure and final site work.
K. **Sustainability:** The design shall incorporate ground-source geothermal systems and be solar-ready to support the achievement of a net-zero energy building. The project shall also be designed to achieve Green Globes with a minimum of 2 globes, but striving for 3. **Commissioning Services:** The architect/engineer shall collaborate with the Commissioning Services Agent hired by MCPS for performance and functional testing of the building systems and assemblies.
L. **MCPS Consultants**: The Architect/Engineer (A/E) design team shall coordinate and collaborate with MCPS-hired consultants to integrate the required building systems and components into the design, including, but not limited to, door hardware, intrusion detection systems, security cameras, card access readers, and data infrastructure.
M. **Geotechnical Investigation**: The architect shall retain the services of a Geotechnical Engineer to perform an investigation of the site soils and determine the required design criteria and foundation designs.
N. **Existing Conditions Survey**: The survey shall include the existing facility, structures, property boundary, topography survey, subsurface materials and conditions, and underground utilities type, locations, size, and material. Provide a final survey report to MCPS.
O. **Value Engineering**: In the effort to ensure the designs align with the project budget, the architect shall clearly indicate a series of design elements on the drawings that can be considered as add or deductive alternates for evaluating the cost impact of these items and how they can or cannot be accommodated by the project budget.
P. **Constructability Reviews:** The Architect shall be fully responsible for the constructability of the proposed site features and structures. The Architect shall coordinate the preliminary design of all mechanical, electrical, and plumbing (MEP) work to avoid conflicts among the respective MEP systems and to confirm that they will all fit within the allotted space

PART 9 – TECHNICAL PROPOSAL SUBMISSION REQUIREMENTS

A. Each Offeror shall submit a technical proposal and a separate, sealed fee proposal, both fully responsive to the RFP. The fee proposal shall identify in detail all costs associated with the listing of services. Use the Offer's Fee Proposal Form in Attachment A.

B. Submitted proposals shall have the following formatting requirements:

1. Minimum Font Size: 11 point
2. Section Dividers: Include clearly labeled tabs or dividers corresponding to each section identified in Technical Proposal Submission - Part 1.
3. Maximum Page Limit: Technical proposals shall not exceed 75 pages. Cover pages, section tabs/dividers, and table of contents pages will not be counted towards the page limit.

C. Procurement Process—MCPS will appoint an "Evaluation Committee" to evaluate the proposals provided in response to the RFP. The Evaluation Committee will evaluate each Proposal based on the evaluation factors. Interviews will also be conducted and scored. Based on the interviews and presentations, the Evaluation Committee will select the Offeror it considers the best fit for the Project.

D. The Offeror's experience must include the completed design and construction of educational projects, including a minimum of 2 secondary schools and 1 elementary school projects in the past 10 years. If an Offeror does not meet the minimum projects completed requirements, its proposal may be deemed non-responsive and disqualified from further consideration.

E. The architectural firm and its consultants are to demonstrate that they have the skills, competence, responsibility, licensing, professional staff, financial capabilities, and other resources to satisfactorily perform the nature and magnitude of work necessary to complete the project.

F. The offeror is to submit a letter on company letterhead signed by an authorized person verifying compliance with the following mandatory requirements, with corresponding attachments in the proposal:

1. Firms must be licensed as required by the State of Maryland (Business Regulation Article, Annotated Code of Maryland) and shall submit proof of current business with their submission.

2. Firms must provide a "Good Standing Certificate" from the General Accounting Division, Comptroller of Maryland, and hold a current registration with the State Department of Assessments and Taxation.

G. Technical Proposal Submission – Part 1

The proposal must include the Offeror's understanding of the scope of work and a fully detailed, developed approach to be undertaken by the Offeror to accomplish the Scope of Work for the Project. The approach should clearly articulate the Offeror's prior experience with projects of similar size, type, and scope, and how the firm and key personnel will leverage and apply that experience on these projects. The written approach should document how the team will meet the Project's requirements by describing the processes, procedures, and strategies used. This approach shall outline the philosophy and methodology for:

1. Relevant Experience [30 PTS]

a. **Project Experience:** The project team demonstrates completion of multiple K-12 educational projects comparable in size, scope, and complexity. Each discipline demonstrates deep expertise in similar project types and integration across disciplines. Describes design and coordination processes/procedures successfully

applied to projects.

b. **Key Personnel Experience:** Identifies all required roles (ie, Principal, Project Manager, Project Architect, Engineers of Record, etc). Demonstrates minimum qualifications and relevant project experience of key personnel. Provides clear roles, responsibilities, and level of involvement of each key team member throughout the project. Ensures that all disciplines are led by experienced professionals capable of addressing complex design challenges.

c. **Capacity and Availability:** Demonstrate sufficient staffing capacity and resource availability to ensure project success. Demonstrate ability to take on the project given the current workload.

d. **Minority Business Enterprises:** Make a good-faith effort to have participation of not less than ten percent of the value of work performed by minority or women-owned business firms.

2. **Project Approach [40 PTS]**

a. **Project Management and Coordination Strategy:** Provide a clear project management structure, team organization, communication protocols, and coordination methods. Include the proposed approach to advancing schematic design through construction documents and project close-out.

b. **Approach to Project Delivery:** Provide detailed project plans, site utilization strategies, and QA/QC processes. Demonstrate coordination strategies and proactive problem-solving approaches to successfully design a highly functional facility.

c. **Communication and engagement stakeholders:** Provide outlines of a clear communication plans for MCPS, Construction Manager, and outside agencies. Describe the proposed methodology and prior experience in conducting community meetings. Include strategies for engaging school leadership, staff, and students.

d. **Schedule:** Provide a realistic and logical design schedule that sequences activities for the successful achievement of required milestones that includes all phases of design, community engagement, permitting activities, state design approvals, mandatory referral by Planning Commission, etc.

3. **Design Ideas, Creativity, and Sustainability [30 PTS]:**

a. **Design Ideas:** Demonstrate up to 2-3 viable conceptual plans that account for an occupied construction site, including phasing consideration to maintain necessary school operations, and maintain the proposed schedule and within budget. Concepts also consider all site constraints and opportunities, as well as the neighboring context.

b. **Creativity & Innovation:** Introduces innovative strategies that enhance the educational environment and flexible learning spaces.

c. **High-Performance Design and Sustainability Goals:** Concepts to consider high-performance design and achieve the sustainability goals of net-zero energy.

H. Technical Proposal Submission – Part 2

1. The Offeror shall submit a Cost Proposal in a separate, sealed envelope clearly labeled: *"Cost Proposal – Technical Proposal Submission Part 2."* The Offeror shall use the Offer's Fee Proposal Form in Attachment A. The Cost Proposal shall include the following:

    a. A lump sum Fixed Design Fee.
    b. A detailed fee breakdown by each design phase.
    c. A detailed fee breakdown by discipline and all consultants on a separate sheet.
    d. Hourly billing rates for all proposed key personnel on a separate sheet.

    Failure to provide the required cost information in the prescribed format may result in disqualification.

2. Following the evaluation of Technical Proposal Submission – Part 1, the Owner will shortlist a minimum of three (3) highest-ranked Offerors for interviews. Only shortlisted Offerors will be invited to participate in the interview phase.

3. Shortlisted Offerors shall comply with the following interview requirements and format:

    a. A maximum of seven (7) presenters is permitted. The presentation team shall include key personnel of the design team, including, but not limited to, the Architect and representatives from the Civil, Structural, and MEP disciplines, as appropriate to support the presentation and respond to questions.

    b. Each Offeror will be allotted five (5) minutes for introduction and thirty (30) minutes for the oral presentation.

    c. A question and answer session of fifteen (15) minutes will follow the presentation.

PART 10 – EVALUATION CRITERIA AND AWARD

A. A committee of MCPS staff will independently review and evaluate each technical proposal based on a combination of qualifications and cost factors.

B. MCPS reserves the right to clarify information submitted in the Technical and Fee proposals. Firms shall furnish MCPS with all such information and data necessary to determine if the proposal is responsible and responsive to MCPS requirements as stated herein.

C. MCPS intends to award the contracts to the firm that, based upon the criteria for evaluation, is the most responsive and responsible and most qualified to accomplish the scope of services/work in the time frame required, within the budget, and is in the best interest of MCPS.

D. Incomplete or missing responses, or responses that do not follow the required format, will negatively affect the evaluation of a firm.

E. The Technical Proposal submission consists of the following sections and possible points per section:

Part 1: Technical Proposal Submission

- Relevant Experience 30 Points
- Project Approach 40 Points
- Design Ideas, Creativity, and Sustainability 30 Points

Part 2: Interview and Fee Proposal

Shortlisted Offerors will be evaluated during the interview based on the following criteria:

- Team organization and professional experience of the key project team members 20 points
- Demonstrate a plan for QA/QC strategies, community engagement and communication protocols, coordination methods for success in design services. 20 points
- Demonstrate a plan to employ innovative design solutions and Project approach resulting in the successful design of a highly functional facility 20 points
- Team participation and professionalism during presentation 20 points

Fee Proposal 20 points

A. Upon completion of the evaluation process, the Evaluation Committee shall recommend the selected Architectural/Engineering Team to the Superintendent, who shall submit the recommendation to the Board of Education (BOE) for approval.

Attachment A – Offeror's Fee Proposal Form

Firm Name: _____

The Offeror's fixed Professional Design Services Fee Proposal is as follows:

1. Professional Design Services Fee is: $_____

    a. Provide a breakdown of the Design Services Fee by following tasks:

        Schematic Design $_____

        Design Development $_____

        Construction Documents $_____

        Bidding Negotiation $_____

        Construction Administration $_____

        Post Construction / Close-Out $_____

    b. Provide a breakdown of the Design Services Fee by each design discipline and consultants on a separate sheet.

    c. Provide Hourly billing rates for all proposed key personnel on a separate sheet.

2. The Offeror acknowledges and understands that the fixed Design Services Fee is firm and will not be subject to further adjustment once agreed upon in the Agreement.

Introduction

Eastern Middle School is located at 300 University Boulevard, East in Silver Spring, Maryland. Smolen Emr Ilkovitch Architects (SEI) conducted this study at the request of Montgomery County Public Schools (MCPS). All work for this study was performed under the advisement and direction of the MCPS Department of Planning and Construction.

Participation

The Feasibility Study participants reviewed revised and approved the design approaches for a Major Capital Project at Eastern Middle School through a series of work sessions. These sessions occurred on March 4, March 24, April 29 and May 28, 2025. The proposed designs are a result of the participants suggestions and guidance during the feasibility study process.

Executive Summary

Purpose

The purpose of this feasibility study was to explore options for a Major Capital Project at Eastern Middle School. Options will accommodate the educational specifications developed by Montgomery County Public Schools (MCPS), dated November 13, 2024. The design capacity of the school will be increased to 1,097 students, with a core capacity of 1,200 students. The study process evaluated a series of potential approaches that would satisfy the requirements of the educational specifications and space summary. The intent of this study is to provide MCPS with considerations and construction costs associated with the implementation of each proposed option.

Background/History

Location: 300 University Boulevard E, Silver Spring, Maryland 20901
Cluster: Montgomery Blair High School

History and Square Footage of Existing Building:

1951	Original Construction	84,486 square feet
1958	Classroom Addition	23,975 square feet
1963	Library Addition (Music Suite)	10,373 square feet
1975	Media Center Addition	16,001 square feet
2001	Admin and Cafeteria/Kitchen Addition	17,295 square feet
	Total	152,130 square feet

Site Size: 14.51 acres

Current and Projected School Capacity and Student Enrollment:

	Actual	Projections				
	2025-2026	2026-2027	2027-2028	2028-2029	2029-2030	2030-2031
Program Capacity	1012	1012	1012	1012	1012	1012
Enrollment	1015	1025	1034	1037	1039	1019
Space Available/Deficit	(3)	(13)	(22)	(25)	(27)	(7)

Number of Relocatable Classrooms: 0
Current Parking Spaces: 123

Executive Summary (Continued)

Methodology:

The existing school was evaluated by the design team to determine the most advantageous approach to achieving the proposed programmed spaces. Additionally, the study indicates the impact, if any, that can be reasonably expected as a result of each proposed option. The evaluation is based on compliance with Montgomery County Public Schools educational specifications.

The study is based on the following four step process:

Step 1: Information Gathering & Evaluation

- Compare existing building program versus project goals and educational specifications
- Evaluate existing building and site issues
- Perform code analysis / review
- Produce building specific diagrams
- Analyze site plan

Step 2: Concept Design

- Create concept bubble diagrams depicting general planning concepts
- Committee input is applied to the diagrams
  - Combinations of preferred features
  - Incorporate committee input
  - Development of refined approaches

Step 3: Development of Plan Options

- Concepts are refined into formal plan approaches and are technically scrutinized
- Engineering disciplines are applied
- Code compliance
- Cost estimating
- Sustainability, energy conservation and life cycle cost analysis
- Construction schedule, duration, and phasing plan

Step 4: Technical Report Preparation

- Prepare Board of Education materials and brochures
- Prepare IAC feasibility study submission

Executive Summary (Continued)

Overview

Eastern Middle School is comprised of the original building constructed in 1951 with additions in 1958, 1963, 1975 and 2001. The main level of the 1950s construction utilizes concrete floor structure above a crawl space, The remaining additions utilize concrete slab on grade on the main level. The second story and roofs are supported by a combination of load-bearing masonry walls and steel framing. The existing envelope displays signs of degradation, and occupants attest to water and pest infiltration. The existing Heating, Ventilation and Air-Conditioning (HVAC) system is beyond its expected lifespan, leading to significant occupant comfort concerns.

The site is relatively flat, with steep slopes at the eastern property edges to connect down to the neighboring properties. The bus loop, accessed off of East Franklin Street is adequately sized. The student drop off loop is accessed from both University Boulevard and East Franklin Street, with a single exit onto East Franklin. The convergence of traffic within this loop causes extensive backups during arrival and dismissal.

The feasibility study process culminated with four (4) approaches to a major capital project at Eastern Middle School. All approaches result in a new Eastern Middle School in line with the project Educational Specifications. New HVAC, Electrical, Plumbing, Information Technology, Communication, Life Safety and Security systems are provided in each approach. The existing building envelope will be replaced in any area of renovation.

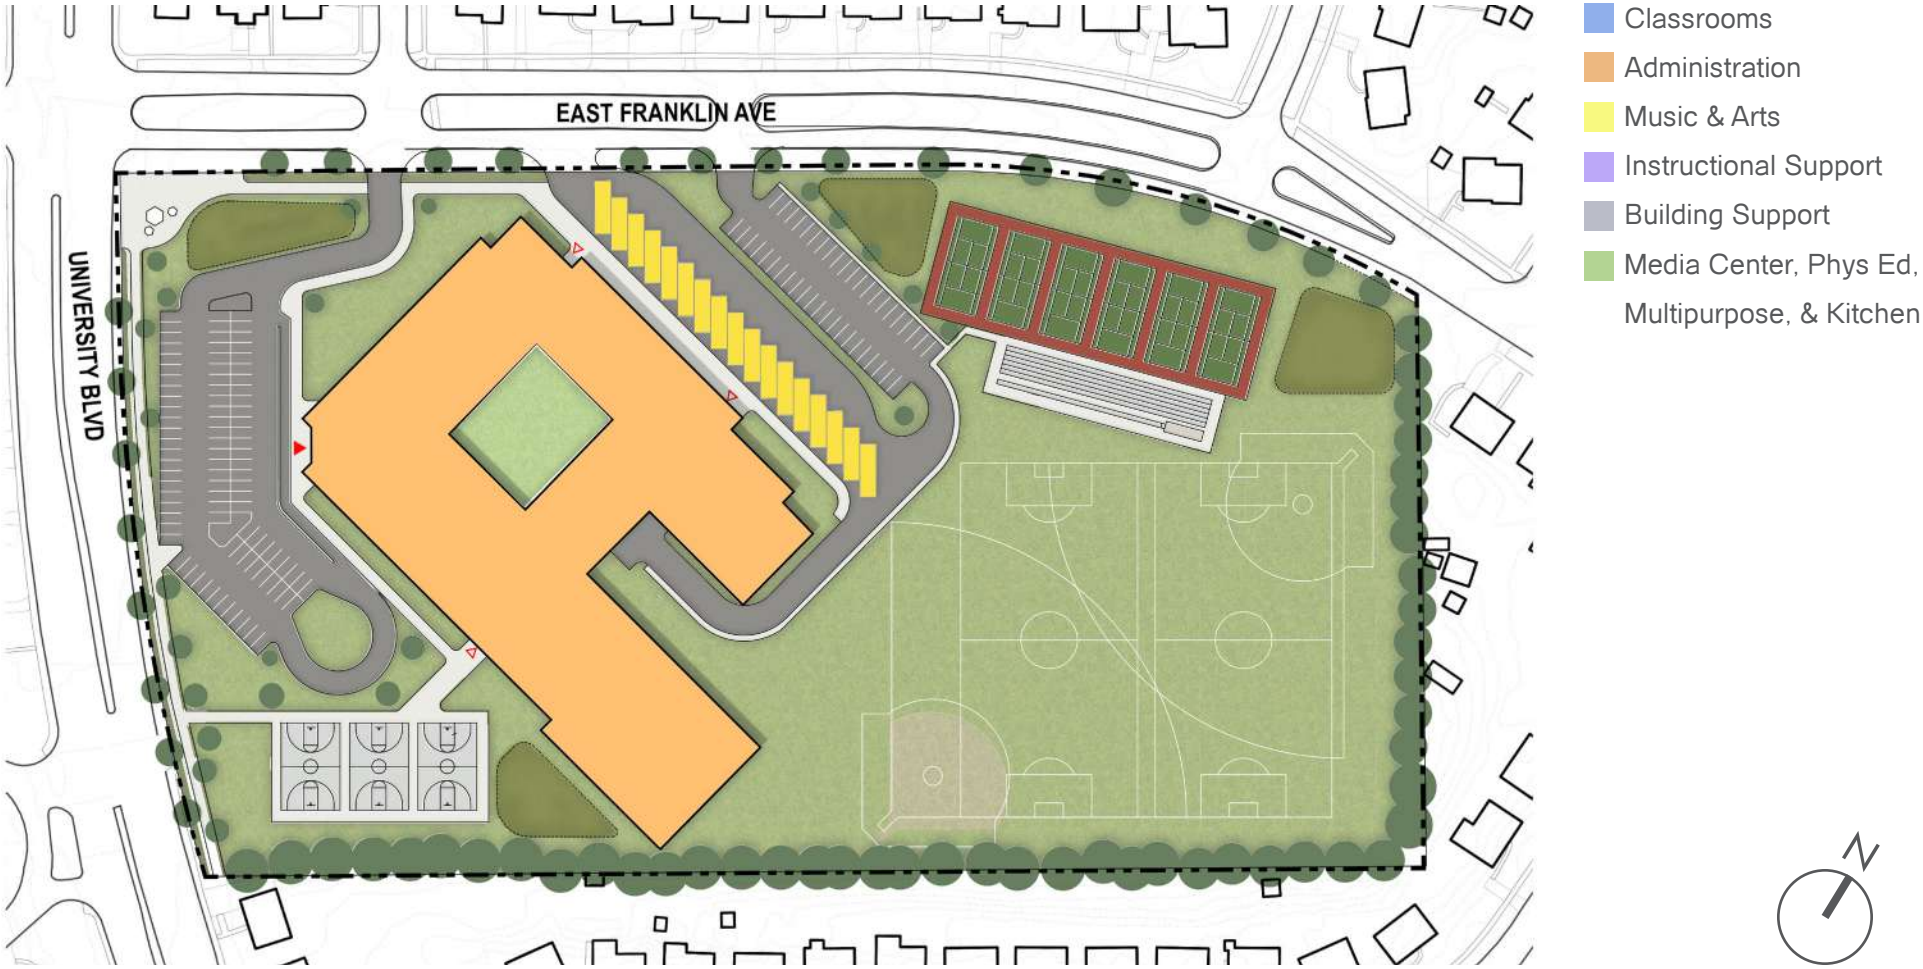
The approaches vary in their scale of intervention. Approach 1 proposes a 'Renewal' scope. The existing building footprint is maintained, and all square footage of the building is renovated. No additions are included within this approach. Approaches 2 and 3 investigate 'Renovation / Addition' scopes. Approach 2 demolishes approximately 25% of the existing building and constructs additions to achieve the Educational Specification area. Approach 3 demolishes approximately 60% of the existing building, and constructs additions to achieve the Educational Specification area. Approach 4 constructs a 'Replacement' facility which involves 100% demolition of existing building.

Executive Summary (Continued)

Approach 1 - Renewal (0% Demolition)

Approach 1 leaves the existing building footprint intact. The building is renovated in full, including the replacement of the exterior envelope. The site and building programs required in the educational specifications will be provided, although Physical Education and Building Services spaces will not achieve all of the spatial requirements. All systems, finishes and equipment will meet MCPS standards.

- Classrooms
- Administration
- Music & Arts
- Instructional Support
- Building Support
- Media Center, Phys Ed, Multipurpose, & Kitchen



Approach 2 - Renovation / Addition (25% Building Demolition)

Approach 2 demolishes 25% of the existing building. A two story addition is placed on the University Boulevard side of the building with the existing square footage renovated in full, including the replacement of the exterior envelope. The site and building programs required in the educational specifications will be provided, meeting all spatial requirements. All systems, finishes and equipment will meet MCPS standards.

Approach 3 - Renovation / Addition (60% Building Demolition)

Approach 3 demolishes 60% of the existing building. The original gymnasium volume, and the classroom bays around the courtyard are retained and renovated in full, including the replacement of the exterior envelope. Two story academic wings surround the courtyard, with single story P.E. and Arts wings on the south-west side. The site and building programs required in the educational specifications will be provided, meeting all spatial requirements. All systems, finishes and equipment will meet MCPS standards.

Approach 4 - Replacement (100% Building Demolition)

Approach 4 constructs a full replacement facility at the rear of the site. The existing building would be demolished in full after students relocate into the new school. The building locates its public functions at the south side of a new courtyard. Two stories of academic program enclose the courtyard. The site and building programs required in the educational specifications will be provided, although Physical Education and Building Services spaces will not achieve all of the spatial requirements. All systems, finishes and equipment will meet MCPS standards.

Options for Student Relocation During Construction

No holding facilities sufficient to house a middle school are currently available. Students will remain onsite throughout construction for all approaches. Approaches 1, 2 and 3 will require phased occupied construction. Construction will be broken down in multiple phases, with students swung to different spaces at the onset of each phase. Portable classrooms and/or modular buildings will be necessary to swing students throughout multiple phases of construction in Approaches 1, 2 and 3. The replacement facility in Approach 4 would be built on the play fields while the existing school remains in use. The existing building will be torn down after the school moves into the new facility.

Executive Summary (Continued)

Comparative Analysis of Options

Approach 1

Demolition	0
Modernization	152,130
Addition	0
Total G.S.F.	152,130
Efficiency	66.5%

Approach 2

Demolition	39,996
Modernization	112,134
Addition	57,630

Legend

Executive Summary (Continued)

Conclusions and Recommendations

The feasibility study process culminated in scoring each of the final approaches based on six (6) categories. Scores were not weighed to prioritize any category above others. These categories were developed through an analysis of the feedback and concerns received from feasibility study participants during the information gathering phase. The categories were as follows:

- Building Goals
- Site Goals
- Community Goals
- Sustainability
- Cost
- Phased Occupied Construction Impact

Approach 4, the replacement facility, received the highest cumulative score. Scoring was independently performed by Smolen Emr Ilkovitch Architects and presented at the final community engagement meeting on May 28, 2025.

Independently of this scoring, the Eastern Middle School Parent-Teacher-Student Association (PTSA) passed a formal resolution supporting a replacement approach. This resolution, dated May 21, 2025, was based off the approaches presented at the third community engagement meeting on April 29, 2025. Rationale listed by the PTSA align with the categories utilized by Smolen Emr Ilkovitch. Primary points centered on meeting educational goals, safety and security, sustainability, and construction impact on education.

Project Scope, Objectives & Goals

Scope and Intent

The intent of this feasibility study report is to provide viable options for upgrading and modernizing Eastern Middle School to fulfill the educational program requirements of students and staff and respond to the concerns of the community. All options will follow MCPS standards and comply with current building, life safety, energy and accessibility codes. New mechanical, electrical, plumbing, information technology, communication, and life safety systems will be accommodated in all options. Building designs will target a maximum Energy Use Intensity (EUI) value of 25 kBTU/ft2/yr to achieve a 'Net-Zero Ready' facility. The completed facility will have a capacity of 1,097 students, with a core capacity of 1,200.

The final approaches presented in this report are a result of comments and suggestions of the feasibility study participants, incorporated through the community engagement meetings. These meetings were held both in person at Eastern Middle School and virtually to reach as broad an audience as possible. Meetings were held at on March 4, 2025 (in person), March 24, 2025 (in person), April 29, 2025 (virtual) and May 28, 2025 (virtual). For the sessions, the design team analyzed the educational specifications and developed several options for modernizing Eastern Middle School and addressing the site deficiencies in vehicular and pedestrian circulation. During the sessions, the designs were reviewed and revised by the feasibility study participants. All comments and suggestions discussed were incorporated when found to be practical and beneficial to the design.

General Goals

The following goals and objectives were developed by the feasibility study participants at the initial community engagement meeting:

- Creating environments where students feel comfortable; Fostering social-emotional development
- Utilizing building and site to facilitate community use
- Embracing sustainability and integrating with the natural environment
- Developing innovative and flexible learning environments, both in and outside of the classroom
- Providing appropriately conditioned and physically comfortable spaces so students to staff can focus
- Addressing pedestrian and vehicular safety concerns at student drop off and at University Boulevard traffic light

Project Scope, Objectives & Goals (Continued)

The following site and building goals and objectives established by the feasibility study participants are to be addressed by the design team and Montgomery County Public Schools staff in this feasibility study.

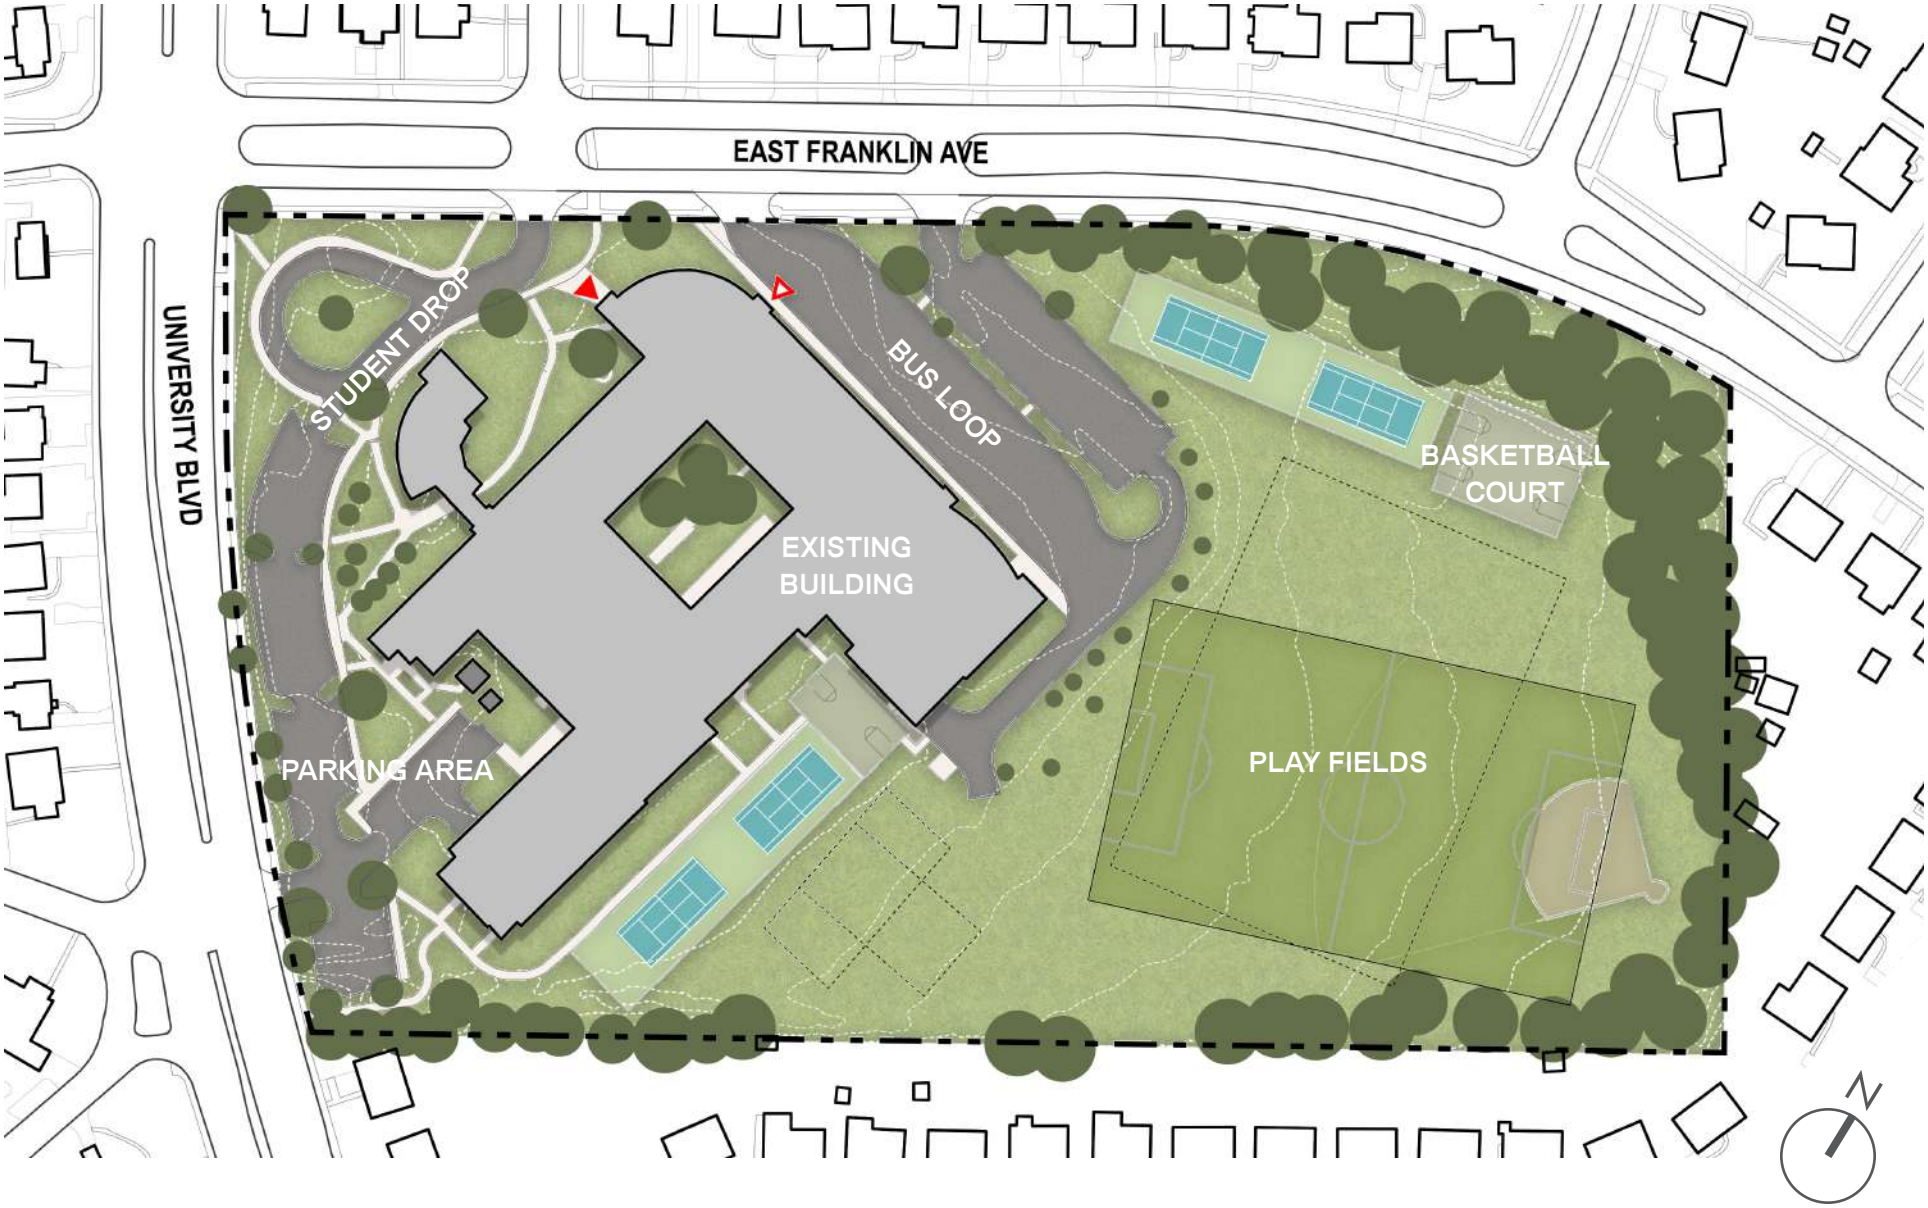
Site Goals and Objectives

The revitalized site should:

- Provide site amenities required per the educational specifications
- Provide secure outdoor learning environments
- Provide adequate vehicle stacking at student drop off loop to improve site congestion
- Provide safe pedestrian walking paths from intersection of University Boulevard and E Franklin Ave
- Improve supervision of play fields
- Provide a safe and secure campus through utilization of Crime Prevention through Environmental Design (CPTED) principles

Building Goals and Objectives

The revitalized building should:



- Provide all classrooms and teaching spaces as required per the educational specifications
- Provide appropriate programmatic adjacencies in line with curriculum and educational pedagogy
- Provide a floor plan that promotes circulation and supervision throughout the building
- Prioritize student safety and security
- Provide clear public and private zones to facilitate community use
- Maintain natural light in all instructional spaces
- Meets energy use reduction goals and achieves ‘Net-Zero Ready’

1975 Addition	16,001 SF
2001 Addition	17,295 SF
Total:	140,290 SF

Existing Conditions Summary

The original Eastern Middle School facility was constructed in 1951, with subsequent additions in 1958, 1963, 1975 and 2001. The building is composed of two floors. The existing structure is a type IIB construction utilizing non-combustible materials. Exterior walls built before 2001 are masonry mass walls with no drainage cavity or insulation. The building exterior is clad primarily with veneer brick. Exterior Insulation and Finishing System (EIFS) is used selectively to infill portions of 1950s era window openings. The 1963 wing features a distinctive curved curtainwall facade and art installation facing out to University Boulevard. Multiple stuctural systems are utilized. The 1950s main floors are composed of concrete framed slab over a ventilated crawl space. Later additions utilize concrete slab-on-grade. Both masonry bearing walls and steel frame construction supports the second floor and roofs. The existing envelope displays signs of degradation, and occupants attest to water and pest infiltration. The existing Heating, Ventilation and Air-Conditioning (HVAC) system is beyond its expected lifespan, leading to significant occupant comfort concerns.

The 14.51 acre site is located at 300 University Boulevard E in Silver Spring, Maryland. University Boulevard is a state highway, and a major commuter route to reach the Capitol Beltway (I-495). Eastern Middle School is approximately 0.3 miles south of I-495. The neighborhood is composed of single-family homes. The site is relatively flat, with steep slopes at the eastern property edges to connect down to the neighboring properties. The bus loop, accessed off of East Franklin Street is adequately sized. The student drop off loop is accessed from both University Boulevard and East Franklin Street, with a single exit onto East Franklin. The convergence of traffic within this loop causes extensive backups during arrival and dismissal.

See Appendix C “Existing Conditions Survey” for complete survey.

Description of Options

General

A series of building options were developed with input from the feasibility study participants and Montgomery County Public Schools staff. Ultimately, these were narrowed down to the four approaches described herein. Each option meets all of the programmatic requirements set forth by the educational specifications and explores different approaches of approaching educational and facility needs of Eastern Middle School.

All options will meet the requirements of the Maryland Green Building Council - High-Performance Green Building Program and will comply with GBI Green Globes (minimum two Green Globes) and the International Green Construction Code (IgCC).

Common Design Elements

SITE ELEMENTS

- **Sediment and Erosion Control** – Any project over 5,000 sf of disturbance will need to receive approval of the erosion and sediment control plan from Montgomery County DPS. Plans should conform to the 2011 Standards and Specifications for Soil Erosion and Sediment Control from Maryland Department of the Environment. It is anticipated that any major project will need to include a sediment trap or sediment basin with a connection to the public storm drain system. All projects will also require a stabilized construction entrance, inlet protection, silt or super silt fence, stockpile areas, concrete washouts, and permanent stabilization.
- **Site Demolition** – Existing site features located within the proposed building footprint or modifications to existing site items will require demolition. The existing basketball court on the east side of the bus loop will need to be demolished and replaced.
- **Grading** – The site should be designed to have a balance between cut and fill to limit the amount of export or import for the site. All grass areas should be stabilized with sod.
- **Forestation** – The project will not be clearing any forest. Large trees near the public sidewalk or along residential properties should be maintained when possible. The property will need to go through with a forest conservation exemption or a full forest conservation plan depending on the amount of work being proposed. All work will be reviewed by the Maryland National Capital Park and Planning Commission.
- **Site Improvements** – Any pavement shall meet the following requirements:
  - Sidewalk shall be concrete (4,500 psi). Sidewalks shall be 5’ wide and 4” deep with WWF 6x6 and a 4” stone base.
  - All curb and gutter shall be concrete (4,500 psi).
  - All heavy duty concrete (4,500 psi) for ADA spaces or vehicular pavement shall be 8” thick with WWF 4x4 and 4” GAB.
  - Asphalt pavement shall be 6” thick (2” asphalt surface course and 4” asphalt base course) with a 6” GAB.
  - Heavy duty asphalt pavement for the bus loop, loading dock, or construction access shall be 6” thick (2” asphalt surface course and 4” asphalt base course) with an 8” GAB.
  - All pavement shall be over an approved subgrade

Description of Options (Continued)

- **Proposed Utilities**
  - **Water** – The waterline for the site shall be upgraded to an 8" DIP to serve the sprinkler system, hydrants, and domestic demand for the building. This will require a new water meter vault with easement. The existing waterline will require a service connection abandonment. The new line will require a new service connection.
  - **Sanitary Sewer** – The existing sanitary sewer should be reused if possible. If a new line is necessary, a new line should be connected to either the line in University Blvd. or in E Franklin Ave.
  - **Gas** – The existing line should be reused if able. Otherwise a new line will need to be coordinated with Washington Gas
  - **Electric** – A new electric main will be provided, with the locations closest to the new transformer to limit the amount of new electric main that will be needed. All work to be coordinated with PEPCO.
  - **Stormwater Management** – All new work will need to meet Montgomery County SWM requirements. The site will need to meet the County's ESD requirements. It is assumed that a combination of pervious pavement, micro-bioretentions, and other ESD practices will be needed. If ESD cannot be met, Chapter 3 or structural practices
  - **Storm Drainage** – Existing drainage issues along the east and south will need to be addressed to avoid sending runoff towards the adjacent residential properties. A storm drain will likely need to be added to drain this runoff towards the existing storm drain in E Franklin Ave. This storm drain can also be used to drain the proposed sediment trap.
- **Fields and Courts** – The existing fields and courts will be maintained where possible. Any of the courts removed with the new work will be replaced. The tennis courts and basketball courts will be grouped together rather than left separated. New turf grass will be provided on the play fields. Grading will be adjusted to include better drainage.

ARCHITECTURAL ELEMENTS

- **Educational Specification -** All program spaces will be provided. Ed Spec square footages will be met in all approaches that enlarge the building footprint. Sizes. Spaces will be laid out to provide appropriate adjacencies. Adequate storage will be provided and distributed across the school.
- **Accessibility -** Building will comply with the Americans with Disability Act (ADA) Accessibility Guidelines and the Maryland Accessibility Code (COMAR 09.12.53).
- **Safety and Security -** Crime Prevention Through Environmental Design (CPTED) principals will be followed to promote a safe and secure environment.
- **Daylighting -** Natural light will be provided in all teaching spaces.
- **Exterior Walls -** High performance exterior wall systems will be provided to eliminate thermal bridging and minimize air/vapor permeance. Walls will include continuous approximately R-25 insulation, with exact value confirmed during design with the use of energy modeling software.
  - Ventilated and or cavity wall systems will be utilized to permit air movement behind cladding.
  - Masonry veneer units will be the primary building cladding material to maximize durability. Rainscreen panel accents may be utilized on high walls to break down the building mass.
  - Existing envelope will be replaced in full in areas of renovation.

Description of Options (Continued)

- **Exterior Glazing -** High performance double pane low-e glazing with a center of glass U-value of 0.24. Visible Light Transmittance will be balanced with Solar Heat Gain Coefficients to maximize daylighting without negatively impacting energy performance. Approximately 22% of the exterior walls will be glazed to minimize energy usage and achieve 'Net-Zero Ready.' Daylight modeling software will be utilized to strategically locate these openings.
- **Roofing -** New R-30 minimum built-up asphalt roofing will be provided.
- **Finishes -** New finishes will be provided throughout the school. Finish materials, including but not limited to, flooring, tiling, ceilings, paints, casework will comply with MCPS standards.
- **Educational Design -** Teaching spaces will be designed to be as flexible as possible. Classroom technology and display boards will be arranged to facilitate multiple teaching layouts within each space. Breakout and collaborative spaces will be distributed throughout the building.

STRUCTURAL ELEMENTS

- **Areas of Renovation**
  - In general, all new additions must be structurally independent of the existing structure.
  - The existing original floor structure, floor to floor height is 12'-4" and the joists are 18 inches on center spacing. The existing structural elements do not have the capacity to support new DOAS style HVAC units. All new HVAC units will need to be supported by new structure to include new footings.
  - Reskin of the existing structure will require full replacement of the exterior wall systems (veneer and masonry back up). New wall systems will bear on new concrete footings. Test pits around the exterior will be required to confirm typical existing footing depths. All locations where the new parapets exceed the height of the existing parapets will be reinforced (or replaced) to accommodate new snow drift loads.
- **Areas of New Construction / Addition**
  - The main structural system for all new structural elements will be structural steel frame. The lateral wind and seismic resisting system will be a combination of masonry shear wall and steel moment frame, as needed.
  - The elevated floor structures will consist of 3 ½" cast-in-place normal weight concrete on 1 1/2" composite floor deck (total slab thickness = 5"). The structural slab system shall be supported by structural steel beams, framing to steel girders and columns.
  - The roof structure will be framed with a series of steel joists framing to steel girders and columns.
  - The foundation system will be a combination of standard strip (continuous) footings around the perimeter and spread footings at each steel columns, if determined feasible by the project geotechnical engineer.

MECHANICAL ELEMENTS

- **Areas of Renovation -** Existing spaces within Eastern MS will be renovated in their entirety. Existing chilled/heating water infrastructure systems and localized HVAC equipment will be incrementally demolished throughout the entire building. All mechanical infrastructure systems and HVAC system components will be replaced utilizing a phased-while-occupied construction approach, allowing the school to remain in operation throughout the duration of construction. The existing water-cooled chiller, cooling tower, and hydronic boiler infrastructure systems located within the school will continue to operate until the final phase of construction, at which time these systems will be demolished.

Description of Options (Continued)

- **Primary Heating and Cooling Infrastructure System (Approach 1) -** An air-source heat pump unit system will be utilized, providing the ability to have independent heating or cooling year-round, while delivering an extremely high level of overall building energy efficiency.
  - Cassette type variable refrigerant flow (VRF) terminal units will be provided for typical classrooms areas. Heat recovery type air-source condensing units will be located on the roof near the spaces served.
- **Primary Heating and Cooling Infrastructure System (Approaches 2, 3 & 4) -** A ground-coupled geothermal heat pump unit system will be utilized, providing the ability to have independent heating or cooling year-round with an extremely high level of overall building energy efficiency.
  - A ground-coupled geothermal borehole field will be located to allow for continued operation of the existing school during installation of the geothermal wellfield with limited disruption.
  - Distribution pumps and other major mechanical infrastructure components will be located within the first floor building addition mechanical room.
  - Extended range vertical heat pump units will be provided for space conditioning within the typical classroom areas, with these units located within mechanical closets positioned near the area served.
- **Ventilation and Dehumidification -** Dedicated Outside Air Supply (DOAS) units will provide ventilation and dehumidification.
  - Demand control ventilation within the classroom areas will be provided to assist with reducing the school's overall energy consumption by regulating the quantity of conditioned outdoor air delivered to each space based on the actual room carbon dioxide levels.
- **Cafe/Multi-Purpose Room, and Gymnasium HVAC Systems -** A series of rooftop heat pump units will provide space conditioning and ventilation for the these high volume programs.
  - Full airside economizer and enthalpy wheel energy recovery devices will be provided where required by the International Energy Conservation Code.
  - Demand control ventilation will be provided for the units serving Media Center, Cafe/Multipurpose Room, and Gymnasium.
- **Miscellaneous Building Areas -** Data, Telecomm, and Elevator Room will be served by ductless split systems. Heating-only type spaces such as mechanical rooms, electrical rooms, stairs, storage rooms, and entry vestibules will be provided with electric cabinet and propeller unit heaters. In addition, a dedicated switch-operated exhaust fan will also be provided within the health suite area and within the administration workroom.
- **Building Automation Control System -** Automatic temperature controls will be direct digital type controls (DDC). All system components will be installed in accordance with MCPS standards and networked to the existing front-end server located at the MCPS Energy Management Office.

PLUMBING ELEMENTS

- **Domestic Water Systems** – A new combination fire/water service will enter the school within the first floor
  - A new domestic water service, complete with basket strainer and backflow preventer will separate the domestic water and fire services prior to distributing water throughout the school.
  - Domestic water piping will be distributed from this first floor mechanical room area to plumbing fixtures and equipment located throughout the school.
  - Existing domestic water piping will be replaced throughout renovated areas, with new piping incrementally replaced in phases to accommodate a phased-while-occupied construction approach.
  - Domestic hot water will be generated by a pair of electric resistance tank type domestic water heaters.

Description of Options (Continued)

- **Storm Water Piping Systems -** Above and below-grade storm water piping will be constructed from PVC material.
  - Storm water drains and piping systems will be replaced to the greatest extent possible throughout areas of renovation, with limited portions of the existing underground piping anticipated to remain to accommodate project phasing.
- **Sanitary and Vent Piping Systems -** Above and below-grade sanitary and vent piping will be constructed from PVC material.
  - Equipment and sinks that may discharge grease into the sanitary system from the kitchen will be piped to a new underground concrete grease interceptor. The discharge from this interceptor will be connected to site sanitary piping system.
  - Sinks within the art classrooms will be provided with solids interceptors, collecting debris and preventing it from entering the site sanitary piping system.
  - Sanitary waste and vent piping systems will be replaced to the greatest extent possible throughout areas of renovation, with limited portions of the existing underground piping anticipated to remain to accommodate project phasing.
- **Plumbing Fixtures -** All new plumbing fixtures will be provided throughout the school. **F**ixtures will meet the Americans with Disabilities Act (ADA) and utilize water conservation features compliant with current plumbing code and promoting good water conservation practices.
- **Gas Piping Systems -** A new natural gas service will be provided by Washington Gas for the school, with a new outdoor meter and pressure reducing station located near the new first floor mechanical room. Gas piping will serve the science classrooms and the emergency generator.

FIRE PROTECTION SYSTEMS

- The entire building will be fully sprinklered, A fire pump is not currently anticipated based on the available water pressure at the existing school. All work will be specified to conform to standards of the National Fire Protection Association (NFPA).

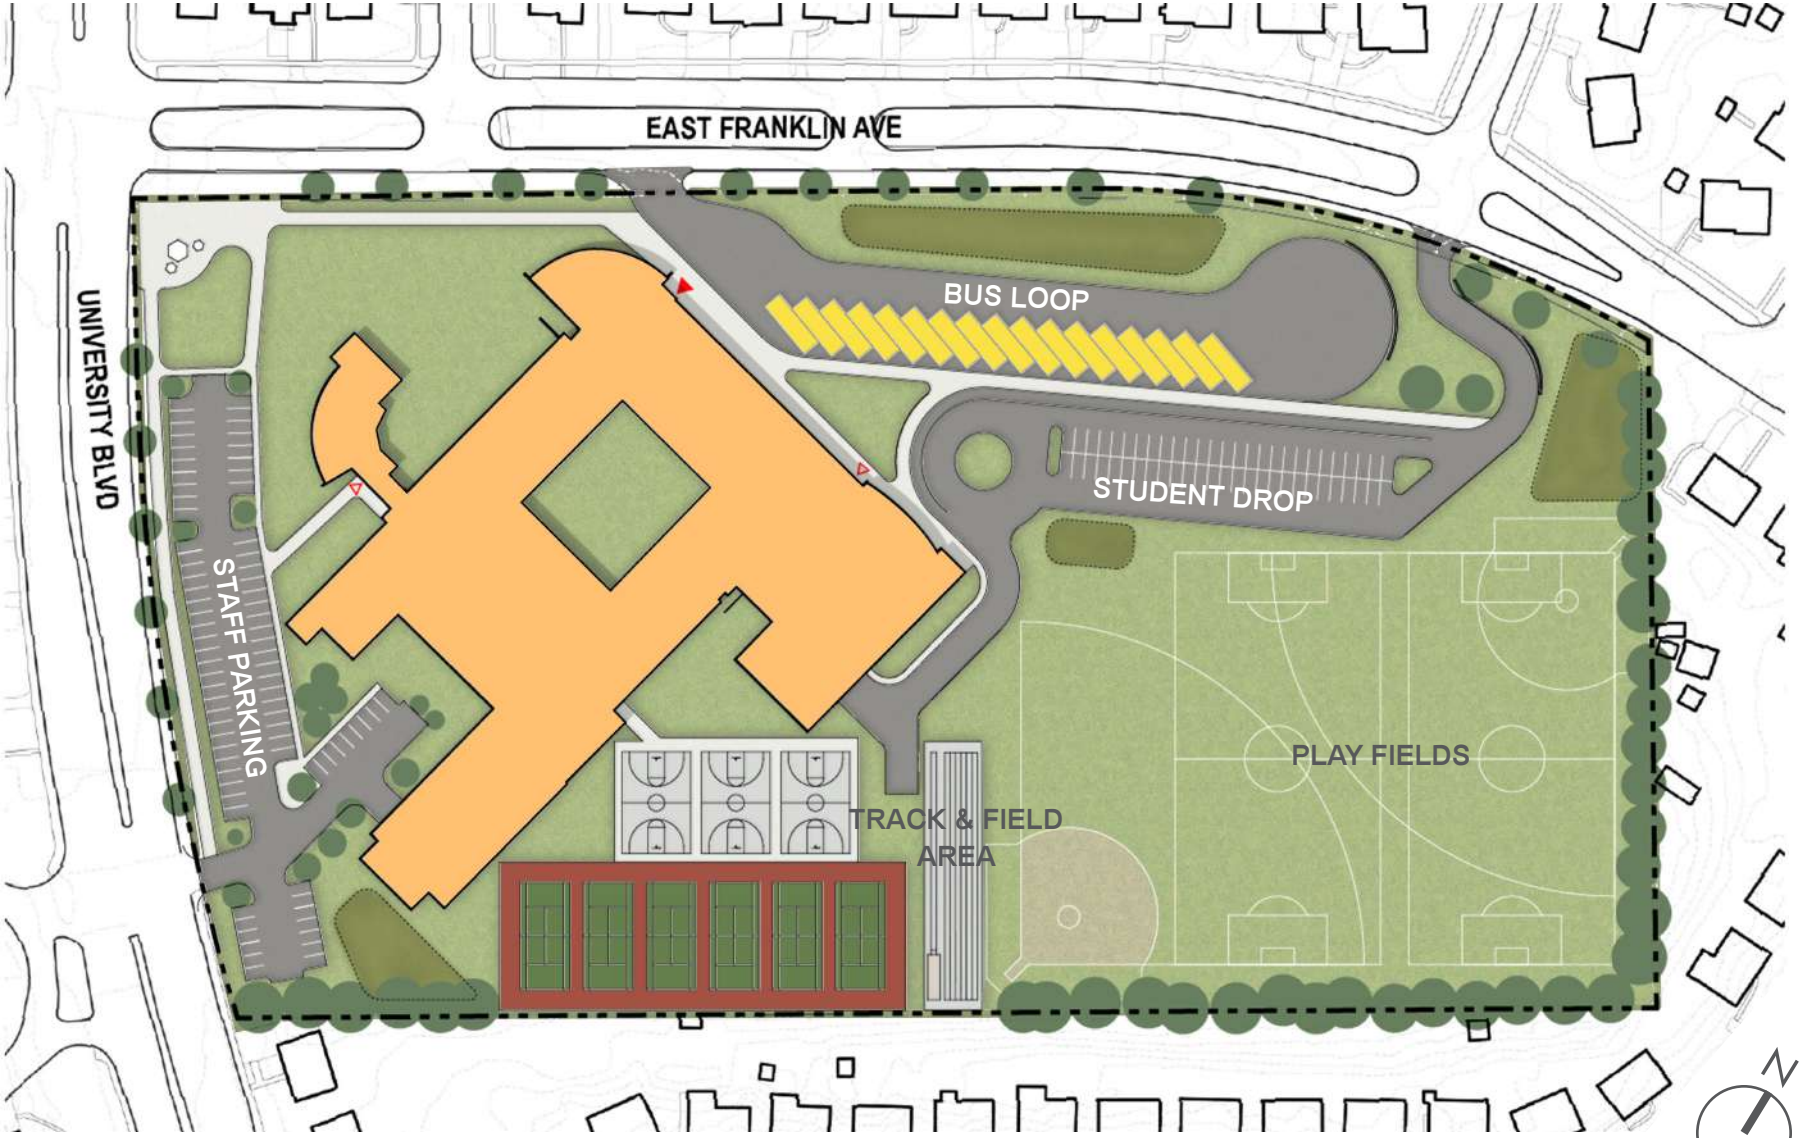
ELECTRICAL ELEMENTS

- **General** - All new electrical distribution equipment, lighting fixtures, lighting controls, receptacles, fire alarm system, voice/data system, public address system, and security system components will be provided
  - Existing systems within the renovation areas will be replaced utilizing a phased-while-occupied construction approach, allowing the school to remain in operation throughout the duration of construction..
- **Electrical Service** - A new electrical service will be provided to serve a new main switchboard in a new main electrical room.
  - A new outdoor pad-mounted Pepco utility transformer will be provided adjacent to the new main electrical room.
  - The existing switchboard will be backfed from the new main switchboard within renovation approaches to maintain existing power distribution throughout the duration of construction.
  - The new 3,000 amperes, 277/480 volts, 3-phase, 4-wire switchboard will be sized with spare capacity and space for future circuit breakers in order to accommodate any future renovations to the school. A tap section for connection of future on-site photovoltaic (PV) system will be provided.
  - A separate “auxiliary” electrical room will be provided within the new main electrical room for new generator-connected equipment.
- **Emergency Shelter -** The Maryland Emergency Management Agency (MEMA) may designate Eastern MS as an emergency public shelter. In this case, electrical equipment to connect a temporary portable generator to the main switchboard will be provided.
  - MCPS may request MEMA for a waiver to not designate Eastern MS as an emergency public shelter.

Description of Options (Continued)

- **Electric Vehicle (EV) Charging Stations -** MCPS standard electrical provisions will be provided in the parking lot.
- **Solar Photovoltaic -** Electrical provisions will be made for a future solar PV system.
- **Generator Power -** There will be an onsite outdoor natural-gas generator with weatherproof, sound-attenuated enclosure, sized to accommodate emergency / life-safety and standby loads via automatic transfer switches. The estimated size for the generator is 150 kW.
  - Standby panelboards will serve typical loads, including, but not limited to, data/voice communications equipment, automatic temperature control (ATC) / building management system control panels, kitchen cooler/freezer, refrigerator in health suite, intercom/public address equipment, security equipment, fire detection and alarm equipment.
  - A generator docking station will provided on the emergency / life-safety power distribution system to allow for connecting to a temporary portable generator. The generator docking station will be sized to accommodate the entire generator load and will be located at the building exterior adjacent to the generator.
- **Lighting -** Luminaires (lighting fixtures) will utilize LED light sources. Typical LED luminaires will be recessed 2' x 2' or 2' x 4' fixtures. Recessed downlight, high-bay "UFO" style, high abuse wall-mounted, LED strip, and architectural pendant luminaires will be used where appropriate.
  - Building and pole-mounted exterior luminaires around the perimeter of the building, located so as not to exceed the maximum lighting levels beyond the property line.
- **Lighting Controls -** Switching of luminaires will have ON/OFF and RAISE/LOWER lighting level capability. Occupancy sensors will be utilized for automatic control of both interior and exterior lighting. An astronomic time switch / time clock will be used to turn ON/OFF exterior lighting
- **Fire Detection and Alarm -** The fire detection and alarm system will be a stand-alone, addressable, and will have voice evacuation capability. The main fire alarm control panel (FACP) will be located either in the main telecom room or in a location as directed by MCPS. The fire alarm annunciator with graphic display and adjacent keypad will be located at the main building entrance vestibule or lobby.
- **Public Address System -** Intercommunications/public address system devices will include speakers and call switches. Stand-alone sound reinforcement systems will be provided in the multipurpose room, main gymnasium, auxiliary gym, dance rooms, and music rooms per MCPS standards.
- **Security System -** Security systems will include door access control (card readers), intrusion detection (keypads and motion detectors), and video surveillance (cameras). Distributed antenna system will be provided for public safety radio for first responders.
- **Technology Infrastructure -** The school will have communications (data and voice) systems including wireless access points throughout for Wi-Fi. Provisions for audio/visual systems for instructional technology will be provided.

Description of Options (Continued)



Approach 1: Renewal (0% Building Demolition)

The renewal approach aims to preserve as much of the existing building as possible. the existing building envelope will be replaced with a new, high-performance wall system to improve energy efficiency and durability. The primary focus is on demolishing interior walls to reconfigure the layout in accordance with the educational specifications. Structural bearing walls, high-volume areas and existing corridor walls are kept in place. Programs are reorganized in the renovation by rebuilding interior partitions. The design will meet most of the educational specification requirements. The largest deficiences are found within the physical education, student dining, and building services programs. Square footages allocated to these programs are 19.7%, 12.7% and 20% below those listed within the educational specifications, Providing all the square footages prescribed within the educational specifications cannot be acheived without expanding the building footprint, Working within the footprint also impacts the spatial proportions of many program spaces. The new auxillary gym program will not be a high volume spaces within the renewal approach. Many of the laboratory spaces spaces will be housed in long narrow rooms to fit within the existing classroom bay spacing. Appropriate adjancies between programs will be accomodated to the greatest extent possible, but cannot be idealized within the renewal. Grade clusters are disjointed, and relevant support spaces are not as close as preferred.

The site will be redesigned to improve circulation and overall functionality. The main entry of the building will be relocated to face the bus loop and the student drop off lot. The bus loop layout will be updated but will remain on the east side of the campus at East Franklin Ave. Meanwhile, the student drop-off area will be relocated to the east side, with access also coming from East Franklin Ave. Most of the on-site parking will remain on the west side closer to University Blvd. with additional parking added on the student drop-off area. The play field will remain in the same location with an updated field layout. The basketball court and tennis courts are clustered together in one area along the south side of the site.

Approach 1: Renewal (0% Building Demolition) - Advantages and Disadvantages

Scoring

BUILDING GOALS	●●●○○○
SITE GOALS	●●●●○○
COMMUNITY	●●●◐○○
SUSTAINABILITY	●●●◐○○
COST	●●●●●◐
PHASED OCCUPIED	●●●●○○
OVERALL	●●●●○○

Advantages

BUILDING/PLAN
- 20th century layout minimizes unprogrammed areas

PHASED OCCUPIED CONSTRUCTION
- Shortest time line of renovation concepts

SITE
- Can achieve redesign of bus loop and parent loop circulation

COMMUNITY
- Walkers do NOT cross any vehicle entrances
- Least impactful construction to surrounding community/neighbors

SUSTAINABILITY
- Reuses ALL existing building steel and concrete

COST
- Reduced initial construction cost

Disadvantages

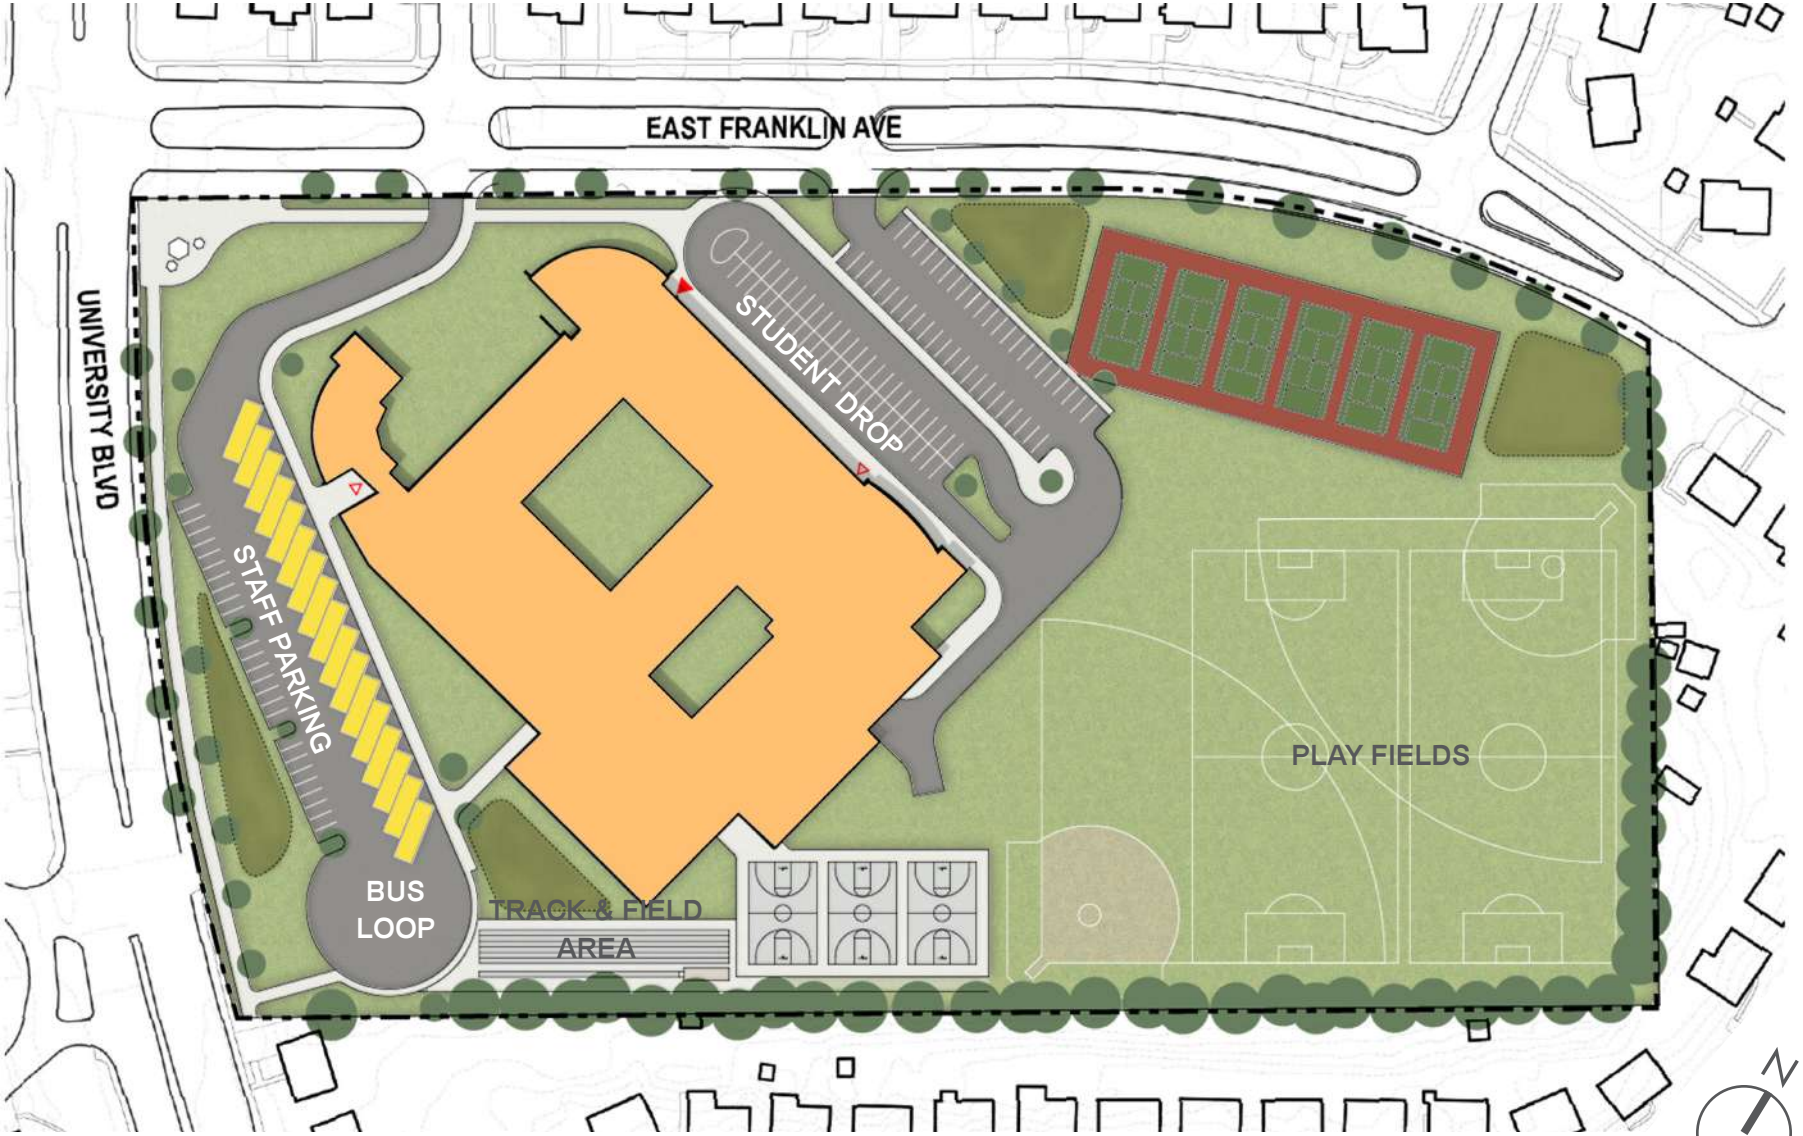
BUILDING/PLAN
- LEAST next generation learning opportunities
- Long, narrow lab spaces within renovated building
- Media Center and Sciences not integrated with grade level clusters
- Building services, Media Center, and Gym volume spaces are below Ed Spec standards
- Music is located on the second floor, above the cafeteria/stage level
- Grade clusters not closely defined

SITE
- Significant overlap of play fields
- Building service zone close to play fields

COMMUNITY
- Main entrance faces away from University Blvd.
- Play fields remain hidden, limiting after hours use supervision
- Hidden space tucked behind 1960s wing not addressed

SUSTAINABILITY
- May not be able to achieve Net Zero using all site mounted PVs
- Structural limitations prohibit the use of prefered high efficiency geothermal HVAC.

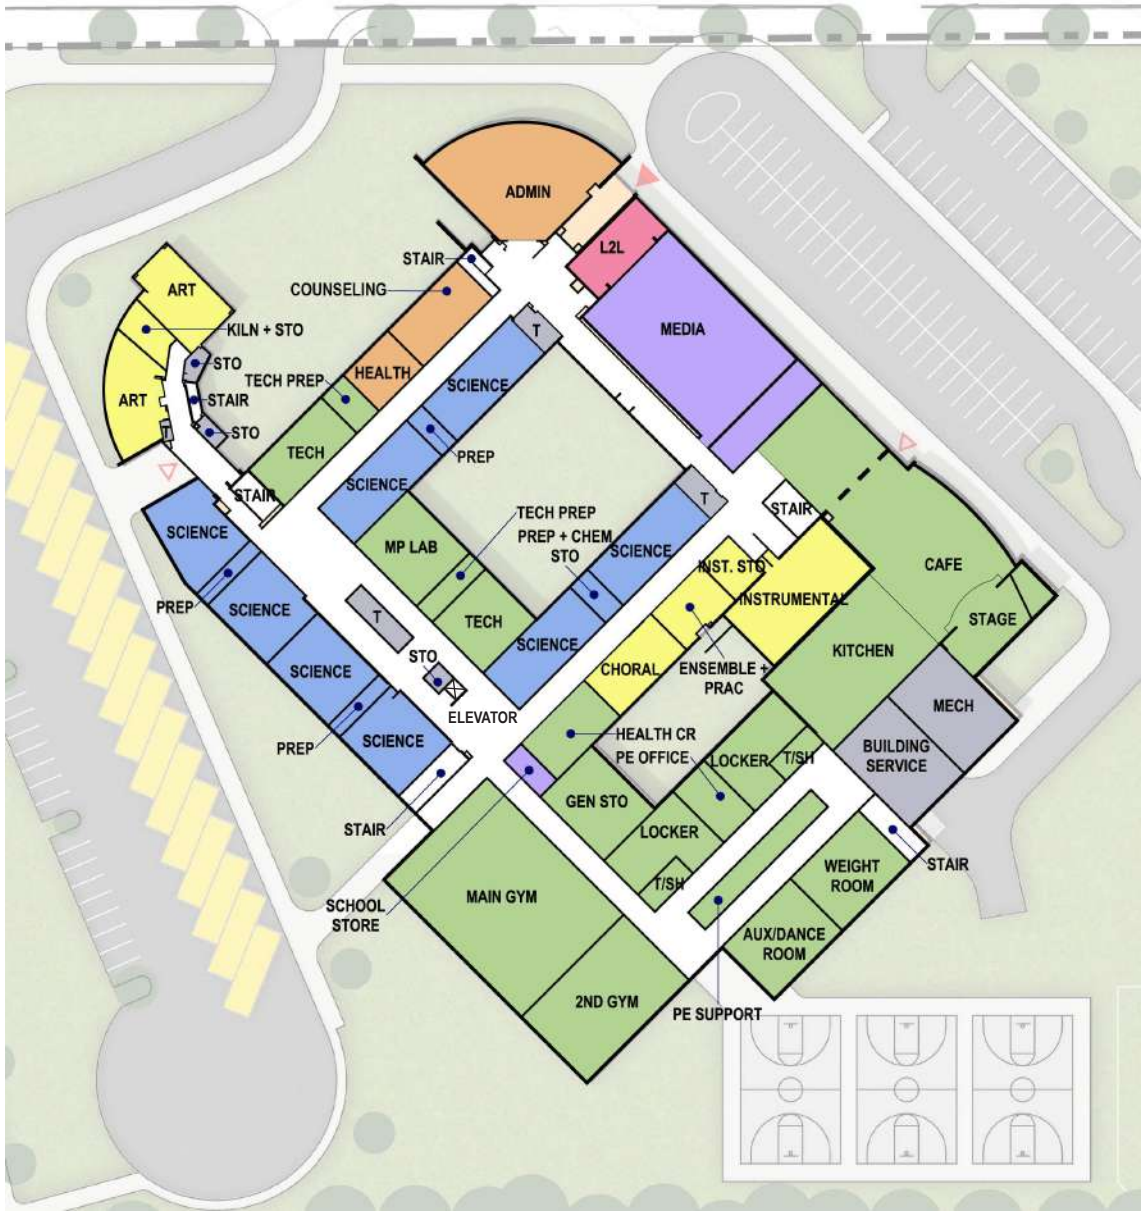
COST
- Highest building life cycle operation cost



Approach 2: Renovation / Addition (25% Building Demolition)

This strategy involves demolishing approximately 25% of the existing building footprint and constructing 57,630 GSF of new space. The remaining portions of the existing building will be renovated similarly to the renewal option, with the entire building envelope upgraded to a high-performance wall system. The new addition will house a brand-new gymnasium, a second gym, an auxiliary gym/dance studio, a weight room, locker rooms, and supporting gym facilities. It will also include new science classrooms and general classrooms on the second floor. The existing gym will be repurposed as the new media center, and the cafeteria will be expanded to meet the educational specification requirements. The main entry of the building will be relocated to face East Franklin Avenue and the student drop off loop. The building will feature two courtyards: one in the current location and a smaller one between the new addition and the renovated area. Both will be designed as outdoor learning environments. The facility will be designed to be Net Zero Ready, with the potential to accommodate future rooftop photovoltaic (PV) panels on the new addition.

Site improvements include relocating the bus loop to the east side of the campus near University Blvd., with access from East Franklin Ave. The existing bus loop will be converted into the student drop-off area and on-site parking. The play field will remain in its current location but will receive an updated layout. The tennis courts will be positioned in the northeast corner of the site, while the basketball court will be located to the south.



Demolition	39,996
Modernization	112,134
Addition	57,630
Total G.S.F.	169,764
Efficiency	66.0%

Scoring

BUILDING GOALS	●●●◐○○
SITE GOALS	●●●●◐○
COMMUNITY	●●●●○○
SUSTAINABILITY	●●●●○○
COST	●●●●○○
PHASED OCCUPIED	●●●◐○○
OVERALL	●●●●○○

Advantages

BUILDING/PLAN
- Grade clusters clearly defined

COMMUNITY
- Students do NOT cross drop of loop entrance
- Main parking lot behind school

SUSTAINABILITY
- Reuses MOST existing building steel and concrete

Disadvantages

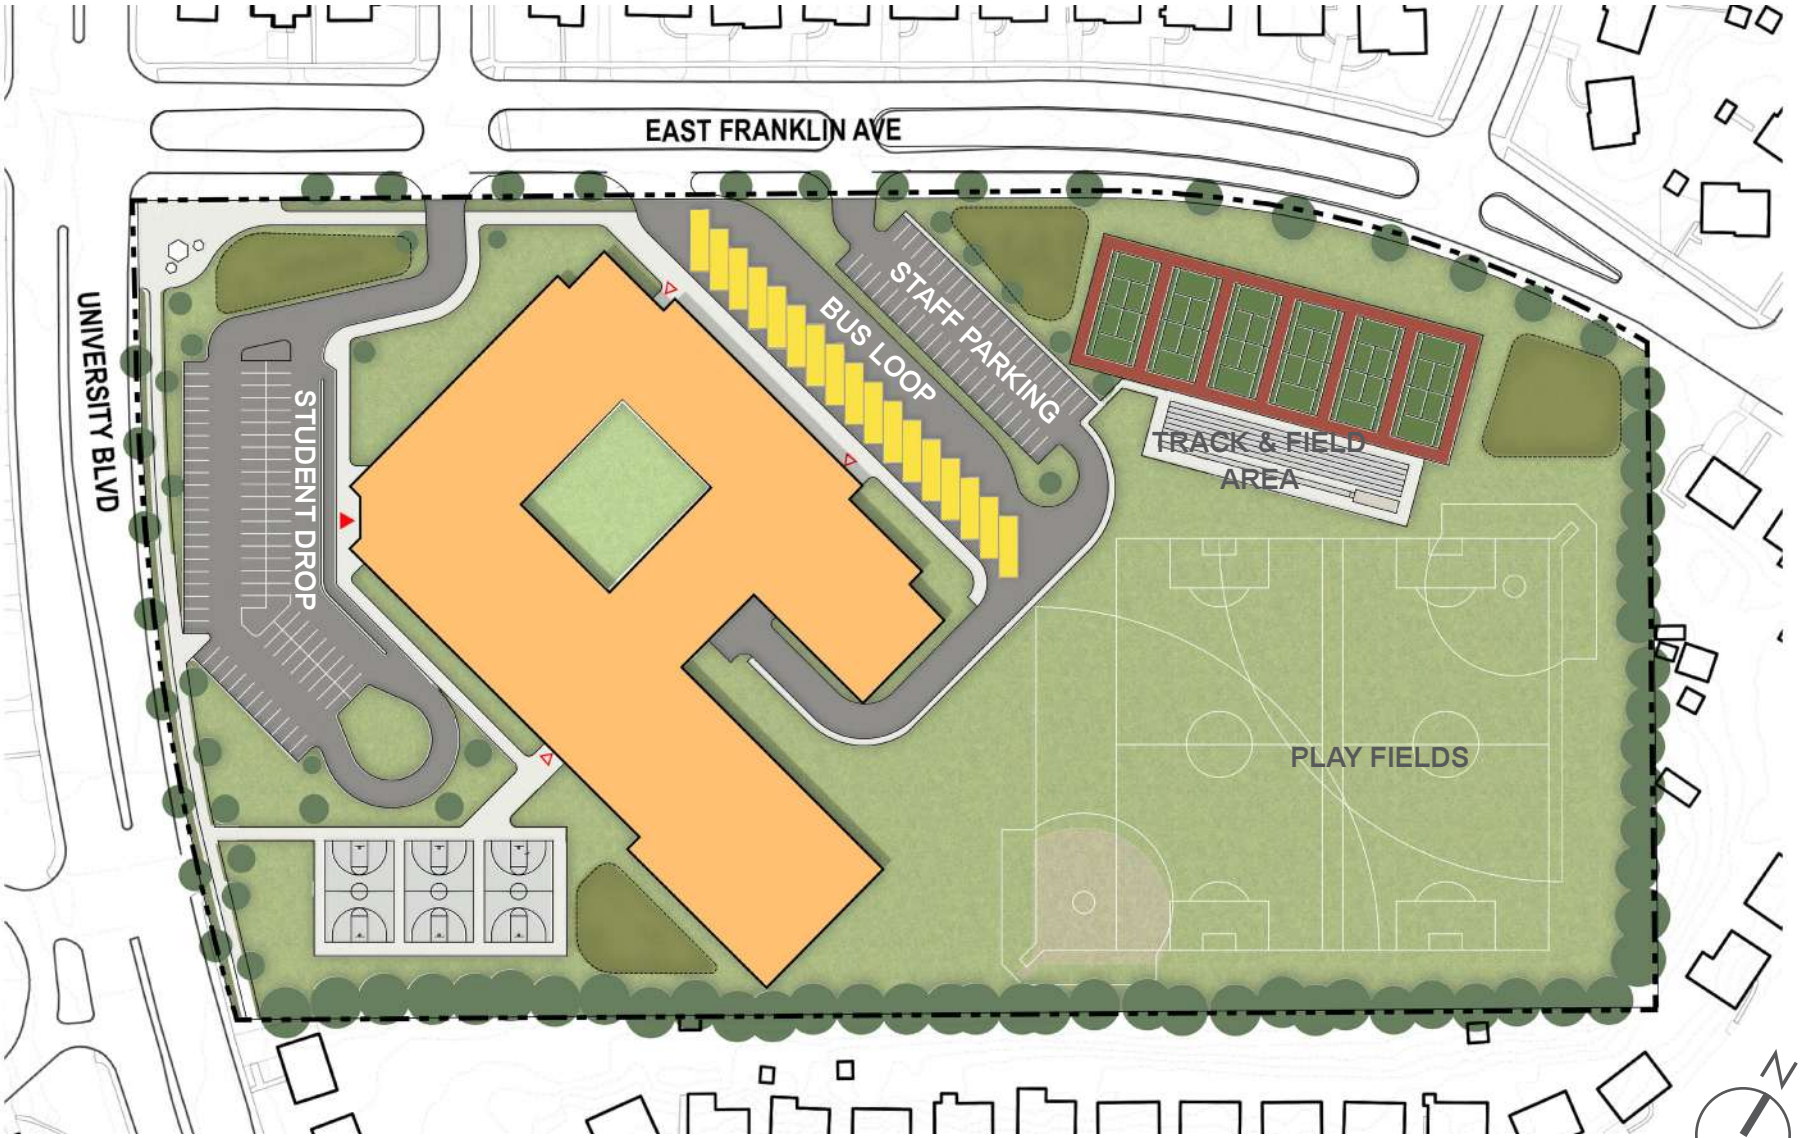
BUILDING/PLAN
- MINIMAL next generation learning opportunities
- Long, narrow lab spaces within renovated building
- Media center not integrated with grade level clusters
- Sciences not integrated with grade level clusters

PHASED OCCUPIED CONSTRUCTION
- Longest construction duration

COMMUNITY
- Main entrance faces away from University Blvd
- Play fields remain hidden, limiting after hours use supervision
- Hidden space tucked behind 1960s wing not addressed

SUSTAINABILITY
- Large amount of site mounted PV required to achieve Net Zero

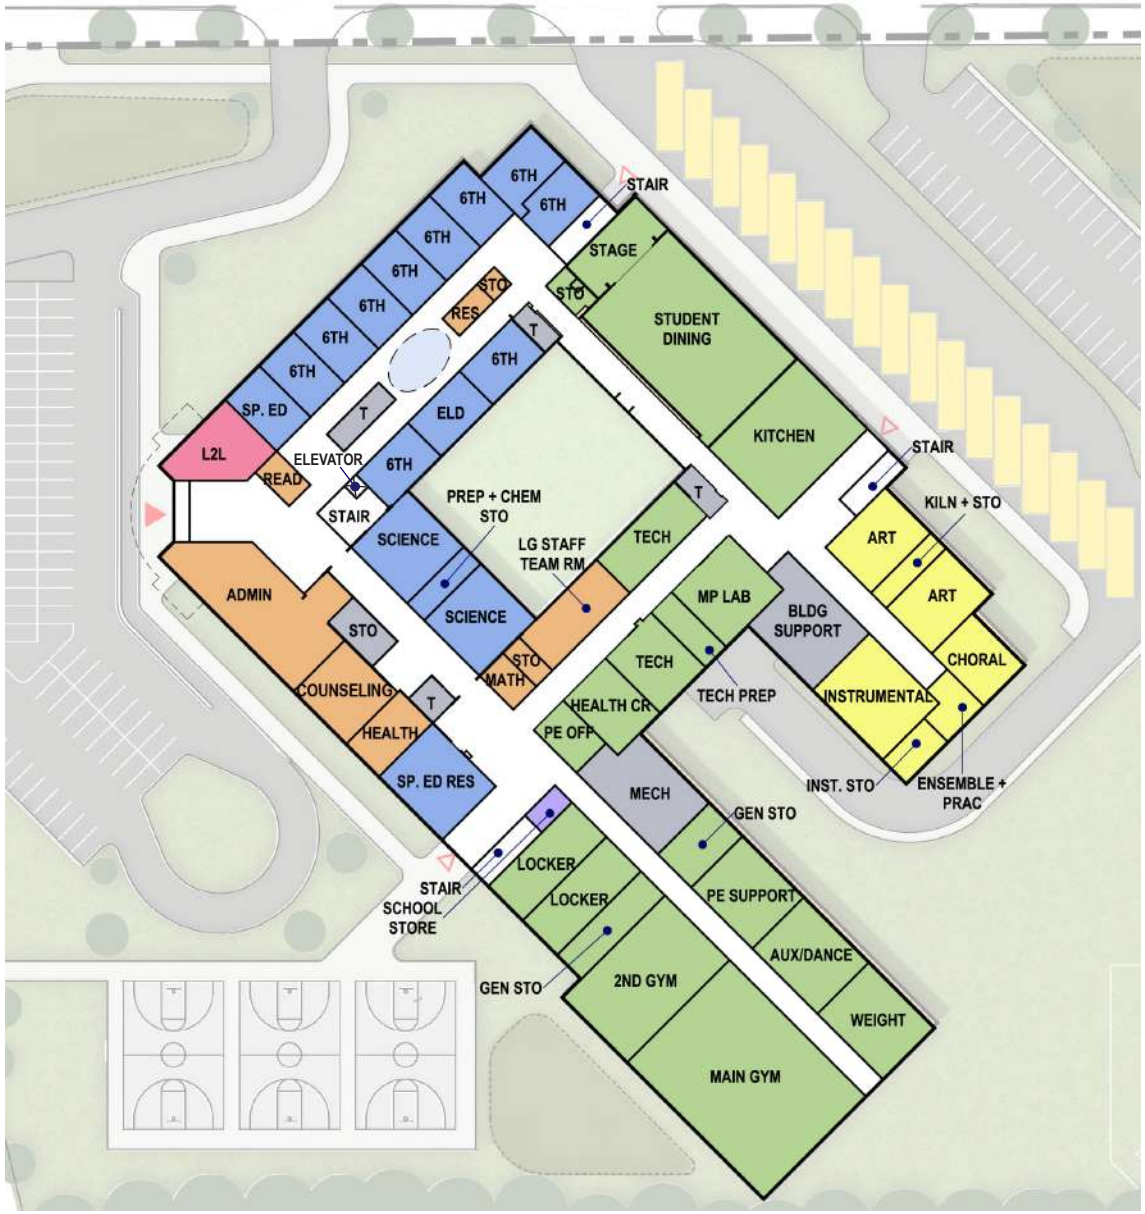
Description of Options (Continued)



Approach 3: Renovation / Addition (60% Building Demolition)

This strategy proposes demolishing approximately 60% of the existing building footprint and constructing 103,348 GSF of new space. The remaining portion of the building will be renovated similarly to the renewal option, and the entire building envelope will be upgraded with a high-performance wall system. The new addition aims to reface the building and reorient the main entry facing University Blvd. The new addition in the south will include a main gym, a second gym, an auxiliary gym/dance studio, a weight room, locker rooms, and supporting athletic spaces. It will also feature new science classrooms, an arts and performing arts wing, and additional general classrooms. The existing gym will be converted into a new cafeteria and kitchen.

The existing courtyard will be preserved and redesigned as an outdoor learning space. The building will be Net Zero Ready, with the potential to support future rooftop photovoltaic (PV) panels on the new addition. The play field will remain in its current location but will be reconfigured with an updated layout. The site plan retains the current bus loop location while reworking the student drop-off area and on-site parking to improve circulation and access.



Demolition	88,416

Scoring

BUILDING GOALS	●●●●○○
SITE GOALS	●●●●○○
COMMUNITY	●●●●○○
SUSTAINABILITY	●●●●◐○
COST	●●●●○○
PHASED OCCUPIED	●●●◐○○
OVERALL	●●●●○○

Advantages

BUILDING/PLAN
- SOME ideal superteam layouts
- Media Center integrated with superteams

SITE
- Ideal relationship between student drop off lane, visitor parking lot and main entrance

COMMUNITY
- Strong street presence for main entrance

SUSTAINABILITY
- Reuses MUCH existing building steel and concrete
- Sizeable area for rooftop PV array (not enough for full net-zero)

Disadvantages

BUILDING/PLAN
- P.E. program is remotely located
- Central plant, Kitchen and building services separated

SITE
- Kitchen loads from bus loop

PHASED OCCUPIED CONSTRUCTION
- Longest construction
- Select demolition of structural bays more structurally complicated

COMMUNITY
- Walkers cross drop off loop entrance
- Play fields remain hidden, limiting after hours use supervision

SUSTAINABILITY
- Some site mounted PV required to achieve Net Zero

Description of Options (Continued)

Approach 4: Replacement (100% Building Demolition)

This approach proposes demolishing the entire existing building and constructing a new two-story replacement building on the east side of the site. Building on a new footprint allows construction to proceed without disrupting the current facility. The design includes a single courtyard, thoughtfully planned as an outdoor learning space for the Science, Technology, Engineering, Arts and Math (STEAM) programs. The building layout promotes efficient loop circulation, enhancing visibility and movement throughout the school. Public functions are clearly defined along the south wing, while more private or academic spaces are located on the north side.

The new facility will be designed to be Net Zero Ready, with the potential to support future rooftop photovoltaic (PV) panels. The site layout will be reconfigured to place the play fields at the front of the campus, where the existing building currently stands. Student drop-off and on-site parking will be located to the west of the new building, accessible from East Franklin Ave. The main entrance will face both the student drop-off loop and University Blvd. A new bus loop will be located on the east side of the site, incorporating a switchback design to address the steep grade in the northeast corner.

SITE GOALS	●●●●●◐
COMMUNITY	●●●●●◐
SUSTAINABILITY	●●●●●◐
COST	●●●●●○
PHASED OCCUPIED	●●●●●○
OVERALL	●●●●●◐

Advantages

BUILDING/PLAN
- Idealized layout for 'superteam' as detailed in Educational Specification
- Loop circulation

SITE
- Maximizes site programming area

PHASED OCCUPIED CONSTRUCTION
- Shortest Construction Duration
- No Portables or Modulars needed

COMMUNITY
- Play fields visible for after hours use

SUSTAINABILITY
- Net-Zero Ready

COST
- Lowest lifecycle / operational cost

Disadvantages

PHASED OCCUPIED CONSTRUCTION
- No play fields during construction

COMMUNITY
- Walkers cross drop off loop entrance
- Building closer to Curran Road
- Prominent car infrastructure

SUSTAINABILITY
- No reuse of existing steel or concrete

Introduction

☐ This document describes the facilities that are needed for the Eastern Middle School educational program. The descriptions provide the architect with useful guidelines and are used by staff representatives when reviewing drawings and specifications for the facility.

☐ This school will be designed with a capacity for 1097 students, a core capacity for 1200 students, and is to have a 200-classroom addition master planned to bring it to its core capacity. The architect should show the location for the future classroom addition.

☐ The project is scheduled to open in August 202X. The site work will be completed by September 202X.

☐ The educational specifications are divided into three sections.

- The first section, the space summary, lists the type of spaces and square footage required when the project is complete.
- The second section describes the general design, location, and specific requirements for each type of space in accordance with Montgomery County Public Schools (MCPS) guidelines.
- The third section identifies additional program requirements for the school.

☐ The architect should show the location for relocatable classrooms, should they be required in the future. These units should be sited in a location where it will not cause conflict with the constructability of a future addition. The necessary utility connections, i.e. electrical power, fire alarm, public address, and data should be provided near the future location of relocatable classrooms.

☐ The architect will provide a space summary comparison between the programmed space requirements and the proposed after each phase of the project including but not limited to the schematic design, design development, and final design phase.

☐ This project is to provide the facilities to meet the educational specifications for a Grades 6–8 middle school program. Middle school organization assumes teams of about 125-150 students per team. Some middle schools organize the school by grade level, or “super team.” The organization of the school should be taken into the account during the design process.

☐ The design of the school should promote a collaborative approach for both teaching and learning. Flexibility of design should be provided to accommodate changing educational programs and pedagogy.

☐ The project will be designed to the meet current local and state sustainability guidelines.

General Planning Considerations

In the general planning of this building and development of the site, special consideration is to be given to the following comments and instructions.

Code and Guidelines

☐ The architect is expected to become thoroughly familiar with all national, state and local fire safety, life safety, and health code regulations and to follow applicable rules of the State Interagency Committee on School Construction.

☐ The building is to be accessible to the disabled within the meaning of the latest edition of the Americans with Disabilities Act and to conform to all the latest requirements of the *Americans with Disabilities Act Standards for Accessible Design*. (The regulation can be found at https://www.ada.gov/2010ADAstandards_index.htm)

☐ In addition to the ADASAG, the *Maryland Accessibility Code* (COMAR.05.02.02) also is required for public schools. (The regulation can be found at http://mdcodes2.umbc.edu/dhcd/access.htm).
Per COMAR 23.03.02: Regulation .29, all high school projects that include replacing or upgrading the electrical system should be designed and constructed sot that a designated public shelter area can be fully powered in the event of an emergency.

☐ The architect should refer to the MCPS Facility Guideline Specifications when noted. The Document can be found at:
http://www.montgomeryschoolsmd.org/departments/construction/publications/guidelines.shtm

☐ Special consideration should be given to energy conservation including total life-cycle costs. The current Department of General Service (DGS) requirements shall be applied as design criteria. Life-cycle cost accounting in accordance with DGS criteria is required. A statement on energy conservation must be a part of the preliminary plans submission. Additional details on energy conservation will be provided under separate cover.

☐ The architect should refer to MSDE 2006 *Classroom Acoustic Guidelines* to address the acoustical qualities for classrooms. Core learning spaces should include sound-absorptive finishes for compliance with reverberation time requirements as specified in ANSI, *Acoustical Performance Criteria, Design Requirements, and Guidelines for Schools* (ANSI S12.60-2002.)

☐ High quality materials are to be used in the construction. The architect should refer to the MCPS Facility Design Guidelines.

Educational Considerations

☐ The school should be designed to support flexible and collaborative learning environments. When possible, the architect should identify collaborative work spaces throughout the building. These spaces can be located near the instructional spaces as well as informal areas such as the library, hallways, etc.

- ☐ All spaces should be designed in such a way that can be adapted to changes in pedagogical changes in the future.
- ☐ The classrooms should be designed to accommodate various size groups. Each classroom should be readily adaptable for group work, various presentation formats, and should have maximum connectivity to outside resources.
- ☐ The shape of the classroom and the design of built-in features and storage areas should provide optimum net usable floor area. Elongated rooms and features that protrude into floor area, limiting flexibility, are to be discouraged. Rectangular shaped classrooms are preferred.
- ☐ For maximum instructional flexibility, large special instruction areas such as those provided for general music and multipurpose laboratories should be designed to allow easy conversion of some or all of the space for other kinds of instruction in the future
- ☐ Every teaching station, support space, and core area must be wired for computer and VOIP telephone, along with adequate electrical supply in compliance with Maryland Sate design guidelines for Technology in Schools and the MCPS Office of Technology and Innovation (OTI) guidelines. Facilities must be adaptable to accommodate rapid development in high technology and its equipment since educational program and organization in this field are dynamic. Space and power supply must be flexible to meet these changing needs.

Facility Considerations

- ☐ The architect is to design the spaces within 5 percent (plus/minus) of the net square foot guidelines provided in this document unless otherwise noted.
- ☐ The first impression of a building is important. The main entrance to the school should have a clear and inviting identity, and the architect should emphasize the entrance area through its design and landscape.
- ☐ The facility is to reflect an appealing visual, acoustic, and thermal environment and is to be properly furnished and equipped. Well-chosen colors and textures should be used.
- ☐ The design of the main lobby area needs to convey a feeling of warmth and welcome. The inclusion of a lighted showcase in which student work can be displayed is recommended.
- ☐ The main lobby should have a large overhead-animated electronic display board for messages and videos.
- ☐ Lighting must meet current guidelines and provide adequate levels.
- ☐ Carpeting should be limited to the principal's office, assistant principal's office and conference room in the administration suite and the main reading room of the library media center (LMC).

- ☐ The inclusion of lighted showcases to display student work should be provided in the corridors of the main entrance, art, technology education, gymnasium, and in each grade level area. They should be recessed into the wall with access from within a room and have an electric outlet.
- ☐ Staff work areas should be arranged to encourage interdisciplinary interaction.
- ☐ Noise and distracting sounds are to be minimized. In areas such as the multipurpose room and classrooms, which may be used for meetings and adult education, the sound of operating fans for ventilation should not interfere with instruction.
- ☐ A MCPS-designed alarm system will provide security for this facility. The architect will provide for this system in consultation with the Division of Design and Construction (DDC) staff.
- ☐ Some windows must be operable in each space in the building. Transmission of radiation through windows into various portions of the plant is to be considered in relation to heating and ventilating and in relation to planning the building for air conditioning. All instructional spaces should have windows, preferably exterior windows. If the design does not permit exterior windows, windows onto corridors should be provided.
- ☐ All windows should be equipped with window coverings. The specification for the window coverings will be provided by DDC. Screens on operable windows should be installed in all food related areas.
- ☐ Careful placement of glass is required to avoid excess heat gain in occupied areas.
- ☐ The entire school is to be air-conditioned.
- ☐ Zoning the plant for heating and air-conditioning should be related to after-hours use of various areas such as offices, gymnasium, cafeteria, and the instructional media center. Appropriate location of parking, corridor barriers, and toilet rooms is necessary for after-hours use. Some classrooms nearby the cafeteria should be zoned for after hour use as well.
- ☐ Core spaces such as the cafeteria, gymnasiums, and LMC should be easily accessible for community use and secure from the rest of the building after school hours.
- ☐ Special attention should be given to security measures within the building including location of security barriers in corridors, lockable doors to secure various sections of the building for after-hour use.
- ☐ Spaces that serve no real educational function, such as corridors, should be limited while at the same time assuring an easy to supervise and smooth flow of pupil traffic to and from the LMC, cafeteria, gymnasium, specialized centers, and support rooms.
- ☐ For security purposes, all doors into classrooms, conference rooms, offices, etc. must be designed with a sidelight window with shades. If a sidelight is not possible, then the door requires a vision panel.

- ☐ Noise and distracting sounds are to be minimized. In areas such as the cafeteria and classrooms, which may be used for meetings and adult education, the sound of operating fans for ventilation should not interfere with instruction.
- ☐ Some toilet rooms should be located so that they may be used during after-hour use.
- ☐ Bathrooms for staff and students should be located throughout the building. Some student bathrooms must be located near the cafeteria and gymnasiums.
- ☐ To the extent feasible, at least one inclusive restroom should be provided on each floor and in high-traffic areas for student use. These toilets should be designed with a non-locking door and one individual stall in each toilet room.
- ☐ Electric water coolers should be strategically located throughout the building and close to the restrooms. At least eight of the water coolers should have water bottle filling stations and should be located near high volume areas such as the cafeteria and gymnasium and on each floor.
- ☐ Corridors where lockers are installed must be a minimum of 10' in width.
- ☐ The number of lockers in the corridor should be equal to the core capacity plus 10% of the core capacity.
- ☐ The location of the elevator(s) must consider use by the student population, LMC staff, and after-hours users.
- ☐ A public address system is required in the facility. The architect and engineers should refer to the MCPS Facility Guideline Specifications for additional information.
- ☐ A building services call system is required.
- ☐ A room numbering system which is logical and understandable and which lends itself to electronic scheduling of room assignments for students is required.

Site Considerations

- ☐ A covered walkway from the bus loading area to the front door is desirable.
- ☐ The design of the building and grounds must provide for a secure environment for students and staff. Isolated areas should be minimized and natural surveillance encourage by eliminating visual barriers.
- ☐ Exterior lighting is to be shaded from neighboring properties and is to be operable as appropriate from both time and key switches. For major entrances, a doorbell should be installed.
- ☐ Separate controls on a time clock for illumination of walkways and parking lots, including parking areas for the stadium area are required.

☐ Landscaping and provision for outdoor watering are to be included. Planting is to include screen planting and those that may be needed for erosion control. Other landscaping to support energy conservation and to relate the building to the site with aesthetic appeal must be included.

Technology Framework

The latest technology should be integrated into every aspect of building. The architect should consult with the Office of Technology and Innovation (OTI) and the Division of Design and Construction (DDC) for the latest technology requirements. The architect must at a minimum plan for the following elements.

- ☐ Through the use of wireless access, local area and wide area computer and video networks, students should have access to each other, to schools throughout the county with similar capabilities, and to universities and government institutions throughout the world.
- ☐ Each classroom is to have one dedicated 20 amp electrical circuit for a charging mobile laptop cart.
- ☐ Each classroom will have an interactive teaching board at the teaching wall and computer network outlet (CNO) for the teacher's computer.
- ☐ Additional outlets to allow for charging of personal student devices should be provided in the classrooms and throughout the building.
- ☐ CNOs consisting of a flush mounted standard electrical box with 1 1/2" conduit to the ceiling space overhead should be located in all classrooms, offices, and other work locations according to the following general rules:
  - ☐ one CNO per office, staff office, planning room, etc. adjacent to telephone outlet
  - ☐ One CNO for VOIP system in the classroom
  - ☐ Two CNOs for student use located 3' apart along the back or side wall in each classroom.
  - ☐ Multiple CNOs in media center at circulation desk, reference areas, etc.
  - ☐ One CNO at each science lab workstation
  - ☐ All other areas such as the stage, bookstore, dining room, etc., where computers might be used.
- ☐ The number and location of telecommunication closets required to support the building-wide computer network is dependent on the size and geometry of the building. The layout of the telecommunication closets will be determined during the design phase of the project.
- ☐ Outdoor wireless access points need to be provided at the schools.
- ☐ Wireless access point needs to be provided at the main entrance of the school for a message board.
- ☐ CNOs for security cameras are required at the schools. The number and location will be determined during the design process.

Description of Facilities

The following is an approach to the design of new and modernized schools. Please refer to the summary of spaces for the square foot requirements for each space described below. Square foot allocations should be considered the standard to be followed, although minor deviations are allowed.

Standard Classrooms

- ☐ Classrooms should be arranged to support the grade level team organization for middle schools. Each grade's area of the building also will have three science laboratories and various instructional support spaces
- ☐ Each classroom should be designed to support flexible furniture arrangements that will support a variety of teaching and learning models.
- ☐ A lockable teacher's closet is to be provided for general supply storage, personal storage, and wardrobe.
- ☐ Every classroom must have computer outlets for two student workstations and one teacher workstation. The building information and communications distribution system and other aspects of the building design must comply with the latest edition of MSDE *Maryland Public School Standards for Telecommunications Distribution System*.
- ☐ Book storage should be located along the window wall with half of the cabinets equipped with hinged, lockable doors. A minimum of 60 linear feet should be provided for book storage.
- ☐ Each classroom should have between 48 and 60 feet of whiteboard. The architect should refer to the MCPS Facility Guideline Specifications for the main teaching wall layout.
- ☐ Map rails and tack rails are to be placed above all whiteboards. One flag holder attachment is to be placed on all map rails with four to six map holders.
- ☐ Each classroom should be equipped with window coverings. The specifications for the window coverings will be provided by DDC.
- ☐ Battery operated clocks will be installed.

Science Laboratories

Spatial Needs
Laboratory
Preparation Room
Chemical Storage

- ☐ Science laboratories should be designed in pairs, within team areas, with a preparation room preferably between pairs of labs.
- ☐ If the science labs are on separate floors of the building, they should be located near an elevator.
- ☐ The teaching wall should be on one of the long walls of the laboratory.
- ☐ Space should be designated in the laboratory to charge 2-3 laptop carts.
- ☐ The architect also should refer to the MSDE document, *Science Facilities Design Guidelines,* 1994 when designing the science laboratories.
- ☐ These rooms serve as a lecture/laboratory space and should be equipped with the basic equipment as listed below.
- ☐ Each science lab should have two exits.
- ☐ Seven student lab stations should be provided in a peninsula or island with trough style design, with hot and cold water, electricity, and gas are to be provided. The layout should ensure that a teacher can view of all student groups while in labs.
- ☐ The layout of the outlets, sinks, and gas jets should be designed to ensure that students to avoid crowding of student during and after investigations.
- ☐ One mobile bench (dry sink type) should be located under windows in each lab to facilitate work with plants.
- ☐ A three by five foot demonstration table should be located at the front of the room, but should not block the student view of the interactive teaching board. This demonstration table should be equipped with a stone sink, hot and cold running water, gas, and electricity.
- ☐ Twenty-four feet of whiteboard and a small tackboard are required. Wiring for an interactive teaching board should be provided in the center of the teaching wall.
- ☐ Two four foot project cabinets and two four foot storage cabinets, all lockable, are to be located in each room.

- ☐ One installed fume hood with full utilities (water, sink, gas, and light) is needed in each laboratory that fits in a cabinet (24" x 36"). A pass-through fume hood, shared with the prep room should be considered when possible.
- ☐ A safety station is to be installed, with shower, automatic shut-off eyewash, and drain with a sloped floor, and should accommodate persons with disabilities. The shower and eyewash should have a spring loaded mechanism. The eyewash station should have a plumbed drain.
- ☐ The safety station should be located fifteen to twenty feet away from the fume hood.
- ☐ Each room should be wired for tie-in to the school computer network at each lab station.
- ☐ There should be a master cutoff switch for gas, water, and electric in each room. The master cutoff switch should be strategically located so that it is not overly accessible to students, and should not be located near the exit door of the classroom. The cut-offs should operate electrically (as panic buttons) with a visible light indicator for gas and electric.
- ☐ In accordance with ADA guidelines, at least one science lab station in each laboratory should be made accessible to individuals with disabilities.
- ☐ Cabinetry for storage of laboratory equipment and microscopes should be provided in all of the labs.
- ☐ A sanitizing goggle cabinet, with 36 goggles, should be provided for all labs.
- ☐ A teacher's wardrobe should be provided.
- ☐ A location should be identified for a file cabinet.
- ☐ Locks with a common key are to be provided on drawers in special areas and the teacher demonstration table.
- ☐ Two pull-down electrical outlet fixtures should be provided in each lab: one in the center, one in the rear.

Preparation Rooms

- ☐ These rooms are to facilitate the preparation of student projects and short-term storage of projects, as well as to provide general storage.
- ☐ Each room is to contain adjustable locked storage and counter facilities, electrical hookup and space for a refrigerator.
- ☐ Easy accessibility to the science rooms is important and is a required for visual control of the rooms from adjacent rooms.

- ☐ These rooms should contain sinks equipped with hot and cold running water and a floor drain and workbenches equipped with electrical and gas outlets.
- ☐ A safety station is to be installed, with shower, automatic shut-off eyewash, and drain with a sloped floor, and should accommodate persons with disabilities. The shower and eyewash should have a spring loaded mechanism. The eyewash station should have a plumbed drain.
- ☐ Space and utilities should be provided in each prep room for a dishwasher.
- ☐ Emergency shut-off and telephone should be located in the chemical storage and prep room only.

Chemical Storage Room

- ☐ The chemistry storage room requires a steel flammable storage cabinet, with outside power vent, and an acid cabinet.
- ☐ This room should be located adjacent to the chemistry prep room.
- ☐ This room must have a 24-hour, 365 day per year exhaust system vented directly to the outside in compliance with the latest applicable codes.
- ☐ Sturdy, wood, and chemical resistant shelves with safety anti-roll lips on each shelf to prevent accidental roll-off.
- ☐ A safety center with shower and eye wash should be provided in the chemical storage room. If the chemical storage room is located adjacent to the prep room the safety center should located close to the chemical storage room.
- ☐ The eyewash station should have a plumbed drain.

Instructional Support Rooms

Spatial Needs
Team Workroom
Interdisciplinary Textbook Storage Room
Departmental Textbook Storage Room
Foreign Language Textbook Storage Room
Developmental Reading Room
Math Intervention Room

Team Workroom

- ☐ Two team workrooms are to be provided for each grade level, providing space in each for teacher desks or a large conference table.
- ☐ These rooms should be located next to each other and have an interconnecting door and a 4' x 6' window with window coverings between one another.
- ☐ A telephone will be located in these rooms.
- ☐ Storage and open/closed bookshelves to store teaching supplies and instructional materials should be provided.
- ☐ A work counter with sink and electric outlets is needed.
- ☐ Three feet of tackboard and four feet of whiteboard are required.
- ☐ Wiring for four computers in each team room is required.
- ☐ The school can consider to combine team rooms to support the team organization of the school.

Interdisciplinary Textbook Storage Room

- ☐ An interdisciplinary textbook storage room is to be provided for each grade level and is to be easily accessible from the classrooms and the team workroom and should have adjustable built-in shelving.
- ☐ These rooms must have adequate HVAC and lighting for flexible use by staff as office space.
- ☐ Secure storage for computers should be provided within this space and should include adequate electric power for recharging battery powered laptop computers.

Departmental Textbook Storage Room

- ☐ Three departmental textbook storage areas are to be provided with the same requirements as the interdisciplinary textbook storage rooms.

Foreign Language Textbook Storage Room

- ☐ A foreign language textbook storage room must be centrally located for foreign language materials.
- ☐ It needs to have adequate HVAC for flexible use as office space for staff.

Developmental Reading Room

- ☐ The developmental reading room should be centrally located.
- ☐ A standard teaching wall should be provided per MCPS Facility Guideline Specifications.
- ☐ Space for 10-12 student desks should be provided. Storage should be provided under the windows.
- ☐ Magnetic marker boards should be provided along all the walls in this room.
- ☐ If this room is located adjacent to a classroom or resource room, a window should be provided between the two rooms.
- ☐ A teacher's desk and wardrobe should be provided.

Math Intervention

- ☐ The Math Intervention Room should be centrally located.
- ☐ A standard teaching wall should be provided per MCPS Facility Guideline Specifications.
- ☐ Space for 10-12 student desks should be provided.
- ☐ Magnetic marker boards should be provided along all the walls in this room.
- ☐ If this room is located adjacent to a classroom or resource room, a window should be provided between the two rooms.
- ☐ A teacher's desk and wardrobe should be provided.

ESOL

Spatial Needs
ESOL Classroom
ESOL Team Room
ESOL Storage

If the school has an ESOL program, the following spaces should be provided.

ESOL Classroom

☐ The ESOL classrooms should be located in the academic areas of the building and be designed with the same requirements as a standard classroom.

ESOL Team Room

☐ The team room should have space for teacher desks or a large conference table.

☐ A telephone should be located in this room.

☐ Storage and open/closed bookshelves to store teaching supplies and instructional materials should be provided.

☐ A work counter with sink and electric outlets is needed.

☐ Three feet of tackboard and four feet of whiteboard are required.

☐ Wiring for two computers is required.

Special Education Facilities

Spatial Needs
Special Education Classrooms
Team Workroom
Resource Room
Speech & Language Support Room
Occupational Therapy/Physical Therapy Room
Accommodation Rooms

Special Education Classrooms

☐ The special education classrooms should be located in the academic areas of the building and be designed with the same requirements as regular classrooms.

☐ See the Additional Program Requirements section for specific special education programs at this school.

Team Workroom

☐ The team workroom should be designed exactly like the team rooms in the regular education areas but should be located adjacent to the support suite.

Resource Room

☐ The special education resource room needs open shelving, counter space, and closed storage.

☐ The room should be designed similar to a standard classroom.

☐ Space for 15-20 student desks should be provided.

☐ It should be located in association with the academic classrooms.

Speech Language Room

☐ This room requires a whiteboard, tack board, open and closed lockable storage, open shelving, and a lockable teacher wardrobe.

☐ Room for a teacher's desk, lockable file cabinet, and table to work with small groups of students is required.

- ☐ The speech/language room should be wired for access to one computer workstation each.
- ☐ The speech room must be located on the first floor and be acoustically treated.
- ☐ The speech room needs a 4’ x 4’ mirror mounted to the wall.
- ☐ The speech room requires a sink with counter space.

Occupational Therapy/Physical Therapy (OT/PT) Room

- ☐ Each room must have whiteboard that is mounted two feet off the floor.
- ☐ A tack board, open and closed lockable storage, open shelving, and a lockable teacher wardrobe are required.
- ☐ A sink with counter space is required in the OT/PT room.
- ☐ Room for a teacher's desk, lockable file cabinet, and assorted sized furniture with adjustable legs should be provided.
- ☐ The OT/PT rooms should be wired for access to one computer workstation each.
- ☐ The OT/PT requires a ceiling mounted hook, with a 12’ foot diameter clear space for hanging swings and other suspended equipment.
- ☐ The OT/PT room requires lockable storage with sufficient area to house large gross motor equipment (minimum of 35 square feet) such as therapy balls, scooter boards, walkers, balance beams, ramps, etc.

Accommodations Room

- ☐ Space for 8-10 student desks should be provided.
- ☐ Space for 2-3 computer workstations should be provided.
- ☐ Magnetic marker boards should be provided along all the walls in this room.
- ☐ If this room is located adjacent to a classroom or resource room, a window should be provided between the two rooms.
- ☐ A teacher’s desk and wardrobe should be provided.

Music Suite

Spatial Needs
Instrumental Music Room with approximately 400 sq. ft. of perimeter storage)
Small Ensemble Room
Practice Rooms

- ☐ The music area should be at the same level as the stage, if possible, to facilitate the movement of equipment from the music rooms to the stage.
- ☐ Each room is to be acoustically isolated from the rest of the school and the general/choral and instrumental areas separated by an acoustical barrier or wall with a Sound Transmission Classification (STC) of 50 or more.
- ☐ Listening is an important skill related to music education, and thus the need for quiet ventilation. Therefore, noise criterion (NC) levels of lighting and ventilating systems must not exceed NC 25 for the large rehearsal rooms and NC 30 for the practice rooms
- ☐ Both music rooms must have access to all computer technology including the LAN, and be equipped for a multimedia station.
- ☐ A water bottle filling station should be located in proximity to the choral and instrumental music rooms.
- ☐ Consistent heating, cooling and humidity control are required to maintain the instruments in these rooms. The architect is to ensure that the mechanical system is designed on a separate system to allow for 24 hour control in rooms that store instruments.
- ☐ Maximum security locks must be provided for each in this suite.
- ☐ Student toilet rooms should be located near the suite so that they might be used as dressing rooms. Each toilet room should have one stall plus dressing space.
- ☐ Recording and audio equipment with microphones, built in from the ceiling should be designed in each of the music rooms.
- ☐ At least four duplex electrical outlets must be provided along the front all of each music room.
- ☐ Multiple operable and reachable windows should be in the music rooms to accommodate for increased aerosols created through music practice.

Instrumental Music

- ☐ The instrumental music room must have a level floor.

- ☐ The specified 1,900 square feet is a minimum requirement and must not be reduced to accommodate other design needs. The room should be as square as possible in shape.
- ☐ 400 square feet of the instrumental music room should accommodate Wenger type instrument storage for assorted size instruments around the perimeter walls of the room. The room depth may be varied if it will provide better acoustics.
- ☐ Storage must accommodate large band instruments, concert percussion, marching percussion, and large orchestra instruments (cellos and acoustic upright basses).
- ☐ Acoustical treatment is needed so that the room is sound engineered for a band with maximum size of 80 members and a decibel level in the safe range, keeping in mind that the typical band produces decibels in the 100-120 range.
- ☐ A 16-foot ceiling is necessary to obtain proper volume.
- ☐ No supporting pillars or fabric folding doors are to be used in the room.
- ☐ An outside entrance should be near, but not in, the music suite if possible.
- ☐ A standard teaching wall should be provided per MCPS Facility Guideline Specifications. A double staff should be painted on one of the white boards.
- ☐ A teacher's wardrobe should be provided in this space.
- ☐ A work sink with countertop is needed for cleaning instruments.

General/Choral Music Room

- ☐ The general/choral music room is to have a ceiling of approximately 16 feet.
- ☐ The dimensions should be approximately 38' x 27'.
- ☐ The entrance should be a double entry door.
- ☐ The room is to seat approximately 70 students and be on one level.
- ☐ A standard teaching wall should be provided per MCPS Facility Guideline Specifications. A double staff should be painted on one of the white boards.
- ☐ A mirror on a non-teaching wall should be provided.
- ☐ A teacher's wardrobe should be provided in this space.

- ☐ Heavy-duty ceiling tiles should be used to assure maximum loss in sound transmission. Acoustical treatment is to provide a sound transmission loss of at least 50 decibels and a reverberation time of between 1.2 and 1.6 seconds.
- ☐ Adequate ventilation is needed.
- ☐ A music folder cabinet, horizontally slotted, with locking doors, with at least 100 horizontal compartments (15 inches high, 2 inches wide), and with facilities for numbering each compartment is required.
- ☐ Cabinetry must be adequate to store 20 electronic keyboards and 32 guitars in spaces 6 inches high, 40 inches deep, and 16 inches wide.

Small Ensemble Room

- ☐ The small ensemble room should be adjacent to and have access from both the general/choral room and the instrumental music room and have some windows to allow for supervision into both classrooms.
- ☐ This room can be designed to teach piano or music technology if the school teaches those classes.
- ☐ The room should be arranged so that it may be used as a small ensemble room or to teach sectionals.
- ☐ A standard teaching wall should be provided per MCPS Facility Guideline Specifications.
- ☐ A teacher's wardrobe should be provided in this room.
- ☐ Storage for instruments and folio cabinets for sheet music should be provided in this room.
- ☐ A four-foot wide door is required.

Practice Rooms

- ☐ These rooms need to be acoustically treated for isolation and reverberation.
- ☐ Rubber seals for sound proofing and thick solid doors to reduce sound transmission should be used.
- ☐ The doors need windows to allow for supervision.
- ☐ These rooms should be located with easy access to both the instrumental and choral rooms.

Visual Arts Suite

Spatial Needs
Art Room
Storage Room
Kiln Room

☐ The visual arts suite should be designed with outside doors to an art courtyard from the teaching station, if possible, and with the storage/office and kiln room adjacent to the classroom.

Art Room

☐ The room is to have adequate natural and artificial lighting and views as well as access to the outdoors.

☐ Ceiling track lights are to be provided with six to ten spotlights.

☐ Cabinetry and wall colors should be neutral.

☐ The design of the room must allow for placement of the art tables with adequate space between the tables for good circulation.

☐ Entrance doors must clear 36 inches.

☐ A lighted display case should be located in the hall outside the art room.

☐ An 8' W x 8'H tackboard with open space below for drying racks should be provided.

☐ Tackboards should be provided on the walls, as much as possible.

☐ A 4-6' wide bank of cubbies (height may vary) to accommodate 32 student backpacks and notebooks should be provided.

☐ Three large stainless steel sinks (18” x 40” x 14”) should be provided in the room. Each sink will have solid waste traps, two drains, two lever-controlled hot and cold faucets, adequate approximately 3’ of counter space for storage on either side of the sinks, and wall cabinets above (if sinks are not on an island). One sink needs to be ADA accessible. The counters should be made of a

☐ A standard teaching wall should be provided per MCPS Facility Guideline Specifications.

☐ Additional tackboard should be provided to ceiling and on the sides as space permits.

☐ Open space should be provided near the sink to accommodate five students working at five potters wheels.

- ☐ Ample electrical outlets, approximately every 4’ should be provided.
- ☐ Open and closed shelves are to be provided for storage of art projects, flammable materials, and reference books.
- ☐ Open space is to be provided in the art room for three banks of flat files cabinets (stacked) and two drying racks. 5-drawer flat file units are 40 ¾”W x 15 3/8”H x 28 3/8”D x 2” drawer depth. (NIC)
- ☐ Blackout shades are to be included on windows.

Storage Room

- ☐ This room should be designed with windows to the art room.
- ☐ As much open 24” deep shelving as possible should be provided in this room.
- ☐ Space should be provided for a teacher’s wardrobe and a filing cabinet.
- ☐ Immediately inside the entrance, a worktable 6-feet wide, 30 inches tall, 34 inches deep should be provided with built-in adjustable shelves below and 14-inch deep wall hung shelves above. This table will accommodate a 30-inch square paper cutter and storage of large art reproductions and papers below, in 3 banks of shelving units 8 inches on center, 20-inches wide (inside width).
- ☐ The storage room door should be lockable.

Kiln Room

- ☐ This room should be equipped with space and utilities for 2 kilns (to be included) and an exhaust fan hood.
- ☐ As much 18" deep, tall, adjustable metal shelving should be provided.
- ☐ A 36”W x24”D spray booth with exhaust and cabinets below should be provided.
- ☐ A small worktable with shelves above and below is needed.

Multipurpose Technology

Spatial Needs
Multipurpose Technology Laboratory
Computer Technology Laboratory
Preparation Room

☐ Sufficient lighting to create shadow less work surfaces.

☐ Ample electrical service and receptacles to accommodate computers, machines, and portable electric tools. Sufficient service shall be provided to accommodate flexibility within the studio with tabletop machinery and overhead pull-down receptacles, providing for machines and portable electric hand tools.

☐ If floor receptacles are provided, they shall be flush.

☐ Hallway walls should include interior glass for viewing into the laboratory.

☐ Windows starting 36” from the floor should be provided between all of the rooms in this suite.

Multipurpose Technology Laboratory

☐ A standard teaching wall should be provided in this room per DDC layout.

☐ A teacher’s desk and wardrobe is required for this room.

☐ Adequate ventilation system to remove airborne dust is required.

☐ Space for 32 students working at mobile work tables is required in this laboratory.

☐ Floor covering shall be non-slip tile.

☐ The room requires whiteboard throughout the room.

☐ A counter with wall and base cabinets and a wash sink should be provided along one wall.

Computer Technology Laboratory

☐ The computer laboratory should be zoned for independent air-conditioning during times when the rest of the building is closed.

☐ The minimum dimensions of the room should provide for an uninterrupted area of 25’ x 32’ so that the computer laboratory may be designed with the following requirements.

- ☐ Each computer laboratory should accommodate 32 student workstations.
- ☐ The layout should be designed with five to six collaborative groups of computers workstations that cluster around a monitor.
- ☐ Additional space for some worktables should be provided.
- ☐ File server and printers are to be located near teacher's desk or in office.
- ☐ A teacher's wardrobe and storage cabinets should be provided.
- ☐ The teaching wall should be designed to accommodate an interactive teaching board. The teaching wall layout will be provided by the Division of Construction.
- ☐ Marker boards should be provided in the laboratory.
- ☐ The architect should consult with the OTI/DDC for the latest technology requirements.
- ☐ Space and outlets should be provided for printers.
- ☐ The storage area is to include shelving and a work counter with electrical outlets and overhead and base cabinets.
- ☐ The architect should consult with the OTI/DDC for the latest technology requirements.

Preparation Room

- ☐ The preparation room should be located next to the Multipurpose Technology Laboratory.
- ☐ The door and wall should have windows into the Multipurpose Technology Laboratory to allow for supervision by the staff.
- ☐ One side of the room should be designed have a counter with wall and base cabinets.
- ☐ Storage area will be equipped with steel shelves and cabinets capable of storing a variety of instructional materials, supplies, special tools, equipment, and student projects.

Multipurpose Laboratory

Spatial Needs
Multipurpose Laboratory
Storage Room

☐ This space will be designed for flexible use by art, family and consumer science, and other elective courses.

☐ The design should include full computer access so that the space could be used as a computer laboratory.

☐ The teaching wall should be designed according to MCPS Facility Guideline Specifications.

☐ Perimeter counters should be provided along one or two walls of the laboratory with wall and base cabinets.

☐ Adequate electrical service and receptacles to accommodate computers, small and large appliances, and other electric machines are essential.

☐ Access from the laboratory to the storage room is needed.

☐ A kitchen area should have three kitchen units, (to be placed along one or two adjoining walls) each containing the following:

- ☐ Eight feet of countertop space including a stainless steel sink;
- ☐ Lockable base and wall storage with hinged doors, with a minimum amount of drawer space (2 drawers per kitchen);
- ☐ Wall oven;
- ☐ Ample electrical outlets along the counter to be used for small appliances and induction type stoves;
- ☐ Hot and cold water;
- ☐ One of the kitchens should be ADA accessible;
- ☐ One safety eyewash station should be provided in the lab; and
- ☐ Space for two residential refrigerators, accessible to the kitchens should be provided.

Storage Room

☐ The storage room should have the following:

☐ Lockable door with access to the teaching station;

☐ The room is to be equipped with metal shelving secured to the perimeter walls;

☐ Space and electrical and plumbing requirements should be designed for A heavy-duty washer and wall-vented dryer;

☐ Perimeter counters should be adjacent to the washer/dryer and be a minimum of 24” deep;

☐ Space for one residential refrigerator and one residential freezer; and

☐ A sink.

Physical Education

Spatial Needs
Gymnasium (equals 2 teaching stations)
2nd Gymnasium
Fitness/Weight Room
Auxiliary Gymnasium/Dance Room
Health Classroom
Locker Rooms
Inclusive Locker Room
Storage Rooms
Toilet Rooms
Shower/Drying Towel Rooms
Laundry Room
Offices
Common Planning Area
General Storage
Outdoor Storage
ICB Storage
Outside Storage Shed (See Site Requirements)

- ☐ Major entrance doors to the gymnasiums and locker rooms should be double doors with no center posts. Non-glazed doors throughout the entire area are preferred.
- ☐ Doors should be forty-eight inches wide.
- ☐ Storage closets should have no center posts and should be able to be held open to allow for easy movement of equipment.
- ☐ If design allows, operable windows in the gymnasiums should be provided.

Gymnasium

- ☐ The gymnasium is to have a wooden floor.
- ☐ The gymnasium requires fiberglass electrically operated folding bleachers to seat one-third of the maximum projected enrollment along one long side, leaving an area of 65 by 100 feet when folded.
- ☐ A 27-foot clear ceiling is required.
- ☐ An electrically operated folding partition with pass-through door is to be installed with convenient dual control system. The folding wall should fold to the bleacher side.

☐ Fixed equipment will include the following:

- ☐ Climbing ropes (2 with knots, 2 without knots)
- ☐ High bar with floor plates
- ☐ Insertion type (Senoh only) floor plates for volleyball and badminton game standards and gymnastic equipment (Senoh only) red aluminum combination uprights that work for both volleyball and badminton, therefore only requiring one size of poles and one size of sleeves. Each side of the gymnasium should be designed for four badminton/volleyball courts for a total of eight small courts.
- ☐ Wooden rings with hoist and safety straps
- ☐ Floor plates for uneven bars
- ☐ Scoreboard
- ☐ A clock with cage at each end of the gymnasium
- ☐ Archery net, the full width of the gymnasium, with hoist on non-bleacher side
- ☐ Six basketball baskets, with safety straps. Four should be cross-court. The two end baskets should have rectangular glass backboards and hydraulic rims. All baskets should be motorized and adjustable with key. There should be no doors under the basketball goals.
- ☐ Wall safety padding must be mounted under each basket.
- ☐ Provisions for reducing glare should be considered.
- ☐ Shielded metal halide lighting should be provided.
- ☐ Acoustics should be addressed.
- ☐ It is particularly important that ventilation function equally and quietly on both sides of the folding partition.
- ☐ All switches, fire alarms, etc. should be located in corners, covered with wire boxes, and be duplicated on each side of the folding partition.
- ☐ Each wall of the gymnasium should have four sets of electrical outlets.
- ☐ Painting and creative artistic wall graphics should be provided.
- ☐ The gymnasium should be equipped with acoustical deck, computer outlet, interactive teaching board, and sound system.

- ☐ A location should be identified for an interactive teaching board including the appropriate power and wiring.
- ☐ A 4' whiteboard should be provided on both side of the folding partition wall.

☐ A recessed water bottle filling station with filter should be provided outside each end of the gymnasium or integrated into an alcove within the gymnasium.

☐ A lobby with display case, tack board, and small storage closet should be provided adjacent to the gymnasium.

☐ Security doors should be provided to close off other parts of the building from the gymnasium/lobby areas.

☐ If the gym opens to the outside, a step-down entrance with concrete landing is needed.

☐ Emergency lights should be at least 12 feet from the floor.

☐ MCPS staff will provide gymnasium court markings.

☐ Plug-in service for score table controls shall be provided in the floor and need to be flush. Controls must be accessible when bleachers are in the open position.

☐ Attention should be given to the design of lighting fixtures so that they will not be damaged by indoor ball sports.

2nd Gymnasium

☐ The 2nd gymnasium is to have a wooden floor.

☐ A 27-foot clear ceiling is required.

☐ Fixed equipment will include the following:

- ☐ Insertion type (Senoh only) floor plates for volleyball and badminton game standards and gymnastic equipment (Senoh only) red aluminum combination uprights that work for both volleyball and badminton, therefore only requiring one size of poles and one size of sleeves. There should be four smaller badminton/volleyball courts in this gym.
- ☐ A clock with cage at each end of the gymnasium
- ☐ Two end baskets should be motorized and adjustable with key. There should be no doors under the basketball goals.
- ☐ Wall safety padding must be mounted under each basket.
- ☐ Provisions for reducing glare should be considered.

- ☐ Shielded metal halide lighting should be provided.
- ☐ Acoustics should be addressed.
- ☐ All switches, fire alarms, etc. should be located in corners, covered with wire boxes.
- ☐ Each wall of the gymnasium should have four sets of electrical outlets.
- ☐ Painting and creative artistic wall graphics should be provided.
- ☐ A 4’ whiteboard should be provided in this gymnasium.
- ☐ The gymnasium should be equipped with acoustical deck, computer outlet, interactive teaching board and sound system.
- ☐ A location should be identified for an interactive teaching board including the appropriate power and wiring.

☐ A recessed water bottle filling station with filter should be provided outside each end of the gymnasium or integrated into an alcove within the gymnasium.

☐ Security doors should be provided to close off other parts of the building from the gymnasium/lobby areas.

☐ If the gym opens to the outside, a step-down entrance with concrete landing is needed.

☐ Emergency lights should be at least 12 feet from the floor.

☐ MCPS staff will provide gymnasium court markings.

☐ Attention should be given to the design of lighting fixtures so that they will not be damaged by indoor ball sports.

Fitness/Weight Room

☐ The fitness/weight room should be located adjacent to the gymnasium area and the lockers rooms and have sixteen-foot ceilings.

☐ Direct access to the corridor is desired.

☐ Projections, posts, or other hazards are to be avoided.

☐ An electric deodorizer system and an excellent ventilation system must be provided.

☐ This room requires rubberized, resilient floor for weight training.

☐ 6'x12' mirror should be mounted on one wall of the weight room.

- ☐ A climbing wall should be installed along the other long wall of this room (need to confirm length of the wall)
- ☐ Functional fitness equipment (such as or comparable to MoveStrong Functional Fitness Equipment) should be installed along one of the long walls to include the following:
  - ☐ Monkey bar, cantilevered bridge system with wall mount that is 10 to 20 feet long with the following attachments:
    - ☐ Globe balls on end to attach additional pieces of equipment
    - ☐ Dip station upright post
    - ☐ Pull up bars
  - ☐ Monkey bars to extend the climbing walls and/or wall mount bridge
  - ☐ Battle rope pull (1-2)
  - ☐ With appropriate rope for middle school
  - ☐ Two or three stall bars mounted to the wall with the following equipment:
    - ☐ pull-up bars
    - ☐ G-loop anchors (4 per stall bar) for resistance bands
    - ☐ Ground rotational trainer (1)
  - ☐ Double triple-tier pull up bar (such as or comparable to the Wall FTS unit) with the following attachments: (This unit could replace on or two of the pull-up attachments above)
    - ☐ One or two storage trays (to hold medicine balls and dumbbells)
    - ☐ Functional training equipment suspended from the wall mount such as ropes, resistance bands, suspensions devices, or other devices
- ☐ Electric outlets should be located on all four walls.
- ☐ A small recessed lockable closet with shelving should be provided.
- ☐ A small 6' x 4' tack board and whiteboard are to be installed.
- ☐ Colored acoustical panels, auxiliary stereo sound system, audio and computer hookups and clocks with cages should be provided in this room.

- ☐ Wall graphics are to be specified by MCPS staff.
- ☐ Light switches are to be keyed.

Auxiliary Gymnasium/Dance Room

- ☐ The auxiliary gymnasium should be located adjacent to the gymnasium area and the lockers rooms and have sixteen-foot ceilings.
- ☐ Direct access to the corridor is desired.
- ☐ Projections, posts, or other hazards are to be avoided.
- ☐ A sprung wood floor should be provided to allow for dance and other activities to be taught in this room.
- ☐ A mirror should be provided along one long wall.
- ☐ The room should be able to accommodate mats for wrestling and other fitness activities.
- ☐ Colored acoustical panels, auxiliary stereo sound system, audio and computer hookups and clocks with cages should be provided in this room.
- ☐ Electrical outlets should be provided around the room.
- ☐ MCPS staff will provide paint colors and wall graphic layout.
- ☐ A sound system with the control panel should be installed in the storage closet.
- ☐ Light switches are to be keyed.
- ☐ A keyed electric hoist system must be installed to move and store wrestling mats.
- ☐ A room to store moveable dance barres in the future should be identified.
- ☐ A water cooler must be located in the hallway near this room.
- ☐ A small white board (4' x 6') and tackboard (4' x 6') should be installed.
- ☐ A battery operated clock with protective cover should be installed approximately 9' high.

General Storage Room

- ☐ The general storage room should be located in the gymnasium and needs to have the same ceiling height as the gymnasium. The general storage also needs to be easily accessible from the auxiliary gymnasiums and 2nd gymnasium.

- ☐ Mats, gymnastic equipment, and other physical education materials and equipment need to be accommodated.
- ☐ A small intramural athletic coordinator storage closet is needed near the gym (separate key).
- ☐ Two doors, each four feet wide and seven feet high with no thresholds or center mullions and heavy-duty hardware are required for the interior storage rooms.
- ☐ An outside storage area requires double doors that need to be seven feet high.
- ☐ All storage areas should include shelves, bins, pegs, and pulley system for storing goals.

ICB Storage

- ☐ These storage rooms are for use by community groups and should be in or near the main and 2nd gymnasiums
- ☐ It should include shelving on one wall as well as space for badminton and volleyball uprights.
- ☐ This room needs to be keyed separately.

Locker Rooms

- ☐ The locker rooms need to meet the following requirements:
- ☐ Interior double door entrances with maze to block vision into space must be designed.
- ☐ The locker rooms need an outside exit for use by physical education classes. This exit door must be keyed for re-entry by classes.
- ☐ A "step-down" with concrete landing should be planned.
- ☐ Some shelves should be provided near the entrance to the locker room for student books.
- ☐ Male and female locker rooms should be adjacent and located on the same floor so that the Physical Education Offices can have a connecting door and common connected planning room.
- ☐ To the extent feasible, MCPS should provide at least one inclusive changing facility into the design of new schools and school renovations, taking into account safety and confidentiality considerations in the design and location of the inclusive changing facility.
- ☐ Locker space should handle a total of 1,440 lockers evenly divided between male and female locker rooms. All lockers are to have padlocks and be 3 tiered 12" x 12" x 24". Locker rows should be situated for maximum supervision from the PE office area and be no higher than six feet.

- ☐ Several lockers with key-entry are needed for ADA accommodations.
- ☐ The locker rooms are to be well ventilated and include a deodorizer system.
- ☐ Clocks, tackboard, PA, and a water cooler must be provided in each locker room.
- ☐ Benches used for dressing purposes are to be secured to the floor with a single bench between locker rows.
- ☐ Full-length mirrors are to be provided on the ends of each locker bank with convenient electrical outlets.
- ☐ The locker room should reflect school colors.
- ☐ Storage within the locker area is to be near the office and should accommodate various physical education supplies, equipment, and furnishings. Shelving with bins and hooks will be specified later. Shelving must have lip to keep balls from falling.
- ☐ A hose bib should be located in each locker area. Appropriate drainage of the locker area is required.
- ☐ The floor surface must be a non-skid surface but smooth enough for thorough cleaning. VCT/rough surface tile is preferred.
- ☐ Toilet rooms are to be located in each locker area and are to contain lavatories, water closets, and/or urinals.
- ☐ Mirrors are to be installed over sinks.

Shower/Drying/Towel Room

- ☐ The shower area should be well ventilated and free from hazardous projections.
- ☐ Each shower room is to have three individual showers and one handicapped accessible shower, with modesty panels, a nonskid floor surface and recessed soap dishes.
- ☐ A central lockable cut-off valve for the showers must be provided in each locker room.
- ☐ The drying room, with nearby towel storage, should be located between the shower room and locker room and have wall hooks and a nonskid floor surface, preferably tile.

Inclusive Locker Rooms

To the extent feasible, MCPS should provide at least one all-inclusive changing facility into the design of new schools and school renovations, taking into account safety and confidentiality considerations in the design and location of the inclusive facility.

This space should be master planned in the building with the following features:

- ☐ Interior double door entrances with maze to block vision into space must be designed.
- ☐ Some shelves should be provided near the entrance to the locker room for student books.
- ☐ The locker rooms should be well ventilated and include a deodorizer system.
- ☐ The locker room should be adjacent and located on the same floor so that the Physical Education Offices can have a connecting door to the offices to allow for supervision of the space.
- ☐ Fifty lockers should be provided in this space with several lockers with key-entry are needed for ADA accommodations.
- ☐ Small private dressing areas are to be provided in the inclusive locker area with one meeting ADA requirements.
- ☐ A full-length mirror is to be provided in the room with a convenient electrical outlet.
- ☐ The locker room should reflect school colors.
- ☐ Plumbing should be roughed in for a future toilet room.
- ☐ The floor surface must be a non-skid surface but smooth enough for thorough cleaning. VCT/rough surface tile is preferred.

Laundry Room

- ☐ A laundry area with floor drain for a commercial washer and dryer and laundry tub should be included with shelving for towel storage.

Offices

- ☐ The offices need to be centrally located with access to both male and female locker rooms, have windows with window coverings for effective supervision of the appropriate locker room and have VCT floors.
- ☐ Each office requires a separate shower, toilet, sink, mirror with shelf over sink that is large enough to use as changing areas for the physical education staff.
- ☐ Six full-length lockers and a full-length mirror also should be provided.
- ☐ Storage is required for the offices.
- ☐ The offices need to be air-conditioned.

- ☐ Each office requires space for four desks with appropriate telephone, electrical and computer outlets and tackboards.
- ☐ A clock should be provided in each office.
- ☐ Each office is to be separated from the other office by a common planning room with access to both the common planning area and the hallway to the gymnasium.

Common Planning Room

- ☐ The common planning room requires access from both PE offices and the hallway.
- ☐ This space needs to be designed with locking kitchen type casework, counter with cabinets above and below, clock, phone, computer outlet, tackboard, and whiteboard.
- ☐ The space should be large enough to allow for a small conference table with six to eight chairs.

Health Classroom

- ☐ The health classroom should be designed with the same specifications as all academic classrooms on opposite sides of the room.
- ☐ This classroom needs to be located in close proximity to the physical education suite since the health and physical education teacher may be the same person and may have to supervise the locker rooms.

Computer Support

Spatial Needs
Storage Room/Office Area
Telecommunication Equipment Closets
Telecommunication Closets

☐ A secure storage room/office area is provided for storage of software and instructional materials. The combination storage room/office area is to be located near one of the computer laboratories and to be wired for building-wide network access. This room may house multiple file servers.

Library Media Center (LMC)

Spatial Needs
Main Learning Environment
Circulation Area
Instructional Area
Work and Production Area
General Storage
IT Systems Specialist Room
Multimedia Production Room

- ☐ The Library Media Center (LMC) is the information hub of the school.
- ☐ The latest version of the MSDE document, *Facilities Guidelines for Library Media Programs,* may be used as a reference for the design of the LMC.
- ☐ The LMC should be centrally located and easily accessible from the outside to allow the LMC easy access by outside groups during after school hours and in the summer.
- ☐ There should be easy access to the elevator.
- ☐ Toilet rooms should be located nearby the LMC.
- ☐ Sight lines are an important feature in the design of the LMC. Staff should have visual supervision of the entire LMC including the entrance from the LMC circulation desk.
- ☐ Flexible lighting with the ability to darken separate areas of the main resource room without affecting other spaces.
- ☐ If possible, the LMC should not be located below high noise level activities such as music, multipurpose technology education, cafeteria, or physical education.
- ☐ Multiple charging outlets need to be provided throughout the LMC and can be located in the floor, wall, and counters. Consideration should be given to the location of the circulation desk and seating areas that may require data and or power for the use of computers or staff/student work areas.
- ☐ Ideally, a countertop with outlets above the counter should be provided along one of the walls of the LMC to allow users to plug in portable devices. The counter should be located in an area that can be easily supervised and at a desk top height so that chairs can be interchanged in the library.

Main Learning Environment

This is the main area of the library that includes the stacks, instructional space, and circulation area.

Stacks (the area containing book shelves)

- ☐ The height of the low moveable bookshelves should accommodate three rows of books and the height should be at least 48 inches in order to accommodate picture and nonfiction books.
- ☐ Must be on wheels to allow for flexibility.
- ☐ Lights should be designed to allow for flexible arrangement of shelving in the main reading room.
- ☐ Different materials can be explored based on design and cost factors to include metal and wood shelving.
- ☐ Soft, comfortable seating should be provided for individual and collaborative student work and power should be provided throughout this area.
- ☐ Consideration should be given for shelving for special types of collections such as graphic novels, periodicals, and oversized books including picture books.
- ☐ Wall shelving should be maximized in this area, where possible (six feet when possible).
- ☐ Consideration should be given to provide opportunities to display and highlight student work and items in the collection.
- ☐ If there is a special program focus at the school, consideration should be provided for space for a collection that supports the specific program. The design team should consult the School Library Media Program Office for more information.
- ☐ Shelving is to be allocated on the average as follows:

	Linear Feet	**Shelving Space**
Non-fiction books	530	11”
Fiction Books	670	10.5”
Magazines (adjustable shelving that can accommodate magazine and/or books)	24	N/A
New Book/Interest Display	12	12”
Media Center Storage (20-24” depth)	As space allows	N/A

Circulation Area

- ☐ The architect needs to identify a location for a circulation desk that is large enough to accommodate two computer workstations and a networked printer to access the online catalog system.
- ☐ If space permits, storage cabinets should be provided in the circulation area for miscellaneous activities such as book repairs and holds.
- ☐ The circulation desk furniture package will include the following features:
  - ☐ a storage area for book return carts;
  - ☐ a book return container to catch the books;
  - ☐ supplies drawers;
  - ☐ a writing area unit; and
  - ☐ an area for a laser printer and supplies.
- ☐ The front height of the circulation desk should have an area that does not exceed 39" in height so that elementary students have access.
- ☐ There should be two means of egress for the circulation desk.
- ☐ The work surface for the staff member should meet ADA compliance with optimal ergonomics (keyboard height).
- ☐ Electric and Ethernet needs to be provided.
- ☐ The circulation desk should be placed in such a way that allows for two means of egress.

Instructional Areas: Main and Secondary and Collaboration Rooms

Main Instructional Area

- ☐ Sight lines are an important feature in this area. Staff should have visual supervision of the entire LMC from this area.
- ☐ A teaching wall area designed for an interactive board should be included.
- ☐ This area should include table and chair seating as well as soft seating so that the combination of seating totals 32. A variety of heights in the instructional area for students including standing and sitting options should be provided.
- ☐ This area should be carpeted

- ☐ The space should be easy to reconfigure for a variety of uses and groupings with the use of flexible furniture to support whole class, small group, and project based learning activities.
- ☐ The instructional areas need access to all forms of technology in the school including wireless access.

Secondary Instructional Area

- ☐ Additional informal instructional areas should be identified and located near the entrance of the LMC.
- ☐ The flooring in this area should be VCT or other hard surface material. This area may also be used during the day for lunch.

Collaboration Room(s)

- ☐ At least one small group collaboration room should be provided near the informal instructional area that allows for students to be visually supervised, but work independently.
- ☐ Data and electric to accommodate a collaboration technology table should be provided.
- ☐ This room should be glass enclosed.
- ☐ This space should be carpeted.

Work and Production Area

This area was formerly two distinct spaces: the library media specialist office and library media center workroom. The new combined space now supports the library media staff functions and is also used as a multipurpose space to include maker activities for student and school staff use.

- ☐ The work area should be delineated through the use of a different ceiling height or half wall.
- ☐ This room requires VCT floor material.
- ☐ Consideration for a counter for student use is preferable.
- ☐ Adequate electrical and data outlets are to be designed in consultation with the LM Specialist and central office staff members.
- ☐ It must contain a sink with hot and cold water, in addition to ample worktops for library media processing, student and teacher use.
- ☐ Space is needed for two staff work stations. This can be built-in or through furniture.
- ☐ Two lockable wardrobes need to be provided. See media center specifications available from the MCPS Facility Guideline Specifications.

- ☐ This space needs to contain open shelving to accommodate materials for student use such as maker space supplies and hands on activities as well as closed lockable cabinets for library media center supplies.
- ☐ Space should be provided for a networked school printer that is accessible by teachers and students.
- ☐ Electric and data should be located on all walls to provide flexibility in the use of the space.
- ☐ The work area includes space for collaborative planning and processing of library media materials.

Library Media Storage

- ☐ The library media storage room provides for storage of library media materials, equipment, seasonal materials and supplies.
- ☐ Electric and Ethernet should be provided to accommodate library media technology needs.
- ☐ A variety of shelving should be provided for instructional materials for teacher use such as DVDs, audio book resources, and equipment with some open space to accommodate computer cart storage.
- ☐ Varied depths of shelving should be provided including 6", 12" and 24" deep.

IT Support Specialist Room

- ☐ A room is needed in or near the IMC for the IT Support Specialist.
- ☐ This room should have multiple data and electrical outlets and space for the specialist to work on computers.

Multimedia Production Room

- ☐ This room should be located adjacent to the Library Media Center and will be used for staged videotaping and other multimedia activities.
- ☐ One wall should be designed to accommodate six editing stations.
- ☐ A chromakey green screen or green painted wall should be installed on one of the walls for video and photography use.
- ☐ This room does not require any special lighting for video production.

Student Activities Facilities

Spatial Needs
School Store
Student Government Storage Closet

- ☐ These rooms need direct access to a corridor and are to be near the cafeteria and/or gymnasium.
- ☐ Flow of student traffic to and from the area is an important consideration.

School Store

- ☐ The school store should be located near the gymnasium.
- ☐ It needs a counter, shelving and display areas.
- ☐ Special consideration is to be given to security and to accessibility so as not to block the corridor during heavy usage.
- ☐ A storage area should be located adjacent to the student store.
- ☐ A corridor showcase for display should be included.

Administration Suite

Spatial Needs
General Office
Principal's Office
Assistant Principal's Office
Assistant School Administrator Office
Administrative Secretary's Office
Workroom/Storage/Toilet Area
Storage
Conference Room
Copier Workroom
Student Support Center
Financial Secretary Office
Staff Development Office
Security Office
Testing Room

General Office

☐ The administrative suite must be located with good access from the main entrance of the school and visual oversight of the main entrance and bus drop-off area.

☐ The suite must be a natural first stop for visitors to the school and must, therefore, have direct corridor access. A security vestibule must be designed so that all visitors must enter the general office to check in before entering the school.

☐ Spaces need to be arranged for student and visitor flow and for efficient use by office staff.

☐ The attendance secretary should have a window to the corridor.

☐ The general office is to have easy access to toilet rooms, phone room, and coat closet.

Principal's Office

☐ This office requires an outside window, a public entrance connected to the main office, and a private entrance.

☐ The principal's secretary is to be located adjacent to the principal's office and have a private office.

☐ These areas are to relate effectively with each other as well as to the general office.

☐ The office should be planned for an L-shaped desk, computer, phone, file cabinets, and a small table for four to six chairs for small group meetings.

☐ This office requires a private toilet room.

Assistant Principal/Assistant School Administrator Office

- ☐ A student waiting area close to these offices should be provided.
- ☐ Each office should be planned for an L-shaped desk, computer, phone, file cabinets, and a small round table with four chairs for small group meetings.

Administrative Secretary's Office

- ☐ The administrative secretary's office should be located adjacent to the principal's office and close to the general office.
- ☐ The office should be designed with a window to the general office to allow for supervision of the space by the administrative secretary.
- ☐ This office should be planned for an L-shaped desk, computer, phone, file cabinets, and chairs to serve as a waiting area.

Workroom

- ☐ The workroom contains cabinetry with sink, shelving, and workspace, including electrical outlets suitable for preparing various releases and for copying and other types of paper work.
- ☐ A sink cabinet and space for full size refrigerator are to be located in this room.
- ☐ Staff mailboxes are to be readily accessible but not visible from the main entrance and are to contain 100 boxes at least 12 inches wide plus five additional boxes that are somewhat larger.
- ☐ The workroom is to have a space and outlet for a small copier machine.
- ☐ Offices, workroom, storage, and toilet rooms are to serve the general office employees.
- ☐ The storage room is to relate well with the workroom and need not be directly accessible to the corridor
- ☐ A coat closet, phone room and staff toilet rooms for administrative office staff and visitors should be included.

Conference Room

- ☐ The conference room is to be located in relationship to the principal's and assistant principals' offices and should be directly accessible to the corridor.

- ☐ The conference room is to have a whiteboard installed and data outlet for monitor, computer, and phone outlets.

Copier Workroom

- ☐ The copier workroom is for staff use and should be located conveniently for teacher use.
- ☐ It should not be located in the media center.
- ☐ This room requires storage cabinets, shelving, and lockable cabinets for paper, ink, and other supplies.
- ☐ Proper ventilation is required in this room.

Student Support Center

- ☐ This room should be located adjacent to the main office suite.
- ☐ Space should be provided for 10-12 student desks.
- ☐ A teaching wall and teacher's desk should be provided in this room.
- ☐ Ideally, this room should be located near the Administration or Counseling Suites but not in the suite.

Financial Assistant's Office

- ☐ This office should be located in the administrative suite.
- ☐ The office needs space for a desk and file cabinet, and requires tackboard and wiring for a computer.

Staff Development Office

- ☐ The staff development office may be centrally located and near the administrative suite.
- ☐ This office needs a space for a desk, file cabinet, and round table with chairs.
- ☐ The office also needs whiteboard, closet, and video, voice and data outlets.

School Security Office

- ☐ This office should accommodate up to 4 staff persons and should be located directly off a main corridor.
- ☐ Space is needed for a table and chairs to meet with students.
- ☐ This office must have lockers and secure storage.
- ☐ This office suite must accommodate the cameras and accompanying communication equipment for a visual monitoring system.

Testing Room

- ☐ This room should be designed as a secure room for testing materials and should have a counter with lockable cabinets above and below.
- ☐ This room needs acoustical treatment as well as video, voice, and data outlets.

Command Center

- ☐ An interior room in the school needs to be designated as the command center for shelter in place/lock down emergencies. In many schools, the workroom in the administration suite may serve this purpose. The room cannot be on an outside wall.
- ☐ The room designated as the command center must have all data and communication equipment including electrical and data outlets and public address (PA) system.
- ☐ The PA console should be located in the room that is designated as the command center.
- ☐ Window coverings such as mini blinds or roller shades must be provided for all windows and doors to the command center.
- ☐ In secondary schools, the security camera monitors should be located in this area.
- ☐ The space designated as the Command Center must be large enough to accommodate up to six staff persons.
- ☐ Storage space is needed for the shelter in place/lock down emergency kit.

Counseling Suite

Spatial Needs
Counselor's Office
Waiting Area
Conference Room
Records Room
Itinerant Staff Office

- ☐ The counseling suite should be separate from the administration suite, but easily accessible from the main entrance.
- ☐ The suite consists of a waiting area with space for the secretary, seating for visitors, storage for office supplies and a coat closet, the conference room, the records room and counselors' offices.
- ☐ The records room is to be 1-hour rated.
- ☐ The records room is to have no windows.
- ☐ These spaces must have window walls, doors with windows, and be designed so that students can find them easily and feel free to drop in between classes.
- ☐ The waiting area must be wired for the secretary's desk and not be designed as part of the corridor/hallway to the main office.
- ☐ Window coverings must be provided on all windows within in the suite to provide privacy when required.

Counselor's Office

- ☐ Counselor's offices should be provided at the rate of one per every 250 students.
- ☐ Each office should be planned for the counselor's desk with computer, phone, file cabinets, and a small round table with four chairs for small group counseling.

Conference Room

- ☐ The conference room is to be accessible from the waiting area and corridor.
- ☐ The conference room should seat 12-15 people.
- ☐ The room requires a whiteboard and computer and phone outlets.

Itinerant Staff Office

- ☐ This room needs space for a teacher's desk file cabinet and computer and phone outlets.
- ☐ This room needs a space to administer tests to students including a student computer workstation.
- ☐ This room also may be used to accommodate post-test conferences with teachers and/or parents.

Records Room

- ☐ The records room is to accommodate shelving, files, and other record cabinets for use by both administrative and counseling personnel.
- ☐ It must, therefore, relate to both areas, yet be designed to afford security of private records and files.
- ☐ It should be located in the counseling suite.

Health Services Suite

Spatial Needs
Waiting Area
Treatment/Medication Area
Office/Health Assessment Room
Health Assessment/Isolation Room
Rest Areas
Toilet Room
Storage Room

- ☐ The Health Services Suites should be in complete compliance with COMAR 13A.05.05.10A.
- ☐ The architect should refer to MSDE document, *School Health Services,* June 2002 for specific utility information.
- ☐ The health suite must meet accessibility requirements of the ADA, and at a minimum, include spaces for waiting, examination and treatment, storage, resting, a separate room for private consultation and for use as the school health services professional's office, a toilet room, and lockable cabinets for storing health records and medications.
- ☐ The health suite is to be located near the administrative area, preferably adjoining, with direct access to a main corridor for emergency access and egress.
- ☐ A tack board is to be installed just outside of the door to the health suite.
- ☐ A designated school health services professional from the Montgomery County Department of Health and Human Services (DHHS) must be involved in the planning of the health services suite.
- ☐ The suite should be designed to provide easy visual supervision of all the spaces by the health services professional.
- ☐ The health services suite must have a window into the general office so that office staff may monitor the room when heath staff is unavailable.
- ☐ The health room must also have a door to the corridor.
- ☐ Ventilation is important throughout the health suite.
- ☐ A window to the outside, if possible, is preferred.
- ☐ The countertops should be seamless to aid in maintaining sanitary conditions.
- ☐ The floor finish should be an easily cleaned non-absorbent material. Carpet should not be used in any areas of the health suite.

- ☐ A non-porous ceiling material should be used. Vinyl-coated ceiling tile or painted drywall is an acceptable choice.
- ☐ If any of the areas are enclosed then glazed walls areas should be provided.
- ☐ The health suite requires wall and base cabinets and lockable file cabinets for storing health records. A portion of these cabinets must be lockable to store medications, medical supplies, and equipment.
- ☐ Student traffic is to be kept close to the door, with cross traffic minimized, and good supervision of the room from within as well as from the general office area is to be provided.
- ☐ Two doors to the suite are required to move students through waiting and treatment areas during a mass procedure. One door is normally kept closed.

Waiting Area

- ☐ The waiting area is to have space for up to ten chairs.
- ☐ A small tackboard should be provided in the waiting area to display health care and other information of importance to students and staff.
- ☐ A pamphlet rack, and a 24-inch x 48-inch table, should be provided.
- ☐ Two telephone jacks are to be installed in the waiting area.

Treatment/Medication Area

- ☐ This area should be adjacent to the waiting area and toilet room to facilitate the efficient flow of students.
- ☐ This area should have a kitchen type sink with cabinets above and below (including a locked medicine cabinet), a 36-inch high countertop, and a small residential style refrigerator/freezer to store medical supplies and foods.
- ☐ The freezer should have an icemaker.
- ☐ The treatment area also requires a computer.
- ☐ This area also needs a scale, floor lamp, and an area for two chairs

Office/Health Assessment Room

- ☐ The room requires one computer, fax machine, and electronic connection and physical proximity to a copy machine.

- ☐ The spaces used for consultation and examinations must be enclosed with sufficient acoustical isolation to ensure complete privacy and confidentiality.
- ☐ A small sink, with cup, towel, and soap dispensers should be provided.

Health Assessment/Isolation Room

- ☐ This room needs to have access and have a door to the corridor.
- ☐ The spaces used for consultation and examinations must be enclosed with sufficient acoustical isolation to ensure complete privacy and confidentiality.
- ☐ A small sink, with cup, towel, and soap dispensers should be provided.
- ☐ In the rest area and Isolation Room, supplementary power ventilation capable of 20 changes per hour should be provided, with control by means of a separate switch within the health suite.
- ☐ A window is needed in this room to provide supervision from the treatment area and office. The design of the window also needs to ensure that only staff can see into the room.

Rest Area

- ☐ This area should not be fully contained rooms but rather areas that can provide privacy for each cot with a draw curtain on a ceiling track.
- ☐ The rest area needs space four cots with individual light switches for wall sconces, electrical outlets 16” from the finished floor, and bedside cabinets for each rest area.
- ☐ In the rest area, supplementary power ventilation capable of 20 changes per hour is to be provided, with control by means of a separate switch within the health suite.

Toilet Rooms

- ☐ Two separate ADA toilets should be provided.

Storage Room

- ☐ The storage area is to have space sufficient for a four drawer locked file cabinet, a wardrobe for coats, and a wheelchair, and a space for forms and supplies.
- ☐ A minimum of 12 linear feet of wall and base cabinets should be provided.

Staff Facilities

Spatial Needs
Staff Room
Privacy Room

Staff Room

- ☐ The staff room provides teachers with a place to rest, plan, study, and think together.
- ☐ The staff room should contain a compact built-in kitchen with six linear feet of counter space for a microwave and sink and a space for a refrigerator (NIC).
- ☐ Toilet rooms associated with the staff room are to be provided for staff and be located in a corridor just outside of staff room.
- ☐ A phone booth is required.
- ☐ Acoustical treatment is important.
- ☐ This area should have exterior windows and door to outside staff patio if design allows.
- ☐ Computer access should be provided.

Wellness Room

- ☐ A small, enclosed room with countertop and space for one chair is needed for a telephone.
- ☐ An electrical outlet should be provided above and below the counter and the counter should be tall enough to accommodate a small refrigerator.
- ☐ A mirror should be provided above the counter.
- ☐ A small sink is needed for hand washing and washing of personal items.
- ☐ This space needs to be accessible to staff with disabilities.

Food Services Facility

Spatial Needs
Student Dining Area
Stage
Storage
Chair Storage

Student Dining

- ☐ The student dining area should be capable of seating one third of the student body at cafeteria tables or one half in rows of chairs.
- ☐ Acoustics, ventilation, and color are important considerations in the cafeteria.
- ☐ A public address system should be built-in.
- ☐ An LCD monitor should be included in the dining area.
- ☐ Tackboard is to be placed near the entrance.
- ☐ Care is to be exercised in the location of windows in relationship to the location of tables and chairs.
- ☐ Trash from the dining area must not flow through the kitchen.
- ☐ Student toilet rooms must be located near the cafeteria and have good sound absorption.
- ☐ Outside access from the cafeteria to a paved area should be considered in the design of the student dining area.
- ☐ There must be a water bottle filling station in the cafeteria.
- ☐ A listening assistance device for the hearing impaired should be included in the cafeteria.
- ☐ Security gates are to deny access to other parts of the building from the cafeteria/stage/lobby areas.
- ☐ An outside entrance to the cafeteria for easy access in the evening and an outside eating area with permanent trash cans (preferably a courtyard) are desirable.
- ☐ Consideration should be given to the use of electronic menu boards.

Stage

- ☐ The stage should be 32” high from the floor of the cafeteria to allow for 8” coursing.

- ☐ The stage should include closed storage for an upright piano and some storage for costumes and flats if possible.
- ☐ The stage and backstage areas must be accessible to individuals with disabilities and be accessible from corridors and the cafeteria.
- ☐ Wing space should be provided for theater productions.
- ☐ The stage space must have adequate exhaust ventilation and lighting for other uses.
- ☐ The stage should be equipped with stage curtains and a stage sound and lighting system.
- ☐ A whiteboard and data for an interactive teaching board should be included along the back wall of the stage.
- ☐ A large electric pull down screen should be designed in front of the stage and behind the short curtain to be used for assemblies.
- ☐ Electrical and microphone outlet should be provided at the front wall of the stage house.
- ☐ Floor outlet should be located in the cafeteria, approximately 15-20', or as appropriate, for use of a projector on the screen.

Chair Storage

- ☐ Storage for 1,200 chairs on racks and for stage equipment needs to be provided
- ☐ Forty-eight inch doors are required on the interior storage rooms.

Kitchen

Spatial Needs
Food Preparation
Dry Food Storage
Refrigerator
Freezer
Serving Area
Office
Locker/Toilet Room
Loading Platform
Receiving Area
Chemical Storage Room

- ☐ The kitchen is to have direct access from the loading dock, with a walk-in freezer and walk-in refrigerator.
- ☐ Walls and ceilings are to be light in color, smooth, impervious to moisture, easy to wash, and easy to keep in good repair.
- ☐ An easy to mop floor such as, slip resistant quarry tile floor or polyurethane cement flooring system is required. If quarry tile is used then the color of grout should be the same or darker than the color of the floor.
- ☐ Kitchen should be linked to the security monitoring system and school intercom.
- ☐ A wall clock at serving line should be provided and should be linked to master control.
- ☐ When designing the kitchen and related spaces, special consideration should be made to temperature and humidity control and traffic.
- ☐ Control railings may be portable.

Serving Area

- ☐ The serving area shall consist of four food serving areas that may vary from school to school.
- ☐ Serving lines should be secured when not in use.
- ☐ Supervision is an important consideration in the serving area.
- ☐ Unobstructed sight lines are necessary for one staff member to effectively supervise students.
- ☐ Control of serving lines should be designed to facilitate rapid serving of food.

- ☐ A dedicated circuit for cash registers is required with under floor conduit for intercommunication links.
- ☐ Temperature and humidity control and efficient traffic movement throughout are required.
- ☐ Natural ventilation should be provided.
- ☐ Also of importance are the following:
  - ☐ Meeting current health and sanitation codes
  - ☐ Providing louvered shelving in the storage rooms
  - ☐ Designing trash storage completely separate from kitchen and dock areas
  - ☐ Locating the loading and receiving area, with sheltered dock and with access to the storage and preparation areas, separate from other school receiving
  - ☐ Considering the relationship and traffic movement within the dining area of the serving line to the remainder of the kitchen area
- ☐ Providing acoustical treatment to preparation and serving areas
- ☐ Receiving door must be 48" wide, self-closing, with peephole, and doorbell to manager's office.
- ☐ All windows must have screens.

Preparation Area

- ☐ Space needs to be provided for cook, baker, and beverage/salad/sandwich prep areas.
- ☐ Trough-type drains at steamers, hand sinks in each prep area with soap and towel dispensers, and automatic wash filtered hood are required.
- ☐ Consideration of the utility distribution system is needed.
- ☐ Filtered hood with automatic wash above fryers and fire protection system are required.

Dry Food Storage Area

- ☐ This area must be located adjacent to the prep area and receiving area.
- ☐ Door opening must be a minimum of 3’8”.
- ☐ This area must be air conditioned at all times.
- ☐ Mobile shelving and dunnage and key lock for security must be provided.
- ☐ This space must be free of roof access ladders or electrical panels.

Cooler/Freezer Storage

- ☐ This area should have a common wall, located adjacent to the prep and receiving areas.
- ☐ Insulated slab and thickest quarry tile floor is preferred with a minimum of 20 foot candle lighting.
- ☐ Roof mount compressors, polymer mobile shelving and dunnage, and sound alarm for temperature monitoring should be included.

Chemical Storage Room

- ☐ This area must be key-locked for security.
- ☐ A safety shower and eye wash should be provided in this room.

Building Service Facilities

Spatial needs
Building Service Office
Locker/Shower area
Plant Equipment Operator Office
Compactor/Trash Room
Receiving and Storage Area
General Storage
Building Service Outdoor Storage
Building Service Closets

Building Service Office

☐ The entire building services area should be located adjacent to the general receiving area.

☐ The office should be designed as a general office that can accommodate two staff members with two desks and appropriate wiring for computers, phones, etc.

☐ If possible, the office should have a window or a sightline to the outside to monitor weather conditions.

Locker/Shower Area

☐ A locker area must be located near the receiving area.

☐ 10-12 full-size lockers should be provided in the locker area.

☐ The locker area should be designed with a private toilet room and shower room for building service staff use.

☐ An ENERGY STAR stackable washer and dryer is required in this area.

Plant Equipment Operator Office

☐ This office needs to be adjacent to the boiler room.

☐ The office needs to accommodate a desk and appropriate data wiring for computer and phone.

Compactor/Can Wash/Trash Room

- ☐ This room needs to be completely separate from the kitchen spaces with no common walls.
- ☐ Trash trucks must have access to this room.
- ☐ The room should be heated and have adequate interior lighting, floor drainage, and easily cleanable surfaces.
- ☐ Hot and cold water should be available for flushing and cleaning.
- ☐ The room should be designed to be pest free and well ventilated.
- ☐ Floors should be sloped so that wash down stays within the room and goes down the drain.
- ☐ The compactors need to be installed with enough clearance away from the wall to permit staff to access the equipment from all sides.
- ☐ A roll-up door for trash transfer to trucks, steam cleaning equipment, and trash collection containers are needed.
- ☐ The room should be designed with a ramp to allow trashcans to be rolled to the dock.

Receiving and Storage Area

- ☐ The receiving area should be enclosed, floor to ceiling, with a chain link fence.
- ☐ Flexible shelving is required but should not occupy more than one third of the area.
- ☐ This area must be secured.
- ☐ Good lighting and easy access to materials being stored are required.
- ☐ Electrical outlets, upgraded lighting and ventilation must be provided in this area.

General Storage

- ☐ Flexible shelving to accommodate books, teaching aids, large size (24" x 36") paper, and other instructional supplies is required.
- ☐ Good lighting and easy access to materials being stored are required.
- ☐ Electrical outlets, upgraded lighting and ventilation must be provided in all large storage rooms for future flexibility.

Building Service Outdoor Storage Room

- ☐ Outdoor storage is to be near the service area and is to be suitable for heavy mowing, snow removal, and other outdoor equipment.
- ☐ The dimensions of the outdoor storage area must be able to accommodate two tractors side by side. (Approximately 9’ long by 7.5’ wide) and other equipment.
- ☐ A rolling garage style door and a regular door must be provided.
- ☐ A ramped and paved driveway is required for the tractor so that it can access the sidewalk and driveways of the school during snow removal.
- ☐ Electrical service and lighting inside must be provided. Access to the light switches must be available at both entrances.
- ☐ Proper ventilation for storage of gasoline is required.

Building Service Closets

- ☐ At a minimum, there should be a building service closet for each 19,000 gross square of the facility. In addition, there should be a building service closet on each floor and each wing of the facility.
- ☐ The closets should be a minimum of 25 sq. ft.
- ☐ The building service closet must accommodate a minimum of one utility cart.
- ☐ The closet requires shelving for cleaning supplies.
- ☐ The closet requires a floor mop sink with hot and cold running water and a floor drain.
- ☐ A mop/broom holder is required.

Site Requirements

The items described below are for a school that meets the minimum useable site size of 15.5 acres that is capable of fitting the instructional program, including site requirements. At schools with smaller sites, the architect is to work with MCPS staff, including the Physical Education Curriculum Coordinator, Safety Director, and school staff to determine layout of the play areas.

- ☐ The site should be designed to provide a clear view of all play areas and to facilitate supervision from one location.
- ☐ Protective fencing may need to be provided near heavily wooded areas, busy streets, steep hills, parking lots and turnaround areas.
- ☐ Metal drains/grates should not be located in the playing fields, paved play areas and mulched playground equipment areas.
- ☐ Paved areas and fields must be as level as possible. Water should not collect on paved areas or in mulched areas. The architect should consider the architecture of the neighborhood in designing the building.
- ☐ The architect should consider the architecture of the neighborhood in designing the building.
- ☐ The design should retain as many trees as possible in order to buffer the school and the playing fields.
- ☐ Pedestrian access must be provided from the surrounding neighborhoods.
- ☐ An unimproved area on-site should be designated to serve as an environmental study area in the future.
- ☐ A covered area for students in the bus loading area must be provided.
- ☐ Space for buses to load at one time is needed. The number of buses will be reviewed during the design phase in consultation with the Department of Transportation.
- ☐ Ideally, parking spaces for 125 cars are to be provided. At least half of the parking area should be readily accessible to the gymnasium. Outdoor lighting for all parking areas and entrances must be adequate for safety and crowd control.
- ☐ Bike racks should be provided near the building.
- ☐ Accessible parking spaces should be located near the main entrance, after hours use, and the playing fields.

Driveway

- ☐ The architect/engineer should refer to the MCPS Facility Guideline Specifications when designing the driveway, bus loop, service drives, etc.
- ☐ Bus traffic should be separated from car traffic at all times, when possible. Bus loading zones should be able to accommodate the entire student body.
- ☐ A student drop off area should be provided and must be separate from the bus loop area.
- ☐ All driveways must be arranged so that children do not cross them to get to the fields and play areas.
- ☐ Pedestrian access to the school facilities should be designed to make the best use of community right-of-ways and avoid crossing of loading zone areas.
- ☐ The site must comply with the most current ADA or COMAR regulations, whichever is most stringent.
- ☐ Site access must be provided to comply with fire protection and storm water management.
- ☐ Driveway aprons are to be perpendicular to the centerline of the street; and if there is an intersecting street on the opposite side from the proposed driveways, the driveway apron should line up with the intersecting street.
- ☐ Driveways should be located so that vehicle headlights do not project into adjacent homes.
- ☐ A service drive is required to service the kitchen, boiler room, and general delivery area. The architect should refer to the MCPS Facility Guideline Specifications.
- ☐ Care for safety of students must be exercised in developing the driveways including use of safety rails in the bus loading area.

Service Drive

- ☐ The architect should refer to the MCPS Facility Guideline Specifications for design of the service drive.
- ☐ The service drive is required for the kitchen, boiler room, shops, and general delivery areas.
- ☐ The service drive must be designed so that students do not need to cross the service drive to get to the play fields.

Playing Fields

- ☐ One 400’ x 400’ playing field is desired for general use.
- ☐ One 300' x 300' playing field with two sets of soccer goals should be installed.

Softball Fields

- ☐ At a minimum two softball fields should be provided, but ideally four softball fields should be provided if possible.
- ☐ Ideally, a 250' minimum radius with backstops is desired—one field should be designed with hood, benches, and safety fences.
- ☐ The baseline of the main field should be skinned and infield mix added.

Track And Field Area

- ☐ A long jump pit should be provided.
- ☐ A short, 60-yard, 6-lane track for short distances and hurdle practice should be designed for track and field instruction. This track should be connected to a walking asphalt path around the perimeter of the fields.
- ☐ Several permanent trashcans should be provided in this area.

Basketball Courts

- ☐ Three courts fenced with six gooseneck posts with heavy-duty basketball backboards with goals should be installed.
- ☐ A three-level chinning bar should be placed near the black top area.

Paved Area

- ☐ One paved play area, 55’ x 110', with all-weather surface play area should is desirable near the cafeteria and separate from the other physical education areas.

Tennis Courts

- ☐ Six tennis courts are required each with all-weather surfacing.

- ☐ The tennis courts will include striping for tennis and pickleball. The architect should refer to the DDC guidelines for specific details.
- ☐ One electrical outlet on the outside of the fence of on one court is required.
- ☐ Several benches and outside trashcans should be permanently installed.
- ☐ A common "rebound" wall contiguous with the tennis courts should be provided.

Storage Shed

- ☐ A 12' x 16' storage shed should be provided at the far end of the site.
- ☐ No electric or water is needed.
- ☐ It must be designed with double steel doors with heavy-duty hardware and shelves on one wall.

Other Program Requirements

PROGRAM OF REQUIREMENTS
FOR
LINKAGES TO LEARNING
Eastern Middle School

I. Overview

The Linkages to Learning (LTL) staff will provide behavioral health, social services, and community education/development services to the students and families of the school community.

II. Project Description

A. The project provides for the construction of a comprehensive LTL facility where services are delivered to members of the school community. It should incorporate these basic components: the administrative area and the mental health/social services/community education suite.
B. It is preferred that the LTL suite be located near the main entrance for supervision and security purposes and have at least one direct access to the outside with clear identification of LTL entrance to provide access during evening and weekend hours when the school is closed.
C. One entrance from the school to the LTL suite is needed.
D. The design shall consider safety and security of the LTL staff and school uses. The facility is to be arranged so access from it to the school can be controlled when school is not in session.
E. Doors should have windows, and all windows should have blinds, including the window within the door. There should be Vinyl Composite Tile (VCT) flooring throughout the center. A doorbell should be placed at the outer entrance, with audible notification to one office and the main reception area. All rooms should have the capability to be locked.

III. Linkages to Learning Operations

A. Hours of Operation: 8:00 a.m.-4:30 p.m. Monday through Friday, with some evening hours during the week and on the weekend (LTL operates evening hours at least one evening per week).
B. Staff: child/family therapist, family care manager, and may include community service aide, and LTL coordinator.
C. Months of Operation: a full component of the above-mentioned staff will be present during the school day during the school year and during the summer.

IV. Site Requirements

The site chosen by MCPS for the school facility must be able to accommodate the LTL suite. Site selection considerations shall include, at a minimum, the feasibility to provide separate access to an LTL suite and safety and security considerations with the operation of an LTL suite on the property.

The location of the LTL facility is to have convenient access to the school foyer and parking lot drop off area.

V. Mechanical and Electrical Systems

The facility is to be compatible with the systems of the school at which it is located. It should have heating and air conditioning. Because the LTL may operate while the main portion of the school is not in session, the Heating, Ventilation and Air Conditioning (HV AC) must be zoned for after-hours use. The system shall be included in the school energy management system but shall allow for zoning separation capabilities. Systems selected must be maintainable by MCPS.

Electrical outlets are to be provided on all walls and comply or exceed the number required by applicable code(s). There should be an electrical outlet and data drop in the copy machine area. There should be two data drops in every office and area that will house phones and computers, including conference room and offices, except for the Community Services Aide/Intern Workstation (only one electrical outlet and data drop is needed in this room). On new construction only, a center data drop and plug in the floor of the conference room should also be included.

VI. IT/Telecommunications

The telecommunication network conduit and wiring infrastructure are to be provided in all spaces except the toilet room, building service closets, and small storage rooms under 100 square feet. Additionally, wireless access points are to be provided to enable uninterrupted wireless service to MCG/DHHS computers throughout the LTL suite.

The telephone systems shall be owned by MCPS and connected to the MCPS' telephone network (see VIII. School Facilities Needed for Support). If an individual LTL school is at full capacity in terms of phone lines, Montgomery County Government (MCG)/Department of Health and Human Services (DHHS) will pay for the costs associated with required increased phone line capacity.

The computer devices will be purchased and owned by MCG/DHHS and shall be connected to the MCPS computer network. Fiber optic service or equivalent Internet connection will be provided by MCPS. The LTL suite will utilize the fiber optic service to connect to the County Government network via the Carver Educational Services Center (CESC) county link. All equipment and software will meet County standards and provide compatibility with other LTL suites.

VII. Security

The LTL suite is to be integrated into the school security system. The system must include provisions for permitting use of the suite when school is not in session, for example, a separate control panel for the suite.

The suite is to be arranged so access from the suite to the school can be controlled when school is not in session. The door to this exit should be visible so that the staff can monitor the entrance and control access. This door should have a lock and bell system. Emergency buzzers should be installed in all rooms and areas of the LTL suite. Also required are doors with interior windows in LTL Coordinator's offices into the administrative/reception areas.

Exterior security, including the design of access from the parking area to the entrance, a doorbell, security camera system and the provision of substantial exterior lighting is important.

VIII. School Facilities Need for Support

A mailbox to accommodate letters and packages shall be identified for the LTL suite in the school mailroom. The school public address/intercom system shall be extended to all rooms in the LTL suite. Speakers in the facility shall have volume and on/off controls, as well as call back features to the school's main office. A telephone system integrated into the school telephone system shall be provided by MCPS with voice mail capabilities.

IX. Furnishings and Equipment

Montgomery County Government (MCG) shall provide the furniture and equipment as needed to operate the LTL suite. A furniture and equipment summary is attached for design purposes.

As part of the construction contract, the following items will be provided upon completion of construction (other items may be identified during design):

- Shelves in the supply closet;
- Sign outside (Linkages to Learning spelled out);
- Tack boards in every office and reception area (number and size are provided in the space descriptions);
- Large marker board in conference room;
- Television mount in conference room;
- Built-in locking cabinets in Child/Family therapist office, Family Care Manager office, and printer area;
- Soap dispenser and towel holders at the sink;
- Vents in the bathroom;

X. Applicable Laws

This facility shall comply will all applicable current local, state, and federal laws, regulations, and codes.

XI. Space Descriptions

Square Foot Summary			
Description	# of Spaces	Net SQ. FT. Each	Total Net SQ. FT.
Administrative Area:			
1. General Office/Reception Area	1	225	225
2. Conference Room	1	275	275
Linkages to Learning Suite			
1. Child/Family Therapy Room	2	175	350
2. Care Mgr./Community School Coor. Office	1	140	140
3. Family Resources Closet	1	50	50
Other			
1. Toilet Room	1	50	50
Total Net SQ. FT.			**1,090**
Total Gross SQ. FT. - # net sq. ft. x 1.34 =			**1,460**

A. General Office/Reception Area
Key Features:

The general office space should be designed to be near the entrance of the suite and serve as a reception/waiting area. Two 4'x4' tack boards should be located in this area. It should have space for a reception desk and secretarial chair and 4-6 guest chairs. This room requires a telephone and computer. This space should have VCT flooring.

B. Conference/Meeting Room
Key Features:

Conference room configuration should seat 10-12 people around a conference table or seat 15-20 people in an informal seating arrangement. There should be room for a credenza. A center data drop and plug should be in the floor. This space should have VCT flooring. This room will require a telephone. There should be a wall mounted bracket for a TV monitor and in focus. Two 4'x6' tack boards and one 4'x8' marker board should be provided in this room.

C. Child/Family Therapy Room

Key Features:

This room should accommodate a desk and space for play/group therapy. This space should be located in an area that affords clients the most privacy for their counseling. Built-in storage cabinets for toys, games, and supplies are to be provided with countertop, base and wall cabinets. Space should be provided for a round table and four chairs or small couch and two chairs, a 4-drawer lateral file cabinet, and bookcase. This space should have VCT flooring. This room will require a telephone and computer. One 4'x4' tack board should be provided in this room.

D. Family Care Manager/Community School Coordinator Office

Key Features:

This room should accommodate an L-shaped desk and space for round table and four chairs. Space should be provided for a 4-drawer lateral file cabinet and bookcase. This space should have VCT flooring. This room will require a telephone and computer. One 4'x4' tack board should be provided in this room.

E. Family Resource Closet

Key Features:

Lockable storage space is needed for the following:

- Food and clothing pantry
- Toys, books, and other tangible resources for children and families
- Literature

This closet should be equipped with a clothing rod and adjustable shelves.

F. Toilet Room

Key Features:

A student handicapped accessible toilet room with sink, soap and towel dispensers, and toilet. This space should have ceramic tile flooring and wainscot.

Adult toilets within the school should be close to the LTL suite and accessible for staff and visitor use.

Furniture and Equipment Summary

Item Description		Units
Reception and General Office		
	Secretarial chair	1
	Desk 30”x60”	1
	Personal computer	1
	42” 4-drawer lateral file	1
	Telephone	1
	Chairs-fan back	6

Conference Room		
	Table	1

	Lateral file cabinet 4-drawer	1

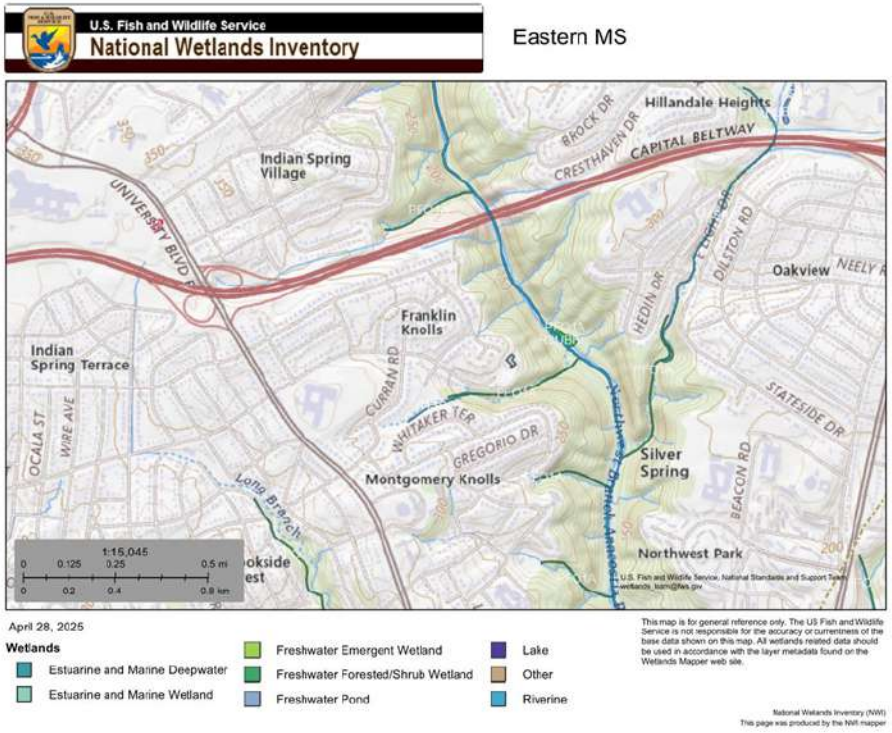
Site Conditions

GENERAL DESCRIPTION

The existing Eastern Middle School is located at 300 University Blvd. E in Silver Spring, MD. The site is bordered on the southwest by University Blvd, the northwest by E Franklin Ave, and the east and southeast by single family detached residential properties. The property is known as Parcel P842 and is located at tax map JP52. The property is 632,055 sf (14.51 ac). The property is zoned R-60.

The site is currently an operating middle school consisting of the school building, a separated bus and parent drop off, parking, 2 basketball courts, 4 tennis courts, and a grass play field which includes a rectangular play area and a skinned infield for softball or baseball.



SITE CIRCULATION AND PARKING

The site currently has four curb cuts. Three of the curb cuts are on E Franklin and one is on University Blvd. The curb cut on University Blvd. is an entrance only and can be accessed by both north and south bound vehicles on University Blvd. This curb cut leads to parking spaces (78 spaces – 4 of which are designated ADA), as well as the parent drop off loop. These are located on the west side of the school. This drop off area is also accessed by a two way curb cut on E Franklin Ave. The parent drop off loop sees a lot of congestion at arrival and dismissal as there is only one exit point that is impacted by its close proximity to the intersection with University Blvd. and a large amount of walkers that cross the crosswalk on their way to or from University Blvd.

The two other curb cuts are an entrance only for the buses and a two way curb cut for the buses to exit and for other staff to enter and exit. These are located on the east side of the school. There are 45 spaces in this lot – 2 of which are designated as ADA spaces. There are also a large number of vehicles that park in the bus loop during off hours. There is no after hours striping which leads vehicles to double stack within the bus spaces (approximately 30 additional spaces). The bus loop is currently striped for 15 buses.

There are two loading docks for the school which are each accessible from one of the sets of curb cuts. The access for vehicles accessing these docks is not ideal as it requires vehicles to back up a significant distance to reach or exit the docks.

ZONING

The property is zoned R-60. Educational uses are allowed in residential zones. Below are the requirements of the zone:

Lot coverage:	35% maximum
Building Setback – Front	25’
Building Setback – Side:	25’
Building Setback – Rear:	20’
Building Height:	35’ max

MCPS is allowed leeway in several zoning categories if the building is unable to comply with the zoning requirements. Parking for MCPS projects is based on MCPS experience. It is anticipated that all staff members will be required to park on site and have space for visitor spaces during the day.

PROPERTY TOPOGRAPHY

In general, the property drains from the west towards the east, northeast, or south-east. Towards the northeast corner of the property, the grade drops off significantly for approximately 12’. Along the residential properties to the east and south there is also a significant grade change on their properties of approximately 8-10’. The drainage for the site drains to an unnamed tributary to the Anacostia and is in MDE watershed #02140205 which is listed as use IV water. Class IV waters are designated as recreational trout waters.

SOILS

Soils for the site are noted as Glenelg-Urban land Complex (2UB and 2UC), Wheaton Silt Loam (65B) and Wheaton-Urban Land Complex (66UC).

FLOODPLAIN, WETLANDS & STREAMS

The property is located outside the 100-yr floodplain per FEMA maps 24031C0370D and 24031C0390D (effective as of 9/29/2006).
There are currently no wetlands or streams on the property per the National Wetlands Inventory.

Appendix C - Existing Conditions Survey (Continued)

FOREST AND LANDSCAPING

Most of the vegetation for the site is focused along the southern, eastern, and northeastern property lines. It does not appear that any of the landscaped areas meet the requirements of a forest. There are other miscellaneous trees located around the site. All the trees appear to be in reasonable shape.

EXISTING ATHLETIC FACILITIES

There are currently four tennis courts on the property that area split into two areas of two, two to the south of the building and two on the east side of the bus loop. The tennis courts are in good condition. There does not appear to be ADA access to the tennis courts to the east of the bus loop. There are two basketball courts. They area separated and located adjacent the two tennis areas. The basketball court to the east of the bus loop is in poor condition. The basketball court to the south of the building is in good condition. The backboards and rims are in fair condition. The metal nets are in poor condition. The rectangular grass play field and baseball softball field appears to be in good condition. There is inadequate drainage for the fields. There is no ADA access to the softball/baseball field and benches.

EXISTING UTILITIES

- **Water** – The site is currently served by a 4" waterline that comes from a 20" cast iron or sand spun line in University Blvd. There is an 8" asphaltic ductile iron and a 10" cast iron or sand spun line in E Franklin Ave.
- **Sanitary Sewer** – The site currently drains to a 10" vitrified clay sanitary sewer in University Blvd. that runs down Moss Ave.
- **Storm Drainage** – The site currently has multiple connections to the existing storm drain infrastructure in University Blvd. that runs westward across University. Near the intersection of University Blvd. and E Franklin Ave, there is an existing 30" RCP that runs across the road and runs eastward along E Franklin Ave. There is also a connection to an existing 24" RCP near the curb cut on University Blvd that runs across the street and runs eastward down Dearborn Ave. There is also an inlet at the northeastern property corner to drain the water coming off the slope.
- **Stormwater Management** – There are three stormwater management facilities on site. There is a surface sand filter located within the parent drop off loop. There are also two underground stone infiltration trenches underneath the grass play field.
- **Electric & Gas** – Electric and gas for the site come from University Blvd. near the curb cut on University Blvd. The gas is noted as a 1.5" line.

Building Envelope

EXTERIOR WALLS

Exterior walls built in the 2001 addition project are masonry cavity walls with face brick veneer. Cavity walls include 2" extruded polystyrene rigid insulation (R-10).

All other walls are masonry mass walls with no cavities for ventilation or insulation. These mass walls appear to water infiltration, with visible discoloration and spalling observed during site survey. Visible rust observed at steel lintels supporting veneer brick. 'Stair Step' cracks can be found in exterior mortar joints, indicating movement within the existing walls and foundation systems.

WINDOWS

Windows throughout the facility are approximately 25 years old. All glazing uses double pane insulated glass. 1950s construction included very large window openings typical of that time. These large openings have largely been infilled and replaced with smaller aluminium windows and storefronts. Backup walls have been infilled with stud wall construction. The exterior facades have been predominantly infilled with EIFS, with veneer brick in some areas.

ROOFING

The existing building utilizes built-up asphalt roofing system. Roofing surface is protected with a gravel coating. Per available documentation, the existing system has an approximate average R-Value of R-18.8. All existing roofing warranties have expired.

FLOOR SLABS

The first floor of the 1950s construction is built on a ventilated crawl space. Crawl space is neither encapsulated nor insulated.

Building Structure

1951 STRUCTURE

The existing 1951 structure is a partial one and two-story structure. The two-story area is steel frame. The roof structure is comprised of steel joists bearing on steel girders, framing to steel columns. The second floor is comprised of concrete on 9/16" form deck bearing on steel joists. The steel joists frame to steel girders and columns. The one-story area is wall bearing. The roof structure is comprised of steel joists framing to composite masonry bearing walls. The majority of the 1951 original structure is on a crawl space. The crawl space (main floor structure) is cast in place concrete joists framing to concrete girders and concrete columns. Existing structural documentation was not available for this part of the structure, all the information was obtained through site survey.

The visible portions of the basic structure appear to be in acceptable structural condition. Minor water infiltration was observed along the exterior walls, most likely due to the composite wall construction and construction methodologies common in 1951. We cannot assess the condition of the perimeter girders as the existing girders are fully encased in masonry. It is highly possible that the existing girders are deteriorating due to moisture infiltration within the exterior wall system. We also observed stair steeping cracks in the masonry veneer and deterioration of the veneer structural support elements.

1958 STRUCTURE

The existing 1958 structure is a partial one and two-story. The two-story area is steel frame. The roof structure is comprised of steel joists bearing on steel girders, framing to steel columns. The second floor is comprised of concrete on 9/16" form deck bearing on steel joists. The steel joists frame to steel girders and columns. The one-story area is wall bearing. The roof structure is comprised of steel joists framing to composite masonry bearing walls. The majority of the 1958 structure is on a crawl space. The crawl space (main floor structure) is concrete dox plank framing to concrete girders and concrete columns. The foundation system is comprised of spread and strip footings. Existing structural documentation is available for this part of the structure.

The visible portions of the basic structure appear to be in acceptable structural condition. Significant damage to the exterior wall system was observed throughout this area of the structure. We cannot assess the condition of the perimeter girders as the existing girders are fully encased in masonry. It is highly possible that the existing girders are deteriorating due to moisture infiltration within the exterior wall system.

1963 STRUCTURE

The existing 1963 structure is two-story. The roof and floor structures are comprised of concrete joists framing to concrete girders and columns. This area does not have a crawl space. The foundation system is comprised of spread and strip footings. Existing structural documentation is available for this part of the structure.

The visible portions of the basic structure appear to be in acceptable structural condition.

1975 STRUCTURE

The existing 1975 structure is comprised of a two-story partial steel frame and a one-story wall bearing structure (gymnasium). The roof structure of the two-story structure is comprised of steel joists bearing on steel girders, framing to steel columns. The second floor is comprised of concrete on 9/16" form deck bearing on steel joists. The steel joists frame to a combination of steel girders and columns and masonry bearing walls. There is also a portion of the second floor that is comprised of dox plank. The one-story area (gymnasium) is wall bearing. The roof structure is comprised of steel joists framing to masonry

bearing walls. This area does not have a crawl space. The foundation system is comprised of spread and strip footings. Existing structural documentation is partially available for this part of the structure. Very minor brick veneer cracking was observed; this seems to indicate no significant settlement issues have occurred.

The visible portions of the basic structure appear to be in acceptable structural condition.

2001 STRUCTURE

The existing 2001 structure is one-story. The roof is comprised of joists which frame to a combination of steel girders and columns and masonry bearing walls. This area does not have a crawl space. The foundation system is comprised of spread and strip footings. Existing structural documentation is available for this part of the structure.

Mechanical Systems

GENERAL

Eastern Middle School (MS) was originally constructed around 1956, with a boiler replacement in 1995, a major renovation/addition provided around 2002, and a systemic HVAC equipment replacement around 2010. It appears that most of the existing mechanical systems within the school date to the 2002 renovation/addition and the 2010 systemic replacement, except for the school's existing chilled water infrastructure and boiler systems (which were replaced around the time of the 1995 boiler replacement project).

Following is a detailed description of the existing mechanical systems.

HEATING WATER INFRASTRUCTURE SYSTEMS

Two natural gas-fired firetube type boilers produce heating water for Eastern MS. All boiler systems are located within the basement mechanical room. Combustion air enters the boiler room through an areaway positioned adjacent to the room. While provided, this approach does not comply with the current International Mechanical Code (IMC) and CSD-1 requirements for combustion air.

Manufactured by Cleaver Brooks (Model CB700-100), these boilers were installed around 1996 and appeared to be in working condition during our site visit. While currently in working order, the existing boilers are nearing the end of their anticipated useful lifespan. Further, while the existing boilers are functioning adequately to satisfy the areas served, there does not appear to be surplus capacity available to support future expansion of the building without losing standby capacity if one boiler fails.

EXISTING DUAL-FUEL HYDRONIC BOILERS

Each boiler is rated for a natural gas consumption rate of 4,185 cubic feet per hour (CFH). Individual flues extend from each boiler through the basement mechanical room to the existing chimney and up vertically through the school.

Heating water generated by the boilers is distributed by a two-pipe (dual temperature) chilled/heating water piping loop. Additional heating water equipment connected to the piping loop includes an air separator, expansion tank, and two constant-speed base-mounted end-suction heating water pumps that distribute heating water to equipment located within their respective building area. All heating water pumping systems are located within the basement mechanical room and arranged in a lead/lag setup with only one pump operating at any time. The pumps were manufactured in 1985 and appear to be in poor condition.

EXISTING HEATING WATER PUMPS

Chilled Water Infrastructure Systems

Production of chilled water for Eastern MS is accomplished by a single water-cooled centrifugal chiller. Manufactured by Trane (model CVHE320), this equipment has an available output capacity of approximately 320-tons, was installed around 1997, and appears in good condition but is nearing the end of its anticipated useful life. Operation of this equipment could not be verified during our site visit due to the weather. This chiller is located within the basement mechanical room. There does not appear to be surplus capacity available to support any planned additions or expansions to the school.

EXISTING WATER-COOLED CHILLER

Heat rejection from the water-cooled chiller is accomplished by a single counterflow, forced draft cooling tower located outdoors and positioned adjacent to the basement mechanical room. The cooling tower is mounted on a concrete curb, with vibration isolation provided between the cooling tower base and the curb. A steel access platform is provided around the perimeter of the tower for maintenance. Manufactured by Baltimore Aircoil Company (model VT1-NMCR), this was installed around 1997 and is approaching the end of its anticipated useful life. Outdoor condenser water piping is constructed from PVC. A single constant speed base-mounted end-suction condenser water pump is installed in the basement mechanical room to circulate condenser water between the water-cooled chiller and the cooling tower. An additional base-mounted end-suction standby pump, also located within the basement mechanical room, serves as a backup pump for both the condenser water and chilled water systems.

EXISTING COOLING TOWER

As described within the Heating Water Infrastructure Systems section of this document, chilled water is distributed by a two-pipe (dual temperature) chilled/heating water piping loop. Additional chilled water equipment connected to the piping loop include an air separator, expansion tank, and a single constant speed base-mounted end-suction chilled water pump that distributes chilled water to equipment located within their respective building area. As described above, an additional base-mounted end-suction standby pump, serves as a backup pump for both the condenser water and chilled water systems. All chilled water pumping systems are located within the basement mechanical room and arranged in a lead/lag setup with only one pump operating at any time. The pumps were manufactured in 1996 and appear to be in poor condition.

EXISTING CHILLED WATER PUMP

In addition to chilled water, direct expansion (DX) type cooling is provided for ductless split systems serving select data and information technology (IT) spaces located throughout the school, as well as the kitchen manager's office and dry storage areas. In addition, the indoor air-handling units serving the administration area and Cafeteria are provided with DX cooling via split air-cooled condensing units located on the roof. Spaces served by DX space conditioning typically require cooling operation at times when chilled water is not available.

Existing Fan Coil Unit #1

Existing Air-handling unit (AHU-3)

HVAC SYSTEMS – EASTERN MS

The heating, ventilating, and air conditioning (HVAC) systems serving Eastern MS vary slightly throughout the school. The following is a breakdown of the various spaces and their associated HVAC system:

- **Administration Suite Areas**: Space conditioning and ventilation for administration and health suite areas are provided by two vertical ducted split system air-handling units (Fan Coil Unit #1 and AHU-3). These air-handling units are located in a mechanical room on the second floor. Outside air is ducted to the return air duct work for each air-handling unit from a rooftop gooseneck opening. Fan coil unit #1 and AHU-3 are provided with DX cooling and electric resistance heating. Air cooled condensing units associated with this equipment are located on the roof above. Relief and rest room air is exhausted outdoors through a rooftop exhaust fan. The air-handling units and exhaust fan were installed as part of the 2002 renovation/addition, appeared to be in fair working condition, and have exceeded their useful service life.
- **Miscellaneous Offices and Conference Areas:** Space conditioning and ventilation for office and conference spaces outside the administration suite are provided by vertical console type fan coil units and unit ventilators connected to the school's chilled/heating water system. Vertical fan coil units and unit ventilators have a direct outdoor air connection through a louver mounted in the exterior wall. The fan coil units and unit ventilators were installed as part of the 2010 renovation, appeared to be in fair working condition, and are approaching the end of their useful service life.
- **Health Suite Areas:** Space conditioning for the health suite areas is provided by vertical console type fan coil units connected to the school's chilled/heating water system. Ventilation is provided by a roof mounted energy recovery ventilator (ERV-2) with a duct-mounted heating coil utilized for reheat. The duct-mounted heating coil is

Existing ACCUs

connected to the school's chilled/heating water system but is only utilized when the system is in heating operation. Relief air from the waiting area is exhausted to the outdoors through the ERV. A rooftop exhaust fan provides exhaust for toilet and isolation areas. The fan coil units were installed as part of the 2010 renovation, appeared to be in fair working condition, and are approaching the end of their useful service life. The ERV and exhaust fan were installed as part of the 2002 renovation/addition, appeared to be in fair working condition, and have exceeded their useful service life.

- **Computer Lab:** Space conditioning and ventilation for the computer lab is provided by a unit ventilator connected to the school's chilled/heating water system. The unit ventilator has a direct outdoor air connection through a louver mounted in the exterior wall. A transfer grille ducted to a wall louver is provided to maintain proper room pressurization. The unit ventilator was installed as part of the 2010 renovation, appeared to be in fair working condition, and is approaching the end of its useful service life.
- **Typical Classroom:** Space conditioning and ventilation for the typical classroom areas throughout the school is provided by vertical unit ventilators connected to the school's chilled/heating water system. Each unit ventilator has a direct outdoor air connection through a louver mounted in the exterior wall or a rooftop gooseneck opening. A transfer grille ducted to a wall louver is provided for each classroom to maintain proper room pressurization. Unit ventilators were installed as part of the 2010 renovation, appeared to be in fair working condition, and are approaching the end of their useful service life.
- **Resource Rooms:** Space conditioning for the school's resource rooms is provided by a multiple-zone variable air volume (VAV) air-handling unit system with fan powered VAV terminal units with hydronic heating coils. The air-handling unit is located in a mechanical room above Storage Room C104. The VAV terminal units are located above the ceilings of the spaces they serve. Both the air-handling unit and the VAV terminal units are connected to the school's chilled/heating water system. The VAV terminal units are ducted to square ceiling mounted supply diffusers and ceiling mounted return grilles. Outside air is ducted to the air-handling unit through a rooftop gooseneck opening. Space pressurization is maintained by relieving air outdoors through a rooftop gravity relief ventilator. The air-handling unit and associated VAV terminal units were installed as part of the 2002 renovation/addition, appeared to be in fair working condition, and have exceeded their useful service life.

ERV-2

Typical Classroom Unit Ventilator

Existing AHU Serving Resource Rooms

- **Student Dining Area:** The student dining area is provided with space conditioning and ventilation through a constant volume indoor air-handling unit, located within a mechanical room adjacent to the stage. The air-handling unit is provided with DX cooling. The associated condensing unit is located on the roof above the kitchen. Heating is provided by a duct-mounted indirect fired natural gas heater. This equipment was manufactured in 2020 and appears to be in good condition. Facilities personnel indicated that the existing duct-mounted heater is not functioning and that they are currently utilizing a wall-mounted electric propeller unit heater. Supply duct work extends throughout the student dining and stage areas, with a series of square ceiling diffusers provided for airflow distribution. Room air is circulated from the dining area to the serving line by an inline transfer fan located above the ceiling. Return air is ducted from the space and returned to the air-handling unit system. Outside air is ducted to the units return from an outside air intake hood located on the roof.

Student Dining Area

Existing Student Dining Air-Handling Unit

Existing Student Dining Duct Heating Coil

Existing Student Dining ACCU

- **Kitchen:** Heating for the kitchen area is accomplished through a series of hydronic propeller unit heaters, positioned near the perimeter of the kitchen area. No air-conditioning is currently provided for the kitchen; however, the associated kitchen office and dry storage areas are provided with wall mounted ductless split systems. Major kitchen equipment is positioned below a Type 1 (grease type) kitchen hood, with a gas-fired kitchen hood make-up air unit provided at roof level. This make-up air unit was manufactured in 1988, appeared to be in poor condition, and has exceeded its useful service life. Additional make-up air for the kitchen is transferred from the adjacent student dining area via an inline transfer fan.
- **Media Center:** Space conditioning and ventilation for the media center is accomplished through an indoor air-handling unit (AHU-1) located in Mechanical Equipment Room 204-A and connected to the school's chilled/heating water system. Supply duct work extends throughout the student media center, with a series of square ceiling diffusers provided for airflow distribution. The air-handling unit was manufactured in 1993, appeared to be in fair working condition, and has exceeded its useful service life.
- **Gymnasium:** Heating and ventilation for the school's gymnasium is accomplished through an indoor air-handling unit located in Mechanical Equipment Room 603 and connected to the school's chilled/heating water system. Supply and return duct work extends from the AHU to wall mounted grilles within the gym. The heating-only air-handling unit appears to match the age of AHU-4 and AHU-5, which were manufactured in 1995, and has exceeded its useful service life. The gym is also ventilated by two roof-mounted down blast type exhaust fans.
- **Auxiliary Gymnasium:** Heating and ventilation for the auxiliary gymnasium is accomplished through an indoor air-handling unit (AHU-5) located in Storage Room 205C and connected to the school's chilled/heating water system. Supply duct work extends, exposed, from the AHU to round diffusers within the gym. The air-handling unit was manufactured in 1995 and has exceeded its useful service life.
- **Boy's Locker Room:** Heating and ventilation for the boy's locker room area is accomplished through an indoor air-handling unit (AHU-4) located in Storage Room 205C and connected to the school's chilled/heating water system. Supply duct work extends from the AHU to square diffusers within the locker room. The air-handling unit was manufactured in 1995 and has exceeded its useful service life. Space pressurization and exhaust is provided by a roof mounted exhaust fan.

Kitchen Make-Up Air Unit

Media Center Air-handling unit

Existing Gym AHU

Existing Gym Exhaust Fans

- **Girl's Locker Room:** Space conditioning and ventilation for the girl's locker room is provided through an inline supply fan. The supply fan draws outside air through a roof mounted intake hood and transfer air from the adjacent auxiliary gymnasium space. A hot water duct mounted heating coil is installed downstream of the supply fan for tempering supply air. Space pressurization and exhaust is provided by a roof mounted exhaust fan. The exhaust fan is installed immediately adjacent to the outside air intake hood and does not meet the minimum separation distance required by current building code.
- **Building Exhaust Systems:** A combination of roof-mounted, ceiling-mounted, and wall-mounted fans remove exhaust and pressure relief air throughout the building. The age and condition of these fans vary throughout the school; generally, they appear to have exceeded their useful service life.

AHU-4

AUTOMATIC TEMPERATURE CONTROL (ATC) SYSTEMS

The existing ATC system is comprised of both pneumatic and direct digital control (DDC) system components, with a Schneider Electric energy management system currently provided for the school and installed by Control Sources. Major valve and damper components are provided with either pneumatic or electronic actuation throughout the building. A simplex air compressor, complete with a horizontal storage tank, is located within the basement mechanical room and serves the building's pneumatic control components. The air supplied from this compressor is fed through a refrigerated dryer system. Both the air compressor and refrigerated dryer appeared to be in fair to poor working condition during our site visit. Replacement of any existing pneumatic control device with electronically operated DDC type components is recommended under any planned building renovations.

Plumbing Systems

DOMESTIC COLD WATER AND ASSOCIATED DOMESTIC WATER PIPING

Eastern Middle School is served from the county water system through a dedicated 4-inch incoming domestic water service, entering the building within the basement mechanical room. The domestic water service is provided with a shut-off valve near where the piping enters the school. Unfortunately, this valve is also located above the main switchgear. Currently, no backflow preventer is provided within the building at the domestic water service entrance. While this may have been acceptable at the time the system was installed, it does not meet current plumbing code requirements. It is anticipated that limited surplus capacity exists for the existing 4-inch domestic cold water main. Most of the school's domestic water piping systems (including cold water, hot water, and hot water return piping) date back to the school's original construction in 1956. These piping systems and associated piping components (valves, fittings, and piping insulation) have exceeded their useful service life and are recommended for replacement as part of any planned building renovations.

Domestic Water Main Shut-off Valve

DOMESTIC HOT WATER EQUIPMENT

Domestic hot water for the majority of the building is generated through a pair storage type water heaters located in the basement room. These water heaters supply 110-degree F domestic hot water to all areas of the school, excluding the kitchen area. Manufactured by State (model SBD-100-199NET 118), these water heaters are provided with 199 MBH gas burners and 100-gallon storage tanks.

A pair of domestic hot water circulation pumps maintain a continuous hot water flow throughout the areas served. The systems are not equipped with a thermostatic mixing valve, which is typically provided on today's new systems. It is anticipated that minimal surplus capacity exists for the water heaters. The water heaters were manufactured in 2017 and are approximately halfway through their expected lifespan.

Domestic hot water for the kitchen is generated through a single storage-type water heater located in the adjacent mechanical room. Manufactured by A.O. Smith (model BT-80 400), this water heater is provided with 75.1 MBH gas burner and 74-gallon storage tank. A domestic hot water circulation pump maintains a continuous hot water flow throughout the areas served. It is anticipated that minimal surplus capacity exists for the water heater. This water heater was manufactured in 2021 and is in good condition.

Domestic Water Main Shut-off Valve

SANITARY WASTE, VENT, AND STORM WATER PIPING

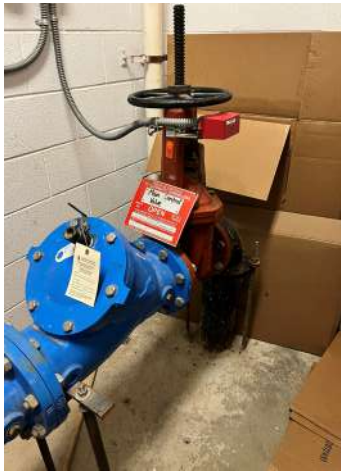
Like the domestic water piping systems, a majority of the existing above- and below-grade sanitary waste, vent, and storm water piping systems date back to the school's original construction or the 2002 addition and range from between 23- to almost 70-years in age. A majority of these existing piping systems have exceeded their useful service life are recommended for replacement as part of any planned building renovations.

PLUMBING FIXTURES

The plumbing fixtures are similar in age to the piping described above. Replacement of the existing plumbing fixtures as part of any planned building renovations is recommended due to age.

NATURAL GAS SERVICE AND PIPING

The school's existing gas service is located within an outdoor areaway positioned adjacent to the basement mechanical room. While no gauges were present at the existing gas service, it is anticipated that a 2-PSI gas pressure is currently provided and that this existing service has sufficient capacity to support any planned building renovations. Interior gas piping is primarily limited to the existing basement mechanical room area and appeared to be in fair condition during our site visit.



Existing Exterior Gas Service and Washington Gas Meter

Fire Protection Systems

Eastern Middle School is currently provided with sprinkler coverage throughout. The building is provided with a dedicated incoming 6-inch fire service, complete with a backflow preventer and a fire department connection. The incoming fire service is located within a sprinkler control room near the school's kitchen area.

A fire line extends from the discharge of the backflow preventor and serves a series of zone valve assemblies located throughout the school. Sprinkler mains extend from each zone valve assembly and serve sprinkler heads located throughout their respective zone. Sprinkler system components appeared to be in good to fair condition during our site visit.

Incoming Fire Service/Backflow Preventer

Electrical Systems

GENERAL

Eastern Middle School (MS) was originally constructed around 1956 with major renovation/addition projects around 1974 and 2002. It appears that most of the existing electrical distribution equipment within the school date to the 1974 and 2002 renovation/addition projects.

The following is a description of the existing electrical service, power distribution, lighting and lighting controls, voice/data, public address, security (door access control, intrusion detection, video surveillance), and fire detection and alarm systems.

Utility Pole Adjacent School Property

Utility Transformer, Generator, and Cooling Tower

ELECTRICAL SERVICE

The existing electrical service to Eastern Middle School is provided by Pepco distributed via overhead electrical power lines supported by utility poles along University Boulevard, located on the southwest side of the school. The primary utility service conductors run down a utility pole adjacent to school property and underground to an exterior, pad-mounted utility transformer (799429-6705) located in the service yard with the generator and cooling tower. Underground service conductors run from the secondary of the utility transformer to the C/T cabinet section of the main service switchboard located in the boiler room.

POWER DISTRIBUTION

The main service switchboard is manufactured by the Square D Company, Power-Style Switchboard, Type PS-2, which appears to be in fair condition. The switchboard is rated at 120/208 volts, 3-phase, 4 wire with a 3,000-ampere bus and three sections. From left to right, the first section is the C/T cabinet section; the second section is the main section consisting of a 3,000-ampere main circuit breaker for the main service disconnect and a stacked compartment with distribution circuit breakers above the main circuit breaker compartment; and the third section consisting of two (2) distribution circuit breakers. The existing switchboard was installed under the 1974 renovation project and is past its useful life.

The main water service shut-off valve is located above the main switchboard in the boiler room in violation of the working clearances required by the National Electrical Code (NEC).

Main Service Switchboard

The distribution compartment above the main circuit breaker has feeder circuit breakers

with the following sizes: 225A (Panel B), 225A (Panel HP), 125A (Panel L1), 400A (Portable Classrooms), 100A (Unlabeled), 150A (Panel LS), 100A (Panel FC), 100A (Panel L3), 125A (Panel UV), 60A (Unlabeled), and 150A (Panel NLS). The circuit breakers in the distribution section serve the chiller (1,600A) and Distribution Panel MDP (2,000A).

Other electrical equipment in the boiler room includes: Pepco utility meter (KZD351048268), Distribution Panel MDP, the fire alarm control panel (FACP), automatic transfer switches, emergency (life safety) panelboards, optional stand-by panelboards, branch circuit panelboards.
Distribution Panel MDP is a two-section switchboard manufactured by the Square D Company, Power-Style Switchboard, Type PS-2, circa 1974, rated at 120/208 volts, 3-phase, 4-wire, with a 2,000-ampere bus. Distribution Panel MDP serves mechanical equipment and branch circuit panelboards located throughout the building.

Branch circuit panelboards are typically recessed-mounted in the corridors. The branch circuit panelboards installed under the 1974 renovation project are manufactured by Square D, are typically located in the corridors of Eastern Middle School.

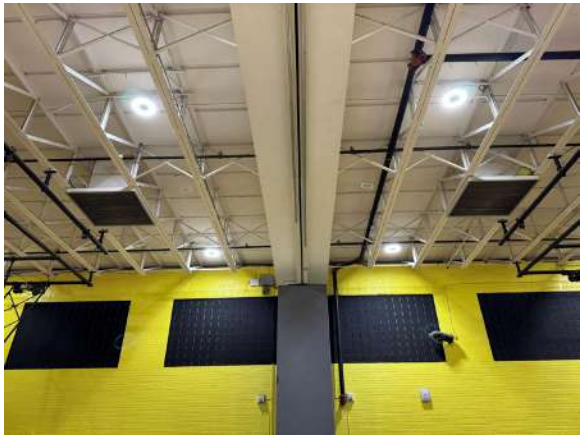
Typical Branch Circuit Panelboards in Corridor

GENERATOR DISTRIBUTION

The existing, exterior, natural-gas-fired generator is manufactured by Kohler, installed after the 2002 addition, and rated at 100 kW, 120/208 volts, 3-phase, 4-wire, with two (2) unit mounted 150-ampere circuit breakers serving emergency (life safety) and optional stand-by loads. The generator appears to be in good condition. The automatic transfer switches, located in the adjacent boiler room, are manufactured by Kohler and rated at 150 amperes, 120/208 volts.

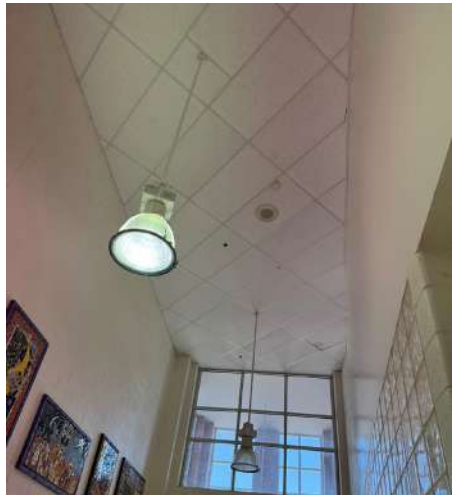
Outdoor Generator

LIGHTING AND LIGHTING CONTROLS



Fluorescent lighting is primarily used in Eastern MS. The boiler room has 1'x4' lighting fixtures with wrap-around lenses. Most spaces, including corridors, classrooms, private offices, and the main administration area, have 2'x4' recessed fluorescent lighting fixtures with prismatic lenses. The main gym and aux gym utilize pendant mounted LED lighting fixtures. The Cafeteria has pendant mounted linear fluorescent lighting fixtures and recessed downlights with compact fluorescent lamps. Pendant mounted high-bay stye lighting fixtures are provided in the Cafeteria Lobby.

Typical Classroom Lighting



Cafeteria Lighting

Main Gym Lighting

Automatic Transfer Switches

Cafeteria Lobby Lighting

Aux Gym Lighting

Exterior lighting consists of building-mounted lighting and pole-mounted LED lighting fixtures in the parking lot.

Line-voltage toggle switches are used to control lighting in each space. Eastern MS does not use occupancy sensors to automatically turn off lighting when rooms are unoccupied.

TYPICAL CLASSROOM LIGHTING CONTROLS

Lighting and lighting controls do not meet current energy-code requirements (i.e., 2021 International Energy Conservation Code) for lighting power density (watts per square foot), occupant sensor controls, and light-reduction controls (dimming).

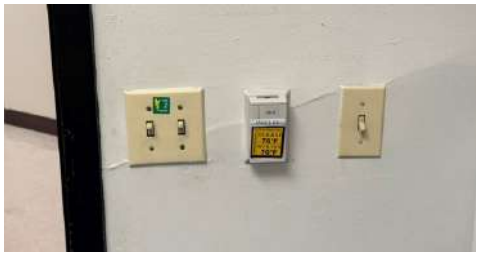
DATA AND VOICE SYSTEMS

The main data equipment is located in within the media center, which consists of two main distribution frame (MDF) data racks. An intermediate distribution frame (IDF) data rack is located in a storage room in the main office area. MDF and IDF racks have data fiber optic distribution enclosures (light interface units) and patch panels by Superior Modular Products, and electronic data switches by Cisco.

Category 5/5e cabling distribution system is installed in the school to provide network connectivity. Each typical classroom has both teacher and student outlets. Wireless access points by Cisco are mounted on the ceilings.

There are 110-style voice connecting blocks on the walls behind the MDF and IDF racks. The telephone system is a separate voice system for telephones in the school offices.

INTERCOM AND SOUND SYSTEMS



The public address/intercom equipment is a Telecenter V system manufactured by Rauland, located in the main office area. The system has the capability to perform select local calls to classrooms or paging throughout the entire school. Each classroom has a ceiling mounted speaker and a wall mounted call switch. Ceiling or wall speakers are located in the corridors.
There are Rauland administration control station handsets in the main office area.

Exterior Wall Pack Lighting Fixture

Exterior Pole Mounted Lighting Fixture

Typical Classroom Lighting Controls

Public Address System

SECURITY SYSTEMS

The intrusion detection system control panels are located in the main office area. There are four (4) security system keypads located in the main office area. There are ceiling mounted and wall mounted intrusion detection motion detectors/sensors in the corridors. There is a door card access control panel located adjacent to the intrusion detection control panel.

FIRE DETECTION AND ALARM SYSTEM

The existing fire alarm control panel (FACP), located in the boiler room, is manufactured by Edwards Systems Technologies, Model EST2 with Voice Control Panel. The EST2 system is obsolete. Spare parts are no longer manufactured and are difficult to obtain for this FACP. The fire alarm annunciator panel is located in the corridor adjacent to the main lobby. Fire alarm initiation devices include manual pull stations, smoke detectors, duct detectors, flow switches, tamper switches, monitoring modules for generator run, generator fault, and kitchen hood, and elevator smoke detectors and heat detectors. Fire alarm notification devices include combination speaker/strobes.

Introduction

☐ This document describes the facilities that are needed for the Eastern Middle School educational program. The descriptions provide the architect with useful guidelines and are used by staff representatives when reviewing drawings and specifications for the facility.

☐ This school will be designed with a capacity for 1112 students, with a core capacity for 1300 students. An 8-classroom addition is to be master planned to bring the facility to its core capacity. The architect should show the location for the future classroom addition.

☐ The architect should show the location for relocatable classrooms, should they be required in the future. These units should be sited in a location where it will not cause conflict with the constructability of a future addition. The necessary utility connections, i.e. electrical power, water service to meet sprinklering requirements, fire alarm, public address, and data should be provided near the future location of relocatable classrooms.

☐ The school is located at 300 University Blvd E, Silver Spring, MD 20901. There are single family detached homes to the north on the other side of Franklin Avenue (a divided street), east beyond the play fields, south, along Curran Road, and across University Boulevard, to the west.

☐ This project needs to meet the educational guidelines for the Grades 6-8 middle school program.

☐ The project is scheduled to open in August 2030. The site work will be completed by August 2031.

☐ The educational specifications are divided into three sections.

- The first section, the space summary, lists the type of spaces and square footage required when the project is complete.
- The second section describes the general design, location, and specific requirements for each type of space in accordance with Montgomery County Public Schools (MCPS) guidelines.
- The third section identifies additional project specific and additional program requirements for the school, add alternates, and information about the master planned future addition.

☐ The architect will provide a space summary comparison between the programmed space requirements and the proposed after each phase of the project including but not limited to the schematic design, design development, and final design phase.

☐ This project is to provide the facilities to meet the educational specifications for a Grades 6–8 middle school program. Middle school organization assumes teams of about 125-150 students per team. Some middle schools organize the school by grade level, or "super team." The organization of the school should be taken into the account during the design process.

☐ The design of the school should promote a collaborative approach for both teaching and learning. Flexibility of design should be provided to accommodate changing educational programs and pedagogy.

☐ The project will be designed to meet current local and state sustainability guidelines.

General Planning Considerations

In the general planning of this building and development of the site, special consideration is to be given to the following comments and instructions.

Code and Guidelines

☐ The architect is expected to become thoroughly familiar with all national, state and local fire safety, life safety, and health code regulations and to follow applicable rules of the State Interagency Committee on School Construction.

☐ The building is to be accessible to the disabled within the meaning of the latest edition of the Americans with Disabilities Act (ADA) and to conform to all the latest requirements of the *ADA Standard*s. ADA Standards for Accessible Design | ADA.gov

☐ In addition to *ADA Standards*, the *Maryland Accessibility Code* (COMAR.09.12.53) also is required for public schools. (The regulation can be found at https://www.dllr.state.md.us/labor/build/buildaccess.shtml.

☐ Per COMAR 23.03.02: Regulation .29, all projects that include replacing or upgrading the electrical system should be designed and constructed so that a designated public shelter area can be fully powered in the event of an emergency.

☐ The architect should refer to the MCPS Facility Guideline Specifications when noted. The Document (which is currently under construction) can be found at: http://www.montgomeryschoolsmd.org/departments/construction/publications/guidelines.shtm

☐ Special consideration should be given to energy conservation including total life-cycle costs. The current Department of General Service (DGS) requirements shall be applied as design criteria. Life-cycle cost accounting in accordance with DGS criteria is required. A statement on energy conservation must be a part of the preliminary plans submission. Additional details on energy conservation will be provided under separate cover.

☐ The architect should refer to MSDE 2006 *Classroom Acoustic Guidelines* to address the acoustical qualities for classrooms. Core learning spaces should include sound-absorptive finishes for compliance with reverberation time requirements as specified in ANSI, *Acoustical Performance Criteria, Design Requirements, and Guidelines for Schools* (ANSI S12.60-2002.)

☐ High quality materials are to be used. The architect should refer to the MCPS Facility Design Guidelines.

Educational Considerations

☐ The school should be designed to support flexible and collaborative learning environments. When possible, the architect should identify collaborative workspaces throughout the building. These spaces can be located near the instructional spaces as well as informal areas such as the library, hallways, etc.

- ☐ All spaces should be designed in such a way that can be adapted to changes in pedagogical changes in the future.
- ☐ The classrooms should be designed to accommodate various size groups. Each classroom should be readily adaptable for group work, various presentation formats, and should have maximum connectivity to outside resources.
- ☐ The shape of the classroom and the design of built-in features and storage areas should provide optimum net usable floor area. Elongated rooms and features that protrude into floor area, limiting flexibility, are to be discouraged. Rectangular shaped classrooms are preferred.
- ☐ For maximum instructional flexibility, large special instruction areas such as those provided for general music and multipurpose laboratories should be designed to allow easy conversion of some or all of the space for other kinds of instruction in the future
- ☐ Every teaching station, support space, and core area must be wired for computer and VOIP telephone, along with adequate electrical supply in compliance with Maryland Sate design guidelines for Technology in Schools and the MCPS Division of Technology Services (DTS) guidelines. Facilities must be adaptable to accommodate rapid development in high technology and its equipment since educational program and organization in this field are dynamic. Space and power supply must be flexible to meet these changing needs.

Facility Considerations

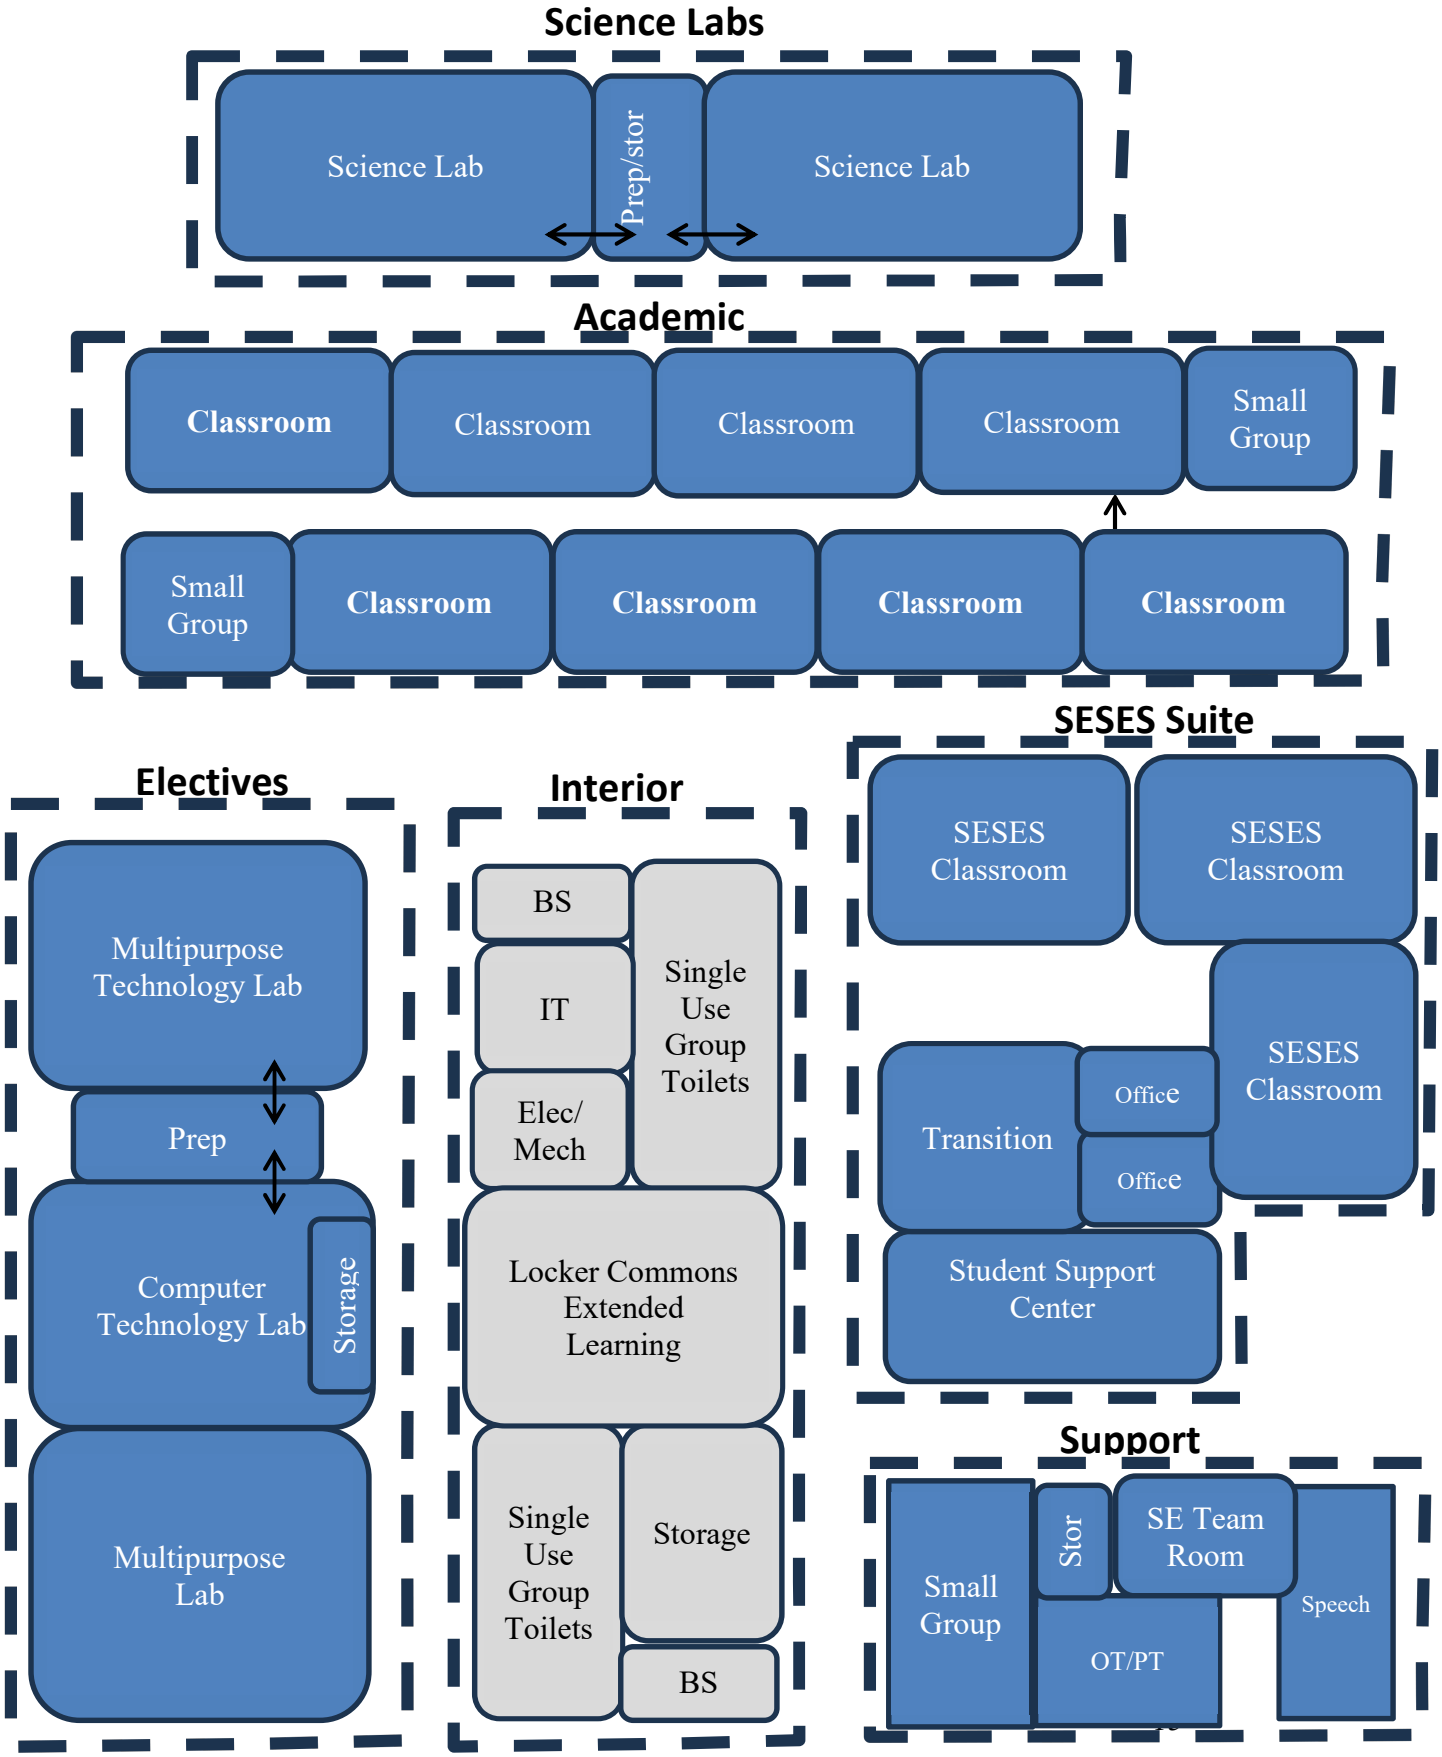
- ☐ The architect is to design the spaces within 5 percent (plus/minus) of the net square foot guidelines provided in this document unless otherwise noted.
- ☐ The first impression of a building is important. The main entrance to the school should have a clear and inviting identity, and the architect should emphasize the entrance area through its design and landscape.
- ☐ The Gym entrance should be easily identifiable, and also be inviting though design and landscape, as should Linkages to Learning if it is part of the program.
- ☐ The facility is to reflect an appealing visual, acoustic, and thermal environment and is to be properly furnished and equipped. Well-chosen colors and textures should be used.
- ☐ The design of the main lobby area needs to convey a feeling of warmth and welcome. The inclusion of a lighted showcase in which student work can be displayed is recommended.
- ☐ The main lobby should have a large overhead-animated electronic display board for messages and videos.
- ☐ Lighting must meet current guidelines and provide adequate levels.
- ☐ Carpeting should be limited to the principal's office, assistant principal's office and conference room in the administration suite, the offices in the guidance suite, and the main reading room of the library media center (LMC).

- ☐ The inclusion of lighted showcases to display student work should be provided in the corridors of the main entrance, art classrooms, technology education, gymnasium, and in each grade level area. They should be recessed into the wall with access from within a room and have an electric outlet. Lighting should be switched on or off from within the display case. Each display case shall have its own lighting switch.
- ☐ Staff work areas should be arranged to encourage interdisciplinary interaction.
- ☐ Noise and distracting sounds are to be minimized. In areas such as the multipurpose room and classrooms, which may be used for meetings and adult education, the sound of operating fans for ventilation should not interfere with instruction.
- ☐ An MCPS-designed alarm system will provide security for this facility. The architect will provide for this system in consultation with the Division of Planning and Construction (DPC) staff.
- ☐ Coordination must occur with MCPS DPC and any contractors for door security, camara locations (interior and exterior), intrusion, latch detection, remote dogging at main entrance and bus loop entrance, ACS, electronic hardward functions, card reader locations and design intent for all systems including sign operations.
- ☐ Some windows must be operable in each space in the building. Transmission of radiation through windows into various portions of the plant is to be considered in relation to heating and ventilating and in relation to planning the building for air conditioning. All instructional spaces should have windows, preferably exterior windows. If the design does not permit exterior windows, windows onto corridors should be provided.
- ☐ The specification for the window coverings will be provided by DPC. Screens on operable windows should be installed in all food related areas. Shades on side lights next to door openings or half lights are required.
- ☐ All spaces to be occupied by staff and students must have windows. Vision panels can be side lights, or half lights on the top half of the door if there isn't room for a side light next to the door opening.
- ☐ Careful placement of glass is required to avoid excess heat gain in occupied areas.
- ☐ The entire school is to be air-conditioned.
- ☐ Zoning the plant for heating and air-conditioning should be related to after-hours use of various areas such as offices, gymnasium, cafeteria, and the instructional media center. Appropriate location of parking, corridor barriers, and toilet rooms is necessary for after-hours use. Some classrooms nearby the cafeteria should be zoned for after-hour use as well.
- ☐ Core spaces such as the cafeteria, gymnasiums, and LMC should be easily accessible for community use and secure from the rest of the building after school hours.

- ☐ Special attention should be given to security measures within the building including location of security barriers in corridors and lockable doors to secure various sections of the building for after-hour use.
- ☐ Spaces that serve no real educational function, such as corridors, should be limited while at the same time assuring an easy to supervise and smooth flow of pupil traffic to and from the LMC, cafeteria, gymnasium, specialized centers, and support rooms.
- ☐ For security purposes, all doors into classrooms, conference rooms, offices, etc. must be designed with a sidelight window with shades. If a sidelight is not possible, then the door requires a vision panel. Doors should only have one vision panel on top half if needed. Limit lower vision panels.
- ☐ Noise and distracting sounds are to be minimized. In areas such as the cafeteria and classrooms, which may be used for meetings and adult education, the sound of operating fans for ventilation should not interfere with instruction.
- ☐ Some toilet rooms should be located so that they may be used during after-hours for student use and adult use.
- ☐ Bathrooms for staff and students should be located throughout the building. Some student and adult bathrooms must be located near the cafeteria and gymnasiums (available for after-hour use as well).
- ☐ To the extent feasible, at least one inclusive restroom should be provided on each floor and in high-traffic areas for student use. These toilets should be designed with a non-locking door and one individual stall in each toilet room.
- ☐ Electric water coolers should be strategically located throughout the building and close to the restrooms. At least eight of the water coolers should have water bottle filling stations and should be located near high volume areas such as the cafeteria and gymnasium and on each floor.
- ☐ Main corridors or any corridor where lockers are installed must be a minimum of 10' in width clear but not exceed 14’ in width unless required by code. Secondary corridors without lockers may be 8’ in width unless required by code to be wider. Suite corridors may be 6’ in width unless required by code to be wider.
- ☐ Lobby areas outside of the main gymnasium and cafeteria areas may be wider but not to exceed 20’ in width unless required by code to accommodate event crowd management.
- ☐ Locker pod areas should be located near prime stairwells when possible.
- ☐ The number of lockers should be equal to the core capacity plus 10%.
- ☐ The location of the elevator(s) must consider use by the student population, LMC staff, and after-hours users. Card readers are required for elevator use on all floors.
- ☐ A public address system is required in the facility. The architect and engineers should refer to the MCPS Facility Guideline Specifications for additional information.
- ☐ A building services call system is required.

- ☐ A room numbering system which is logical and understandable and which lends itself to electronic scheduling of room assignments for students is required. Permanent room numbers should be provided on all drawings at bid time.
- ☐ Identify storage room for spare materials/attic stock such as acoustic ceiling tile, paint, carpet tile, and ceramic tile. Include 12" metal shelving in the storage room.

Site Considerations



- ☐ A covered walkway from the bus loading area to the front door is desirable.
- ☐ The design of the building and grounds must provide for a secure environment for students and staff. Isolated areas should be minimized, and natural surveillance encourage by eliminating visual barriers.
- ☐ Exterior lighting is to be shaded from neighboring properties and is to be operable as appropriate from both time and key switches. For major entrances, a doorbell should be installed. The kitchen delivery area is to include peep site viewer for service area door entrance, and MPR entrance should also include a peep site viewer for after school activities.
- ☐ Walkways from remote parking areas to have lighting along an accessible path.
- ☐ Separate controls on a time clock for illumination of walkways and parking lots, including parking areas for the stadium area are required.
- ☐ Landscaping and provision for outdoor watering are to be included. Planting is to include screen planting and those that may be needed for erosion control. Other landscaping to support energy conservation and to relate the building to the site with aesthetic appeal must be included.
- ☐ Rough ins for electric charging stations are necessary to both a standard and ADA parking spot.
- ☐ Rough ins for underground conduits and sprinkler systems (as required by code) for future relocatable classroom locations.
- ☐ Bike racks, trash and recycle bin locations require concrete pads.
- ☐ Vehicle barriers should be considered at any entrance near a drive aisle.
- ☐ Sidewalk ADA ramps, curb cuts should be considered at all parking lot crossings.
- ☐ PV array on structured canopies in the parking lot may be used to meet Net Zero requirements.

Technology Framework

The latest technology should be integrated into every aspect of building. The architect should consult with the Division of Technology Services (DTS) and the Division of Planning and Construction (DPC) for the latest technology requirements. The architect must at a minimum plan for the following elements.

- ☐ Through the use of wireless access, local area and wide area computer and video networks, students should have access to each other, to schools throughout the county with similar capabilities, and to universities and government institutions throughout the world.
- ☐ Each classroom is to have one dedicated 20 amp electrical circuit for a charging mobile laptop cart.
- ☐ Each classroom will have the capacity to support an interactive teaching board at the teaching wall and computer network outlet (CNO) for the teacher's computer.
- ☐ Additional outlets to allow for charging of personal student devices should be provided in the classrooms and throughout the building.
- ☐ CNOs consisting of a flush mounted standard electrical box with 1 1/2" conduit to the ceiling space overhead should be located in all classrooms, offices, and other work locations according to the following general rules:
  - ☐ one CNO per office, staff office, planning room, etc. adjacent to telephone outlet
  - ☐ One CNO for VOIP system in the classroom
  - ☐ Two CNOs for student use located 3' apart along the back or side wall in each classroom.
  - ☐ Multiple CNOs in media center at circulation desk, reference areas, etc.
  - ☐ One CNO at each science lab workstation
  - ☐ All other areas such as the stage, cafeteria, etc., where computers might be used.
- ☐ The number and location of telecommunication closets required to support the building-wide computer network is dependent on the size and geometry of the building. The layout of the telecommunication closets will be determined during the design phase of the project.
- ☐ Outdoor wireless access points need to be provided at the schools.
- ☐ Wireless access point needs to be provided at the main entrance of the school for a message board.
- ☐ CNOs for security cameras are required at the schools. The number and location will be determined during the design process.

Adjacency Diagrams

Description of Facilities

The following is an approach to the design of new and modernized schools. Please refer to the summary of spaces for the square foot requirements for each space described below. Square foot allocations should be considered the standard to be followed, although minor deviations are allowed.

Standard Classrooms

☐ Classrooms should be arranged to support the grade level team organization for middle schools. Each grade's area of the building also will have three science laboratories and various instructional support spaces

☐ Each classroom should be designed to support flexible furniture arrangements that will support a variety of teaching and learning models.

☐ A 36”W x 24”D x 84” lockable teacher's closet is to be provided for general supply storage, personal storage, and wardrobe. There should be a duplex electrical outlet, a mirror with a pin tray, file cabinet, closet rod, a finger door latch, and adjustable shelves inside the wardrobe. The location should be near the teacher’s desk if possible.

☐ Every classroom must have computer outlets for two student workstations and one teacher workstation. The building information and communications distribution system and other aspects of the building design must comply with the latest edition of MSDE *Maryland Public School Standards for Telecommunications Distribution System*.

☐ Book storage should be located along the window wall with half of the cabinets equipped with hinged, lockable doors. A minimum of 60 linear feet should be provided for mobile book storage.

☐ Each classroom should have between 48 and 60 feet of whiteboard with a minimum of 16 feet along the teaching wall. Mounting height should be at 36”. The architect should refer to the MCPS Facility Guideline Specifications for the main teaching wall layout.

☐ 6” map rails and tack rails are to be placed above all whiteboards. One flag holder attachment is to be placed on all map rails with four to six map holders. Snap trim is the MCPS standard for all display boards, and H trim is required for all split board assemblies.

☐ Each classroom should be equipped with window coverings for all windows and on the door. All exterior windows on the ground floor, sidelight by the door, vision panel in the door, and windows facing the corridor are to receive an opaque shade. Exterior windows on upper floors to receive 5% openness shade. The specifications for the window coverings will be provided by DPC.

☐ Battery-operated clocks will be installed by MCPS.

- ☐ The teacher's desk should be located by the teaching wall and have clear view of the door. The call button should be located near the teacher's desk.
- ☐ Floor Finish: VCT, Ceiling Finish: 2'x4' ACT, Wall Finish: Painted, Base: 4" rubber, Lighting: 2x4 LED

Science Laboratories

Spatial Needs
Laboratory
Preparation Room
Chemical Storage

- ☐ When feasible, science laboratories should be designed in pairs, within team areas, with a preparation room preferably between pairs of labs.
- ☐ If the science labs are on separate floors of the building, they should be located near an elevator.
- ☐ The teaching wall should be on one of the long walls of the laboratory.
- ☐ Space should be designated in the laboratory to charge 2-3 laptop carts.
- ☐ The architect also should refer to the MSDE document, *Science Facilities Design Guidelines*, 1994 when designing the science laboratories.
- ☐ These rooms serve as a lecture/laboratory space and should be equipped with the basic equipment as listed below.
- ☐ Each science lab should have two exits.
- ☐ Seven student lab stations should be provided with peninsula or island with trough style design, with hot and cold water, and electricity provided. The layout should ensure that a teacher can view all student groups while in labs.
- ☐ Two of the labs should also include gas jets.
- ☐ The layout of the outlets, sinks, and gas jets should be designed to ensure that students to avoid crowding of students during and after investigations.
- ☐ One mobile bench (dry sink type) should be located under windows in each lab to facilitate work with plants.
- ☐ A three by five-foot demonstration table should be located at the front of the room, but should not block the student view of the interactive teaching board. This demonstration table should be equipped with a stone sink, hot and cold running water, gas, and electricity.
- ☐ Twenty-four feet of whiteboard and a small tackboard are required. Wiring for an interactive teaching board should be provided in the center of the teaching wall.
- ☐ Two four-foot project cabinets and two four-foot storage cabinets, all lockable, are to be located in each room.

- ☐ One installed fume hood with full utilities (water, sink, gas, and light) is needed in each laboratory that fits in a cabinet (24" x 36"). A pass-through fume hood, shared with the prep room should be considered when possible.
- ☐ A safety station is to be installed, with shower, automatic shut-off eyewash, and drain with a sloped floor, and should accommodate people with disabilities. The shower and eyewash should have a spring-loaded mechanism. The eyewash station should have a plumbed drain.
- ☐ The safety station should be located fifteen to twenty feet away from the fume hood.
- ☐ Each room should be wired for tie-in to the school computer network at each lab station.
- ☐ There should be a master cutoff switch for gas, water, and electric in each room. The master cutoff switch should be strategically located at the teacher's station so that it is not overly accessible to students, and should not be located near the exit door of the classroom. The cut-offs should operate electrically (as panic buttons) with a visible light indicator for gas and electric.
- ☐ In accordance with ADA guidelines, at least one science lab station in each laboratory should be made accessible to individuals with disabilities.
- ☐ Cabinetry for storage of laboratory equipment and microscopes should be provided in all of the labs.
- ☐ A sanitizing goggle cabinet, with 36 goggles, should be provided for all labs.
- ☐ A teacher's wardrobe should be provided.
- ☐ A location should be identified for a file cabinet.
- ☐ Locks with a common key are to be provided on drawers in special areas and the teacher demonstration table.
- ☐ Two pull-down electrical outlet fixtures should be provided in each lab: one in the center, one in the rear.
- ☐ Floor Finish: VCT, Ceiling Finish: 2'x4' ACT, Wall Finish: Painted, Base: 4" rubber, Lighting: 2x4 LED

Preparation Rooms

- ☐ These rooms are to facilitate the preparation of student projects and short-term storage of projects, as well as to provide general storage.
- ☐ Each room is to contain adjustable locked storage and counter facilities, electrical hookup and space for a refrigerator.

- ☐ Easy accessibility to the science rooms is important and is required for visual control of the rooms from adjacent rooms.
- ☐ These rooms should contain sinks equipped with hot and cold running water and a floor drain and workbenches equipped with electrical and gas outlets.
- ☐ A safety station is to be installed, with shower, automatic shut-off eyewash, and drain with a sloped floor, and should accommodate people with disabilities. The shower and eyewash should have a spring-loaded mechanism. The eyewash station should have a plumbed drain.
- ☐ Space and utilities should be provided in each prep room for a dishwasher.
- ☐ Emergency shut-off and telephone should be located in the chemical storage and prep room only.

Chemical Storage Room

- ☐ The chemistry storage room requires a steel flammable storage cabinet, with outside power vent, and an acid cabinet.
- ☐ This room requires an SKD keyed door.
- ☐ This room should be located adjacent to the chemistry prep room.
- ☐ This room must have a 24-hour, 365 day per year exhaust system vented directly to the outside in compliance with the latest applicable codes. Placement on the top floor, or on an exterior wall that is not near an air intake or outdoor space that is typically occupied is necessary.
- ☐ Sturdy, wood, and chemical resistant shelves with safety anti-roll lips on each shelf to prevent accidental roll-off.
- ☐ A safety center with shower and eye wash should be provided in the chemical storage room. If the chemical storage room is located adjacent to the prep room the safety center should located close to the chemical storage room.
- ☐ The eyewash station should have a plumbed drain.

Instructional Support Rooms

Spatial Needs
Large Staff Team Room
Team Resource Center/Workroom
Interdisciplinary Textbook Storage Room
Departmental Textbook Storage Room
Foreign Language Textbook Storage Room
Student Staff Office
Developmental Reading Room
Math Intervention Room

Large Staff Team Room

- ☐ The staff office should include a 100 sq. ft. office for the Resource Teacher.
- ☐ Space for teacher desks, storage, bookshelves, and filing cabinets for commonly used department supplies and instructional materials should be identified.
- ☐ A work counter with sink and electric outlets is required. Dedicated circuits are required for each outlet to accommodate microwaves or similar appliances in this space.
- ☐ Space should be provided for a refrigerator.
- ☐ One four-foot tackboard and one four-foot magnetic white board are required.
- ☐ Secure storage and electric and data outlets to accommodate computer equipment.

Team Resource Center/Workroom

- ☐ Two team workrooms are to be provided for each grade level, providing space in each for teacher desks or a large conference table.
- ☐ These rooms should be located next to each other and have an interconnecting door and a 4' x 6' window with window coverings between one another.
- ☐ A telephone will be located in these rooms.
- ☐ Storage and open/closed bookshelves to store teaching supplies and instructional materials should be provided.
- ☐ A work counter with sink and electric outlets is needed.
- ☐ Three feet of tackboard and four feet of whiteboard are required.

- ☐ Wiring for four computers in each team room is required.
- ☐ The school can consider combining team rooms to support the team organization of the school.

Interdisciplinary Textbook Storage Room

- ☐ An interdisciplinary textbook storage room is to be provided for each grade level and is to be easily accessible from the classrooms and the team workroom and should have adjustable built-in shelving.
- ☐ These rooms must have adequate HVAC and lighting for flexible use by staff as office space.
- ☐ Secure storage for computers should be provided within this space and should include adequate electric power for recharging battery powered laptop computers.

Departmental Textbook Storage Room

- ☐ Three departmental textbook storage areas are to be provided with the same requirements as the interdisciplinary textbook storage rooms.
- ☐ ATC ceilings are to be provided in these spaces.
- ☐ If the storage room is 100 sf or greater, add data and a call switch.

Foreign Language Textbook Storage Room

- ☐ A foreign language textbook storage room must be centrally located for foreign language materials.
- ☐ It needs to have adequate HVAC for flexible use as office space for staff.

Support Staff Office

- ☐ The office needs space for a desk and file cabinet and requires tackboard and wiring for a computer.

Developmental Reading Room

- ☐ The developmental reading room should be centrally located.
- ☐ A standard teaching wall should be provided per MCPS Facility Guideline Specifications.

- ☐ Space for 10-12 student desks should be provided. Storage should be provided under the windows.
- ☐ Magnetic marker boards should be provided along all the walls in this room.
- ☐ If this room is located adjacent to a classroom or resource room, a window should be provided between the two rooms.
- ☐ A teacher's desk and wardrobe should be provided.

Math Intervention Room

- ☐ The Math Intervention Room should be centrally located.
- ☐ A standard teaching wall should be provided per MCPS Facility Guideline Specifications.
- ☐ Space for 10-12 student desks should be provided.
- ☐ Magnetic marker boards should be provided along all the walls in this room.
- ☐ If this room is located adjacent to a classroom or resource room, a window should be provided between the two rooms.
- ☐ A teacher's desk and wardrobe should be provided.

English Language Development (ELD)

Spatial Needs
ELD Classroom
ELD Team Room
ELD Storage

If the school has an ELD program, the following spaces should be provided.

ELD Classroom

☐ The ESOL classrooms should be located in the academic areas of the building and be designed with the same requirements as a standard classroom.

ELD Team Room

☐ The team room should have space for teacher desks or a large conference table.

☐ A telephone should be located in this room.

☐ Storage and open/closed bookshelves to store teaching supplies and instructional materials should be provided.

☐ A work counter with sink and electric outlets is needed.

☐ Three feet of tackboard and four feet of whiteboard are required.

☐ Wiring for two computers is required.

ELD Storage

☐ Metal shelving

☐ Design in anticipation that this may be converted to an office in the future.

Special Education Facilities

Spatial Needs
Special Education Classrooms (3 SESES, 3 Autism)
Team Workroom
Support Room
Student Support Center
Staff Office
Transition Space
Personal Care Room
Preparation Area
Office (Psychologist/Social Worker)
Resource Room
Accommodations Room
Speech & Language Support Room
Occupational Therapy/Physical Therapy Room

Special Education Classrooms

This school will have both an SESES program and an Autism program.

☐ The special education classrooms should be located within the academic areas of the building and be designed with the same requirements as regular classrooms.

☐ Classrooms should be set up with two teacher desks and two teacher wardrobes

☐ SESES classrooms should be paired in a suite arrangement whenever possible.

☐ See the Additional Program Requirements section for specific special education programs at this school.

Team Workroom

☐ The team workroom should be designed exactly like the team rooms in the regular education areas but should be located adjacent to the support suite.

Autism Support Room

☐ Office sized room (140 s.f.) with data power for one workstation (desk and computer) and room for a table with chairs. There should be one support room for every two Autism classrooms. If there is an odd number of classrooms, round up for support rooms (i.e. for three Autism classrooms, there should be two support rooms).

SESES Student Support Center

- ☐ This support space should be located within the SESES suite.
- ☐ Dimmable lighting is desirable.
- ☐ Details for this room will be discussed during the quarter scale review.

Special Education Office

- ☐ The offices should be outfitted similarly to other offices in the building.
- ☐ This office should be located adjacent to the Student Support Center.

SESES Transition Space (adjacent to the Student Support Center)

- ☐ This space will be used as a flexible room for students as well as reception and conferencing.
- ☐ This space should be located between the office and the Student Support Center.

Autism Personal Care Room

- ☐ The personal care room should be accessible from within the classroom or shared between a pair of classrooms.
- ☐ The personal care room requires space for a toilet and sink. No changing table is required; toilet training is taught.

Autism Preparation Area

- ☐ The preparation area is not intended for cooking; it should consist of a refrigerator, sink, counters and lockable cabinets.
- ☐ Each school requires one washer and dryer to be shared. The washer and dryer should be centrally located for shared use.
- ☐ The washer and dryer should be ADA accessible.

Resource Room

- ☐ The special education resource room needs open shelving, counter space, and closed storage.
- ☐ The room should be designed similar to a standard classroom.
- ☐ Space for 15-20 student desks should be provided.

- ☐ It should be located in association with the academic classrooms.

Accommodations Room

- ☐ Space for 8-10 student desks should be provided.
- ☐ Space for 2-3 computer workstations should be provided.
- ☐ Magnetic marker boards should be provided along all the walls in this room.
- ☐ If this room is located adjacent to a classroom or resource room, a window should be provided between the two rooms.
- ☐ A teacher's desk and wardrobe should be provided.

Speech Language Room

- ☐ This room requires a whiteboard, tack board, open and closed lockable storage, open shelving, and a lockable teacher wardrobe.
- ☐ Room for a teacher's desk, lockable file cabinet, and table to work with small groups of students is required.
- ☐ The speech/language room should be wired for access to one computer workstation each.
- ☐ The speech room must be located on the first floor and be acoustically treated.
- ☐ The speech room needs a 4' x 4' mirror mounted to the wall.
- ☐ The speech room requires a sink with counter space.

Occupational Therapy/Physical Therapy (OT/PT) Room

- ☐ Each room must have whiteboard that is mounted two feet off the floor.
- ☐ A tack board, open and closed lockable storage, open shelving, and a lockable teacher wardrobe are required.
- ☐ A sink with counter space is required in the OT/PT room.
- ☐ Room for a teacher's desk, lockable file cabinet, and assorted sized furniture with adjustable legs should be provided.
- ☐ The OT/PT rooms should be wired for access to one computer workstation each.

☐ The OT/PT requires a ceiling mounted hook, with a 12’ foot diameter clear space for hanging swings and other suspended equipment.

☐ The OT/PT room requires lockable storage with sufficient area to house large gross motor equipment (minimum of 35 square feet) such as therapy balls, scooter boards, walkers, balance beams, ramps, etc.

Music Suite

Spatial Needs
Instrumental Music Room with approximately 400 sq. ft. of perimeter storage)
Instrument Storage Room
General Music/Choral Room
Small Ensemble Room
Practice Rooms

☐ The music area should be at the same level as the stage, if possible, to facilitate the movement of equipment from the music rooms to the stage.

☐ Each room is to be acoustically isolated from the rest of the school and the general/choral and instrumental areas separated by an acoustic barrier or wall with a Sound Transmission Classification (STC) of 50 or more.

☐ Listening is an important skill related to music education, and thus the need for quiet ventilation. Therefore, noise criterion (NC) levels of lighting and ventilating systems must not exceed NC 25 for the large rehearsal rooms and NC 30 for the practice rooms

☐ Both music rooms must have access to all computer technology including the LAN, and be equipped for a multimedia station.

☐ A water bottle filling station should be located in proximity to the choral and instrumental music rooms.

☐ Consistent heating, cooling and humidity control are required to maintain the instruments in these rooms. The architect is to ensure that the mechanical system is designed on a separate system to allow for 24-hour control in rooms that store instruments.

☐ Maximum security locks must be provided for each in this suite.

☐ Student toilet rooms should be located near the suite so that they might be used as dressing rooms. Each toilet room should have one stall plus dressing space.

☐ Recording and audio equipment with microphones, built in from the ceiling, should be designed in each of the music rooms.

☐ At least four duplex electrical outlets must be provided along the teaching wall of each music room.

☐ Multiple operable and reachable windows should be in the music rooms to accommodate for increased aerosols created through music practice.

Instrumental Music

- ☐ The instrumental music room must have a level floor.
- ☐ The specified 1,900 square feet is a minimum requirement and must not be reduced to accommodate other design needs. The room should be as square as possible in shape.
- ☐ 400 square feet of the instrumental music room should accommodate Wenger type instrument storage for assorted size instruments around the perimeter walls of the room. The room depth may be varied if it will provide better acoustics.
- ☐ Storage must accommodate large band instruments, concert percussion, marching percussion, and large orchestra instruments (cellos and acoustic upright basses).
- ☐ Acoustic treatment is needed so that the room is sound engineered for a band with maximum size of 80 members and a decibel level in the safe range, keeping in mind that the typical band produces decibels in the 100-120 range.
- ☐ A 16-foot ceiling is necessary to obtain proper volume.
- ☐ No supporting pillars or fabric folding doors are to be used in the room.
- ☐ An outside entrance should be near, but not in, the music suite if possible.
- ☐ A standard teaching wall should be provided per MCPS Facility Guideline Specifications. A double staff should be painted on one of the whiteboards.
- ☐ A teacher's wardrobe should be provided in this space.
- ☐ A work sink with countertop is needed for cleaning instruments.

General/Choral Music Room

- ☐ The general/choral music room is to have a ceiling of approximately 16 feet.
- ☐ The dimensions should be approximately 38' x 27'.
- ☐ The entrance should be a double entry door.
- ☐ The room is to seat approximately 70 students and be on one level.
- ☐ A standard teaching wall should be provided per MCPS Facility Guideline Specifications. A double staff should be painted on one of the whiteboards.
- ☐ A mirror on a non-teaching wall should be provided.
- ☐ A teacher's wardrobe should be provided in this space.

- ☐ Heavy-duty ceiling tiles should be used to assure maximum loss in sound transmission. Acoustical treatment is to provide a sound transmission loss of at least 50 decibels and a reverberation time of between 1.2 and 1.6 seconds.
- ☐ Adequate ventilation is needed.
- ☐ A music folder cabinet, horizontally slotted, with locking doors, with at least 100 horizontal compartments (15 inches high, 2 inches wide), and with facilities for numbering each compartment is required.
- ☐ Cabinetry must be adequate to store 20 electronic keyboards and 32 guitars in spaces 6 inches high, 40 inches deep, and 16 inches wide.

Small Ensemble Room

- ☐ The small ensemble room should be adjacent to and have access from within both the general/choral room and the instrumental music room and have some windows to allow for supervision from both classrooms.
- ☐ This room can be designed to teach piano or music technology if the school teaches those classes.
- ☐ The room should be arranged so that it may be used as a small ensemble room or to teach sectionals.
- ☐ A standard teaching wall should be provided per MCPS Facility Guideline Specifications.
- ☐ A teacher's wardrobe should be provided in this room.
- ☐ Storage for instruments and folio cabinets for sheet music should be provided in this room.
- ☐ A four-foot wide door is required.

Practice Rooms

- ☐ These rooms need to be acoustically treated for isolation and reverberation.
- ☐ Rubber seals for sound proofing and thick solid doors to reduce sound transmission should be used.
- ☐ The doors need windows to allow for supervision.
- ☐ These rooms should be located with easy access to both the instrumental and choral rooms.
- ☐ These rooms to be keyed by the supplier.

Visual Arts Suite

Spatial Needs
Art Room
Storage Room
Kiln Room

☐ The visual arts suite should be designed with outside doors to an art courtyard from the art classrooms, if possible, and with the storage/office and kiln room adjacent to the classroom.

Art Room

☐ The room is to have adequate natural and artificial lighting and views as well as access to the outdoors.

☐ Ceiling track lights are to be provided with six to ten spotlights.

☐ Cabinetry and wall colors should be neutral.

☐ The design of the room must allow for placement of the art tables with adequate space between the tables for good circulation.

☐ Entrance doors must clear 36 inches.

☐ A lighted display case should be located in the hall outside the art room.

☐ An 8' W x 8'H tackboard with open space below for drying racks should be provided.

☐ Tackboards should be provided on the walls, as much as possible.

☐ A 4-6' wide bank of cubbies (height may vary) to accommodate 32 student backpacks and notebooks should be provided.

☐ Three large stainless steel sinks (18” x 40” x 14”) should be provided in the room. Each sink will have solid waste traps, two drains, two lever-controlled hot and cold faucets, adequate approximately 3’ of counter space for storage on either side of the sinks, and wall cabinets above (if sinks are not on an island). One sink needs to be ADA accessible. The counters should be made of solid surface material.

☐ A standard teaching wall should be provided per MCPS Facility Guideline Specifications.

☐ Additional tackboard should be provided to ceiling and on the sides as space permits.

☐ Open space should be provided near the sink to accommodate five students working at five potter’s wheels.

- ☐ Ample electrical outlets, approximately every 4’ should be provided.
- ☐ Open and closed shelves are to be provided for storage of art projects, flammable materials, and reference books.
- ☐ Open space is to be provided in the art room for three banks of flat files cabinets (stacked) and two drying racks. 5-drawer flat file units are 40 ¾”W x 15 3/8”H x 28 3/8”D x 2” drawer depth. (NIC)
- ☐ Blackout shades are to be included on windows.

Storage Room

- ☐ This room should be designed with windows to the art room.
- ☐ As much open 24” deep shelving as possible should be provided in this room.
- ☐ Space should be provided for a teacher’s wardrobe and a filing cabinet.
- ☐ Immediately inside the entrance, a worktable 6-feet wide, 30 inches tall, 34 inches deep should be provided with built-in adjustable shelves below and 14-inch deep wall hung shelves above. This table will accommodate a 30-inch square paper cutter and storage of large art reproductions and papers below, in 3 banks of shelving units 8 inches on center, 20-inches wide (inside width).
- ☐ The storage room door should be lockable.

Kiln Room

- ☐ This room should be equipped with space and utilities for 2 kilns (to be included) and an exhaust fan hood.
- ☐ As much 18" deep, tall, adjustable metal shelving should be provided.
- ☐ A 36”W x24”D spray booth with exhaust and cabinets below should be provided.
- ☐ A small worktable with shelves above and below is needed.

Multipurpose Technology

Spatial Needs
Multipurpose Technology Laboratory
Computer Technology Laboratory
Preparation Room

☐ Sufficient lighting is needed to create shadow-less work surfaces.

☐ Ample electrical service and receptacles to accommodate computers, machines, and portable electric tools. Sufficient service shall be provided to accommodate flexibility within the studio with tabletop machinery and overhead pull-down receptacles, providing for machines and portable electric hand tools.

☐ If floor receptacles are provided, they shall be flush.

☐ Hallway walls should include interior glass for viewing into the laboratory.

☐ Windows starting 36” from the floor should be provided between all of the rooms in this suite.

Multipurpose Technology Laboratory

☐ A standard teaching wall should be provided in this room per DPC layout.

☐ A teacher’s desk and wardrobe is required for this room.

☐ Adequate ventilation system to remove airborne dust is required.

☐ Space for 32 students working at mobile worktables is required in this laboratory.

☐ Floor covering shall be non-slip tile.

☐ The room requires whiteboard throughout the room.

☐ A counter with wall and base cabinets and a wash sink should be provided along one wall.

Computer Technology Laboratory

☐ The computer laboratory should be zoned for independent air-conditioning during times when the rest of the building is closed.

☐ The minimum dimensions of the room should provide for an uninterrupted area of 25’ x 32’ so that the computer laboratory may be designed with the following requirements.

- ☐ Each computer laboratory should accommodate 32 student workstations.
- ☐ The layout should be designed with five to six collaborative groups of computers workstations that cluster around a large shared monitor.
- ☐ Additional space for some worktables should be provided.
- ☐ A file server and printers are to be located near teacher's desk or in office.
- ☐ A teacher's wardrobe and storage cabinets should be provided.
- ☐ The teaching wall should be designed to accommodate an interactive teaching board. The teaching wall layout will be provided by the Department of Planning and Construction (DPC).
- ☐ Marker boards should be provided in the laboratory.
- ☐ The architect should consult with the DTS/DPC for the latest technology requirements.
- ☐ Space and outlets should be provided for printers.
- ☐ The storage area is to include shelving and a work counter with electrical outlets and overhead and base cabinets.
- ☐ The architect should consult with the DTS/DPC for the latest technology requirements.

Preparation Room

- ☐ The preparation room should be located next to the Multipurpose Technology Laboratory.
- ☐ The door and wall should have windows into the Multipurpose Technology Laboratory to allow for supervision by the staff.
- ☐ One side of the room should be designed have a counter with wall and base cabinets.
- ☐ Storage area will be equipped with steel shelves and cabinets capable of storing a variety of instructional materials, supplies, special tools, equipment, and student projects.

Multipurpose Laboratory

Spatial Needs
Multipurpose Laboratory
Storage Room

- ☐ This space will be designed for flexible use by art, family and consumer science, and other elective courses.
- ☐ The design should include full computer access so that the space could be used as a computer laboratory.
- ☐ The teaching wall should be designed according to MCPS Facility Guideline Specifications.
- ☐ Perimeter counters should be provided along one or two walls of the laboratory with wall and base cabinets.
- ☐ Adequate electrical service and receptacles to accommodate computers, small and large appliances, and other electric machines are essential.
- ☐ Access from the laboratory to the storage room is needed.
- ☐ A kitchen area should have three kitchen units, (to be placed along one or two adjoining walls) each containing the following:
  - ☐ Eight feet of countertop space including a stainless steel sink;
  - ☐ Lockable base and wall storage with hinged doors, with a minimum amount of drawer space (2 drawers per kitchen);
  - ☐ Wall oven; hood may be required over oven with exhaust duct;
  - ☐ Ample electrical outlets along the counter to be used for small appliances and induction type stoves;
  - ☐ Outlets over counters should have dedicated circuits to prevent breaker tripping.
  - ☐ Hot and cold water;
  - ☐ One of the kitchens should be ADA accessible;
  - ☐ One safety eyewash station should be provided in the lab; and
  - ☐ Space for two residential refrigerators, accessible to the kitchens should be provided.
  - ☐ The kitchens shall not include peninsulas nor islands with the exception of a demonstration table. A mobile demonstration table will maximize flexibility.

☐ Consideration should be given to use of the space for after school activities/clubs and by special education students working on life skills curricula.

Storage Room

☐ The storage room should have the following:

☐ Lockable door with access to the teaching station;

☐ A vision panel or window into the storage room is required for supervision.

☐ The room is to be equipped with 18" metal shelving secured to the perimeter walls;

☐ Space and electrical and plumbing requirements should be designed for a commercial grade washer and wall-vented dryer that meets ADA requirements;

☐ Perimeter counters should be adjacent to the washer/dryer and be a minimum of 24" deep;

☐ Space for one residential refrigerator and one residential freezer; and

☐ Space for a table for folding laundry.

☐ A sink.

☐ The sink and appliances must be ADA compliant.

Physical Education

Spatial Needs
Gymnasium (equals 2 teaching stations)
2nd Gymnasium
Fitness/Weight Room
Auxiliary Gymnasium/Dance Room
Health Classroom
Locker Rooms
Inclusive Locker Room
Storage Rooms
Toilet Rooms
Shower/Drying Towel Rooms
Laundry Room
Offices
Common Planning Area
General Storage
Outdoor Storage
ICB Storage
Outside Storage Shed (See Site Requirements)

☐ Primary entrance doors to the gymnasiums and locker rooms should be double doors with no center posts. Non-glazed doors throughout the entire area are preferred.

☐ Doors should be forty-eight inches wide.

☐ Storage closets should have no center posts and should be able to be held open to allow for easy movement of equipment.

☐ Doors should be located at least six feet from each side of any basketball hoop to ensure that full wall padding can be provided behind the hoop.

☐ If design allows, operable windows in the gymnasiums should be provided.

Gymnasium

☐ The gymnasium is to have a wooden floor.

☐ The gymnasium requires fiberglass electrically operated folding bleachers to seat one-third of the maximum projected enrollment along one long side, leaving an area of 65 by 100 feet when folded.

☐ A 27-foot clear ceiling is required.

- ☐ An electrically operated folding partition with pass-through door is to be installed with convenient dual control system. The wall should fold to the bleacher side.
- ☐ The folding partition shall comply with *Safety Guidelines on the Use of Electric Retractable Partitions in Maryland Schools*.
- ☐ Fixed equipment will include the following:
  - ☐ High bar with floor plates
  - ☐ Insertion type (Senoh only) floor plates for volleyball and badminton game standards, red aluminum combination uprights that work for both volleyball and badminton, therefore only requiring one size of poles and one size of sleeves. Each side of the gymnasium should be designed for four badminton/volleyball courts for a total of eight small courts.
  - ☐ Floor plates for uneven bars
  - ☐ Scoreboard
  - ☐ A clock with cage at each end of the gymnasium
  - ☐ Archery net, the full width of the gymnasium, with hoist on non-bleacher side
  - ☐ Six basketball baskets, with safety straps. Four should be cross-court. The two end baskets should have rectangular glass backboards and hydraulic rims. All baskets should be motorized and adjustable with key. There should be no doors under the basketball goals.
  - ☐ Wall safety padding must be mounted under each basket 4’ max AFF.
  - ☐ Provisions for reducing glare should be considered.
  - ☐ LED lighting for instruction and competition is required.
  - ☐ Acoustics should be addressed.
  - ☐ It is particularly important that ventilation function equally and quietly on both sides of the folding partition.
  - ☐ All switches, fire alarms, etc. should be located in corners, covered with wire boxes, and be duplicated on each side of the folding partition.
  - ☐ Each wall of the gymnasium should have four sets of electrical outlets.
  - ☐ Painting and creative artistic wall graphics should be provided.
  - ☐ The gymnasium should be equipped with acoustical deck, computer outlet, wired for an interactive teaching board, and sound system.

- ☐ A location should be identified for an interactive teaching board including the appropriate power and wiring.
- ☐ A 4' whiteboard should be provided on both side of the folding partition wall.

☐ A recessed water bottle filling station with filter should be provided outside each end of the gymnasium or integrated into an alcove within the gymnasium.

☐ A lobby with display case, tack board, and small storage closet should be provided adjacent to the gymnasium.

☐ Security doors should be provided to close off other parts of the building from the gymnasium/lobby areas.

☐ If the gym opens to the outside, a step-down entrance with concrete landing is needed.

☐ Emergency lights should be at least 12 feet from the floor.

☐ MCPS staff will provide gymnasium court markings and approval prior to painting.

☐ Plug-in service for score table controls shall be provided in the floor and need to be flush. Controls must be accessible when bleachers are in the open position.

☐ Attention should be given to the design of lighting fixtures so that they will not be damaged by indoor ball sports. Review with MCPS DPC.

2nd Gymnasium

☐ The 2nd gymnasium is to have a wooden floor.

☐ A 27-foot clear ceiling is required.

☐ Fixed equipment will include the following:

- ☐ Insertion type (Senoh only) floor plates for volleyball and badminton game standards, red aluminum combination uprights that work for both volleyball and badminton, therefore only requiring one size of poles and one size of sleeves. There should be four smaller badminton/volleyball courts in this gym.
- ☐ A clock with cage at each end of the gymnasium
- ☐ Two end baskets should be motorized and adjustable with key. There should be no doors under the basketball goals.
- ☐ Wall safety padding must be mounted under each basket, 4" max AFF.
- ☐ Provisions for reducing glare should be considered.

- ☐ LED lighting for instruction and competition is required.
- ☐ Acoustic treatment as necessary for appropriate instruction and competition.
- ☐ All switches, fire alarms, etc. should be located in corners, covered with wire boxes.
- ☐ Each wall of the gymnasium should have four sets of electrical outlets.
- ☐ Painting and creative artistic wall graphics should be provided.
- ☐ A 4' whiteboard should be provided in this gymnasium.
- ☐ The gymnasium should be equipped with acoustical deck, computer outlet, interactive teaching board and sound system.
- ☐ A location should be identified for an interactive teaching board including the appropriate power and wiring.

☐ A recessed water bottle filling station with filter should be provided outside each end of the gymnasium or integrated into an alcove within the gymnasium.

☐ Security doors should be provided to close off other parts of the building from the gymnasium/lobby areas.

☐ If the gym opens to the outside, a step-down entrance with concrete landing is needed.

☐ Emergency lights should be at least 12 feet from the floor.

☐ MCPS staff will provide gymnasium court markings.

☐ Attention should be given to the design of lighting fixtures so that they will not be damaged by indoor ball sports.

Fitness/Weight Room

☐ The fitness/weight room should be located adjacent to the gymnasium area and the lockers rooms and have sixteen-foot ceilings.

☐ Direct access to the corridor is desired.

☐ Projections, posts, or other hazards are to be avoided.

☐ An electric deodorizer system and an excellent ventilation system must be provided.

☐ This room requires rubberized, resilient floor for weight training.

☐ 6'x12' mirror should be mounted on one wall of the weight room.

- ☐ A climbing wall should be installed along the other long wall of this room (need to confirm length of the wall)
- ☐ Functional fitness equipment (such as or comparable to MoveStrong Functional Fitness Equipment) should be installed along one of the long walls to include the following:
  - ☐ Monkey bar, cantilevered bridge system with wall mount that is 10 to 20 feet long with the following attachments:
    - ☐ Globe balls on end to attach additional pieces of equipment
    - ☐ Dip station upright post
    - ☐ Pull up bars
  - ☐ Monkey bars to extend the climbing walls and/or wall mount bridge
  - ☐ Battle rope pull (1-2)
  - ☐ Appropriate rope for middle school
  - ☐ Two or three stall bars mounted to the wall with the following equipment:
    - ☐ pull-up bars
    - ☐ G-loop anchors (4 per stall bar) for resistance bands
    - ☐ Ground rotational trainer (1)
  - ☐ Double triple-tier pull up bar (such as or comparable to the Wall FTS unit) with the following attachments: (This unit could replace on or two of the pull-up attachments above)
    - ☐ One or two storage trays (to hold medicine balls and dumbbells)
    - ☐ Functional training equipment suspended from the wall mount such as ropes, resistance bands, suspensions devices, or other devices
- ☐ Electric outlets should be located on all four walls.
- ☐ A small recessed lockable closet with shelving should be provided.
- ☐ A 6' x 4' tack board and whiteboard are to be installed.
- ☐ Colored acoustic panels, auxiliary stereo sound system, audio and computer hookups and clocks with cages should be provided in this room.

- ☐ Wall graphics are to be specified by MCPS staff.
- ☐ Light switches are to be keyed.

Auxiliary Gymnasium/Dance Room

- ☐ The auxiliary gymnasium should be located adjacent to the gymnasium area and the lockers rooms and have sixteen-foot ceilings.
- ☐ Direct access to the corridor is desired.
- ☐ Projections, posts, or other hazards are to be avoided.
- ☐ A sprung wood floor should be provided to allow for dance and other activities to be taught in this room.
- ☐ A mirror should be provided along one long wall.
- ☐ The room should be able to accommodate mats for wrestling and other fitness activities.
- ☐ Colored acoustic panels, auxiliary stereo sound system, audio and computer hookups and clocks with cages should be provided in this room.
- ☐ Electrical outlets should be provided around the room.
- ☐ MCPS staff will provide paint colors and wall graphic layout.
- ☐ A sound system with the control panel should be installed in the storage closet.
- ☐ Light switches are to be keyed.
- ☐ A keyed electric hoist system must be installed to move and store wrestling mats.
- ☐ A room to store moveable dance barres should be identified.
- ☐ A water cooler must be located in the hallway near this room.
- ☐ A whiteboard (4' x 6') and tackboard (4' x 6') should be installed.
- ☐ A battery operated clock with protective cover should be installed approximately 9' high.

General Storage Room

- ☐ The general storage room should be located in the gymnasium and needs to have the same ceiling height as the gymnasium. The general storage also needs to be easily accessible from the auxiliary gymnasiums and 2nd gymnasium.

- ☐ Mats, gymnastic equipment, and other physical education materials and equipment need to be accommodated.
- ☐ A small intramural athletic coordinator storage closet is needed near the gym (separate key).
- ☐ Two doors, each four feet wide and seven feet high with no thresholds or center mullions and heavy-duty hardware are required for the interior storage rooms.
- ☐ An outside storage area requires double doors that need to be seven feet high.
- ☐ All storage areas should include shelves, bins, pegs, and pulley system for storing goals.

ICB Storage

- ☐ These storage rooms are for use by community groups and should be in or near the main and 2nd gymnasiums
- ☐ It should include metal shelving on one wall as well as space for badminton and volleyball uprights.
- ☐ This room needs to be keyed separately.

Locker Rooms

- ☐ The locker rooms need to meet the following requirements:
- ☐ Interior double door entrances with maze to block vision into space must be designed.
- ☐ The locker rooms need an outside exit for use by physical education classes. This exit door must be keyed for re-entry by classes and after hours maintenance issues. This is a card reader access point.
- ☐ A "step-down" with concrete landing should be planned.
- ☐ Some shelves should be provided near the entrance to the locker room for student books.
- ☐ Male and female locker rooms should be adjacent and located on the same floor so that the Physical Education Offices can have a connecting door and common connected planning room.
- ☐ To the extent feasible, MCPS should provide at least one inclusive changing facility into the design of new schools and school renovations, taking into account safety and confidentiality considerations in the design and location of the inclusive changing facility.
- ☐ Locker space should handle a total of 1,440 lockers evenly divided between male and female locker rooms. All lockers are to have padlocks and be 3-tiered 12" x 12" x 24". Locker rows

should be situated for maximum supervision from the PE office area and be no higher than six feet.

- ☐ Several lockers with key-entry are needed for ADA accommodations.
- ☐ The locker rooms are to be well ventilated and include a deodorizer system.
- ☐ Clocks, tackboard, PA, and a water cooler must be provided in each locker room.
- ☐ Benches used for dressing purposes, including ADA benches, are to be secured to the floor with a single bench between locker rows. ADA benches should be in close proximity to ADA lockers.
- ☐ Full-length mirrors are to be provided on the ends of each locker bank with convenient electrical outlets.
- ☐ The locker room should reflect school colors.
- ☐ Storage within the locker area is to be near the office and should accommodate various physical education supplies, equipment, and furnishings. Shelving with bins and hooks will be specified later. Shelving must have lip to keep balls from falling.
- ☐ A hose bib should be located in each locker area. Appropriate drainage of the locker area is required.
- ☐ The floor surface must be a non-skid surface but smooth enough for thorough cleaning. VCT/rough surface tile is preferred.
- ☐ Toilet rooms are to be located in each locker area and are to contain lavatories, water closets, and/or urinals.
- ☐ Hose bibs are required near the shower area as well as within proximity to the restroom area.
- ☐ Area drains are required in the shower and restroom areas.
- ☐ Mirrors are to be installed over sinks.

Shower/Drying/Towel Room

- ☐ The shower area should be well ventilated and free from hazardous projections.
- ☐ Each shower room is to have three individual showers and one handicapped accessible shower, with modesty panels, a nonskid floor surface and recessed soap dishes. Marble thresholds are required at the shower to floor transitions.
- ☐ A central lockable cut-off valve for the showers must be provided in each locker room.

☐ The drying room, with nearby towel storage, should be located between the shower room and locker room and have wall hooks and a nonskid floor surface, preferably tile.

Inclusive Locker Room

To the extent feasible, MCPS should provide at least one all-inclusive changing facility into the design of new schools and school renovations, taking into account safety and confidentiality considerations in the design and location of the inclusive facility.

This space should be master planned in the building with the following features:

☐ Interior double door entrances with maze to block vision into space must be designed.

☐ Some shelves should be provided near the entrance to the locker room for student books.

☐ The locker rooms should be well ventilated and include a deodorizer system.

☐ The locker room should be adjacent and located on the same floor so that the Physical Education Offices can have a connecting door to the offices to allow for supervision of the space.

☐ Fifty lockers should be provided in this space with several lockers with key-entry are needed for ADA accommodations.

☐ Small private dressing areas are to be provided in the inclusive locker area with one meeting ADA requirements.

☐ A full-length mirror is to be provided in the room with a convenient electrical outlet.

☐ The locker room should reflect school colors.

☐ Plumbing should be roughed in for a future toilet room.

☐ The floor surface must be a non-skid surface but smooth enough for thorough cleaning. VCT/rough surface tile is preferred.

Laundry Room

☐ A laundry area with floor drain for a commercial washer and dryer and laundry tub should be included with shelving for towel storage.

P.E. Offices

- ☐ The offices need to be centrally located with access to both male and female locker rooms, have windows with window coverings for effective supervision of the appropriate locker room and have VCT floors.
- ☐ Each office requires a separate shower, toilet, sink, mirror with shelf over sink that is large enough to use as changing areas for the physical education staff.
- ☐ Six full-length lockers and a full-length mirror also should be provided.
- ☐ Storage is required for the offices.
- ☐ The offices need to be air-conditioned.
- ☐ Each office requires space for four desks with appropriate telephone, electrical and computer outlets and tackboards.
- ☐ A clock should be provided in each office.
- ☐ Each office is to be separated from the other office by a common planning room with access to both the common planning area and the hallway to the gymnasium.

Common Planning Room

- ☐ The common planning room requires access from both PE offices and the hallway.
- ☐ This space needs to be designed with locking kitchen type casework, counter with cabinets above and below, clock, phone, computer outlet, tackboard, and whiteboard.
- ☐ The space should be large enough to allow for a small conference table with six to eight chairs.

Health Classroom

- ☐ The health classroom should be designed with the same specifications as all academic classrooms on opposite sides of the room.
- ☐ This classroom needs to be located in close proximity to the physical education suite since the health and physical education teacher may be the same person and may have to supervise the locker rooms.

Computer Support

Spatial Needs
Storage Room/Office Area
Telecommunication Equipment Closets
Telecommunication Closets

☐ A secure storage room/office area is provided for storage of software and instructional materials. The combination storage room/office area is to be wired for building-wide network access. This room may house multiple file servers.

Library Media Center (LMC)

Spatial Needs
Main Learning Environment
Circulation Area
Instructional Area
Work and Production Area
General Storage
Instructional Technician Support Room
Multimedia Production Room

- ☐ The Library Media Center (LMC) is the information hub of the school.
- ☐ The latest version of the MSDE document, *Facilities Guidelines for Library Media Programs,* may be used as a reference for the design of the LMC.
- ☐ The LMC should be centrally located and easily accessible from the outside to allow the LMC easy access by outside groups during after school hours and in the summer.
- ☐ There should be easy access to the elevator.
- ☐ Toilet rooms should be located nearby the LMC.
- ☐ Sight lines are an important feature in the design of the LMC. Staff should have visual supervision of the entire LMC including the entrance from the LMC circulation desk.
- ☐ Flexible lighting with the ability to darken separate areas of the main resource room without affecting other spaces.
- ☐ If possible, the LMC should not be located below high noise level activities such as music, multipurpose technology education, cafeteria, or physical education.
- ☐ Multiple charging outlets need to be provided throughout the LMC and can be located in the floor, wall, and counters. Consideration should be given to the location of the circulation desk and seating areas that may require data and power for the use of computers or staff/student work areas.
- ☐ Ideally, a countertop with outlets above the counter should be provided along one of the walls of the LMC to allow users to plug in portable devices. The counter should be located in an area that can be easily supervised and at a desk top height so that chairs can be interchanged in the library.

Main Learning Environment

This is the main area of the library that includes the stacks, instructional space, and circulation area.

Stacks (the area containing book shelves)

- ☐ The height of the low moveable bookshelves should accommodate three rows of books and the height should be at least 48 inches.
- ☐ Must be on wheels to allow for flexibility.
- ☐ Lights should be designed to allow for flexible arrangement of shelving in the main reading room.
- ☐ Different materials can be explored based on design and cost factors to include metal and wood shelving.
- ☐ Soft, comfortable seating should be provided for individual and collaborative student work and power should be provided throughout this area.
- ☐ Consideration should be given for shelving for special types of collections such as graphic novels, periodicals, and oversized books.
- ☐ Wall shelving should be maximized in this area, where possible (six feet when possible).
- ☐ Consideration should be given to provide opportunities to display and highlight student work and items in the collection.
- ☐ Consideration should be given to including an edge condition for focused study, such as window seats or seats along a countertop that incorporates lower ceilings and focused lighting for students.
- ☐ Consideration should be provided for space for a collection that supports the specific program at the school. The design team should consult the School Library Media Program Office for more information.
- ☐ Shelving is to be allocated on the average as follows:

	Linear Feet	**Shelving Space**
Non-fiction books	530	11”
Fiction Books	670	10.5”
Magazines (adjustable shelving that can accommodate magazine and/or books)	24	N/A
New Book/Interest Display	12	12”
Media Center Storage (20-24” depth)	As space allows	N/A

Circulation Area

- ☐ The architect needs to identify a location for a circulation desk that is large enough to accommodate two computer workstations and a networked printer to access the online catalog system.
- ☐ If space permits, storage cabinets should be provided in the circulation area for miscellaneous activities such as book repairs and holds.
- ☐ The circulation desk furniture package will include the following features:
  - ☐ a storage area for book return carts;
  - ☐ a book return container to catch the books;
  - ☐ supplies drawers;
  - ☐ a writing area unit; and
  - ☐ an area for a laser printer and supplies.
- ☐ The front height of the circulation desk should have an area that does not exceed 39" in height.
- ☐ The work surface for the staff member should meet ADA compliance with optimal ergonomics (keyboard height).
- ☐ Electric and Ethernet needs to be provided.
- ☐ The circulation desk should be placed in such a way that allows for two means of egress.
- ☐ Full access to operate the lighting in the instructional area should be provided from a switch at the Circulation desk.

Instructional Areas: Main and Secondary and Collaboration Rooms

Main Instructional Area

- ☐ Sight lines are an important feature in this area. Staff should have visual supervision of the entire LMC from this area.
- ☐ A teaching wall area designed for an interactive board should be included.
- ☐ This area should include table and chair seating as well as soft seating so that the combination of seating totals 32. A variety of heights in the instructional area for students including standing and sitting options should be provided.
- ☐ This area should be carpeted.

- ☐ The space should be easy to reconfigure for a variety of uses and groupings with the use of flexible furniture to support whole class, small group, and project based learning activities.
- ☐ The instructional areas need access to all forms of technology in the school including wireless access.
- ☐ A three way switch for light fixtures should be provided in the main area and instructional area so the lights can be dimmed as needed for presentations.

Secondary Instructional Area

- ☐ Additional informal instructional areas should be identified and located near the entrance of the LMC.
- ☐ The flooring in this area should be VCT or other hard surface material. This area may also be used during the day for lunch.

Collaboration Room(s)

- ☐ At least one small group collaboration room should be provided near the informal instructional area that allows students to be visually supervised but work independently.
- ☐ Data and electricity to accommodate appropriate technology should be provided.
- ☐ This room should be glass enclosed.
- ☐ This space should be carpeted.

Work and Production Area

This area was formerly two distinct spaces: the library media specialist office and library media center workroom. The new combined space now supports the library media staff functions and is also used as a multipurpose space to include maker activities for student and school staff use.

- ☐ The work area should be delineated through the use of a different ceiling height or half wall.
- ☐ This room requires VCT floor material.
- ☐ Consideration for a counter for student use is preferable.
- ☐ Adequate electrical and data outlets are to be designed in consultation with the library media Specialist and central office staff members. Dedicated circuits may be required.
- ☐ It must contain a sink with hot and cold water, in addition to ample worktops for library media processing, student and teacher use.
- ☐ Space is needed for two staff workstations. This can be built-in or through furniture.

- ☐ Two lockable wardrobes need to be provided. Power will be required. See media center specifications available from the MCPS Facility Guideline Specifications.
- ☐ This space needs to contain open shelving to accommodate materials for student use such as maker space supplies and hands on activities as well as closed lockable cabinets for library media center supplies.
- ☐ Space should be provided for a networked school printer and 3D printer that is accessible by teachers and students. Identify the locations on the plans as a dedicated circuit will be required.
- ☐ Electric and data should be located on all walls to provide flexibility in the use of the space.
- ☐ The work area includes space for collaborative planning and processing of library media materials.

Library Media Storage

- ☐ The library media storage room provides for storage of library media materials, equipment, seasonal materials and supplies.
- ☐ This room requires an SKD key.
- ☐ Electric and Ethernet should be provided to accommodate library media technology needs.
- ☐ A variety of shelving should be provided for instructional materials for teacher use such as audio book resources, and equipment with some open space to accommodate Chromebook cart storage.
- ☐ Varied depths of shelving should be provided including 6", 12" and 24" deep.

IT Support Specialist Room

- ☐ A room is needed in or near the IMC for the IT Support Specialist.
- ☐ This room should have multiple data and electrical outlets and space for the specialist to work on computers.

Multimedia Production Room

- ☐ This room should be located adjacent to the Library Media Center and will be used for staged videotaping and other multimedia activities.
- ☐ One wall should be designed to accommodate six editing stations.
- ☐ A chromakey green screen or green painted wall should be installed on one of the walls for video and photography use.

☐ This room does not require any special lighting for video production.

Student Activities Facilities

Spatial Needs
School Store
Student Government Storage Closet

☐ These rooms need direct access to a corridor and are to be near the cafeteria and/or gymnasium.

☐ Flow of student traffic to and from the area is an important consideration.

School Store

☐ The school store should be located near the gymnasium.

☐ This room has a manual roll up overhead door over the counter.

☐ It needs a transaction counter, shelving and display areas.

☐ Special consideration is to be given to security and to accessibility so as not to block the corridor during heavy usage.

☐ A storage area should be located adjacent to the student store.

☐ A corridor showcase for display should be included.

☐ Lockable tall storage is necessary.

Administration Suite

Spatial Needs
General Office
Principal's Office
Assistant Principal's Office
Assistant School Administrator Office
Administrative Secretary's Office
Workroom
Storage
Conference Room
Copier Workroom
Student Support Center
Financial Secretary Office
Staff Development Office
Security Office
Testing Room

General Office

☐ The administrative suite must be located with good access from the main entrance of the school and visual oversight of the main entrance and bus drop-off area.

☐ The suite must be a natural first stop for visitors to the school and must, therefore, have direct corridor access. A security vestibule must be designed so that all visitors must enter the general office to check in before entering the school.

☐ Spaces need to be arranged for student and visitor flow and for efficient use by office staff.

☐ The attendance secretary should have a window to the corridor.

☐ The general office is to have easy access to toilet rooms, privacy room, and coat closet.

☐ Carpet shall be used in the individual offices and conference room within the suite.

☐ VCT is to be used in the all the other spaces.

Principal's Office

☐ This office requires an outside window, a public entrance connected to the main office, and a secondary entrance.

☐ The principal's secretary is to be located adjacent to the principal's office and have a private office.

☐ These areas are to relate effectively with each other as well as to the general office.

- ☐ The office should be planned to accommodate an L-shaped desk, computer, phone, file cabinets, and a small table for four to six chairs for small group meetings.
- ☐ This office requires a private toilet room (MCPS standard is ceramic tile flooring).

Assistant Principal/Assistant School Administrator Office

- ☐ A student waiting area close to these offices should be provided.
- ☐ Each office should be planned for an L-shaped desk, computer, phone, file cabinets, and space for chairs for small group meetings.

Administrative Secretary's Office

- ☐ The administrative secretary's office should be located adjacent to the principal's office and close to the general office.
- ☐ The office should be designed with a window to the general office to allow for supervision of the space by the administrative secretary.
- ☐ This office should be planned for an L-shaped desk, computer, phone, file cabinets, and chairs to serve as a waiting area.

Workroom

- ☐ The workroom contains cabinetry with sink, shelving, and workspace, including electrical outlets suitable for preparing various releases and for copying and other types of paper work.
- ☐ A sink cabinet and space for full size refrigerator are to be located in this room.
- ☐ Staff mailboxes are to be readily accessible but not visible from the main entrance and are to contain 100 boxes at least 12 inches wide plus five additional boxes that are somewhat larger.
- ☐ The workroom is to have space and appropriate outlet for a copier machine. Verify size and power requirements with MCPS.
- ☐ Offices, workroom, storage, and toilet rooms are to serve the general office employees.
- ☐ Toilet rooms are to have large occupied and unoccupied door indicators.
- ☐ The storage room is to relate well with the workroom and need not be directly accessible to the corridor
- ☐ A coat closet, privacy room and staff toilet rooms for administrative office staff and visitors should be included.

Conference Room

- ☐ The conference room is to be located in relationship to the principal's and assistant principals' offices and should be directly accessible to the corridor.
- ☐ The conference room is to have a whiteboard installed and data outlet for monitor, computer, and phone outlets.

Workroom

- ☐ The copier workroom is for staff use and should be located conveniently for teacher use.
- ☐ It should not be located in the media center.
- ☐ This room requires storage cabinets, shelving, and lockable cabinets for paper, ink, and other supplies.
- ☐ Proper ventilation is required in this room.

Student Support Center

- ☐ This room should be located adjacent to the main office suite.
- ☐ Space should be provided for 10-12 student desks.
- ☐ A teaching wall and teacher's desk should be provided in this room.
- ☐ Ideally, this room should be located near the Administration or Counseling Suites but not in the suite.

Financial Assistant's Office

- ☐ This office should be located in the administrative suite.
- ☐ The office needs space for a desk and file cabinet and requires tackboard and wiring for a computer.
- ☐ A storage closet on an SKD key is necessary to store the school safe/funds.

Staff Development Office

- ☐ The staff development office may be centrally located and near the administrative suite.
- ☐ This office needs a space for a desk, file cabinet, and round table with chairs.
- ☐ The office also needs whiteboard, closet, and video, voice and data outlets.

School Security Office

- ☐ This office should accommodate up to 4 staff and should be located directly off a main corridor.
- ☐ Space is needed for a table and chairs to meet students.
- ☐ This office must have lockers and secure storage.
- ☐ This office suite must accommodate the cameras and accompanying communication equipment for a visual monitoring system.

Testing Room

- ☐ This room should be designed as a secure room for testing materials and should have a counter with lockable cabinets above and below.
- ☐ This is an SKD keyed room.
- ☐ This room needs acoustical treatment as well as video, voice, and data outlets.

Command Center

- ☐ An interior room in the school needs to be designated as the command center for shelter in place/lock down emergencies. In many schools, the workroom in the administration suite may serve this purpose. The room cannot be on an outside wall.
- ☐ The room designated as the command center must have all data and communication equipment including electrical and data outlets and main console for the public address (PA) system.
- ☐ Window coverings/roller shades must be provided for all windows and doors to the command center.
- ☐ The security camera monitors should be located in this area.
- ☐ The space designated as the Command Center must be large enough to accommodate up to six staff persons.
- ☐ Storage space is needed for the shelter in place/lock down emergency kit.

Counseling Suite

Spatial Needs
Counselor's Office
Waiting Area
Conference Room
Records Room
Itinerant Staff Office

- ☐ The counseling suite should be separate from the administration suite, but easily accessible from the main entrance.
- ☐ The suite consists of a waiting area with space for the secretary, seating for visitors, storage for office supplies and a coat closet, the conference room, the records room and counselors' offices.
- ☐ The records room is to be 1-hour rated.
- ☐ The records room is to have no windows.
- ☐ These spaces must have window walls, doors with windows, and be designed so that students can find them easily and feel free to drop in between classes.
- ☐ The waiting area must be wired for the secretary's desk and not be designed as part of the corridor to the main office.
- ☐ Window coverings must be provided on all windows within the suite to provide privacy when required.
- ☐ The room should be designed in such a way that it could easily be split into two private offices in the future if needed.
- ☐ Carpet shall be used in all offices and the conference room within the suite. Corridor is to be VCT.

Counselor's Office

- ☐ Counselor's offices should be provided at the rate of one per every 250 students.
- ☐ Each office should be planned for the counselor's desk with computer, phone, file cabinets, and a small round table with four chairs for small group counseling.

Conference Room

- ☐ The conference room is to be accessible from the waiting area and corridor.
- ☐ The conference room should seat 12-15 people.

- ☐ The room requires a whiteboard and computer and phone outlets.

Itinerant Staff Office

- ☐ This room needs space for a teacher's desk file cabinet and computer and phone outlets.
- ☐ This room needs a space to administer tests to students including a student computer workstation.
- ☐ This room also may be used to accommodate post-test conferences with teachers and/or parents.

Records Room

- ☐ The records room is to accommodate shelving, files, and other record cabinets for use by both administrative and counseling personnel.
- ☐ This is an SKD keyed room.
- ☐ It must, therefore, relate to both areas, yet be designed to afford security of private records and files.
- ☐ It should be located in the counseling suite.

Health Services Suite

Spatial Needs
Waiting Area
Treatment/Medication Area
Office/Health Assessment Room
Health Assessment/Isolation Room
Rest Areas
Toilet Room
Storage Room

- ☐ The Health Services Suites should be in complete compliance with COMAR 13A.05.05.10A.
- ☐ The architect should refer to MSDE document, *School Health Services,* June 2002 for specific utility information.
- ☐ The health suite must meet accessibility requirements of the ADA, and at a minimum, include spaces for waiting, examination and treatment, storage, resting, a separate room for private consultation and for use as the school health services professional's office, a toilet room, and lockable cabinets for storing health records and medications.
- ☐ The health suite is to be located near the administrative area, preferably adjoining, with direct access to a main corridor for emergency access and egress.
- ☐ A washable vinyl tack board is to be installed just outside of the door to the health suite.
- ☐ A designated school health services professional from the Montgomery County Department of Health and Human Services (DHHS) must be involved in the planning of the health services suite.
- ☐ The suite should be designed to provide easy visual supervision of all the spaces by the health services professional.
- ☐ The health services suite must have a window into the general office so that office staff may monitor the room when heath staff is unavailable.
- ☐ The health room must also have a door to the corridor.
- ☐ Ventilation is important throughout the health suite.
- ☐ A window to the outside, if possible, is preferred.
- ☐ The countertops should be seamless to aid in maintaining sanitary conditions.
- ☐ The floor finish should be an easily cleaned non-absorbent material. There should be no carpet used in any areas of the health suite. The MCPS standard is VCT.

- ☐ Ceiling materials should be non-porous. Vinyl-coated ceiling tile or painted drywall are acceptable choices.
- ☐ If any of the areas are enclosed, then glazed walls areas should be provided.
- ☐ The health suite requires wall and base cabinets and lockable file cabinets for storing health records. A portion of these cabinets must be lockable to store medications, medical supplies, and equipment.
- ☐ Student traffic is to be kept close to the door, with cross-traffic minimized, and good supervision of the room from within as well as from the general office area is to be provided.
- ☐ Two doors to the suite are required to move students through waiting and treatment areas during a mass procedure. One door is normally kept closed.

Waiting Area

- ☐ The waiting area is to have space for up to ten chairs.
- ☐ A small washable vinyl tackboard should be provided in the waiting area to display health care and other information of importance to students and staff.
- ☐ A pamphlet rack, and a 24-inch x 48-inch table should be provided.

Treatment/Medication Area

- ☐ This area should be adjacent to the waiting area and toilet room to facilitate the efficient flow of students.
- ☐ This area should have a kitchen type sink with cabinets above and below (including a locked medicine cabinet), a 36-inch high countertop, and a small residential style refrigerator/freezer to store medical supplies and foods.
- ☐ Sufficient countertop area should be provided adjacent to either side of the sink in order to have a “clean” and “dirty” side.
- ☐ The freezer should have an icemaker.
- ☐ The treatment area also requires a computer.
- ☐ This area also needs a scale, floor lamp, and an area for two chairs

Office/Health Assessment Room

- ☐ The room requires one computer, fax machine, and electronic connection and physical proximity to a copy machine.
- ☐ The spaces used for consultation and examinations must be enclosed with sufficient acoustical isolation to ensure complete privacy and confidentiality.
- ☐ A small sink, with cup, paper towel, and soap dispensers should be provided.

Health Assessment/Isolation Room

- ☐ This room needs to have access and have a door to the corridor.
- ☐ The spaces used for consultation and examinations must be enclosed with sufficient acoustical isolation to ensure complete privacy and confidentiality.
- ☐ A small sink, with cup, paper towel, and soap dispensers should be provided.
- ☐ It is important that sufficient space is provided to allow for wheelchair clearances and turning radii in this space.
- ☐ In the rest area and Isolation Room, supplementary power ventilation capable of 20 changes per hour should be provided, with control by means of a separate switch within the health suite.
- ☐ A window is needed in this room to provide supervision from within the treatment area and office. The design of the window also must ensure that only staff can see into the room.

Rest Area

- ☐ This area should be open to the health suite yet provide privacv for each cot with a draw curtain on a ceiling track.
- ☐ The rest area shall accommodate four cots with individual light switches for wall sconces, electrical outlets 16” from the finished floor, and bedside cabinets for each rest area.
- ☐ In the rest area, supplementary power ventilation capable of 20 changes per hour is to be provided, with control by means of a separate switch within the health suite.

Toilet Rooms

- ☐ Two separate ADA toilets should be provided with large occupied and unoccupied door indicators.

Storage Room

☐ The storage area is to have space sufficient for a four-drawer locked file cabinet, a wardrobe for coats, and a wheelchair, and a space for forms and supplies.

☐ A minimum of 12 linear feet of wall and base cabinets should be provided.

Staff Facilities

Spatial Needs
Staff Room
Privacy Room

Staff Room

- ☐ The staff room provides teachers with a place to rest, plan, study, and think together.
- ☐ The staff room should contain a compact built-in kitchen with six linear feet of counter space for a microwave and sink and a space for a full-size refrigerator and vending machines (NIC).
- ☐ Toilet rooms are to be provided for staff and accessible from a corridor just outside of staff room.
- ☐ Acoustical treatment is important.
- ☐ This area should have exterior windows and door to outside staff patio if design allows.
- ☐ Computer access should be provided.
- ☐ Lockers should be provided for paraeducators and other itinerant staff to lock their belongings.

Privacy Room

- ☐ A small, enclosed room with countertop and space for one chair is needed for a telephone.
- ☐ An electrical outlet should be provided above and below the counter and the counter should be tall enough to accommodate a small refrigerator.
- ☐ A mirror should be provided above the counter.
- ☐ A small sink is needed for hand washing and washing personal items.
- ☐ This space needs to be accessible to staff with disabilities.
- ☐ Occupied / Unoccupied indicator on the door.
- ☐ Keyed for emergency entry.

Food Services Facility

Spatial Needs
Student Dining Area
Stage
Table Storage
Chair Storage

Student Dining

- ☐ The student dining area should be capable of seating one third of the student body at cafeteria tables or one half in rows of chairs.
- ☐ Acoustics, ventilation, and color are important considerations in the cafeteria.
- ☐ A public address system should be built-in.
- ☐ Wall power for digital display boards should be included in the dining area.
- ☐ Display boards and power should be located at a height to avoid student accessibility and damage.
- ☐ A washable vinyl tackboard is to be placed near the entrance.
- ☐ Care is to be exercised in the location of windows in relationship to the location of tables and chairs.
- ☐ Trash from the dining area must not flow through the kitchen.
- ☐ Student toilet rooms must be located near the cafeteria and have good sound absorption.
- ☐ Outside access from the cafeteria to a paved area should be considered in the design of the student dining area.
- ☐ There must be a water bottle filling station in the cafeteria.
- ☐ A listening assistance device for the hearing impaired should be included in the cafeteria.
- ☐ Security doors are needed to control access to other parts of the building from the cafeteria/stage/lobby areas.
- ☐ An outside entrance to the cafeteria for easy access in the evening and an outside eating area with permanent trash cans (preferably a courtyard) are desirable.
- ☐ Consideration should be given to the use of electronic menu boards HT AFF to minimize student accessibility and damage.

Stage

- ☐ The stage should be 32” high from the floor of the cafeteria to allow for 8” coursing.
- ☐ The stage should include closed/lockable storage for an upright piano and some storage for costumes and flats if possible.
- ☐ The stage and backstage areas must be accessible to individuals with disabilities and be accessible from corridors and the cafeteria.
- ☐ Wing space should be provided for theater productions.
- ☐ The stage space must have adequate exhaust ventilation and lighting for other uses.
- ☐ The stage should be equipped with stage curtains and a production capable sound and lighting system. Confirm with MCPS FA on equipment capabilities and required quantity of mics to be provided.
- ☐ A whiteboard and data for an interactive teaching board should be included along the back wall of the stage.
- ☐ A large electric pull down screen should be designed in front of the stage and behind the short curtain to be used for assemblies. See NCOS standards for screen requirements.
- ☐ Electrical and microphone outlets should be provided on the front wall of the stage house. A Three outlets on dedicated circuits are required.

Table Storage

- ☐ Forty-eight-inch doors are required on the interior storage rooms.
- ☐ Do not locate any sound control cabinets or electrical panels or other wall mounted equipment in this space.

Chair Storage

- ☐ Storage for 1,200 chairs on racks and for stage equipment needs to be provided
- ☐ Forty-eight-inch doors are required on the interior storage rooms.
- ☐ Do not locate any sound control cabinets or electrical panels or other wall mounted equipment in this space.

Kitchen

Spatial Needs
Food Preparation
Dry Food Storage
Refrigerator
Freezer
Serving Area (3 Lines)
Office
Locker/Toilet Room
Loading Platform
Receiving Area
Chemical Storage Room

☐ The kitchen is to have direct access from the loading dock, with a walk-in freezer and walk-in refrigerator.

☐ Walls and ceilings are to be light in color, smooth, impervious to moisture, easy to wash, and easy to keep in good repair.

☐ An easy to mop floor such as, slip resistant quarry tile floor or polyurethane cement flooring system is required. If quarry tile is used, then the color of grout should be the same or darker than the color of the floor.

☐ Kitchen should be linked to the security monitoring system and school intercom.

☐ A wall clock at the serving line should be provided.

☐ When designing the kitchen and related spaces, special consideration to temperature and humidity control, and traffic are paramount.

☐ Control railings may be portable.

☐ Coordination with Food and Nutrition Services throughout the design process is necessary.

Serving Area

☐ The serving area shall consist of four food serving areas that may vary from school to school.

☐ Serving lines should be secured when not in use.

☐ Supervision is an important consideration in the serving area.

☐ Unobstructed sight lines are necessary for one staff member to effectively supervise students.

☐ Control of serving lines should be designed to facilitate rapid serving of food.

- ☐ A dedicated circuit for cash registers is required with under floor conduit for intercommunication links.
- ☐ Temperature and humidity control and efficient traffic movement throughout are required.
- ☐ Natural ventilation should be provided.
- ☐ Also of importance are the following:
  - ☐ Meeting current health and sanitation codes
  - ☐ Providing louvered shelving in the storage rooms
  - ☐ Designing trash storage completely separate from kitchen and dock areas
  - ☐ Locating the loading and receiving area, with sheltered dock and with access to the storage and preparation areas, separate from other school receiving
  - ☐ Considering the relationship and traffic movement within the dining area of the serving line to the remainder of the kitchen area
- ☐ Providing acoustical treatment to preparation and serving areas
- ☐ Receiving door must be 48" wide, self-closing, with peephole, and doorbell to manager's office.
- ☐ All windows must have screens.

Preparation Area

- ☐ Space needs to be provided for cook, baker, and beverage/salad/sandwich prep areas.
- ☐ Trough-type drains at steamers, hand sinks in each prep area with soap and towel dispensers, and automatic wash filtered hood are required.
- ☐ Consideration of the utility distribution system is needed.
- ☐ Filtered hood with automatic wash above fryers and fire protection system are required.

Dry Food Storage Area

- ☐ This area must be located adjacent to the prep area and receiving area.
- ☐ Door opening must be a minimum of 3’8”.
- ☐ This area must be air conditioned at all times.
- ☐ Mobile shelving and dunnage and key lock for security must be provided.
- ☐ This space must be free of roof access ladders or electrical panels.

Cooler/Freezer Storage

- ☐ This area should have a common wall, located adjacent to the prep and receiving areas.
- ☐ Insulated slab and thickest quarry tile floor is preferred with a minimum of 20 foot candle lighting.
- ☐ Roof mount compressors, polymer mobile shelving and dunnage, and sound alarm for temperature monitoring should be included.

Building Service Closet

- ☐ This has an SKD keyed door.
- ☐ 12” Metal shelving

Building Service Facilities

Spatial needs
Building Service Office
Locker/Shower area
Preventative Maintenance Technician Office
Compactor/Trash Room
Receiving and Storage Area
General Storage Rooms
Building Service Outdoor Storage
Building Service Closets

Building Service Office

☐ The entire building services area should be located adjacent to the general receiving area.

☐ The office should be designed as a general office that can accommodate two staff members with two desks and appropriate wiring for computers, phones, etc.

☐ If possible, the office should have a window or a sightline to the outside to monitor weather conditions.

Locker/Shower Area

☐ A locker area must be located near the receiving area.

☐ 10-12 full-size lockers should be provided in the locker area.

☐ The locker area should be designed with a private toilet room and shower room for building service staff use.

☐ An ENERGY STAR stackable washer and dryer is required in this area.

Preventative Maintenance Technician Office

☐ This office needs to be adjacent to the boiler room.

☐ The office needs to accommodate a desk and appropriate data wiring for computer and phone.

Compactor/Can Wash/Trash Room

- ☐ This room needs to be completely separate from the kitchen spaces with no common walls.
- ☐ Trash trucks must have access to this room.
- ☐ The room should be heated and have adequate interior lighting, floor drainage, and easily cleanable surfaces.
- ☐ Hot and cold water should be available for flushing and cleaning.
- ☐ The room should be designed to be pest-free and well ventilated.
- ☐ Floors should be sloped so that wash down stays within the room and goes down the drain.
- ☐ The compactors need to be installed with enough clearance away from the wall to permit staff to access the equipment from all sides.
- ☐ A roll-up door for trash transfer to trucks, steam cleaning equipment, and trash collection containers are needed.
- ☐ The room should be designed with a ramp to allow trashcans to be rolled to the dock.

Receiving and Storage Area

- ☐ The receiving area should be enclosed, floor to ceiling, with a chain link fence. The gate should have a standard cylinder for keying with the rest of the building.
- ☐ Flexible shelving is required but should not occupy more than one third of the area.
- ☐ This area must be secure.
- ☐ Good lighting and easy access to materials being stored are required.
- ☐ Electrical outlets, appropriate lighting and ventilation must be provided in this area.

General Storage

- ☐ Flexible shelving to accommodate books, teaching aids, large size (24" x 36") paper, and other instructional supplies is required.
- ☐ Good lighting and easy access to materials being stored are required.
- ☐ Electrical outlets, appropriate lighting and ventilation must be provided in all large storage rooms for future flexibility.

Building Service Outdoor Storage Room

- ☐ Outdoor storage is to be near the service area and is to be suitable for heavy mowing, snow removal, and other outdoor equipment.
- ☐ This is an SKD keyed room.
- ☐ The dimensions of the outdoor storage area must be able to accommodate two tractors side by side. (Approximately 9' long by 7.5' wide) and other equipment.
- ☐ A rolling garage style door and a regular door must be provided.
- ☐ A ramped and paved driveway is required for the tractor so that it can access the sidewalk and driveways of the school during snow removal.
- ☐ Electrical service and lighting inside must be provided. Access to the light switches must be available at both entrances.
- ☐ Proper ventilation for storage of gasoline is required.
- ☐ 18" metal shelving

Building Service Closets

- ☐ At a minimum, there should be a building service closet for each 19,000 gross square of the facility. In addition, there should be a building service closet on each floor and each wing of the facility.
- ☐ The closets should be a minimum of 25 sq. ft.
- ☐ The building service closet must accommodate a minimum of one utility cart.
- ☐ The closet requires shelving for cleaning supplies.
- ☐ The closet requires a floor mop sink with hot and cold running water and a floor drain.
- ☐ A mop/broom holder is required.

General and Vehicular Site Requirements

The items described below are for a school that meets the minimum useable site size of 15.5 acres that is capable of fitting the instructional program, including site requirements. At schools with smaller sites, the architect is to work with MCPS staff, including the Physical Education Curriculum Coordinator, Safety Director, and school staff to determine layout of the play areas.

- ☐ The MSDE site-related guidelines can be found at this link: https://iac.mdschoolconstruction.org/?page_id=2131.
- ☐ The site should be designed to provide a clear view of all play areas and to facilitate supervision from one location.
- ☐ Protective fencing may need to be provided near heavily wooded areas, busy streets, steep hills, parking lots, bio-retention facilities, and turnaround areas.
- ☐ Metal drains/grates should not be located within the playing fields, paved play areas and mulched playground equipment areas.
- ☐ Paved areas and fields must be as level as possible. Water should not collect on paved areas or in mulched areas. The architect should consider the architecture of the neighborhood in designing the building.
- ☐ The architect should consider the architecture of the neighborhood in designing the building.
- ☐ The design should retain as many trees as possible to buffer the school and the playing fields.
- ☐ Pedestrian access must be provided from the surrounding neighborhoods.
- ☐ An unimproved area on-site should be designated to serve as an environmental study area in the future.
- ☐ A covered area for students in the bus loading area must be provided.
- ☐ Space for buses to load at one time is needed. The number of buses will be reviewed during the design phase in consultation with the Department of Transportation.
- ☐ Ideally, parking spaces for 125 cars are to be provided. At least half of the parking area should be readily accessible to the gymnasium. Outdoor lighting for all parking areas and entrances must be adequate for safety and crowd control.
- ☐ Bike racks should be provided near the building. U shaped bolted down with trim ring to cover bolts is the MCPS standard.
- ☐ Accessible parking spaces should be located near the main entrance, after-hours use, and the playing fields. After-hour use parking spaces are allowed in the bus loops with blue lined striping and appropriate signage.

Driveway

- ☐ The architect/engineer should refer to the MCPS Facility Guideline Specifications when designing the driveway, bus loop, service drives, etc.
- ☐ Bus traffic should be separated from car traffic at all times, when possible. Bus loading zones should be able to accommodate the entire student body.
- ☐ A student drop-off area should be provided and must be separated from the bus loop area. The length of the queue will be determined during the design phase.
- ☐ All driveways must be arranged so that children do not cross them to get to the fields and play areas.
- ☐ Pedestrian access to the school facilities should be designed to make the best use of community right-of-ways and avoid crossing of loading zone areas.
- ☐ The site must comply with the most current ADA or COMAR regulations, whichever is most stringent.
- ☐ Site access must be provided to comply with fire protection and storm water management.
- ☐ Driveway aprons are to be perpendicular to the centerline of the street; and if there is an intersecting street on the opposite side from the proposed driveways, the driveway apron should line up with the intersecting street.
- ☐ Driveways should be located so that vehicle headlights do not project into adjacent homes.
- ☐ A service drive is required to service the kitchen, boiler room, and general delivery area. The architect should refer to the MCPS Facility Guideline Specifications.
- ☐ Care for safety of students must be exercised in developing the driveways including use of safety rails in the bus loading area.

Service Drive

- ☐ The architect should refer to the MCPS Facility Guideline Specifications for design of the service drive.
- ☐ The service drive is required for the kitchen, boiler room, shops, and general delivery areas.
- ☐ The service drive must be designed so that students do not need to cross the service drive to get to the play fields.

Playing Fields

- ☐ One 400’ x 400’ turf playing field is desired for general use.
  - ☐ An add alternate should be designed to provide artificial turf.
  - ☐ The width and length of the field must accommodate soccer, field hockey, and football
- ☐ Proper drainage should be assured for all fields.
- ☐ One 300' x 300' playing field with two sets of soccer goals should be installed.
- ☐ All fields are to be GPS or Lazer graded.

Softball Fields

- ☐ At a minimum two softball fields should be provided, but ideally four softball fields should be provided if possible.
- ☐ Ideally, a 250' minimum radius with backstops is desired—one field should be designed with hood, benches, and safety fences.
- ☐ The baseline of the main field should be skinned and infield mix added.

Track And Field Area

- ☐ A long jump pit should be provided.
- ☐ A short, 60-yard, 6-lane track for short distances and hurdle practice should be designed for track and field instruction. This track should be connected to a walking asphalt path around the perimeter of the fields.
- ☐ Several permanent trashcans should be provided in this area.

Basketball Courts

- ☐ Three courts fenced with six gooseneck posts with heavy-duty basketball backboards with goals should be installed.
- ☐ A three-level chinning bar should be placed near the black top area.

Paved Area

☐ One paved play area, 55’ x 110', with all-weather surface play area should is desirable near the cafeteria and separate from the other physical education areas.

Tennis Courts

☐ Six tennis courts are required each with all-weather surfacing.

☐ The tennis courts will include striping for tennis and pickleball. The architect should refer to the DDC guidelines for specific details.

☐ Courts should be sited far enough away from the property line to minimize disruption to neighbors.

☐ One electrical outlet on the outside of the fence of on one court is required.

☐ Several benches and outside trashc and recycling receptacles should be permanently installed.

☐ A common "rebound" wall contiguous with the tennis courts should be provided.

Storage Shed

☐ A 12' x 16' storage shed should be provided at the far end of the site.

☐ No electric or water is needed.

☐ It must be designed with double steel doors with heavy-duty hardware and shelves on one wall.

Outdoor Learning

☐ Environmental education areas may be considered during schematic design, including but not limited to site areas with native landscaping, rain gardens, stormwater bio-retention, and raised planting beds, rain barrels or similar features.

☐ Outdoor seating may be designed as an Add Alternate.

☐ The design should consider a hose bib and power outlet for outdoor learning.

☐ Forest conservation requirements must be met. Natural plantings that provide shade coverage are desirable.

☐ MSDE voluntary design guidelines for program areas such as *Conserving & Enhancing the Natural Environment, A Practical Guide to Planning, Construction and Using School*

Courtyards, and Environmental Education in Maryland Public Schools: The development and implementation of Maryland's environmental education program.

Project Specific and Other Program Requirements

Overview

- Eastern Middle School is located at 300 University Boulevard, Silver Spring, Maryland.
- The PSC is **L15F037**
- Per the IAC Facility Inventory Database (FIDB), the existing school was built in 1951 at 84,486 s.f. and includes additions in 1958 (23,975 sf), 1963 (10,373 sf), 1975 (16,001 sf), and 2001 (17,295 sf) with a major renovation in 2001 for a total of 152,030 sf.
- No major capital projects have occurred since 2001; a security project occurred in 2014 as well as replacement of interior doors and gym lights in 2021.
- According to the IAC FIDB the current local capacity is listed as 1,012 students as of 2025.
- Current enrollment is as per the submitted space summary dated March 28, 2025.

State Rated Capacity Statement

- According to the IAC FIDB, the existing school has an SRC of 1,050 students. When the project is complete the SRC is to be 1,177.
- Design SRC: Ed Spec= 1,097 BMS = 1,120 PLN-Estimated = 1,199
- Estimated Eligible Enrollment/Design SRC: 57.6%

Regional Special Education Statement

- There are three classrooms of a regional Social Emotional Special Education Services (SESES) program which serves students from the Eastern MS attendance area as well as students from outside the attendance area. This is one of five SESES middle school program locations throughout the county.
- Anticipated SE Students: 30
- SESES program suite requirements: 3 standard classrooms, 1 student support center (300 sf), 1 transition space located between the student support center and offices (300 sf), and 2 offices (140 sf each).
- Social emotional special education services are developed and implemented throughout MCPS for students are experiencing social, emotional and behavioral challenges which interfere with their learning and access to the general education curriculum. Through the use of the interdisciplinary team, services are designed to empower students to reach academic and social successes within the least restrictive environment.
- For more information about this program, please refer to the web address https://www.montgomeryschoolsmd.org/departments/special-education/programs-services/behavior-and-emotional-support/

The SESES and Autism Programs should be located within the academic areas of the building to facilitate interaction and inclusion with age/grade level peers.

Spaces associated with the SESES services should be designed as a suite.

- There are three classrooms of a regional Autism services program which serves students from the Eastern MS attendance area as well as students from outside the attendance area.
- Anticipated Autism SE students: 18

- Student Teacher ratio: 6 to 1

Cooperative Use Space (CUS)
- There is 150 GSF of ICB storage.
- There is 150 GSF of PTA storage.

Project Delivery method/Financing
- CMR will be used
- Estimated total project budget: $105,000,00

High Performance: 2 Green Globes, MCPS will explore Net Zero Ready

Other Considerations

☐ Orderly walking networks and wayfinding implemented on corridors and sidewalks is helpful.

☐ Consider canopies and shelters by the bus loop.

☐ Consider soothing spaces and calming colors.

☐ Consider use of the "I need assistance" symbol which is an appropriately scaled magenta dot placed on windows to indicate help is inside or nearby.

Add Alternates

Linkages to Learning

PROGRAM OF REQUIREMENTS
FOR
LINKAGES TO LEARNING-LARGE

I. Overview

The Linkages to Learning (LTL) staff will provide behavioral health, social services, and community education/development services to the students and families of the school community.

II. Project Description

A. The project provides for the construction of a comprehensive LTL facility where services are delivered to members of the school community. It should incorporate these basic components: the administrative area and the mental health/social services/community education suite.

B. It is preferred that the LTL suite be located near the main entrance for supervision and security purposes and have at least one direct access to the outside with clear identification of LTL entrance to provide access during evening and weekend hours when the school is closed.

C. One entrance from the school to the LTL suite is needed.

D. The design shall consider safety and security of the LTL staff and school uses. The facility is to be arranged so access from it to the school can be controlled when school is not in session.
E. Doors should have windows, and all windows should have blinds, including the window within the door. There should be Vinyl Composite Tile (VCT) flooring throughout the center. A doorbell should be placed at the outer entrance, with audible notification to one office and the main reception area. All rooms should have the capability to be locked.

III. Linkages to Learning Operations

A. Hours of Operation: 8:00 a.m.-4:30 p.m. Monday through Friday, with some evening hours during the week and on the weekend (LTL operates evening hours at least one evening per week).
B. Staff: child/family therapist, family care manager, and may include community service aide, and LTL coordinator.
C. Months of Operation: a full component of the above-mentioned staff will be present during the school day during the school year and during the summer.

IV. Site Requirements

The site chosen by MCPS for the school facility must be able to accommodate the LTL suite. Site selection considerations shall include, at a minimum, the feasibility to provide separate access to an LTL suite and safety and security considerations with the operation of an LTL suite on the property.

The location of the LTL facility is to have convenient access to the school foyer and parking lot drop-off area. Coordination with HHS for signage purchase and installation is required.

V. Mechanical and Electrical Systems

The facility is to be compatible with the systems of the school at which it is located. It should have heating and air conditioning. Because the LTL may operate while the main portion of the school is not in session, the Heating, Ventilation and Air Conditioning (HV AC) must be zoned for after-hours use. The system shall be included in the school energy management system but shall allow for zoning separation capabilities. Systems selected must be maintainable by MCPS.

Electrical outlets are to be provided on all walls and comply or exceed the number required by applicable code(s). There should be an electrical outlet and data drop in the copy machine area. There should be two data drops in every office and area that will house phones and computers, including conference room and offices, except for the Community Services Aide/Intern Workstation (only one electrical outlet and data drop is

needed in this room). On new construction only, a center data drop and plug in the floor of the conference room should also be included.

VI. IT/Telecommunications

The telecommunication network conduit and wiring infrastructure are to be provided in all spaces except the toilet room, building service closets, and small storage rooms under 100 square feet. Additionally, wireless access points are to be provided to enable uninterrupted wireless service to MCG/DHHS computers throughout the LTL suite.

The telephone systems shall be owned by MCPS and connected to the MCPS' telephone network (see VIII. School Facilities Needed for Support). If an individual LTL school is at full capacity in terms of phone lines, Montgomery County Government (MCG)/Department of Health and Human Services (DHHS) will pay for the costs associated with required increased phone line capacity.

The computer devices will be purchased and owned by MCG/DHHS and shall be connected to the MCPS computer network. Fiber optic service or equivalent Internet connection will be provided by MCPS. The LTL suite will utilize the fiber optic service to connect to the County Government network via the Carver Educational Services Center (CESC) county link. All equipment and software will meet County standards and provide compatibility with other LTL suites.

VII. Security

The LTL suite is to be integrated into the school security system. The system must include provisions for permitting use of the suite when school is not in session, for example, a separate control panel for the suite.

The suite is to be arranged so access from the suite to the school can be controlled when school is not in session. The door to this exit should be visible so that the staff can monitor the entrance and control access. This door should have a lock and bell system. Emergency buzzers should be installed in all rooms and areas of the LTL suite. Also required are doors with interior windows in LTL Coordinator's offices into the administrative/reception areas.

Exterior security, including the design of access from the parking area to the entrance, a doorbell, security camera system and the provision of substantial exterior lighting is important.

VIII. School Facilities Need for Support

A mailbox to accommodate letters and packages shall be identified for the LTL suite in the school mailroom. The school public address/intercom system shall be extended to all rooms in the LTL suite. Speakers in the facility shall have volume and on/off controls,

as well as call back features to the school's main office. A telephone system integrated into the school telephone system shall be provided by MCPS with voice mail capabilities.

IX. Furnishings and Equipment

Montgomery County Government (MCG) shall provide the furniture and equipment as needed to operate the LTL suite. A furniture and equipment summary is attached for design purposes.

As part of the construction contract, the following items will be provided upon completion of construction (other items may be identified during design):

- Shelves in the supply closet;
- Sign outside (Linkages to Learning spelled out);
- Tack boards in every office and reception area (number and size are provided in the space descriptions);
- Large marker board in conference room;
- Television mount in conference room;
- Built-in locking cabinets in Child/Family therapist office, Family Care Manager office, and printer area;
- Soap dispenser and towel holders at the sink;
- Vents in the bathroom;
- Changing table in the bathroom.

X. Applicable Laws

This facility shall comply will all applicable current local, state, and federal laws, regulations, and codes.

XI. Space Descriptions

Square Foot Summary			
Description	# of Spaces	Net SQ. FT. Each	Total Net SQ. FT.
Administrative Area:			
3. General Office/Reception Area	1	225	225
4. Conference Room	1	275	275
Linkages to Learning Suite			
5. Child/Family Therapy Room	2	175	350
6. Family Care Manager Office	2	140	280
7. Family Resources Closet	1	50	50
8. Community Service Aide/Intern Workstation	1	70	70
Other			

2. Toilet Room	1	50	50
Total Net SQ. FT.			**1,300**
Total Gross SQ. FT. - # net sq. ft. x 1.34 =			**1,742**

A. General Office/Reception Area

Key Features:

The general office space should be designed to be near the entrance of the suite and serve as a reception/waiting area. Two 4'x4' tack boards should be located in this area. It should have space for a reception desk and secretarial chair and 4-6 guest chairs. This room requires a telephone and computer. This space should have VCT flooring.

B. Printer Alcove

Key Features:

The fax machine and copier/printer will be located in this area, and their placement should be designed to optimize confidentiality and prevent unauthorized access.

C. Conference/Meeting Room

Key Features:

Conference room configuration should seat 10-12 people around a conference table or seat 15-20 people in an informal seating arrangement. A storage closet with five adjustable shelves should be provided within this space, as well as a credenza. A center data drop and plug should be in the floor. This space should have VCT flooring. This room will require a telephone. There should be a wall mounted bracket for a TV monitor and in focus. Two 4'x6' tack boards and one 4'x8' marker board should be provided in this room.

D. Child/Family Therapy Room

Key Features:

This room should accommodate an L-shaped desk and space for play/group therapy. This space should be located in an area that affords clients the most privacy for their counseling. Built-in storage cabinets for toys, games, and supplies are to be provided with countertop, base and wall cabinets. Space should be provided for a round table and four chairs or small couch and two chairs, a 4-drawer lateral file cabinet, and bookcase. This space should have VCT flooring. This room will require a telephone and computer. One 4'x4' tack board should be provided in this room.

E. Family Care Manager Office

Key Features:

This room should accommodate an L-shaped desk and space for round table and four chairs. Space should be provided for a 4-drawer lateral file cabinet and bookcase. This space should have VCT flooring. This room will require a telephone and computer. One 4'x4' tack board should be provided in this room.

F. Family Care Manager Office

Key features:

This room should accommodate an L-shaped desk and space for a round table and four chairs. This office should have a window looking into the reception area. Space should be provided for a 4- drawer lateral file cabinet and bookcase. This space should have VCT flooring. This room will require a telephone and computer. One 4'x4' tack board should be provided in this room.

G. Community Service Aide/Intern Workstation

Key Features:

This room should accommodate a small workstation/desk to accommodate a PC and telephone. Space should be provided for a 2-drawer upright file cabinet and 2 chairs. This space should have VCT flooring. This room will require a telephone and computer.

H. Family Resource Closet

Key Features:

Lockable storage space is needed for the following:

- Food and clothing pantry
- Toys, books, and other tangible resources for children and families
- Literature

This closet should be equipped with a clothing rod and adjustable shelves.

I. Toilet Room

Key Features:

A student handicapped accessible toilet room with sink, soap and towel dispensers, toilet, and changing table. This space should have ceramic tile flooring and wainscot.

Adult toilets within the school should be close to the LTL suite and accessible for staff and visitor use.

Furniture and Equipment Summary

Item Description		Units
Reception and General Office		
	Secretarial chair	1
	Desk 30”x60”	1
	Personal computer	1
	42” 4-drawer lateral file	1
	Telephone	1
	Chairs-fan back	6
Conference Room		
	Table	1
	Conference room chairs	8
	Chairs stack	6
	Projection screen/TV	1
	Telephone	1
	Credenza	1
Child/Family Therapy Room		
	L-shaped desk	1
	Desk hutch with doors	1
	Secretarial chair	1

GENERAL GUIDELINE REQUIREMENTS

A. Materials contained in the Montgomery County Public Schools Guidelines for Architects and Engineers are provided for information and guidance regarding preferred products, materials, and practices, and shall not be construed as waiving or granting exceptions to any element of federal, state, or local building codes, ordinances, and regulatory requirements as applicable to the specific project. These Guidelines, along with the project-specific Education Specifications and Master Specifications, are complementary. Any conflict between these Guidelines, the Education Specifications, Master Specifications, and governing local, state, or federal codes shall be brought to the immediate attention of the Montgomery County Public Schools (MCPS) Department of Planning and Construction.
B. Where manufacturers, brands, and model numbers are indicated, they are provided to establish the required type, quality, and performance standards. These references do not preclude the use of equivalent products, except in cases where specific items are necessary to maintain compatibility with existing systems or infrastructure. Such instances shall be clearly identified as “no substitutions allowed.” The Design Team shall notify MCPS in writing of any proposed alternate manufacturer, brand, or model number used in the design, and obtain approval prior to incorporation into the project documentation.
C. The project plans and specifications shall incorporate and reflect the requirements and intent of the Montgomery County Public Schools Guidelines for Architects and Engineers, the project-specific Education Specifications, and the Master Specifications. These documents shall be used collectively to inform the design and documentation process.
D. All coordination between the Design Team and Montgomery County Public Schools (MCPS) shall be directed to and facilitated through the Department of Planning and Project Manager (PM) assigned to the project. The PM shall serve as the primary point of contact for all project-related communications, decisions, and approvals.
E. These Guidelines do not preclude the use of alternate systems, methods, or materials, provided that the proposed deviation has been reviewed and approved by the MCPS Project Manager and/or Facilities Architect. For project-specific applications, all deviations and substitutions shall be submitted for review during each design phase plan review and stakeholder meeting. Each submission shall include a design reference, justification for the proposed change, and the recommended alternative. MCPS review and formal acceptance of all deviations is required prior to implementation.
F. Refer to MCPS Division of Planning and Construction website.

Date	Division	Topic	Comments

DRAFT

ABBREVIATIONS AND ACRONYMS

This list is provided for reference only and includes abbreviations used throughout this document. It is not intended to be a comprehensive list of industry terminology.

Short Form	Full Name
ADA	Americans with Disabilities Act
AED	Automated External Defibrillator
AFF	Above Finished Floor
AHJ	Authority Having Jurisdiction
AHU	Air Handling Unit
BAS	Building Automation System
BDA	Bi-Directional Amplifier
BMP	Best Management Practice
CMU	Concrete Masonry Unit
Cx	Commissioning
CxA	Commissioning Agent
DOAS	Dedicated Outdoor Air System
DPS	Department of Permitting Services
Ed Spec	Educational Specifications
ERU	Energy Recovery Unit
FAAP	Fire Alarm Annunciator Panel
FF&E	Furniture, Fixtures, and Equipment
FRT	Fire Retardant Treatment
GWB	Gypsum Wall Board
HDPE	High-Density Polyethylene
HVAC	Heating, Ventilating, and Air Conditioning
IBC	International Building Code
IAQ	Indoor Air Quality
IDF	Intermediate Distribution Frame
LEED	Leadership in Energy and Environmental Design
LFI	Learning for Independence
MCPS	Montgomery County Public Schools
MDF	Main Distribution Frame
MDOT	Maryland Department of Transportation
MEP	Mechanical, Electrical, and Plumbing
MERV	Minimum Efficiency Reporting Value
MNCPPC	Maryland-National Capital Park and Planning Commission
MOU	Memorandum of Understanding
NFPA	National Fire Protection Association
NIC	Not In Contract
OD	Outside Diameter
PA	Public Address
PEP	Preschool Education Program
PM	Project Manager
POR	Program of Requirements
PV	Photovoltaic
RTU	Rooftop Unit
SCB	School Community-Based
STC	Sound Transmission Class
TAB	Testing, Adjusting, and Balancing
TPO	Thermoplastic Polyolefin
UL	Underwriters Laboratories
VFD	Variable Frequency Drive
VOC	Volatile Organic Compound
VRF	Variable Refrigerant Flow
WAP	Wireless Access Point
ADA	Americans with Disabilities Act
AED	Automated External Defibrillator

DRAFT

MOU's & CODE AGREEMENTS

MCPS Project Managers will provide MOU(s) to Design Team for reference in the design & permitting process.

Fire/Life Safety Codes Agreements

General

Topics Include but not limited to:

- Fire Watch Requirements
- Existing Exhaust Hoods
- Exterior Exit Doors
- Fire Extinguishers in Schools
- Fire Lanes
- HVAC Smoke Detection
- Smoke Detector Controlled Doors
- Manual Fire Alarms
- Latching of Doors
- Residential Ranges and Ovens in Buildings
- Visual Devices
- Existing School Facilities
- Partial Occupancy of New Facilities Under Construction
- Requirements to Allow Partial Occupancy by Students
- Relocatable Classrooms

Department of Health and Human Services

- Confirm with MCPS regarding Pre-Disaster Shelter Plan considerations.
- For projects with Linkages to Learning and/or Wellness Centers the Program of Requirements (POR) will be provided from the MCPS project manager. Design team is required to incorporate these design requirements and coordinate any conflicts with the MCPS project manager.

Occupancy Letter For Courtyards (Montgomery County DPS)

- MCPS to provide standard waiver letter to the Design Team stating the courtyard occupant load is not included in the occupant count (non-simultaneous use).
- Design Team is required to coordinate with the Department of Permitting Services (DPS) prior to the building permit submission and will provide the letter with the building permit submission.
- Design Team shall coordinate with MCPS for projects falling under other AHJ's.

DRAFT

NON-EDUCATION SPECIFICATION SPACE NOTES

Circulation

Stair Towers

General

- The stair tower shall not extend to the roof level unless required by code.
- Provide power outlets at every floor in stairwells for building services cleaning equipment.

Area of Refuge

- Design team is to ensure areas of refuge comply with codes and regulatory requirements.
- MCPS requires an area of refuge be incorporated at all stair towers.
  - Design team to incorporate area of refuge on each floor where at grade exit is not provided.
  - Provide a two-way communication device located at each area of refuge in stairwells. Communication device is to be tied into the Fire Command center where buildings are over 100,000 sf.
  - Design team to provide detail for two-way communication instructional signage in accordance with IBC 1009.8.2.
  - Provide lighted signage in corridor (similar to exit signs) and perpendicular to travel stating “Area of Rescue Assistance.”

Figure 1 Area of Rescue Assistance Sign

DRAFT

Courtyards

General

- Unless specified otherwise or required by AHJ, courtyard drainage systems are to be designed to carry the 100-year storm event. Design team to confirm.
- Ensure exterior courtyard sidewalks and drainage systems are sloped to drain away from the building. Ensure ADA slopes are met.
- Design team to provide canopy(s) or similar cover over all courtyard doors.
- If possible, provide a storage room accessible from the courtyard to store maintenance equipment. If storage space is not feasible, the design and layout of the courtyard shall be well considered for maintenance equipment access.
- Door hardware keying and card readers to be coordinated during design for courtyard and courtyard storage doors.
- Provide exterior power at courtyards for use by maintenance and building services
- Add Alternate Items:
  - Outdoor amphitheater
  - Extended canopy

Compactor Room

General

- The compactor room shall be detached from the school building to avoid rodent issues. No open chase or anything connecting to the main building.
- Power, water, sprinkler, and drain connection to sanitary are required.
- The overhead door shall have an electric operator.
  - Location of the overhead door shall be towards the loading area/parking lot.
  - See also Overhead Doors.
- A regular exterior man door should also be provided for access without the need to open the overhead door.

DRAFT

01 00 00: GENERAL REQUIREMENTS

Not Used.

DRAFT

02 00 00: EXISTING CONDITIONS

Existing Conditions

General

- Design Team to coordinate Underground locations with Utility companies prior to Bid.
- Design Team to receive HazMat report from MCPS Environmental Health Specialist from Asbestos Abatement Unit/Pest Control.
- Design Team to receive test results for PCB and Lead from MCPS Indoor Air Quality Specialist from Division of Maintenance.

Geotechnical Testing

General

- Geotechnical testing is strongly encouraged at each BMP location prior to placement of facility to ensure its suitable location for bioretention. Separation from seasonal high-water table is critical to ensure that the media does not become saturated and unable to function effectively.
- Structural engineer to coordinate geotechnical boring locations with geotechnical engineer.
- Testing should not take place during regular hours. MCPS project manager to coordinate with school and community programs.
- MCPS to be verified should any alternate foundation system be recommended and/or used in projects.
- Design Team to notify MCPS of areas with high water tables.
- Assumed amount of unsuitable soils to be removed and/or replaced to be shared with MCPS and included in project documents.

Demolition

General

- After 65% CD review, Design Team shall coordinate with MCPS Project Manager.
  - Provide a final salvage list in the specifications and on the drawings.
  - AED and Stop the Bleed Kits are typically salvaged and stored by the contractor. Coordinate with MCPS and provide notations as necessary.
- Design Team is to consider utility termination for in design work. Contractor will be responsible for coordinating during construction with MCPS Project Manager and the below services:
  - Data: Confirm Service with MCPS Project Manager.
  - Water: WSSC or Design Team to confirm.
  - Gas: Washington Gas
  - Electricity: Confirm Service with MCPS Project Manager.
  - Security Cameras: Department of Safety and Security
    - Tied into Electricity
    - Tied into Telephone

DRAFT

- Telephone: MCPS IT System Specialist/Telecom Services & Department of Safety and Security.

DRAFT

03 00 00: CONCRETE

General

- Ensure enclosure detail is provided where excessive gaps are present between slab edges and walls.
- See also Division 09 00 00 and Division 32 00 00.

Slab On Grade

General

- Provide detail at all doorways tying interior SOG and exterior concrete to avoid exterior slab heaving and/or door swing conflict.
  - Recommend providing doweled rebar connection between slab edges.

Composite Decking

General

- Decking

Concrete Mix Design Table

General

- Concrete mixtures to be used such that the average Global Warming Potential (GWP) of all concrete on the project is less than or equal to 225 kgCO2E/yd^3

Use the below table for minimum requirements of concrete mix designs. Design team to verify with all applicable codes and regulations and to NOTIFY OWNER OF ANY DEVIATION.

CONCRETE MIX DESIGN TABLE										
MEMBER	**LOCATION**	**f'c**	**W/C**	**F**	**S**	**P**	**D**	**C**	**3/4" AGGREGATE**	**1" AGGREGATE**
FOUNDATION WALLS AND PLASTERS	INTERIOR (typ)	4500 PSI	0.45	F0	S0	P0	D0	C1	N/A	N/A
FOUNDATION WALLS AND PLASTERS	EXTERIOR	4500 PSI	0.45	F2	S0	P0	D1	C1	6+/-1.5%	8+/-1.5%
FOOTINGS	INTERIOR (typ)	3000 PSI	0.55	F2	S9	P9	D9	C1	N/A	N/A
FOOTINGS	EXTERIOR	4500 PSI	0.45	F2	S9	P9	D9	C1	6+/-1.5%	8+/-1.5%
SLABS-ON-GRADE	INTERIOR (typ)	3500 PSI	-	-	-	-	-	-	N/A	N/A
SLABS-ON-GRADE	EXTERIOR	4500 PSI Min.	-	-	-	-	-	C4*	*N/A	*N/A
SLAB ON STEEL DECKING	INTERIOR (typ)	3500 PSI	3500 PSI	F2	S9	P9	D3	C19	N/A	N/A

Notes: Provide concrete mixes in accordance with ACI301 for the exposure categories identified in the table.

DRAFT

Repair Mortars

Bonding & Anti-Corrosion Agent

- Basis of Design: Ardex Bonding & Anti-Corrosion Agent
- Purpose: Used to promote adhesion between repair mortars and existing concrete surfaces, and to protect embedded steel reinforcement from corrosion.

Concrete Resurfacing Compound

- Basis of Design: Ardex CD – Concrete Dressing
- Purpose: A resurfacing compound designed to restore the appearance and surface profile of worn or spalled concrete.

Concrete Reinforcement

General

- Design Team to note and specify contact lap splices for rebar reinforcement.
    - This is required to ensure connection between concrete slab and masonry walls.
- Design Team to provide detail at all doorways tying interior SOG and exterior concrete to avoid exterior slab heaving and/or door swing conflict.

Construction Joints

General

- Fill with pourable urethane filler.
- Design team to provide detail for circular control joints at structural columns, diamond shaped joints at columns are NOT approved by MCPS.
    - Structural to show circular joints around columns on area plans and to provide details.

Polished Concrete

General

Polished concrete slabs may be used in select areas throughout the building. Refer to Master Specs. Confirm Aggregate, polish level, grit, stain etc. with MCPS.

DRAFT

04 00 00: MASONRY

Concrete Masonry Units

General

- Design team is to provide details for the following conditions where applicable:
  - Detail(s) for smoke, acoustical, or fire protection infill between top of CMU and deck above.
  - Detail(s) for Joist Enclosure Detail where wall terminates at the joist and seal is required to continue to deck.
  - Detail(s) for Chase Wall Bracing Detail
  - Detail(s) for CMU wall bracing plan Detail
  - Detail(s) for Corner/Tee Intersecting Wall Reinforcing Detail
  - Detail(s) for Walls to Deck or Structure
- Coordinate with Roofing section.
- Design should incorporate masonry façade up to a 24" min. and preference is to use dark color masonry. (metal panel should not be used at the lower portions of exterior walls.)
- Refer to Wall Mock Up Panel section.
- MCPS prefers using Shear walls for lateral support systems. Any other support system to be reviewed by MCPS.

Typical Locations

- Main Building Service Areas, Gymnasium, Stairwells, and Loading Dock walls are to be constructed using CMU.
- Corridor walls are to be constructed using CMU unless otherwise approved by MCPS.
- Design Team to provide CMU construction as necessary to comply with codes and regulations.

Product

- Fly ash in CMU is not approved by MCPS.

All Other Masonry Types

General

- Provide masonry types from (1) one supplier. Other manufacturers to furnish bricks similar in cost, appearance, and quality.
- The contractor is required to build 3'x3' sample panels for MCPS to choose the brick color/finish.

Mortar

General

- Mortar mixing sand to be measured using bucket method only.

DRAFT

Detailing & Execution

Brick Detailing:

General

- Required to have air space of 1" minimum (not nominal ¾"). Coordinate the size of brick ties with the structural engineer.
- Control joint shall be centered between windows, not along the edge of windows/doors due to the lintel bearing at the masonry opening or header with CFMF.

Metal Drip Edge & Flashing

General

- Use of stainless steel drip edge at grade is required.
- Provide drip edge 1" beyond the face of building.
- No stainless-steel drip edge above the windows.
- Drip edges shall be a hemmed form drip turned down immediately at the face of the wall. Do not provide a flat surface before forming the drip.
- Slope bed of mortar below metal drip edge to maintain positive drainage to exterior.
- Seal embedded flexible flashing to metal drip edge.

Reinforcement

- Provide Contact Lap Splices. This is required to ensure connection between concrete slab and masonry walls.

Execution

- In existing conditions, stop effected area of masonry work by stepping back units in each course from those in course below. Do not tooth in work.
- Cleaning requirements to be brush and bucket no pressure washers.

Masonry Lintels

- Avoid use of hung plates in masonry exterior masonry walls.
- Where precast "U" lintels are used spans are to be limited to 12'-4"

DRAFT

05 00 00: METALS

Framing

General

- In addition to locations defined by Architect/Structural engineer, signed and sealed shop drawings required for stage framing, ceiling overhangs at stage area, Media Center hard ceiling areas.
- Structural framing plans should include lists of unit loads where the mechanical units are to be supported.

Roof Access & Roof to Roof Ladders

General

- Provide access ladders & hatches for servicing DOAS, RTUs, ERUs and VRF as needed to service equipment, filters and belts service.

Roof Hatch

General

- Design team to consider opening size, ships ladder length and height, and structural supports to avoid head height conflicts.

Size:

- 30”-36” w x 60” L (preferred)(54” L min.)

Fall Protection

General

- Basis of Design: Dakota Safety, SafetyRail 2000.
- Fall protection: use general industry standards. Check current OSHA requirements. 42” parapet or guardrail (not roof-mounted guardrail).

Roof Ladder(s)

Material & Type:

- Aluminum Ships Ladder

Location(s)

- Ships ladders to be used for interior and exterior access.

Mounting

- Ensure fastening point is provided within 12” of top of parapets.

DRAFT

Roof Deck

General

- No attachment to be permitted to roof deck including but not limited to, bulkheads, pipes, mechanical duct supports, and joist enclosures.
  - Design team to provide detail for clamp support.

Handrails (Interior)

General

- Finish: Stainless Steel Brushed #4. (including center rail at stairs)
- See 32 00 00 Exterior Improvements - Exterior Railings.

Elementary Schools

Railing Requirements

- Provide dual looped handrails with the following dimensions:
  - 36 inches to the top of the upper handrail
  - 25 inches to the top of the lower handrail
- The design team is responsible for confirming conformance with ADA, IBC, and all applicable local codes and regulations.

Return/Termination Requirements

- Elementary handrails shall feature dual looped returns.
- The termination must include a loop that connects the upper and lower handrails, forming a continuous return.
- Wall returns are not recommended unless explicitly approved by MCPS.
- Straight or unreturned terminations are not permitted, as they pose potential safety hazards and do not meet best practice design standards.

Middle & High Schools

Railing Requirements

- Provide single handrail designs in accordance with ADA and all codes and regulations.

Return/Termination Requirements

- To ensure safety and compliance with accessibility standards, all single handrails must terminate with either:
  - A wall return, where the handrail curves back to meet the wall surface, or
  - A continuous loop return, where the handrail bends downward in a closed loop.
- Straight or unreturned terminations are not permitted, as they pose potential safety hazards and do not meet best practice design standards

Guardrails (Interior)

- Provide 48” high guardrail to be provided at spaces that overlook floors, although the code requirement is 42” AFF.

DRAFT

- Finish: Powder Coated

Stainless Steel Corner Guards

Location

- Kitchen

Product

- Type: Surface mounted
- Material: Stainless Steel

Ballet Barres

Product:

- Basis of Design: Gerstung International - Designer Pro Barre Brackets
- Single and/or Double

Mounting

- Provide Mounting Boards
  - 1" Thick
  - 2" wider than bracket base.

Therapy Swing Hook

General

- Coordinate with MCPS Physical Therapy Department.
  - Common Swing Product (NIC)
    - SouthPaw Adult Sling Swing 0134

Details

- Provide Hook Eye Hole at 8'-0" AFF
- Ensure 12'-0" clear diameter space is provided
- Provide angled bracing extending down near the eyehook but above ceiling. Bracing is not to be exposed below ceiling.
- Hook to be painted to match ceiling color.

Locations

- Occupational/Physical Therapy
- Refer to Educational Specifications

DRAFT

Aluminum Expansion Joint Covers

General

- Interior Wall
  - Provide corner EJ cover with clips.
- Floor & Slab
  - Provide threshold covers.
  - Recessed slab expansion joints are not preferred.

DRAFT

06 00 00: WOOD, PLASTICS, AND COMPOSITES

General

- Casework to be pre-manufactured unless otherwise approved by MCPS. See also 12 00 00: Furnishings.

Exterior Grade Plywood

General

- Exterior grade plywood is to be suitable for extended exposure to weather.
- Formaldehyde Treated Lumber is prohibited.

Fire Retardant Treatment (FRT)

General

- Kiln dry wood after treatment to a maximum moisture content of 19 percent for lumber and 15 percent for plywood.
- Treat all exterior rough carpentry items.
- Do not use treated wood in direct contact with the ground.
- Treat wood blocking installed in built-up thickness for roofing terminations except top layer in direct contact with roofing membrane.
- Roof blocking and plywood to be fire retardant.

Custom Casework

- Where custom casework are provided, notes should be added to details regarding matching color and grains. Reference AWI Wood Casework Standards.

Electrical/Tele-data Backing

- Provide plywood backing for equipment on all walls in electrical/teledata rooms per specifications

DRAFT

07 00 00: THERMAL AND MOISTURE PROTECTION

Through Wall Flashing

General

- Use termination bars at top of flashing.
  - Embedded flashing in masonry joints is not to be used.
- Ensure flashing detail is provided at the base of all walls.
- Ensure positive drainage is provided to exterior of building.
- Designs should consider the placement of drip edges to avoid excessive vertical jogs.
- Masonry to have minimum 2000 psi. Also refer to specifications.

Material:

- Stainless Steel, confirm with code requirements.

Weep Vents

General

- Provide notation on drawings for mason to coordinate weep vents with proposed grade level.

Type:

- PVC Waffle Weeps
  - Color should match mortar color as close as possible. MCPS to approve color.

Location:

- Provide open head joints at top of masonry cavity walls or other means of providing ventilation at the top of the cavity wall. Alternate solutions shall be approved by MCPS.
- As required for proper cavity drainage.

Metal Wall Panels

General

- Where metal wall panels are provided:
  - Care should be taken by the Design Team to coordinate rib locations and any wall penetrations to avoid awkward placement between or straddling ribs.
  - J tracks with weep holes should be provided at the base of panels and above the flashing where base panels are accessible by occupants to avoid exposure to sharp/cut edges.

DRAFT

Spray Fire Proofing

General

- Make considerations for construction sequencing when detailing structure adjacent to walls (generally exterior walls).
  - Spray foam needs to be applied to beam prior to wall construction in order for all sides of beam to be protected.
- Alternate enclosure detailing is also acceptable as long as all code requirements are met.

Wall Mock Up Panel

General

- Design team shall provide details and drawings for mock up panels in construction drawings. Detailing to include but not limited to the following:
  - Thermal insulation
  - Air/Vapor application
  - All façade materials eg. Masonry, Metal Panel etc.
  - Glazing & Opening detailing
  - Coping/Parapets (as necessary)
  - Interior and Exterior corner conditions.
- Mockup panels to be approved prior to construction/install. Design team to provide in contract documents.

Roofing

General

- 20 Year Warranty typical.
- Provide flat seam panels on parapets over 24".
- Coordinate all types with roofing manufacturer requirements.

Thermoplastic Polyolefin (TPO)

General

- Used for low slope new and replacement roofs.

Material

- 80 Mil. TPO– Fully Adhered, horizontal surfaces (Confirm with Manufacturer)
- 60 Mil. TPO – Fully Adhered, vertical surface (Confirm with Manufacturer)

Standing Seam Metal Roofing

General

- Used for sloped roof conditions and outbuildings.

DRAFT

Built-Up Roofing

General

- Used for existing conditions where full replacement of roof is not part of the scope.

Walkways

- Provide 4'-0" wide walkway
  - Layout path from roof access to and around rooftop air handling units (AHU).
  - Fully Adhered and heat welded at edges. Confirm with manufacturer standard requirements.

Coping

General

- Standing seam joints to be used.
- Provide detail on drawings for standing seam.

Typical Expansion Joint

General

- Basis of Design: 5" Expand-O Flashing

Interior Insulation & Sound Proofing

General

Provide STC 50 min. for classroom partitions, Principal, Assistant Principals, counselors office, and other offices where discussions of sensitive information may require additional sound isolation. Design team and MCPS to review during 1/4 scale review of spaces.

- Design team to provide notation that contractor is to fill gaps around door frames between stud and hollow metal frame with insulation.

Green Roofs

General

- Preferred type to utilize trays.
- Coordinate Absorption of stormwater with SWM system.

Roof Penetrations for MEP

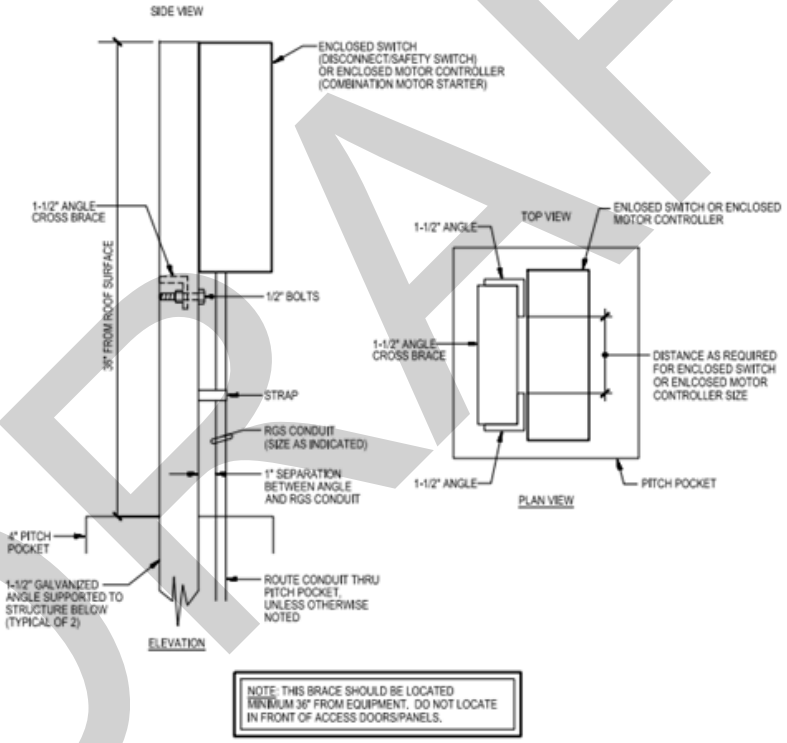
Dog Boxes

- For roof penetrations, stainless steel to be used for dog boxes, rain hoods, etc.
  - Galvanized is **NOT** to be used.
- At Dog Boxes provide exit seals to limit water infiltration.
  - B.O.D. Sigrist Exit Seal

DRAFT

Equipment Mounting

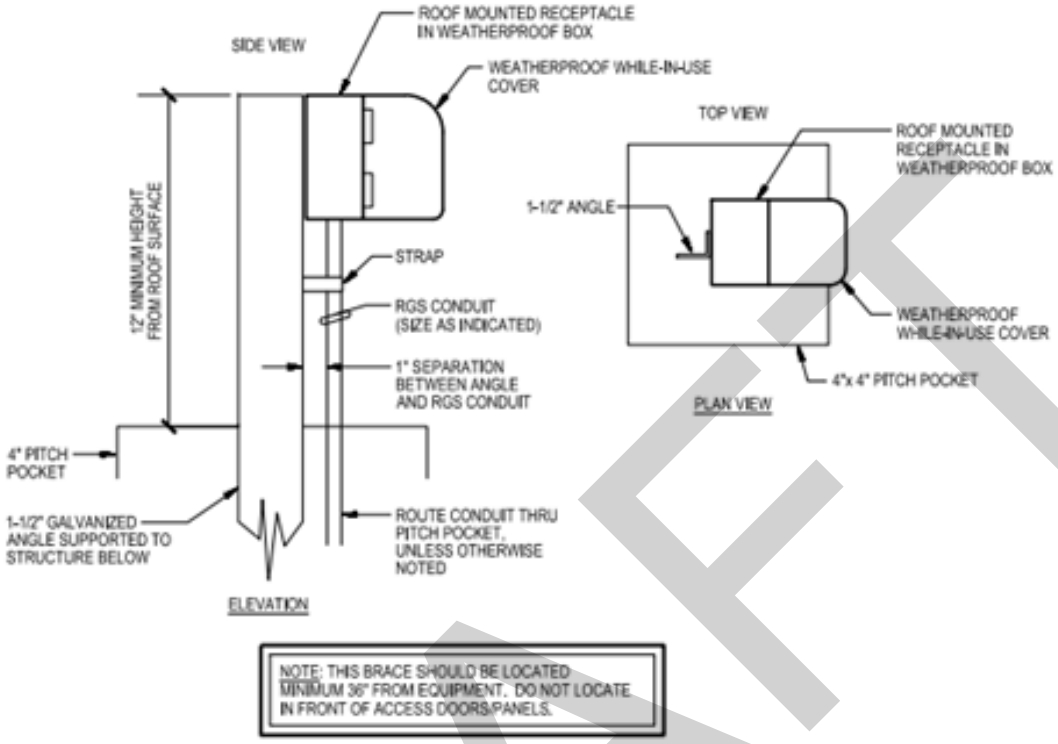
General



- There are two recommended mounting structures that can be used for mounting rooftop equipment electrical disconnects, receptacles and photo cells.

Product

- Provide 60-inch-high roof-mounted electrical pedestal and base assemblies as required for rooftop equipment and maintenance access in accordance with the MCPS Master Specifications. Design team to indicate locations on roof plan drawings.



Detailed

- See the below details for constructing using angle iron for mounting electrical equipment power boxes.

Detail 1 Disconnect Mounting on Roof

DRAFT

Detail 2 Receptacle & Photo Cell Installation On Roof

Figure 2 Mechanical Equipment Shut Off Mount

DRAFT

08 00 00: OPENINGS

General

- Typical Window/Curtainwall/Storefront set back is 3" from face of veneer.
- At all Curtainwall/Storefront/Window sills, sill flashing detail to show flashing turned up within Curtainwall/Storefront/Window sill connection and between caulking joints.
  - Turning flashing up will prevent water infiltration if/when exterior caulking degrades.
- Skylights are not approved by MCPS.

Glazing:

General

- Consider the future replacement/maintenance challenges
  - The maximum single panel glazing size is 12 sqft.
  - Clear tint to be provided only.

Aluminum Windows

General

- Required to use an aluminum spacer only. No rubber style spacer.
- Insulated glazing stops are aluminum, not rubber.

Storefront & Curtainwall

General

- MCPS Acceptable Manufacturer List:
  - EFCO
  - YKK AP America
  - Tubelite
  - Oldcastle Building Envelope
  - Kawneer North America
- Curtain Wall/Storefront acceptable manufacturer to be listed as an acceptable manufacturer in the aluminum window specification section.Designs should avoid terminating walls at exterior glazing/mullion where acoustical separation is required.
  - Where instances do arise, provide mullion partition gap closure details and meet the required STC rating of the partitioning wall.

Operable Windows

Typical Locations

- Provide at the following locations:
  - Kitchen
  - Cafeteria
  - Classrooms

DRAFT

- Offices

Requirements

- Kitchen and Cafeteria operable windows to receive insect screens. No other operable windows to have an insect screen.
- Hopper Style - Confirm vent with MCPS.
- Ensure Window latch type is ADA compliant.
- Limit operable windows to 4" max opening distance from exterior face of fixed frame to interior face of operable frame.
- At grade operable windows should limit opening to avoid protrusions past the veneer.
- No operable windows are to be provided in stairwells.

Overhead Doors

General Notes

- All electrified Overhead Doors to have accompanying man door for access to space.
- Exterior surfacing to slope away form building.
- Threshold:
  - Threshold to be recessed so that door sits below interior finish floor level to prevent water infiltration into space.
  - Ensure slope of threshold area is to the exterior.
  - Provide steel edge protection angle at exterior face of building slab at overhead door openings.

Doors

Exterior

- Provide hollow metal doors and frames at all entrances unless otherwise approved by MCPS.
- Doors with two glass lites (top and bottom) shall be used only at the main entrance to the building due to the security shade installation challenges.
- ADA push button door openers to be installed on one of the exterior doors at the main entrance and the door to the Admin suite from the vestibule.
  - Note: Door from vestibule to admin suite does not get an auto opener.
- The courtyard door shall swing in from the courtyard side with panic hardware to avoid anyone being trapped in the courtyard.
- No Vision Panels to be provided at Gymnasium exterior doors.
- Exterior door sills positive drainage away from building to avoid water infiltrating the building.

DRAFT

Interiors

Corridors

- Length of the recessed door alcove/pocket shall be an additional 3”min. longer than the width of the door to avoid conflict with door swing arc. (eg. 3’-3” from face of frame with a 3’-0” door.)

Hollow Metal Doors & Frames

General

- Roof access door to swing out on roof side.

Hollow Metal Doors

- Steel stiffened, 14 gauge, with 16 gauge stiffeners, 12 gauge top and bottom channels, and 16 gauge reinforcing full height at leading edge and hinge edge.
- Finish: Painted

Typical Locations

- All Exterior doors.
- Back of House Locations
  - Loading Docks
  - Mechanical Room
  - Electrical Room
  - Kitchen Receiving Entrances

Hollow Metal Frames

General

- Door panels to be 14 ga. with 16 ga. reinforcement full height at leading edge and hinge edge.
- Welded with base anchors and four (4) anchors per jamb located above and below the electro-magnetic locks.
- Knock Down Construction in metal stud walls and where no side light is provided.
- Finish: Painted

Flush Wood Doors

General

- Doors between classrooms in elementary school shall be flush doors, with no lite.
- Species: Maple

Typical Locations

- Provide at locations not mentioned under Hollow Metal Doors. Confirm with MCPS per project.

DRAFT

Door Hardware

General

- All doors in the group bathroom shall have door hold open. (where doors are provided)
- Trash room doors need to have an outdoor Best key.
- Provide door viewers at the kitchen receiving door
- One for ADA and one at normal height.
- Provide screw on weather stripping at all exterior doors not adhesive rubber gasket
- One door at all exterior entrances to be roughed-in for card readers.
- Stairwell doors to have a single point unlocking feature in fire command center or at main vestibule near FAAP need wiring details for this work.
- Provide Electric latch detection at all exterior doors. Confirm wiring detail with MCPS project manager.

DRAFT

09 00 00: FINISHES

Carpet

Location

- Admin offices and conference rooms
- Media Center
- Carpet is not allowed to use in the corridor unless approved by MCPS.

Product

- Provide Tile carpeting at areas listed above unless otherwise approved by MCPS.

Resilient Tile

Locations

- Throughout building unless otherwise noted.
- Media Center Maker Space
- Elementary school platform behind curtain
- Stair entry landings
- Admin except areas to receive carpet (see carpet)

CLEANING AND PROTECTION

A. Comply with manufacturer's written instructions for cleaning and protection of resilient products.
B. Perform the following operations immediately after completing resilient product installation:
    1. Remove visible adhesive and other surface blemishes from resilient products.
    2. Sweep or vacuum floor thoroughly.
    3. Damp-mop surfaces to remove marks and soil.
C. Prior to the general cleaning a classroom shall be selected for a sample cleaning. When ready the contractor shall arrange for inspection and approval by MCPS Building Services Manager. Upon approval the sample room cleaning shall be used as a basis for general cleaning.
D. Protect resilient products from stains, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
E. Floor Polish: Remove soil, visible adhesive and surface blemishes from resilient stair treads before applying liquid floor polish.
A. Vinyl Composition and Rubber Flooring
    1. Stripping
        a. Strip floors using an approved floor machine and black stripping pad. Use Essential Industries, Green Essence 8881FX, Green Strip only.
        b. Rinse floors using at least two (2) coats of hot water rinse.
        c. Allow floors to dry completely before applying any finish coat(s). Use wet-dry vacuum to remove excess water if necessary.
    2. Apply Finish

DRAFT

a. Apply six coats (2,000 to 2,500 SF/gal) of Essential Industries, Green Essence 8801FFX, Green G2 Finish with clean pre-rinsed lamb's wool applicator at minimum one hour drying time between each coat.
b. Allow final coat to dry 24 hours before allowing traffic on finished floor.

Resinous Flooring

General

- Integral base at all locations were resinous is used.
- At stairs, tread nosing shall be painted under seal coat a contrasting color.

Locations

- Stairs & Mid Landings
- Kitchen floor (or quarry tile)

Product

- Resinous pour with flake is generally recommended.
- Color: To be reviewed by MCPS.

Epoxy Flooring

General

- Integral base at all locations were epoxy is used.

Locations

- Mechanical Room,
- Building Services Closet,
- Trash Room
- Heat pump Rooms

Product

- Color: Gray

Rubber Tile Floor

Locations

- Security Vestibules
- Gym Vestibules
- Interior Ramps

Rubber Base

Locations

- All locations not listed in porcelain alternate base materials.
  - Ensure back of house and closet locations are included.
- Cove base to be used throughout.

DRAFT

Ceramic Tile

Locations

- Restrooms
- Corridors (with gypsum walls)

Product

- Base to be 4" minimum.
- Corners to have bull nosed profile, including base.

Porcelain Tile

Locations

- Restrooms (Alternate Wall Base)
- Corridor Wall Base (Preferred)

Product

- Provide Through Body Color
- Base to be 4" minimum.
- Corners to have bull nosed profile.

Quarry Tile

Location:

- Kitchen (Alternate)
- Corridor Wall Base (Alternate)

Product

- Provide Through Body Color
- Base to be 4" minimum.
  - Corners to have bullnose profile

Notes and Concerns

- Ensure verbiage is included in the specifications for waterproofing testing.
  - *"Do not install tile or setting materials over waterproofing until waterproofing has cured and been tested to determine that it is watertight."*
- Provide marble threshold at entry door and at floor to shower transition.

Thresholds

Location:

- Restroom entry and/or tile floor transitions for restrooms
- Showers

DRAFT

Profile

- Double Bevel, ensure ADA compliance
  - Detail Note: Hold face of beveled transition to corridor/room face of door frames to avoid jogging cuts of flooring.

Wood Flooring

- Elementary School Platform
  - Provide stained hard wood floor at steps and in front of curtain only.
- Middle School and High School Stage to receive wood floors
  - Hard wood floor to be stained in front of main curtain.
  - Behind curtain, wood floor to be painted black.

Gym Floor

Material

- Basis of Design: Robbins, Air-Channel Star
- Finish: Water based sealer and paint finish
  - All courts apply (2) two coats of sealer and four coats of finish.

Game Lines: High, Middle, and Elementary Schools

General

- Keep all game lines No less than 3'-0" from any obstruction such as end walls, side walls, operable wall, or bleachers.
- Logos cannot be trademarked. We will use Gametime wraps or MCPS approved alternative. Logo has to fit inside the 12'-0" circle at center court.
- Only Main Basketball and Main Volleyball games lines shall be painted inside main basketball courts for HS and MS. All other games lines inside the main basketball for HS and MS, shall be T's and L's. T's and L's that occur in the border or logo will be cut in with ¼" gaps. Solid game lines shall be painted outside of main basketball courts.
- All basketball keys and 3'-0" borders will be stained for high schools and only the borders for middle schools.

High School

Main Basketball

- One court 50'-0" x 84'-0".
- Mark full layout, keys, three-point, and center circle lines with 2" Black lines.
- End lines keep a distance of 4'-0" from the inside of the end line to the face of the backboard.
- Provide 19'-9" three-point lines.

Side Basketball

- Use main basketball half court lines.
- Position auxiliary baskets-rims lengthwise to the gym.

DRAFT

- Provide 2'-0" L x 0'-2"W foul lines at all auxiliary baskets. Line color shall be Base Gold.

Main Volleyball

- Center 30'-0" x 60'-0" court using 2" White lines.
- Include attack lines 10'-0" from center and outside serving area lines.
- All lines should be shown even though it occurs on the main basketball court.

Side Volleyballs

- Include two (2) to Three (3) 30'-0" x 60'-0" Side Volleyballs using 2" Brown blend V lines when lines are outside of the main basketball court
- T's and L's should be used if the line appears on the main basketball court.
- Include perimeter lines, attack lines 10'-0" from center and outside serving area lines.

Badminton Courts 20'-0" x 44'-0"

- Add six (6) to eight (8) 20'-0"x 44'-0" regulation courts using 1 ½" Tan Blend U Line.
- Courts are laid out parallel with length of basketball court.
- No badminton full lines inside the basketball court, use T's and L's.
- Use tick mark to mark 7'-0" from the center for pickle ball non-volley zone (NVZ).
- Maximize the area to provide as many regulation courts as possible.

Middle School

Main Basketball

- Main court size varies depends on size of gym. Mark full layout, keys, three-point line, center circle with 2" Black lines.
- End lines keep a distance of 4'-0" from the inside of the end line to the face of the backboard.
- Provide 19'-9" three-point line

Side Basketball

- Use main basketball half court lines
- Provide 24" x 2" foul lines at all auxiliary baskets. Line color shall be Base Gold.

Main Volleyball

- Center 30'-0" x 60'-0" court using 2" White lines.
- Include attack lines 10'-0" from center and outside serving area lines.
- All lines should be shown even though it occurs on the main basketball court.

Side Volleyballs

- Include two (2) to three (3) 30'-0" x 60'-0" Side Volleyballs using 2" Brown blend V lines when lines are outside of the main basketball court
- T's and L's should be used if the line appears on the main basketball court.
- Include perimeter lines, attack lines 10' from center and outside serving area lines.

Badminton Courts 20'-0" x 44'-0"

- Add six (6) to eight (8) 20'-0"x44'-0" regulation courts using 1 ½" Tan Blend U Line color.
- Courts are laid out perpendicular with length of basketball court.

DRAFT

- No badminton full lines inside the basketball court, use T's and L's.
- Use tick mark to mark 7'-0" from the center for pickle ball non-volley zone (NVZ).
- Maximize the area to provide as many regulation courts as possible.

Elementary Schools

Main Basketball

- Main court size varies depends on size of gym.
- Mark full layout, including the key
- No three-point lines
- Center circles (6'-0") with 2" Black lines.
- Center circles 12'-0" and 15'-0" color selected by school
- End lines keep a distance of 4'-0" from the inside of the end line to the face of the backboard.

Side Basketball

- Use main basketball half court lines
- Provide 24" x 2" foul lines at all auxiliary baskets. Line color shall be **Base Gold**.

Main Volleyball

- Center of basketball court, include one regulation 30'-0" x 60'-0" court using 2" **White lines**.
- Include attack lines 10'-0" from center and outside serving area lines

Side Volleyballs

- Include (2) 30'-0" x 44'-0" Side Volleyballs using 2" **Brown blend V** lines.
- On three sides use basketball lines as layout.
- Center Poles shall be 2'-0" away from center divider/line.

Badminton Courts

- Add (3) 20'-0" x 44'-0" regulation courts using 1 ½" **Tan Blend U Line** color
- Courts are laid out perpendicular with length of basketball court
- Layout only perimeter using full lines

Light Gauge Stud Construction

General

- Provide steel reinforcement with baseplate for all low wall conditions.
- Provide slotted track to accommodate deflections at all full height partitions. Details and specifications must be provided.
- Provide specifications and details for slotted track to accommodate deflections.

Common Locations

- Behind Low lockers
- Behind Cubbies
- At student workstation seating bars
- Throughout Building

DRAFT

Gypsum Wall Board (GWB)

General

- Install GWB ½" thick above deck to avoid water wicking.
- Where possible provide moisture barriers at bottom of gypsum board. Confirm barriers provide necessary UL rating.

Drywall Partitions:

Product

- As a value engineering (VE) alternative to CMU in corridors, high impact 5/8" thick gypsum wall board to be used up to 8'-0" AFF in corridors. Use of GWB in corridors must be accepted by MCPS.
  - Should GWB finish be approved by MCPS in corridors, provide ceramic or porcelain tile wainscoting in corridors up to 48"AFF.
- Impact-resistant 5/8" thick gypsum wall board to be used up to 8'-0" AFF in all spaces except corridors.
- Corner Beads
  - Products
    - Basis of Design: CertainTeed Pre-Cut Drywall Corner Beads - AquaBead
    - Size: ¾" Radius
  - Locations
    - All Public Spaces
    - Classrooms
    - Offices
    - Staff Spaces
    - Workrooms
- Do not provide at bulkheads, windows, and back of house areas.
- Stainless Steel Corner Guards. Refer to section 05 00 00 Metals.

Interior Paint

Finishes

- Concrete Masonry Units (CMU)
  - Finish: Semi-gloss.
  - All interior CMU to receive (2) two filler coats and (2) two finish coats. Tint the second coat.
- Gypsum Wall Board (GWB)
  - Finish: Egg-shell (unless approved by MCPS.)

Ceilings

Typical Locations with No Ceilings

- Mechanical Room,
- Building Services Closets
- Trash Room

DRAFT

- Heat pump Rooms
- IDF and MDF Closets

DRAFT

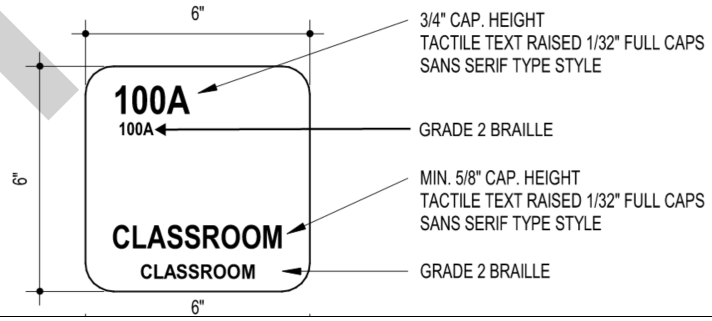
10 00 00: SPECIALTIES

Knox-Box

Product

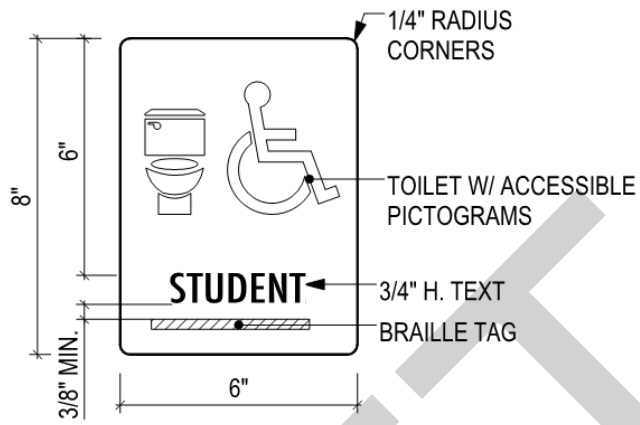
- Provide Knox-Vault 4400 Series as required by Fire Marshal. Design Team to confirm requirements with Fire Marshal and DPS.

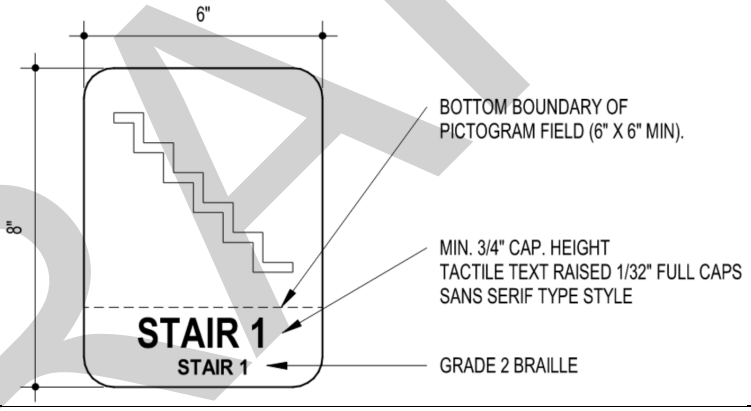
Location

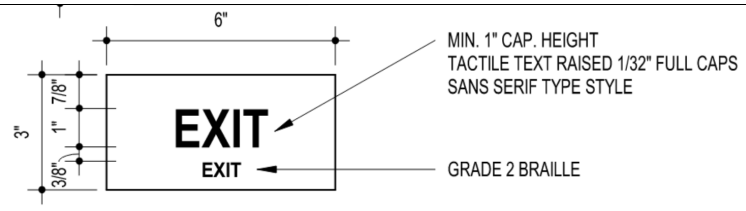


- Confirm Mounting Height and Locations with Fire Marshal and DPS.

Interior Room Signage







Product

- Material: Non-Glare Acrylic
- Thickness: 0.080-inch
- Surface-applied and painted graphics are not acceptable.
- Provide caulking around all room signage.
- Manufacturers:
  - Best Sign Systems inc.
  - Mohawk Sign Systems, Inc.
  - Bayuk Graphic Systems, Inc.
  - Digital Color Graphics,
  - Supersine Company
  - Adcorp
  - Signs and Wonders

Detail 3: Typical Room Signage Mounting Locations

Plaques

General

- County Plaque provided for new construction & replacement projects only.
- State plaque also required if the project is state funded.
  - Refer to state Guidelines for Plaques.
- If the school is newly named, the naming description plaque to be added.

Product

- Material: Bronze
- Size: 18”W x 12”H
- Text: Helvetica

Locations

- Vestibule/Lobby areas. Architect to review locations with MCPS.

DRAFT

Canopies

Locations

- At all exterior door(s) a canopy or similar cover is required.

Execution & Details

- Canopies are not to be through-bolted through exterior walls design team to provide details for concealed and embedded canopy connections.
- Architect and Structural Engineer should ensure coordination of details between the design team, MCPS, and the basis of design manufacturer.

Metal Lockers

General

- All lockers to have 3-point latch system.
  - Note: Single point latch lockers do not stay shut when a lock is not used causing circulation obstructions.
- Provide setback for all lockers were adjacent to rounded GWB corner or bull nosed masonry corners.

Student

- Knocked-down, Standard, Sloped top
- Concrete base 4”
- Wardrobe lockers in the corridor are not vented.

Elementary

- No locks for ES corridor lockers for students.
- Corridor lockers shall be 60”H (max.) x 15”W Double Stacked

Middle

- Size:60”H (max.) x 15”W
  - If not against a wall, lockers should be lower to allow for visibility.
- Provide built-in combination locks.

High School

- Size:60”H (max.) x 15”W
  - If not against a wall, lockers should be lower to allow for visibility.
- Provide built-in combination locks.

Athletic Lockers

General

- Provide ventilated doors.
- Provide built-in combination locks.

Elementary

- None.

DRAFT

Middle

- Size:72”H(max.) – 3 Tiered
- Confirm required # with Ed. Spec.

High

- Size:72”H(max.) – 2 Tiered
- Confirm required # with Ed. Spec.

Staff Lockers

- Size: 72”H x 12” W.
- Provide built-in combination locks.

Toilet Partitions

General

- Provide pilasters at urinal privacy partitions and ensure space between pilasters at urinals complies with ADA clear space.

Products:

Material:

- **Type:** High-density, polyethylene (HDPE) panel material
  - Having 100 percent post-consumer recycled content.
- Thickness: no less than one (1") inch thick.
- **Edging:** Eased (Chamfered or Rounded).
- **Color and Pattern:** Basis of Design - Paisley (Bradley Corp.)
  - Homogenous color and patterns throughout the thickness of the material.

Acceptable Manufactures:

- Bradley Corporation
- Scranton Products
- Yemm & Hart Green Partition
- ASI Global Partitions
- Hadrian

Mounting

- **Overhead Bracing:** Heavy-duty, anti-grip, corrosion-resistant.
- **Pilaster Shoes and Sleeves (Caps):** 4 inches high.
- **Brackets (Fittings):** Full-Height (continuous)
- **Material:** Manufacturer's standard design; extruded aluminum
- **Heat-Sink Strip:** Manufacturer's standard continuous, extruded aluminum strip fastened to exposed bottom edges of solid-polymer components to prevent burning.

Hardware:

- **Hardware and Accessories:** Heavy-duty operating hardware, and accessories.
- **Material:** Stainless Steel

DRAFT

Figure 3: Toilet & Urinal Partition

AED Kits

General

- Shall be provided and installed by the MCPS Department of Systemwide Safety and Emergency Management
- The plan locations shall be determined by MCPS Department of Systemwide Safety and Emergency Management staff during the design, and A/E to show in the drawing.
- The final location to be coordinated with the MCPS project manager and the principal. MCPS project manager to coordinate with appropriate MCPS staff.
- AED Kit and Stop the Bleed Kit shall be installed stacked. The bottom edge of the lower kit shall be at 27" AFF to comply with ADA requirements.

Locations

- Main Lobby
- Near Gymnasium Lobby

Stop the Bleed Kit

General

- Shall be provided and installed by the MCPS Department of Systemwide Safety and Emergency Management.
- For Middle & High Schools the plan locations shall be determined by MCPS Department of Systemwide Safety and Emergency Management staff during the design, and A/E to show in the drawing.
- For Elementary Schools the kit is kept in the Health Suite.

DRAFT

- If there is an existing kit in the building, the MCPS project manager is responsible to coordinate with the MCPS Department of Systemwide Safety and Emergency. Management for a new location and with the Division of Maintenance and Operation for the installation.
- AED Kit and Stop the Bleed Kit shall be installed stacked. The bottom edge of the lower kit shall be at 27" AFF to comply with ADA requirements.

DRAFT

11 00 00: EQUIPMENT

Projection Screen

Product

- Non-Tensioned
- Aspect Ratio: 16:9
- Screen Size: Preferred Width of +/-12'-0".
- Viewing Surface Material & Color: White
- Extra Drop Color: Black
- Border Color: Black
- Height: 36" above viewing floor, 6" min. above raised floor.

Typical Locations

- All Purpose Rooms
- Auditoriums
- See additional requirements in Ed. Specs.

Fold Up Dividers

General

- Fold Up Divider shall be used to divide the main gymnasium into (2) two spaces.
- If the second gymnasium is connected to the main gymnasium, movable partition shall be used to separate the main gymnasium and second gymnasium.
- No roll up dividers shall be used.

Product

- Approved Manufacturers:
  - Draper,
  - Spalding
  - Gared - PSS Performance Sports Systems.

Kiln

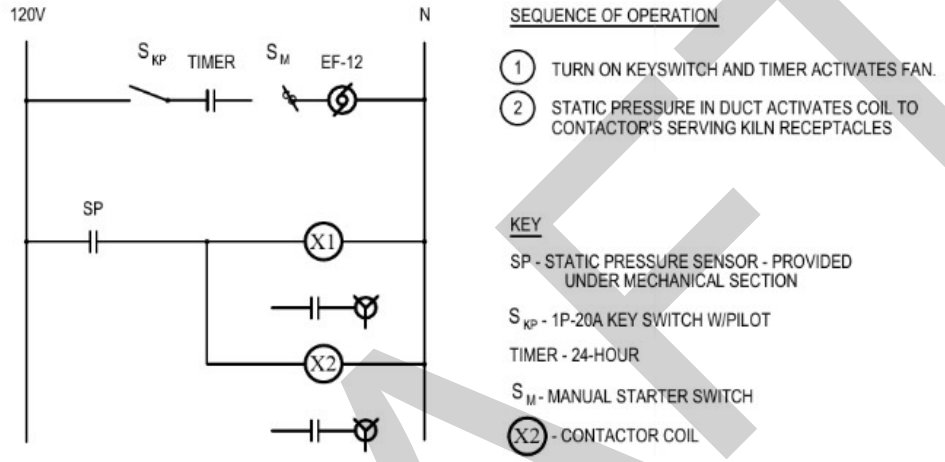
General

- Refer to the Educational Specifications for the number of kilns to be provided. Each kiln to have exhaust hood.
- Kilns should be located at the far end of the Storeroom/Kiln Room.

Product

Elementary

- Kiln
  - Basis of Design: Paragon TNF 82-3
  - Size: 30"W x 30"D x 36"H
  - Electrical: 240 volt; 30 amp; 7200 Watts; Single Phase



DRAFT

Middle & High Schools

- Kiln
  - Basis of Design: L&L JD230EZ – 48 amp model.
  - Plug: 15-50p
  - Electrical: 208V, 60 Amp Circuit: 3 Phase

Exhaust Hood

- Provide a Local switch with 24-hour timer.
- Positive ventilated.

Detail 4: Example Kiln Electrical Wiring Diagram

PugMill

- Model:
- Power Requirements:

Spray Booth

- Location: Typically in Kiln Rooms
- MCPS requires vented spray booths.
- Model: Leguna Pro-V
  - Power: 115v or 220v

Ceramic Pottery Wheel

Distillers (Science/Chemistry)

- Location: Prep Rooms on countertop
- Need to be near drain and have dedicated water line hookups.
- Hookups to be provided typically in all HS and MS Science & Chemistry prep rooms. Confirm with Ed Specs.

Ice Machines

- Ensure drains are provided where ice machines are located.

DRAFT

Residential Range and Vent

Locations

- Provide in rooms for School Community Based (SCB) & Learning for Independence (LFI) Classrooms.
- Refer to Educational Specifications.

Product

Vent

- The vent above range shall be a residential, re-circulating type.
- Exhausting outside is not required.

Trash Compactors

Product:

Elementary & Middle

- Basis of Design: Harmony 450 SS
  - https://harmony1.com/harmony-products/indoor-stainless-steel-compactor/

High

- Basis of Design: IDC 10T compactor.
  - IDC 10T Compactors - Big Stuff, Inc.

Fume Hoods at Science

General

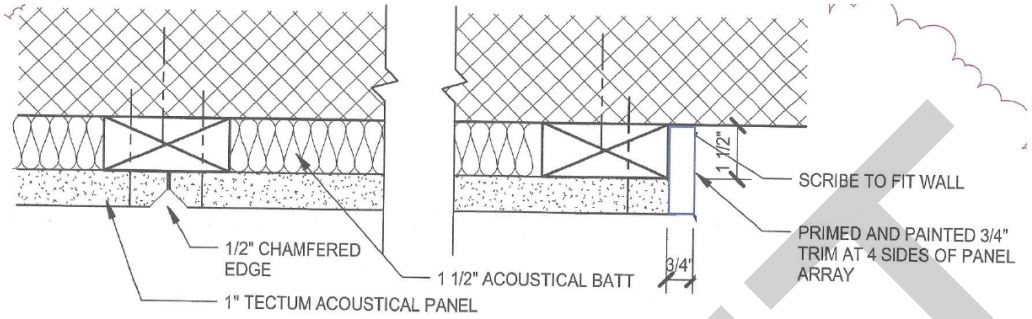
- Provide dual entry type. This type maximizes the space and minimizes the fume hood size.
- Refer to Educational Specifications.

Wood Fiber Acoustical Wall Panels

Product:

- Basis of Design: Armstrong Tectum Panels
- Acoustical insulation on the back. Back to receive the painted finish.

Location



- Not Limited to but including:
  - Gymnasium
    - No fabric wrapped panel in a gymnasium.

Mounting and Construction Details

- Provide wood edge protection around tectum panels in gymnasium(s).
- Do not caulk or fill screw mounting holes in panels
- Paint all tectum panels. Colors, patterns and designs should be carefully considered.

DRAFT

- Paint all exposed fasteners to match panels.
- See Tectum Wall Panel Attachment Detail below.

Detail 5: Tectum Wall Panel Attachment and Framing.

Gymnasium Equipment:

General

- Provide "climbing ropes" 4'-0" apart min.
- Provide "chin-up bars"
- Horizontal bar and associated floor sleeve/anchors shall be installed per Ed. Specs in HS gym only.
- Refer to Gym Flooring section.

Wall Padding

Mounting & Installation

- The bottom of the wall padding to be at 4" AFF max. Confirm with codes.
- Use (3) continuous French cleats for mounting each pad to the wall.
- Secure with flange at bottom of pads and fasten with (3) 1 ¼" decking screws, 2" from each end and one in the center. Athletic flooring base will require notching to accommodate bottom flange. Provide detail of padding including bottom flange in drawings.

Equipment Lists

General

- Design team to coordinate the required gymnasium equipment to be included in contract with the MCPS project manager.

High School Equipment List

Qty.	Equipment Type	Manufacture	Model #
10	Badminton/Pickleball Combo Poles	Sports Imports	DG11-PBC
4	Volleyball Poles	Sports Imports	DE-11
2	Heavy Duty cranks	Sports Imports	HDNR
8	Badminton Nets	Senoh/Sports Imports	SBN-20
2-3	Volleyball Nets	Senoh/Sports Imports	HM50

DRAFT

1	Floor markers	Floor Marx	6 Pack Master Set
2	Volleyball Wall Rack (2 poles*if needed).	Sport Imports	WR10
3	Badminton Wall Rack(4poles*if needed).	Sports Imports	BWR10
1	Equipment cart	Senoh/ Sports Imports	DU22

Middle School Equipment List

Qty.	Equipment Type	Manufacture	Model #
8 to 10	Badminton/Pickleball Combo Poles	Sports Imports	DG11-PBC
4	Volleyball Poles	Sports Imports	DE-11
2	Heavy Duty Cranks	Sports Imports	HDNR
6 to 8	Badminton Nets	Senoh/Sports Imports	SBN-20
2 to 3	Volleyball Nets	Senoh/Sports Imports	HM50
2	Volleyball Wall Rack (2 poles) *If needed	Sports Imports	WR10
2 to 3	Badminton Wall Rack(4poles) *if needed	Sports Imports	BWR10
1	Floor markers	Floor Marx	6 Pack Master Set
1	Equipment cart	Senoh/Sports Imports	DU22

Elementary School Equipment Layout

Qty.	Equipment Type	Manufacture	Model #
4	Badminton/Pickleball Poles	Sport Imports	DG11-PBC
4	Volleyball Poles	Sport Imports	DE-11
1	Heavy duty Crank	Sports Imports	HDNR
3	Badminton Nets	Senoh	SBN-20
2	Volleyball Nets	Senoh	HM50
1	Floor markers	Floor Marx	6 Pack Master Set
1	Equipment cart	Senoh	DU22
2	Volleyball Wall Rack (2 pole) *if needed	Sports Imports	WR10
1	Badminton Wall Rack (4pole) *if needed	Sports Imports	BWR10

Scoreboards

General

DRAFT

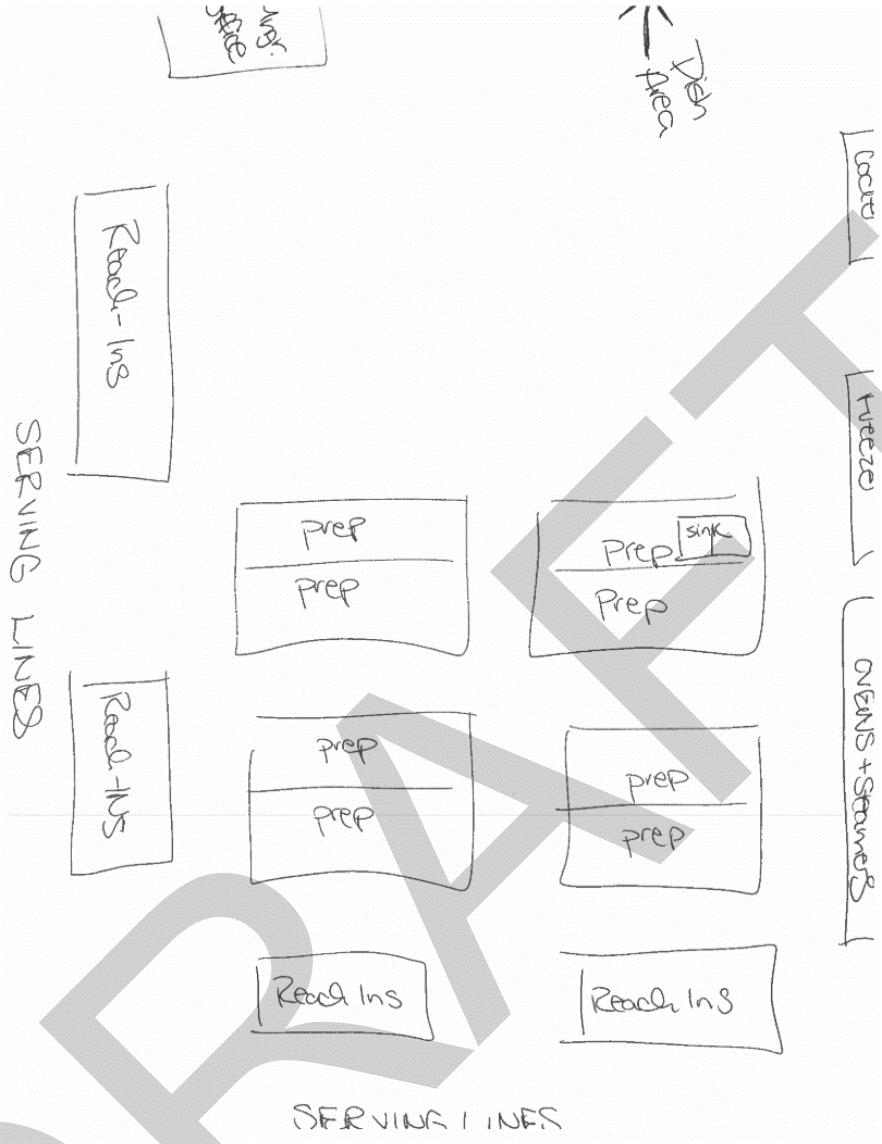
- Provide (1) one scoreboard in Middle Schools at the main gym.
- Provide (2) two scoreboards in the main gym of High Schools and (1) one scoreboard in the secondary gym(s).

Kitchen Equipment:

General

- Walk-in refrigerator and freezer should be on the emergency generator.
- Delivery access between loading dock and cooler/freezer should be wide enough to accommodate pallets.
- Provide a door bell at the loading dock door to the Cafeteria Manager Office.
- Kitchen equipment must not require proprietary service. If proprietary equipment is required, service and support must be provided for the life of the equipment.
- Corkboards should be located outside the Managers Office.

Elementary School Kitchen



Front of House

- Front-of-house layouts shall support efficient student circulation with clearly defined entry and exit paths through the serving area.
- Kitchen front walls facing the cafeteria shall incorporate glazed panels to allow natural light into the kitchen and maintain visual connectivity.
- Door locations shall be configured to support a one-way circulation pattern through the serving line where feasible.
- Wall surfaces above or integrated with glazed panels may include graphics, signage, or applied imagery to create a welcoming, age-appropriate cafeteria environment. MCPS Facilities Architect.
- Graphics may be applied directly to glazing or adjacent wall surfaces, provided light transmission and visibility are maintained. Designs to be approved by MCPS Facilities Architect.

Back of House

- Back-of-house layouts shall be organized to support efficient food service operations within a compact, rectangular floor plan.
- Delivery access shall allow direct movement of products into dry storage and walk-in refrigeration/freezer units.
- Adequate food preparation space shall be provided directly in front of cooking equipment and behind the serving line.
- The rectangular configuration shall support clear circulation and minimize cross-traffic between functional zones.
- The manager's office shall be located to allow direct visual oversight of kitchen production and service areas.
- The three-compartment sink shall be located away from food preparation and serving areas to support sanitation and food safety requirements.

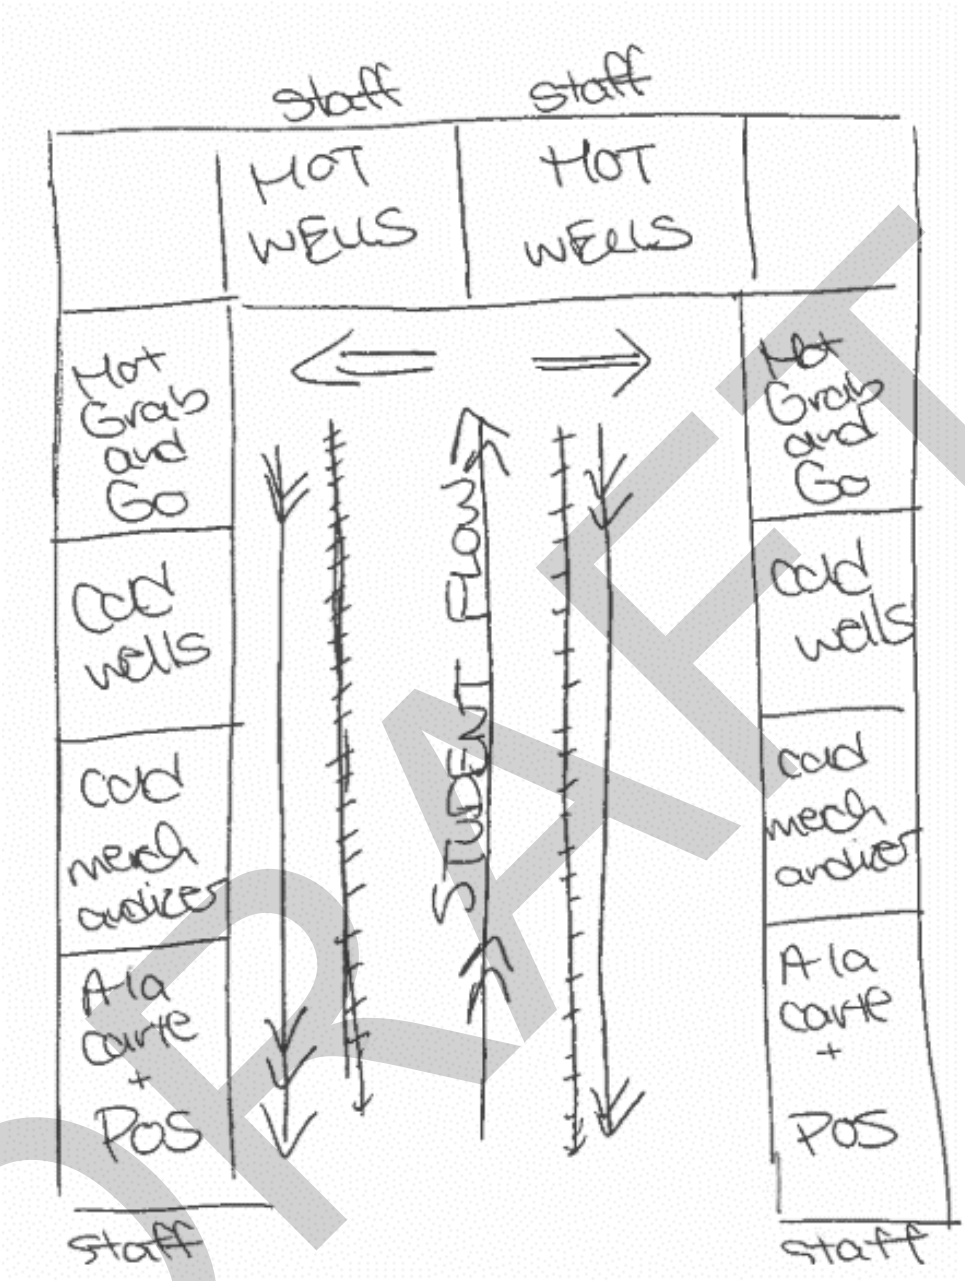
DRAFT

Sketch 1 Single Serving Line and Prep Kitchen Example: NTS

Secondary School Kitchen

Front of House

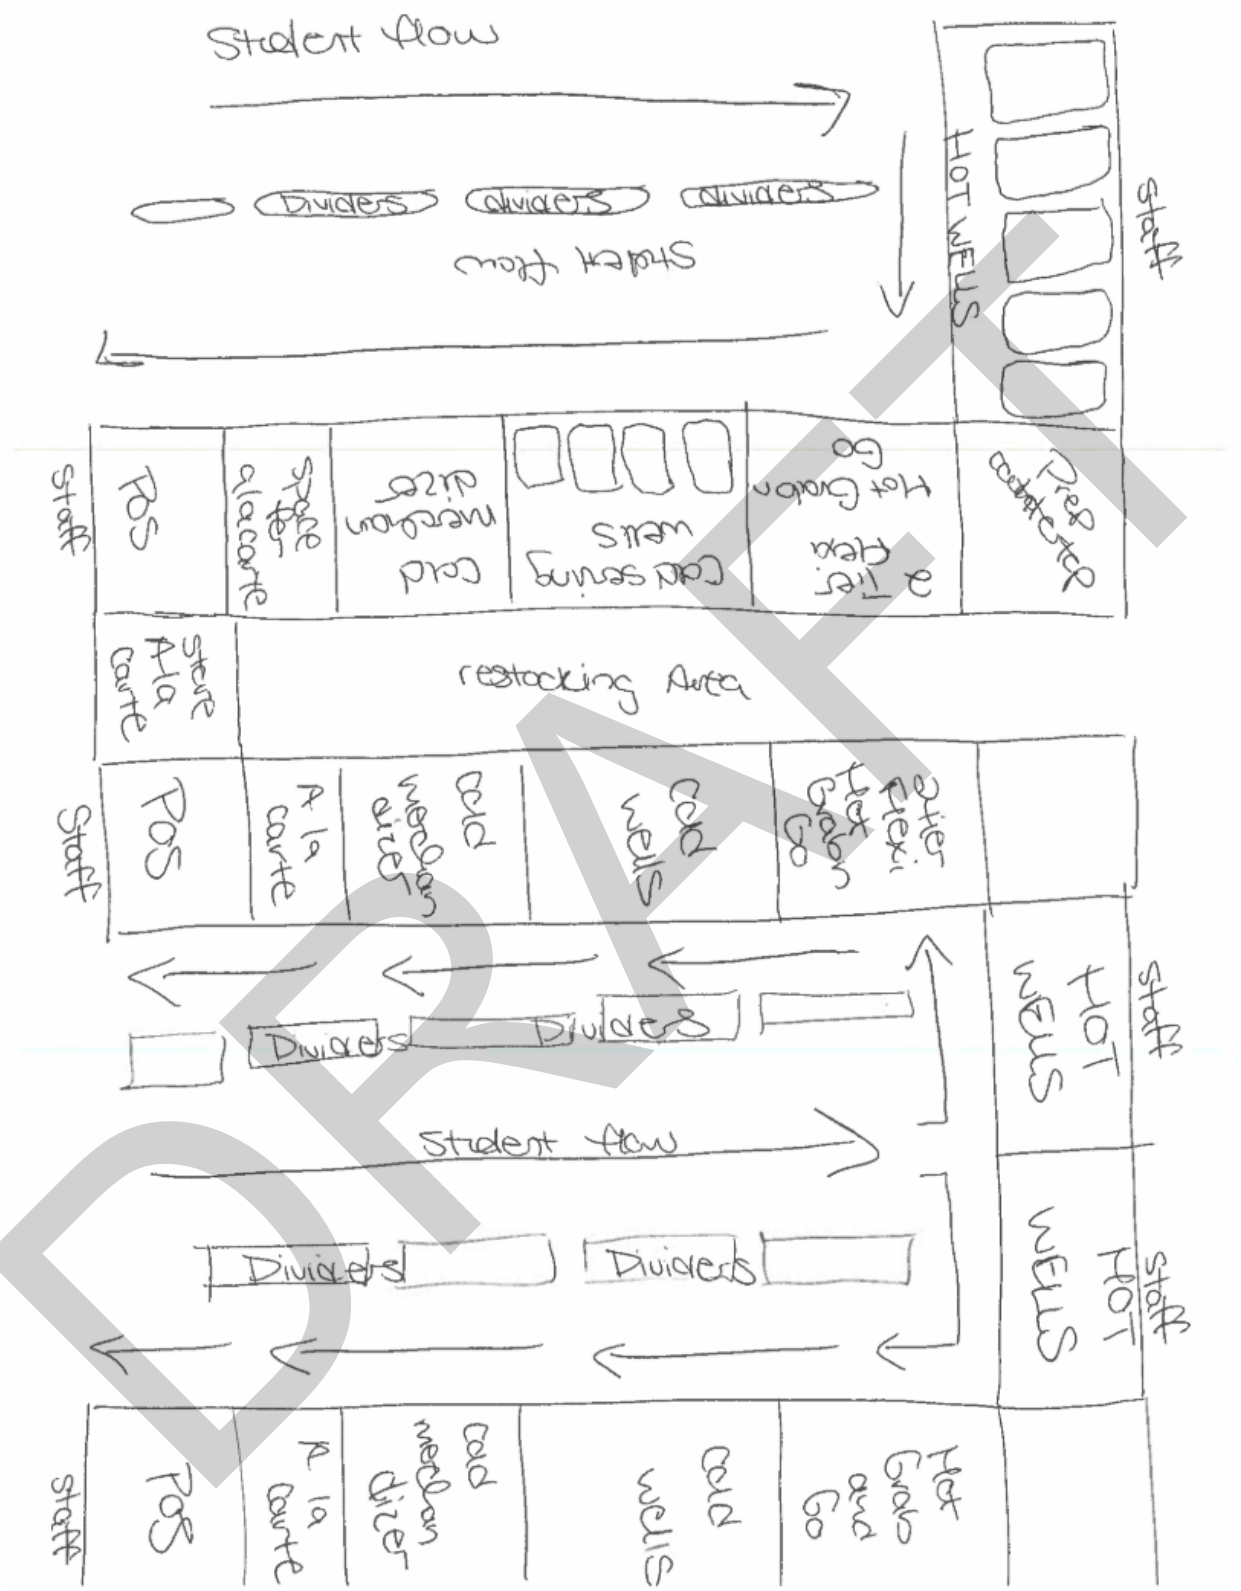
- Front-of-house layouts shall be designed to minimize the perception of long wait times and encourage student participation in meal programs.
- Serving configurations shall limit long queues extending into the cafeteria.
- Serving lines shall be arranged so that a portion of student waiting occurs within the defined serving line rather than in open cafeteria space.
- Serving line layouts shall position hot wells at the back of the line, with reach-in refrigeration units located directly behind for restocking.



DRAFT

- Circulation shall allow students to turn and proceed sequentially through hot grab-and-go, cold wells, cold merchandising, à la carte, and point-of-sale (POS) stations before exiting back into the cafeteria.
- Dividers or barriers shall be used to clearly define serving queues and direct student traffic flow.
- Divider materials and finishes shall align with countertop materials where possible to create cohesive appearance.
- Dedicated space shall be provided behind each serving line for restocking and staff movement.

Back of House



- Back-of-house layouts shall be designed to support a clear, continuous operational food service flow.
- Receiving areas shall allow food deliveries to move directly into dry storage and walk-in refrigeration/freezer units.
- Food products shall flow logically from storage areas to designated food preparation areas without backtracking.
- Preparation tables shall be arranged back-to-back and located in front of cooking equipment (ovens and steamers) and behind reach-in refrigeration units.
- Reach-in refrigeration units shall be located directly behind each serving line to facilitate efficient restocking during service.
- Adequate staff circulation clearance shall be provided between serving lines and reach-in refrigeration units.
- Sufficient space shall be provided adjacent to the three-compartment sink for drying racks and ware-drying operations.
- The warewashing area shall be located in a separate room or be sufficiently separated from food preparation and serving areas to prevent cross-contamination.
- The manager's office shall be positioned to allow maximum visual oversight of food production and serving operations.

DRAFT

Sketch 2 Spit Kitchen Serving Line Example: NTS

DRAFT

Sketch 3 Dual Serving Line Example: NTS

DRAFT

Loading Corridor/Dock Area

- Provide Loading Dock area be suitable for a 20'+ foot truck, away from students. Loading dock designs should minimize slopes for both the raised concrete area and truck parking.
- Loading
- Entire path between loading dock and walk-in coolers be wide enough to fit pallets through.
- Doorbell from back door to Cafeteria Managers Office – increased safety.

DRAFT

12 00 00: FURNISHINGS

General Casework

ADA Sink, Wall and Base Cabinets

- Provide a minimum of 30" clear above the casework sinks to install soap and paper towel dispensers.
- Provide waterproof core particle board at all sink countertops. No joints should be located within 3'-0" of the sink.
- Provide Student countertop sinks at:
  - Pre-K/Kindergarten Classrooms 26" high,
  - All other ES classrooms shall be 30" high.
- Design team to indicate faucets at Pre-K & K classroom sinks to be on the side to provide easier access to students.
- Design Team to note/provide detail calling out all countertops to have 1" radius at exposed outside corners.
- Shelves are plywood core with only front and back surfaces shall be edged.
- Casework to receive 4" rubber base on all exposed faces (including toe kicks).
- Provide PVC edging for all exposed PLAM edges.
- Non ADA cabinets shall not have backs in cabinet to allow for cleanout/wall access.

Teacher's Wardrobe

General

- Indicate and Provide the following:
  - Duplex electrical outlet to charge personal phone/devices. (Coordinate with Electrical)
  - Mirror with Pin Tray
  - File Cabinet
  - Lockable Doors
  - Closet Rod in main compartment
  - Chain Door Stops
  - Finger Door Latches
  - Adjustable Shelves
  - Refer also to MCPS typical detail.

Basis of Design

- Stevens Advantage – Wardrobe 25667 or equal

Cubbies:

General

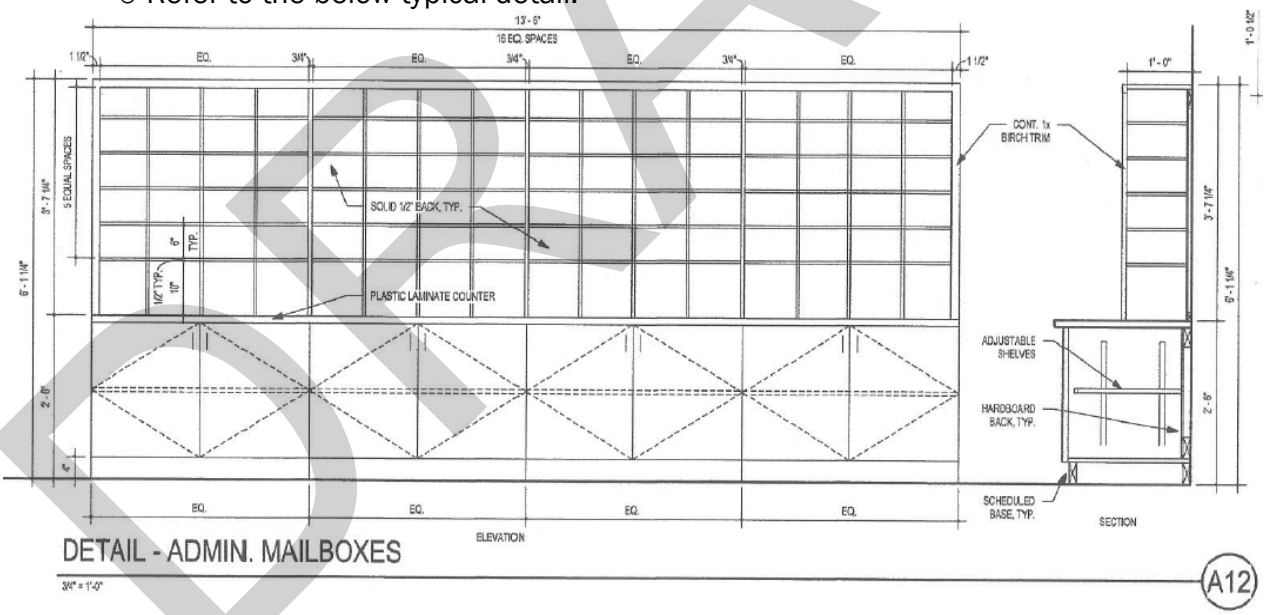
- Ensure cubby lay out allows for ADA access.
- Where cubbies are not located directly against a wall, a low wall with a wood top (WD top) is required at the back of the cubbies. At these locations, coordinate the width

DRAFT

and thickness of the top cap with adjacent door frames and window sills to avoid conflicts and ensure a clean, integrated installation.

Materials

- Tops
  - Hardwood or 3/4" plywood with wood veneer and hardwood edging.
  - ½" Radiused exposed edges.
- Exposed Sides :
  - 3/4" plywood with wood veneer and hardwood edging.
- Base: 4" tall with resilient base applied to face.



Dimensions: (Per Cubbie)

- 12" W x 48" to top.
- Compartments
  - Bottom (Shoes): 9 ½"clear
  - Middle (Coat): 2'-3" clear
  - Top (Papers): +/- 3"

Admin Mailbox

General

- Confirm the required number of mail boxes with Educational Specifications.
  - Refer to the below typical detail.

Detail 6: Typical Staff Mailboxes

Furniture

General

- Refer to Educational Specifications for items to be not in contract (NIC).
- Design team to provide furniture layouts, review with MCPS, and the coordinate necessary utilities required.

DRAFT

- MCPS project manager is responsible to receive the final furniture drawings from the furniture vendor and distribute them to the contractor and MCPS design team.
- Perimeter bookcases are movable bookcases under FF&E budget. Design Team to show them in the drawings, but indicate them as NIC.
  - Depth of movable bookcase to be 18”-26”.
- Admin Lobby counter, Lobby desks, and Media Center are NIC. Design Team to provide locations on drawings and coordinate with data and power to desks.

Laboratory Casework

General

- Plumbing for water & gas, and electrical conduits to be installed by GC/Subcontractor. Laboratory casework does NOT come pre-piped. Coordinate Arch specs and MEP.
- All Science lab casework:
  - Plumbing fixtures, water, and gas piping need to be specified and drawn in contract documents
  - Design team to provide drawings for division of scope of work.
- The MEP contractor will be responsible for a warranty for all mechanical work on the Science casework
- Visible piping to be painted after the piping is installed and tested by the mechanical contractor.
- Provide accessible trench where utilities are be provided to demonstration tables and lab work tables. Trench to be flush type to accept floor finish. Fasteners to be concealed or flush.
- One large deep 18" x 18" x 20" sink should be provided for cleaning materials. Locate the sink so that there is a min. of 3’-0” counter space on either side.

Demonstration Tables

General

- Demonstration tables to be fixed.
- Design team to incorporate power and data for teacher’s desk in demonstration table where teacher desk adjacent to table.

Chemistry Lab:

General

- Check with the codes, including Montgomery County codes for ventilation and storage requirements.
- The demonstration desk needs one 220-volt outlet and two 120-volts.

Music Storage

General

- Basis of Design: Wenger
- Refer to Ed Specs. for casework type requirements.

DRAFT

Horizontal Blinds

General:

- Horizontal louver blinds to be provided only if the project is very minimal renovation/addition. Roller shades are preferred. Coordinate with MCPS.

Roller Shades

General

- Design Team to coordinate chain tensioner device locations where manual shades are provided. P-Clips, Bars, and wands are not to be used.
- Design Team to accommodate room between structural columns and window frame for shade assembly.
- At corner windows allow for shade assembly form both directions to cover glass in both directions at the corner or provide 1'-0"x 1'-0" solid corner.
- Provide plan tags for type of shade application at all required locations.
- Provide shades mounted above the jambs at interior sidelights to provide adequate coverage.

Products

- Recommended Manufacturers:
- Shade Material & Locations
  - Type: Blackout
    - Locations: Exterior windows at grade, interior side lites, door lites & sidelites to corridors, and non-corridor windows to courtyards.
  - Type: 5% Shade
    - Locations: Exterior windows above first floor.
  - Type: Dual Shade (Blackout & 5%)
    - Locations: Admin Offices
  - Type: Motorized
    - Locations: Exterior high-volume glazing and clerestory locations.
    - Material: see Blackout and 5% Shade descriptions.
    - Operation: Singular key switch for the same area.

Display Boards

General

- MCPS Standard Teaching Wall Details / teachers station is located opposite side of room from corridor

Marker Boards

General

- Refer to Ed Spec requirements for locations and widths.
- Marker Boards in Gymnasiums are to be provided without chalk trays.
- Typical Dimensions: height is 5'-0" tall, widths vary. Refer to Master Specifications for frame width.

DRAFT

Elementary Schools

- Provide marker boards and tack boards at the below elevations:
  - Classroom– Pre-K & K: 1'-6" AFF
  - Classroom– Grade 1-5: 2'-0" AFF
  - Art/Music/Gymnasium/Dual Purpose – ES: 2'-0" AFF

High Schools, Middle Schools, & Staff Areas:

- Provide marker boards and tack boards at 3'-0" AFF.
- Refer to Elementary Schools where early education programs are provided.

Music Staff

- At general and instrumental music provide full width or min. 5'-0" to 6'-0" for staff lines.

Tack Boards

General

- Refer to Ed Spec requirements for locations and widths.
- Typical Dimensions:
  - Full Size: Height is 5'-0" tall, widths vary.
  - Above Markerboards: 12" or 2" map rails are provided.
    - Refer to Ed Spec for required locations.

Stage Curtains

General

- All stage curtains **must** be made of IFR material. **Fire treated cotton is not acceptable.**
- No proprietary curtain control systems are permissible.

DRAFT

13 00 00: SPECIAL CONSTRUCTION

Not Used.

DRAFT

14 00 00: CONVEYING EQUIPMENT

Elevator

General

- Design Team shall accommodate the mechanical system for the elevator shaft on an emergency circuit per elevator inspector requirements.
  - A letter confirming that the shaft will not exceed the required temperatures during a power outage, may be substituted if permitted by the AHJ.
  - See also section 23 00 00 Heating, Ventilation, and Air Conditioning.
- Design Team shall provide lights at landings on an emergency circuit.
- Design Team to ensure that at Least one (1) elevator is able to accommodate an ambulance stretcher. Coordinate location with MCPS.
- If an elevator is equipped with an oil minder the drawings should point out a location that is tamper proof.
- Design Team to indicate that the elevator shaft walls are to be painted white.

DRAFT

21 00 00: FIRE SUPPRESSION

Fire Safety:

Pull Stations

General

- MCPS maintains a Memorandum of Understanding (MOU) with the County Fire Marshal's Office governing the placement and requirements of fire alarm pull stations. The Design Team shall review the current MOU, available in the front-end specifications provided by the Project Manager, and coordinate with the MCPS Fire Safety Compliance Technician to ensure all fire alarm system designs comply with its provisions.
- Inspector Test Locations should be located 6'-0" or higher above finished floor.

Typical Locations

- Main Entrance, All Purpose Room, Gym, Auditorium, boiler room, near the kitchen exit, and near the most remote exit form the main entrance.

Fire Extinguishers & Cabinets

General

- MCPS maintains a Memorandum of Understanding (MOU) with the County Fire Marshal's Office regarding the selection, type, and placement of fire extinguishers. The Design Team shall review the current MOU, included in the front-end specifications provided by the Project Manager, and coordinate with the MCPS Fire Safety Compliance Technician to verify that fire extinguisher locations and specifications conform to the approved standards.
- Fire extinguishers will be provided by MCPS post construction.

Type

- Cabinets: Fully recessed. (Preferred)

Typical Locations

- Typical Fire extinguishers will be installed after the completion of the construction with the exception of the Elevator Machine Room fire extinguisher which will be provided by the MCPS Fire Safety Compliance Technician prior to the elevator inspection.

Sprinkler System

General

- The Design Team shall account for sprinkler head placement in areas with unique or complex ceiling configurations, such as all purpose rooms with ceiling clouds. Sprinkler coverage, alignment, and aesthetics shall be coordinated to ensure code compliance and visual integration with the ceiling design intent.

DRAFT

Layout

- The Design Team shall account for sprinkler head placement in areas with unique or complex ceiling configurations, such as all purpose rooms with ceiling clouds. Sprinkler coverage, alignment, and aesthetics shall be coordinated to ensure code compliance and visual integration with the ceiling design intent.
- Special attention should be paid to the placement of stairwell doors in relation to sprinkler standpipes.

DRAFT

22 00 00: PLUMBING

Fixture Mounting Heights

Follow the below chart for mounting heights. Architect/Designer to confirm compliance with ADA, IBC & ANSI standards.

FIXTURE MOUNTING HEIGHTS					
Fixture	Pre-K & PEP	K	1-3	4-5	MS/HS & Adult
Lavatories	24”	24”			
ADA Lavatory	24”	24”	28”	24”	*
Water Closet Seat HT	11”	15”	15”	15”	15”
ADA Water Closet Seat HT	15”	15”	18”	18”	18”
Urinals	-	-	*16”	*16”	*24”
ADA Urinal	-	-	*16”	*16”	*16”
Mop Sink	36”	-	-	-	-
Hose Bib (Exterior)	18”	-	-	-	-
Hose Bib (Interior)	16”	-	-	-	-
*Confirm with ADA, IBC, & ANSI					

Fixtures

Lavatories

General

- All wall hung lavatory fixtures shall be supported with concealed floor mounted carriers.

Sink Bubblers

General

- Sink mounted bubblers are not permitted in MCPS Schools.

DRAFT

Water Cooler w/ Bottle Filling Station

General

- Design team to note height and placement of water cooler on drawings.
- Where possible, water coolers are to be located within alcove to prevent conflicts with corridor/restroom traffic.
- Provide tile backsplash on all three walls and tile flooring below.

Product

- Provide a filtered bottle filling station with an integrated, versatile bi-level ADA-compliant drinking fountain at each designated location.

Typical Locations

- Near music/instrumental classroom.
- In or near Gymnasium
- In or near Cafeteria
- Near the exterior door to the outdoor play area(s)
- Near Pre-K & Kindergarten Classroom areas
- Near PEP Classroom areas.
- Spread throughout the building on each floor.

Hose Bibs

Typical Locations

- Provide hose bib at courtyards for use by building services.
- Provide a hose bib at the perimeter of the building near the hard surface play areas.
- Design team shall coordinate with the MCPS for the placement of hose bibs around the perimeter of the building.

Trench Drains

General

- Ensure coordination with structural to avoid conflicts at composite floor decks and water proofing of flooring system.

Locations

- Group Restrooms/locker rooms.
- Outside of shower stalls. Confirm locations with MCPS plumbing engineer.

Round Floor Drains

- At washer dryer areas, showers, restrooms and as necessary.

Back Flow Valves

General

- Design Team to confirm backflow valve requirements with the MCPS plumbing engineer.

DRAFT

Roof Drains

General

- Design team to provide detail for roof drain and to note that a PVC threaded connection is not to be used for roof drain connection to the main stormwater PVC drain pipe. Connect the roof drain with a threaded cast iron pipe extension coupled to the PVC stormwater drain pipe with a neoprene flexible coupling.
  - Basis of Design: Fernco Proflex.
- Specify that a flood test is to be conducted for all roof drains to ensure connections are made properly.
- Include in the specifications that the roof installer needs to come back to the school after 1 year and tighten all roof drain bolts by hand.

Toilets

General

- All toilets must be floor mounted

Cleanouts

General

- Provide cleanouts before and after the bathrooms. Locate cleanouts in an accessible and appropriate location. Reference Brown Station drawings.

DRAFT

23 00 00: HEATING, VENTILATING, AND AIR CONDITIONING (HVAC)

Mechanical Systems

General

- Provide access ladders for servicing DOAS, RTUs, ERUs and VRF as needed to service equipment, filters and belts service.
- Provide adequate space to service HVAC equipment. Provide at least 2'-0" of clearance or manufacture's minimum clearance (whichever is greater) on all serviceable sides of each piece of equipment. Coordinate layout with MCPS.

Split Systems

- Provide dedicated split systems for all IDF and MDF closets above door ensure drainage does avoids all equipment.
- Ensure drain connections are provided for mechanical drain pans

Radon Vents

General

- Design Team is to show radon vents on drawings and ensure code requirements are met.
- Provide adjacent power above roof where vents do not receive fans for potential fan installation after completion of project.

Refrigerant Piping Supports

General

- Provide (1) saddle per pipe.
- Provide clevis hanger with saddle and sip tie for a maximum of 2 pipes (one branch) per clevis hanger.
- Provide pipe saddle mounted to trapeze framing with pipe clamps and insulating inserts for areas with (3) three or more

Product

- Saddles: Basis of Design - Snap-A-Saddle

Thermostat Cover

General

- Provide wire cage guards for wall-mounted thermostats and control devices located in high traffic areas.
- Wire guard should allow for user access through the guard without removing the guard entirely.

DRAFT

Typical Locations

- Gymnasium
- Auditorium
- Corridors
- Cafeterias
- All Purpose Rooms

Product

- Basis of Design: Honeywell Thermostat Guard Models CG510A, CG511A, & CG512A

Control Wiring

General

- Final runs of control devices to the MDF/IDF room is to be part of MCPS' low-voltage vendor's scope outside of design team's scope of work.

Serviceable Parts Above Ceiling

General

- Serviceable parts are to be located within 2'-0" of finished ceiling height.

Servicing Roof-Mounted Equipment

General

- All elevated equipment must have easily accessible platformed work areas with appropriate guardrails and fall protection. Provide ladders to access platforms.

No Impeding Servicing of Equipment

General

- Design team shall coordinate and take care to ensure that no architectural, structural, mechanical, electrical, plumbing, fire protection, etc., impedes access to servicing equipment.

Roof Hoists

General

Provide structure for attaching chain hoist to lift heavy equipment to roof. Coordinate project requirements with MCPS.

DRAFT

26 00 00: ELECTRICAL

Spare Fuse Compartments

General

- Ensure space is provided for lockable spare fuse compartments in mechanical or building services areas. Coordinate compartment locks to be cored with a building Best key cylinders. See also specifications.

Additional Receptacle Locations

General

- At Courtyards Provide exterior outlets to accommodate outdoor teaching stations, maintenance, etc.
- Coordinate location(s) on roof near radon vents without fans for future connection.
- Provide power within stairwell for building services cleaning.
- Refer also to Ed Specs. for required locations.
- All new elementary school projects need to achieve an Energy Use Intensity of 24 or lower. Coordinate also with sustainability requirements.

Lighting

Site Lighting

General

- Provide LED wall-mounted light fixtures with hooded or full-cutoff designs that minimize light spill and glare. Fixtures shall be selected and positioned to ensure illumination of the intended area while preventing direct visibility of the light source from a distance or adjacent properties.
- Lighting systems **must** use non-proprietary protocols (i.e. Bacnet IP)
- Design team is to utilize 2x4 grid flat panel LED lighting throughout the majority of the building, 2x2 LED flat panel fixtures to be considered only where necessary.
- Alternate light fixture types will be considered by MCPS for specialty areas. MCPS to approve RCP.
  - Where pendent fixtures are to be used, design team is to review the bottom of fixture height with MCPS.
  -

Light Pole Base

- Basis of Design
  - Manufacturer: Old Castle
  - Product: Omni Pole Base
- Base to have conduit raceway channels below grade.
- Provide slotted bolt patterns at base for anchoring light poles.
- Design team to specify bolt anchor bolt cover wide enough to conceal the anchoring slots on the top of the concrete base.

DRAFT

Locations

- Placement of light poles should be placed outside of sidewalk circulation to avoid impeding path of travel.
- Exterior wall lighting and site lighting locations to be reviewed and coordinated with MCPS.

Controls Power

General

- Coordinate all power requirements for Controls and ensure that requirements are shown on the drawings.
- Provide dedicated circuits for building control devices **before** the main disconnect, not after, for proper maintenance.

Smart Metering

General

- Bacnet IP protocol electric metering hardware is required. Provide a Bacnet gateway if needed. Coordinate with 23 09 00 smart metering.

Fusible Disconnects

General

- Provide fusible disconnects at all equipment.

DRAFT

27 00 00: COMMUNICATIONS

Bi-Directional Amplifier (BDA)/ In-Building Radio Signal Amplification System

General

- An allowance should be provided for testing, design, and installation of the BDA system by the contractor. Contractor to follow DPS standards for the BDA system.
- The design of a BDA system is not typically in the design services scope.

Network Wiring

General

- All low-voltage wiring shall comply with the MCPS Color Guide below for cable identification and labeling. The Design Team shall ensure that wiring colors are consistent with the established standards for system type, function, and location to maintain uniformity across all MCPS facilities.

Pathways

- Service pathways from the street should be provided with as minimal bends as possible terminating directly in the MDF.
- Provide interdicting for all services into the MDF closets.
- Provide Fire stopping for all penetrations.
- Design for 295’ max. run length from IDF to termination points for copper lines.

Color Guide:

- Yellow — Lighting
- Red — Fire Alarm
- White — P.A. System
- Green — Security (Cameras, Access Control, Vape sensors)
- Purple — B.A.S. (Building Automated System)
- Orange — B.A.S.
- Brown — B.A.S.
- Blue — Data
- Black — Wireless Access Point (W.A.P.)
- Grey — Intrusion Security

Surface Mounted Conduits

General

- In renovation areas, provide metal surface raceway (e.g., Wiremold) for surface-mounted electrical installations. Surface-mounted metal conduit may be used in back-of-house or utility spaces.
- All surface-mounted raceways and conduits shall be painted to match the adjacent wall or surface finish.

DRAFT

Basis of Design

- Manufacturer: Wiremold
- Product: V4000 Line (where power & data are needed)
- Product: V700 (Where data only is needed)
- Color: White

IDF Racking

- Network infrastructure is provided by MCPS in separate contract. Design team to coordinate with MCPS.
- Design team should make considerations for:
  - 2 post racks
  - Additional space for maintenance on either side of the racks.
  -

Data Drop Locations

- Provide a minimum of (2) two data drops for all offices and conference rooms. Located on separate walls.
- Exterior pathways shall be provided for and coordinated with MCPS for all High and Middle Schools.
- Pathways to be provided for courtyards.

Roof Penetration

General

- Provide a single roof penetration to serve as future network access. Location should be near an IDF closet however, not directly into the IDF closet itself to avoid damage to any water infiltration..
- Provide pathway from penetration to the closest corridor for future runs to the IDF.
- Provide roof pedestal with weather tight junction for future connections near as penetration device. Pedestal must meet electrical conduit size requirements.

Cable Passthrough

General

- Provide cable pass-through detail at multimedia production rooms. Confirm any other locations with Ed Specs.

Details

- Masonry Conditions - Turn one closure CMU unit on its side to provide passthroughs. Bullnose all exposed cell edges.
- Drywall Conditions - Provide 6”H x 18”W framed opening with rounded corner guards.

DRAFT

PA Systems

General

- PA system needs to provide min. 3 extra gateways or up to 30%, whichever is greater, for future expansion capacity per system
- PA system design needs to provide a dB level, appropriate for the room use, consistent throughout all areas.
- Provide PA phones at Main Office, Principal's Office, APs Offices and all other locations required by the AHJ. Coordinate additional locations with MCPS.
- Provide volume control in Conference Rooms and Principal's Offices.
- Provide data pathways for all PA and Sound Systems (including exterior and athletic field requirements)

Production Audio-Visual Systems

General

- Data requirements for production spaces (i.e. Control Rooms) must be coordinated with MCPS Design and Construction IT Systems Engineer.
- Noise making equipment (i.e. dimmer switches) should not be located in the areas programmed for recording (i.e. Recording Studio)
- Ease of access for audio-visual connections must be provided for future maintenance and changes to the audio-visual systems (i.e. racks, boards, etc)

DRAFT

28 00 00: ELECTRONIC SAFETY AND SECURITY

Fire Command Center

General

- The design team to confirm if the Fire Command Center is required for the project, and its design requirements per applicable codes.
- Stairwell doors to have a single point unlocking feature in fire command center or at main vestibule near FAAP need wiring details for this work

Card Readers

Design Process

- MCPS will coordinate proposed locations of card readers with the Department of School Safety and Security. Upon receiving approved plan locations, the Design Team shall coordinate final card reader placement and integration with the door hardware consultant to ensure full system operation and compatibility.

Locations

- All exterior doors to be roughed in for card readers. Indicate exterior door with symbol on drawings with "RCR" for rough in card reader (rough in only, no actual card reader) and "CR" for installing card reader.
- At the main entrance, there shall be a card reader at 3 locations,
  - One (1) of the exterior doors at the main entrance,
  - One (1) at the interior door from the security vestibule to the main office,
  - One(1) at the interior door between the security vestibule and the school main lobby area.
- A door to the fire command center shall have a card reader.
- Exterior doors in kindergarten classrooms are to receive card reader access from the play area.

Room Numbering

General

- Ensure that final school room numbers are used for all addressable devices and on Annunciator Panel.

Isolation Relays

General

- Provide isolation relay(s) to prevent line voltage from damaging expensive control panel equipment

DRAFT

Pull Station Covers

General

- Ensure pull-station false alarm covers are shown on the design drawings.

Fire Door Hold Opens

General

- Coordinate magnetic door hold open requirements per MCPS/Fire Marshall MOU.

Evacuation Messages

General

- Coordinate with MCPS to determine languages to be provided for evacuation messages.

DRAFT

31 00 00: EARTHWORK

- Refer to 32 00 00 Site improvements for planting requirements.

- Design team to contact MDE to determine if there are registered in-ground fuel tanks during project feasibility and relay that information to MCPS Sustainability and Compliance Team

DRAFT

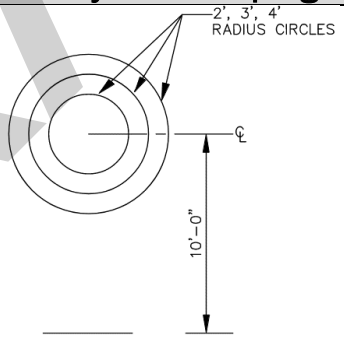
32 00 00: EXTERIOR IMPROVEMENTS

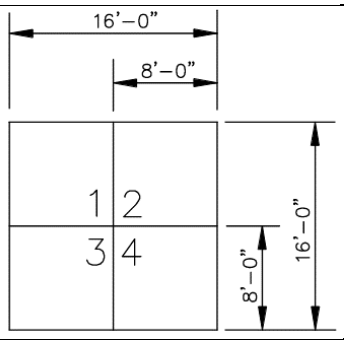
Asphalt Surfacing

General

- Provide wedging detail where asphalt is unfinished during construction around items and surfaces of dissimilar heights.
- Provide pathways and sufficient space for a lift or bucket truck to maintain glazing above 1 story

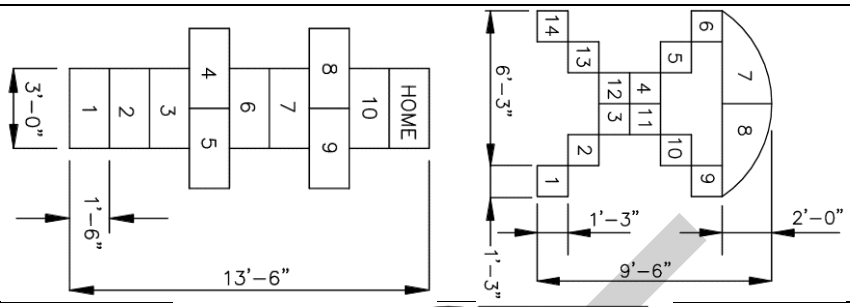
Typical Parking & Drive Aisles

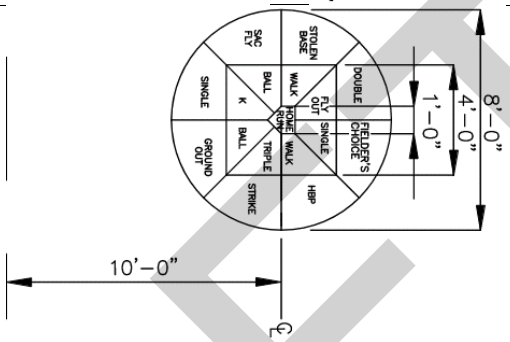


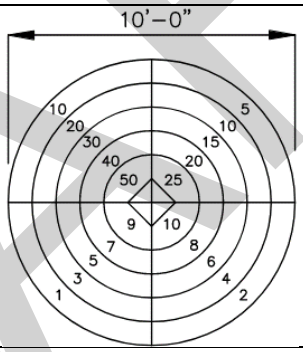


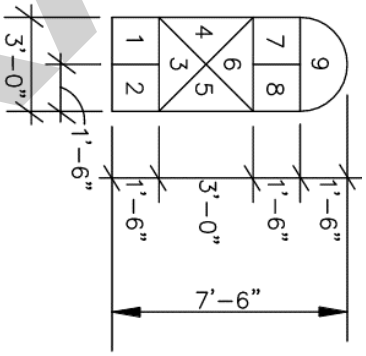
- 9.5 mm Hot Mix Asphalt superpave PG.64-22 Low ESALS's

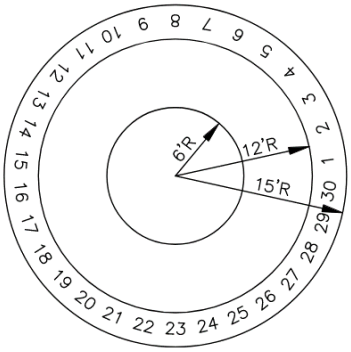
Middle and High School Basketball Courts





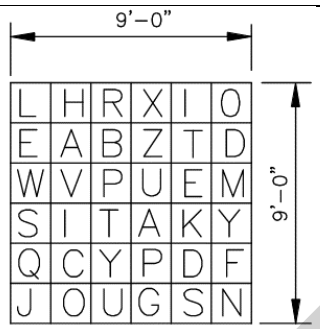


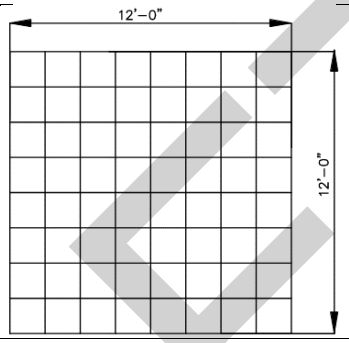


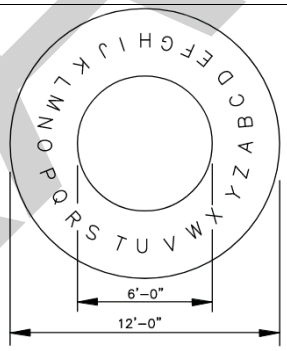


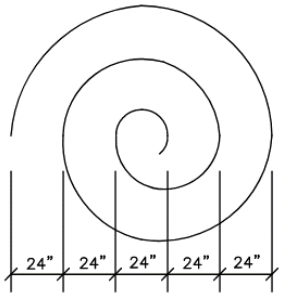
- 9.5 mm Hot Mix Asphalt superpave PG.64-22 Low ESALS's

Elementary School Basketball and Play Surface









- Base Layer: 9.5 mm Hot Mix Asphalt superpave PG.64-22 Low ESALS's
- Top Layer: 4.75 mm Hot Mix Asphalt superpave PG.64-22 Low ESALS's
  - Additional thickness required for more frequent use and durability
  - See MCPS design team regarding surface color & design.
- Refer to Educational Specifications for required size and number of hard surface play areas.

Pervious Pavement

General

- Design Team to verify with MCPS if pervious pavement is to be used.
- Design Team to coordinate basis of design manufacturer design requirements and standard details with Department of Permitting Service (DPS). Ensure DPS drainage requirements are met.
- Concrete header to be provided where dissimilar paving is provided.
  - Dimensions: 8"w x 18"d min.
    - Note that bottom of header is to be lower than excavation depth required for adjacent paving including subsurface aggregate, soil, etc.
  - Provide rebar reinforcement.
- Civil drawings to indicate areas where pervious pavement is to be provided.
- If using pervious pavers, ensure pave puller tool is noted in specs to be turned over to MCPS building services at the end of the project.

Fire Lanes

General

- Provide fire and rescue access lanes with a minimum width of 20'-0", located at least 10'-0" from the building, and paved to provide all-weather access. If local fire code or AHJ requirements are more stringent, the more stringent requirements shall govern.
- Per the MCPS Memorandum of Understanding (MOU) with the County Fire Marshal, "No Parking" traffic signs may be installed in an arrangement approved by the Fire Marshal in lieu of painting the curbs at designated fire lanes.
  - Design Team to coordinate sign locations with fire marshal and MCPS and provide details.

Drive Aisle, Parking, And Bus Loops

General

- Passenger loading zones shall provide a vehicular pull up space 8'-0" wide minimum and 20'-0" long min. along an access aisle that shall not overlap the vehicular way. Coordinate with MCPS.
- Access aisles shall be 60" wide minimum and extend the full length of the vehicle pull-up spaces they serve.

DRAFT

- Design teams shall carefully evaluate building and drop-off canopy height and placement near bus loops to prevent potential bus and vehicle collisions. Low canopies adjacent to bus loops are discouraged due to the risk of buses striking overhead structures. Ensure more than adequate clearance is provided for safety.

Loading Docks

General

- Considerations for pedestrian, bus, and vehicular traffic crossings should be incorporated into the designed flow of traffic to avoid conflicts and ensure safety.
- Considerations for delivery drop-off timing and bus/vehicular drop-off should be made when designing traffic flows.

Exterior Concrete

General

- Exterior Sealants are required at Stairs, Ramps, and Loading Docs to protect against delamination from the use of Rock Salt in the winter.

Concrete Sidewalks

- Concrete joints to be tooled to 1/3 the depth.
  - For heavy duty concrete only, provide saw cuts.
- Note to provide ½"felt at expansion joints with caulk.
- Light Broom finish perpendicular to path of travel.
- All obstructions to have 36" in clear travel space.
- Concrete to be min. 4500 psi or SHA #6.
- Provide sidewalks at drop-off areas per the standard minimum widths below, to be confirmed with MCPS during design.
  - ES 10' min.
  - MS 12' min.
  - HS 14' min.

Accessible Paths

General

- No obstructions are permitted within accessible paths, i.e. light poles.
- Provide accessible paths to all exterior program spaces such as fields, play areas, etc.

Curb Cuts

- Provide curb cuts and tactile warning pads at all drive isle crossings.
- All ADA parking area crossings to be 8" concrete.

DRAFT

Exterior Stairs

General Notes

- Provide reinforced cheek walls on either side of stairs.
  - 8” wide min.
  - Edges to be chamfered.

Nosing

- Provide four (4) tooled beveled grooves at the nosing of all exterior concrete stairs, as illustrated in the image below.

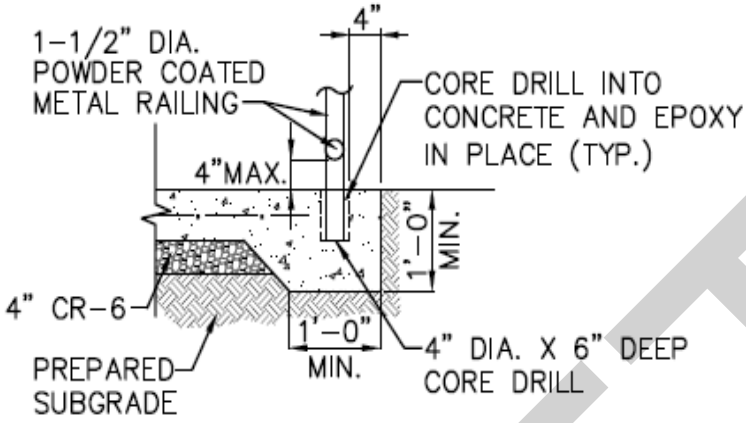

Figure 4 Tooling at Exterior Stair Nosing

Exterior Railings

General

- Finish: Powder Coated Black
- Powder coat to be applied in shop.
- Design team to provide note to avoid and minimize field welding and application of finish where at all possible.
- 5’-0” max between posts.
- Keep core drill for handrail posts 4” min. from edge of concrete.
- Provide detailing to ensure epoxy at posts stopped ½” below concrete, provide caulking around post to avoid water infiltration and cracking from freeze/thaw cycles.

DRAFT

Detail 7 Example Handrail Post Detail

Fences and Gates

General

- All exterior fences shall be 2"x2" wire mesh standard black vinyl-coated with knuckled edge.
- Fence mesh openings may not be larger than 1 ¾ inches measured horizontally between the corners of the mesh openings.
- Fences should be consistent with ASTM F2049, Standard Safety Performance Specification for Fences/Barriers for Public, Commercial, and Multi-Family Residential Use Outdoor Play Areas.

Posts & Bases

- Where curbs are provided under fences, curb shall be 12" wide min.
- Where posts are provided in lawn areas, concrete base to be crowned above proposed grade.
- Where fences are provided at asphalt courts, asphalt to extend 12" past fencing.
- Provide detailing to ensure epoxy at posts stopped ½" below concrete, provide caulking around post to avoid water infiltration and cracking from freeze/thaw cycles.

Gates

- Provide chain link tension tabs on gates. (J-Bolt are not acceptable.)
- Gates must not have protruding latches or other protrusions at a height less than 54" from the ground

Chain-link Fence At Retaining Walls

General

- Chain link guard fence to be 48" minimum.
- Provide skateboard deterrents for low site walls

DRAFT

Above Segmental Retaining Wall

- Design Team to provide detail containing items below:
  - Embed post 12" min. into courses below cap block. Design team to verify if additional depth is required.
  - Top courses to be filled with continuous grout.
  - Provide epoxy around post and above masonry cap to ensure positive drainage and avoid freeze/thaw cracking of masonry cap.

Above Cast-in-Place Concrete Wall

- Design Team to provide detail showing epoxy around post up to ½" below finished face. Caulk to be provided where post meets epoxy and applied above top of concrete wall to ensure positive drainage and avoid spalling from freeze/thaw cycle.

Access Road Gate Detail

Gate Details

- Provide square or boxed gate types at large openings.
  - Triangular or single-pole gate designs shall not be used, as they are difficult to see at night and pose a potential "clothesline" hazard to pedestrians or cyclists.
- Design team to coordinate latch type with MCPS.

Bollards

General

- Provide bollards as required for both public and service area applications. The Design Team shall coordinate locations with MCPS.

Architectural Bollards

General

- Provide removable bollards at all designated drop-off zones to allow controlled vehicular access when required.

Basis of Design

- Manufacturer: Reliance Foundry
- Product: Bollard R-7576
- Color: To be reviewed by MCPS.

Service Area Bollard

General

- Provide concrete-filled schedule 40 steel pipe bollards at all service and loading areas.

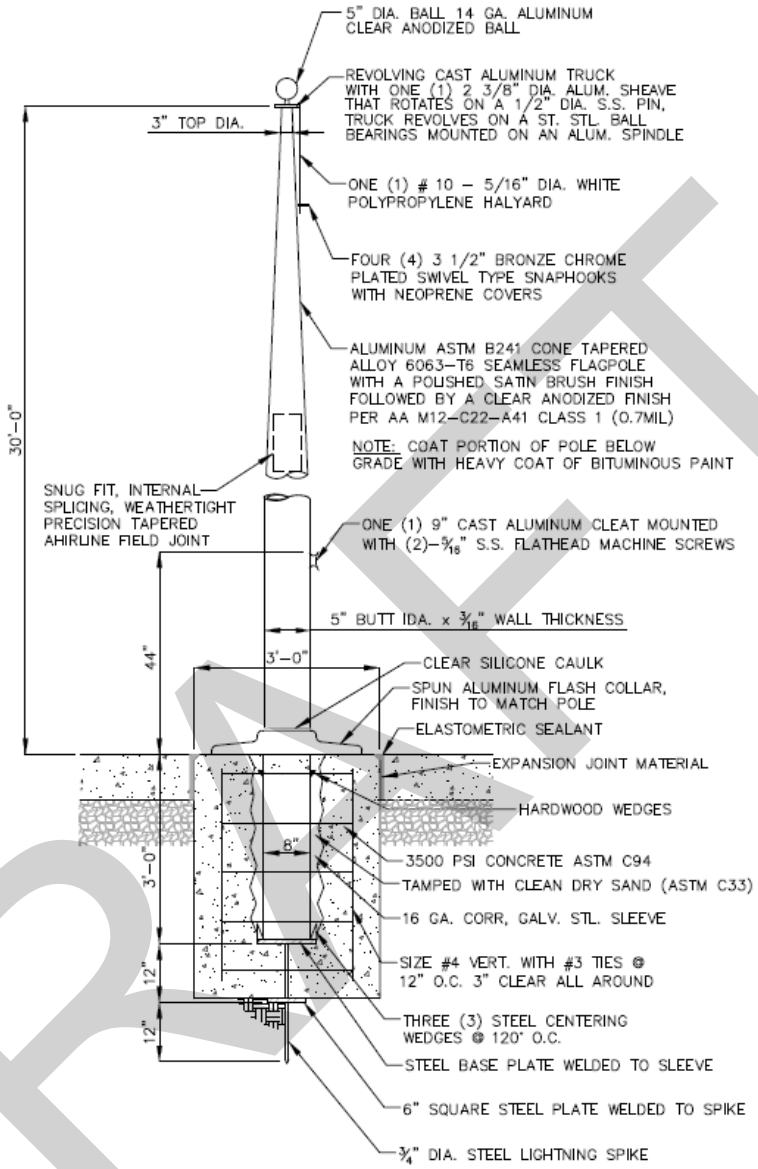
Construction

- Material: Concrete filled Schedule 40 Steel Pipe.
- Color: Yellow

DRAFT

- Dimensions: 6”diameter x 48” above finish grade to top of cap
- Galvanized Cap: 7 ½” Tall with 1 ½” reveal at base of cap.
  - Schedule 40 Steel Pipe.
  - Provide top and bottom plates.
- Bollard is to extend into base and below grade min. of 36”
- Concrete Base: +/- 18” diameter
- Detail to show layer of roofing felt as a bond break between bollard and concrete base.
- Detail to indicate positive drainage away at base.

Typical Locations & Placement



- Service Areas – Spaced 10’-0” O.C.
- Overhead Doors – On either side of opening at 2’-0” away from exterior wall.

Standard Flag Pole Detail

General

- Provide 5’-0” concrete sidewalk and skirt for access.
  - Slope concrete a minimum of 1/4" per foot away from all sleeve sides.
- Ensure detail indicates 4 swivels are provided to allow for two flags. (MD & U.S.)
- Elementary, Middle and High Schools to have one flagpole near main building entrance.
- Design Team to coordinate additional locations of flag poles with MCPS.
  - Commonly High Schools are to have additional flagpoles at stadiums.
- Extend the ground sleeve one-half inch above the finished concrete elevation.

DRAFT

Detail 8: Typical Flag Pole Detail

Exterior Digital Signs

General

- Provide controller with cell activity.
- Electrical
  - Provide 1" min. conduit for electrical connection. Coordinate with electrical sign manufacturer.
- Fiberoptic
  - Provide 1 1/2" or greater waterproof PVC or EMT conduit for the fiber optic connection.

DRAFT

Exterior Trash and Recycle Center

General

- Provide concrete base three part recycle and trash bins at the exterior of the building.

Product

- Basis of Design: WAUSAU Tile - 3-part bin (bottles/cans, trash, and mixed paper)
- Material: Concrete
- Anchors: ½" threaded inserts

Location

Standard Bike Rack

General

- Provide single wide loop bike racks constructed of OD tubular steel pipe. Coordinate requirements with MCPS.

Product

- Basis of Design: Stanley Model BRWS-101
  - Bolted Base with lockable escutcheon.

Location & Placement

- 5'-0" Min from Fire Hydrant and Sidewalk
- 4'-0" Min. from loading zone, bus stop, bus shelter and/or bus bench.
- 3'-0" min. from building, walls, curbs, parking meters, light poles, signs, tree space, trash cans, utility meters or manholes.

Site Deterrents

General

- Provide skateboard deterrents for low site walls.
- Limit bird roosting/nesting within the site (overhangs, perches, etc).
  - Provide bird-spikes or painted hardware cloth as required.

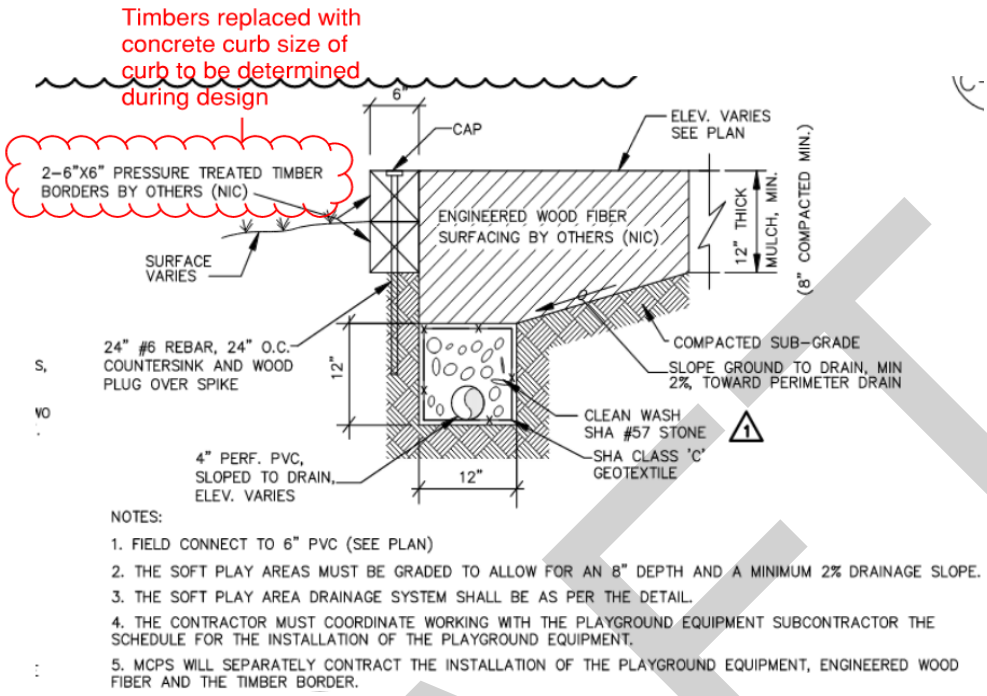
Playground Equipment

General

- Playground Equipment installation is procured separately by MCPS.
- Design Team is required to design pad, drainage, fencing, and surrounding area. Design Team is required to coordinate area with MCPS and Playground Equipment designer and/or installer.

Surfacing

- In existing conditions where equipment remains, engineered wood fiber shall remain unless otherwise noted and should be designed to comply with ADA requirements for depth etc.



DRAFT

- A poured access pad shall be designed for ADA access to playground equipment

Equipment Requirements

- Platforms may be no taller than:
  - Grades 1-5: 72”
  - Pre-K & K: 48”
- Climbing walls and other equipment may not have fall height exceeding:
  - Grades 1-5: 84”
  - Pre-K & K: 60”
- Equipment may not be yellow. (Yellow attracts bees and wasps)
- Prohibited equipment:
  - Swings and any other equipment attached to trees or other objects not installed by MCPS-approved playground installers
  - Enclosed tunnels without openings or spy holes permitting observation of children inside
  - Fully-enclosed dome climbers
  - Log rolls
  - Track rides
  - Any equipment with fall heights exceeding 84 inches & 60 inches for Pre-K.
  - Clatter bridges (bridges with moving parts)
  - Tunnel slides
  - Trampolines
  - Climbing ropes not secured at both ends
  - Chain net climbers
  - 3D matrix net climbers (such as Playworld PlayWeb) unless the vendor provides annual inspection and maintenance.
  - Playworld Vortex
  - GameTime Hanging Pod
  - Equipment with major components constructed of wood and/or bare metal
  - Any other equipment deemed not permissible by MCPS Systemwide Safety Programs.
- Benches and other equipment may not be installed within 6’-0” of fences and walls per ASTM requirements.

DRAFT

Detail 9 Typical Drainage Detail at Engineered Wood Fiber Playground Surfacing

Athletic Fields

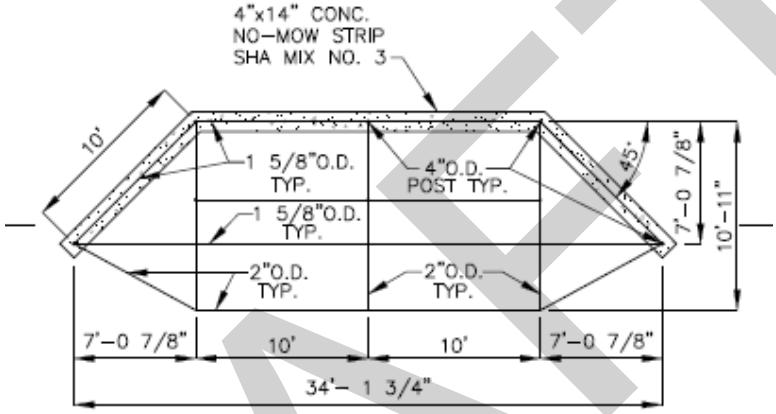
General

- MNCPPC will take over the maintenance of play fields at Elementary and Middle schools.
  - Designs Teams are required to follow MNCPPC requirements for play fields.
  - MNCPPC will inspect fields during construction GC or CM to coordinate all inspections.
  - Design Team to provide drawing indicating area where parks specifications and details are to be applied.
- See Appendix A for Typical High School Field Layouts.

Baseball & Softball Fields

General

- For all ES, MS, and HS, skinned (dirt) fields to have 20 feet high, straight backstops.
  - Provide Team benches
  - Provide 6'-0" high fences in front of benches. see CBES for field layout.
  - No canopy/overhang at the top of the backstops.
- For Grass Fields no backstops, no benches, and no fences to be provided.



Backstop Details

General

- Overall Dimensions:
  - Length: approx. 34'-0"

DRAFT

  - Left and Right Sections at 45-degree angle: 10’-0”
  - Middle Section approx. 20’-0”
- Posts & Cage:
  - Width: Approx. 7'-0”
  - 4'-0" Deep vertical posts (typical)
  - 2" O.D. posts & perimeter framing (typical)
  - 5/8" O.D. cross members & supports
- Concrete Base:
  - 4" D x 14" W Concrete No-Mow Strip with posts attached.
- See below typical Detail 10: Baseball & Softball Backstop.

Detail 10: Baseball & Softball Backstop

Soccer Field

General

- Refer also to Educational Specifications.

Goals

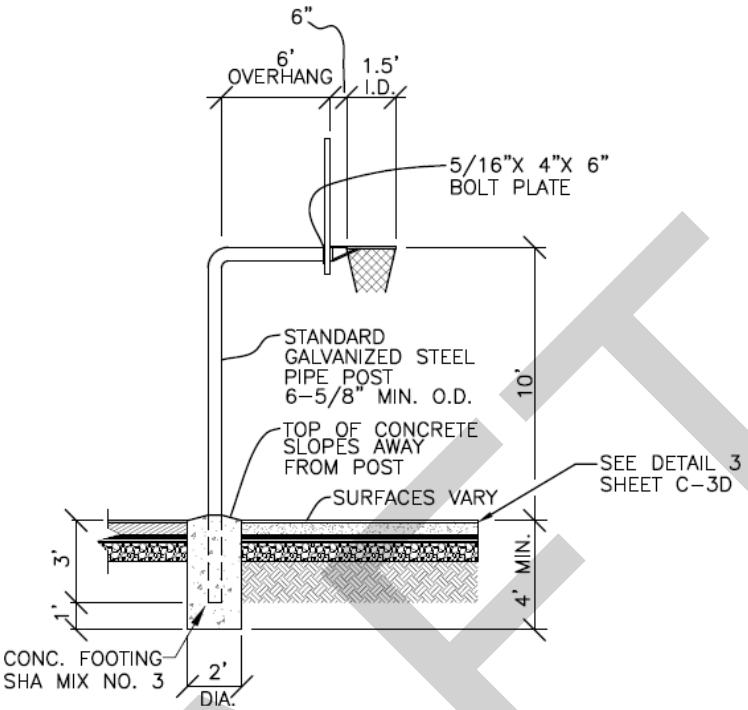
- Design Team to include soccer goals in contract at high school stadiums only. Coordinate with MCPS Facilities Architect for product.
- Refer to Figure 5: High School Soccer Goal Note: The cross bar at base is required to be at the middle of the horizontal legs to avoid conflicts with the football goal posts.

DRAFT

Figure 5: High School Soccer Goal

Basketball Court

General



- Refer to Educational Specifications for number of courts required.
- See Asphalt Surfacing for surfacing materials and requirements.

Backstops

General

- Basis of Design: AALCO, Model G66-601
- Provide pin to prevent backstop slippage.
- See Detail 11: Typical Exterior Basketball Hoop for typical design.

DRAFT

Detail 11: Typical Exterior Basketball Hoop

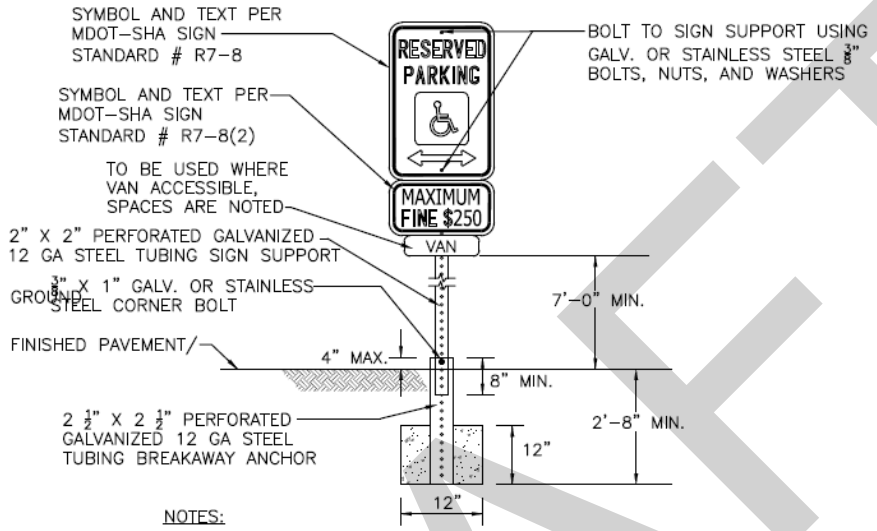
Site Signage

General

- Reserved parking signs to be coordinated with school principal and MCPS.
- Confirm materials with MDOT Standards.

Base

General

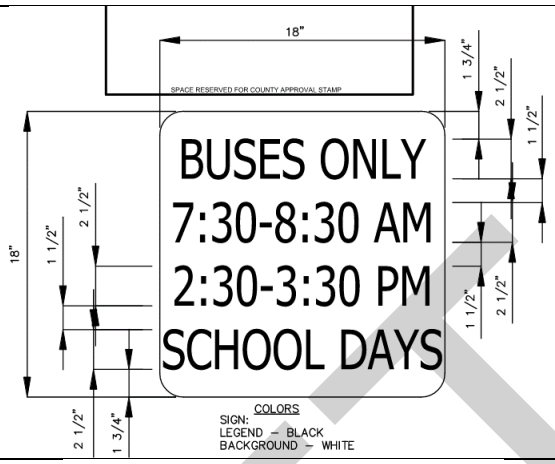


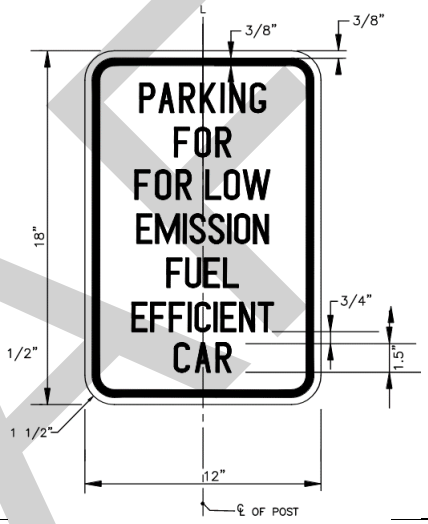
- Design Team to provide signage in conformance with MDOT SHA standards.
- Provide sleeve in concrete base below grade and stub up for connection to sign post. The design of the sign post and base is to have separate sleeve and post to allow for

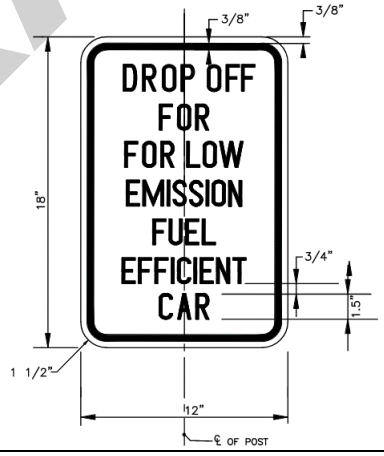
DRAFT

easy replacement of sign and post by building maintenance. See below detail for reference. Ensure concrete is crowned to drain water away from the post.

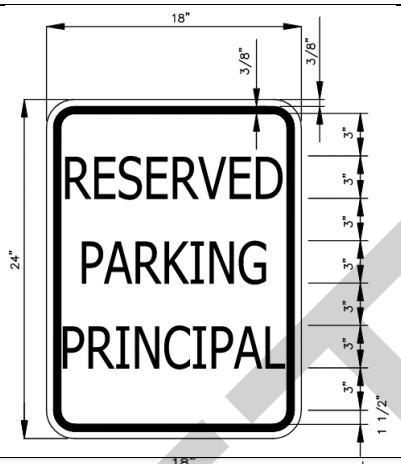
Placement

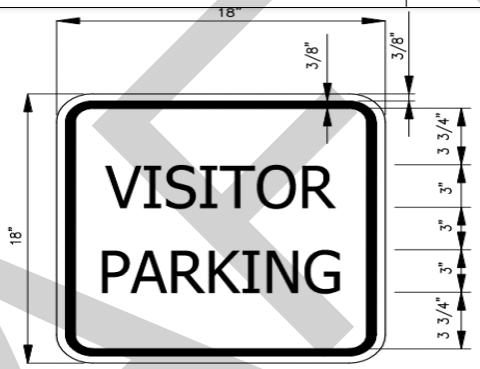






- Provide sign at 12" behind face of curb/sidewalk.
- See Detail 12: Site Signage Post below for example.





Detail 12: Site Signage Post

TYPICAL SITE SIGNAGE ELEVATIONS	
Fire Lane Signage *Confirm requirements with Fire Marshal.

POROUS PAVEMENT SIGN - 18”X24” - 2” Lettering	

DRAFT

Surface Arrow	

Fire Lane Construction for Fire Apparatus Support

General

- Design Team to confirm design requirements for fire apparatus per the fire marshals' requirements and interpretation of NFPA.
- Design Team should avoid placing utility vaults or manholes within Fire Lane.

Lawns and Grass

General Sod Locations

General

- Provide 6" min of top soil.
- Soil to be crowned for proper drainage.
- Provide Sod requirements to property line even if outside the LOD.
- Basic design (minimal design with grass and paved areas) to be the base bid, and extensive design and landscape design to be an add/alternate.
- Avoid landscaping at exterior ramp switchbacks where possible.
- Maintenance accessibility concerns between ramps and with slopes.

Bioretention Design Standards

Geotechnical Testing

- Geotechnical testing is strongly encouraged at each bmp location prior to placement of facility to ensure its suitable location for bioretention. Separation from seasonal high-water table is critical to ensure that the media does not become saturated and unable to function effectively.

Bio-Soil Media

- All Bio media must be mixed off site by a qualified soil manufacturer to ensure uniform blending. The content of the soil shall be verified with a delivery ticket and document (certificate and or lab tests) that it meets regulatory media requirements. Mixing the filter media on-site with excavation or loading equipment is not sufficient.

DRAFT

- The current soil specification consists of 1/3 perlite or Solite, 1/3 compost and 1/3 topsoil. The perlite shall be coarse grade horticultural perlite. The compost shall be high grade compost free of stones and partially composted wood material including 35% by volume (of compost) triple-shredded hardwood mulch. The media depth should be a minimum of 18" in depth with 36" required to support cells with trees and shrubs. The pH of the soil bed material should be tested to ensure it is a range from 5.5 to 6.5.

Choker Course/Separation Layer

- A 2 to 4-inch layer of choker stone (e.g., typically ASTM D448 No. 8 or No. 89 gravel double washed clean and free of fines) should be placed beneath the filter media and over the underdrain stone. A sand layer is not recommended (and should be avoided) as it is prune to clog due to migrations of fines from upper layer and or construction activities.

Underdrain

- An underdrain likely will be used in all bioretention facilities. The underdrain must be encased in a layer of ASTM D448 No.57 stone that is washed clean and free of fines. It is encouraged to partially restrict or enhance underdrain orifice necessary to promote infiltration as well as plant production. Partial restriction devices can be achieved by using an adjustable restrictor plate, valve or other proprietary technology.

Reservoir Storage Layer

- ASTM D448 No.57 stone should be utilized for the reservoir storage layer. Larger reservoirs are encouraged to support increased water storage capacity as well as support vegetation health through wicking processes.

Side Slopes

- The maximum side slope ratio for earthen embankments is 3:1.

Vegetation/Planting

- In addition to meeting all water quality and performance requirements, the aesthetic integration of BMPs shall be a design consideration. Vegetation selection, layout, and maintenance strategies shall promote a healthy, well-kept appearance that complements the overall campus design. A visually appealing BMP that fits well within the site context is more likely to be perceived by MCPS students, staff, and the community as a positive and educational site amenity.

Planting Strategy

Layout

- Geometric groupings /Bands: Vegetation should be designed and planted in distinct patterns, such as creating groups of four or more plants in rectangle shapes or planting species separately from each other in repeating geometric clusters or bands, so that weeds are easily recognized.

DRAFT

Planting Density

- Density should be increased to fill all voids spaces (mulch area). The intent is for vegetation to have an 85-90% plant coverage and very little (10-15%) bare ground exposed after one year and very limited mulch areas the following years.
- Herbaceous plant spacing
  - Herbaceous plants spaced 18-24" apart – one-gallon containers.
  - Ground cover spaced 8-10" apart - quarts or large plugs.
  - Shrubs spaced 24-36" apart depending on mature size -2-3-gallon containers.
  - Trees depend on their mature size to determine appropriate spacing. Suggest no smaller than 1 ½" caliper.

Plant Selection

- Plants shall be native to Maryland and capable of withstanding the environmental site conditions of a bioretention facility. Vegetation shall be hardy to salt, reasonably hardy to deer pressure. They should be heavy grade, not restoration grade. Inlet plants will need to withstand high volumes and velocity of stormwater and pollution. Basin plants need to withstand fluctuation in moister, inundated at times and very dry at times.
  - Herbaceous Plants and Grasses:
    - Critical to low maintenance is to match the mature size of the plant to the size of the BMP. Smaller footprints will need shorter, smaller growing species. Larger BMP footprints will need plants that cover a greater area. Note: Large volume of vegetation removal from larger growing grasses can increase maintenance costs.
  - Green Mulch/Low Growing Ground Cover:
    - The planting design should include a layer of vegetation for a low growing ground cover to minimize or eliminate the need for mulch. This layer of vegetation may be seen as a "green mulch" that provides the functions of both vegetation and mulch, including preventing weed growth and erosion. Ground covers should be spaced appropriately to form a dense vegetation layer that reduces erosion and weed pressure.
  - Trees & Shrubs:
    - Trees and shrubs provide year-round seasonal interest and planting structure, as primary activities occur in schools (September-June), outside of summer planting season. Shrubs and trees help improve the function and reduce maintenance requirements of bio systems. When selecting tree and shrub locations, the designer should ensure consistency and clear organization across the site, reflect the character of the architecture, and establish a neat appearance.
- Adequate spacing should be provided to account for the mature size of trees and shrubs and must account for current and future site conditions to ensure that trees and shrubs do not create any safety hazards, interfere with pedestrian, vehicular traffic, and are at least 20' from the foundation of buildings. Trees may be planted in all bios as site conditions allow the shading from trees helps to reduce weed pressure and infiltration of stormwater. However, trees should not be planted directly on top of the underdrain.

DRAFT

- Shrubs can be planted in all bio types, the roots penetrate bio media, promoting infiltration and the soil biota. Where possible, shrubs should be woven around trees to clarify the visual structure of the landscape, while providing year-round interest.

Planting Specifications:

- Planting should be done generally between mid-March through June and mid-September through mid-October (i.e., spring and fall) to avoid temperature extremes and frost.
    - Material checks: Upon delivery, tickets should be checked to ensure they match the plant species, quantities, and sizes delivered. The plants should be checked to ensure they are the species listed on the approved plans or project specifications.
    - The on-site contractor should verify that plants are in good condition when they arrive. Plants should have no obvious signs of damage, pests, or disease. This includes major leaf damage, a large portion of broken stems or branches, or an obvious infestation of insects. Leaves should not be wilted. Before installing plants, any weeds in pots or on root balls should be removed.

    - Plant storage:
        - Plants should be installed as soon as possible after they are received but should be planted no later than 1-2 days after delivery to increase the chance of survival. If it is not possible to plant immediately, vegetation should be stored in a cool and shaded location with roots covered to protect them from extreme temperature and direct sunlight. Roots should be kept moist; this usually means watering daily.

Figure 6: Example illustration of a 500-square-foot bioretention with three species, with the number of plants required to create *85%*. Illustration from: Vegetation in Stormwater Best Management Practices, The Maryland Department of the Environment, 2019.

DRAFT

Watering Instructions

- Water plants for 6 weeks following installation, unless more than a ½ inch of rain falls in any week for which watering is scheduled. During the 6-week period following installation, please follow this schedule:
  - 3 times a week for the first 2 weeks
  - 2 times a week for the next 2 weeks
  - 1 time a week for the last 2 weeks

    Contractor to adjust schedule accordingly due to rain fall
- Watering Notes:
  - All watering should use a hose with nozzle end breaker or a sprinkler. Be mindful that sprinklers do not water evenly and will need to be monitored for the flow patterns. Areas that are getting missed will need subsequent hand watering or sprinklers adjusted to get full watering coverage. Water must be applied in sufficient quantities to maintain moist soil to a depth of at least 4 inches. Water must be applied at low water pressure directly to the root zone of each plant, allowing water to be absorbed into the planting pit soil until saturated, but without runoff.
  - If planting late in the season (November) the watering schedule may be shortened. Due to the late install please water once the weather warms up for one month. In severe dry days beyond the schedule outlined above, please monitor plantings for wilting and water as needed especially the first year.

<u>Mulch</u>

- All newly installed plantings require a 2-3" layer of hardwood shredded undyed mulch for reducing weed pressure and retaining moisture around plant roots for the plant establishment phase. Triple-shredded hardwood mulch has been found to be less likely to wash away than other forms of mulch (such as pine).

Signage

- Signage should be installed at each bioretention facility. Additional sustainability signage guidance is currently being developed by the Division of Sustainability and Compliance. The MCPS approved standard sign should be placed at each bmp location. Additional site-specific signage may also be included.

Overflow Drain

- Where possible, landscape fabric or woven geotextile fabric can be placed over drain perforations to reduce solids such as waste from entering and clogging.

Key Planting Criteria:

Mulch	All newly installed plantings require a 2-3" layer of hardwood shredded undyed mulch for reducing weed pressure and retaining moisture around plant roots for the plant establishment phase.
Minimum density of Vegetation	85% ground coverage evenly spaced across the surface area of the BMP within one year of installation and maintained thereafter.
Ground Cover	All facilities should use a dense low growing ground cover to act as a "green mulch" that the functions of

DRAFT

	both vegetation and mulch
Layout	Vegetation should be planted in Geometric Clusters/Bands to easily distinguish weeds.
Trees and shrubs	Recommended for all facilities (see above)
Bio Soil specification	pH range between 5.5-6.5 Follow DPS blend, but utilize additional hardwood mulch for compost
Choker Layer	Lay a 2-to-4-inch layer of choker stone (e.g., typically No.8 or No.89 washed gravel) over the underdrain stone.
Underdrain	
Reservoir Storage Layer	#57 stone must be uniform, angular, double-washed, clean, free of all fines. Larger reservoirs are encouraged
Geotextile Fabric	Should be avoided, except to support side slopes that do not inhibit infiltration
Side slopes	Max side slopes is 3:1

DRAFT

33 00 00: UTILITIES

General

- Designs shall include provisions for future relocatable classrooms, including site locations and necessary utility infrastructure. Coordinate proposed locations with MCPS. The Design Team shall provide drawings for underground rough-ins at designated relocatable classroom sites and shall consider current code requirements related to fire protection, where applicable.

Montgomery County Public Schools

Master Specifications Draft

DRAFT 05/28/2026

DRAFT

Department of Planning and Construction
45 W. Gude Drive,
Rockville, Maryland 20850

GENERAL GUIDELINE REQUIREMENTS

A. Materials contained in the Montgomery County Public Schools Master Specifications are provided for information and guidance regarding preferred products, materials, and practices, and shall not be construed as waiving or granting exceptions to any element of federal, state, or local building codes, ordinances, and regulatory requirements as applicable to the specific project. These Master Specifications, along with the project-specific Education Specifications and Facility Design Guidelines, are complementary. Any conflict between these Master Specifications, the Education Specifications, Facility Design Guidelines, and governing local, state, or federal codes shall be brought to the immediate attention of the Montgomery County Public Schools (MCPS) Department of Planning and Construction.
B. Where manufacturers, brands, and model numbers are indicated, they are provided to establish the required type, quality, and performance standards. These references do not preclude the use of equivalent products, except in cases where specific items are necessary to maintain compatibility with existing systems or infrastructure. Such instances shall be clearly identified as “no substitutions allowed.” The Design Team shall notify MCPS in writing of any proposed alternate manufacturer, brand, or model number used in the design, and obtain approval prior to incorporation into the project documentation.
C. The project plans and specifications shall incorporate and reflect the requirements and intent of the Montgomery County Public Schools Facility Design Guidelines, the project-specific Education Specifications, and the Master Specifications. These documents shall be used collectively to inform the design and documentation process.
D. All coordination between the Design Team and Montgomery County Public Schools (MCPS) shall be directed to and facilitated through the Department of Planning and Project Manager (PM) assigned to the project. The PM shall serve as the primary point of contact for all project-related communications, decisions, and approvals.
E. The Design Team is required, throughout the design process, to utilize the MCPS-provided Master Specification files as the basis for developing project-specific technical specifications. The Design Team shall edit, coordinate, and expand these provided files to reflect the specific scope, systems, and materials applicable to the project. All modifications shall maintain consistency with MCPS standards and clearly indicate project-specific requirements, unless otherwise approved by MCPS.
F. These Master Specifications do not preclude the use of alternate systems, methods, or materials, provided that the proposed deviation has been reviewed and approved by the MCPS Project Manager and/or Facilities Architect. For project-specific applications, all deviations and substitutions shall be submitted for review during each design phase plan review and stakeholder meeting. Each submission shall include a design reference, justification for the proposed change, and the recommended alternative. MCPS review and formal acceptance of all deviations is required prior to implementation.
G. Refer to MCPS Division of Planning and Construction website.

SUMMARY OF REVISIONS

This log serves to indicate any alterations to the current version of the MCPS Master Specifications made by MCPS.

Date	Division	Topic	Comments

PROJECT SPECIFIC LOGS

This log serves to maintain record for any revisions, additions, or modifications to the provided MCPS Master Specifications proposed by the Design team that are required to achieve project specific requirements.

Date	Division	Topic	MCPS Approval

DRAFT

TABLE OF CONTENTS

DIVISION 1 – GENERAL REQUIREMENTS

DIVISION 2 – EXISTING CONDITIONS
- 023000 Subsurface Investigation
- 024100 Demolition

DIVISION 3 – CONCRETE
- 033000 Cast-In-Place Concrete
- 033543 Polished Concrete Finishing
- 034500 Precast Architectural Concrete
- 035400 Cast Underlayment

DIVISION 4 – MASONRY
- 042000 Unit Masonry

DIVISION 5 – METALS
- 051200 Structural Steel Framing
- 051213 Architecturally-Exposed Structural Steel Framing
- 052100 Steel Joist Framing
- 053100 Steel Decking
- 054000 Cold Formed Steel Framing – Structural (CFSF-S)
- 054003.13 Continuous Insulation (CI) Framing System – Bracket
- 054003.14 Continuous Insulation (CI) Framing System – Girt
- 055000 Metal Fabrications
- 055100 Metal Stairs
- 055133 Metal Ladders
- 055213 Pipe and Tube Railings

DIVISION 6 – WOOD PLASTICS AND COMPOSITES
- 061000 Rough Carpentry
- 064100 Architectural Wood Casework

DIVISION 7 – THERMAL AND MOISTURE PROTECTION
- 070150.19 Preparation for Re-Roofing
- 071113 Bituminous Dampproofing
- 071300 Sheet Waterproofing
- 072100 Thermal Insulation
- 072700 Air Barriers
- 072736 Sprayed Foam (SPF) Air Barrier
- 073113 Asphalt Shingles
- 074113 Metal Roof Panels
- 074213 Metal Wall Panels
- 074213.23 Metal Composite Material Wall Panels
- 075100 Built-Up Bituminous Roofing
- 075423 TPO Membrane Roofing
- 075563 Vegetated Protected Membrane Roofing
- 076200 Sheet Metal Flashing and Trim

DRAFT

077100 Roof Specialties
077200 Roof Accessories
077600 Roof Pavers
078100 Applied Fire Protection
078123 Intumescent Fire Protection
078400 Firestopping
078426 Thermal Barriers for Plastics
079200 Joint Sealants
079500 Expansion Control

DIVISION 8 – OPENINGS

081113 Hollow Metal Doors and Frames
081416 Flush Wood Doors
083100 Access Doors and Panels
083313 Coiling Counter Doors
083323 Overhead Coiling Doors
083326 Overhead Coiling Grilles
084313 Aluminum-Framed Storefronts
084413 Glazed Aluminum Curtain Walls
085113 Aluminum Windows
085619 Pass Windows
087100 Door Hardware
088000 Glazing
088300 Mirrors
088723 Safety and Security Films
088733 Decorative Films
088813 Fire-Rated Glazing
089100 Louvers

DIVISION 9 – FINISHES

092216 Cold Formed Steel Framing - Non-Structural (CFSF-NS)
092900 Gypsum Board
093000 Tiling
095100 Acoustical Ceilings
095426 Suspended Wood Ceilings
096400 Wood Flooring
096453 Stage Flooring Assembly
096466 Wood Athletic Flooring
096467 Dance Flooring Assemblies
096500 Resilient Flooring
096566 Resilient Athletic Flooring
096623 Resinous Matrix Terrazzo Flooring
096700 Resinous Flooring and Walls
096813 Tile Carpeting
096817 Textile Composite Flooring
097200 Wall Coverings
098430 Sound-Absorbing Wall and Ceiling Units
099100 Painting

DRAFT

DIVISION 10 – SPECIALTIES

101100	Visual Display Units
101200	Display Cases
101400	Signage
102113.19	Plastic Toilet Compartments
102123	Cubicle Curtains and Track
102239	Folding Panel Partitions
102600	Wall and Door Protection
102800	Toilet and Bath Accessories
104400	Fire Protection Specialties
105113	Metal Lockers
107300	Protective Covers
107500	Flagpoles

DIVISION 11 – EQUIPMENT

111313	Loading Dock Bumpers
113013	Residential Appliances
114000	Foodservice Equipment
115213	Projection Screens
115223	Television Brackets
115313	Laboratory Fume Hoods
116123.16	Orchestra Pit Fillers
116143	Stage Curtains
116613	Ballet Barres
116623	Gymnasium Equipment
116843	Exterior Scoreboards
117300	Patient Care Equipment
118129	Facility Fall Protection
119513	Kilns

DIVISION 12 – FURNISHINGS

122400	Window Shades
123553.19	Wood Laboratory Casework
123583	Music Equipment Storage Casework and Accessories
124813	Entrance Floor Mats and Frames
125651	Library Furnishings
126100	Fixed Audience Seating
126600	Telescoping Stands

DIVISION 13 – SPECIAL CONSTRUCTION

133416	Grandstands and Press Box
133416.53	Bleachers

DIVISION 14 – CONVEYING SYSTEMS

142100	Electric Traction Elevators
144200	Wheelchair Lifts

DIVISION 21 – FIRE SUPPRESSION

210500	Common Work Results for Fire-Suppression

DRAFT

211000 Water-Based Fire-Suppression Systems

DIVISION 22 – PLUMBING

220500 Common Work Results for Plumbing
220513 Common Motor Requirements for Plumbing Equipment
220516 Expansion Fittings and Loops for Plumbing Piping
220517 Sleeves and Sleeve Seals for Plumbing Piping
220519 Meters and Gages for Plumbing Piping
220523 General-Duty Valves for Plumbing Piping
220529 Hangers and Supports for Plumbing Piping and Equipment
220533 Heat Tracing for Plumbing Piping
220553 Identification for Plumbing Piping and Equipment
220700 Plumbing Insulation
221113 Facility Natural-Gas Piping
221116 Domestic Water Piping
221119 Domestic Water Piping Specialties
221123 Packaged Domestic Water Booster Pumps
221125 Domestic Water Circulating Pumps
221316 Sanitary Waste and Vent Piping
221319 Sanitary Waste Piping Specialties
221413 Facility Storm Drainage Piping
221423 Storm Drainage Piping Specialties
221429 Sump Pumps
223300 Electric Water Heaters
223400 Fuel-Fired Domestic Water Heaters
224000 Plumbing Fixtures

DIVISION 23 – MECHANICAL

230130.51 HVAC Air-Distribution System Cleaning
230513 Common Motor Requirements for HVAC Equipment
230516 Expansion Fittings and Loops for HVAC Piping
230517 Sleeves and Sleeve Seals for HVAC Piping
230519 Meters and Gauges for HVAC Piping
230523 General-Duty Valves for HVAC Piping
230529 Hangers and Supports for HVAC Piping and Equipment
230533 Heat Tracing for HVAC Piping
230548 Vibration and Seismic Control for HVAC
230553 Identification for HVAC Piping and Equipment
230593 Testing, Adjusting, and Balancing for HVAC
230713 Duct Insulation
230716 HVAC Equipment Insulation
230719 HVAC Piping Insulation
230800 Commissioning of HVAC
230900 Building Automation System
230934 Variable-Frequency Motor Controllers
230993 Sequence of Operations for HVAC Controls
232113 Hydronic Piping
232113.33 Ground-Loop Heat-Pump Piping

DRAFT

232114 Hydronic Specialties
232123 Hydronic Pumps
232300 Refrigerant Piping
232500 HVAC Water Treatment
233100 HVAC Ducts and Casings
233300 Air Duct Accessories
233319 Duct Silencers
233423 HVAC Power Ventilators
233513 Dust Collection Systems
233600 Air Terminal Units
233700 Air Outlets and Inlets
234000 HVAC Air Cleaning Devices
235100 Breechings, Chimneys, and Stacks
235213 Electric Boilers
235216 Condensing Boilers
235700 Heat Exchangers for HVAC
236416 Centrifugal Water Chillers
236423 Scroll Water Chillers
236426 Rotary-Screw Water Chillers
236513 Forced-Draft Cooling Towers
236514 Induced-Draft Cooling Towers
237200 Air-to-Air Energy Recovery Equipment
237313 Modular Indoor Central-Station Air-Handling Units
237413 Packaged Outdoor Central Station Air Handling Units
237416 Packaged Rooftop Air-Conditioning Units
237433 Dedicated Outdoor Air Units
238126.13 Small-Capacity Split-System Air Conditioners
238129 Variable Refrigerant Flow HVAC Systems
238146 Water Source Unitary Heat Pumps
238149 Ground-Source Unitary Heat Pumps
238200 Convection Heating and Cooling Units
238241 Water-to-Water Heat Pumps

DIVISION 25 – INTEGRATED AUTOMATION – Not Used

DIVISION 26 – ELECTRICAL

260505 Selective Demolition for Electrical
260519 Low-Voltage Electrical Power Conductors and Cables
260526 Grounding and Bonding for Electrical Systems
260529 Hangers and Supports for Electrical Systems
260533 Raceway and Boxes for Electrical Systems
260543 Underground Ducts and Raceways for Electrical Systems
260553 Identification for Electrical Systems
260573 Power System Studies
260923 Lighting Control Devices
260943 Lighting Control Relay Panels
262200 Low-Voltage Transformers
262413 Switchboards

DRAFT

262416 Panelboards
262550 Generator Docking Stations
262653 Electric Vehicle Charging Equipment – Level 2
262713 Electricity Metering
262726 Wiring Devices
262813 Fuses
262816 Enclosed Circuit Breakers
262817 Enclosed Switches
262913 Enclosed Controllers
263100 Photovoltaic Collectors
263213 Engine Generators
263600 Transfer Switches
264100 Facility Lightning Protection
264300 Surge Protective Devices
265100 Interior Lighting
265561 Theatrical Lighting System
265568 Exterior Athletic Lighting
265600 Exterior Lighting
265613 Lighting Poles and Standards

DIVISION 27 – COMMUNICATIONS

270533.13 Conduit for Communications Systems
270536 Cable Trays for Communications Systems
275123 Intercommunications and Program Systems
275129 Rescue Assistance Signal System
275129.17 Two-way Radio Communication Enhancement Systems
275140 Gymnasium Sound Reinforcement System
275141 Student Dining Sound Reinforcement System
275142 Music Rooms Sound Reinforcement System
275143 Wrestling, Weight, and Fitness Rooms Sound Reinforcement System
275144 Athletic Fields Sound Reinforcement System

DIVISION 28 – ELECTRONIC SAFETY AND SECURITY

280513 Conductors and Cables for Electronic Safety and Security
284600 Fire Detection and Alarm

DIVISION 31 – EARTHWORK

311000 Site Clearing
311005 Site Demolition
312000 Earth Moving
312005 Building Earthwork
312319 Dewatering
312500 Erosion and Sediment Control
313116 Termite Control
315000 Excavation Support and Protection

DIVISION 32 – EXTERIOR IMPROVEMENTS

321216 Hot-Mixed Asphalt Paving

DRAFT

321220 Road and Parking Accessories
321600 Concrete Walks
321610 Concrete Curbing
321800 Athletic Field Construction
321813 Synthetic Grass Surfacing
321820 Site Athletic Equipment
321823 Synthetic Running Track Surfacing
323113 Chain Link Fences and Gates
323119 Ornamental Steel Fencing
323223 Precast Concrete Modular Retaining Walls
329000 Tree Conservation
329305 Lawns and Grasses
329500 Trees, Shrubs, and Groundcover

DIVISION 33 – UTILITIES

330840 Commissioning of Stormwater Utilities
331000 Utility Standards
331005 Water Distribution System
333000 Sanitary Sewerage
334100 Storm Drainage

DIVISION 34 – TRANSPORTATION

END OF TABLE OF CONTENTS

DRAFT

SECTION 023000
SUBSURFACE INVESTIGATION

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of Contract including General and Supplementary Conditions, and Division 1, Specification Sections apply to work in this section.

1.02 DESCRIPTION OF WORK

A. Existing Subsurface Conditions: A subsurface investigation has been conducted at project site to determine general subsurface conditions. A copy of the report is included in this section.

1.03 RELATION SECTIONS

A. Refer to Section 312000 "Earthmoving".

1.04 RESPONSIBILITY OF DATA

A. The Owner and Architect will not be responsible for interpretations or assumptions made by Contractor based on subsurface exploration data furnished. Data is made available for Contractor’s convenience. Opinions expressed in report are interpretation of geotechnical engineer based on analysis and tests.

B. Additional subsurface investigations may be made by Contractor at no increase to the Contract Sum. Obtain written authorization from Owner before proceeding with subsurface investigations.

C. Subsurface Materials: Boring logs indicate general character of subsurface materials encountered only at boring locations.

D. Groundwater: Groundwater levels for project site are not known. Groundwater fluctuations may occur with variations in precipitation, surface run-off and existing utility leakage.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION 023000

DRAFT

SECTION 024100
DEMOLITION

PART 1 GENERAL

1.01 DEFINITIONS

A. "Remove": Carefully detach or dismantle items from existing construction and properly dispose of or recycle off site, unless items are indicated to be salvaged or reinstalled.

B. "Salvage" or "Remove and Salvage": Carefully detach or dismantle items from existing construction in a manner to prevent damage. Clean, package, label and deliver salvaged items to **<<Owner>>** in ready-for-reuse condition. If indicated to be reinstalled, store in a secure area until ready for reinstallation.

C. "Reinstall" or "Remove and Reinstall": Carefully detach or dismantle items from existing construction in a manner to prevent damage. Clean and prepare for reuse and reinstall where indicated.

D. "Existing", "Existing to Remain" or "ETR": Designation for existing items that are not to be removed and that are not otherwise indicated to be salvaged or reinstalled.

1. Not all existing construction to remain shall be noted with one of these terms on the Drawings; the intent is to assist the Contractor in areas where it may be difficult to determine. Existing construction shall be assumed to remain unless specifically noted to be removed - either when noted with "remove", "salvage", or "reinstall" terminology per above, or when indicated graphically in accordance with the Demolition Legend on the Demolition Drawings.

1.02 REFERENCE STANDARDS

A. NFPA 241 - Standard for Safeguarding Construction, Alteration, and Demolition Operations.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene a preinstallation meeting not less than one week before starting work of this section; require attendance by all affected installers.

1. Hold the preinstallation meeting at the Project site; perform a walkthrough to review the existing conditions and highlight areas of particular concern.
2. Review structural concerns and deficiencies in the existing building(s).
3. Review demolition schedule**<< , including phasing; or None - N/A>>**.
4. Review specific elements indicated to remain or to be salvaged, and review procedures for protection and / or storage of those elements.
5. Review Owner's occupancy and noise requirements.

B. Coordination: Coordinate **<< phasing; and staging>>** requirements with Owner's occupancy of the existing building.

1. Coordinate with Division 01 sections for **<< Owner's occupancy; phasing; and noise>>** requirements.
2. **<< Equipment and Furnishings to be Salvaged (By Owner):>>** Owner's personnel shall remove existing equipment and furnishings from spaces to be demolished prior to the beginning of the Work. Except for any built-in equipment specifically indicated on the Drawings to remain and be protected, the Contractor will not be required to work in furnished areas and will not be responsible for the condition of furniture or equipment left in place. ******Verify whether items will be removed or remain in place on a case-by-case basis. Coordinate with paragraph below.******

DRAFT

3. **<< Equipment and Furnishings to be Salvaged (By Contractor)>>**: Contractor shall remove existing equipment and furnishings from spaces to be demolished prior to beginning of the Work. Refer to Salvage List for a complete listing of items to be removed from the existing facility and transported to another facility within Montgomery County, Maryland. ******Important to provide a complete list of items to be salvaged so Contractor can price accurately.******
4. **<< Equipment and Furnishings to Remain In Place:>>** Contractor shall provide protective coverings over existing equipment and furnishings to remain in place during the Work. Cover equipment and furnishings with 6 mil plastic sheeting, and tape around all seams and edges to prevent dust intrusion. For overhead work, provide padding or blankets over horizontal surfaces prior to plastic sheeting, to protect against dropped items. Ensure all items are protected prior to the start of demolition.

1.04 SUBMITTALS

A. Photographic Documentation: Submit photographic record of the existing conditions, either as still photographs or as a video-recorded walkthrough. Contractor shall perform walkthrough of existing conditions with Owner's representative prior to site mobilization.
   1. Photographic documentation shall clearly show existing damage and wear on existing surfaces that may be interpreted as being caused by subsequent demolition and construction operations.
   2. For still photographs, submit marked-up plan(s) indicating locations where photographs were taken and direction photograph is facing. Include a written narrative to describe existing damage and other conditions as deemed necessary.
   3. For video recordings, include a spoken narrative to describe locations and existing conditions, or provide a supplementary written narrative.
   4. Submit all photographic documentation as digital photo / video files, and supplementary narratives and plans as PDF files. Submit as part of the initial submittal package required prior to release of the first request for payment.

B. Shop Drawings: Submit demolition plans and survey as required by OSHA and local AHJs.
   1. Engineering Survey: Provide structural survey of existing building(s). Provide additional surveys if unforeseen conditions are revealed during the course of the Work.
   2. Indicate extent of demolition, removal sequencing, bracing and shoring, and location and construction of barricades and fences.
   3. Indicate elements to be salvaged and elements that are to remain in place and protected.

C. Sustainable Design Submittals: Refer to Division 1 Section "Sustainable Design Requirements."

D. Refrigerant Certification: Provide a written statement, signed by refrigerant recovery technician, certifying that refrigerant materials were recovered in accordance with EPA regulations. Statement shall include certified technician's full name and business name as applicable, address, and date of recovery. ******Include if project involves demo of HVAC units******

E. Project Record Documents: Accurately record actual locations of capped and active utilities and subsurface construction.

1.05 QUALITY ASSURANCE

A. Refrigerant Recovery Technician Qualifications: Technicians removing or disposing of any equipment or appliance containing ozone-depleting refrigerants shall be certified in accordance with EPA Section 608 Technician Certification. ******Include if project involves demo of HVAC units******

DRAFT

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.01 EXAMINATION

A. Perform an initial walkthrough and visual survey of the existing building(s). Take photographic documentation of the existing conditions per submittal requirements above.

B. Perform structural engineering survey of the existing conditions as required by OSHA and local AHJs.

C. Receive verification in writing that hazardous materials remediation is complete before proceeding with demolition work.

3.02 PREPARATION

A. Remove and salvage items indicated to be reinstalled or turned over to Owner. Clean items and protect in secure packaging, and store in a secure location on-site.

3.03 GENERAL PROCEDURES AND PROJECT CONDITIONS

A. All demolition work shall be considered unclassified. Barring discovery of hazardous materials or undocumented structural components, where elements are indicated to be demolished, the bid price shall be for complete demolition of the element, regardless of the individual component makeup of that element.

B. Refrigerant Recovery: Certified recovery technician shall remove refrigerant from all applicable equipment and appliances prior to the start of demolition activities. ******Include if project involves demo of HVAC units******

C. Hazardous Materials: It is not expected that hazardous materials will be encountered during performance of the Work. ******Verify hazardous materials status and include either this paragraph or the paragraph "D" below******

1. If suspected hazardous materials are discovered during demolition operations, stop work and notify Architect and Owner; hazardous materials include regulated asbestos containing materials, lead, PCBs, and mercury.

D. Hazardous Materials: Hazardous materials are present in the existing building, and a report is available indicating locations. Do not commence demolition work in an area until written confirmation is received that abatement activities in that area are complete. ******Verify hazardous materials status and include either this paragraph or the paragraph "C" above******

1. Hazardous materials abatement will be performed under a separate contract; coordinate with Owner for abatement scheduling. ******Verify with MCPS for abatement in separate contract or under this contract******
2. Hazardous materials abatement will be performed as part of this Project; refer to abatement requirements elsewhere in the Contract Documents. ******Verify with MCPS for abatement in separate contract or under this contract******
3. If suspected hazardous materials that were not previously documented and abated are discovered during demolition operations, stop work and notify Architect and Owner; hazardous materials include regulated asbestos containing materials, lead, PCBs, and mercury.

E. Comply with applicable codes and regulations for demolition operations and safety of adjacent structures and the public.

1. Obtain required permits.

DRAFT

2. Fire Safety: Comply with applicable requirements of the International Fire Code; Chapter 33, and with **<<NFPA 241>>**.
    a. Use of explosives is not permitted.
    b. Hot Work: Remove all combustibles from areas where hot work is required, including use of cutting torches, welding, or heating equipment. Maintain fire watch for entire duration of hot work and for a minimum 30 minutes after completion of hot work.
        1) Keep portable fire extinguishers within 30 feet of locations where hot work is being performed for entire duration.
    c. Maintain egress routes and emergency access routes at all times; do not allow demolished materials to accumulate and block routes.
    d. Remove combustible demolished materials from the building by the end of each work day. Temporarily store combustible materials in noncombustible containers with self-closing lids until they can be removed from the building.
    e. Do not burn demolished material on site.
3. Take precautions to prevent catastrophic or uncontrolled collapse of structures to be removed; do not allow worker or public access within range of potential collapse of unstable structures.
4. Provide, erect, and maintain temporary barriers and security devices.
5. Conduct operations to minimize effects on and interference with adjacent structures and occupants.
6. Do not close or obstruct roadways or sidewalks without permits from authority having jurisdiction.
7. Conduct operations to minimize obstruction of public and private entrances and exits. Do not obstruct required exits at any time. Protect persons using entrances and exits from removal operations.
8. Obtain written permission from owners of adjacent properties when demolition equipment will traverse, infringe upon, or limit access to their property.

F. Do not begin removal until receipt of notification to proceed from Owner.

G. Do not begin removal until built elements to be salvaged, relocated, or reinstalled have been removed.

H. Protect existing structures and other elements to remain in place and not removed.
1. Provide bracing and shoring.
2. Prevent movement or settlement of adjacent structures.
3. Stop work immediately if adjacent structures appear to be in danger.

I. Minimize production of dust due to demolition operations. Do not use water if that will result in ice, flooding, sedimentation of public waterways or storm sewers, or other pollution.

J. Perform demolition in a manner that maximizes salvage and recycling of materials.
1. Comply with requirements of Section **<< 017419 - Construction Waste Management and Disposal>>**.
2. Dismantle existing construction and separate materials.
3. Set aside reusable, recyclable, and salvageable materials; store and deliver to collection point or point of reuse.

K. If items of potential historic interest are discovered during the course of the Work, such as cornerstones or plaques, consult with the Owner prior to proceeding. If Owner wishes to preserve these items, carefully remove and salvage, and store in on-site location designated by Owner.

DRAFT

3.04 EXISTING UTILITIES

A. Coordinate work with utility companies. Notify utilities before starting work, comply with their requirements, and obtain required permits.

B. Protect existing utilities to remain from damage.

C. Do not disrupt public utilities without permit from authority having jurisdiction.

D. Do not close, shut off, or disrupt existing life safety systems that are in use without at least 7 days prior written notification to Owner, and Owner's approval in writing.

E. Do not close, shut off, or disrupt existing utility branches or take-offs that are in use without at least 3 days prior written notification to Owner, and Owner's approval in writing.

F. Locate and mark utilities to remain; mark using highly visible tags or flags, with identification of utility type; protect from damage due to subsequent construction, using substantial barricades if necessary.

G. Remove exposed piping, valves, meters, equipment, supports, and foundations of disconnected and abandoned utilities.

H. Prepare building demolition areas by disconnecting and capping utilities outside the demolition zone. Identify and mark, in same manner as other utilities to remain, utilities to be reconnected.

3.05 SELECTIVE DEMOLITION FOR ALTERATIONS

A. Existing construction and utilities indicated on drawings are based on casual field observation and existing record documents only.

1. Verify construction and utility arrangements are as indicated.
2. Report discrepancies to Architect before disturbing existing installation.
3. Beginning of demolition work constitutes acceptance of existing conditions that would be apparent upon examination prior to starting demolition.

B. Separate areas in which demolition is being conducted from areas that remain occupied.

1. Provide, erect, and maintain temporary dustproof partitions of construction specified in Division 1 Section "Temporary Facilities and Controls" **<< in locations indicated on drawings; _____; or None - N/A>>**.

C. Maintain weatherproof exterior building enclosure, except for interruptions required for replacement or modifications; prevent water and humidity damage.

D. Protect existing work to remain.

1. Prevent movement of structure. Provide shoring and bracing as required.
2. Perform cutting to accomplish removal work neatly and as specified for cutting new work.
3. Repair adjacent construction and finishes damaged during removal work.
4. Patch to match new work.

E. Remove existing work as indicated and required to accomplish new work.

1. Remove items indicated on drawings.

F. Services (Including but not limited to **<< HVAC; Plumbing; Fire Protection; Electrical; Telecommunications; and _____>>**): Remove existing systems and equipment as indicated.

1. Maintain existing active systems to remain in operation, and maintain access to equipment and operational components.
2. Where existing active systems serve occupied facilities but are to be replaced with new services, maintain existing systems in service until new systems are complete and ready for service.

DRAFT

3. Coordinate with Division 1 for limitations on outages and required notifications to Owner, as applicable.
4. Verify that abandoned services serve only abandoned facilities before removal.
5. Remove abandoned pipe, ducts, conduits, and equipment, including those above accessible ceilings. Remove back to source of supply where possible, otherwise cap stub and tag with identification.

G. Floor Finishes: After removal of existing floor finishes including backings, underlayments, and thick set mortar beds, remove all residual adhesives and glue. Provide grinding, sanding, or shot-blasting of existing concrete floor slab to achieve the proper surface to receive new indicated floor finish. Coordinate slab surface preparations required for each new indicated floor finish with appropriate subcontractor.

H. Carpet: Coordinate with Division 9 carpet manufacturer and Division 1 Construction Waste Management section for recycling of existing sheet or tile carpet. Remove carpet carefully and remove all loose debris and metal (tacks, nails, stretcher strips). Coordinate with Carpet and Rug Institute guidelines for removal and disposal of adhesives. Cut sheet carpeting and carpet padding into four foot sections and tightly roll and wrap. Stack carpet tile on 36 inch or smaller pallets, no higher than 4 feet, and shrink wrap. Store in a protected, dry location in preparation for delivery to reclamation/recycling facility.

I. Acoustical Ceiling Panels: Coordinate with Division 9 acoustical ceiling panel manufacturer and Division 1 Construction Waste Management section. Remove ceiling tiles and stack neatly on pallets; wrap or band pallet loads. Store in a protected, dry location in preparation for delivery to recycling facility.

J. Concrete**<< and Terrazzo; or None - N/A>>**: Cut neatly in straight lines with power-driven saw with diamond-tooth blade or other type specifically intended for concrete and masonry. Break up and remove carefully, avoiding damage to adjacent flooring that will remain exposed in the finished work.

K. Masonry: Remove masonry in whole units at exposed surfaces, new openings, and unless otherwise indicated, to allow for toothing-in of new masonry.
   1. Solid masonry may be cut with power saw where masonry edges will be concealed by the finished work. Do not cut hollow masonry.

L. Existing Surfaces to Receive Finishes: Remove miscellaneous hangers, exposed nails not serving as fasteners, and similar protrusions; remove adhesive residue and tape; fill anchorage holes; and otherwise patch and restore surface to be a uniform substrate suitable for applied finishes.

DRAFT

3.06 DEBRIS AND WASTE REMOVAL

A. Comply with requirements of Division 1 for Construction Waste Management and Disposal.

B. Remove all debris, trash, and other materials not indicated to be salvaged or reinstalled from the site.

C. Leave site in clean condition, ready for subsequent work.

D. Clean up spillage and wind-blown debris from public and private lands.

END OF SECTION 024100

SECTION 033000
CAST-IN-PLACE CONCRETE

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ACI 117 - Specification for Tolerances for Concrete Construction and Materials.

B. ACI 211.1 - Selecting Proportions for Normal-Density and High Density-Concrete - Guide.

C. ACI PRC-213 - Guide for Structural Lightweight-Aggregate Concrete.

NNN. NSF 372 - Drinking Water System Components - Lead Content.

1.02 SUBMITTALS

A. Product Data: Submit manufacturers' data on manufactured products showing compliance with specified requirements and installation instructions.
   1. For curing compounds, provide data on method of removal in the event of incompatibility with floor covering adhesives.

B. Mix Design: Submit proposed concrete mix designs. Reports or laboratory tests prepared more than 12 months prior to the date submitted for review are not acceptable.
   1. Indicate proposed mix design complies with requirements of **<<ACI 301>>**, Section 4 - Concrete Mixtures.
   2. Indicate proposed mix design complies with requirements of **<<ACI 318>>**, Chapter 5 - Concrete Quality, Mixing and Placing.
   3. Indicate proposed mix design complies with fiber reinforcing manufacturer's written recommendations.
   4. Indicate proposed mix design complies with admixture manufacturer's written recommendations.
   5. Indicate proposed mix design complies with expansive component manufacturer's written recommendations.
   6. Indicate proposed mix designs meet the an average Global Warming Potential (GWP) of all concrete on the project of less than or equal to 225 kgCO2E/yd3 for lifecycle stages A1-A3.

DRAFT

C. Submit recycled-content data, designating percentages of post-consumer and pre-consumer recycled material.

D. Reinforcing Steel Shop Drawings: Comply with requirements of MNL-66. Include bar schedules, shapes of bent bars, spacing of bars, and location of splices.
   1. Prepare shop drawings under seal of a Professional Structural Engineer experienced in design of work of this type and licensed in the State in which the Project is located.

E. Manufacturer's Certificate: Certify that reinforcing steel and accessories supplied for this project meet or exceed specified requirements.

F. Informational Submittals:
   1. Provide qualifiaction data for foundation installation contractor.
   2. Provide ACI Flatwork Finisher Certificate for flatwork installer in accordance with **<<ACI 301>>**.

G. Welder's Qualifications Statement: Welders' certificates in accordance with AWS B2.1/B2.1M and dated no more than 12 months before start of scheduled welding work.

H. Void Form Product Data: Provide data on void form materials and installation requirements.

I. Formwork Shop Drawings: Indicate pertinent dimensions, materials, bracing, and arrangement of joints and ties.
   1. Include the design engineer's stamp or seal on shop drawings.

J. Permanent Insulated Foam Panel Formwork Shop Drawings: Include calculations or selections from manufacturer's prescriptive design tables that indicate compliance with applicable building code and manufacturer's requirements.
   1. Include test reports for performance criteria specified.
   2. Include the designing engineer's stamp or seal on shop drawings.

K. Samples for Pigment Color Selection: Submit manufacturer's complete sample chip set, including pigment number and required dosage rate for each color.

L. Verification Samples: Submit sample chips of specified colors indicating pigment numbers and required dosage rates, for subsequent comparison to installed concrete.

M. Test Reports: Submit report for each test or series of tests specified.

N. Manufacturer's Installation Instructions: For concrete accessories, indicate installation procedures and interface required with adjacent construction.

O. Sustainable Design Submittal: Refer to Division 1 Section - Sustainable Design Requirements.

P. Project Record Documents: Accurately record actual locations of embedded utilities and components that will be concealed from view upon completion of concrete work.

Q. Construction Joint Layout: Indicate proposed Construction joints required to construct the structure.
   1. Location of construction joints is subject to approval of the Architect.

R. Minutes of Pre-Installation meetings.
   1. Contractor shall conduct pre-installation meeting on project site prior to commencement of work. Contractor shall conduct the meeting and shall be responsible for the attendance of all required trades and subcontractors including the special inspector.

1.03 QUALITY ASSURANCE

A. Perform work of this section in accordance with **<<ACI 301>>** and **<<ACI 318>>**.
   1. Maintain **<< one copy; or ____ copies>>** of each document on site.

DRAFT

B. Follow recommendations of **<<ACI 305R>>** when concreting during hot weather.

C. Follow recommendations of **<<ACI 306R>>** when concreting during cold weather.

D. Installer Qualifications:
   1. A qualified installer who employs on Project personnel qualified as ACI-certified Flatwork Technician and Finisher and a supervisor who is an ACI-certified Concrete Flatwork Technician.
   2. For foundations and formed structural members, an experienced installer who has completed concrete work similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

E. Manufacturers Qualifications: A firm experienced in manufacturing ready-mixed concrete products that complies with ASTM C94 requirements for production facilities and equipment.
   1. Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities."

F. Preinstallation Conference: Conduct conference at Project site a minimum of 2 weeks prior to start of concrete work.
   1. After submitting design mixtures, review concrete design mixtures and examine procedures for ensuring quality of concrete materials. Require representatives of each entity directly concerned with cast-in-place concrete to attend, including but not limited to the following:
      a. Contractor's superintendent.
      b. Special inspector.
      c. Ready-mix concrete manufacturer.
      d. Concrete subcontractor.
      e. Concrete polishing subcontractor.

G. Quality Control at Epoxy Terrazzo Substrates: Contractor shall establish and provide written quality control concrete slab finishing procedures reviewed by and acceptable to the epoxy terrazzo flooring manufacturer for (slab on grade) slab areas to receive epoxy terrazzo flooring to maintain the tolerance specified. Reduce high spots by approved mechanical means such as shot blast or special grinder. Fill low slab areas with cementitious or epoxy leveling compound acceptable to epoxy terrazzo flooring manufacturer and compatible with epoxy resin to attain level substrate for epoxy terrazzo work. Before concrete slab installation at epoxy terrazzo flooring areas, the General Contractor and installer shall review all screed elevations and spacing, extent of slab pour to help assure quality, and special conditions such as interface to stairs, elevator entrance thresholds and edge of slabs to minimize miscellaneous cracks.

H. For slabs required to include moisture vapor reducing admixture (MVRA), do not proceed with placement unless manufacturer's representative is present for **<< every; first; or _____>>** day of placement.

I. Formwork Designer Qualifications: Design formwork under direct supervision of a Professional Structural Engineer experienced in design of concrete formwork and licensed in the State in which the Project is located.

J. Welders Qualifications: Welding processes and welding operators qualified in accordance with AWS D1.4/D1.4M and no more than 12 months before start of scheduled welding work.

1.04 MOCK-UP

A. Construct and erect mock-up panel for architectural concrete surfaces indicated to receive special treatment or finish as result of formwork.

DRAFT

1. Panel Size: **<< 6 by 6 feet; or __by __ feet>>** unless otherwise indicated.
2. Number of Panels: **<< Two; Three; ___; or As indicated on drawings>>**.
3. Coordinate location with Architect and Owner.

B. Obtain acceptance of resulting surface finish prior to erecting formwork.

C. Accepted mock-up panel is considered basis of quality for the finished work. Keep mock-up exposed to view for duration of concrete work.

D. Mock-up **<< may; may not; or _____>>** remain as part of the Work.

PART 2 PRODUCTS

2.01 FORMWORK

A. Formwork Design and Construction: Comply with guidelines of **<<ACI 347R>>** to provide formwork that will produce concrete complying with tolerances of **<<ACI 117>>**.

B. Form Materials: **<<Contractor>>**'s choice of standard products with sufficient strength to withstand hydrostatic head without distortion in excess of permitted tolerances.

1. Form Facing for Exposed Finish Concrete: **<<Contractor>>**'s choice of materials that will provide smooth, stain-free final appearance. Refer to ACI 301.
2. Form Coating: Release agent that will not adversely affect concrete**<< or interfere with application of coatings; or None - N/A>>**.
3. Form Ties: **<< Cone snap; Taper removable bolt; or _____>>** type that will leave no metal within **<< 1-1/2 inches; or _____ inches>>** of concrete surface, and when removed, will leave no hole larger than 1 inch diameter in concrete surface.

C. Removable Prefabricated Forms

1. Tubular Column Type: Round, spirally wound laminated fiber material, surface treated with release agent, non-reusable, of sizes indicated.

D. Void Forms: Moisture resistant treated paper faces, biodegradable, structurally sufficient to support weight of wet concrete mix until initial set.

2.02 REINFORCEMENT MATERIALS

A. Reinforcing Steel: **<<ASTM A615/A615M>>**, Grade **<< 40 (40,000 psi); 60 (60,000 psi); 80 (80,000 psi); 100 (100,000 psi); or ___ (_____ psi)>>**.

1. Type: **<< Plain; Deformed; or ____>>** billet-steel bars.
2. Finish: Unfinished**<< , unless otherwise indicated; as indicated; at _____; _____; or None - N/A>>**.
3. Finish: Galvanized in accordance with **<<ASTM A767/A767M>>**, Class **<< I; or II>><< , unless otherwise indicated; as indicated; at _____; _____; or None - N/A>>**.
4. Finish: Epoxy coated in accordance with **<<ASTM A775/A775M>><< , unless otherwise indicated; as indicated; at _____; _____; or None - N/A>>**.

B. Reinforcing Steel: **<<ASTM A706/A706M>>**, Grade 60 (60,000 psi) (420 MPa).

1. Type: Deformed low-allow steel bars (weldable.)
2. Finish: Unfinished, unless otherwise indicated.

C. Steel Welded Wire Reinforcing (WWR): **<< Plain type, ASTM A1064/A1064M; Galvanized, plain type, ASTM A1064/A1064M; Deformed type, ASTM A1064/A1064M; Class A epoxy coated, deformed type, ASTM A884/A884M; or _____>>**.

1. Form: Flat Sheets.

DRAFT

2. Finish: Plain, unless otherwise indicated.
3. Finish: Galvanized in accordance with ASTM A767/A767M, Class I, unless otherwise indicated.

D. Reinforcing Accessories:
1. Tie Wire: Annealed, minimum **<< 16 gauge, 0.0508 inch; or __ gauge, __ inch>>**.
2. Chairs, Bolsters, Bar Supports, Spacers: Sized and shaped for adequate support of reinforcement during concrete placement.
a. Manufacture bar supports of steel, wire, plastic or pre-cast concrete of greater compressive strength than concrete being placed.
b. Provide stainless steel, galvanized, plastic, or plastic coated steel components for placement within 1-1/2 inches (38mm) of weathering surfaces.
c. Welded wire fabric reinforcing shall be supported on continuous bolsters spaced at 2'-6" oc, unless otherwise indicated. Bolsters shall have sand plates or horizontal runners. Solid brick for support of reinforcing in slab is prohibited.
d. For exposed to view concrete surfaces, where legs of bolsters are in contact with forms, provide bolsters with legs that are plastic coated.
e. The use of rebar stakes to holld reinforcement in place shall not be permitted.

E. Coupler Systems: Mechanical devices for splicing reinforcing bars; capable of developing 125% of steel reinforcing yield strength in tension and compression.

F. Dowel Bar Splicer with Dowel-Ins: Mechanical devices for connecting dowels; capable of developing 125% steel reinforcing yield strength in tension and compression.

G. Reinforcing Fabrication:
1. Fabricate concrete reinforcing in accordance with **<<CRSI (DA4)>>** - Manual of Standard Practice.
2. Welding of reinforcing steel is not permitted.
3. Welding of reinforcing steel is permitted only with the specific approval of Architect. Perform welding in accordance with **<<AWS D1.4/D1.4M>>**.
a. Galvanized Reinforcement: Clean surfaces, weld and re-protect welded joints in accordance with **<<CRSI (DA4)>>**.
4. Fabricate and handle epoxy-coated reinforcing in accordance with ASTM D3963/D3963M.
5. Locate reinforcing splices not indicated on drawings at point of minimum stress.

DRAFT

2.03 CONCRETE MATERIALS

A. Cement: **<<ASTM C150/C150M>>**, Type I / II/ IL Portland Lime type (refer to specific types specified on the contractor drawings). White
1. Acquire cement for entire project from same source.

B. Fine and Coarse Aggregates: **<<ASTM C33/C33M>>**.
1. Acquire aggregates for entire project from same source and within a 500-mile radius of the Project site.

C. Lightweight Aggregate: **<<ASTM C330/C330M>>**.

D. Fly Ash: **<<ASTM C618>>**, Class **<< F; C; C or F; or _____>>**.
1. Use of flyash shall not exceed 25% of cementitious materials by weight.
2. Use of flyash in polished slabs is prohibited.

E. Silica Fume: **<<ASTM C1240>>**, densified amorphous silica fume.
1. Use of silica fume shall not exceed 10% of cementitious materials by weight.

F. Ground Granulated Blast Furnace Slag: ASTM C989, Grade 100 or 120.
   1. Use of blast furnace slag shall not exceed 50% of cementitious materials by weight.

G. Color Additives: Pure, concentrated mineral pigments specifically intended for mixing into concrete and complying with **<<ASTM C979/C979M>>**.
   1. Concentration: Base dosage rates on weight of total cementitious materials, but not aggregate or sand.
   2. Packaging: If pigments are to be added to mix at site, furnish pigments in premeasured disintegrating bags to minimize job site waste.
   3. Color(s): As indicated on drawings.
   4. Color(s): To match **<<Architect>>**'s and Owner sample(s) when incorporated into specified mix design(s).
   5. Color(s): As selected by **<<Architect>>** and Owner from manufacturer's full range.
      a. Allow for **<< ____>>** different pigment colors.
      b. Allow for up to **<< ____>>** percent dosage for each color.
   6. Color: **<< _____>>** at dosage rate of **<< ____>>** percent.

H. Water: **<<ASTM C1602/C1602M>>**; clean, potable, and not detrimental to concrete.

2.04 ADMIXTURES

A. Do not use chemicals that will result in soluble chloride ions in excess of 0.1 percent by weight of cement.

B. Air Entrainment Admixture: **<<ASTM C260/C260M>>**.

C. High Range Water Reducing and Retarding Admixture: **<<ASTM C494/C494M>>** Type G.

D. High Range Water Reducing Admixture: **<<ASTM C494/C494M>>** Type F.

E. Water Reducing and Accelerating Admixture: **<<ASTM C494/C494M>>** Type E.

F. Water Reducing and Retarding Admixture: **<<ASTM C494/C494M>>** Type D.

G. Accelerating Admixture: **<<ASTM C494/C494M>>** Type C.

H. Retarding Admixture: **<<ASTM C494/C494M>>** Type B.

I. Water Reducing Admixture: **<<ASTM C494/C494M>>** Type A.

J. Shrinkage Reducing Admixture: **<<ASTM C494/C494M>>** , Type S.

K. Shrinkage Compensating Admixture: For on site production of concrete with **<<ASTM C845/C845M>>**, **<< Type K; Type M; Type S; or _____>>** cement.

L. Corrosion Inhibiting Admixture:
   1. **<<ASTM C494/C494M>>**, Type C or Type S.
   2. **<<ASTM C1582/C1582M>>**.

M. Porosity Inhibiting Admixture (PIA): Liquid, inorganic admixture free of volatile organic compounds (VOCs) and reactive silicates. Closes capillary systems formed during concrete curing to reduce moisture vapor emission and transmission. Reduces alkali silicate reaction (ASR) and concrete shrinkage with no adverse effect on concrete properties or applied flooring.
   1. Provide admixture in slabs to receive adhesively applied flooring**<< None - N/A; or roofing; or _____>>**.
   2. Hydraulic Conductivity: **<< 6 x 10 exp(-8) fps>>**, minimum, when tested according to **<<ASTM D5084>>**.
   3. Concrete Shrinkage Reduction at 28 Days: 75 percent, minimum, when compared to mix design without PIA and both tested according to **<<ASTM C157/C157M>>**.

DRAFT

4. ASR Reduction at 28 Days: 78 percent, minimum, when compared to mix design without PIA and both tested according to **<<ASTM C1260>>**.
5. Includes integral biocide.
6. Provide warranty to cover cost of flooring failures due to moisture migration from slabs for life of the concrete.

N. Moisture Vapor Reducing Admixture (MVRA): Liquid, inorganic admixture free of volatile organic compounds (VOCs). Closes capillary systems formed during concrete curing to reduce moisture vapor emission and transmission. Reduces concrete shrinkage with no adverse effect on concrete properties or applied flooring.
1. Provide admixture in slabs to receive adhesively applied flooring**<< None - N/A; or roofing; or _____>>**.
2. Concrete Shrinkage Reduction at 28 Days: 35 percent, minimum, when compared to mix design without MVRA and both tested according to **<<ASTM C157/C157M>>**.
3. VOC Content: Zero.
4. Provide warranty to cover cost of flooring failures due to moisture migration from slabs for life of the concrete.

O. Waterproofing Admixture: Admixture formulated to reduce permeability to liquid water, with no adverse effect on concrete properties.
1. Admixture Composition: Crystalline, functioning by growth of crystals in capillary pores.
2. Admixture Composition: Hydrophobic polymer waterproofing and corrosion inhibitor, functioning by closing concrete pores and chemical bonding.
3. Permeability of Cured Concrete: No measurable leakage when tested in accordance with **<<COE CRD-C 48>>** at **<< 200 psi; or ____ feet>>**; provide test reports.
4. Potable Water Contact Approval: National Science Foundation (NSF) certification for use on structures holding potable water, based on testing in accordance with **<<NSF 61>>** and **<<NSF 372>>**.

2.05 ACCESSORY MATERIALS

A. Underslab Vapor Retarder:
1. Sheet Material: **<<ASTM E1745>>**, **<< Class A; Class B; Class C; or _____>>**; stated by manufacturer as suitable for installation in contact with soil or granular fill under concrete slabs. Single ply polyethylene is prohibited.
a. Thickness: 15 mils, minimum.
2. Accessory Products: Vapor retarder manufacturer's recommended tape, adhesive, mastic, prefabricated boots, etc., for sealing seams and penetrations.

B. Termite-Resistant Vapor Barrier Sheet: Plastic sheet complying with **<<ASTM E1745>>**, **<< Class C; or _____>>**; stated by manufacturer as suitable for installation in contact with soil or granular fill under concrete slabs, and for exclusion of subterranean termites.
1. Accessory Products: Vapor retarder manufacturer's recommended tape, adhesive, prefabricated boots, etc., for sealing seams and penetrations.

C. Non-Shrink Cementitious Grout: Flowable and low slump, dry pack premixed compound consisting of non-metallic aggregate, cement, water reducing and plasticizing agents.
1. Grout: Comply with **<<ASTM C1107/C1107M>>**.
2. Minimum Compressive Strength at 48 Hours, **<<ASTM C109/C109M>>**: **<< 2,000 pounds per square inch; or ____ pounds per square inch>>**.
3. Minimum Compressive Strength at 28 Days: **<<ASTM C109/C109M>> << 7,000 pounds per square inch; or ____ pounds per square inch>>**.

DRAFT

4. Products containing aluminum powder are not permitted.

D. Non-Shrink Epoxy Grout: Moisture-insensitive, two-part; consisting of epoxy resin, non-metallic aggregate, and activator.
   1. Minimum Compressive Strength at 7 days, **<<ASTM C579>>**: **<< 12,000 pounds per square inch; 16,000 pounds per square inch; or ____ pounds per square inch>>**.

E. Architectural Concrete Floor Topping and Resurfacer:
   1. Minimum Compressive Strength at 28 Days, **<<ASTM C109/C109M>>**: **<< 6,500 pounds per square inch; 7,000 pounds per square inch; or ____ pounds per square inch>>**.
   2. Minimum Compressive Strength at 28 Days: **<<ASTM C472>>**: **<< 5000 pounds per square inch; or _____ pounds per square inch>>** .
   3. Minimum Compressive Strength at 28 Days: ASTM C1708/C1708M: 5,000 pounds per square inch (48 mPA).

F. Self-Leveling Cementitious Concrete Floor Underlayment:
   1. Minimum Compressive Strength at 28 Days, **<<ASTM C1708/C1708M>>**: **<< 7,000 pounds per square inch; or 5,500 pounds per square inch>>**.

2.06 BONDING AND JOINTING PRODUCTS

A. Latex Bonding Agent: Non-redispersable acrylic latex, complying with **<<ASTM C1059/C1059M>>**, Type II.

B. Epoxy Bonding System:
   1. Complying with **<<ASTM C881/C881M>>** and of Type required for specific application.

C. Acetate Bonding Agent: Non-redispersable polyvinyl acetate.

D. Silane Hybrid Anchoring System:
   1. Complying with **<<ASTM C881/C881M>>** and of Type required for specific application.

E. Waterproofing Admixture Slurry: Slurry coat of Portland cement, sand, and crystalline waterproofing additive, mixed with water in proportions recommended by manufacturer to achieve waterproofing at cold joints in concrete.

F. Waterstops: Bentonite and butyl rubber, complying with **<<NSF 61>>** and **<<NSF 372>>**.
   1. Configuration: As indicated on drawings (3/4"x1" minimum).
   2. Size: As indicated on drawings.

G. Reglets: Formed steel sheet, galvanized, with temporary filler to prevent concrete intrusion during placement.
   1. Size: As indicated on drawings.

H. Dovetail Anchor Slots: Hot-dip galvanized-steel sheet, not less than 0.034 inch (0.85 mm) thick, with bent tab anchors. Temporarily fill or cover face opening of slots to prevent intrusion of concrete or debris.

I. Slab Isolation Joint Filler: **<< 1/2 inch; 1/4 inch; or ____ inch>>** thick, unless otherwise indicated, height equal to slab thickness, with removable top section that will form **<< 1/2 inch; or ___ inch>>** deep sealant pocket after removal.
   1. Material: **<<ASTM D1751>>**, **<< cellulose fiber; cork; or _____>>**.
   2. Material: **<<ASTM D1752>>**, **<< sponge rubber (Type I); cork (Type II); self-expanding cork (Type III); recycled PVC (Type IV); or _____>>**.
   3. Material: **<<ASTM D8139>>**, semi-rigid, closed-cell polypropylene foam.
   4. Material: Closed-cell, non-absorbent, compressible polymer foam in sheet form.

DRAFT

J. Slab Contraction Joint Device: Preformed linear strip intended for pressing into wet concrete to provide straight route for shrinkage cracking.

K. Slab Construction Joint Devices: Combination keyed joint form and screed, galvanized steel, with **<< rectangular; square; round; or _____>>** knockout holes for conduit or rebar to pass through joint form at **<< 6 inches; or ___ inches>>** on center; ribbed steel stakes for setting.
   1. Provide removable plastic cap strip that forms wedge-shaped joint for sealant installation.
   2. Height: To suit slab thickness.

L. Dowel Sleeves: Plastic sleeve**<< and nailable plastic base; _____; or None - N/A>>** for smooth, round, steel load-transfer dowels.

2.07 CURING MATERIALS

A. Evaporation Reducer: Liquid thin-film-forming compound that reduces rapid moisture loss caused by high temperature, low humidity, and high winds; intended for application immediately after concrete placement.

B. Curing Compound, Naturally Dissipating: Clear, water-based, liquid membrane-forming compound; complying with **<<ASTM C309>>**.
   1. Product dissipates within **<< 4 to 6 weeks; 30 to 60 days; 7 to 10 days; or _____>>**.
   2. Provide product containing fugitive red dye.

C. Curing Agent, Water-Cure Equivalent Type: Clear, water-based, non-film-forming, liquid-water cure replacement agent.
   1. Comply with **<<ASTM C309>>** standards for water retention.
   2. Compressive Strength of Treated Concrete: Equal to or greater than strength after 28-day water cure when tested according to **<<ASTM C39/C39M>>**.
   3. VOC Content: Zero.

D. Curing and Anti-Spalling Compound: Boiled linseed oil compound.
   1. Application: Use on roadway, bridge deck, parking deck, and ramps.

E. Resin Curing Compound: Solvent-based liquid, white pigmented, membrane-forming.
   1. For use on exterior slabs. When slab will be painted, sealed, topped, or receive other applied finish, completely remove curing compound after curing is complete and before finish coatings are applied.
   2. Comply with **<<ASTM C309>>**, Type 2, Classes A and B.
   3. VOC Content: Less than 350 g/L.
   4. Solids Content: 20 percent, minimum.

F. Low-Solids, Non-Membrane-Forming, Silicate Curing Compound: Water-based, reactive silicate, non-membrane-forming liquid**<< with red fugitive dye; or None - N/A>>**.

G. Curing and Sealing Compound, Moisture Emission-Reducing, Membrane-Forming: Liquid, membrane-forming, clear sealer, for application to newly-placed concrete.
   1. Use this product to cure and seal all slabs to receive adhesively applied flooring or roofing.
   2. Comply with **<<ASTM C309>>** and **<<ASTM C1315>>** Type I Class A.
   3. VOC Content: Less than 100 g/L.
   4. Solids Content: 25 percent, minimum.

H. Curing Compound, Non-dissipating: Liquid, membrane-forming, clear, non-yellowing acrylic; complying with **<<ASTM C309>>**.

DRAFT

1. Application: Use at **<< _____>>**.
2. Vehicle: **<< Water-based; Solvent-based; or _____>>**.
3. Gloss: **<< Low; High; or ___>>**.
4. Solids by Mass: **<< 10 percent; 15 percent; 18 percent; 25 percent; or _____>>**, minimum.
5. VOC Content: OTC compliant.

I. Curing and Sealing Compound, Low Gloss: Liquid, membrane-forming, clear, non-yellowing acrylic; complying with **<<ASTM C1315>>** Type 1 Class A.

J. Curing and Sealing Compound, High Gloss: Liquid, membrane-forming, clear, non-yellowing acrylic; complying with **<<ASTM C1315>>** Type 1 Class A.

K. Moisture-Retaining Sheet: **<<ASTM C171>>**.
1. Curing paper, **<< regular; white; or _____>>**.
2. Polyethylene film, **<< clear; white opaque; or _____>>**, minimum nominal thickness of **<< 4 mil, 0.004 inch; or ___ mil, ___ inch>>**.

L. Polyethylene Film: **<<ASTM D2103>>**, **<< 4 mil, 0.004 inch; 6 mil, 0.006 inch; or ___ mil, ___ inch>>** thick, **<< clear; white opaque color; or _____>>**.

M. Water: Potable, not detrimental to concrete.

2.08 DENSIFIERS AND HARDENERS

A. Liquid Densifier and Hardener (CONC-LH): Penetrating chemical compound that reacts with concrete, filling the pores and hardening, and dustproofing. ***This section applies to floor slabs indicated by the architect to receive liquid hardener (CONC-LH). Densifiers/hardeners are commonly called out on our projects in spaces that require a more durable and long term treatment than a standard cure & seal product. Liquid hardeners/densifiers are silicate based products that fall under the classification of "penetrating sealers". The other category of penetrating sealer is the water repellant type of penetrating sealer. These are silane and siloxane based products. They would be beneficial on exposed exterior slabs and slabs subjected to water with road salts (parking garages). They are not specified here because they are not as often used on our projects as the hardeners. These types of sealers and other special floor finishes/coatings are specified in 033511 Concrete Floor Finishes.***
1. Composition: Sodium silicate

2.09 CONCRETE MIX DESIGN

A. Proportioning Normal Weight Concrete: Comply with **<<ACI 211.1>>** recommendations.

B. Proportioning Structural Lightweight Concrete: Comply with **<<ACI PRC-213>>** recommendations.

C. Concrete Strength: Establish required average strength for**<< each type of; or None - N/A>>** concrete on the basis of **<< field experience; trial mixtures; or _____>>**, as specified in **<<ACI 301>>**.
1. For trial mixtures method, employ independent testing agency for preparing and reporting proposed mix designs.

D. Admixtures: Add acceptable admixtures as recommended in **<<ACI 211.1>>** and at rates recommended or required by manufacturer.

E. Normal Weight Concrete:
1. Compressive Strength, when tested in accordance with **<<ASTM C39/C39M>>** at **<< 28; or ____>>** days: **<< 3,000 pounds per square inch; 4,000 pounds per square inch;**

DRAFT

5,000 pounds per square inch; _____ pounds per square inch; As indicated; As indicated on drawings; or _____>>.

2. Supplementary Cementitious Materials (SCM) Content: As indicated.
3. Water-Cement Ratio: By weight. as indicated.
4. Entrained Air Content: determined in accordance with **<<ASTM C173/C173M>>**. As Indicated.
5. Slump Limits: As indicated.
6. Maximum Aggregate Size: As indicated.
7. Durability Requiements: As indicated.

F. Structural Lightweight Concrete: ***Refer to ACI 213 for detailed information about these properties.***

1. Compressive Strength, when tested in accordance with **<<ASTM C39/C39M>>** at **<< 28; or ____>>** days: **<< 3,000 pounds per square inch; 4,000 pounds per square inch; 5,000 pounds per square inch; _____ pounds per square inch; As indicated; As indicated on drawings; or _____>>**.
2. Water-Cement Ratio: By weight, as indicated.
3. Total Air Content: determined in accordance with **<<ASTM C173/C173M>>**. As Indicated.
4. Maximum Slump: As indicated.
5. Maximum Aggregate Size: As indicated.
6. Calculated Equilibrium Density; Determined in accordance with ASTM C567: As Indicated ***Equilibrium density is generally 3-8 lb/cu ft less than the bulk fresh density and about 3 lb/cu ft more than the oven dry density.***

2.10 MIXING

A. On Project Site: Mix in drum type batch mixer, complying with **<<ASTM C685/C685M>>**. Mix each batch not less than 1-1/2 minutes and not more than 5 minutes.

1. Colored Concrete: Add pigments in strict accordance with manufacturer's instructions to achieve consistent color from batch to batch. ***If needed, per project.***
2. Expansive Component: Batch and mix as recommended by manufacturer for specific project conditions. I***f needed, per project.***

B. Transit Mixers: Comply with **<<ASTM C94/C94M>>**.

C. Adding Water: If concrete arrives on-site with slump less than suitable for placement, do not add water that exceeds the maximum water-cement ratio. Only add water if withheld from the supplier

1. Batch ticket shall indicate volume of water withheld.

D. Do not use expansive component in same concrete batch with MVRA or PIA. ***MVRA and PIA already contain shrinkage reducers and should not be used with other shrinkage reducing admixtures.***

E. Do not use shrinkage-reducing admixture (SRA) in same concrete batch with MVRA or PIA. ***MVRA and PIA already contain shrinkage reducers and should not be used with other shrinkage reducing.***

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify lines, levels, and dimensions before proceeding with work of this section.

DRAFT

3.02 FORMWORK

A. Erect formwork, shoring and bracing to achieve design requirements, in accordance with requirements of ACI 301.

B. Provide bracing to ensure stability of formwork. Shore or strengthen formwork subject to overstressing by construction loads.

C. Obtain approval before framing openings in structural members that are not indicated on drawings.

D. Install void forms in accordance with manufacturer's recommendations. Protect forms from moisture or crushing.

E. Coordinate this section with other sections of work that require attachment of components to formwork.

F. If formwork is placed after reinforcement, resulting in insufficient concrete cover of reinforcement, request instructions from Architect before proceeding.

3.03 APPLICATION - FORM RELEASE AGENT

A. Apply form release agent formwork in accordance with manufacturer's recommendations.

B. Apply prior to placement of reinforcing steel, anchoring devices, and embedded items.

C. Do not apply form release agent where concrete surfaces will receive special finishes or applied coverings that are affected by agent. Soak inside surfaces or untreated forms with clean water. Keep surfaces coated prior to placement of concrete.

3.04 INSTALLING REINFORCEMENT AND OTHER EMBEDDED ITEMS

A. Fabricate and handle epoxy-coated reinforcing in accordance with **<<ASTM D3963/D3963M>>**.

B. Comply with requirements of **<<ACI 301>>**. Clean reinforcement of loose rust and mill scale, and accurately position, support, and secure in place to achieve not less than minimum concrete coverage required for protection.

C. Install welded wire reinforcement in maximum possible lengths and offset end laps in both directions. Splice laps with tie wire.

D. Verify that anchors, seats, plates, reinforcing steel and other items to be cast into concrete are accurately placed, positioned securely, and will not interfere with concrete placement.

E. Wet sticking is not permited.

3.05 INSERTS, EMBEDDED PARTS AND OPENINGS

A. Provide formed openings where required items to be embedded passing through concrete work.

B. Locate and set in place items that will be cast directly into concrete.

C. Coordinate with work of other sections in forming and placing openings, slots, reglets, recesses, sleeves, bolts, anchors, other inserts, and components of other work.

D. Position recessed anchor slots for brick veneer masonry anchors to spacing and intervals specified.

E. Install accessories in accordance with manufacturer's instructions, so they are straight, level, and plumb. Ensure items are not disturbed during concrete placement.

F. Install waterstops in accordance with manufacturer's instructions, so they are continuous without displacing reinforcement.

DRAFT

G. Provide temporary ports or openings in formwork where required to facilitate cleaning and inspection. Locate openings at bottom of forms to allow flushing water to drain.

H. Close temporary openings with tight fitting panels, flush with inside face of forms, and neatly fitted so joints will not be apparent in exposed concrete surfaces.

3.06 FORM CLEANING

A. Clean forms as erection proceeds, to remove foreign matter with forms.

B. Clean formed cavities of debris prior to placing concrete.

1. Flush with water or use compressed air to remove remaining foreign matter. Ensure that water and debris drain to exterior through clean-out ports.
2. During cold weather, remove ice and snow from within forms. Do not use de-icing salts. Do not use water to clean out forms, unless formwork and concrete construction proceed within heated enclosure. Use compressed air or other means to remove foreign matter.

3.07 FORMWORK TOLERANCES

A. Construct formwork to maintain tolerances required by ACI 117, unless otherwise indicated.

B. Construct and align formwork for elevator hoistway in accordance with ASME A17.1.

3.08 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Section 014000 - Quality Requirements.

B. Inspect erected formwork, shoring, and bracing to ensure that work is in accordance with formwork design, and to verify that supports, fastenings, wedges, ties, and items are secure.

3.09 FORM REMOVAL

A. Do not remove forms or bracing until concrete has gained sufficient strength to carry its own weight and imposed loads.

B. Loosen forms carefully. Do not wedge pry bars, hammers, or tools against finish concrete surfaces scheduled for exposure to view.

C. Store removed forms to prevent damage to form materials or to fresh concrete. Discard damaged forms.

3.10 PLACING CONCRETE

A. Place concrete in accordance with **<<ACI 304R>>**.

B. Place concrete for floor slabs in accordance with **<<ACI 302.1R>>**.

C. Place concrete with shrinkage-compensating expansive component in accordance with **<<ACI 223R-10>>**.

D. Maintain records of concrete placement. Record date, location, quantity, air temperature, and test samples taken.

E. Ensure **<< reinforcement; inserts; waterstops; embedded parts; formed construction joint devices; and _____>>** will not be disturbed during concrete placement.

F. Place concrete continuously without construction (cold) joints wherever possible; where construction joints are necessary, before next placement prepare joint surface by removing laitance and exposing the sand and sound surface mortar, by sandblasting or high-pressure water jetting.

G. Finish floors level and flat, unless otherwise indicated, within the tolerances specified below.

DRAFT

3.11 SLAB JOINTING

A. Locate joints as indicated on drawings.

B. Anchor joint fillers and devices to prevent movement during concrete placement.

C. Isolation Joints: Use preformed joint filler with removable top section for joint sealant, total height equal to thickness of slab, set flush with top of slab.

1. Install wherever necessary to separate slab from other building members, including columns, walls, equipment foundations, footings, stairs, manholes, sumps, and drains.

D. Load Transfer Construction and Contraction Joints: Install load transfer devices as indicated; saw cut joint at surface as indicated for contraction joints.

E. Saw Cut Contraction Joints: Saw cut joints in slabs-on-grade as soon as cutting will not ravel, abrade, or otherwise damage the surface, and before random shrinkage cracks begin to develop; generally from **<< 4 to 12 hours; or _____>>** after placing. Use **<< 3/16 inch; or ____ inch>>** thick blade and cut to depth indicated.

F. Contraction Joint Devices: Use preformed joint device, with top set flush with top of slab. ***Only when specifically needed.***

G. Construction Joints: Where not otherwise indicated, use metal combination screed and key form, with removable top section for joint sealant.

H. Terrazzo Coordination: Locate construction joints at terrazzo floor areas to align with joint and divider locations indicated on terrazzo floor pattern drawing, as approved.

3.12 FLOOR FLATNESS AND LEVELNESS TOLERANCES

A. An independent testing agency, as specified in Section **<< 014000>>**, will inspect finished slabs for compliance with specified tolerances.

B. Minimum F(F) Floor Flatness and F(L) Floor Levelness Values: ***Refer to ACI 117-10, section 4.8.4 commentary and ACI 302-15,section 10.15 for detailed info on floor flatness and levelness. Adjust values per project requirements.***

1. Slab-on-grade:
   a. Specified Overall Values: F(F)35/F(L)25 ***Adjust values per project requirements and floor finish.***
   b. Minimum Local Values: F(F)24/F(L) 17 ***Adjust values per project requirements and floor finish***.
2. Elevated Unshored Concrete Floors:
   a. Specified Overall Values: F(F)30
   b. Minimum Local Values: F(F)27
3. Polished Concrete Floors:
   a. Specified Overall Values: F(F)50/F(L)30
   b. Minimum Local Values, F(F)24/F(L) 17
4. Exposed to View and Foot Traffic: F(F) of 20; F(L) of 15**<< , on-grade only; , before removal of shoring; _____; or None - N/A>>**.
5. Under Raised Access Flooring: F(F) of 20; F(L) of 15**<< , on-grade only; , before removal of shoring; _____; or None - N/A>>**.
6. Under Thick-Bed Tile: F(F) of 20; F(L) of 15**<< , on-grade only; , before removal of shoring; _____; or None - N/A>>**.
7. Under Thin Resilient Flooring and Thinset Tile: F(F) of 35; F(L) of 25**<< , on-grade only; , before removal of shoring; _____; or None - N/A>>**.
8. Slabs Supporting Steel Cells: F(F) of 45; F(L) of 35, on grade only.

DRAFT

C. Measure F(F) Floor Flatness and F(L) Floor Levelness in accordance with **<<ASTM E1155/E1155M>>**, within 48 hours after slab installation; report both composite overall values and local values for each measured section.

D. Correct the slab surface if composite overall value is less than specified and if local value is less than two-thirds of specified value or less than F(F) 13/F(L) 10.

E. Correct defects by grinding or by removal and replacement of the defective work. Areas requiring corrective work will be identified. Re-measure corrected areas by the same process. ***Keep in mind that this is not a desirable corrective measure for polished concrete slabs since it will cause variation in slab appearance.***

F. Slabs to receive specialized flooring such as but not limited to wood planks flooring shall have a maximum surface deviation of 1/8 inch in any direction when checked with a 10 foot straight edge. Use trowelable leveling and patching compounds, according to manufacturer's written instructions to fill cracks, holes, and depressions in substrates.

3.13 CONCRETE FINISHING

A. Repair surface defects,**<< including tie holes,; or None - N/A>>** immediately after removing formwork.

B. Unexposed Form Finish: Rub down or chip off fins or other raised areas **<< 1/4 inch; or ___ inch>>** or more in height.

C. Exposed Form Finish: Rub down or chip off and smooth fins or other raised areas **<< 1/4 inch; or ___ inch>>** or more in height. Provide finish as follows:

1. Smooth Rubbed Finish: Wet concrete and rub with carborundum brick or other abrasive, not more than 24 hours after form removal.
2. Grout Cleaned Finish: Wet areas to be cleaned and apply grout mixture by brush or spray; scrub immediately to remove excess grout. After drying, rub vigorously with clean burlap, and keep moist for 36 hours.
3. Smooth Skim Finish: Exposed concrete walls shall receive a smooth skim to 1/8" parge finish.

D. Concrete Slabs: Finish to requirements of **<<ACI 302.1R>>**, and as follows:

1. Surfaces to Receive Thick Floor Coverings: "Wood float" as described in **<<ACI 302.1R>>**: thick floor coverings include **<< quarry tile; ceramic tile; Portland cement terrazzo; and _____>>** with full bed setting system.
2. Surfaces to Receive Thin Floor Coverings: "Steel trowel" as described in **<<ACI 302.1R>>**; thin floor coverings include **<< carpeting; resilient flooring; seamless flooring; resinous matrix terrazzo; thin set quarry tile; thin set ceramic tile; and _____>>**.
3. Decorative Exposed Surfaces: Trowel as described in **<<ACI 302.1R>>**; take measures necessary to avoid black-burnish marks; decorative exposed surfaces include **<< surfaces to be stained or dyed; pigmented concrete; surfaces to receive liquid hardeners; surfaces to receive dry-shake hardeners; surfaces to be polished; all other exposed slab surfaces; and _____>>**.
4. Other Surfaces to Be Left Exposed: Trowel as described in **<<ACI 302.1R>>**, minimizing burnish marks and other appearance defects.
5. Finish lightweight concrete slabs in accordance with submitted procedure. Refer to Section 1.04 Submittals.
6. Concrete: Refer to Section 033543 Concrete Finishing.

DRAFT

3.14 CURING AND PROTECTION

A. Comply with requirements of **<<ACI 308R>>**. Immediately after placement, protect concrete from premature drying, excessively hot or cold temperatures, and mechanical injury.

B. Maintain concrete with minimal moisture loss at relatively constant temperature for period necessary for hydration of cement and for the in-place concrete to develop its minimum design properties.

C. Formed Surfaces: Keep forms in place for full curing period. If wood forms are used, keep moist, especially during hot or dry weather.

D. Surfaces Not in Contact with Forms:

1. Initial/ Intermediate Curing: Start as soon as bleed water has disappeared and before surface is dry for concrete with low bleed rate and when evaporative conditions are aggressive. Maintain until final curing methods begin.
   a. Liquid applied evaporation reducer.
   b. Continuous water-fogging
   c. Environment modification: sunshades, windscreens, enclosures
2. Final Curing:
   a. Continuous water fogging or sprinkling.
   b. Ponding.
   c. Moisture retaining cover.
   d. Liquid membrane-forming curing compound.
      1) Floor slabs to Receive Adhesive-Applied Flooring: Curing compounds and other surface coatings are usually considered unacceptable by flooring and adhesive manufacturers. If such materials must be used, obtain the approval of the flooring and adhesive manufacturers prior to use or remove the surface coating after curing to flooring manufacturer's satisfaction.
   e. Plastic Film

3.15 FIELD QUALITY CONTROL

A. The owners approved agent will engage independent testing agency to perform field quality control tests, as specified in Section **<< 014000 - Quality Requirements>>**.

B. Provide free access to concrete operations at project site and cooperate with appointed firm.

C. Submit proposed mix design**<< of each class of concrete; or None - N/A>>** to**<< inspection and; or None - N/A>>** testing firm for review prior to commencement of concrete operations.

D. Tests of concrete and concrete materials may be performed at any time to ensure compliance with specified requirements.

E. Testing Frequency: Obtain one composite sample for each day's pour of each concrete mixture exceeding 5 cu. yd, but less than 25 cu yds, plus one set for each additional 50 cu. yd. or fraction thereof.

F. When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.

G. Slump: ASTM C 143; one test at point of placement for each composite sample. Perform additional tests when concrete consistency (flowability) appears to change.

H. Air Content: ASTM C 231, pressure method, for normal-weight concrete; ASTM C 173, volumetric method, for structural lightweight concrete; one test for each composite sample.

DRAFT

I. Concrete Temperature: ASTM C 1064; one test hourly when air temperature is 40 deg F and below and when 80 deg F and above, and one test for each composite sample.

J. Unit Weight: ASTM C 567, fresh unit weight of structural lightweight concrete; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.

K. Compression Test Specimens: ASTM C 31.

1. Cast and laboratory cure one set of four 6-inch diameter or five 4-inch diameter cylinder specimens for each composite sample.

L. Compressive Strength Tests: ASTM C 39; test one laboratory-cured specimen at 7 days and one set of two 6-inch or three 4-inch specimens at 28 days. 56 day compression testing will not be deemed acceptable.

M. A compressive-strength test shall be the average compressive strength from a set of two 6-inch or three 4-inch specimens obtained from same composite sample and tested at age indicated.

N. Strength of each concrete mixture will be satisfactory if every average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength, and no compressive-strength test value falls below specified compressive strength by more than 500 psi.

O. Slab Testing: Cooperate with manufacturer of specified moisture vapor reducing admixture (MVRA) to allow access for sampling and testing concrete for compliance with warranty requirements.

P. Permeability Test: Test concrete with waterproofing admixture according to **<<COE CRD-C 48>>**.

Q. An independent testing agency, as specified in Section 014000 - Quality Requirements, will inspect installed reinforcement for compliance with contract documents before concrete placement.

R. Inspect erected formwork, shoring, and bracing to ensure that work is in accordance with formwork design, and to verify that supports, fastenings, wedges, ties, and items are secure.

S. Concrete: Refer to section 033543 Concrete for protection requirements.

3.16 DEFECTIVE CONCRETE

A. Test Results: The testing agency shall report test results in writing to **<<Architect>>** and **<<Contractor>>** within 24 hours of test.

B. Defective Concrete: Concrete not complying with required lines, details, dimensions, tolerances or specified requirements.

C. Repair or replacement of defective concrete will be determined by the **<<Architect>>**. The cost of additional testing shall be borne by **<<Contractor>>** when defective concrete is identified.

D. Do not patch, fill, touch-up, repair, or replace exposed concrete except upon express direction of **<<Architect>>** for each individual area.

3.17 PROTECTION

A. Do not permit traffic over unprotected concrete floor surface until fully cured.

END OF SECTION 033000

DRAFT

SECTION 033543
POLISHED CONCRETE FINISHING

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ANSI/NFSI B101.1 - Test Method for Measuring the Wet SCOF of Hard-Surface Walkways.

B. ANSI/NFSI B101.3 - Test Method for Measuring the Wet DCOF of Hard Surface Walkways.

C. ASTM C1353/C1353M - Standard Test Method for Abrasion Resistance of Dimension Stone Subjected to Foot Traffic Using a Rotary Platform Abraser.

D. ASTM D4039 - Standard Test Method for Reflection Haze of High-Gloss Surfaces.

E. ASTM D4541 - Standard Test Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers.

F. ASTM D5767 - Standard Test Method for Instrumental Measurement of Distinctness-of-Image (DOI) Gloss of Coated Surfaces.

G. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials.

H. ASTM G154 - Standard Practice for Operating Fluorescent Ultraviolet (UV) Lamp Apparatus for Exposure of Nonmetallic Materials.

I. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers Version 1.2.

J. CARB (SCM) - Suggested Control Measure for Architectural Coatings; California Air Resources Board.

K. SCAQMD 1113 - Architectural Coatings.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Coordinate work of this section with concrete floor placement and concrete floor curing.

B. Preinstallation Meeting: Conduct a preinstallation meeting **<< 10 days; or _____>>** prior to start of any concrete work. Preinstallation meeting for this section may be combined with preinstallation meeting for concrete per Section 033000 "Cast-in-Place Concrete." Conduct meeting at the Project site.

1. Items for Review:
    a. Contract document requirements.
    b. Approved submittals and mock-up requirements, including location and timing of test areas/mock-ups.
    c. Physical requirements of concrete slab and slab finish, including specific mix design(s), specified compressive strengths, and floor flatness requirements.
    d. Curing methods.
    e. Polished concrete finish requirements.
    f. Protection of surfaces not scheduled for finish application.
    g. Surface preparation.
    h. Application procedure, including details of each step of grinding, honing, and polishing operations, application of liquid applied products, and quality control.
    i. Procedures for edges and penetrations.
    j. Cleaning, including proper disposal of concrete slurry and concrete dust.

DRAFT

k. Methods of protection of polished concrete floors during construction and after completion of polishing work, including coordination with all trades to clarify requirements and responsibilities.
l. Coordination with other work.

2. Require attendance of parties directly affecting work of this section, including:
   a. Concrete producer's technical representative.
   b. Concrete installer.
   c. Concrete polishing contractor.
   d. General Contractor's representative.
   e. **<<Contractor>>**'s representative.
   f. **<<Architect>>**.
   g. Structural engineer.
   h. **<<Owner>>**'s representative.
3. Notify parties one week in advance of date and time of meeting.

1.03 SUBMITTALS

A. Product Data:
   1. Submit manufacturers specifications, technical data, test data, and written recommendations for storage, preparation, application and curing for each type of product indicated.
   2. Submit manufacturer's Material Safety Data Sheet (MSDS) and other safety requirement for each type of manufactured material and product indicated.

B. Submit Polishing Contractor’s recommended installation procedures which, when reviewed by the Architect, may become the basis for accepting or rejecting actual installation procedures used on the work.

C. Samples for initial selection, approximately 12-inches x 12-inches x 2-inches, to illustrate finished surfaces of polished concrete.

D. Manufacturer's Certification: Letter of certification from product manufacturer stating that installer is a certified applicator and is familiar with proper procedures and installation requirements required by the manufacturer.

E. Concrete Polishing Contractor Qualifications:
   1. Provide letter of certification from the Concrete Polishing Council (CPC) stating that installer is a certified applicator of special concrete finishes.
   2. Submit a list of previous projects similar to this project in design, extent, and scope.

F. Sustainable Design Submittals: Refer to Division 1 Section “Sustainable Design Requirements.”

1.04 QUALITY ASSURANCE

A. Concrete Polishing Contractor Qualifications:
   1. Shall be a company that has expertise in this type of work, sufficient production capability, successful completion of at least five projects similar to this project in size, and scope.
   2. Shall have an adequate number of personnel trained and experienced in this type of work, and shall have an on-site supervisor who is currently certified as Concrete Polishing Craftsman by the Concrete Polishing Council (CPC).
   3. Shall be approved/certified by the manufacturer for application of the liquid applied products.

DRAFT

4. Shall be familiar with the specified requirements and the methods needed for proper performance of work of this Section.

1.05 MOCK-UP

A. Construct mock-ups of each type finish, to demonstrate surface finish, color variation, typical joints, and standard of workmanship.

B. Cast concrete slab mock-ups approximately 10 ft x 10 ft in the location indicated or if not indicated, as directed by the Architect.

C. Placement, grinding, and polishing work shall be performed by the same personnel who will be doing this work on the Project.

D. Notify Architect seven days in advance of dates and times when mock-ups will be constructed, when practical.

E. Obtain approval of mock-ups from the Architect before starting actual work. If the Architect determines the mock-ups do not meet requirements, demolish and remove them from the site and cast others until mock-ups are approved.

F. Maintain approved mock-ups during construction in an undisturbed condition as a standard for judging the completed work.

G. When approved by Architect, approved mock-ups may remain as part of the finished work if undamaged and clean at time of Substantial Completion.

1.06 PROTECTION

A. Prevent petroleum or rust stains on concrete slab. No satisfactory chemical or cleaning procedure is available to remove petroleum and rust stains from the concrete surface. Prevention is therefore essential.

B. All equipment shall be diapered to avoid staining of the concrete from petroleum, oil, hydraulic fluid, or other liquid dripping from equipment over concrete surfaces.

C. Do not allow trades to park vehicles on the interior floor slab. If vehicles must be driven on interior slabs, drop cloths shall be placed under vehicles at all times.

D. Do not allow pipe cutting machine to be used or set up on the interior floor slab.

E. Steel, cans, and steel containers shall not be placed on interior slab, to avoid rust staining.

F. All equipment must be equipped with non-marking tires.

G. Equipment with soft rubber tires prone to picking up screws and nails shall be equipped with canvas tire bags.

H. Slabs subject to masonry construction, mortar spoils, pallet movers, forklifts, and scaffolding shall be protected with a breathable product and plywood or OSB until all masonry operations are complete

I. Do not tape protective coverings to concrete.

J. Prohibit use of markers, spray paint and soap stone.

K. Protect from painting activities over interior floor slab.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's sealed packaging, including application instructions.

B. Store materials to comply with manufacturer's written instructions to prevent deterioration from moisture or other detrimental effects.

DRAFT

C. Dispense special concrete finish material from factory numbered and sealed containers. Maintain record of container numbers.

1.08 FIELD CONDITIONS

A. Ambient Conditions: Verify that field conditions are within manufacturer's allowable range prior to application.

PART 2 PRODUCTS

2.01 MATERIALS AND MANUFACTURERS

A. Penetrating Liquid Floor Treatment (Densifier and Stain Resistance): Penetrating chemical compound that reacts with concrete, fillng the pores and hardening, and dustproofing. Colorless, odorless, and zero VOC. Breathable treatment which permits moisture transmission through concrete.
   1. Composition: Lithium silicate.
   2. Abrasion Resistance: Greater than 50 percent improvement compared to untreated sample in accordance with **<<ASTM C1353/C1353M>>**.
   3. Treated Material Slip Resistance: High traction range when tested according to **<<ANSI/NFSI B101.1>>** and **<<ANSI/NFSI B101.3>>**.
   4. Adhesion: Greater than 10 percent increase in pull-off strength compared to untreated sample when tested according to **<<ASTM D4541>>**.
   5. Water Vapor Transmission: Zero perms compared to untreated sample when tested according to **<<ASTM E96/E96M>>** Method B.
   6. UV Stability: No degradation or yellowing when tested in accordance with **<<ASTM G154>>**.
   7. Products:
      a. Bomanite Corporation; Stabilizer Pro.
      b. Laticrete International; L&M FGS Hardener Plus.
      c. Sika; Scofield Formula One Lithium Densifier.
      d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Protective Sealer: Provide manufacturer's recommended **<< low-gloss; medium-gloss; or high-gloss>>** solvent-based penetrating clear protective treatment and stain guard.
   1. Sealers/Coatings: Sealers and coatings field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet applicable VOC limits of **<<CARB (SCM)>>** or **<<SCAQMD 1113>>**.

2.02 RELATED MATERIALS

A. Water: Clean and potable.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrate, with concrete base slab installer and Concrete Polishing Contractor present, for conditions affecting performance of finish. Correct conditions detrimental to timely and proper work. Do not proceed until unsatisfactory conditions are corrected.

B. Verify that base slab meets requirements of Division 3 Section “Cast-In-Place Concrete.”
   1. Finished floor flatness.

DRAFT

2. Curing methods.
3. Compressive strength.

3.02 APPLICATION

A. Prepare floor for hardener-sealer application with specified diamond grinding steps, followed by the application of hardener-sealer and final polishing steps.

B. Machine grind floor surfaces to receive polished finishes level and smooth, and to depth required to reveal aggregate to exposure **<< Class A - Cement Fines; cement fines, 85 to 95 percent; fine aggregates, 5 to 15 percent; Class B - Fine Aggregate; fine aggregates, 85 to 95 percent; cement fines and coarse aggregate blend, 5 to 15 percent; Class C - Coarse Aggregate; coarse aggregate and cement fines, 80 percent; fine aggregate and cement fines blend, 10 to 20 percent; or _____>>**; per Concrete Polishing Council aggregate exposure guidelines, and to match approved mockup.

C. Polish interior slabs to **<< Level 4 - Highly Polished, image clarity value 70 to 100 percent; Level 3 - Polished, image clarity value 40 to 69 percent; Level 2 - Satin, image clarity value 10 to 39 percent; Level 1 - Flat, image clarity value 0 to 9 percent; or _____>>** per Concrete Polishing Council appearance guidelines, and to match approved mockup.

1. Image Clarity: Image clarity value per above value shall be measured in accordance with **<<ASTM D5767>>**; prior to application of sealer (if applicable).
2. Haze Index: Haze index average less than 10 shall be measured in accordance with **<<ASTM D4039>>**; prior to application of sealer (if applicable).

D. Hardening and Polishing of Concrete Surface:

1. Concrete must be in place a minimum of 28 days or as directed by the manufacturer before application can begin.
2. Only a certified applicator shall apply hardener. Applicable procedures shall be followed as recommended by the product manufacturer and as required to match approved test sample.
3. Apply hardener for polished concrete in polishing sequence and according to manufacturer's written instructions, allowing recommended drying time between successive coats.
4. Achieve waterproofing, hardening, dust-proofing and abrasion resistance of the surface without changing the natural appearance of the concrete, except for the sheen.
5. Finish to within 1/2-inch of vertical surfaces.
6. Properly dispose of collected dry dust from polishing.

3.03 WORKMANSHIP AND CLEANING

A. Maintain polished concrete clean and free of stains and debris

B. Remove spatter from adjoining surfaces.

C. Repair damage to adjacent surfaces caused by cleaning operations.

D. Dispose of materials in accordance with local regulations.

E. Grind and polish in multiple passes with each full pass in direction perpendicular to previous pass.

F. Fill gaps, voids, and pop-outs during grinding operation.

3.04 PROTECTION

A. Final Protection of Polished Concrete:

DRAFT

1. Protective Sealer:
   a. Stop spreading treatment material when drying begins.
   b. Avoid overlapping treatment material.
   c. Allow to dry tack-free before burnishing slab surface in accordance with manufacturer's recommendations.
   d. Repeat treatment with additional coats as required by manufacturer.
   e. For increased gloss or reduced haze as necessary, allow final coat to dry before burnishing slab surface in accordance with manufacturer's recommendations.
2. Following completion of the final polishing, surface shall be covered to protect from other trades. Cover with breathable product, such as Kraft paper or thin curing blanket. Do not cover with Masonite, plywood, or polyethylene.
3. Do not allow wheeled equipment or vehicles onto concrete after polishing is complete.

B. Clean spills on slab surfaces immediately, with manufacturer's recommended chemicals and absorptive materials.

C. No haze, white residue, streaking, or burnish marks permitted.

T. PCI MNL-120 - PCI Design Handbook.

U. PCI MNL-122 - Architectural Precast Concrete.

V. PCI MNL-123 - Connections Manual: Design and Typical Details of Connections for Precast and Prestressed Concrete.

W. PCI MNL-135 - Tolerance Manual for Precast and Prestressed Concrete Construction.

DRAFT

1.02 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene a minimum of two weeks prior to commencing work of this section.

1.03 SUBMITTALS

A. Product Data: Manufacturer's information on accessory products, including pigments, admixtures, inserts, plates, etc.

B. Shop Drawings: Indicate layout, unit locations, configuration, unit identification marks, reinforcement, connection details, support items,**<< location of lifting devices,; or None - N/A>>** dimensions, openings, and relationship to adjacent materials. **<< Provide erection drawings.; or None - N/A>>**

1. Include special details and shapes such as building corners, window sills, keystones, and others as applicable.
2. Include joint and reveal sizes, materials, and styles.
3. Include details of mix designs.
4. Include structural design calculations.

C. Sustainable Design Submittals: Refer to Division 1 Section "Sustainable Design Requirements."

D. Samples: Provide manufacturer's standard size samples illustrating surface finish, color, and texture.

E. Test Reports: Submit test reports by an independent testing agency, for concrete materials, reinforcing, admixtures, and water-absorption testing.

1. When approved by Architect, in lieu of test reports, fabricator may submit signed certificates in writing indicating material compliance with requirements.

F. Designer's Qualification Statement.

G. Welders' Qualification Statement: Welders' certificates in accordance with **<<AWS B2.1/B2.1M>>** and dated no more than 12 months before start of scheduled welding work.

1.04 QUALITY ASSURANCE

A. Design Engineer Qualifications: Design precast concrete units, including concrete mixes, reinforcement, anchorages, and supports, under direct supervision of a Professional Structural Engineer experienced in design of precast concrete and licensed in **<<the State in which the Project is located>>**.

B. Fabricator Qualifications: Comply with at least one of the following:

1. Plant certified under Precast/Prestressed Concrete Institute Plant Certification Program; product group and category A1 - Architectural Precast Concrete.
2. Plant certified under Architectural Precast Association Plant Certification Program for production of architectural precast concrete.

C. Installer Qualifications: Company specializing in performing installation work for architectural precast, including overhead applications; specifically trained or certified by fabricator for installation of architectural precast products.

D. Welder Qualifications: Welding processes and welding operators qualified in accordance with **<<AWS D1.1/D1.1M>>** and no more than 12 months before start of scheduled welding work.

E. Quality Standards: Comply with requirements of the following publications:

1. PCI MNL-120 "PCI Design Handbook - Precast and Prestressed Concrete" for design and fabrication requirements.

DRAFT

2. PCI MNL-117 "Manual for Quality Control for Plants and Production of Architectural Precast Concrete Products" for material, forming, testing, finish, and other quality control requirements.
3. PCI MNL-135 "Tolerance Manual for Precast and Prestressed Concrete Construction" for manufacturing, fabrication, and installation tolerances.

1.05 MOCK-UPS ****VERIFY MOCKUP TYPE ON CASE-BY-CASE BASIS AND KEEP APPLICABLE PARAGRAPH BELOW****

A. See Section **<< 014000 - Quality Requirements>>** for additional requirements.

B. Integrated Exterior Mockup: Attend preinstallation conference and provide precast work for integrated exterior mockup as indicated on Drawings and as specified in Division 1 Section "Quality Requirements."

C. Mockup: Attend masonry preinstallation conference and provide precast work for masonry sample panel indicated in Division 4 Section "Unit Masonry."

1.06 DELIVERY, STORAGE, AND HANDLING

A. Handling: Lift and support precast units only from support points.

B. Blocking and Lateral Support During Transport and Storage: Use materials that are clean, non-staining, and non-harmful to exposed surfaces. Provide temporary lateral support to prevent bowing and warping.

C. Protect units to prevent staining, chipping, or spalling of concrete.

D. Mark units with date of production in location that will be concealed after installation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Architectural Precast Concrete Fabricators:
1. American Stone Virginia, LLC; Ladysmith, VA.
2. Arban Precast, Ltd.; Dumfries, VA.
3. Cast Stone Systems, Inc.; Warrenton, NC.
4. Gate Precast Company; Oxford, NC.
5. Metromont Corp.; Richmond, VA/Charlotte, NC/Greenville, SC.
6. Seaboard Concrete Products Co.; Richmond VA.
7. Southern Castings, Inc.; Valdosta, GA.
8. Smith Midland; Midland, VA.
9. Tindall Corp.; Petersburg VA/Spartanburg, SC.
10. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.02 PRECAST UNITS, GENERAL

A. Precast Architectural Concrete Units: Comply with **<<PCI MNL-120>>**, **<<PCI MNL-122>>**, **<<PCI MNL-123>>**, **<<PCI MNL-135>>**, and **<<ACI CODE-318>>**.
1. Concrete Face and Backup Mixtures: Minimum 5000 psi, 28 day strength; comply with **<<ACI SPEC-301>>**.
2. Water Absorption: 6% by weight or 14% by volume, when tested according to **<<ASTM C642>>**, except for boiling requirement.

DRAFT

3. Design Loads: Static loads, anticipated dynamic loading, including positive and negative wind loads, thermal movement loads, and erection forces as defined by applicable code.
4. Calculate structural properties of units in accordance with **<<ACI CODE-318>>**.
5. Accommodate construction tolerances, deflection of building structural members, and clearances of intended openings.
6. Provide connections that accommodate building movement and thermal movement and adjust to misalignment of structure without unit distortion or damage.

B. Decorative Precast Architectural Sphere Bollards: Comply with PCI MNL-120, PCI MNL-122, PCI MNL-123, and PCI MNL-135.
1. Manufacturers:
a. Belson Outdoors; Precast Concrete Sphere Bollards. ******MCPS preferred Basis of Design product.******
b. Petersen Manufacturing Co, Inc; BB Bollard Series.
c. Post Guard by Encore Commercial Products, Inc; Concrete Round Ball Sphere Bollard.
d. Wausau Tile; Concrete Sphere Bollard.
2. Size: **<< 12 inches; 18 inches; 24 inches; 30 inches; 36 inches; or <u>As indicated on Drawings</u>>>**.
3. Texture: Smooth.
4. Finish: Stained concrete.
5. Color: As selected by Architect from manufacturer's full range.
6. Anchor Method: Barricade installation.

C. Sustainability: Coordinate with Division 01 Section "Sustainable Design Requirements." Provide reports and/or mix designs indicating amount of Portland cement replaced by fly ash, silica fume or other recycled waste material.
1. Provide information indicating amount of recycled content in steel reinforcing, anchors, inserts, and other metal components.

D. Finish Type: Provide a light sandblast or acid etch finish for a smooth surface texture.
1. Color: Shall be selected from manufacturer's full range.

DRAFT

2.03 REINFORCEMENT

A. Reinforcing Steel: **<<ASTM A615/A615M>>**, Grade 60 (60,000 psi), deformed billet-steel bars.

B. Steel Welded Wire Reinforcement (WWR): **<<ASTM A1064/A1064M>>**; plain type; galvanized steel wire fabricated into flat sheets.

2.04 CONCRETE MATERIALS

A. Cement: **<<ASTM C150/C150M>>**, Type I - Normal Portland type, or Type III - High Early Strength.

B. Other Cementitious Materials:
1. Fly Ash or Natural Pozzolans: Comply with **<<ASTM C618>>**.

C. Fine and Coarse Structural Aggregates: **<< <u>ASTM C33/C33M</u>; or _____>>**.

D. Lightweight Structural Aggregate: **<< <u>ASTM C330/C330M</u>; or _____>>**.

E. Color Additives: Pure, concentrated mineral pigments specifically intended for mixing into concrete and complying with **<<ASTM C979/C979M>>**.
1. Color(s): As selected by **<<Architect>>** from manufacturer's full range.

F. Water: **<<ASTM C1602/C1602M>>**; clean, potable, and not detrimental to concrete.

G. Air Entrainment Admixture: **<<ASTM C260/C260M>>**.

2.05 MORTAR

A. Mortar and Mortar Mix: Comply with Division 04 Section "Unit Masonry" for mortar materials and mixes.

2.06 SUPPORT DEVICES

A. Connecting and Support Devices; Anchors and Inserts: **<<ASTM A36/A36M>>** steel; hot-dip galvanized in accordance with **<<ASTM A153/A153M>>**.
   1. Clean surfaces of rust, scale, grease, and foreign matter.
   2. Galvanize after fabrication in accordance with requirements of **<<ASTM A123/A123M>>**.

B. Bolts, Nuts, and Washers: **<<ASTM A307>>** heavy hex bolts, Type A, hot-dip galvanized, with matching **<<ASTM A563/A563M>>** nuts and matching washers.

C. Primer: Zinc rich type.

2.07 FABRICATION

A. Fabricate in compliance with **<<PCI MNL-117>>** and **<<PCI MNL-135>>**.

B. Maintain plant records and quality control program during production of precast units. Make records available upon request.

C. Use rigid molds, constructed to maintain precast unit uniform in shape, size, and finish.

D. Use form liners in accordance with manufacturer's instructions.

E. Maintain consistent quality during manufacture.

F. Fabricate connecting devices, plates, angles, items fit to steel framing members, inserts, bolts, and accessories. Fabricate to permit initial placement and final attachment.

G. Embed reinforcing steel, anchors, inserts plates, angles, and other cast-in items.

H. Cure units to develop concrete quality, and to minimize appearance blemishes such as non-uniformity, staining, or surface cracking.

I. Minor patching in plant is acceptable, providing structural adequacy and appearance of units is not impaired.

2.08 FABRICATION TOLERANCES

A. Comply with **<<PCI MNL-117>>** and **<<PCI MNL-135>>**, except as specifically amended below.
   1. Maximum Variation From Nominal Face Dimensions: Plus or minus 3/32 inch.
   2. Maximum Variation From Square or Designated Skew: Plus or minus 1/8 inch in 10 feet.
   3. Maximum Variation from Thickness: Plus or minus 1/8 inch.
   4. Maximum Misalignment of Anchors, Inserts, Openings: Plus or minus 1/8 inch.
   5. Maximum Bowing of Members: Plus or minus length/360.

2.09 SOURCE QUALITY CONTROL

A. Provide testing and analysis of concrete mix. Testing and analysis may be performed by qualified plant personnel or by third party testing agency.

B. Take concrete test cylinders as required to test for compressive strength, water-cement ratio, and other performance requirements indicated.

DRAFT

C. Take air entrainment test cylinder for each set of exterior concrete test cylinders taken.

D. Take water absorption test in accordance with **<<PCI MNL-117>>**.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that building structure, anchors, devices, and openings are ready to receive work of this section.

3.02 PREPARATION

A. Provide for erection procedures and induced loads during erection. Maintain temporary bracing in place until final support is provided.

3.03 ERECTION

A. Erect units without damage to shape or finish. Replace or repair damaged panels.

B. Erect units level and plumb within allowable tolerances.

C. Align and maintain uniform horizontal and vertical joints as erection progresses.

D. Mechanical Fastening: Secure **<< overhead units (such as lintels); copings; large precast panels; and other precast elements, as determined by fabricator's engineer>>**, with mechanical connections or by welding of cast in anchors/studs to supporting structure, in accordance with fabricator's approved erection drawings.

E. Precast Laid in Mortar: Provide full bed joint at sills, water tables, and similar precast elements. Rake bed joint back for pointing mortar, and point joint slightly concave. Coordinate with flashings, weeps, and other cavity wall materials.

F. Joints Between Precast Pieces or Between Precast and Other Materials:

1. Provide sealant head joints where precast is exposed horizontally or protrudes from wall surface (for example, at all copings, sills, water tables, and similar shapes).
2. Provide sealant joints at expansion and control joints, above shelf angles or other pressure-relieving joints, and at other building joints.
3. Where precast is completely flush to adjacent wall surface (precast accent course without protruding from wall surface), all head and bed joints may be pointed with mortar.
4. Prime precast before installation of sealant, as required by manufacturer for proper adhesion.
5. Provide compressible filler/backer rod and sealant per Division 7 Section "Joint Sealants."
6. Tool all precast joints (mortar and sealant) slightly concave.

G. Exposed Joint Dimension: 1/2 inch. Adjust units so that joint dimensions are within tolerances.

3.04 TOLERANCES

A. Erect members level and plumb within allowable tolerances. Comply with **<<PCI MNL-135>>**.

3.05 REPAIR AND CLEANING

A. Repair precast that is damaged during construction to create a uniform match to adjacent precast. If repair is unable to match to the satisfaction of the Owner, remove and replace the damaged piece of precast.

B. Clean precast of soil, mortar, and other stains or markings.

DRAFT

3.06 PROTECTION

A. Protect installed precast concrete from subsequent construction operations.

END OF SECTION 034500

DRAFT

SECTION 035400
CAST UNDERLAYMENT

PART 1 GENERAL

PART 2 PRODUCTS

1.01 MANUFACTURERS

A. Cementitious Underlayment:
   1. ARDEX Engineered Cements; ARDEX K 15 with ARDEX P51 Primer.
   2. Custom Building Products; CL-150 Self-Leveling Underlayment with CP-A Acrylic Primer.
   3. Dayton Superior Corporation; EconoLevel with J42 Primer.
   4. Dependable Chemical Co., Inc; SKIMFLOW ES with PRIMER A.
   5. Lambert Corporation; Lambco L-16 Self-Level with Primer L16.
   6. LATICRETE International, Inc; LATICRETE SUPERCAP SC500 with LATICRETE SUPERCAP Primer Plus.
   7. MAPEI Corporation; Ultraplan 1 Plus with Primer T.
   8. Maxxon Corporation; Level-One EZ with Multi-Use Acrylic Primer.

1.02 MATERIALS

A. Cast Underlayments, General:
   1. Comply with applicable code for combustibility or flame spread requirements.
   2. Provide certificate of compliance from authority having jurisdiction indicating approval of underlayment materials in the required fire rated assembly.

B. Cementitious Underlayment: Blended cement mix, producing self-leveling underlayment with the following properties when mixed with water in accordance with manufacturer's directions:
   1. Compressive Strength: Minimum **<< 4000 pounds per square inch; 5000 pounds per square inch; 8000 pounds per square inch; or _____ pounds per square inch>>** after 28 days, tested per **<<ASTM C109/C109M>>**.
   2. Flexural Strength: Minimum **<< 1,000 psi; 1,250 psi; or _____ psi>>** after 28 days, tested in accordance with **<<ASTM C348>>**.
   3. Density: 125 pounds per cubic foot, nominal.
   4. Final Set Time: 1-1/2 to 2 hours, maximum.
   5. Thickness: Capable of thicknesses from feather edge to maximum **<< 3-1/2 inches; or _____ inches>>**.
   6. Surface Burning Characteristics: Flame spread index of 0 and smoke developed index of 0 when tested in accordance with **<<ASTM E84>>**.

C. Aggregate: Dry, well-graded, washed silica aggregate, approximately **<< 1/8 inch; 1/4 inch; or _____ inch>>** in size and acceptable to underlayment manufacturer.

D. Water: **<<ASTM C1602/C1602M>>**; clean, potable, and not detrimental to underlayment mix materials.

E. Joint and Crack Filler: Latex-based filler, as recommended by manufacturer.

DRAFT

PART 3 EXECUTION

2.01 EXAMINATION

A. Verify substrate surfaces are clean, dry, unfrozen, and do not contain petroleum byproducts or other compounds detrimental to underlayment material bond to substrate.

2.02 PREPARATION

A. Concrete: Mechanically prepare steel troweled concrete to create surface to achieve bond; permitted methods include bead blasting and scarifying. Do not use acid etching.

B. Remove substrate surface irregularities. Fill voids and deck joints with filler. Finish smooth.

C. Vacuum clean surfaces.

D. Prime substrate in accordance with manufacturer's instructions. Allow to dry.

2.03 APPLICATION

A. Apply underlayment in accordance with manufacturer's instructions.

B. Pump or pour material onto substrate. Do not retemper or add water.

1. Pump, move, and screed while material is still highly flowable.
2. Be careful not to create cold joints.
3. Wear spiked shoes while working in wet material to avoid leaving marks.

C. For final thickness over **<< 1-1/2 inches>>**, place underlayment in layers. Allow initial layer to harden to point where material loses evaporative moisture. Immediately prime and begin application of subsequent layer within 24 hours.

D. Where additional aggregate is used, add top layer of mix without aggregate, if needed, to level and smooth surface.

E. If a fine, feathered edge is required for transition, steel trowel the edge after initial set, but before it is completely hard.

2.04 CURING

A. Once underlayment starts to set, prohibit foot traffic until final set is reached.

B. Air cure in accordance with manufacturer's instructions.

2.05 PROTECTION

A. Protect against direct sunlight, heat, and wind; prevent rapid drying to avoid shrinkage and cracking.

B. Do not permit traffic over unprotected floor underlayment surfaces.

OO. BIA Technical Notes No. 46 - Maintenance of Brick Masonry.

PP. NCMA TEK 08-02A - Removal of Stains from Concrete Masonry.

QQ. NCMA TEK 10-04 - Crack Control for Concrete Brick and Other Concrete Masonry Veneers.

RR. NCMA TEK 12-01B - Anchors and Ties for Masonry.

SS. NCMA TEK 12-02B - Joint Reinforcement for Concrete Masonry.

TT. PCI MNL-116 - Manual for Quality Control for Plants and Production of Structural Precast Concrete Products.

UU. TMS 402/602 - Building Code Requirements and Specification for Masonry Structures.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene a preinstallation meeting at the Project site at least two weeks before starting work of this section; require attendance by all relevant installers.

1.03 SUBMITTALS

A. Product Data: Provide data for **<< masonry units; fabricated wire reinforcement; mortar; masonry accessories; and _____>>**.

1. Installation Instructions for Cold- and Hot-Weather: Provide a detailed description of the procedures that will be used to comply with **<<TMS 402/602>>** for cold- and hot-weather, including materials and equipment that will be used.

B. Shop Drawings: Indicate pertinent dimensions, materials, anchorage, size and type of fasteners, and accessories, for each type of masonry.

1. Provide elevations indicating steel reinforcing bar locations; provide details of reinforcing including bends and cross-sections, in accordance with **<<ACI SP-66>>**.
2. Indicate control and expansion joint locations.
3. Provide flashing details indicating corners, end dams, and other special conditions.
4. Calcium Silicate Masonry Units: For a substitute product meeting **<<ASTM C90>>** to be considered, submit shop drawings of all elevations indicating locations of control, expansion, and other movement joints. ******Keep if using Arriscraft as basis-of-design******

C. Temporary Bracing Plan:
   1. Provide a temporary bracing plan for the information only

D. Sustainability Submittals: Refer to Division 1 Section "Sustainable Design Requirements."

E. Samples: All veneer types and mortar selections will be verified in mock-up panel.
   1. Provide color charts or other printed selection samples for decorative masonry (for example, split face, ground face, glazed brick, as applicable) prior to furnishing for mockup.
   2. Provide color charts or other printed selection samples for exposed accessories and trim requiring color selection.

F. Temporary Bracing Plan:
   1. Provide a temporary bracing plan for the information only of the Architect; plan shall be submitted a minimum of two weeks prior to initiating masonry Work.
   2. The bracing plan shall be based on the Mason Contractors Association of America's "Standard Practice for Bracing Masonry Walls Under Construction" and "Masonry Wall Bracing Design Handbook," or other industry reconginzed standard.
   3. Bracing plan shall be reviewed by a Professional Structural Engineer licensed in the State of Maryland; Professional Structural Engineer shall provide a letter certifying their review of the plan and acknowledgement of its completeness.
   4. The bracing plan and Professional Structural Engineer's letter shall indicate project conditions unique to any referenced standard and provide for the unique bracing required for those conditions.
   5. Maintain one copy of any industry standard referenced within the plan at the Project site.

G. Material Certificates and Test Reports: Provide manufacturer's certificates and test reports for the following:
   1. Masonry Units:
      a. Brick: Size data including fabrication tolerances.
      b. Brick: Efflorescence test, per **<<ASTM C67/C67M>>**.
      c. Masonry Units: Compressive strength test data.
      d. Concrete Masonry: Data indicating aggregates comply with **<<ASTM C33/C33M>>** (normal weight), **<<ASTM C331/C331M>>** (lightweight), and **<<ASTM C618>>** (fly ash).
   2. Mortar and Grout Mixes: Provide description and proportion of materials for each type of mortar and grout.
   3. Provide material certificates for each type of metal accessory, including reinforcing bars, joint reinforcement, veneer ties and anchors, and other indicated accessories, indicating compliance with requirements.

H. Cold- and Hot-Weather Procedures: Provide a detailed description of the procedures that will be used to comply with **<<TMS 402/602>>** for cold- and hot-weather, including materials and equipment that will be used.

I. Masonry Contractor's Qualification Statement.

1.04 QUALITY ASSURANCE

A. Masonry Contractor's Qualifications:
   1. Masonry contractor shall have at least 10 years' experience in masonry construction of type and scope

B. Comply with provisions of **<<TMS 402/602>>**, except where exceeded by requirements of Contract Documents.

C. Fire Rated Assemblies: Provide products that comply with fire-resistance ratings indicated as determined by testing according to **<<ASTM E119>>**, by equivalent testing thickness, or by means acceptable to authorities having jurisdiction.

D. Source Limitations for Masonry: Provide each type of masonry unit from a single manufacturer's plant, sourced through a single supplier. Each type of masonry unit shall maintain consistency of color and texture for all product required on the entire project. The approved mockup/sample panel shall be used to determine acceptable color and texture range.
   1. Source Limitations for Decorative Concrete Masonry: Provide decorative concrete veneers from a manufacturer with a quality control agreement with water repellant manufacturer, certifying that units have been manufactured with integral water repellant to conform to performance requirements indicated. Provide current certificate from water repellant manufacturer confirming conformance.

E. Source Limitations for Mortar: Provide each mortar mix from a single manufacturer, sourced through a single supplier. Each required mortar mix shall maintain consistency of each component, including cementitious materials and aggregate, to provide consistent color and texture for all product required on the entire project. The approved mockup/sample panel shall be used to determine acceptable color and texture range.

F. Aggregate for Concrete Masonry Units: If bottom ash is used as aggregate in the CMU, the Source for the bottom ash shall be a power station that has a minimum of ten (10) years continuous experience as a supplier of quality material as verified by independent certified laboratory testing and no defects in the marketplace.

G. Pre-Construction Testing: Owner shall engage an independent testing agency to perform field quality control tests, in accordance with Section **<< 014000 - Quality Requirements>>**.
   1. Clay Masonry Unit Tests: Testing agency shall test each variety of clay masonry in accordance with **<<ASTM C67/C67M>>** compressive strength requirements.
   2. Concrete Masonry Unit Tests: Testing agency shall test each variety of concrete unit masonry in accordance with **<<ASTM C140/C140M>>** compressive strength requirements.

1.05 MOCK-UPS ******VERIFY USE OF A SAMPLE PANEL VERSUS A FULL INTEGRATED MOCKUP BASED ON PROJECT SIZE AND MCPS REQUIREMENTS******

A. Sample Panel: Build a sample panel approximately 60 inches long by 48 inches high. Include each type of masonry veneer and mortar. Include a sealant filled control joint. **<< Construct sample panel next to existing wall to verify masonry veneer and mortar provide an acceptable match to existing.; or None - N/A>>** ******Sample panel for smaller jobs. Adjust size or language here as needed, depending on number of veneer materials and other components to include******

B. Integrated Exterior Mockups: Attend preinstallation conference and provide masonry work for integrated exterior mockup as indicated on Drawings and as specified in Division 1 Section "Quality Requirements."

1.06 FIELD CONDITIONS

A. Wall Cavity Protection: Provide temporary waterproof sheet coverings over masonry walls at top of walls, sills, parapets, and other horizontal projections. Install coverings at end of each workday, when rain or precipitation is expected, and after masonry work is completed.
   1. Extend coverings down vertically at least 24 inches on each side of masonry wall. At multi-wythe walls where one wythe is more than 24 inches taller than other wythe(s), extend covering as required to fully cover all wythes and cavities.
      a. At roof parapets, extend covering on rear side of parapet full height down to roof deck/membrane, until vertical protection/roof membrane is installed.
   2. Secure all coverings in place with tape or adhesive that does not leave residue, or other securement method that does not penetrate or damage permanent construction.
   3. Provide protective coverings at sills and horizontal projections that can also serve as protection from mortar droppings.
   4. Provide protective coverings over tops of foundation walls containing insulation to protect from exposure to sun and from construction traffic damage.
   5. Do not remove or allow removal of temporary covers until permanent top of wall protection elements (coping, sill, roof surface, waterproof membrane, etc) are underway.

B. Cold- and Hot-Weather Requirements: Comply with requirements of **<<TMS 402/602>>** or applicable building code, whichever is more stringent.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver, handle, and store masonry units by means of that will prevent mechanical damage and contamination by other materials.

PART 2 PRODUCTS

2.01 CONCRETE MASONRY UNITS

A. Concrete Block: Comply with referenced standards and as follows:
   1. Size: Standard units with nominal face dimensions of **<< 16 by 8 inches>>** and nominal depths as indicated on drawings for specific locations.
   2. Special Shapes: Provide nonstandard blocks configured for corners, lintels, headers, conditions indicated below, and as detailed on Drawings.
      a. Provide bullnose units for outside corners.
      b. Provide solid block with bullnosed top edges at free-standing CMU walls and where top of block is exposed at window sills and similar applications.
   3. Concrete Masonry Units: **<<ASTM C90>>**, lightweight.
      a. Exposed Faces: Manufacturer's standard color and texture.
      b. Aggregates:
         1) Lightweight Aggregates: Lightweight aggregate shall strictly comply with **<<ASTM C331/C331M>>**, **<<ASTM C151>>**, and **<<ASTM C641>>**. Drying shrinkage of aggregate shall not exceed 0.10% at 100 days.
         2) Fly ash, waste concrete, bottom ash, scoria, and aglite shall not be permitted. ******MCPS Standard to not allow fly ash.******
   4. Decorative Concrete Block: **<<ASTM C90>>**, normal weight.
      a. Pattern: Manufacturer's standard **<< ground-face; or split-face>>** pattern.

b. Pattern: Scored **<< ground-face; or split-face>>** with **<< (1); (2); or (3)>>** 3/8-inch vertical rib(s). ******Most common specialty pattern of decorative CMU, other options are available from manufacturer******

c. Wall-Mounted Devices: Where a heavily textured product such as **<< split-face>>** is indicated, provide a smooth textured block (ground-face, cast stone, or similar) in a matching color at all locations where wall-mounted devices are indicated (such as electrical outlets, cameras, light fixtures, etc). Coordinate with M/E/P, communications, electronic security, and door hardware subcontractors as applicable to determine all final mounting locations and heights. ******MCPS request to include - verify need for this on a case-by-case basis if using textured veneer types******

d. Size: Match standard nominal dimensions per "Concrete Block" paragraph above.

e. Color: To be selected by Architect from manufacturer's full range.

f. Provide integral water repellent and companion mortar additive at all exterior decorative CMU.

g. Topcoat: Where recommended by manufacturer of ground-face units, provide clear acrylic top-coat, minimum 20 percent solids content.

h. Integral Water Repellent: Provide all decorative concrete block units as specified in this section with a polymeric liquid or powder admixture added to concrete masonry units at time of manufacture.

1) Performance of Units with Integral Water Repellent:

(a) Water Permeance: When tested per **<<ASTM E514/E514M>>** and for a minimum of 72 hours.

(1) No water visible on back of wall above flashing at the end of 24 hours.

(2) No flow of water from flashing equal to or greater than **<< 0.032 gallons per hour>>** at the end of 24 hours.

(3) No more than 25 percent of wall area above flashing visibly damp at end of test.

(b) Flexural Bond Strength: **<<ASTM C1072>>**; minimum 10 percent increase.

(c) Compressive Strength: **<<ASTM C1314>>**; maximum 5 percent decrease.

2) Use only in combination with mortar that also has integral water repellent admixture.

(a) Use water repellent admixtures for masonry units and mortar by a single manufacturer.

3) Available Products: Provide one of the following or comparable product approved by block manufacturer.

(a) ACM Chemistries; RainBloc.

(b) BASF Aktiengesellschaft; Rheopel Plus.

(c) Grace Construction Products (W.R. Grace & Co.); Dry-Block.

B. Concrete Brick:

1. Actual Size: 3-5/8 inches wide by 2-1/4 inches high by 7-5/8 inches long.
2. Concrete Building Brick: **<<ASTM C55>>**; lightweight, solid, for interior or concealed use.

2.02 BRICK UNITS

A. Unit Cost Allowance: Face brick shall be furnished via unit cost allowance. Unit cost shall cover purchase of brick and transport to the project site.

1. Face Brick Unit Cost: **<< Five Hundred Dollars ($500); or _____>>** per thousand.
2. The unit cost shall not cover installation, overhead or profit.

3. Bidders and material suppliers are responsible for determining cost to produce special shape units, such as "lipped" brick units.
4. The Contract Sum will be adjusted to reflect the actual cost of selected brick in accordance with the General Conditions. The Contractor shall submit receipts and initiate Change Order process.
5. The Contractor is reminded that unit cost includes all required taxes, less applicable trade discounts, in accordance with the General Conditions.

B. Facing Brick: **<<ASTM C216>>**, Type FBS or FBX, Grade SW.
1. Color and Texture: Match existing, to the approval of Owner and Architect. ******Option for existing buildings that allows Contractor to submit closest matches for review******
2. Color and Texture: Provide Basis-of-Design selection(s) below or comparable product submitted as a substitution and approved by Owner and Architect: ******Option for projects where Architect has already selected acceptable product(s)******
   a. Face Brick 1: **<< _____>>**.
   b. Face Brick 2: **<< _____>>**.
3. Actual Size: 3-5/8 inches wide by 2-1/4 inches high by 7-5/8 inches long (modular).
4. Actual Size: 3-5/8 inches wide by 3-5/8 inches high by 11-5/8 inches long (utility).
5. Actual Size: 3-5/8 inches wide by 2-1/4 inches high by 11-5/8 inches long (norman).
6. Actual Size: 3-5/8 inches wide by 1-5/8 inches high by 11-5/8 inches long (roman).
7. Acutal Size: 3-5/8 inches wide by 2-3/4 inches high by 7-5/8 inches long (engineer/jumbo).
8. Actual Size: 3-5/8 inches wide by 2-3/4 inches high by 11-5/8 inches long (jumbo norman).
9. Special Shapes: Molded units (plant-fabricated) as required by conditions indicated, unless standard units can be sawn to produce equivalent effect. Cut or sawn edges shall not be exposed in the finished work.
10. Efflorescence: Provide brick that has been tested per **<<ASTM C67/C67M>>** and received a rating of "not effloresced."

C. Building (Common) Brick: **<<ASTM C62>>**, Grade SW, except MW may be used in locations acceptable per reference standard; solid units.
1. Actual Size: Match face brick.
2. Locations: May be used in concealed locations in lieu of face brick.

D. Glazed Brick (Single Fired, Brick Units): **<<ASTM C1405>>**, Grade S (Standard), Class Exterior, Division Solid or H40V. ******Glazed brick should only be used in existing conditions with specific approval of MCPS******
1. Provide Type I (single-faced) where only one finished face will be exposed in the completed work, and Type II (double-faced) where both faces will be exposed in the completed work.
2. Color and Texture: **<< _____>>**. ******Fill in Basis-of-Design specific colors or use option below to select from manufacturer's full range******
3. Color and Texture: As selected by Architect from manufacturer's full range.
4. Nominal Size: **<< Modular; and Utility>>**. ******Limited sizes available for glazed brick******
5. Special shapes: Molded units as required by conditions indicated, unless standard units can be sawn without chipping glaze to produce equivalent effect.
6. Manufacturers:
   a. Belden Brick.
   b. Elgin Butler.

c. Glen-Gery.

2.03 CALCIUM-SILICATE (SAND-LIME) MASONRY UNITS ******INDUSTRY TERM FOR ARRISCRAFT. INCLUDE CAST STONE ALTERNATE HERE FOR COMPETITIVE BIDDING******

A. Sand-Lime Brick: **<<ASTM C73>>**, Grade **<< SW; MW; SW, except where MW permitted by reference standard; or ____>>**; solid units that have been pressure formed and autoclaved; 3-5/8-inch bed depth..

1. Actual Size: **<< 3-5/8; 7-5/8; and 11-5/8>>** inches high; **<< 3-5/8; 4-5/8; and _____>>** inch depth; 23-5/8 inches long.
   a. Where multiple sizes are indicated, refer to Drawings for layout and location of each size of unit.
   b. Provide special shapes as indicated.
2. Texture: **<< Smooth; and Rocked>>** finish on exposed faces and ends.
3. Corners: Provide **<< quirk mitered corner; 3/8-inch quirk dimension unless otherwise indicated; end return at corners; end finish shall match face texture indicated; and _____>>**.
4. Provide matching dolomitic limestone courses where calcium silicate is indicated at or below grade.
5. Fabrication Tolerances:
   a. Unit Length and Height: Plus or minus 1/16 inch.
   b. Deviation from Square: Plus or minus 1/16 inch, with measurement taken using hte longest edge as the base.
   c. Bed Depth: Plus or minus 1/8 inch.
   d. Custom Unit Dimensions: Plus or minus 1/8 inch.
6. Physical Characteristics:
   a. Average Compressive Strength, Brick Method: 8500 psi; per **<<ASTM C67/C67M>>**
   b. Average Compressive Strength, Dimension Stone Method: 6600 psi; per **<<ASTM C170>>**.
   c. Average Modulus of Rupture: 770 psi; per **<<ASTM C99>>**.
   d. Average Absorption Rate: 8.8 percent; per **<<ASTM C97>>**.
   e. Average Density: 129 lbs/ft^3; per **<<ASTM C97>>**.
7. Products:
   a. Basis-of-Design Product: Arriscraft; Renaissance Stone.
      1) Color A: **<< _____>>**.
      2) Color B: **<< _____>>**.
   b. Subsitutions: Substitutions will be accepted if proper consideration is made by the bidder and contractor to accommodate for the different physical properties of the substitutes in comparison to the base bid material of Calcium Silicate Masonry Units. Any Unit considered for substitution must have tolerances that match Calcium Silicate Masonry Unit Tolerances to be accepted. Products below meet the **<<ASTM C90>>** Concrete Block standard and shall be installed per NCMA TEK Bulletins and Notes, including horizontal joint reinforcement, control joints, and other installation criteria for movement and crack control. Available **<<ASTM C90>>** products:
      1) General Shale Company; Regency Stone.
      2) Indiana Cast Stone; Cast Stone Masonry Units.
      3) Reading Rock, Inc; RockCast.

2.04 MORTAR AND GROUT MATERIALS

A. Masonry Cement: **<<ASTM C91/C91M>>**.
   1. Colored Mortar: Premixed cement as required to match **<<Architect>>**'s color sample.
   2. Available Products:
      a. Argos USA; Magnolia Masonry Cement.
      b. Holcim (US) Inc.; Rainbow Mortamix Custom Color Masonry Cement.
      c. Lehigh Hanson; flamingo Colored Cement.
      d. Roanoke Cement; a division of Titan America; Colored Masonry Cement.
      e. York Building Products, a Stewart Company; Workrite Colored Masonry Cement.

B. Surface Bonding Mortar (Parge Coat): **<<ASTM C887>>**.

C. Mortar Aggregate: **<<ASTM C144>>**.

D. Grout Aggregate: **<<ASTM C404>>**.

E. Water: Clean and potable.

F. Accelerating Admixture: **<<ASTM C494/C494M>>**, Type C; nonchloride, noncorrosive type for use in cold weather; approved by manufacturer for use in masonry mortar.

G. Integral Water Repellent Admixture for Mortar: Polymeric liquid or powder admixture added to mortar at the time of manufacture.
   1. Use only in combination with masonry units manufactured with integral water repellent admixture.
   2. Use only water repellent admixture for mortar from the same manufacturer as water repellent admixture in masonry units.
   3. Meet or exceed performance specified for water repellent admixture used in masonry units.

2.05 DAMPPROOFING

A. General: Refer to and coordinate with Division 7 Section "Bituminous Dampproofing."

2.06 REINFORCEMENT AND ANCHORAGE

A. Reinforcing Steel: **<<ASTM A615/A615M>>**, Grade 60 (60,000 psi), deformed billet bars; uncoated.
   1. Recycled Content: Provide steel with minimum 90 percent total recycled content, including at least 60 percent post-consumer recycled content.
   2. Regional Materials: Provide steel manufactured and of primary raw materials extracted or recovered within 100 mile radius of project site.
   3. At overlapping ends of rebar, provide full contact lap splices at all locations.

B. Joint Reinforcement, Anchorage, and Ties, General: Comply with **<<NCMA TEK 12-02B>>**, **<<NCMA TEK 12-01B>>**, and requirements below.
   1. Use ladder type joint reinforcement, unless otherwise indicated. Truss type reinforcement may be used only when approved by Architect, at walls indicated not to have vertical reinforcing steel and not to be grouted.
   2. Provide prefabricated corner and tee reinforcement, matching design type, wire thickness, and finish of adjacent joint reinforcement. Wire mesh/hardware cloth is not acceptable.
   3. Provide joint reinforcement in minimum 10 foot lengths.

4. At multi-wythe/cavity wall applications, size all anchors, ties, and reinforcement for depths of cavities indicated, including indicated insulation thickness as applicable. Ties shall maintain full adjustability at veneer wythe without affecting insulation.
5. At cavities with space between wythes wider than 4-1/2 inches (air space + insulation depth), provide high strength ties engineered for cavity depths indicated.

C. Single Wythe Joint Reinforcement: **<<ASTM A951/A951M>>**; ladder-type.
1. Material: Mill-galvanized steel for interior walls; hot-dip galvanized steel for exterior walls.
2. Size: **<< 0.1483 inch; 0.1875 inch; or ___ inch>>** side rods with **<< 0.1483 inch; 0.1875 inch; or ___ inch>>** cross rods; width as required to provide not less than **<< 5/8 inch>>** of mortar coverage on each exposure.

D. Multiple Wythe Joint Reinforcement: **<<ASTM A951/A951M>>**; ladder-type. Provide at composite walls and subgrade walls where all wythes are of the same material.
1. Material: **<< ASTM A1064/A1064M steel wire, mill galvanized to ASTM A641/A641M Class 3; ASTM A1064/A1064M steel wire, hot dip galvanized after fabrication to ASTM A153/A153M Class B; stainless steel complying with ASTM A580/A580M Type 304; or Mill-galvanized steel for interior walls, hot-dip galvanized steel for exterior walls>>**.
2. Size: **<< 0.1483 inch; 0.1875 inch; or ___ inch>>** side rods with **<< 0.1483 inch; 0.1875 inch; or ___ inch>>** cross rods; width as required to provide not less than 5/8-inch of mortar coverage on each exposure.
   a. Provide two side rods for each wythe that is nominal 6-inch depth or greater, and one side rod for each wythe that is nominal 4-inch depth.

E. Adjustable Multiple Wythe Joint Reinforcement: **<<ASTM A951/A951M>>**. Provide at cavity walls/masonry veneer walls.
1. Type: Ladder, with adjustable ties or tabs spaced at **<< 16 in>>**on center.
2. Material: Hot-dip galvanized steel.
3. Size: **<< 0.1483 inch; 0.1875 inch; or ___ inch>>** side rods with **<< 0.1483 inch; 0.1875 inch; or ___ inch>>** cross rods and adjustable components of **<< 0.1875 inch; or ___ inch>>** wire, width of components as required to extend at least halfway through veneer wythe, but provide not less than 5/8-inch of mortar coverage from each masonry face.
4. Vertical adjustment: Not more than 1-1/4 inches.

F. Rigid Anchors: Bent steel shapes, 1-1/2 inch width, 0.105-inch thick, 24 inch length, with 2 inch **<< 1-1/2 inch; 2 inch; or ___ inch>>** long, 90 degree bend at each end to form a U or Z shape or with cross pins, **<< hot dip galvanized to ASTM A153/A153M Class B; mill galvanized; stainless steel; epoxy coated; or _____>>**.

G. Flexible Anchors: 2-piece anchors that permit differential movement between masonry and building frame, sized to provide not less than **<< 5/8 inch>>** of mortar coverage from masonry face.
1. For Anchorage to Structural Steel Framing: Crimped wire anchors for welding to frame, **<< 0.25 inch; or ___ inch>>** thick, with triangular/trapezoidal wire ties **<< 0.1875 inch; 0.25 inch; or ___ inch>>** thick, **<< hot dip galvanized to ASTM A 153/A 153M, Class B; or _____>>**.

H. Masonry Veneer Anchors: 2-piece anchors that permit differential movement between masonry veneer and structural backup, **<< hot dip galvanized to ASTM A 153/A 153M, Class B; mill galvanized; stainless steel; or _____>>**. Provide at masonry veneer walls with metal framing backup. At cavity walls with CMU backup and masonry veneer, masonry veneer

anchors may be used in conjunction with standard horizontal joint reinforcing, at Contractor's option, in lieu of adjustable multiple wythe joint reinforcement.

1. Anchor Plates: Not less than **<< 0.075 inch; 0.105 inch; or ___ inch>>** thick, designed for fastening to structural backup through sheathing by two fasteners.
2. Wire Ties: **<< Triangular; Trapezoidal; Rectangular; Manufacturer's standard; or _____>>** shape, **<< 0.1875 inch; 0.25 inch; or ___ inch>>** thick.
   a. Size wire ties to extend at least halfway through veneer wythe, but provide not less than 5/8 inch of mortar coverage from masonry face.
3. Vertical Adjustment: Not less than **<< 2 inches; 3-1/2 inches; 5-1/2 inches; or _____ inches>>**.
4. Products:
   a. Construction Tie Products; CTP-16.
   b. Heckmann Building Products; 213 + 263.
   c. Hohmann & Barnard; HB-213-2x.
   d. Wire Bond; RJ-711.
   e. 3GEN Masonry Products; H-13-H or H-13-V.

I. Metal-to-Metal Fasteners (for Steel Studs): Self-drilling, self-tapping #10 hex screws; fabricated of either 304 stainless steel or of steel with corrosion resistant polymer coating tested to **<<ASTM B117>>**. Fasteners shall include integral neoprene or EPDM washer.
   1. Products:
      a. ELCO Construction Products; Dril-Flex with Stalgard Finish.
      b. Heckmann Building Products; #668 TEK Self-Drilling Steel Stud Screw.
      c. ITW Commercial Construction North America; Teks Maxiseal with Climaseal Finish, or Scots Long Life Teks (stainless steel).

2.07 FLASHINGS

A. Combination Non-Asphaltic Flashing Materials - Stainless Steel:
   1. Stainless Steel/Polymer Fabric Flashing: **<<ASTM A240/A240M>>**; minimum 2 mil type 304 stainless steel sheet bonded on one side to one sheet of polymer fabric.
      a. Manufacturers:
         1) York Flashings; Multi-Flash SS (basis-of-design).
         2) Hohmann & Barnard, Inc; Mighty-Flash Stainless Flashing.
         3) Prosoco; R-Guard SS ThruWall.
         4) STS Coatings; Wall Guardian Stainless Steel TWF.
         5) WIRE-BOND; 4160 Bond-N-Flash.
   2. Stainless Steel/Polymer Fabric Drainage Plane Flashing: **<<ASTM A240/A240M>>**; **<< 2 mil; 3 mil; or _____ mil>>** type **<< 304; 316; or ____>>** stainless steel sheet bonded **<< between one sheet of polymer fabric and one sheet of non-woven drainage material; or _____>>**.
      a. Manufacturers:
         1) York Flashings; Flash-Vent SS (basis-of-design).
         2) 3GEN Masonry Products; Genflash SS.
         3) STS Coatings, Inc; Wall Guardian Venting Stainless Steel TWF.

B. Flashing Corners and End Dams: Provide minimum 26 gauge stainless steel; factory-fabricated corner and end dam components or field formed by folding in line with the flashing material.

C. Termination Bars: One-inch wide, fabricated of 0.090-inch extruded aluminum or 0.075-inch stainless steel; compatible with membrane and adhesives.

D. Drip Edge: **<< Stainless steel; Copper; or _____>>**; angled drip with hemmed edge; compatible with membrane and adhesives. Provide a 1/2-inch hemmed edge extension. ******1/2-inch hemmed edge extension per MCPS request. Stainless steel should be standard, copper may still be preferred at some aesthetic conditions (for example, with certain colors of decorative cmu)******

E. Flashing Sealant/Adhesive/Liquid Seam Tape: Polyether-based, 100% solids, moisture-curing elastomeric products recommended by flashing manufacturer for bonding flashing sheets to each other and to substrates; and that are compatible with asphalt-free flashing materials and air barrier materials. Traditional mastic is not acceptable.
   1. Available Products:
      a. Master Builders Solutions; MasterSeal NP150.
      b. STS Coatings; GreatSeal LT-100 Liquid Tape.
      c. York Flashings; UniverSeal US-100 Liquid Tape.

2.08 ACCESSORIES

A. Preformed Control Joints: Rubber material. Provide with corner and tee accessories, fused joints.
   1. Provide nominal 2.5-inch "standard" and "tee" configurations to suit application unless indicated otherwise.

B. Joint Filler: Closed cell polypropylene or non-chlorinated polyethylene foam; oversized 50 percent to joint width; self expanding; in maximum lengths available.

C. Cavity Mortar Control: Semi-rigid polyethylene or polyester mesh panels, sized to thickness of wall cavity, and designed to prevent mortar droppings from clogging weeps and cavity vents and allow proper cavity drainage.
   1. Mortar Diverter: Semi-rigid mesh designed for installation at flashing locations. Provide in depth matching cavity depth without gap at front or back of mesh. Fabricate approximately 10 inches high with minimum 6 inch high dovetail shape projections.
      a. Available Products:
         1) 3GEN Masonry Products; Mortar Clear.
         2) Advanced Building Products, Inc; Mortar Break DT.
         3) Heckmann Building Products; WallDefender.
         4) Hohmann & Barnard, Inc.; Mortar Trap.
         5) Mortar Net Solutions; MortarNet.
         6) Wire-Bond; Cavity Net DT (3611D).
         7) York Flashings; Weep-Net.
      b. At cavities with air space greater than 2 inches, provide companion drainage product by one of the manufacturers above; nominal 1/2-inch thickness by 20 inches wide, to be field inserted into cavity in a "U" configuration. **<< Basis-of-Design is "Mortar Catch 352" by Advanced Building Products, Inc.; or None - N/A>>**

D. Bond Break: **<<ASTM D226/D226M>>**, Type I ("No.15") asphalt felt or polyethylene tape.

E. Weeps/Cavity Vents:
   1. Cellular Type: **<< Preformed aluminum vents with sloping louvers; Molded PVC grilles, insect resistant; Extruded propylene with honeycomb design; Polyester mesh; or _____>>**.

a. Color(s): To be selected by Architect from manufacturer's standard range.
b. Available Products:
1) 3Gen Masonry Products; Cell Vent.
2) Advanced Building Products, Inc.; Mortar Break weep mesh.
3) Blok-Lok Limited; Cell-Vent.
4) CavClear/Archovations, Inc.; CavClear Weep Vent.
5) Heckmann Building Products Inc.; No. 85 Cell Vent.
6) Hohmann & Barnard, Inc.; Quadro-Vent.
7) Mortar Net Solutions; WeepVent.
8) Wire-Bond; Cell Vent.

2. Bed Joint Weep System: Corrugated plastic drainage system incorporating continuous drainage strip within cavity portion of wall with integral weephole extensions at 9-1/2 inches on center located above flashing in the bed joint of the veneer masonry. Provide at masonry units over 32 inches long, and as indicated.
a. Available Products:
1) Heckmann Building Products; Core/Cavity Vent Weep System #367.
2) Masonry Technology Incorporated (MTI); Cavity Weep CV 5010.

F. Reinforcing Positioners: Provide wire positioners in bed joints to keep steel reinforcing bars centered in cells, fabricated of 0.1483-inch hot-dip galvanized steel wire.
1. Available Products:
a. Heckmann Building Products, Inc.; No. 376 Rebar Positioner.
b. Hohmann & Barnard, Inc.; #RB or #RB-Twin Rebar Positioner.
c. Wire-Bond; O-Ring or Double O-Ring Rebar Positioner.

G. Cleaning Solution: Manufacturer's proprietary standard-strength acidic cleaner intended specifically for removal of efflorescence, mortar or grout stains, and other discoloration and staining of masonry due to construction soiling and residue. Cleaner shall not be harmful to masonry work or adjacent materials; verify cleaner is acceptable for masonry colors and textures indicated.
1. Manufacturers:
a. Diedrich Technologies, Inc.
b. EaCo Chem, Inc.
c. Prosoco, Inc.

2.09 LINTELS

A. Lintels, General: Coordinate with Structural Drawings for lintel information at each opening.

B. Masonry Lintels: Fabricated of bond beam CMUs, with texture matching adjacent standard CMU. Provide reinforcing bars and grout in accordance with structural requirements. Provide temporary supports until cured.

C. Precast Concrete Lintels: Comply with structural requirements for concrete strength and reinforcing. Precast U-lintels fabricated in accordance with performance standards of **<<PCI MNL-116>>** with 3500 psi concrete for standard lintels and 6000 psi concrete for prestressed lintels as manufactured by Cast-Crete are acceptable in lieu of rectangular section lintels.

D. Steel Lintels: Refer to Section **<< 055000 - Metal Fabrications; or _____>>**.

2.10 MORTAR AND GROUT MIXING

A. Mortar for Unit Masonry: **<<ASTM C270>>**, using the Proportion Specification.

1. Masonry below grade and in contact with earth: Type S.
2. Reinforced masonry: Type S.
3. Mortar parge coats: Type S.
4. Exterior, loadbearing and non-loadbearing, and interior, loadbearing and non-loadbearing: Type N, except as indicated above.
    a. Interior, non-loadbearing masonry may use Type O at Contractor's option.

B. Colored Mortar: Proportion selected pigments and other ingredients to match **<<Architect>>**'s sample, without exceeding manufacturer's recommended pigment-to-cement ratio.
    1. Use colored mortar for all veneer masonry. Separate colors shall be required for each type and color of veneer.

C. Grout: **<<ASTM C476>>**; consistency required to fill completely volumes indicated for grouting; fine grout for spaces with smallest horizontal dimension of 2 inches or less; coarse grout for spaces with smallest horizontal dimension greater than 2 inches.

D. Admixtures: Add to mixture at manufacturer's recommended rate and in accordance with manufacturer's instructions; mix uniformly.

E. Mixing: Use mechanical batch mixer and comply with referenced standards.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive masonry.

B. Verify that related items provided under other sections are properly sized and located.

C. Verify that built-in items are in proper location, and ready for roughing into masonry work.

3.02 PREPARATION

A. Direct and coordinate placement of metal anchors supplied for installation under other sections.

B. Provide temporary bracing during installation of masonry work. Maintain in place until building structure provides permanent bracing.

3.03 COLD AND HOT WEATHER REQUIREMENTS

A. For installation in cold or hot weather, comply with requirements of **<<TMS 402/602>>** or applicable building code, whichever is more stringent.

3.04 GENERAL INSTALLATION REQUIREMENTS

A. **<< Existing Masonry:>>** Refer to Division 1 for procedures for cutting and patching of existing masonry; and refer to Division 2 Demolition section for procedures for selective demolition of existing masonry.

B. Establish lines, levels, and coursing indicated. Protect from displacement.

C. Maintain masonry courses to uniform dimension. Form vertical and horizontal joints of uniform thickness.
    1. CMU Coursing: One unit and one mortar joint equal 8 inches, unless otherwise indicated.
    2. Brick Coursing: Either two or three units with accompanying mortar joints shall equal 8 inches, based on basis-of-design brick size(s) indicated above. ******Verify brick coursing with basis-of-design brick size******

D. Provide running bond for all masonry units unless otherwise indicated. ******Verify specialty bonding other than running bond on case-by-case basis******

E. Tool all mortar joints slightly concave both above and below grade, and where they will be exposed, unless otherwise indicated.
   1. Provide flush joints where they will be concealed by surface-applied treatments or finishes other than paint; including but not limited to wall tile, wall coverings, fluid-applied or SPF air barriers, or membranes.

F. Calcium Silicate Masonry Units: If substituting for the Basis-of-Design product with a concrete based product meeting **<<ASTM C90>>**, installation must meet the following requirements in addition to general installation requirements of this section: ******Keep if using Arriscraft as a basis-of-design product******
   1. Provide additional control, expansion, and movement joints to comply with requirements of **<<NCMA TEK 10-04>>**.
   2. Horizontal joint reinforcement shall be spaced at no more than 16 inches O.C. vertically per **<<NCMA TEK 10-04>>**.
   3. Provide continuous bond breaker material between clay masonry and units meeting **<<ASTM C90>>** standard.
   4. For exposed bed joints and head joints of stacked bond, do not vary from a straight line by more than 1/16 inch from one masonry unit to the next.

3.05 PLACING AND BONDING

A. Remove broken, cracked, chipped, or otherwise damaged masonry units from pallets and set aside. Do not use unless they may be field cut to remove damaged section, for installation where special shape is required to fit construction.

B. Create a consistent blend for each type of veneer masonry by mixing units from a minimum of three pallets.

C. Provide asphalt felt or polyethylene tape bond-breaker between clay masonry and concrete or other masonry types. Rake back joints for sealant.

D. Lay solid masonry units in full bed of mortar, with full head joints, uniformly jointed with other work.

E. Lay hollow masonry units with face shell bedding on head and bed joints.

F. Buttering corners of joints or excessive furrowing of mortar joints is not permitted.

G. Remove excess mortar and mortar smears as work progresses.

H. Remove excess mortar with water repellent admixture promptly. Do not use acids, sandblasting or high pressure cleaning methods.

I. Interlock intersections and external corners.

J. Do not shift or tap masonry units after mortar has achieved initial set. Where adjustment must be made, remove mortar and replace.

K. Perform job site cutting of masonry units with proper tools to provide straight, clean, unchipped edges. Prevent broken masonry unit corners or edges.
   1. Do not cut masonry unless it is required for certain shapes, such as rowlock sills, or unless it is unavoidable due to fitting around other construction, such as wall penetrations.
   2. Cut masonry edges shall not be visible in the final work. Where special shapes are required that would expose cut edges, they shall be plant-fabricated.

3.06 DAMPPROOFING (FOUNDATION WALLS)

A. Coordinate with Division 7 Section "Bituminous Dampproofing." Verify locations to receive dampproofing on the drawings and schedule masonry work to coordinate with installation of dampproofing.

3.07 WEEPS/CAVITY VENTS

A. Install weeps in veneer and cavity walls at maximum 24 inches on center for brick (8- and 12-inch wide veneers) and maximum 32 inches on center for decorative CMU (16-inch wide veneers); install horizontally on top of through-wall flashing, above shelf angles and lintels, at bottom of walls, and as indicated on Drawings.

3.08 CAVITY MORTAR CONTROL

A. Do not permit mortar to drop or accumulate into cavity air space or to plug weep/cavity vents.

B. For cavity walls, build inner wythe ahead of outer wythe to accommodate accessories.

C. Install cavity mortar diverter at base of cavity and at other flashing locations as recommended by manufacturer to prevent mortar droppings from blocking weep/cavity vents.

3.09 REINFORCEMENT AND ANCHORAGE - << GENERAL; SINGLE WYTHE MASONRY; AND CAVITY WALL MASONRY>>

A. Unless otherwise indicated on drawings or specified under specific wall type, install horizontal joint reinforcement 16 inches on center.

B. Place masonry joint reinforcement in first and second horizontal joints above and below openings. Extend minimum 16 inches each side of opening.

C. Place continuous joint reinforcement in first and second joint below top of walls.

D. At parapets and below-grade/foundations, provide joint reinforcement at 8 inches o.c. vertically.

E. Embed longitudinal wires of joint reinforcement in mortar joint with at least 5/8-inch mortar cover on each side.

F. Lap joint reinforcement ends minimum 6 inches.

G. Do not extend reinforcement across control, expansion, and other building movement joints.

H. Reinforce corners and intersections with prefabricated T- or L-shaped reinforcing.

I. Fasten anchors to structural framing and embed in masonry joints as masonry is laid. Unless otherwise indicated on drawings or closer spacing is indicated under specific wall type, space anchors at maximum of 36 inches horizontally and 24 inches vertically.

J. Embed ties and anchors in mortar joint and extend at least halfway through masonry veneer unit; with at least 5/8-inch mortar cover to the outside face of the anchor.

3.10 REINFORCEMENT AND ANCHORAGE - MASONRY VENEER

A. Masonry and/or Metal Framing Back-Up: Embed anchors to bond veneer at maximum 16 inches on center vertically and 24 inches on center horizontally. Place additional anchors at perimeter of openings and ends of panels, so maximum spacing of anchors is 8 inches on center.

3.11 REINFORCEMENT AND ANCHORAGES - COMPOSITE UNIT MASONRY

A. Install continuous horizontal joint reinforcement at 16 inches o.c. vertically, except at below grade foundation walls install at 8 inches o.c. vertically.

B. Where concrete foundations are indicated, tie below-grade masonry to concrete with rigid anchors spaced at maximum 8 inches o.c. vertically.

C. Coordinate with parging/dampproofing and with installation of insulation, where indicated.

3.12 MASONRY FLASHINGS

A. Whether or not specifically indicated, install masonry flashing to divert water to exterior at all locations where downward flow of water will be interrupted.
   1. Extend flashings full width at such interruptions, and at head flashings extend at least 4 inches, minimum, into adjacent masonry at each end. Turn up flashing at head and sill not less than 2 inches to form end dams.
   2. Remove or cover protrusions or sharp edges that could puncture flashings.
   3. Seal lapped ends and penetrations of flashing before covering with mortar.

B. Terminate flashing up 16 inches minimum on vertical surface of backing:
   1. Install vertical leg of flashing over air barrier transition membrane and behind the primary air barrier (fluid-applied/SPF), unless otherwise indicated on Drawings.
   2. Anchor vertical leg of flashing into backing with a termination bar and continuous sealant at top of termination bar.

C. Extend metal flashings to within 1/2-inch of exterior face of masonry and adhere to top of drip edge/drip plate.
   1. Notch and hem exterior corners of drip edges to eliminate sharp, exposed cut metal edges at locations below 6' - 0" above grade.

D. Support flexible flashings across gaps and openings.

E. Lap end joints of flashings at least 6 inches, minimum, and seal watertight with flashing sealant/adhesive.

F. Retrofit Through-Wall Flashing: Where flashing is being provided in an existing cavity wall, remove and reinstall masonry to suit through-wall flashing as indicated. ******Provide this for existing walls where flashing needs to be added. Make sure it is well detailed on Drawings******
   1. Remove veneer brick in alternating sections for access to wall cavity. Save removed masonry units for reinstallation.
   2. Provide embedded through-wall flashing with snap-lock receiver on exterior face where indicated to receive counterflashing. Coordinate receiver with counterflashing. Secure concealed flashing to face of existing back-up wythe with termination bar and sealant bead at top.
   3. Infill sections as work progresses with reinstalled or matching veneer masonry and weeps at 16 inches on center. Match existing coursing and bond. Provide flashing end dams at lateral terminations of cavity.
   4. Repeat process with alternate sections of veneer masonry. Lap and seal flashing material sections for continuous installation.

3.13 LINTELS

A. Comply with requirements on Structural Drawings for type of lintel at each opening, additional lintel sizing, reinforcement, and installation requirements.

B. Install loose steel or precast lintels over openings where indicated.

C. Install reinforced unit masonry lintels over openings where steel or precast concrete lintels are not scheduled.
   1. Allow masonry lintels to attain specified strength before removing temporary supports.

D. Maintain minimum 8 inch bearing on each side of opening, unless otherwise indicated.

3.14 GROUTED COMPONENTS

A. Comply with requirements on Structural Drawings for locations of structural grouted components and accessories, including but not limited to, grouted bond beams, reinforced unit masonry walls, (including locations and sizing of vertical steel bar reinforcing), grouted solid CMU, and composite wall collar joints.

B. Lap splices minimum 24 bar diameters.

C. Support and secure reinforcing bars from displacement. Maintain position within 1/2-inch of dimensioned position.

D. Place and consolidate grout fill without displacing reinforcing.

3.15 CONTROL AND EXPANSION JOINTS

A. Do not continue horizontal joint reinforcement through control or expansion joints.

B. Install preformed control joint device in continuous lengths. Seal butt and corner joints in accordance with manufacturer's instructions.

C. Provide control and expansion joints at locations indicated on Drawings, and as follows:

1. At changes in wall height.
2. At changes in wall thickness
3. At change in support (eg: transition from foundation support to floor slab support).
4. Adjacent to corners of walls within a distance equal to no more than half the maximum control joint spacing.
5. Wall intersections.
6. Do not place control joints closer than 16 inches to edge of wall openings (doors, windows, louvers, ducts).
7. Distance between joints shall not exceed a length to height ratio of 1.5:1.
8. Distance between joints shall not exceed 25 feet where no openings occur between joints.
9. Distance between joints shall not exceed 20 feet where openings occur between joints.

3.16 BUILT-IN WORK

A. As work progresses, install built-in metal door frames, anchor bolts, plates, and other items to be built into the work and furnished under other sections.

B. Install built-in items plumb, level, and true to line.

C. Bed anchors of metal door frames in adjacent mortar joints. Fill frame voids solid with grout.

1. Mix mortar (or grout) to a 4-inch maximum slump consistency and hand trowel into place in accordance with Steel Door Institute (SDI-100).
2. Fill adjacent masonry cores with grout minimum 12 inches from framed openings.

D. Do not build into masonry construction organic materials that are subject to deterioration.

3.17 TOLERANCES

A. Install masonry within the site tolerances found in **<<TMS 402/602>>**.

B. Maximum Variation from Unit to Adjacent Unit: 1/16-inch.

C. Maximum Variation from Plane of Wall: 1/4-inch in 10 feet and 1/2-inch in 20 feet or more.

D. Maximum Variation from Plumb: 1/4-inch per story non-cumulative; 1/2-inch in two stories or more.

E. Maximum Variation from Level Coursing: 1/8-inch in 3 feet, 1/4-inch in 10 feet, and 1/2-inch in 30 feet.

F. Maximum Variation of Mortar Joint Thickness: Head joint, minus 1/8-inch, plus 1/8-inch.

G. Maximum Variation from Cross Sectional Thickness of Walls: 1/4-inch.

3.18 CUTTING AND FITTING

A. Cut and fit for chases, pipes, conduit, sleeves, and other penetrations. Coordinate with other sections of work to provide correct size, shape, and location.

B. Obtain approval prior to cutting or fitting masonry work not indicated or where appearance or strength of masonry work may be impaired.

3.19 FIELD QUALITY CONTROL

A. Field Inspections and Tests, General: Except where indicated below, Montgomery County shall provide independent special inspector to perform field quality control inspections and tests and prepare field reports. Refer to Statement and Schedule of Special Inspections included in the Contract Documents and to the Montgomery County Special Inspection Program available from the Montgomery County Department of Permitting Services.

1. The Contractor shall alert MCPS and Montgomery County Special Inspector a minimum of two weeks prior to expected delivery date of masonry products and start of installation.
2. The Contractor shall permit full access to inspectors in order to perform inspections, including use of temporary facilities and equipment such as scaffolding or lifts.
3. Do not enclose cavities or spaces to be grouted solid until inspections have approved grout and reinforcement for material properties, size, and installation locations.

B. Field Testing by Special Inspector: Montgomery County shall provide independent special inspector to perform field quality control tests, as specified in Section **<< 014000 - Quality Requirements>>** and per Statement and Schedule of Special Inspections. Unless otherwise indicated, for each type of masonry unit, 5 randomly chosen units shall be sampled for every 50,000 installed, or portion thereof.

1. Clay Masonry Unit Tests: Testing agency shall test each variety of clay masonry in accordance with **<<ASTM C67/C67M>>** requirements.
2. Concrete Masonry Unit Tests: Testing agency shall test each variety of concrete unit masonry, of each load-bearing size indicated, in accordance with **<<ASTM C140/C140M>>** requirements.
3. Masonry Prism Testing: Test masonry prism per **<<ASTM C1314>>** at beginning of masonry work and for every 7,500 square feet of wall or portion thereof.
4. Mortar Tests: Testing agency shall test each type of mortar in accordance with **<<ASTM C780>>**. Mortar shall be tested on each of the first 3 days. Alert testing agency if mortar mix is altered during construction to allow for retesting.
5. Grout Test: Testing agency shall test each type of grout in accordance with **<<ASTM C1019>>**. Grout shall be tested on each of the first 3 days. Alert testing agency if grout mix is altered during construction to allow for retesting.

C. Field Weep Testing by Contractor: Contractor shall test 10% of weeps (approximately one every 20 linear feet of wall) for proper drainage. Once the veneer has been installed to a height approximately 8- to 16-inches above the top of cavity drainage material, slowly pour approximately 2 cups of clean water into the cavity to observe drainage.

3.20 REPAIR AND CLEANING

A. Remove masonry units that have become damaged or stained, or that do not display acceptable blend of color and texture matching mockup/sample panel. Remove as whole units, do not cut. Replace with new units with fresh mortar joints.

B. Immediately remove excess mortar and mortar droppings.

C. Replace defective mortar and repoint. Enlarge holes or voids at defective mortar, and remove enough adjacent mortar to allow for repointing. Install fresh mortar joint and match to adjacent work.

D. Cleaning, General:

1. Where expansion/control joints and sealant joints are indicated, clean joints and leave them clear and ready for installation of joint or sealant materials.
2. To prevent freezing of cleaners and rinse water, do not clean when masonry surface temperature will drop below 40 degrees F.
3. Test cleaning methods and materials on one half of mockup/sample panel; leave the other half uncleaned. Obtain approval of Architect before cleaning the finished work.
4. Protect adjacent non-masonry surfaces from cleaning materials and processes with temporary sheeting or masking.
5. Pre-wet masonry surfaces and clean with specified cleaning solution. Rinse surfaces immediately after cleaning; do not allow cleaning solution to dry or set into the masonry.
6. Use non-metallic tools in cleaning operations.

E. In-Progress Cleaning:

1. As the work progresses, and prior to mortar curing, dry brush to remove mortar fins and smears before tooling joints.

F. Final Cleaning:

1. As soon as possible after mortar has fully cured, provide final cleaning of masonry in each area (approximately 7 to 28 days; coordinate with manufacturer's recommendations for each mortar type specified). Field test a small area to ensure mortar curing is complete prior to large-scale cleaning.
2. Remove staining of concrete masonry in accordance with NCMA TEK 08-02A.
3. Clean concrete masonry in accordance with **<<NCMA TEK 08-04A>>** using bucket-and-brush hand cleaning methods.
4. Clean clay masonry in accordance with **<<BIA Technical Notes No. 20>>**. using bucket-and-brush hand cleaning methods.
5. Clean masonry with a proprietary acidic cleaner in accordance with manufacturer's written instructions.
6. Remove cleaners promptly after cleaning with low-pressure rinse.

G. Project Closeout Cleaning (prior to Substantial Completion): Provide cleaning of masonry as follows:

1. Remove construction dust with a very low pressure rinse.
2. Perform a visual inspection and spot clean to remove efflorescence, staining, or organic growth, in accordance with recommendations of BIA and NCMA technical notes.

3.21 PROTECTION

A. Provide temporary protective waterproof sheet coverings over tops of walls, parapets, sills, and other horizontal projections as the work progresses, in accordance with FIELD CONDITIONS article in Part 1 above.

B. Without damaging completed work, provide protective boards at exposed external corners that are subject to damage by construction activities.

C. Provide protective vertical boards and horizontal sheeting at grade level base of walls to prevent staining or splashing from rain, mud, or mortar droppings.

3.22 MASONRY WASTE

A. Fill Material: Clean masonry waste may be used as fill material. Break up masonry waste into small pieces no greater than 4 inches any direction. Mix with Division 31 engineered fill material so that masonry waste is no more than 33% of the fill (1 part masonry waste, 2 parts engineered fill). Fill containing masonry waste shall be at least 18 inches below grade level.

1. Excess waste shall be removed and disposed of or recycled in accordance with Division 1 waste disposal requirements.

1.02 SUBMITTALS

A. Shop Drawings:

1. Indicate **<< profiles; sizes; spacing; locations of structural members; openings, cuts; attachments; fasteners; _____; camber, splices; and other relevant data>>**.
2. **<< Connections; Connections not detailed; or _____>>**.
3. Include anchor bolt placement and other embedment drawings.
4. Indicate welded connections with **<<AWS A2.4>>** welding symbols. Indicate weld lengths, type, size, and field or shop.
5. Indicate bolted connections with type, size, and length of bolts. Indicate pre-tensioned and slip critical bolts.
6. Calculations and background data for connections indicated as delegated connection design, signed and sealed by the fabricator's connection design engineer licensed in the state where the project is located. ***Clearly indicate on the drawings (or here) which connections are delegated to the fabricator and which connection design option is to be utilized.***
   a. Calculations need not be performed for pre-designed connections taken from the tables in the AISC manuals and publications provided job conditions precisely match conditions presumed in the tables. Calculations shall be provided for all variations from the conditions presumed in the tables All information used from such tables shall be clearly identified with the table number and all such connections shall be indicated in the calculations submitted.
   b. Submit calculations concurrently with the shop drawings. Shop drawings will not be reviewed without calculations submitted.

B. Product Data/Certification: Certify that **<< products; or _____>>** meet or exceed **<< specified requirements; or _____>>**.

C. Mill Test Reports: Include chemical and mechanical/physical properties of the structural steel. Submit only if requested.

D. Welding Procedure Specifications (WPSs) and Procedure Qualification Records (PQRs): Provide according to AWS D1.1/D1.1M, "Structural Welding Code - Steel," for each welded joint.

E. Welders' Qualification Statement: Welders' certificates in accordance with **<<AWS B2.1/B2.1M>>**.

F. Connection Design Engineer's Qualification Statement.

G. Fabricator's Qualification Statement.

H. Erectors Qualification Statement

I. Sustainable Design Submittals: Refer to Division 1 Section - Sustainable Design Requirements

J. Product data/test reports for:

1. Direct-tension indicators.

DRAFT

2. Tension-control, high-strength, bolt-nut-washer assemblies.
3. Shop primers.
4. Non-shrink grout.

1.03 DOMESTIC ORIGIN

A. Consistent with the Maryland Annotatee Code, Article 78A known as the "Buy American Steel" Act of the General Assembly of Maryland, Acts of 1978, all steel used in th eproject shall be manufactured in the United States of America.

B. Structural fasteners shall comply with the requirements of ASTM F3125, Grade A325 or A490 . Steel used on this project shall be manufactured in the United States of America.

1.04 QUALITY ASSURANCE

A. Fabricate structural steel members in accordance with **<<AISC (MAN)>>** "Steel Construction Manual."

B. Fabricator: Company specializing in performing the work of this section and accredited or certified by one of the following, or another comprehensive quality assurance program acceptable to the Architect and the AHJ.
   1. The International Accreditation Service (IAS) Fabricator Inspection Program for Structural Steel in accordance with IAS AC172.
   2. AISC Quality Certification Program

C. Welder Qualifications: Welding processes and welding operators qualified in accordance with **<<AWS D1.1/D1.1M>>**.

D. Erector: Company specializing in performing the work of this section with a verifiable record of experience completing work similar in materials, size, and complexity to this Project.

E. Connection Design Engineer Qualifications: A Professional Engineer with connection design expertise, and experience with this type of work, licensed in the State in which the Project is located.

1.05 PREINSTALLATION CONFERENCE:

A. Conduct the conference at the Project site a minimum of 2 weeks prior to the comensing of steel work. Require the following representatives to attend.
   1. Project superintendent
   2. Special Inspector
   3. Structural steel erector

1.06 DELIVERY, STORAGE, AND HANDLING

A. Store steel members off the ground on pallets, dunnage, or other supports and spacers. Storage of materials shall not cause distortion, damage, or overload to members or supporting structures.

B. Protect steel members and packaged materials from corrosion and deterioration.

C. Repair or replace damaged members as directed.

D. Fasteners shall be stored in a protected place in sealed containers with manufacturer's labels intact. Repackaging is permissible provided the testing and inspecting agency observes the repackaging and sealing of containers.

DRAFT

PART 2 PRODUCTS

2.01 MATERIALS

A. Recycled Content of Steel Products: Postconsumer recycled content not less than 75 percent.

B. Channels and Miscellaneous Channel Shapes, : **<<ASTM A992/A992M>>** Grade 50.

C. S and M Shapes and T: **<<ASTM A572/A572M>>** Grade 50.

D. Angles: **<<ASTM A572/A572M>>** Grade 50 or **<<ASTM A36/A36M>>** Grade 36.

E. Steel Plate:
   1. **<<ASTM A572/A572M>>** : Less than 4" thick.
   2. **<<ASTM A36/A36M>>** : 4" and thicker.

F. Structural Bars:
   1. **<<ASTM A572/A572M>>** : Less than 4" thick.
   2. **<<ASTM A36/A36M>>** : 4" and thicker.

G. Steel W Shapes and Tees: **<<ASTM A992/A992M>>** Grade 50.

H. HP Shapes: ASTM A572 Grade 50.

I. Rectangular (and square) HSS: **<<ASTM A500/A500M>>** Grade C.

J. Round HSS:**<<ASTM A500/A500M>>** Grade C.

K. Steel Sheet: ASTM A1011/A1011M, Designation SS, Grade 30, or ASTM A1008/A1008M, Designation SS, Grade 30.

L. Steel; Pipe: **<<ASTM A53/A53M>>**, Grade B, Finish **<< black; galvanized; black and galvanized, as indicated; or _____>>**, unless indicated galvanized. ***Try to avoid specifying pipe. Use HSS Round shapes.***

M. Shear Stud Connectors: AWS D1.1 Clause 7, Type B.

N. Raised Pattern Floor Plate: **<<ASTM A786/A786M>>** (33 ksi)commercial grade. ***Yield strength of A786 plate is 33 ksi. Use A786 when possible but, if necessary, can be ordered to a defined plate spec – ASTM A36, A572***

O. Common Structural Bolts and Nuts: Carbon steel, **<<ASTM A307>>**, Grade A.
   1. Galvanizing shall be in compliance with ASTM A153/A153M or ASTM F2329.

P. High-Strength Structural Bolts, Nuts, and Washers: **<<ASTM F3125/F3125M>>**,**<< Type 1,; Type 3,; _____,; or None - N/A>>** Grade A325 with matching compatible **<<ASTM A563>>** or **<<ASTM A563M>>** nuts and **<<ASTM F436/F436M>>** washers. Substitute Grade A490 if needed.

Q. Tension Control Bolts: Twist-off type; **<<ASTM F3125/F3125M>>**. Substitute Type 2280 when using A490 bolts.

R. Headed Anchor Rods and Threaded Rod: **<<ASTM F1554>>**, **<< Grade 36; Grade 55; Grade 105; or _____>>**, with supplement S1, **<< plain; zinc coated; or _____>>**, straight, with matching **<<ASTM A563>>** or **<<ASTM A563M>>** nuts and **<<ASTM F436/F436M>>** Type 1 washers (where hole diameter permits) or ASTM F844. Hooked anchor rods are not permitted.

S. Direct Tension Indicator Washers: **<<ASTM F959/F959M>>** Type S325 or Type A490 as applied.

T. Threaded Rods: **<<ASTM A36/A36M>>**

U. Shear Stud Connectors:**<<AWS D1.1/D1.1M>>** Clause 9, with material as required in Clause 9.2.6, Type B.

DRAFT

V. Welding Materials: **<<AWS D1.1/D1.1M>>**; type required for materials being welded.

W. Sliding Bearing Plates: **<< Teflon coated; or _____>>**.

X. Grout: **<< ASTM C1107/C1107M; ; or None - N/A>>**Non-shrink; premixed compound consisting of non-metallic aggregate, cement, water reducing and plasticizing agents.

1. Minimum Compressive Strength at 48 Hours: **<< 2,000 pounds per square inch; or ____ pounds per square inch>>**.
2. Minimum Compressive Strength at 28 Days: **<< 7,000 pounds per square inch; or 5,000 pounds per square inch>>**.

Y. Shop and Touch-Up Primer: **<< Fabricator's standard; SSPC-Paint 15; or _____>>**, complying with VOC limitations of authorities having jurisdiction.

Z. Touch-Up Primer for Galvanized Surfaces: **<< Fabricator's standard; SSPC-Paint 20 Type I - Inorganic; SSPC-Paint 20 Type II - Organic; or _____>>**, complying with VOC limitations of authorities having jurisdiction.

AA. Factory-Fabricated Fire-Resistant Steel Columns: Load-bearing structural steel members encased in manufacturer's standard fire-resistant insulating material and covered with non-load-bearing steel shell.

1. Structural Steel: Comply with **<<ASTM A36/A36M>>**, **<<ASTM A572/A572M>>**, and **<<ASTM A992/A992M>>**.
2. Steel Bolts: Comply with **<<ASTM F3125/F3125M>>**,
3. Column Fill: Portland cement with manufacturer's standard aggregates, additives, and fire-resistant coating.
4. Steel Flanges and Casings: **<<AISC 325>>**.
5. Configuration: As shown on drawings.
6. Fire-Resistance: **<< As shown on drawings; UL assembly _____; or _____>>**.

2.02 FABRICATION

A. Shop fabricate to greatest extent possible.

B. Fabricate structural steel designated as AESS in accordance with requirements of AISC “Code of Standard Practice for Steel Buildings and Bridges”.

C. Thermal cutting shall be done by machine to greatest extent possible.

D. Continuously seal weld members exposed to weather in the final work by **<< intermittent welds and plastic filler; continuous welds; or _____>>**.

E. Complete shop fabrication, including welding of assemblies, before shop priming.

F. Mill or sawcut column bearing surfaces.

G. Develop required camber for members .

2.03 FINISH

A. Prepare structural component surfaces that are to remain unpainted, in accordance with **<< SSPC-SP 1; SSPC-SP 2; SSPC-SP 3; SSPC-SP 5; SSPC-SP 6; SSPC-SP 7; SSPC-SP 10; SSPC-SP 11; SSPC-SP 13; or _____>>**.

B. Prepare structural component surfaces which are to be painted, as follows:

1. Concealed Steel: SSPC-SP 2 “Hand Tool Cleaning” or SP 3 “Power Tool Cleaning”.
2. Exposed Steel (Exterior and Interior): SSPC-SP 6, “Commercial Blast Cleaning”.

DRAFT

C. Shop prime structural steel members, unless otherwise indicated. Do not prime surfaces that will be **<< fireproofed; field welded; in contact with concrete; high strength bolted; or faying surfaces of slip-critical bolted connections>>**.

D. Coordinate shop primers for compatibility with topcoats to be applied over them.

E. Leave structural steel members un-primed. ***Keep d, or B & C.***

F. Bolt holes shall be cut, drilled or punched perpendicular to metal surfaces. Do not thermally cut bolt holes or enlarge holes by burning in the field.

G. Primer for Exposed Steel at Swimming Pool (Natatorium): Shop primer that complies with Division 9, “High Performance Coatings”.

H. Structural steel members requiring galvanizing shall be hot dip galvanized in accordance with ASTM A123/A123M

I. Galvanize steel lintels and shelf angles located in exterior walls.

J. Galvanize structural steel and fasteners permanently exposed to exterior conditions.

2.04 CONNECTION DESIGN

A. Design connections not detailed on drawings under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the State in which the Project is located.

B. All connections shall be designed using **<< Allowable Stress Design (ASD); or Load and Resistance Factor Design (LRFD)>>** with loads given at service load level.

C. Simple shear connections shall be selected and completed using schematic details indicated and AISC 360. Simple Shear connections completed by the structural-steel fabricator shall withstand loads indicated and comply with other information and restrictions indicated.

D. Moment Connections shall be Fully Restrained (Type FR).

2.05 SOURCE QUALITY CONTROL

A. High-Strength Bolts: Provide inspection and verification that all shop-bolted connections in comply with requirements of **<<RCSC (HSBOLT)>>** "Specification for Structural Joints Using High-Strength Bolts," .

B. Welded Connections: Visually inspect all shop-welded connections in accordance with AWS D1.1 and test using one of the visual inspection indicate a possible deficiency of welds using**<< one of; or None - N/A>>** the following:

1. Radiographic testing performed in accordance with **<<ASTM E94/E94M>>**.
2. Ultrasonic testing performed in accordance with **<<ASTM E164>>**.
3. Liquid penetrant inspection performed in accordance with **<<ASTM E165/E165M>>**.
4. Magnetic particle inspection performed in accordance with **<<ASTM E709>>**.

C. In addition to visual inspection, shop welded shear connectors shall be tested and inspected in accordance with requirements of AWS D1.1 and as follows:

1. Perform bend tests if visual inspection reveals a less than 360 degree flash.
2. If weld fracture occurs on stud being tested, additional studs shall be tested.

2.06 PREFABRICATED BUILDING COLUMNS

A. Prefabricated building columns consisting of load bearing structural steel members protected by concrete fireproofing encased in an outer non-load bearing steel shell.

DRAFT

B. Fire Resistance Rating: Provide prefabricated building columns listed and labeled by a testing and inspection agency acceptable to authorities having jurisdiction, for ratings indicated, based on testing according to ASTM E119.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that conditions are appropriate for erection of structural steel and that the work may properly proceed.

3.02 ERECTION

A. Erect structural steel in compliance with **<<AISC 303>>**.

B. Allow for erection loads and provide sufficient temporary bracing to maintain structure in safe condition, plumb, and in true alignment until completion of erection and installation of permanent bracing.

C. The deck layout and jointing will be finalized in the shop drawings and may require shoring of some composite deck. Do not remove temporary shoring supporting composite deck construction until cast-in-place concrete has attained its design compressive strength.

D. Do not field cut or alter structural members without approval of **<<Architect>>**. Unfair holes that require enlarging shall be reamed. Enlargement of unfair holes shall not be done using burning or drift pin.

E. After erection, prime welds, abrasions, and surfaces not **<< shop primed; galvanized; or _____>>**, which are intended to receive primer. Re-prime all field weld.s

F. Grout solidly between column base plates and bearing surfaces, filling all voids. Comply with manufacturer's instructions for nonshrink grout. Trowel grouted surfaces smooth, splaying neatly to 45 degrees.

G. Shear Connectors: Prepare steel surfaces as required by shear connector manufacturer. Fasten headed stud shear connectors in accordance with AWS D1.1 and manufacturer’s written instructions, using automatic end welding.

1. Remove ceramic ferules from the deck prior to concrete operations.

3.03 PREFABRICATED BUILDING COLUMNS

A. Install prefabricated building columns to comply with AISC 360, manufacturer’s written instructions, and requirements of testing and inspection agency that apply to fire-resistance rating indicated.

3.04 TOLERANCES

A. Comply with tolerance requirements per AISC 303 for structural steel and architecturally exposed structural steel.

3.05 FIELD QUALITY CONTROL

A. The owners approved agent will engage an independent testing agency to perform field quality control tests, inspections, and reports, as specified in Section 014000 - Quality Requirements, and as indicated in the Statement of Special Inspections.

B. High-Strength Bolts: Field-bolted connections will be tested and inspected in accordance with **<<RCSC (HSBOLT)>>** "Specification for Structural Joints Using High-Strength Bolts,".

DRAFT

C. Welded Connections: Field-welded connections will be visually inspected in accordance with AWS D1.1. and tested using one of the following methods when results of visual inspection indicate a possible deficiency:
   1. Radiographic testing performed in accordance with **<<ASTM E94/E94M>>**.
   2. Ultrasonic testing performed in accordance with **<<ASTM E164>>**.
   3. Liquid penetrant inspection performed in accordance with **<<ASTM E165/E165M>>**.
   4. Magnetic particle inspection performed in accordance with **<<ASTM E709>>**.

D. Remove slag and backing bars, back gouge, and grind smooth to facilitate visual inspection of field welds.

E. Complete Joint Penetration Groove Welds shall have ultrasonic testing performed on 10% of CJP weld for Risk Category II structures and all welds for Risk Category III or IV structures with butt, T- and corner joints subject to transversely applied tension loading, in material 5/16 inches or greater.

3.06 TOUCH-UP

A. Shop Primed Steel: Immediately following erection, apply primer to exposed areas using same material as shop coating.

B. Galvanized Steel: Immediately following erection, apply galvanizing repair paint to exposed areas in accordance with ASTM A780.

END OF SECTION 051200

DRAFT

SECTION 051213
ARCHITECTURALLY-EXPOSED STRUCTURAL STEEL FRAMING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Additional requirements for structural steel members designated as architecturally-exposed structural steel (AESS).

1.02 REFERENCE STANDARDS

A. AISC 303 - Code of Standard Practice for Steel Buildings and Bridges.

B. AISC 360 - Specification for Structural Steel Buildings.

C. ASTM A6/A6M - Standard Specification for General Requirements for Rolled Structural Steel Bars, Plates, Shapes, and Sheet Piling.

D. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

E. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.

F. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.

G. ASTM A1085/A1085M - Standard Specification for Cold-Formed Welded Carbon Steel Hollow Structural Sections (HSS).

H. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts and Assemblies, Steel and Alloy Steel, Heat Treated, Inch Dimensions 120 ksi, 144 ksi, and 150 ksi Minimum Tensile Strength, and Metric Dimensions 830 MPa and 1040 MPa Minimum Tensile Strength.

I. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination.

J. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification.

K. AWS D1.1/D1.1M - Structural Welding Code - Steel.

L. SSPC-SP 1 - Solvent Cleaning.

M. SSPC-SP 6 - Commercial Blast Cleaning.

DRAFT

1.03 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Schedule and conduct a preinstallation meeting at project site minimum of 2 weeks prior to start of work of this section; require attendance by all affected installers. Coordinate requirements for shipping, special handling, storage, attachment of safety cables and temporary erection bracing, final coating, touch-up painting, mock-up coordination, **<<Architect>>**'s observations, and other requirements for AESS.

1.04 SUBMITTALS

A. Product data for each type of product specified. Submit paint systems in accordance with Section **<< 099113; 099123; 099600; and _____>>**.

B. Sustainable Design Submittals: Refer to Division 1 Section - Sustainable Design Requirements

C. Shop Drawings: Detailing for fabrication of AESS components.

1. Provide erection documents clearly indicating which members are AESS members and the AESS category of each part.
2. Include details that clearly identify AESS requirements found in this specification. Provide connections for AESS consistent with concepts shown on drawings.
3. Indicate welds by **<<AWS A2.4>>** symbols, distinguishing between shop and field welds, and show size, length and type of each weld. Identify grinding, finish and profile of welds as defined by the designated AESS category.
4. Indicate orientation of hollow structural section (HSS) seams and mill marks (where applicable).
5. Indicate type, size, finish and length of bolts, distinguishing between shop and field bolts. Identify high-strength bolted slip-critical, direct-tensioned shear/bearing connections. Indicate orientation of bolt heads.
6. Indicate which surfaces or edges are exposed and what class of surface preparation is being used.
7. Indicate special tolerances and erection requirements as noted on drawings or defined by the designated AESS category.
8. Indicate vent or drainage holes for HSS members.

D. **<< AESS 1; AESS 2; AESS 3; AESS 4; and AESS C>>** Samples: Provide samples of specific AESS characteristics. Samples may be small size samples or components of conventional structural steel demonstrating specific AESS characteristics, including **<< surface preparation; sharp edges ground smooth; continuous weld appearance; weld show through; fabrication mark removal; and _____>>**.

E. Welders' Qualification Statement: Welders' certificates in accordance with **<<AWS B2.1/B2.1M>>** and dated no more than **<< 12 months; or ____>>** before start of scheduled welding work.

F. Qualification data for fabricator and erector to demonstrate their capabilities and experience. Include **<< lists of completed projects names and address; names and addresses of architects and owners; photographs showing detail of installed AESS; other information specified; and _____>>**.

1.05 QUALITY ASSURANCE

A. Fabricator Qualifications: In addition to those qualifications listed in Section **<< 051200>>**, engage an AISC Certified Fabricator, experienced in fabricating AESS similar to that indicated for this project with a record of successful in-service performance, as well as sufficient production capacity to fabricate AESS without delaying the work.

B. Erector Qualifications: In addition to those qualifications listed in Section **<< 051200>>**, engage an AISC Certified Erector, experienced in erecting AESS work similar in material, design, and extent to that indicated for this project and with a record of successful in-service performance.

C. Welder Qualifications: Welding processes and welding operators qualified within previous **<< 12 months; or ____>>** in accordance with **<<AWS D1.1/D1.1M>>** and dated no more than **<< 12 months; or ____>>** before start of scheduled welding work..

D. Comply with applicable provisions of **<<AISC 303>>**, Section 10 for the designated AESS category.

E. **<<Owner>>** to engage a quality assurance agency per requirements of **<<AISC 360>>**, Chapter N and **<<AISC 303>>**, Section 10.

F. **<<Contractor>>** to engage a quality assurance agency per requirements of **<<AISC 360>>**, Chapter N and **<<AISC 303>>**, Section 10.

DRAFT

1.06 DELIVERY, STORAGE, AND HANDLING

A. Handle finished pieces in accordance with Section 10 of **<<AISC 303>>**, using nylon-type slings, or chains with softeners, or wire ropes with softeners such that they are not damaged.

B. Store materials to permit easy access for inspection and identification. Keep steel members off ground by using pallets, platforms, or other supports. Protect steel members and packaged materials from erosion and deterioration. Use special care in handling to prevent twisting or warping of AESS members.

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS

A. Comply with Section **<< 051200>>**, except as amended in this section for aesthetic purposes.

B. Comply with **<<AISC 303>>**, Section 10 for specific AESS category designated on drawings.

C. Comply with **<<AISC 303>>**, Section 10 for specific AESS as follows:

1. **<< _____>>**: **<< AESS 1; AESS 2; AESS 3; AESS 4; AESS C; or _____>>**

2.02 FABRICATION

A. Fabricate and assemble AESS in shop to greatest extent possible. Locate field joints in AESS assemblies at concealed locations or as approved by **<<Architect>>**. Detail AESS assemblies to minimize field handling and expedite erection.

B. Permissible tolerances for member depth, width, out of square, and camber and sweep to be as specified in **<<ASTM A6/A6M>>**, **<<ASTM A500/A500M>>**, and **<<ASTM A1085/A1085M>>**.

C. For curved structural members, whether composed of a single standard structural shape or built-up, the as-fabricated variation from theoretical curvature to be equal to or less than standard camber and sweep tolerances permitted for straight members in applicable ASTM standard.

D. Use special care in handling and shipping of AESS both before and after shop painting to minimize damage to any shop finish. Use nylon-type slings or softeners when using chains or wire rope slings.

E. Bolted Connections:

1. Make in accordance with Section **<< 051200>>**. Provide bolt type and finish as noted herein.

F. Welded Connections:

1. Comply with **<<AWS D1.1/D1.1M>>** and Section **<< 051200>>**.
2. Assemble and weld built-up sections by methods that will maintain alignment of members without warp exceeding tolerances of this section.

G. Surface Preparation:

1. Remove blemishes or unsightly surfaces resulting from temporary braces or fixtures.
2. Remove backing and run out tabs.

H. Fabricate AESS in accordance with categories defined in **<<AISC 303>>**, as follows:

1. AESS 1: Basic elements.
2. AESS 2: Feature elements viewed at a distance greater than **<< 20 feet>>** (feature elements not in close view).
3. AESS 3: Feature elements viewed at a distance less than **<< 20 feet>>** (feature elements in close view).

DRAFT

4. AESS 4: Showcase elements with special surface and edge treatment beyond fabrication (showcase elements).
5. ----------
6. Add modifications to characteristics included in **<<AISC 303>>** matrix in order to modify one or more of the defined AESS categories and create a custom AESS C.
7. ----------
8. AESS C: Custom elements; fabricate to requirements of **<< AESS 1; AESS 2; AESS 3; AESS 4; or _____>>** and the following characteristics:
   a. C.1: **<< _____>>**.
   b. C.2: **<< _____>>**.
   c. C.3: **<< _____>>**.

2.03 PAINT SYSTEM

A. Compatibility: All components/procedures of AESS paint system to comply with coating system specified, submitted, and approved per **<< Section; or Sections>><< 099113; 099123; 099600; and _____>>**. As a minimum, identify required surface preparation, primer, intermediate coat (if applicable), and finish coat. Primer, intermediate coating, and finish coating to be from a single manufacturer combined in a system documented by manufacturer with adequate guidance for fabricator to procure and execute.

B. Primer: As specified in **<< Section; or Sections>><< 099113; 099123; 099600; and _____>>**. Primer to comply with all federal standards for VOC, lead and chromate levels.

C. Primer: **<< Acrylic water-soluble shop coat with good resistance to normal atmospheric corrosion.; Fast curing two-part epoxy.; Organic, epoxy/zinc rich meeting class B surface requirements for slip critical connections, as found in AISC 360.; Inorganic zinc rich meeting class B surface requirements for slip critical connections, as found in AISC 360.; or _____>>** Primer to comply with all federal standards for VOC, lead and chromate levels.

D. Finish Coating: Field apply intermediate and top coats per **<< Section; or Sections>><< 099113; 099123; 099600; and _____>>**.

2.04 SHOP PRIMING

A. Surface Preparation:
   1. Provide surface preparations to meet **<<SSPC-SP 6>>**.
   2. Coordinate required surface profile with approved paint submittal prior to beginning surface preparation.
   3. Prior to blasting, remove any grease and oil using solvent cleaning to meet **<<SSPC-SP 1>>**.
   4. Remove weld spatter, slivers and similar surface discontinuities.
   5. Ease sharp corners resulting from shearing, flame cutting or grinding.

B. Shop prime structural steel members. Do not prime surfaces that will be **<< fireproofed; field welded; in contact with concrete; high strength bolted with slip-critical connections; or _____>>**.
   1. Extend priming of members partially embedded in concrete or mortar to a depth of **<< 2 inches>>**.

C. Priming: Immediately after surface preparation, apply primer according to manufacturer's instructions to provide a dry film thickness of not less than **<< 1.5 mils>>**. Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.

DRAFT

1. Stripe paint corners, crevices, bolts, welds, and sharp edges.
2. Apply two coats of shop primer to surfaces that are inaccessible after assembly or erection.

2.05 GALVANIZING

A. Hot-Dip Galvanized Finish: Apply zinc coating by hot-dip process to AESS indicated for galvanizing according to **<<ASTM A123/A123M>>**. Fabricate such that all connections of assemblies are made in the field with bolted connections where possible.

2.06 MATERIALS

A. General: Meet requirements of **<< 051200>>** as amended below.

B. Tension Control, High-Strength Bolts, Nuts, and Washers: Per section **<< 051200>>**, Tension Control Bolts. Provide **<< standard carbon steel; cadmium plated; mechanically galvanized; or _____>>** finish **<< rounded bolt heads with twist off bolts; heavy hex bolt heads with twist off bolts; or _____>>**; **<<ASTM F3125/F3125M>>**.

PART 3 EXECUTION

3.01 EXAMINATION

A. Erector to check all AESS members upon delivery for twist, kinks, gouges or other imperfections which may result in rejection of appearance of member. Coordinate remedial action with fabricator prior to erecting steel.

3.02 PREPARATION

A. Provide connections for temporary shoring, bracing and supports only where noted on approved fabrication documents. Temporary connections not shown are to be made at locations not exposed to view in final structure or as approved by **<<Architect>>**.

B. Handle, lift and align pieces using nylon straps or chains with softeners required to maintain appearance of AESS through process of erection.

3.03 ERECTION

A. AESS 1 and 2: Basic elements; feature elements not in close view:

1. Employ special care to handle and erect AESS. Erect finished pieces using nylon straps or chains with softeners such that they are not damaged.
2. Place weld tabs for temporary bracing and safety cabling at points concealed from view in completed structure or where approved by **<<Architect>>** during pre-installation meeting. Obtain **<<Architect>>** approval of methods for removing temporary devices and finishing AESS members prior to erection.
3. AESS Erection Tolerances: Erect to standard frame tolerances for structural steel per Chapter 7 of **<<AISC 303>>**.
4. Set AESS accurately in locations and to elevations indicated and according to **<<AISC 303>>** and **<<AISC 360>>**.
5. Remove blemishes or unsightly surfaces resulting from temporary braces or fixtures.
6. Remove all backing and run out tabs.
7. When temporary braces or fixtures are required to facilitate erection, take care to avoid any blemishes, holes or unsightly surfaces resulting from use or removal of such temporary elements.

DRAFT

8. Bolted Connections: Align bolt heads on same side of connection as indicated on approved fabrication or erection documents.
9. Welded Connections: Comply with **<<AWS D1.1/D1.1M>>** and Section **<< 051200>>**. Appearance and quality of welds to be consistent. Employ methods that will maintain alignment of members without warp exceeding tolerance of this section.
10. Remove weld spatter exposed to view.
11. Grind off projections larger than **<< 1/16 inch>>** at field butt and plug welds.
12. Continuous Welds: Where continuous welding is noted on drawings, provide continuous welds of a uniform size and profile.
13. Do not enlarge holes in members by burning or by using drift pins. Ream holes that must be enlarged to admit bolts. Replace connection plates that are misaligned where holes cannot be aligned with acceptable final appearance.
14. Splice members only where indicated.
15. Obtain permission for any torch cutting or field fabrication from **<<Architect>>**. Finish sections thermally cut during erection to a surface appearance consistent with mock-up.

B. AESS 3: Feature elements in close view:
1. Erect to requirements of AESS 1 and 2 and as follows:
2. Field Welding: Weld profile, quality, and finish to be consistent with mock-ups approved prior to fabrication.
3. Provide a continuous appearance to all welded joints including tack welds. Provide joint filler at intermittent welds.

C. AESS 4: Showcase elements:
1. Erect to requirements of AESS 3 and as follows:
2. Grind welds smooth.
3. Minimize Weld Show Through: At locations where welding on far side of an exposed connection creates distortion, grind distortion and marking of steel to a smooth profile with adjacent material.
4. Filling of Weld Access Holes: Where holes must be cut in web at intersection with flanges on W shapes and structural tees to permit field welding of flanges, fill holes with joint filler.
5. Where welds are indicated to be ground, contoured, or blended, oversize welds as required and grind to provide a smooth transition and match profile on approved mock-up.

D. ----------

E. Add modifications to characteristics included in **<<AISC 303>>** matrix in order to modify one of the defined AESS categories and create a custom AESS C.

F. ----------

G. AESS C: Custom elements:
1. Erect to requirements of **<< AESS 1 and 2; AESS 3; or AESS 4>>** and as follows:
a. **<< _____>>**.
b. **<< _____>>**.

3.04 FIELD QUALITY CONTROL

A. The owners approved agent will engage an independent testing agency to perform field quality control tests, inspections, and reports, as specified in Section 014000 - Quality Requirements, and as indicated in the Statement of Special Inspections.

B. Structural Requirements:

DRAFT

1. Comply with quality control requirements per **<<AISC 360>>**, Chapter N and **<<AISC 303>>**, Section 10. Refer to Section **<< 051200>>** for additional requirements.
2. Quality assurance agency to review work for compliance with requirements of **<<AISC 360>>**, Chapter N and **<<AISC 303>>**, Section 10.

C. AESS 1 and 2 Acceptance: **<<Architect>>** to observe AESS in place and determine acceptability based on qualification data and submittals. Quality assurance agency has no responsibility for enforcing requirements related to aesthetic effect.

D. AESS 3,4, and C Acceptance: **<<Architect>>** to observe AESS in place and determine acceptability based on qualification data and submittals as well as on approved mock- up. Quality assurance agency has no responsibility for enforcing requirements related to aesthetic effect.

3.05 CLEANING

A. Touch-up Painting: Complete cleaning and touch-up painting of field welds, bolted connections, and abraded areas of shop paint to blend with adjacent surfaces of AESS. Perform touch-up work in accordance with manufacturer's instructions and as specified in Section **<< 099113; 099123; 099600; and _____>>**.

B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas. Repair galvanized surfaces in accordance with **<<ASTM A780/A780M>>**.

C. See Section **<< 017419 - Construction Waste Management and Disposal>>**, for additional requirements.

END OF SECTION 051213

DRAFT

SECTION 052100
STEEL JOIST FRAMING

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.

B. ASTM A108 - Standard Specification for Steel Bar, Carbon and Alloy, Cold-Finished.

C. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

D. ASTM A563/A563M - Standard Specification for Carbon and Alloy Steel Nuts (Inch and Metric).

E. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.

F. ASTM E94/E94M - Standard Guide for Radiographic Examination Using Industrial Radiographic Film.

G. ASTM E165/E165M - Standard Practice for Liquid Penetrant Testing for General Industry.

H. ASTM E709 - Standard Guide for Magnetic Particle Testing.

I. ASTM F436/F436M - Standard Specification for Hardened Steel Washers Inch and Metric Dimensions.

J. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts and Assemblies, Steel and Alloy Steel, Heat Treated, Inch Dimensions 120 ksi, 144 ksi, and 150 ksi Minimum Tensile Strength, and Metric Dimensions 830 MPa and 1040 MPa Minimum Tensile Strength.

K. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification.

L. AWS D1.1/D1.1M - Structural Welding Code - Steel.

M. CSA A123.24 - Standard Test Method for Wind Resistance of Vegetated Roof Assembly.

N. IAS AC172 - Accreditation Criteria for Fabricator Inspection Programs for Structural Steel AC172.

O. RCSC (HSBOLT) - Specification for Structural Joints Using High-Strength Bolts; Research Council on Structural Connections.

P. SJI 100 - Standard Specifications for K-Series, LH-Series, and DLH-Series Open Web Steel Joists, and for Joist Girders.

Q. SJI Technical Digest No. 9 - Handling and Erection of Steel Joists and Joist Girders.

R. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer.

S. SSPC-Paint 20 - Zinc-Rich Coating (Type I - Inorganic, and Type II - Organic).

T. SSPC-SP 2 - Hand Tool Cleaning.

1.02 SUBMITTALS

A. Shop Drawings: Indicate **<< standard designations; joist coding; configurations; sizes; spacings; cambers; locations of joists; joist chord extensions; bridging; connections; attachments; and splice and connection locations and details>>**.

B. Calculations and analysis data for Special Joists: (Special Joists “SJ” are those which have special loading conditions and/or non-standard configuration, not in compliance with SJI

DRAFT

Standard Specifications and Load Tables, requiring special design and detailing.) Calculations and analysis data shall be signed and sealed by a professional engineer licensed in the state in which the project is located.

C. Welders' Qualification Statement: Welders' certificates in accordance with **<<AWS B2.1/B2.1M>>**.

D. Joist Design Engineer's Qualification Statement.

E. Manufacturer's Qualification Statement.

F. Erector's Qualification Statement.

G. Sustainable Design Submittals: Refer to Division 1 section - Sustainable Design Requirements.

1.03 QUALITY ASSURANCE

A. Perform Work**<< , including that for headers and other supplementary framing,; or None - N/A>>** in accordance with **<<SJI 100>>** Standard Specifications, Load Tables and Weight Tables for Steel Joists and Joist Girders.

1. Maintain **<< one copy; or ____ copies>>** of document on site.

B. Manufacturer Qualifications: Company specializing in performing the work of this section, with a record of successful performance on projects of similar size and scope as this Project. Manufacturer shall be certified by SJI.

C. Welder Qualifications: Welding processes and welding operators qualified in accordance with **<<AWS D1.1/D1.1M>>**.

D. Erector Qualifications: Company specializing in performing the work of this section with a record of successful performance on projects of similar size and scope as this Project.

E. Joist Design Engineer Qualifications: A Professional Engineer with joist design expertise, and experience with this type of work, licensed in the State in which the Project is located.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Transport, handle, store, and protect products in accordance with SJI requirements.

B. Joists shall be protected from corrosion, deformation, and other damage during delivery, storage, and handling.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide joists, joist substitutes (where indicated), special joists and connections capable of withstanding design loads indicated.

1. Use ASD. Data is given at service-load level.
2. Design special joists to withstand design loads with live-load deflections no greater than the following:
   a. Floor Joists: Vertical deflection of 1/360 of the span.
   b. Roof Joists: Vertical deflection of 1/240 of the span.

B. Recycled Content: Provide products with a minimum post-consumer recycled content of 60%.

2.02 MATERIALS

A. Joist Components: Minimum yield strength, Fy=50 ksi.

DRAFT

B. High-Strength Structural Bolts, Nuts, and Washers: **<<ASTM F3125/F3125M>>**,**<< Type 1,; Type 3,; _____ ,; or None - N/A>>** with matching compatible **<<ASTM A563/A563M>>** nuts and **<<ASTM F436/F436M>>** washers.

C. Tension Control Bolts: Twist-off type; **<<ASTM F3125/F3125M>>**.

D. Shear Stud Connectors: **<< Made from ASTM A108 Grade 1015 bars; Made from ASTM A108 Grade ____ bars; Forged steel, headed, uncoated; or _____>>**.

E. Structural Steel For Supplementary Framing. Minimum yield strength, Fy=36 ksi, unless otherwise indicated.

F. Welding Materials: **<<AWS D1.1/D1.1M>>**; type required for materials being welded.

G. Shop and Touch-Up Primer: **<< SSPC-Paint 15; complying with VOC limitations of authorities having jurisdiction.; Not required except at the following locations:; and _____>>**.

H. Touch-Up Primer for Galvanized Surfaces: **<< SSPC-Paint 20 Type I - Inorganic; SSPC-Paint 20 Type II - Organic; or _____>>**, complying with VOC limitations of authorities having jurisdiction.

2.03 FABRICATION

A. Manufacture steel joists and related components in conformance with SJI 100, Standard Specification for K-Series, LH-Series and DLH-Series Open Web Steel Joists and Joist Girders, with steel angle chords, and chord slope/configuration as indicated.

B. Manufacture composite steel joists and related components in conformance with SJI 200, Standard Specification for CJ-Series Composite Steel Joists, with steel angle chords.

C. Manufacture joist substitutes in accordance with SJI 100.

D. Perform welding in accordance with AWS D1.1 and D1.3 procedures and requirements.

E. Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds 1/4 inch per foot.

F. Provide special sized openings in joist web framing as indicated.

G. Supply bottom chord ceiling extensions as required to support ceilings.

H. S

I. **<< Do not camber roof joists.; Camber joists per SJI recommendations.; Do not camber K, KCS, and LH joists. Camber DLH and Joist Girders per SJI recommendations.; or _____>>**

2.04 FINISH

A. **<< Shop prime joists with SSPC Paint 15, or manufacturer's standard shop primer complying with performance requirements of SSPC Paint 15, unless otherwise indicated.; Leave joists unprimed; Galvanize joists; or _____>>**

1. If fireproofing is specified, omit primer, or verify that primer is compatible with fireproofing materials and will allow adhesion.

B. Prepare surfaces to be finished in accordance with SSPC-SP 1 and **<< SSPC-SP 2; SSPC-SP 3; or ____>>**.

C. Primer for Exposed Joists at Swimming Pool (Natatorium): Shop primer that complies with Division 9, "High Performance Coatings".

D. Joist requiring galvanizing shall receive hot dipped galvanizing coating in accordance with **<<ASTM A123/A123M>>**.

DRAFT

2.05 ACCESSORIES

A. Provide horizontal and diagonal bridging in accordance with SJI standards for size, type and spacing.

B. Provide ceiling extensions adequate to support ceiling construction that is intended to be installed directly to the bottom of the joists (suspended ceiling are not intended), with ends within ½ inch from face of wall, unless otherwise indicated.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing and in field conditions, with Installer present, prior to beginning work to ensure compliance with the requirements for installation tolerances and other conditions affecting performance.

3.02 ERECTION

A. Erect joists with correct bearing length on supports.

B. Allow for erection loads. Provide sufficient temporary bracing to maintain framing safe, plumb, and in true alignment.

C. Coordinate the placement of anchors for securing loose bearing members furnished as part of the work of this section.

D. After joist alignment and installation of framing, field weld joist seats to steel bearing surfaces.

E. Position and field weld joist chord extensions and wall attachments**<< as detailed; or None - N/A>>**. Do not weld bottom chord extensions to columns or other support until dead load is in place.

F. Install supplementary framing for **<< floor; roof; and _____>>** openings greater than as indicated.

G. Do not permit erection of decking until joists are braced**<< , bridged,; or None - N/A>>** and secured or until completion of erection and installation of permanent bridging and bracing.

H. Do not field cut or alter joists without approval of joist manufacturer.

I. After erection, prime **<< welds; damaged shop primer; damaged galvanizing ; surfaces not shop primed; and ___>> << , except surfaces specified not to be primed; or None - N/A>>**.

3.03 TOLERANCES

A. Maximum Variation From Plumb: **<< 1/4 inch; or ____ inch>>**.

B. Maximum Offset From True Alignment: **<< 1/4 inch; or ____ inch>>**.

3.04 FIELD QUALITY CONTROL

A. The owners approved agent will engage an independent testing agency to perform field quality control tests, inspections, and reports, as specified in Section 014000 - Quality Requirements, and as indicated in the Statement of Special Inspections.

B. High-Strength Bolts: Field-bolted connections will be tested and inspected in accordance with RCSC (HSBOLT) "Specification for Structural Joints Using High-Strength Bolts".

C. Welded Connections: Field-welded connections will be visually inspected in accordance with AWS D1.1 and tested using one of the following methods when results of visual inspection

DRAFT

indicate a possible deficiency. Test at least **<< 10>>** percent of welds using**<< one of; or None - N/A>>** the following:

1. Radiographic testing performed in accordance with **<<ASTM E94/E94M>>**.
2. Ultrasonic testing performed in accordance with **<<ASTM E164>>**.
3. Liquid penetrant inspection performed in accordance with **<<ASTM E165/E165M>>**.
4. Magnetic particle inspection performed in accordance with **<<ASTM E709>>**.

3.05 FIELD TOUCH UP

A. Shop Primed Joists: Immediately following erection, apply primer to abraded areas using same material as shop coating.

B. Galvanized Joists: Immediately following erection, apply galvanizing repair paint to abraded areas in accordance with **<<ASTM A780/A780M>>**.

C. Repair of damaged joists shall be per manufacturers recommendations and detailing.

END OF SECTION 052100

DRAFT

SECTION 053100
STEEL DECKING

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

B. ASTM B633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel.

C. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification.

D. AWS D1.1/D1.1M - Structural Welding Code - Steel.

E. AWS D1.3/D1.3M - Structural Welding Code - Sheet Steel.

F. IAS AC172 - Accreditation Criteria for Fabricator Inspection Programs for Structural Steel AC172.

G. ICC-ES AC43 - Acceptance Criteria for Steel Deck Roof and Floor Systems.

H. ICC-ES AC70 - Acceptance Criteria for Power-Actuated Fasteners Driven into Concrete, Steel and Masonry Elements.

I. SDI (DM) - Publication No.30, Design Manual for Composite Decks, Form Decks, and Roof Decks.

J. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer.

K. SSPC-Paint 20 - Zinc-Rich Coating (Type I - Inorganic, and Type II - Organic).

1.02 SUBMITTALS

A. Product Data: Provide for each type: **<< deck profile characteristics; dimensions; structural properties; finishes; _____; and fasteners>>**.

1. Test reports for acoustic roof deck verifying acoustical performance according to ASTM C423 and ASTM E795.

B. Shop Drawings: Indicate deck plan, **<< support locations; projections; openings; reinforcement; pertinent details; accessories; and fastening>>**. Reproductions of the structural steel drawings or any portion of are prohibited without the strict permission of the Architect.

C. Certificates: Certify that products furnished meet or exceed **<< specified requirements; or _____>>**.

D. Welders' Qualification Statement: Welders' certificates in accordance with **<<AWS B2.1/B2.1M>>**.

E. Designer's Qualification Statement.

F. Fabricator's Qualification Statement.

G. Sustainable Design Submittals: Refer to Division 01 Section “Sustainable Design Requirements.”

1.03 DOMESTIC ORIGIN

A. Consistent with Maryland Annotated Code, Article 78A known as “Buy American Steel” Act of the General Assembly of Maryland, Acts of 1978, steel used on this project shall be manufactured in the United States of America.

DRAFT

1.04 QUALITY ASSURANCE

A. Welder Qualifications: Welding processes and welding operators qualified in accordance with **<<AWS D1.1/D1.1M>>** and **<<AWS D1.3/D1.3M>>**.

B. Fabricator Qualifications: A qualified steel deck fabricator that is accredited by the International Accreditation Service (IAS) Fabricator Inspection Program for Structural Steel in accordance with **<<IAS AC172>>**, or other comprehensive quality assurance program acceptable to the Architect and the AHJ.

C. Installer Qualifications: An experienced installer who has completed steel deck work similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Protect deck from damage and corrosion during delivery, storage, and placement.

B. Store deck on dry wood sleepers; slope for positive drainage; provide ventilation.

1. Keep factory installed insulation dry in acoustic cellular deck.

PART 2 PRODUCTS

2.01 STEEL DECK

A. All decks shall have a minimum recycled content of 75 percent post-consumer material.

B. Roof Deck: Fabricate deck panels in accordance with ANSI/SDI Standard for Steel Roof Deck, and the following:

1. Galvanized Steel Sheet: **<<ASTM A653/A653M>>** with G60/Z180 galvanized coating.
   a. Grade as indicated.
2. Galvanized and Shop Primed Steel Sheet: **<<ASTM A653/A653M>>**, with G60 galvanized coating. Pre-treat, clean, and prime with specified primer. Applies to deck surfaces indicated to receive finish paint.
   a. Grade as indicated.
3. Profile: As indicated.
4. Attachment: Puddle weld only. The use of mechanical fasteners at the roof deck is prohibited.

C. Acoustical Roof Deck: Fabricate deck panels in accordance with ANSI/SDI Standard for Steel Roof Deck, and the following:

1. Galvanized Steel Sheet: **<<ASTM A653/A653M>>** with **<< G40/Z120; G60/Z180; G90/Z275; G115/Z350; or ____>>** galvanized coating.
   a. Grade: As indicated.
2. Galvanized and Shop Primed Steel Sheet: ASTM A653, with G60 galvanized coating. Pre-Treate, clean, and prime with specified primer. Applies to deck surfaces indicated to receive finish paint.
   a. Grade: As indicated.
3. Sound Attenuation material: Pre-formed glass fiber strips. Shop installed in cellular deck.
4. Acoustical Performance: Minimum NRC rating = ____, tested in accordance with ASTM C423
5. Profile: As indicated , with perforated vertical ribs.
6. Profile: As indicated, with perforated bottom plate ***(If cellular deck profile).***

DRAFT

7. Attachment: Puddle weld only. The use of mechanical fasteners at the roof deck is prohibited.

D. Composite Floor Deck: Fabricate deck panels in accordance with ANSI/SDI Standard for Steel Floor Deck-Slabs, and the following:
   1. Galvanized Steel Sheet: **<<ASTM A653/A653M>>** with **<< G40/Z120; G60/Z180; G90/Z275; G115/Z350; or ____>>** galvanized coating.
      a. Grade: As indicated.
   2. Profile: As indicated.

E. Acoustical Cellular Floor Deck: Fabricate deck panels in accordance with ANSI/SDI Standard for Steel Floor Deck-Slabs, and the following:
   1. Galvanized Steel Sheet: **<<ASTM A653/A653M>>** with **<< G60/Z180; G90/Z275; G115/Z350; or ____>>** galvanized coating.
      a. Grade: As indicated.
   2. Profile: As indicated.
   3. Sound attenuation material: Pre-formed glass fiber strips. Shop install in cellular deck.
   4. Acoustical Performance: Minimum NRC rating = ____, tested in accordance with ASTM C423.

F. Non-composite Form Deck: Fabricate deck panels in accordance with ANSI/SDI Standard for Non-composite Steel Floor, and the following:
   1. Galvanized Steel Sheet: **<<ASTM A653/A653M>>** with **<< G40/Z120; G60/Z180; G90/Z275; G115/Z350; or ____>>** galvanized coating.
      a. Grade: As indicated.
   2. Profile: As indicated.

G. Natatorium Roof Deck: Fabricate deck panels in accordance with ANSI/SDI Standard for Steel Roof Deck, and the following: **This is set up as a generic spec utilizing standard roof deck (generally 3" deep). It requires galvanized steel deck, with two field coats of a high-performance coating system to be specified in DIV 9. We have had good luck using Tnemec products for those coatings. This approach was used on 582386 – Henrico Aquatic Center. The spec can also be written around a specific manufacturer. Refer to 510022 - PWC 12th High School for a natatorium deck spec written around the Toris-A acoustic deck with Natacoat, by Epic Metals Corp.**
   1. Galvanized Steel Sheet: ASTM A653, with G90 galvanized coating, pre-treated and cleaned in accordance with surface prep requirements for specified coating system.
      a. Grade: As indicated
   2. Profile: As indicated.
   3. Refer to Division 9 "High Performance Coatings" for field-applied two-coat system.

2.02 ACCESSORY MATERIALS

A. Welding Materials: **<<AWS D1.1/D1.1M>>**.

B. Fasteners: **<< Stainless; Galvanized hardened; or _____>>** steel, self tapping.

C. Fasteners at Natatorium: Bi-metal, self drilling, self-tapping stainless steel screws with hardened carbon steel point.

D. Powder Actuated Mechanical Fasteners: Steel; with knurled shank and forged ballistic point. Comply with applicable requirements of **<<ICC-ES AC70>>**. ***Not to be used at roof deck.***
   1. Fasteners shall have an ICC ES evaluation report and shall have been tested in accordance with ICC ES AC70

DRAFT

2. Delegated Design of steel deck fastening system: Refer to Part I of this specification.
3. Installation of steel deck fastening system: Powder Actuated Fasteners shall be installed by qualified persons trained and certified by the fastener manufacturer. Installation shall be in accordance with the manufacturer's recommendations and the Delegated Design submittal.

E. Mechanical Screw Fasteners: Steel; hex washer head, self-drilling, self-tapping. ***To be used as the sidelap connections only.***
1. Fasteners shall have an ICC ES evaluation report and shall have been tested in accordance with ICC ES AC43.
2. When part of delegated design using powder actuated fasteners screw sizes and pattern shall be included in the delegated design (refer to Part I of this specification), else as indicated.
3. Installation of steel deck fastening system: Screw fasteners shall be installed by qualified persons experienced in the use of these fasteners and installation tools on similar previous work. Installation shall be in accordance with the manufacturer's recommendations and the Delegated Design submittal.

F. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

G. Weld Washers: Mild steel, uncoated, **<< 3/4 inch; or ____ inch>>** outside diameter, **<< 1/8 inch; or ____ inch>>** thick.

H. Shop and Touch-Up Primer: **<< SSPC-Paint 15; or _____>>**, complying with VOC limitations of authorities having jurisdiction.

I. Touch-Up Primer for Galvanized Surfaces: **<< SSPC-Paint 20; SSPC-Paint 20 Type I - Inorganic; SSPC-Paint 20 Type II - Organic; or _____>>**, complying with VOC limitations of authorities having jurisdiction.

J. Flute Closures: Closed cell **<< foam rubber; or _____>>**, **<< 1 inch; or ____ inch>>** thick; profiled to fit tight to the deck.

2.03 FABRICATED DECK ACCESSORIES

A. Sheet Metal Deck Accessories: Metal **<< closure strips; wet concrete stops; cover plates; and other standard sheet metal accessories>>**, 22 guage (0.0299 inch) thick sheet steel unless otherwise indicated; of profile and size as indicated; **<< finished same as deck; galvanized; or primed>>**.

B. Pour Stops: Same material, profile and finish as deck, with thickness according to Steel Deck Institute (SDI) recommendations based on overhang dimension and slab thickness, unless otherwise noted.

C. Roof **<< Sump Pans; Drain Pans; Sump Plates; or _____>>**: Formed sheet steel, **<< 14 gauge, 0.0747 inch; or ___ gauge, ___ inch>>** minimum thickness, flat bottom, sloped sides, recessed **<< 1-1/2 inches>>** below roof deck surface, bearing flange **<< 3 inches>>** wide, sealed watertight.

D. Floor Drain Pans: Formed sheet steel, **<< 14 gauge, 0.0747 inch; or ___ gauge, ___ inch>>** minimum thickness, flat bottom, sloped sides, recessed **<< 1-1/2 inches>>** below floor deck surface, bearing flange **<< 3 inches>>** wide, sealed watertight.

E. Hips and Valleys: Same material and finish as deck. Fasten as per edge fastening requirements on roof plan.

DRAFT

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions are suitable for deck installation prior to beginning work.

3.02 INSTALLATION

A. Erect metal deck in accordance with **<< SDI Manual of Construction of Steel Deck; manufacturer's instructions; and _____>>**. Align and level.

B. On **<< concrete; masonry; and ____>>** surfaces provide bearing length as indicated, and **<< 4 inch; 6 inch; or ___ inch>>** minimum.

C. On steel supports provide bearing length as indicated, and **<< 1-1/2 inch; 3 inch; or _____>>** minimum bearing or per manufacturers requirements for interior supports, heavy reactions and for deep deck.

D. Fasten deck to steel support members at ends and intermediate supports as indicated.

E. Fasten side laps: **<< As indicated; or #10 Galv Screws at 18" o.c. unless otherwise noted>>** As indicated or #10 Galc Screws at 18" oc unless otherwise noted.

F. Drive mechanical sidelap connectors completely through adjacent lapped sheets; positively engage adjacent sheets with minimum three-thread penetration.

G. Deck Welding in accordance with **<<AWS D1.3/D1.3M>>**.

1. Weld washers: Uncoated sheet steel, fabricated to fit in deck rib; thickness and hole diameter as recommended by deck manufacturer, but no less than 16 ga thick x 3/8 inch diameter hole.

H. Where deck changes direction, install **<< 6 inch>>** minimum wide sheet steel cover plates, of same thickness as deck. Fusion weld **<< 12 inches; or ____ inches>>** on center maximum.

I. At floor edges, install concrete stops upturned to top surface of slab, to contain wet concrete, unless otherwise indicated. Provide stops of sufficient strength to remain stationary without distortion.

J. At openings between deck and walls, columns, and other penetrations, provide sheet steel closures and angle flashings to close openings.

K. Close openings **<< above walls and partitions perpendicular to deck flutes; and _____>>** with **<< single; double; or _____>>** row of foam cell closures.

L. Position roof drain pans with flange bearing on top surface of deck. Fusion weld at each deck flute.

M. Position floor drain pans with flange bearing on top surface of deck. Fusion weld at each deck flute.

N. Immediately after fastening deck and other metal components in position, wire brush clean and coat welds, burned areas, and damaged surface coating, with touch-up primer per manufacturer's instructions. Patch and close all holes in deck created by welding, prior to touch-up.

O. Where indicated, shore composite deck before concrete placement.

P. Sound Absorbing Insulation: Where indicated, install premolded roll or strip sound absorbing insulation according to deck manufacturer's instructions.

Q. Natatorium Roof Deck Installation

1. Apply first coat of two coat system before deck is installed.

DRAFT

2. Before permanent fastening adjust deck panels into final position with ends aligned and with adequate bearing on the supporting frame.
3. Fasten to supporting structure with mechanical fasteners, as indicated. Welding is not permitted, unless approved by architect.
4. Fasten sidelaps: As indicated.

3.03 FIELD QUALITY CONTROL

A. The owners approved agent shall engage a qualified independent testing and inspection agency to perform field quality control tests, as specified in Section 014000 - Quality Requirements and as follows:
   1. Inspect deck attachments are in accordance with construction documents and shop drawings.
   2. Prior to placement of concrete inspect steel headed stud anchors
      a. Break and remove ceramic ferules from deck prior to concrete operations.

END OF SECTION 053100

DRAFT

SECTION 054000
COLD-FORMED STEEL FRAMING - STRUCTURAL (CFSF-S)

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. AISI S100 - North American Specification for the Design of Cold-Formed Steel Structural Members.

B. AISI S200 - North American Standard for Cold-Formed Steel Framing - General Provisions.

C. AISI S201 - North American Standard for Cold-Formed Steel Framing - Product Data.

D. AISI S220 - North American Standard for Cold-Formed Steel Nonstructural Framing.

E. AISI S240 - North American Standard for Cold-Formed Steel Structural Framing.

F. AISI S240 - North American Standard for Cold-Formed Steel Structural Framing.

G. AISI S400 - North American Standard for Seismic Design of Cold-Formed Steel Structural Systems.

H. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures.

I. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.

J. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.

K. ASTM A1003/A1003M - Standard Specification for Steel Sheet, Carbon, Metallic- and Nonmetallic-Coated for Cold-Formed Framing Members.

L. ASTM C1007 - Standard Specification for Installation of Load Bearing (Transverse and Axial) Steel Studs and Related Accessories.

M. AWS D1.3/D1.3M - Structural Welding Code - Sheet Steel.

N. ICC (IBC) - International Building Code.

O. SSPC-Paint 20 - Zinc-Rich Coating (Type I - Inorganic, and Type II - Organic).

1.02 DOMESTIC ORIGIN

A. Consistent with Maryland Annotated Code, Article 78A known as “Buy American Steel” Act of the General Assembly of Maryland, Acts of 1978, steel used on this project shall be manufactured in the United States of America.

1.03 SUBMITTALS

A. Refer Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Sustainable Design Submittal: Refer to Division 01 Section “Sustainable Design Requirements.”

C. Product Data: Provide data on standard framing members; describe materials and finish, product criteria, limitations**<< and accessories; or None - N/A>>**.

D. Product Data: For lateral-force resisting systems, provide product data sheets on hold-down, showing compliance with requirements.

E. Shop Drawings: Provide signed and sealed shop drawings and calculations by a Registered Professional Engineer licensed in the Commonwealth of Marlyand. Shop drawings shall ndicate component details, **<< framed openings; bearing; anchorage; loading; welds;**

DRAFT

type and location of fasteners; and _____>>, and accessories or items required of related work.

1. Indicate **<< stud; floor joist; ceiling joist; roof joist; roof rafter; roof truss; and _____>>** layout.
2. Describe method for securing **<< studs; or _____>>** to tracks and for **<< bolted; welded; or _____>>** framing connections.

F. Product test reports for steel sheet, Power-actuated anchors, mechanical fasteners, vertical deflection clips, and miscellaneous structural clips and accessories.

1.04 QUALITY ASSURANCE

A. Designer Qualifications: Design framing system under direct supervision of a professional structural engineer experienced in designing this work and licensed in **<<the State in which the Project is located>>**.

B. Welder Qualifications: Welding processes and welding operators qualified in accordance with **<<AWS D1.1/D1.1M>>** and **<<AWS D1.3/D1.3M>>** and dated no more than **<< 12 months; or ____>>** before start of scheduled welding work.

1.05 PRE-INTSALLATION CONFERENCE:

A. Conduct the conference at the project site a minimum of 2 weeks prior to the comensing of cold form steel work.

1.06 DELIVERY, STORAGE AND HANDLING

A. Protect cold-formed steel framing from corrosion, deformation, and other damage during delivery, storage, and handling.

B. Store cold-formed steel framing, protect with a waterproof covering, and ventilate to avoid condensation.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Design Requirements: Design cold-formed framing systems, components and connectors to withstand specified design loads in compliance with **<< ICC (IBC); ASCE 7; applicable building code; AISI S100; AISI S240; AISI S400; and _____>>**.

B. Regulatory Requirements: Comply with **<< applicable building code; or _____>>** criteria for loads, including seismic loads.

1. Design Loads: **<< In accordance with applicable codes.; As indicated on the drawings.; As follows:; or _____ .>>**
2. Framing shall be designed to resist design loads with deflections not greater than the followings:
   a. Exterior Load Bearing and Non-Load Bearing Wall shall have a horizontal deflection not greater than L/240 or L/600 for brick veneer.
   b. Interior Load Bearing and Non-Load Bearing Wall horizontal deflection shall have a horizontal deflection not greater than L/240 under a horizontal load of 5 psf (ASD) or 8 PSF (LRFD).
   c. Floor Joist, Roof Rafter, and Ceiling Joist framing shall have a vertical deflection not greater than L/240 for total load and L/360 for live loads.
3. Able to tolerate movement of components without damage, failure of joint seals, undue stress on fasteners, or other detrimental effects when subject to seasonal or cyclic

DRAFT

day/night temperature ranges subject to a maximum ambient temperature change of 120 deg F.

4. Able to accommodate construction tolerances, deflection of building structural members, and clearances of intended openings with an upward and downward movement of 1 inch.

2.02 MATERIALS

A. Steel Sheet: **<<ASTM A1003/A1003M>>**, subject to the ductility limitations indicated in **<<AISI S240>>**.

2.03 STRUCTURAL FRAMING COMPONENTS

A. Wall Studs and Track Sections: **<<AISI S240>>**; c-shaped studs and u-shaped track sections in stud-matching nominal width and compatible height.

B. Studs and Track: **<<ASTM C955>>**; studs formed to channel, C- or Sigma-shaped with punched web; U-shaped track in matching nominal width and compatible height.

1. Stud: 1-5/8 inch flange width; load bearing - 0.0428 in (18 gage) minimum and non-load bearing - 0.0329 inch (20 gage).
2. Track: 1-1/4 inch flange width; thickness to match stud thickness.
3. Galvanized in accordance with **<<ASTM A653/A653M>>**, **<< G90/Z275; G60/Z180; or ____>>** coating.

C. Steel Box or Back to Back headers studs formed to C- or Sigma-shaped with unpunched web, with stiffeners, U-shaped track in matching nominal width and compatible height.

D. Steel Single or Double L headers formed to L shapes used to form header beams of web depths indicated.

E. Jamb Studs: **<<AISI S240>>**; manufactured, engineered, c-shaped with wide flanges, designed to replace conventional double-stud framing at openings.

F. Headers: **<<AISI S240>>**; manufactured, engineered **<< one-member; two-member; or _____>>** assemblies, with wide flanges, designed to replace conventional box or nested header framing at openings.

1. Jamb Mounting Clips: Manufacturer's standard.
2. Cripple Stud Clips: Manufacturer's standard.

G. Joists and Purlins: Fabricated from **<<ASTM A653/A653M>>** steel sheet, with **<< G90/Z275; G60/Z180; or _____>>** hot dipped galvanized coating.

1. Base Metal: **<< Structural Steel (SS), Grade 33/230; Structural Steel (SS), Grade 37/255; Structural Steel (SS), Grade 50/340, Class 1; or _____>>**.
2. Flange width of 1 5/8 inches, with depths as indicated on plans.
3. Mil thickness: As required to meet specified performance levels.

2.04 MISCELLANEOUS CONNECTIONS

A. Self-Drilling, Self-Tapping Screws, Bolts, Nuts and Washers: Hot-dip galvanized per **<<ASTM A153/A153M>>**.

B. Welding: Comply with **<< AWS D1.1/D1.1M; AWS D1.3/D1.3M; and _____>>**.

2.05 ACCESSORIES

A. Bracing, Furring, Bridging: Formed sheet steel, thickness determined for conditions encountered; finish to match framing components.

DRAFT

B. Plates, Gussets, Clips: **<< Formed ; or None - N/A>>**Sheet Steel, thickness determined for conditions encountered; finish to match framing components.

C. Galvanizing Repair: Touch up bare steel with zinc-rich paint in compliance with **<<ASTM A780/A780M>>**.

D. Shop and Touch-Up Primer: **<< SSPC-Paint 15; or _____>>**, complying with VOC limitations of authorities having jurisdiction.

E. Touch-Up Primer for Galvanized Surfaces: **<< SSPC-Paint 20 Type I - Inorganic; SSPC-Paint 20 Type II - Organic; or _____>>**, complying with VOC limitations of authorities having jurisdiction.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that **<< substrate surfaces; abutting building framing components; or _____>>** are ready to receive work.

B. Verify field measurements and adjust installation as required.

3.02 INSTALLATION - GENERAL

A. Install structural members and connections in compliance with **<<ASTM C1007>>**.

3.03 INSTALLATION OF STUDS

A. Install non load bearing or load-bearing studs; brace, and reinforce to develop full strength and achieve design requirements.

B. Coordinate placement of insulation in multiple stud spaces made inaccessible after erection.

C. Install intermediate studs above and below openings to align with wall stud spacing.

D. Provide deflection allowance in stud track, directly below horizontal building framing at non-loadbearing framing.

E. Attach **<< cross studs; furring channels; or _____>>** to studs for attachment of fixtures anchored to walls.

F. Install framing between studs for attachment of mechanical and electrical items, and to prevent stud rotation.

G. Touch-up field welds and damaged **<< corrosion protected; primed; or _____>>** surfaces with primer.

3.04 INSTALLATION OF << JOISTS; PURLINS; AND _____>>

A. Install framing components in accordance with manufacturer's instructions.

B. Place **<< joists; purlins; or _____>>** at a maximum of **<< 12 inches; 16 inches; 24 inches; or ____ inches>>** on center; not more than **<< 2 inches; or ____ inches>>** from abutting walls and connect joists to supports using **<< fastener; welding; or _____>>** method.

C. Set **<< floor; ceiling; and _____>><< joists; or _____>>** parallel and level, with lateral bracing and bridging.

D. Locate joist end bearing directly over load-bearing studs or provide load distribution on top of stud track.

E. Provide web stiffeners at **<< reaction points; or _____>>**.

DRAFT

F. Touch-up field welds and damaged **<< galvanized; primed; or _____>>** surfaces with primer.

3.05 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Provide inspections for **<< welding; mechanical fastening; cold-formed steel light-frame construction; lateral force-resisting systems; and _____>>** in accordance with requirements of **<<AISI S240>>**.

END OF SECTION 054000

SECTION 054003.13
CONTINUOUS INSULATION (CI) FRAMING SYSTEM - BRACKET

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASHRAE Std 90.1 I-P - Energy Standard for Buildings Except Low-Rise Residential Buildings.

B. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.

C. ASTM A792/A792M - Standard Specification for Steel Sheet, 55% Aluminum-Zinc Alloy-Coated by the Hot-Dip Process.

D. ASTM A1046/A1046M - Standard Specification for Steel Sheet, Zinc-Aluminum-Magnesium Alloy-Coated by the Hot-Dip Process.

E. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

F. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

G. ASTM B633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel.

H. ASTM C955 - Standard Specification for Cold-Formed Steel Structural Framing Members.

I. ASTM C1007 - Standard Specification for Installation of Load Bearing (Transverse and Axial) Steel Studs and Related Accessories.

J. ASTM F593 - Standard Specification for Stainless Steel Bolts, Hex Cap Screws, and Studs.

K. ASTM F594 - Standard Specification for Stainless Steel Nuts.

L. ASTM F1941/F1941M - Standard Specification for Electrodeposited Coatings on Mechanical Fasteners, Inch and Metric.

M. SSPC-Paint 20 - Zinc-Rich Coating (Type I - Inorganic, and Type II - Organic).

1.02 ADMINISTRATIVE REQUIREMENTS

A. Pre-Installation Meeting: Conduct pre-installation meeting at Project site before starting work of this section to verify project requirements, coordinate with installers of other work, establish condition and completeness of building substrate, and review manufacturers' installation instructions and warranty requirements.

B. Coordinate with work of other sections that is to be installed over, or anchored to, the continuous insulation (CI) framing system, including but not limited to structural anchors, claddings and cladding anchors, utilities, insulation, and firestopping.

1.03 DEFINITIONS

A. Clipped Continuous Insulation (CI) Framing System: An engineered “fixing” system of framing designed to support building veneers on metal girts, transmitting all structural loads through insulation to the wall substrate via intermittent, thermally-isolated clips while maintaining required thermal performance of the wall.

1.04 SUBMITTALS

A. Product Data: Provide product data for factory fabricated continuous insulation (CI) framing members and each accessory product.

DRAFT

B. Shop Drawings: Indicate component details, including sizes, depths, and thicknesses of clips, girts, rails, and accessories or items required of related work.
   1. Indicate cladding joint layout, with CI framing system clip and girt layout and spacing coordinated for proper anchorage and support.
   2. Indicate anchorage details including mechanical fasteners for securing CI framing system to primary structural wall element.
      a. Indicate supplemental framing and reinforcing as required due to structural calculations.
   3. Design Data: Include calculations for loadings and stresses of factory fabricated CI framing for project specific claddings and loadings, signed and sealed by a professional structural engineer.

C. Thermal Modeling Report: Provide test data indicating reduction of R-value of continuous insulation due to framing penetrations. Test data shall demonstrate, at minimum, compliance with **<<ASHRAE Std 90.1 I-P>>** U-factor requirement for walls of construction indicated.

D. Test Reports: Provide test reports performed by a qualified testing agency, for structural anchors, mechanical fasteners, framing clips, and accessories.

E. Manufacturer's Installation Instructions: Indicate special procedures and conditions requiring special attention.

F. Designer's Qualification Statement.

G. Installer's Qualification Statement.

1.05 QUALITY ASSURANCE

A. Designer Qualifications: Design CI framing system under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in **<<the State in which the Project is located>>**.

B. Installer Qualifications: Company specializing in exterior/envelope wall systems installation, experienced in the erection and installation of CI framing systems with a history of successful in-service use.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in factory-provided protective coverings and packaging.

B. Protect materials against damage during transit, delivery, storage, and installation at site.

C. Prior to installation, store materials and components under cover in a dry, clean location.

D. Protect CI framing from corrosion, moisture staining, deformation, and other damage during delivery, storage, and handling.

1.07 WARRANTY

A. Warranty: Installer's warranty against failures in materials, fabrication, finishes, and installation commencing on Date of Substantial Completion. Failures include structural cracks or punctures, material deterioration, and workmanship.
   1. Warranty Period: Two years beginning at the date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

DRAFT

A. Continuous Insulation (CI) Framing Systems: Provide complete system including manufacturer's supplementary girts/rails and other required accessories with bracket system indicated.
   1. Aluminum Systems:
      a. ECO Cladding; Sigma Bracket.
      b. GIP GmbH; VECO-A.
      c. Hilti; FOX VI.
      d. SFS intec Ltd. / NVELOPE Rainscreen Systems Ltd.; NV1 Bracket.
   2. Steel Systems:
      a. Exo-Tec Manufacturing, Inc; Stand-Off MPV Bracket.
      b. GIP GmbH; VECO-G.
      c. Knight Wall Systems; MFI D-Series.
      d. Northern Facades; ISO Clip.
   3. Substitutions: Refer to Section 016000 - Product Requirements.

2.02 CONTINUOUS INSULATION (CI) FRAMING SYSTEM

A. Provide primary and secondary framing members (girts and rails), bridging, bracing, plates, gussets, clips, fittings, reinforcement, and fastenings as required to provide a complete framing system.

B. Design Requirements: Provide complete CI framing system, capable of supporting indicated exterior finish cladding(s) in a "rainscreen" design when anchored to indicated structural substrates. System shall consist of thermally isolated brackets supporting vertical girts. Where necessary due to cladding orientation or engineered design, vertical girts shall support horizontal rails. Design shall have the following characteristics:
   1. Structural Performance: Design, engineer, fabricate, and erect to withstand specified design loads for project conditions within required limits.
   2. Design Loads: Refer to Structural Drawings for wind and live loads.
   3. Spacing and types of girts and rails shall be as required by cladding manufacturer to support each indicated type of cladding.
      a. Coordinate with cladding manufacturer(s) for dead loads of cladding system(s).
      b. Coordinate with indicated joint layouts to ensure secondary girts are spaced to provide appropriate structural attachment for cladding(s).
      c. The primary material of the bracket and girt components shall be steel or aluminum. Products fabricated of fiberglass or a composite material are not acceptable.
   4. Able to tolerate movement of components without damage, failure of joint seals, undue stress on fasteners, or other detrimental effects when subject to seasonal or cyclic day/night temperature ranges.
   5. Able to accommodate construction tolerances, deflection of building structural members, and clearances of intended openings.

C. Thermal Performance: System shall obtain effective R-value or U-factor indicated.
   1. Continuous framing profiles fully penetrating insulation are not allowed. Metal framing shall not thermally bridge exterior and interior except for fasteners.
   2. Framing assembly shall not reduce continuous insulation nominal R-value to less than 90% effective R-value.
   3. Continuous insulation framing system shall be thermally modeled to demonstrate, at minimum, compliance with **<<ASHRAE Std 90.1 I-P>>** maximum U-factor for walls.

DRAFT

D. Flatness: Installed system and components shall be flat within the tolerances allowable by cladding manufacturer; with no noticeable warping, buckling, deflections, or other surface irregularities that distort cladding.

E. Heat Resistance: All components that will come into contact with spray foam insulation shall be capable of exposure to the heat generated by spray foam installation without damage, including plastic washers and thermal spacers. Plastics and resins shall be rated for exposure to temperatures of 300 degrees Fahrenheit or more intermittently without loss of structural capacity or integrity.

F. Ventilation: System design shall allow for movement of air in the cavity behind the cladding, including compartmentalization and/or cross-ventilation for a pressure-equalized system where indicated.

G. Drainage: System design shall allow for drainage of moisture from the cavity behind the cladding.

H. AISI Specifications and Standards: Unless more stringent requirements are indicated, comply with Code of Standard Practice.

I. Shop fabricate framing system to the greatest extent possible.

J. Deliver to project site in largest practical sections.

2.03 CONTINUOUS INSULATION FRAMING MATERIALS

A. Steel Framing: Either **<<ASTM A792/A792M>>** aluminum-alloy coated steel or **<<ASTM A1046/A1046M>>** zinc-aluminum-magnesium alloy coated steel.

B. Aluminum Framing: **<<ASTM B209/B209M>>**, Alloy 6061-T6 for plate and sheet and **<<ASTM B221>>**, Alloy 6063-T6 for extrusions.

C. Brackets: To suit girts and cladding system loads, and providing for field adjustment of girts to maintain plane of cladding. Provide fixed or floating type as required to accommodate expansion. Provide brackets of depths required for total wall thickness and cavity sizes indicated on Drawings, including adjustable or custom brackets as required.

D. Girts: As required to suit anchoring of perpendicular rails. Provide either vertical or horizontal girts as required due to indicated orientation of cladding.

1. Perpendicular Rails: Subframing rails mounted to girts, to meet the requirements of cladding manufacturer for support and attachment at cladding ends and joints, and for regular spacing for attachment of claddings.

E. Thermal-Break Pads / Spacers: Minimum 1/8-inch thick; fabricated of stable polymer or resin material that is suitable for loading and for heat resistance indicated, including but not limited to polyoxymethylene (POM) or fiberglass (epoxy- or vinyl ester-based). Polymer pad shall be for thermal break properties only and shall not bear structural loading of cladding materials.

2.04 FASTENERS

A. Self-Drilling, Self-Tapping Screws, Bolts, Nuts and Washers: Type 304 stainless-steel or zinc-plated with electrodeposition coating per **<<ASTM B633>>** or **<<ASTM F1941/F1941M>>**.

B. Anchorage Devices: **<< Powder actuated; Drilled expansion bolts; Screws with sleeves; and _____>>** or chemical anchors; Alloy Group 1 stainless steel per **<<ASTM F593>>** for bolts and **<<ASTM F594>>** for nuts.

2.05 ACCESSORIES

DRAFT

A. Touch-Up Primer for Galvanized Surfaces: **<< SSPC-Paint 20 Type I - Inorganic; SSPC-Paint 20 Type II - Organic; or _____>>**, complying with VOC limitations of authorities having jurisdiction.

B. Protective Coating: Provide corrosion protection coating on concealed aluminum surfaces in contact with cementitious materials or dissimilar metals.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that **<< substrate surfaces; building framing components; or _____>>** are ready to receive work.

B. Verify field measurements and adjust installation as required.

3.02 INSTALLATION

A. Install components in accordance with **<< manufacturers' instructions; ASTM C1007 requirements; and _____>>**.

B. Attach primary brackets prior to application of spray foam insulation/air barrier. Install brackets true to line with secure connections to primary structural components, at spacing required by load calculations and as indicated on Shop Drawings.

C. After installation of spray foam insulation/air barrier, remove only amount needed for attachment of secondary girts/rails and cladding support anchors. Notify spray foam installer if amount of material removed affects wall's insulating or air/vapor barrier performance, or if touch up is required.

D. Install framing girts/rails plumb, square, and true to line, with securely fastened connections.
   1. If cutting is required, cut by sawing or shearing, do not torch cut. Protect adjacent surfaces from sparks.
   2. Fasten CI framing members by screw fastening. Locate all mechanical fasteners as indicated on Shop Drawings.
   3. Locate screws at slotted holes to allow for expansion and contraction in the CI framing system design.
   4. Each girt shall be supported by at least two primary support brackets.
   5. Do not bridge building expansion joints with CI framing. Independently frame both sides of joints.

3.03 TOLERANCES

A. Maximum Variation from True Position: **<< 1/8 inch>>**.

B. Maximum Variation of any Member from Plane: **<< 1/8 inch>>**, unless otherwise indicated by cladding manufacturer.

3.04 REPAIR AND PROTECTION

A. Touch up shop-applied coatings as required if damaged during handling or installation.

B. After installation of primary support brackets, inspect substrates for damage and repair substrate flashings or membranes as required.

C. Provide fine adjustments to CI framing as required immediately prior to cladding installation to verify that tolerances are maintained. Prepare CI framing in a timely manner to avoid excessive UV exposure to substrate membranes, air barriers, and other materials.

DRAFT

D. Provide final protection of CI framing as required to ensure that CI framing system is without damage or deterioration prior to installation of cladding.

SECTION 054003.14
CONTINUOUS INSULATION (CI) FRAMING SYSTEM - GIRT

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASHRAE Std 90.1 I-P - Energy Standard for Buildings Except Low-Rise Residential Buildings.

B. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.

C. ASTM A792/A792M - Standard Specification for Steel Sheet, 55% Aluminum-Zinc Alloy-Coated by the Hot-Dip Process.

D. ASTM A1046/A1046M - Standard Specification for Steel Sheet, Zinc-Aluminum-Magnesium Alloy-Coated by the Hot-Dip Process.

E. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

F. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

G. ASTM B633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel.

H. ASTM C955 - Standard Specification for Cold-Formed Steel Structural Framing Members.

I. ASTM C1007 - Standard Specification for Installation of Load Bearing (Transverse and Axial) Steel Studs and Related Accessories.

J. ASTM F593 - Standard Specification for Stainless Steel Bolts, Hex Cap Screws, and Studs.

K. ASTM F594 - Standard Specification for Stainless Steel Nuts.

L. ASTM F1941/F1941M - Standard Specification for Electrodeposited Coatings on Mechanical Fasteners, Inch and Metric.

M. SSPC-Paint 20 - Zinc-Rich Coating (Type I - Inorganic, and Type II - Organic).

1.02 ADMINISTRATIVE REQUIREMENTS

A. Pre-Installation Meeting: Conduct pre-installation meeting at Project site before starting work of this section to verify project requirements, coordinate with installers of other work, establish condition and completeness of building substrate, and review manufacturers' installation instructions and warranty requirements.

B. Coordinate with work of other sections that is to be installed over, or anchored to, the continuous insulation (CI) framing system, including but not limited to structural anchors, claddings and cladding anchors, utilities, insulation, and firestopping.

1.03 DEFINITIONS

A. Floating Continuous Insulation (CI) Framing System: An engineered “fixing” system of framing designed to support building veneers on metal girts, transmitting all structural loads through insulation to the wall substrate solely via fasteners and the compressive strength of indicated board insulation, while maintaining required thermal performance of the wall.

1.04 SUBMITTALS

A. Product Data: Provide product data for factory fabricated continuous insulation (CI) framing members and each accessory product.

DRAFT

B. Shop Drawings: Indicate component details, including sizes, depths, and thicknesses of clips, girts, rails, and accessories or items required of related work.
   1. Indicate cladding joint layout, with CI framing system clip and girt layout and spacing coordinated for proper anchorage and support.
   2. Indicate anchorage details including mechanical fasteners for securing CI framing system to primary structural wall element.
      a. Indicate supplemental framing and reinforcing as required due to structural calculations.
   3. Design Data: Include calculations for loadings and stresses of factory fabricated CI framing for project specific claddings and loadings, signed and sealed by a professional structural engineer.

C. Thermal Modeling Report: Provide test data indicating reduction of R-value of continuous insulation due to framing penetrations. Test data shall demonstrate, at minimum, compliance with **<<ASHRAE Std 90.1 I-P>>** U-factor requirement for walls of construction indicated.

D. Test Reports: Provide test reports performed by a qualified testing agency, for structural anchors, mechanical fasteners, framing clips, and accessories.

E. Manufacturer's Installation Instructions: Indicate special procedures and conditions requiring special attention.

F. Designer's Qualification Statement.

G. Installer's Qualification Statement.

1.05 QUALITY ASSURANCE

A. Designer Qualifications: Design CI framing system under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in **<<the State in which the Project is located>>**.

B. Installer Qualifications: Company specializing in exterior/envelope wall systems installation, experienced in the erection and installation of CI framing systems with a history of successful in-service use.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in factory-provided protective coverings and packaging.

B. Protect materials against damage during transit, delivery, storage, and installation at site.

C. Prior to installation, store materials and components under cover in a dry, clean location.

D. Protect CI framing from corrosion, moisture staining, deformation, and other damage during delivery, storage, and handling.

1.07 WARRANTY

A. Warranty: Installer's warranty against failures in materials, fabrication, finishes, and installation commencing on Date of Substantial Completion. Failures include structural cracks or punctures, material deterioration, and workmanship.
   1. Warranty Period: Two years beginning at the date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Continuous Insulation (CI) Framing Systems: Provide complete system including girts/rails and other required accessories with framing system indicated.

DRAFT

1. Aluminum Systems:
   a. IMETCO; IntelliFrame.
   b. MOTO Cladding; SL / DL System.
   c. Universe Facade Solutions; Universe "U" Series System.
2. Steel Systems:
   a. Clark Dietrich; ProChannel CI System.
   b. Knight Wall Systems; **<< CI System; or HCI System>>**.
3. Substitutions: Refer to Section 016000 - Product Requirements.

2.02 CONTINUOUS INSULATION (CI) FRAMING SYSTEM

A. Provide primary and secondary framing members (girts and rails), bridging, bracing, plates, gussets, clips, fittings, reinforcement, and fastenings as required to provide a complete framing system.

B. Design Requirements: Provide completed CI framing system, capable of supporting indicated exterior finish cladding(s) in a "rainscreen" design when anchored to indicated structural substrates. System shall consist of girts or clips supported by indicated insulation and anchored through insulation to substrate only via fasteners. Where necessary due to cladding orientation or engineered design, girts or clips shall support secondary framing rails. Design shall have the following characteristics:
   1. Structural Performance: Design, engineer, fabricate, and erect to withstand specified design loads for project conditions within required limits.
   2. Design Loads: Refer to Structural Drawings for wind and live loads.
   3. Spacing and types of girts and rails shall be as required by cladding manufacturer to support each indicated type of cladding.
      a. Coordinate with cladding manufacturer(s) for dead loads of cladding system(s).
      b. Coordinate with indicated joint layouts to ensure secondary girts are spaced to provide appropriate structural attachment for cladding(s).
      c. The primary material of the girt components shall be steel or aluminum. Products fabricated of fiberglass or a composite material are not acceptable.
   4. Able to tolerate movement of components without damage, failure of joint seals, undue stress on fasteners, or other detrimental effects when subject to seasonal or cyclic day/night temperature ranges.
   5. Able to accommodate construction tolerances, deflection of building structural members, and clearances of intended openings.

C. Thermal Performance: System shall obtain effective R-value or U-factor indicated.
   1. Continuous framing profiles fully penetrating insulation are not allowed. Metal framing shall not thermally bridge exterior and interior except for fasteners.
   2. Framing assembly shall not reduce continuous insulation nominal R-value to less than 90% effective R-value.
   3. Continuous insulation framing system shall be thermally modeled to demonstrate, at minimum, compliance with **<<ASHRAE Std 90.1 I-P>>** maximum U-factor for walls.

D. Flatness: Installed system and components shall be flat within the tolerances allowable by cladding manufacturer; with no noticeable warping, buckling, deflections, or other surface irregularities that distort cladding.

E. Heat Resistance: All components that will come into contact with spray foam insulation shall be capable of exposure to the heat generated by spray foam installation without damage, including plastic washers and thermal spacers. Plastics and resins shall be rated for exposure to

DRAFT

temperatures of 300 degrees Fahrenheit or more intermittently without loss of structural capacity or integrity.

F. Ventilation: System design shall allow for movement of air in the cavity behind the cladding, including compartmentalization and/or cross-ventilation for a pressure-equalized system where indicated.

G. Drainage: System design shall allow for drainage of moisture from the cavity behind the cladding.

H. AISI Specifications and Standards: Unless more stringent requirements are indicated, comply with Code of Standard Practice.

I. Shop fabricate framing system to the greatest extent possible.

J. Deliver to project site in largest practical sections.

2.03 CONTINUOUS INSULATION FRAMING MATERIALS

A. Steel Framing: Either **<<ASTM A792/A792M>>** aluminum-alloy coated steel or **<<ASTM A1046/A1046M>>** zinc-aluminum-magnesium alloy coated steel.

B. Aluminum Framing: **<<ASTM B209/B209M>>**, Alloy 6061-T6 for plate and sheet and **<<ASTM B221>>**, Alloy 6063-T6 for extrusions.

C. Primary Girts/Clips: As required to suit anchoring of cladding or perpendicular rails as necessary. Provide either vertical or horizontal girts as required due to indicated orientation of cladding.

1. Perpendicular Rails: Subframing rails mounted to girts, to meet the requirements of cladding manufacturer for support and attachment at cladding ends and joints, and for regular spacing for attachment of claddings.

2.04 FASTENERS

A. Self-Drilling, Self-Tapping Screws, Bolts, Nuts and Washers: Type 304 stainless-steel or zinc-plated with electrodeposition coating per **<<ASTM B633>>** or **<<ASTM F1941/F1941M>>**.

B. Anchorage Devices: **<< Powder actuated; Drilled expansion bolts; Screws with sleeves; and _____>>** or chemical anchors; Alloy Group 1 stainless steel per **<<ASTM F593>>** for bolts and **<<ASTM F594>>** for nuts.

2.05 ACCESSORIES

A. Touch-Up Primer for Galvanized Surfaces: **<< SSPC-Paint 20 Type I - Inorganic; SSPC-Paint 20 Type II - Organic; or _____>>**, complying with VOC limitations of authorities having jurisdiction.

B. Protective Coating: Provide corrosion protection coating on concealed aluminum surfaces in contact with cementitious materials or dissimilar metals.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that **<< substrate surfaces; building framing components; or _____>>** are ready to receive work.

B. Verify field measurements and adjust installation as required.

C. Verify that installation of primary air barrier, air barrier transition materials, flashings, and other materials is complete.

DRAFT

3.02 INSTALLATION

A. Install components in accordance with manufacturer's instructions.

B. Where individual clips are used, mount clips plumb, square, and true to line, at intervals and locations indicated on approved Shop Drawings.

C. Install framing girts/rails plumb, square, and true to line, with securely fastened connections.
   1. Do not use shims between girts and insulation.
   2. If cutting is required, cut by sawing or shearing, do not torch cut. Protect adjacent surfaces from sparks.
   3. Fasten CI framing members by screw fastening. Locate all mechanical fasteners as indicated on Shop Drawings.
   4. Locate screws at slotted holes, and maintain gaps between ends of multiple girt components, to allow for expansion and contraction in the CI framing system design.
   5. Where individual clips are used, each girt shall be supported by at least two primary support clips.
   6. Do not bridge building expansion joints with CI framing. Independently frame both sides of joints.

D. Anchor Fastening: Tighten anchor screws to a snug tight condition; do not strip screws and do not over-torque beyond manufacturer's recommendations. Do not over-compress insulation. If installed using hand tools, verify for each installer at beginning of the work using snug-tight criteria.
   1. Do not use stripped holes. If fastener must be removed, patch all holes, including holes in insulation, air barrier membranes, transition membranes, and flashings, as applicable.

3.03 TOLERANCES

A. Maximum Variation from True Position: **<< 1/8 inch>>**.

B. Maximum Variation of any Member from Plane: **<< 1/8 inch>>**, unless otherwise indicated by cladding manufacturer.

3.04 REPAIR AND PROTECTION

A. Touch up shop-applied coatings as required if damaged during handling or installation.

B. After installation of primary support brackets, inspect substrates for damage and repair substrate flashings or membranes as required.

C. Provide fine adjustments to CI framing as required immediately prior to cladding installation to verify that tolerances are maintained. Prepare CI framing in a timely manner to avoid excessive UV exposure to substrate membranes, air barriers, and other materials.

D. Provide final protection of CI framing as required to ensure that CI framing system is without damage or deterioration prior to installation of cladding.

I. ASTM A536 - Standard Specification for Ductile Iron Castings.

J. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

K. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength.

L. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification.

M. AWS D1.1/D1.1M - Structural Welding Code - Steel.

N. CARB (SCM) - Suggested Control Measure for Architectural Coatings; California Air Resources Board.

O. IAS AC172 - Accreditation Criteria for Fabricator Inspection Programs for Structural Steel AC172.

P. NAAMM MBG 531 - Metal Bar Grating Manual.

Q. SCAQMD 1113 - Architectural Coatings.

R. SCAQMD 1168 - Adhesive and Sealant Applications.

S. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer.

T. SSPC-Paint 20 - Zinc-Rich Coating (Type I - Inorganic, and Type II - Organic).

U. SSPC-SP 3 - Power Tool Cleaning.

V. SSPC-SP 6/NACE No.3 - Commercial Blast Cleaning.

DRAFT

1.02 SUBMITTALS

A. Product Data: Provide product data for each factory fabricated product and accessory material. Include product data for the following:
   1. Nonshrink grout.
   2. Shop primer paint products.
      a. Coordinate with Division 9 Painting topcoat manufacturer and provide compatibility certificates from topcoat manufacturer that shop primers are acceptable substrate for specified topcoats.

B. Shop Drawings: Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories. Include erection drawings, elevations, and details where applicable.
   1. Include field measurements, and indicate where field measurements differ from documents.
   2. Design data: Submit drawings and supporting calculations, signed and sealed by a qualified professional structural engineer.

C. Welders' Qualification Statement: Welders' certificates in accordance with **<<AWS B2.1/B2.1M>>** and dated no more than 12 months before start of scheduled welding work.

D. Designer's Qualification Statement.

E. Fabricator's Qualification Statement: Provide documentation showing steel fabricator is accredited under **<<IAS AC172>>**.

1.03 QUALITY ASSURANCE

A. Design mechanical supports and miscellaneous steel shapes under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the State of Maryland.

B. Welder Qualifications: Welding processes and welding operators qualified in accordance with **<<AWS D1.1/D1.1M>>** and dated no more than 12 months before start of scheduled welding work.

C. Field Measurements: Take field measurements prior to fabrication and verify that dimensions and tolerances are acceptable for fabricated products to fit the space. Indicate field measurements on shop drawings.

DRAFT

PART 2 PRODUCTS

2.01 GENERAL

A. Materials, General: Provide metal fabrications and components with finished surfaces that are smooth and flat. Metal fabrications and components shall not have labels, stickers, engraved or rolled manufacturer names, seams, or blemishes that are exposed in the finished work.

B. Sustainability:
   1. Provide steel fabrications with a minimum 25 percent postconsumer plus 1/2 of preconsumer recycled content.
   2. Provide factory fabricated components that contribute to project's building product disclosure requirements, per Division 01 Section "Sustainable Design Requirements."
   3. Low-Emitting Materials:
      a. Paints and Coatings: Paints, touch-up primers, and other coatings field-applied inside the weatherproofing system shall meet applicable VOC limits of **<<CARB (SCM)>>** or **<<SCAQMD 1113>>**.

b. Adhesives and Sealants: Adhesives and sealants shall meet the chemical content requirements of **<<SCAQMD 1168>>**.

2.02 MATERIALS - STEEL

A. Steel Sections: **<< ASTM A36/A36M; or _____>>**.

B. Steel Tubing: **<< ASTM A500/A500M Grade B cold-formed; ASTM A501/A501M hot-formed; or _____>>** structural tubing.

C. Plates: **<< ASTM A283/A283M; or _____>>**.

D. Pipe: **<< ASTM A53/A53M, Grade B Schedule 40; ASTM A53/A53M Grade B Schedule 80; ASTM A53/A53M Grade ____ Schedule 40; ASTM A53/A53M Grade ____ Schedule ____; or _____>>**.

E. Slotted Channel Fittings: **<<ASTM A1011/A1011M>>**, Grade 33.

F. Mechanical Fasteners: Same material as or compatible with materials being fastened; type consistent with design and specified quality level.

1. Provide stainless steel fasteners for all exterior construction and for fastening stainless steel fabrications.
2. Provide stainless steel fasteners at areas subject to moisture or steam, including mechanical rooms, janitor/custodial rooms with floor sinks, and similar spaces.
3. Provide zinc-plated fasteners for interior construction except where stainless steel is indicated.

G. Bolts, Nuts, and Washers: **<<ASTM A307>><< , Grade A; , Grade B; , _____; or None - N/A>><< , plain; , galvanized to ASTM A153/A153M where connecting galvanized components; or None - N/A>>**.

H. Welding Materials: **<<AWS D1.1/D1.1M>>**; type required for materials being welded.

I. Shop and Touch-Up Primer: **<< SSPC-Paint 15; or _____>>**, universal shop primer, complying with VOC limitations of authorities having jurisdiction.

J. Touch-Up Primer for Galvanized Surfaces: **<< SSPC-Paint 20, Type I - Inorganic; SSPC-Paint 20 Type II - Organic; or _____>>**, complying with VOC limitations of authorities having jurisdiction.

2.03 FABRICATION

A. Fit and shop assemble items in largest practical sections, for delivery to site.

B. Fabricate items with joints tightly fitted and secured.

C. Grind exposed joints flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius.

D. Furnish components required for anchorage of fabrications. Fabricate anchors and related components of same material and finish as fabrication, except where specifically noted otherwise.

2.04 FABRICATED ITEMS

A. Metal Ladders: Refer to Division 5 Section "Metal Ladders".

B. Bollards:

1. Fixed Bollards (Utility Bollard for Service Areas): 6-inch diameter Schedule 40 steel pipe, concrete filled, with prefabricated finial cap, as detailed; manufacturer's standard polyester factory-powder coat finish. ******Architect/designer coordinate with MCPS bollard detail (refer to Adtek Civil details) for custom detail******

DRAFT

a. Basis-of-Design: Calpipe Security Bollards IBF06040 with custom finial cap.
b. Finial Cap: 6 inch diameter by 6 inch high; as detailed; with rebar pigtails for embedding into concrete-filled bollard.
c. Total Exposed Height Including Cap: 48 inches, unless otherwise indicated.
d. Provide roofing felt wrapped around subgrade embedded bollard to serve as bond break between bollard and concrete footing.

2. Removable Bollards: 5-3/4 inch diameter ductile cast iron per **<<ASTM A536>>**; fixed cast-in anchor for casting into new concrete; manufacturer's standard factory polyester powder-coat finish.
   a. Basis-of-Design Product: Reliance Foundry; Model R-7576.
   b. Finial Cap Design: Three (3) decorative annular rings, with rounded cap; matching Basis-of-Design.
   c. Total Exposed Height Including Cap: 34 inches, unless otherwise indicated.
   d. Mounting Method: Manufacturer's standard cast-in anchor. Base is secured to anchor with a full-height 1-inch diameter threaded bar; 3-1/2 inch outside diameter washer and 1-inch nut (sized to threaded bar).
      1) Cap shall install to top of bollard base with three (3) 3/8-inch set screws with plastic plugs.
3. **<< Precast Concrete Bollards: >>**Refer to Division 3 "Precast Architectural Concrete" for decorative precast bollards.

C. **<< Catwalk:>>**Fabricate steel plate and other components specified in Division 05 Section "Structural Steel Framing" for catwalk assembly.

D. **<< Ledge Angles; Shelf Angles; Channels; Plates; and _____>>** Not Attached to Structural Framing: For support of **<< metal decking; joists; masonry; and _____>>**; prime paint finish for field finishing.

E. Lintels: As detailed; prime paint finish for field finishing.

F. Door Frames for **<< Overhead Door Openings; Wall Openings; and _____>>**: Channel or bent plate sections; prime paint finish for field finishing.

G. **<< Operable Partition Support:>>** Provide steel beam or other shape as acceptable to operable partition manufacturer, along length of operable partition; coordinate with manufacturer to size beam to prevent sag.

H. **<< Elevator >>** Hoist and Fall-Protection Beams: Provide beam sections as required by manufacturer; prime paint finish.

I. **<< Elevator >>** Sills: Provide angle shapes for slab edge locations and elevator sill supports; size in coordination with elevator manufacturer's requirements.

J. Slotted Channel Framing: Fabricate channels and fittings from **<<ASTM A1011/A1011M>>**, Grade 33 structural steel complying with the referenced standards; with **<< factory-applied, rust-inhibiting thermoset acrylic enamel; factory-applied, polyester powder-coat; electro-galvanized per ASTM B633 Type III, SC 1; hot-dipped galvanized per ASTM A653, Grade G90; hot-dipped galvanized per ASTM A1 Grade G65.; or _____>>** finish.
   1. Provide 1-5/8 inch by 1-5/8 inch channel unless otherwise indicated.

K. Bar Gratings: **<<NAAMM MBG 531>>**, welded or pressure-locked galvanized steel type. For all gratings, unless otherwise indicated, provide manufacturer's standard galvanized cross rods or bars spaced at 4 inches o.c.
   1. **<< Elevator>>** Sump Grating: Removable; type W-19-4 or P-19-4 per **<<NAAMM MBG 531>>**; minimum 1-inch high by 1/8-inch thick galvanized steel bearing bars, spaced approximately 1-3/16-inch o.c; with cross bars at 4 inches o.c.

DRAFT

2. Provide welded frames for bar gratings, fabricated of galvanized steel shapes, with integral anchors/lugs for casting into concrete.

L. Miscellaneous Steel Shapes: Provide steel shapes for miscellaneous applications indicated on drawings, including but not limited to, reinforcing steel shapes at low partitions/knee walls, concrete slab edge angles, and metal corner guards.

2.05 ENCLOSURES AND GATES

A. Enclosures and Gates: Fabricate gate assembly, including steel gate posts, gate leaves, infill panels, and hardware, in configuration indicated. Galvanize all steel components.

1. Gate Posts: Provide Schedule 80 steel pipe gate posts, unless indicated otherwise. Close tops of posts with cap plates, welded and ground smooth.
2. Gate Framing: Provide 3-inch by 3-inch steel angle or bent plate for perimeter and intermediate framing of gates. Fabricate framing by welding; grind joints smooth.
3. Provide all necessary bracing and reinforcement as required for square, level, and flush operable gates.
4. Provide all fasteners, accessories, and hardware for a complete and operable gate assembly, unless indicated otherwise.
5. Infill: Vertically oriented, composite plastic lumber fabricated from a mixture of cellulose fiber and polyethylene or polypropylene; 1 inch by 5-1/2 inches actual dimension, with square edge. Provide with manufacturer's standard wood grain texture, with color selected from manufacturer's full range.
    a. Manufacturers:
        1) Fiberon LLC; Protect Advantage 1-inch Square Edge (Basis-of-Design)
        2) TimberTech.
        3) Trex Company, Inc.
6. Infill Panels: Provide prefabricated galvanized steel vision screen assembly for 100% visual screening. Infill panels may be secured to gate framing by welding or by mechanical attachments. If using fasteners, fasteners shall be concealed along sides of framing, with smooth exposed heads. Do not fasten to front faces of frame.
    a. Products:
        1) Ametco Manufacturing Corporation; Shadow 100.
        2) Barnett Bates; Orsogril Talia 100.
7. Hardware: Provide the following:
    a. Barrel Hinges: Exterior grade, weld-on type with grease fitting, of mild steel with stainless steel pin. Size to suit weight of gate, but rated not less than 600 pounds per hinge. Provide a minimum of two per gate leaf, unless indicated otherwise.
    b. Pulls: Bent, 1/4-inch by 1-inch galvanized steel bar stock, welded to frame. Minimum 6-inch high by 2-inch deep pull. Provide one at each gate leaf, vertically mounted.
    c. Staple and Hasp: To suit a standard padlock. Padlock is NIC.
    d. Cane Bolts: Minimum 30 inch length, with attachment hangers/brackets that hold bolts in retracted position, and with a weld pin positioned to prevent cane bolt from being accidentally removed from lower bracket. Provide one per gate leaf. Provide receiver cups for each gate leaf in both the closed and 90 degree open positions, to allow for gates to be held open. Fill spaces around receiver cups with non-shrink grout.

DRAFT

2.06 NON-PENETRATING ROOF EDGE PROTECTION RAILING ****USE THIS RAILING PRODUCT ONLY IF NEEDED - DESIGNER SHALL TRY TO AVOID CONDITIONS THAT WOULD REQUIRE THIS RAILING (ROOF EQUIPMENT OR WALK PADS CLOSER THAN 10 FT TO ROOF EDGE)****

A. Roof Edge Protection Railing: Freestanding pedestrian barrier system, including pipe railings, upright posts, bases, and fittings. Provide with corrosion-resistant powdercoat finish complying with AAMA 2604.

1. Standards: Provide a railing system with horizontal top and mid rails, tested for a minimum structural load of 200 lb in any direction, in accordance with OSHA Regulation 29 CFR 1910.28, 1910.29, and 1926.502.
2. Height: Installed height of 42 inches from roof surface to top of top rail. Midrail height 20 inches from roof surface to top of midrail.
3. Mounting Bases: Manufacturer's standard, powdercoated, 90 lb cast iron, galvanized steel, or concrete filled PVC, with protective pads on bottom to protect roof surface.
4. Posts and Rails: Minimum 1-1/2 inch diameter, 16 gauge steel, powdercoated or galvanized.
5. Fittings: Provide manufacturer's standard fittings for a complete assembly. Post to base fitting shall have positive locking system that allows posts to be mounted in any direction. Friction locking is not permitted.
6. Hardware: Provide manufacturer's standard securing carbon steel pins, zinc plated and yellow chromate dipped, consisting of collared pin and lanyard that connects to lynch pin.
7. Accessories:
   a. Toe Board Brackets: Provide system of adjustable metal brackets to secure LP-2 treated lumber toe boards to railing system. Include LP-2 PPTW toeboards in modular length to suit railing system.
   b. Step-Rail: Variable height railing enables a continuous run of railing system when the roof steps up or down.
   c. Raised Mid-Rail: Railing to fit over duct work for continuous run of railing system.
   d. LP Outrigger: Supports placed under ducting or conduit to continue run of railing system when rail section cannot be used.
   e. Gates: Provide railing systems manufacturer’s fabricated pipe rail swinging or sliding gate assembly of opening size indicated. Include hinges, locking coupler, and accessories.
   f. Finishing Rail: D-shaped railing extension for ladder landings, length of rail section and D-loop as indicated on the Drawings.
8. Manufacturers:
   a. BlueWater Manufacturing; SafetyRail 2000.
   b. Garlock Safety Systems; Railguard 200 Railing System.
   c. Kee Safety, Inc.; KeeGuard Contractor.

2.07 DOWNSPOUT BOOTS

A. Downspout Boots: Refer to Division 22 Section "Storm Drainage Piping Specialties."

2.08 FINISHES - STEEL

A. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.

B. Prime paint steel items.

DRAFT

1. Exceptions: Galvanize and do not prime items to be embedded in concrete, masonry, or spray-applied fireproofing. Do not prime items where field welding is required, or provide for field removal of shop primer with a grinder or wire wheel prior to field welding.

C. Prepare interior items to be primed in accordance with **<<SSPC-SP 3>>** Power Tool Cleaning.

D. Prepare exterior items to be primed, and interior items to receive specialty protective coating such as zinc-rich primer, in accordance with **<<SSPC-SP 6/NACE No.3>>** Commercial Blast Cleaning.

E. Galvanizing: Galvanize after fabrication to **<<ASTM A123/A123M>>** requirements.

F. Slotted Channel Framing: **<<ASTM A1011/A1011M>>** Grade 33; coated with manufacturer's standard rust-inhibitive acrylic enamel.

G. Factory Powder Coating: **<<AAMA 2604>>** multiple coat, thermally cured fluoropolymer system; **<< color as indicated; color as selected from manufacturer's standard colors; custom color to match approved sample; or color no. ____ , manufactured by _____>>**.

2.09 FABRICATION TOLERANCES

A. Squareness: 1/8-inch maximum difference in diagonal measurements.

B. Maximum Offset Between Faces: 1/16-inch.

C. Maximum Misalignment of Adjacent Members: 1/16-inch.

D. Maximum Bow: 1/8 inch in 48 inches.

E. Maximum Deviation From Plane: 1/16-inch in 48 inches.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive work.

3.02 PREPARATION

A. Clean and strip primed steel items to bare metal where site welding is required.

B. Furnish setting templates to the appropriate entities for steel items required to be cast into concrete or embedded in masonry.

3.03 INSTALLATION

A. Install items plumb and level, accurately fitted, free from distortion or defects.

B. Provide for erection loads, and for sufficient temporary bracing to maintain true alignment until completion of erection and installation of permanent attachments.

C. Field weld components as indicated on shop drawings.

1. Perform field welding in accordance with **<<AWS D1.1/D1.1M>>**.

D. Obtain approval prior to site cutting or making adjustments not scheduled.

E. After erection, provide touch-up primer on all field welds and areas that have been damaged during installation. Do not prime surfaces to be in contact with concrete. Clean and prepare the surfaces in accordance with manufacturer requirements and ensure that touch-up primer is compatible with shop primer. Coordinate with Division 9 "Painting" for field priming of materials that were not shop-primed and for top coats.

DRAFT

F. Installation of Bollards: Coordinate with bollard details on Drawings. ******Designer shall coordinate installation details with MCPS standards and with Civil drawing details and notes******
   1. Embedded Bollards: Install bond break material around embedded base of bollards, and anchor bollards in concrete footings to a minimum depth of 36 inches with minimum of 6 inches of concrete below bottom and around all sides of bollards, unless otherwise indicated. Fill bollards with concrete and install decorative finial cap into concrete.
   2. Removable Bollards: Coordinate with concrete installer to cast permanent base anchor into concrete. Install bollards into base anchor and secure tightly in accordance with manufacturer requirements.

G. Installation of Enclosures and Gates: Anchor posts in concrete footings, to a minimum depth of 36 inches with 6 inches of concrete below bottom and around all sides of posts, unless otherwise indicated.
   1. Install gate leaf assemblies to smoothly operate without sagging or binding.
   2. Install all hardware for proper operation. Drill cores into concrete apron and install cane bolt receiver sleeves into cores flush with grade. Fill spaces around gate posts and cane bolt receivers with non-shrink grout.

3.04 TOLERANCES

A. Maximum Variation From Plumb: 1/4-inch per story, non-cumulative.

B. Maximum Offset From True Alignment: 1/4-inch.

C. Maximum Out-of-Position: 1/4-inch.

END OF SECTION 055000

DRAFT

SECTION 055100
METAL STAIRS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. 40 CFR 59, Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings; U.S. Environmental Protection Agency.

B. ASTM A6/A6M - Standard Specification for General Requirements for Rolled Structural Steel Bars, Plates, Shapes, and Sheet Piling.

C. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.

D. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.

E. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.

F. ASTM A283/A283M - Standard Specification for Low and Intermediate Tensile Strength Carbon Steel Plates.

G. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.

H. ASTM A501/A501M - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing.

I. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

J. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Required Hardness, Solution Hardened, and Bake Hardenable.

K. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength.

L. ASTM C1107/C1107M - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink).

M. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts and Assemblies, Steel and Alloy Steel, Heat Treated, Inch Dimensions 120 ksi, 144 ksi, and 150 ksi Minimum Tensile Strength, and Metric Dimensions 830 MPa and 1040 MPa Minimum Tensile Strength.

N. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination.

O. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification.

P. AWS D1.1/D1.1M - Structural Welding Code - Steel.

Q. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers Version 1.2.

R. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer.

1.02 SUBMITTALS

A. Product Data: Provide manufacturer's product data for metal stairs.

DRAFT

1. Provide data for shop primer and for nonshrink grout.

B. Shop Drawings: Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories.
   1. Indicate welded connections using standard **<<AWS A2.4>>** welding symbols. Indicate net weld lengths.
   2. Design Data: Include delegated-design shop drawings, including structural calculations and details for loadings and stresses, and anchors and connections.
   3. Include the design engineer's seal and signature on each sheet of shop drawings.

C. Welders' Qualification Statement: Welders' certificates in accordance with **<<AWS B2.1/B2.1M>>** and dated no more than **<< 12 months; or ____>>** before start of scheduled welding work.

D. Designer's Qualification Statement.

1.03 QUALITY ASSURANCE

A. Structural Designer Qualifications: Professional Structural Engineer experienced in design of this work and licensed in **<<the State in which the Project is located>>**, or personnel under direct supervision of such an engineer.

B. Welder Qualifications: Welding processes and welding operators qualified in accordance with **<<AWS D1.1/D1.1M>>** and dated no more than **<< 12 months; or ____>>** before start of scheduled welding work.

C. Indoor Emissions: For each type of paint and coating, comply with the emissions requirements of California Department of Public Health **<<CAL (CDPH SM)>>**.

D. VOC Content: For each type of paint and coating, comply with VOC content restrictions as required by **<<40 CFR 59, Subpart D>>**.

PART 2 PRODUCTS

2.01 METAL STAIRS - GENERAL

A. Metal Stairs: Provide stairs of the design specified, complete with landing platforms, vertical and horizontal supports, railings, and guards, fabricated accurately for anchorage to each other and to building structure.
   1. Regulatory Requirements: Provide stairs and railings that comply with most stringent requirements of local, state, and federal regulations; where requirements of Contract Documents exceed those of regulations, comply with Contract Documents.
      a. Head Clearance: Maintain a minimum of 80 inches head clearance along all paths of travel (the "walk line") as measured above stair noses or finished walking surfaces.
   2. Structural Design: Provide complete stair and railing assemblies that comply with the following:
      a. Stair Capacity: Uniform live load of 100 lb/sq ft and a concentrated load of 300 lb with deflection of stringer or landing framing not to exceed 1/360 of span.
         1) Deflection shall not exceed 1/720 of span where brittle finish materials such as stone, ceramic tile, or terrazzo are indicated.
      b. Railing Assemblies: Refer to Division 5 "Pipe and Tube Railings."
   3. Dimensions: As indicated on drawings.
   4. Shop assemble components; disassemble into largest practical sections suitable for transport and access to site.
   5. No sharp or rough areas on exposed travel surfaces and surfaces accessible to touch.

DRAFT

6. Separate dissimilar metals using paint or permanent tape.

B. Metal Jointing and Finish Quality Levels, per **<<NAAMM AMP 510>>** "Metal Stairs Manual": ******Commercial should be standard - use Architectural for decorative/monumental stairs and Industrial for service/mech yard type spaces******
   1. Architectural: All joints as inconspicuous as possible, whether welded or mechanical.
      a. Welded Joints: Continuously welded and ground smooth and flush.
      b. Mechanical Joints: Butted tight, flush, and hairline; concealed fastenings only.
      c. Exposed Edges and Corners: Eased to small uniform radius.
      d. Metal Surfaces to be Painted: Sanded or ground smooth, suitable for highest quality gloss finish.
   2. Commercial: Exposed joints as inconspicuous as possible, whether welded or mechanical; underside of stair not covered by soffit IS considered exposed to view.
      a. Welded Joints: Intermittently welded on back side, filled with body putty, and sanded smooth and flush.
      b. Welds Exposed to View: Ground smooth and flush.
      c. Mechanical Joints: Butted tight, flush, and hairline.
      d. Bolts Exposed to View: Countersunk flat or oval head bolts; no exposed nuts.
      e. Exposed Edges and Corners: Eased to small uniform radius.
      f. Metal Surfaces to be Painted: Sanded or ground smooth, suitable for satin or matte finish.
   3. Industrial: All joints made neatly.
      a. Welded Joints: Welded on back side wherever possible.
      b. Welds Exposed to Touch: Ground smooth.
      c. Bolts Exposed to Touch in Travel Area: No nuts or screw threads exposed to touch.

C. Fasteners: Same material or compatible with materials being fastened; type consistent with design and specified quality level.

D. Anchors and Related Components: Same material and finish as item to be anchored, except where specifically indicated otherwise; provide all anchors and fasteners required.

DRAFT

2.02 METAL STAIRS WITH CONCRETE TREADS

A. Jointing and Finish Quality Level: **<< Industrial; Service; Commercial; Architectural; or _____>>**, as defined above. ******Coordinate choice selection with types listed above******

B. Risers: Closed.

C. Treads: Metal pan with field-installed concrete fill.
   1. Concrete Depth: 1-1/2 inches, minimum.
   2. Tread Pan Material: Steel sheet.
   3. Tread Pan Thickness: As required by design; 14 gauge, 0.075-inch minimum.
   4. Concrete Reinforcement: Welded wire **<< Welded wire mesh; or _____>>**.
   5. Concrete Finish: Coordinate with Division 9 and design stair treads to prepare for **<< resinous flooring; terrazzo; or resilient stair tread>>**, as indicated. ******Verify finish on case-by-case basis with MCPS******

D. Risers: Same material and thickness as tread pans.
   1. Nosing Depth: Not more than 1-1/2 inch overhang.
   2. Nosing Return: Flush with top of concrete fill, not more than 1/2-inch wide.

E. Stringers: Rolled steel channels.
   1. Stringer Depth: 12 inches, unless otherwise required by Structural Designer.
   2. End Closure Plates: Sheet steel of same thickness as risers welded across ends.
   3. Top Closure Plates: Where excessive gap between wall and stringer occurs (3/8-inch or wider), provide a cover plate of 1/8-inch thick flat steel plate or bar; width to cover full width of stringer and open gap. Field weld top closures to stringers.

F. Landings: Same construction as treads, supported by steel framing members and reinforced as required to achieve design load capacity.

G. Railings: Refer to Division 5 Section "Pipe and Tube Railings."

2.03 METAL STAIRS WITH PRECAST EPOXY TERRAZZO TREADS/RISERS ***FOR DECORATIVE/MONUMENTAL STAIR ONLY***

A. Precast Terrazzo Treads/Risers: Fabricate metal stairs to the same specifications as for cast concrete treads above, except provide vertical steel risers instead of sloped. Design tread pan dimensions to account for terrazzo tread thickness to maintain standard rise and run stair dimensions.
   1. Refer to Division 9 Section "Resinous Matrix Terrazzo Flooring" for precast terrazzo treads/risers.

2.04 HANDRAILS AND GUARDS

A. Handrails and Guards: Refer to Division 5 Section "Pipe and Tube Railings."

2.05 MATERIALS

A. Steel Sections: **<< ASTM A36/A36M; or _____>>**.

B. Steel Tubing: **<<ASTM A500/A500M>>** or **<<ASTM A501/A501M>>** structural tubing, round and shapes as indicated.

C. Steel Plates: **<<ASTM A6/A6M>>** or **<<ASTM A283/A283M>>**.

D. Pipe: **<< ASTM A53/A53M Grade B Schedule 40; ASTM A53/A53M Grade B Schedule 80; ASTM A53/A53M Grade ____ Schedule 40; ASTM A53/A53M Grade ____ Schedule ____; or _____>>**, **<< black finish; galvanized finish; black and galvanized finish, as indicated; or _____>>**.

E. Ungalvanized Steel Sheet: **<< Hot- or cold-rolled, unless otherwise indicated; Cold-rolled only; Hot- or cold-rolled, except use cold-rolled where finished work will be exposed to view; or _____>>**.
   1. Hot-Rolled Steel Sheet: **<<ASTM A1011/A1011M>>**, Designation **<< CS (commercial steel); SS (structural steel), Grade 33; or _____>>**.
   2. Cold-Rolled Steel Sheet: **<<ASTM A1008/A1008M>>**, Designation **<< CS (commercial steel); SS (structural steel), Grade 33, Type 1; or _____>>**.

F. Galvanized Steel Sheet: **<<ASTM A653/A653M>>**, Structural Steel (SS) Grade **<< 33/230; 37/255; 50/340; or ____>>** with **<< G40/Z120; G60/Z180; G90/Z275; or _____>>** coating.

G. Reinforced Concrete Fill: Refer to Division 3 Section "Cast-in-Place Concrete."

2.06 ACCESSORIES

A. Steel Bolts, Nuts, and Washers: **<<ASTM F3125/F3125M>><< , Type 1; , Type 3; , _____; or None - N/A>><< , and galvanized to ASTM A153/A153M where connecting galvanized components; , plain; or None - N/A>>**.

DRAFT

B. Welding Materials: **<<AWS D1.1/D1.1M>>**; type required for materials being welded.

C. Shop and Touch-Up Primer: **<< SSPC-Paint 15; or _____>>** or MPI #79, compatible with topcoat indicated in Division 9 Section "Painting," and comply with VOC limitations of authorities having jurisdiction.

1. At exterior and galvanized surfaces, provide zinc-rich primer; SSPC-Paint 20 or MPI #20, compatible with topcoat, and VOC-compliant.

D. Touch-Up Primer for Galvanized Surfaces: **<< SSPC-Paint 20 Type I - Inorganic; SSPC-Paint 20 Type II - Organic; or SSPC-Paint 20 or MPI #20>>**, compatible with topcoat, and comply with VOC limitations of authorities having jurisdiction.

E. Non-Shrink Cementitious Grout: Premixed compound consisting of non-metallic aggregate, cement, water reducing and plasticizing agents.

1. Grout: Comply with **<<ASTM C1107/C1107M>>**.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive work.

3.02 INSTALLATION

A. Install components plumb and level, accurately fitted, free from distortion or defects.

B. Provide anchors, **<< plates; angles; hangers; struts; and _____>>** required for connecting stairs to structure.

C. Allow for erection loads, and for sufficient temporary bracing to maintain true alignment until completion of erection and installation of permanent attachments.

D. Provide welded field joints where specifically indicated on **<< drawings; shop drawings; or _____>>**. Perform field welding in accordance with **<<AWS D1.1/D1.1M>>**.

E. Other field joints may be either welded or bolted provided the result complies with the limitations specified for jointing quality levels.

F. Obtain approval prior to site cutting or creating adjustments not scheduled.

G. After erection, prime welds, abrasions, **<< and surfaces not shop primed; and surfaces not shop primed or galvanized; or _____>>**, except surfaces to be in contact with concrete.

3.03 TOLERANCES

A. Maximum Variation From Plumb: 1/4-inch per story, non-cumulative.

B. Maximum Offset From True Alignment: 1/4-inch.

END OF SECTION 055100

DRAFT

SECTION 055133
METAL LADDERS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. AAMA 611 - Specification for Anodized Architectural Aluminum.

B. ANSI A14.3 - American National Standard for Ladders - Fixed - Safety Requirements.

C. ASME A17.1 - Safety Code for Elevators and Escalators Includes Requirements for Elevators, Escalators, Dumbwaiters, Moving Walks, Material Lifts, and Dumbwaiters with Automatic Transfer Devices.

D. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.

E. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.

F. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

G. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.

H. ASTM A240/A240M - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.

I. ASTM A283/A283M - Standard Specification for Low and Intermediate Tensile Strength Carbon Steel Plates.

J. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength.

K. ASTM A501/A501M - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing.

L. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength.

M. ASTM B211/B211M - Standard Specification for Aluminum and Aluminum-Alloy Rolled or Cold Finished Bar, Rod, and Wire.

N. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

O. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric).

P. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination.

Q. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification.

R. AWS D1.1/D1.1M - Structural Welding Code - Steel.

S. AWS D1.2/D1.2M - Structural Welding Code - Aluminum.

T. NAAMM MBG 531 - Metal Bar Grating Manual.

U. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer.

V. SSPC-Paint 20 - Zinc-Rich Coating (Type I - Inorganic, and Type II - Organic).

W. SSPC-SP 2 - Hand Tool Cleaning.

DRAFT

1.02 SUBMITTALS

A. Shop Drawings:
   1. Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories. Include erection drawings, elevations, and details where applicable.
   2. Indicate welded connections using standard **<<AWS A2.4>>** welding symbols. Indicate net weld lengths.

B. Welders' Qualification Statement: Welders' certificates in accordance with **<<AWS B2.1/B2.1M>>** and dated no more than 12 months before start of scheduled welding work.

C. Designer's Qualification Statement.

1.03 QUALITY ASSURANCE

A. Design ladders under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the State of Maryland.

B. Welder Qualifications: Welding processes and welding operators qualified in accordance with **<<AWS D1.1/D1.1M>>** and **<<AWS D1.2/D1.2M>>** and dated no more than **<< 12 months; or ____>>** before start of scheduled welding work.

PART 2 PRODUCTS

2.01 MATERIALS - STEEL

A. Steel Sections: **<< ASTM A36/A36M; or _____>>**.

B. Steel Tubing: **<< ASTM A500/A500M Grade B cold-formed; ASTM A501/A501M hot-formed; or _____>>** structural tubing.

C. Plates: **<< ASTM A283/A283M; or _____>>**.

D. Pipe: **<< ASTM A53/A53M, Grade B Schedule 40; ASTM A53/A53M Grade B Schedule 80; ASTM A53/A53M Grade ____ Schedule 40; ASTM A53/A53M Grade ____ Schedule ____; or _____>>**.

E. Mechanical Fasteners: Same material or compatible with materials being fastened; type consistent with design and specified quality level.

F. Bolts, Nuts, and Washers: **<<ASTM A307>><< , plain; , galvanized to ASTM A153/A153M where connecting galvanized components; or None - N/A>>**.

G. Welding Materials: **<<AWS D1.1/D1.1M>>**; type required for materials being welded.

H. Shop and Touch-Up Primer: **<< SSPC-Paint 15; or _____>>**, complying with VOC limitations of authorities having jurisdiction.

I. Touch-Up Primer for Galvanized Surfaces: **<< SSPC-Paint 20, Type I - Inorganic; SSPC-Paint 20 Type II - Organic; or _____>>**, complying with VOC limitations of authorities having jurisdiction.

2.02 MATERIALS - ALUMINUM

A. Extruded Aluminum: **<<ASTM B211/B211M>>**, **<< 6063 alloy; or _____>>**, **<< T6 temper; or _____>>**.

B. Bolts, Nuts, and Washers: Stainless steel.

C. Welding Materials: **<<AWS D1.2/D1.2M>>**; type required for materials being welded.

DRAFT

2.03 FABRICATION

A. Fit and shop assemble items in largest practical sections, for delivery to site.

B. Fabricate items with joints tightly fitted and secured.

C. Grind exposed joints flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius.

D. Exposed Mechanical Fastenings: Flush countersunk screws or bolts; unobtrusively located; consistent with design of component, except where specifically noted otherwise.

E. Supply components required for anchorage of fabrications. Fabricate anchors and related components of same material and finish as fabrication, except where specifically noted otherwise.

2.04 STEEL FABRICATED LADDERS

A. Ladders: Steel; in compliance with **<<ANSI A14.3>>**; with mounting brackets and attachments; galvanized finish.

1. Side Rails: 5/8- by 2-1/2 inch members spaced at 18 inches.
    a. Where ladder side rails extend vertically above the top of the deck, side rails shall flare out on each side to a minimum clear width of 24 inches.
    b. Mounting Brackets: Provide brackets at top and bottom of ladder and at no more than 48 inches o.c. Top bracket shall be nominal 12 inches from top of structural mounting component, and bottom bracket shall be nominal 18 inches from finish roof or floor surface.
        1) Provide mounting bracket depth to ensure a minimum perpendicular clear space of 7 inches from the rear of the rung to the wall surface.
2. Rungs: 3/4-inch diameter solid round bar spaced 12 inches vertically on center.
    a. Cover top of each rung with a non-slip coating or with a premanufactured nonslip cover.
3. Platform: At roof-to-roof (parapet) locations, fabricate ladder with steel bar-grating platform, with 1/2-inch maximum openings between grating bars and 4-inch o.c. between grating crossbars. Provide with steel angle/bent plate frame.
    a. Fabricate bar gratings in accordance with **<<NAAMM MBG 531>>** "Metal Bar Grating Manual."
    b. Provide walk-thru railing over top of platform at 42 inch minimum height, with intermediate rail at 21 inches above platform.
    c. Return: Provide side rails and rungs on the high roof side such that bottom rung will be less than 12 inches above roof surface.
    d. Do not secure ladder to roof surface or copings. Fasten only with brackets to vertical wall surface of parapet.
4. Safety Cage: At all ladders 20 feet or more in height, and at locations indicated on Drawings, provide steel safety cage fabricated in compliance with **<<ANSI A14.3>>**.
    a. Horizontal Hoops: Provide hoops fabricated of minimum 1/4 inch thick by 2 inch flat bar; locate at top and bottom and space vertically no greater than 4 feet on center. Bottom hoop shall flare out approximately 4 inches.
    b. Vertical Bars: Provide vertical bars fabricated of minimum 3/16 inch thick by 1-1/2 inch flat bar; secured each bar to each horizontal hoop.
    c. Assemble safety cage and secure each hoop to vertical ladder side rails either by welding or with stainless-steel mechanical fasteners.
    d. Finish safety cage to match ladder.

DRAFT

e. Security Gate: Provide hinged security gate securely fastened to bottom hoop of safety cage, with manufacturer's standard hinge and hasp for padlock (padlocks NIC).

5. Ladder Security Barrier: Provide minimum 6 foot height continuous panel, coordinated with full width of ladder, to prevent unauthorized access to ladder.
   a. Fabricate barrier as either:
      1) A framed assembly with hot-or cold-rolled steel channel frame, reinforced as required, and galvanized woven wire mesh or expanded metal infill, or
      2) A single piece formed sheet metal guard, fabricated of galvanized, 16 gauge steel; bent to provide closure returns at vertical ladder rails.
   b. Provide continuous piano hinge and hasp for padlock (padlocks NIC).
   c. Provide separate side guards that return to wall surface, matching height of barrier, to prevent access to rear side of ladder rungs.
   d. Secure ladder barrier to vertical ladder rails by welding or with stainless steel mechanical fasteners.
6. Telescoping Safety Post: Provide pre-fabricated safety post designed with telescoping tube section that locks automatically when fully extended. Upward and downward movement shall be controlled by a stainless steel spring balancing mechanism.
   a. Unit shall be completely assembled and provided with fasteners for securing to ladder rungs in accordance with manufacturer's instructions.
   b. Provide unit prefinished with manufacturer's standard safety yellow powder coat.

2.05 ELEVATOR PIT LADDERS

A. Elevator Pit Ladders: Match construction of side rails and rungs as specified above, and in compliance with requirements of **<<ASME A17.1>>**, except as indicated below.
   1. Provide mounting bracket depth to ensure a minimum perpendicular clear space of 4-1/2 inches from the rear of the rung to the wall surface.
   2. Coordinate sizing with elevator manufacturer for hoistway cab and clearance requirements.

2.06 PREFABRICATED ALTERNATING TREAD STAIR

A. Alternating Tread Stairs: Welded metal unit; factory fabricated to the greatest degree possible.
   1. Design Requirements:
      a. Stair Load Capacity: Support the following without exceeding the allowable working stress of the material.
         1) Single Point Load: **<< 1000 pounds; or _____ pounds>>**.
         2) Distributed Load: **<< 100 pounds per square foot; or ____ pounds per square foot>>**.
      b. Guardrail and Handrail Capacity: Support the following without exceeding the allowable working stress of the material.
         1) Single Point Load: **<< 200 pounds; or _____ pounds>>**.
         2) Distributed Load: **<< 50 pounds per linear foot; or ____ pounds per linear foot>>**.
      c. Support the following without exceeding the allowable working stress of the material.
         1) Single Point Load: **<< 1000 pounds; or _____ pounds>>**.
         2) Distributed Load: **<< 100 pounds per square foot; or ____ pounds per square foot>>**.

DRAFT

2. Materials: **<< Stainless steel; ASTM A240/A240M Type 304; Carbon steel; ASTM A1011/A1011M Grade 36 minimum; Aluminum; ASTM B221 ASTM B221M 6063 alloy, T52 temper; or _____>>**.
   a. Stair Angle: 68 degrees.
   b. Components: Manufacturer's standard handrails, guardrails, non-skid treads and stringers.
   c. Finish: Class I natural anodized aluminum.
   d. Accessories: Manufacturer's standard foot divider with rubber bumper strip.
3. Manufacturers:
   a. Lapeyre Stair, Inc; Alternating Tread Stair.
   b. Precision Ladders, LLC; Aluminum Alternating Tread Stairs.

2.07 PREFABRICATED SHIPS LADDERS

A. Prefabricated Ship Ladder: Welded metal unit complying with **<<ANSI A14.3>>**; factory fabricated to greatest degree practical and in the largest components possible.
   1. Components: Manufacturer's standard rails, rungs, treads, handrails. returns, platforms and safety devices complying with the requirements of the MATERIALS article of this section.
   2. Materials: Aluminum; **<<ASTM B211/B211M>>**; 6063 alloy, T52 temper.
   3. Incline: 60 degrees.
   4. Finish: Manufacturer's standard clear anodized coating, comply with **<<AAMA 611>>**, Class 1.
   5. Manufacturers:
      a. Alaco Ladder Company; H60 - 60 Degree Ships Ladder (Hatch).
      b. O'Keeffe's Inc; Model 523A.
      c. Precision Ladders, LLC; Aluminum Ship Stairs to Roof Hatch (SL-01).

2.08 FINISHES - STEEL

A. Prime paint steel items.
   1. Do not prime surfaces in direct contact with concrete.
   2. Do not prime surfaces where field welding is required.

B. Prepare surfaces to be primed in accordance with **<< SSPC-SP2; or ____>>**.

C. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.

D. Prime Painting: **<< One coat; Two coats; or _____>>**.

E. Galvanizing of Non-structural Items: Galvanize after fabrication to **<<ASTM A123/A123M>>** requirements.

2.09 FINISHES - ALUMINUM

A. Class I Natural Anodized Finish: **<<AAMA 611>><< AA-M12C22A41; or None - N/A>>** Clear anodic coating not less than **<< 0.7 mils>>** thick.

B. Apply **<< one coat; or ____ coats>>** of bituminous paint to concealed aluminum surfaces in contact with cementitious or dissimilar materials.

2.10 FABRICATION TOLERANCES

A. Squareness: 1/8-inch maximum difference in diagonal measurements.

B. Maximum Offset Between Faces: 1/16-inch.

DRAFT

C. Maximum Misalignment of Adjacent Members: 1/16-inch.

D. Maximum Bow: 1/8-inch in 48 inches.

E. Maximum Deviation From Plane: 1/16-inch in 48 inches.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive work.

B. Masonry Walls: Confirm that masonry wall assemblies provide adequate structural support for anticipated ladder loads.

C. Metal Framed Walls: Confirm that blocking and reinforcing have been installed in appropriate locations in the wall assembly to provide adequate structural support for anticipated ladder loads.

3.02 PREPARATION

A. Supply setting templates to the appropriate entities for steel items required to be **<< cast into concrete; embedded in masonry; or _____>>**.

3.03 INSTALLATION

A. Install items plumb and level, accurately fitted, free from distortion or defects.

B. Provide for erection loads, and for sufficient temporary bracing to maintain true alignment until completion of erection and installation of permanent attachments.

C. Field weld components as indicated**<< on drawings; on shop drawings; _____; or None - N/A>>**.

D. Perform field welding in accordance with **<<AWS D1.1/D1.1M>>**.

E. Obtain approval prior to site cutting or making adjustments not scheduled.

3.04 TOLERANCES

A. Maximum Variation From Plumb: 1/4-inch per story, non-cumulative.

B. Maximum Offset From True Alignment: 1/4-inch.

C. Maximum Out-of-Position: 1/4-inch.

END OF SECTION 055133

DRAFT

SECTION 055213
PIPE AND TUBE RAILINGS

PART 1 GENERAL ***GENERAL NOTE FOR THIS SECTION: UNLESS OTHERWISE APPROVED BY MCPS, PROVIDE POWDER-COATED STEEL GUARDRAIL ASSEMBLY, WITH STAINLESS STEEL HANDRAILS. FOR DECORATIVE RAILINGS, ARCHITECT SHALL PROVIDE AN ADDITIONAL CUSTOM SECTION***

1.01 REFERENCE STANDARDS

A. 40 CFR 59, Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings; U.S. Environmental Protection Agency.

B. ADA Standards - 2010 ADA Standards for Accessible Design.

C. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.

D. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

E. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.

F. ASTM A554 - Standard Specification for Welded Stainless Steel Mechanical Tubing.

G. ASTM A666/A666M - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.

H. ASTM C1107/C1107M - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink).

I. ASTM E935 - Standard Test Methods for Performance of Permanent Metal Railing Systems and Rails for Buildings.

J. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination.

K. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification.

L. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers Version 1.2.

M. NAAMM AMP 500-06 - Metal Finishes Manual.

N. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer.

O. SSPC-SP 1 - Solvent Cleaning.

1.02 SUBMITTALS

A. Product Data: Provide manufacturer's product data for pipe and tube railings.

B. Sustainability Submittals: Refer to Division 1 Section "Sustainable Design Requirements."

C. Shop Drawings: Indicate profiles, sizes, connection attachments, anchorage, size and type of fasteners, and accessories.

1. Indicate welded connections using standard **<<AWS A2.4>>** welding symbols. Indicate net weld lengths.
2. Design Data: Include delegated-design shop drawings, including structural calculations and details for loadings and stresses, and anchors and connections.
3. Include the design engineer's seal and signature on each sheet of shop drawings.

DRAFT

D. Selection Samples: Provide manufacturer's color charts indicating standard range of powder coat finishes.

E. Welders' Qualification Statement: Welders' certificates in accordance with **<<AWS B2.1/B2.1M>>** and dated within the previous 12 months.

F. Designer's Qualification Statement.

1.03 QUALITY ASSURANCE

A. Structural Designer Qualifications: Professional Structural Engineer experienced in design of this work and licensed in the State of Maryland, or personnel under direct supervision of such an engineer.

B. Welder Qualifications: Welding processes and welding operators qualified within previous **<< 12 months; or ____>>**.

C. Indoor Emissions: For each type of paint and coating, comply with the emissions requirements of California Department of Public Health **<<CAL (CDPH SM)>>**.

D. VOC Content: For each type of paint and coating, comply with VOC content restrictions as required by **<<40 CFR 59, Subpart D>>**.

PART 2 PRODUCTS

2.01 RAILINGS - GENERAL REQUIREMENTS

A. Design, fabricate, and test railing assemblies in accordance with the most stringent requirements of applicable local code.

B. Distributed Loads: Design railing assembly, wall rails, and attachments to resist distributed force of **<< 75 pounds per linear foot; 50 pounds per linear foot; or ___ pounds per linear foot>>** applied to the top of the assembly and in any direction, without damage or permanent set. **<< Test in accordance with ASTM E935; or None - N/A>>**

C. Concentrated Loads: Design railing assembly, wall rails, and attachments to resist a concentrated force of **<< 200 pounds; or ____ pounds>>** applied at any point on the top of the assembly and in any direction, without damage or permanent set. **<< Test in accordance with ASTM E935; or None - N/A>>**

D. Allow for expansion and contraction of members and building movement without damage to connections or members.

E. Dimensions: Refer to Drawings for configurations and heights.

F. Provide brackets, flanges, anchors and other components as required to attach to structure, made of same materials as railing components unless otherwise indicated; where exposed fasteners are unavoidable provide flush countersunk fasteners.

1. For anchorage to concrete or solid masonry, provide brackets anchored with drilled in expansion shields and hanger or lag bolts.
2. For anchorage to hollow masonry, provide brackets anchored with toggle bolts.
3. For anchorage to stud walls, provide brackets anchored with hanger or lag bolts to fire-retardant-treated wood blocking, or with toggle bolts to steel reinforcing backing plates.
    a. Coordinate anchorage locations with Division 6 "Rough Carpentry" and / or Division 9 "Cold-Formed Steel Framing - Non-Structural (CFSF-NS)" to provide blocking or backing plates in framed walls, as applicable.

G. Provide **<< slip-on non-weld mechanical fittings; welding fittings; mechanical and welding fittings where indicated; or _____>>** to join lengths, seal open ends, and conceal

DRAFT

exposed mounting bolts and nuts, including but not limited to elbows, T-shapes, splice connectors, flanges, escutcheons, and wall brackets.

2.02 STEEL RAILING SYSTEM

A. General: Provide the following systems for all handrails and guardrails unless otherwise indicated:
   1. Exterior Railings: Provide black powder-coated steel for all railing components.
   2. Interior Railings: Provide stainless steel handrails. Provide **<< powder-coated; or primed and painted>>** steel for all guardrail components. ******Verify with MCPS on case-by-case basis for powder-coated or primed painted for interior guardrail components******

B. Steel Tube: **<< ASTM A500/A500M Grade B cold-formed; ASTM A501/A501M hot-formed; or _____>>** structural tubing.

C. Steel Pipe: **<< ASTM A53/A53M Grade B Schedule 40; ASTM A53/A53M Grade B Schedule 80; ASTM A53/A53M Grade ____ Schedule 40; ASTM A53/A53M Grade ____ Schedule ____; or _____>>**; unless otherwise required due to structural loading/design.

D. Stainless Steel Components: **<<ASTM A666/A666M>>**, **<< Type 304; Type 316; or _____>>**.
   1. Stainless Steel Tubing: **<<ASTM A554>>**, Type 304, **<< 16-gauge, 0.0625-inch; or ___-gauge, ___-inch>>** minimum metal thickness, 1-1/2-inch nominal diameter.

E. Welding Fittings: Factory- or shop-welded from matching pipe or tube; seams continuously welded; joints and seams ground smooth.

F. Exposed Fasteners: No exposed bolts or screws.

G. Non-Shrink Cementitious Grout: Premixed compound consisting of non-metallic aggregate, cement, water reducing and plasticizing agents.
   1. Grout: Comply with **<<ASTM C1107/C1107M>>**.

2.03 FABRICATION

A. Accurately form components to suit specific project conditions and for proper connection to building structure.

B. Fit and shop assemble components in largest practical sizes for delivery to site.

C. Fabricate components with joints tightly fitted and secured. **<< Provide spigots and sleeves to accommodate site assembly and installation.; or None - N/A>>**

D. Welded Joints:
   1. Exterior Components: Continuously seal joined pieces by **<< intermittent welds and plastic filler; continuous welds; or _____>>**. Drill condensate drainage holes at bottom of members at locations that will not encourage water intrusion.
   2. Interior Components: Continuously seal joined pieces by **<< intermittent welds and plastic filler; continuous welds; or _____>>**.
   3. Grind exposed joints flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius.

2.04 FINISHES

A. General: Comply with **<<NAAMM AMP 500-06>>**.
   1. Complete mechanical finishes before fabrication. After fabrication, finish joints, bends, abrasions, and surface blemishes to match sheet.

DRAFT

2. Protect mechanical finishes on exposed surfaces from damage.
3. Apply organic finishes to formed metal after fabrication.

B. **<< Powder-Coated>>** Steel Finishes:
1. Coated Steel: Clean surface in accordance with **<<SSPC-SP 1>>** before applying coating.
2. Pretreatment: Conversion coating of type suited to organic coating.
3. Powder-Coat Finish: Manufacturer's standard thermosetting polyester or acrylic urethane powder coating; minimum cured-film thickness of **<< 1.5 mils, 0.015 inch>>**.
4. Color: For interior finishes, color shall be selected by Architect from manufacturer's standard range. For exterior, provide black finish.

C. **<< Primed and Painted>>** Steel Finish:
1. Shop Primer: Manufacturer's universal shop primer, compatible with topcoat indicated in Division 9 Section "Painting," and complying with VOC limitations indicated above.
2. Touch-Up Primer: **<< SSPC-Paint 15; or _____>>** or MPI #79, compatible with shop primer, and with topcoat indicated in Division 9 Section "Painting," complying with VOC and emissions limitations indicated above.
3. Finish Coats: Coordinate with Division 9 Section "Painting."

D. Stainless Steel Finishes:
1. Remove tool marks, die marks, and stretch lines before finishing.
2. Directional Satin: No.4.
3. Directional Finishes: Run grain with long dimension of each item.
4. After polishing, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive work.

B. Where required, verify that installation of in-wall blocking and reinforcement is complete and ready to receive work.

3.02 PREPARATION

A. Clean and strip primed steel items to bare metal where site welding is required.

B. Supply items required to be cast into concrete or embedded in masonry with setting templates, for installation as work of other sections.

3.03 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install components plumb and level, accurately fitted, free from distortion or defects, with tight joints.

C. Install railings in compliance with **<<ADA Standards>>** for accessible design at applicable locations.

D. Anchor railings securely to structure.

E. Where railing posts are embedded in concrete, fill annular space around posts with non-shrink grout. At exterior conditions slope non-shrink grout away from post

DRAFT

F. Conceal anchor bolts and screws whenever possible. Where not concealed, use flush countersunk fastenings

3.04 TOLERANCES

A. Maximum Variation From Plumb: 1/4-inch per floor level, non-cumulative.

B. Maximum Offset From True Alignment: 1/4-inch.

C. Maximum Out-of-Position: 1/4-inch.

END OF SECTION 055213

ROUGH CARPENTRY

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM C557 - Standard Specification for Adhesives for Fastening Gypsum Wallboard to Wood Framing.

B. ASTM C1177/C1177M - Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing.

C. ASTM C1280 - Standard Specification for Application of Exterior Gypsum Panel Products for Use as Sheathing.

D. ASTM D2898 - Standard Practice for Accelerated Weathering of Fire-Retardant-Treated Wood for Fire Testing.

E. ASTM D3273 - Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber.

F. ASTM D3498 - Standard Specification for Adhesives for Field-Gluing Wood Structural Panels (Plywood or Oriented Strand Board) to Wood Based Floor System Framing.

G. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

H. AWPA U1 - Use Category System: User Specification for Treated Wood.

I. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers Version 1.2.

J. EPA (TSCA); Title VI - Toxic Substances Control Act, Title VI: Formaldehyde Standards for Composite Wood Products.

K. PS 1 - Structural Plywood.

L. PS 20 - American Softwood Lumber Standard.

M. SCAQMD 1168 - Adhesive and Sealant Applications.

1.02 SUBMITTALS

A. Product Data: Provide technical data for fire-retardant materials and include certification that materials and treatment comply with manufacturer's requirements.

1. Evaluation Reports: Provide ICC-ES evaluation reports for each applicable item below:
    a. Fire-retardant-treated lumber.
    b. Each type of power- or powder-actuated fastener and expansion anchor.

B. Sustainability Submittals: Refer to Division 1 Section "Sustainable Design Requirements."

1.03 QUALITY ASSURANCE

A. Testing Agency Qualifications (for **<< Fire-Retardant Treatments; or None - N/A>>**): Independent firm specializing in performing testing of treatments of type specified in this section, and performing periodic inspections to ensure that the material receiving the classification marking matches the tested material; and approved by local authority having jurisdiction.

DRAFT

1.04 DELIVERY, STORAGE, AND HANDLING

A. General: Cover wood products to protect against moisture. Support stacked products to prevent deformation and to allow air circulation.

B. Fire Retardant Treated Wood: Prevent exposure to precipitation during shipping, storage, and installation.

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS

A. Dimension Lumber: Comply with **<<PS 20>>** and requirements of specified grading agencies.

1. Grading Agencies: Grading agency whose rules are approved by the Board of Review, American Lumber Standard Committee at www.alsc.org and who provides grading service for the species and grade specified.
    a. Northeastern Lumber Manufacturer's Association (NELMA) - Spruce-Pine-Fir.
    b. Southern Pine Inspection Bureau (SPIB) - Southern Pine.
    c. West Coast Lumber Inspection Bureau (WCLIB) - Douglas Fir, Hem Fir, Spruce-Pine-Fir-South.
    d. Western Wood Products Association (WWPA) - Douglas Fir, Hem Fir; Spruce-Pine-Fir-South.
    e. National Lumber Grades Authority (NLGA) - Douglas Fir-North, Hem Fir-North, Spruce-Pine-Fir.
2. Provide lumber stamped with grade mark of responsible grading agency, unless otherwise indicated.
    a. Place grade stamp on unexposed surface of lumber specified to be exposed with natural or stained finish, or omit grade stamp and submit documentation from grading agency certifying grade compliance.
3. Species and Grade:
    a. Species and grade is indicated on Structural Drawings for studs, joists, rafters, beams, columns, ceiling joists, and other structural components, as applicable.
    b. For miscellaneous lumber including non-structural miscellaneous framing, blocking, nailers, grounds, and furring, provide No. 2 or Standard grade.
    c. Lumber of other species or grades is acceptable provided structural and appearance characteristics are equivalent to or better than products specified.
4. Moisture Content: **<< S-dry or MC19 (19% or less); Kiln-dry or MC15 (15% or less); or _____>>**. Applies to lumber for 2-inch nominal thickness and less.

B. Sustainability Requirements:

1. Composite Wood: All composite wood materials installed inside the weatherproofing system shall meet either **<<EPA (TSCA); Title VI>>** for ultra-low-emitting formaldehyde or no added formaldehyde (ULEF / NAUF).
2. Bio-Based Wood Material: Provide sustainably harvested wood; include chain-of-custody certification. Lumber and wood products shall be certified by American Tree Farm System (ATFS), Forest Stewardship Council (FSC), or Sustainable Forestry Initiative (SFI).

2.02 WOOD CONSTRUCTION PANELS

A. Roof Sheathing (Parapet): Exposure 1, veneer faced FRT plywood sheathing. OSB is not acceptable.

1. Thickness: Minimum 5/8 inch.

DRAFT

2. Screws for fastening plywood sheathing over rigid insulation at parapets:
    a. For Steel Framing: Provide #10 SIP low profile flat head or pancake head screws intended for wood-to-metal connections, at spacing indicated.
        1) Pullout Capacity: 108 lb minimum in 43 mil (18 gauge) steel.
    b. For Masonry Backup: 1/4-inch diameter, low-profile flat head type concrete screw anchors at 3 inches from each panel edge, and at spacing indicated. Length to suit embedment into CMU of 1-1/4 inches, minimum.
        1) Pullout Capacity: 100 lb minimum at 1 inch embedment in face shell of hollow CMU.

B. Wall Sheathing: Glass mat faced gypsum, **<<ASTM C1177/C1177M>>**, **<< 1/2 inch; 5/8 inch Type X fire resistant; or ____ inch>>**, unless otherwise indicated.
1. Type X Sheathing: At all fire-rated assemblies and at all locations where 5/8-inch thick sheathing is indicated on Drawings, provide 5/8-inch thick product with Type X core. For rated assemblies, product shall be one of those required by indicated tested assembly.
2. Mold Resistance: Score of 10, when tested in accordance with **<<ASTM D3273>>**.
3. Edges: **<< Square; or _____>>**.
4. Products:
    a. CertainTeed Corporation; GlasRoc Brand.
    b. Georgia-Pacific Gypsum; DensGlass Sheathing.
    c. National Gypsum Company; Gold Bond eXP Sheathing.
    d. USG Corporation; Securock Brand Glass-Mat Sheathing.

C. Communications and Electrical Room Mounting Boards: **<<PS 1>>** A-D FRT plywood, or medium density fiberboard; 3/4-inch thick; flame spread index of 25 or less, smoke developed index of 25 or less, when tested in accordance with **<<ASTM E84>>** (Class A - UL FR-S).

2.03 ACCESSORIES

A. Fasteners and Anchors:
1. Metal and Finish: Provide hot-dipped galvanized steel complying with ASTM A 153 or stainless steel at exterior, high humidity, and fire-retardant treated wood locations.
    a. Fasteners at interior FRT shall be per FRT treatment manufacturer's recommendations.
2. Drywall Screws: Bugle head, hardened steel, power driven type, **<< length three times thickness of sheathing; length to achieve full penetration of sheathing substrate; or _____>>**.
3. Anchors: **<< Toggle bolt type for anchorage to hollow masonry; Expansion shield and lag bolt type for anchorage to solid masonry or concrete; Bolt or ballistic fastener for anchorages to steel; or _____>>**.
4. Screws/Anchors for Fastening Top-of-Parapet Blocking & Nailers and for Back-of-Parapet Plywood Sheathing over Rigid Insulation:
    a. For CFSF-S Metal Framed Parapets: Provide #10 SIP low profile flat head screws intended for wood-to-metal connections, at spacing indicated. Pullout capacity of 108 lb minimum in 43 mil (18 gauge) steel.
    b. For CMU Parapets: Provide 1/4-inch diameter low-profile flat head type concrete screw anchors, at spacing indicated. Length to suit embedment into CMU of 1-1/4 inches minimum. Pullout capacity of 100 lb minimum at 1 inch embedment in face shell of hollow CMU.

DRAFT

B. Flexible Flashing/Separation Material: Barrier sheet fabricated of polyethylene backed rubberized asphalt or butyl rubber sheet; not less than 25 mil overall thickness.

C. General Purpose Construction Adhesives: Comply with **<<ASTM C557>>** or **<<ASTM D3498>>**.

1. Adhesives: Adhesives field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet the chemical content requirements of **<<SCAQMD 1168>>**.

2.04 FACTORY WOOD TREATMENT ******PRESERVATIVE TREATMENTS DELETED PER MCPS REQUEST. IF ARCHITECT DESIGN PROPOSES EXTERIOR OR EXPOSED LUMBER REQUIRING TREATMENT, CONFIRM WITH MCPS******

A. Treated Lumber and Plywood: Comply with requirements of **<<AWPA U1>>** - Use Category System for wood treatments determined by use categories, expected service conditions, and specific applications.

1. Fire-Retardant Treated Wood: Provide FRT lumber and plywood stamped with name and mark of qualified testing agency, fire-retardant treatment product and manufacturer, wood species and drying method, testing standards, and flame spread and smoke development indices.

a. For exterior FRT and FRT that will be exposed to moisture, include accelerated weathering test language, with the words "No increase in the listed classification when subjected to Standard Rain Test **<<ASTM D2898>>**".

B. Fire Retardant Treatment:

1. Exterior Type: **<<AWPA U1>>**, Category UCFB, Commodity Specification H, chemically treated and pressure impregnated; capable of providing a maximum flame spread index of 25 and maximum smoke developed index of 450, when tested in accordance with **<<ASTM E84>>**, with no evidence of significant combustion when test is extended for an additional 20 minutes both before and after accelerated weathering test performed in accordance with **<<ASTM D2898>>**.

a. Kiln dry wood after treatment to a maximum moisture content of **<< 19; 18; or ___>>** percent for lumber and **<< 15; or ___>>** percent for plywood.

b. Treat exterior rough carpentry items associated with roof construction, concealed blocking, and as indicated on Drawings.

c. Do not use treated wood in direct contact with the ground.

2. Interior Type A: **<<AWPA U1>>**, Use Category UCFA, Commodity Specification H, low temperature (low hygroscopic) type, chemically treated and pressure impregnated; capable of providing a maximum flame spread index of 25 and maximum smoke developed index of 450, when tested in accordance with **<<ASTM E84>>**, with no evidence of significant combustion when test is extended for an additional 20 minutes.

a. Kiln dry wood after treatment to a maximum moisture content of **<< 19; 18; or ___>>** percent for lumber and **<< 15; or ___>>** percent for plywood.

b. Treat interior concealed blocking, plywood backing panels, and other rough carpentry items **<< as scheduled; as indicated; or _____>>**.

c. Do not use treated wood in applications exposed to weather or where the wood may become wet.

3. Strength Adjustments (Structural Panels/Plywood): Test FRT structural panels/plywood per ASTM D 5516 and develop strength adjustment factors per ASTM D 6305.

4. Strength Adjustments (Lumber): Test FRT lumber per ASTM D 5664 and develop strength adjustment factors per ASTM D 6841.

DRAFT

PART 3 EXECUTION

3.01 PREPARATION

A. Coordinate installation of rough carpentry members specified in other sections.

3.02 INSTALLATION - GENERAL

A. Select material sizes to minimize waste.

B. Reuse scrap to the greatest extent possible; clearly separate scrap for use on site as accessory components, including: shims, bracing, and blocking.

C. Where treated wood is used on interior, provide temporary ventilation during and immediately after installation sufficient to remove indoor air contaminants.

3.03 BLOCKING, NAILERS, AND SUPPORTS

A. Provide framing and blocking members as indicated or as required to support finishes, fixtures, specialty items, and trim.

B. In metal-framed walls, provide continuous FRT blocking around door and window openings for anchorage of frames, securely attached to stud framing.

C. In metal-framed walls, provide blocking attached to studs as backing and support for wall-mounted items, unless item can be securely fastened to two or more studs or other method of support is explicitly indicated.

D. Where blocking is indicated to be installed directly adjacent to metal decking, other galvanized metals, concrete, or masonry, provide flexible flashing/separation material as a continuous barrier to prevent direct contact between wood and substrate materials.

3.04 ROOF-RELATED CARPENTRY

A. Coordinate installation of roofing carpentry with deck construction, framing of roof openings, and roofing assembly installation.

1. Roof Curbs: Where prefabricated roof curbs and equipment supports are provided at sloped roofs, provide wood blocking so that curbs are level to the ground.

B. Top-of-Parapet Blocking and Nailers: Secure wood blocking and plywood nailers to prepared substrate using mechanical fasteners to attain loading design requirements. Adhesive anchorage of wood nailers & blocking is not acceptable. Coordinate with installation of continuous insulation and air barrier membrane/roof membrane materials.

1. Installation at CMU Parapets: Secure parapet blocking and nailers to CMU with screw anchors in two rows, staggered, at 32 inches on center; except within 10 feet of building corners provide two staggered rows at 24 inches on center. Provide fasteners sized for embedment length into CMU of 1-1/4 inch, minimum. Install screws in accordance with manufacturer's instructions, with screw heads flush with uppermost surface off indicated blocking or plywood nailer.
2. Installation at CFSF-S Metal Framed Parapets: Secure blocking and nailers to metal framing at #10 SIP screws in 2 rows at 16 inches on center; except within 10 feet of building corners provide 2 rows at 12 inches on center. Provide attachment in accordance with APA Form No. T625C, Table 1; for 3/4 inch plywood thickness, wall stud spacing, and wind exposure category indicated.

C. Back-of-Parapet Sheathing Over Rigid Insulation: Secure plywood sheathing over XPS / XEPS insulation to prepared substrate using mechanical fasteners to attain loading design requirements. Adhesive anchorage is not acceptable. Coordinate with installation of continuous insulation and air barrier membrane/roof membrane materials.

DRAFT

1. Stagger vertical butt joints of plywood sheathing.
2. Installation at CMU Parapets: Secure sheathing over board insulation with screw anchors, embedment length of at least 1-1/4 inches into CMU substrate. Fastener spacing shall be 16 inches horizontally and 8 inches vertically.
3. Installation at CFSF-S Metal Framed Parapets: Secure sheathing over board insulation anchored directly to CFSF-S framing with #10 SIP screws. Fastener spacing shall be 16 inches horizontally and 8 inches vertically; verify with spacing of installed CFSF locations in field.

3.05 INSTALLATION OF CONSTRUCTION PANELS

A. Wall Sheathing: Comply with GA-253, **<<ASTM C1280>>**, and with manufacturer's instructions. Secure with long dimension perpendicular to wall studs, with edges butted tight, over firm bearing and staggered; secure using screws as indicated.
   1. Install sheathing with a 3/8-inch gap where abutting structural elements.
   2. Install sheathing with a 1/4-inch gap where abutting masonry, concrete, or other materials that may retain moisture.
   3. Coordinate with flashings, air barriers, joint sealants, and other materials to ensure proper sequencing and to maintain protection from the elements during construction.
   4. Screw panels to cold-formed steel framing. Provide screws spaced at approximately 8 inches apart. For perimeter fasteners provide 3/8-inch set back from all board edges.
   5. Do not overdrive screws; drive snug so that screw is tight against face of sheathing but does not tear or rip facing.
   6. Seal joints, cut edges, holes, and around penetrations with water-resistant polyether-based sealant recommended by sheathing manufacturer.

B. Communications and Electrical Room Mounting Boards: Secure with screws, with edges over firm bearing; space fasteners at maximum 24 inches on center on all edges and in field of board.
   1. At gypsum board/stud walls, verify metal stud locations and coordinate fastener pattern to secure directly to framing.
   2. At CMU walls, equipment may be secured directly to CMU without secondary mounting board.
   3. At fire-rated walls, install board over wall board indicated as part of the fire-rated assembly.
   4. Install bottom of boards at 4-1/2 inches above finish floor to allow for wall base.
   5. Where boards are indicated as full floor-to-ceiling height, install with long edge of board parallel to studs.
   6. Install adjacent boards without gaps.

3.06 CLEANING

A. Waste Disposal: Refer to Section **<< 017419 - Construction Waste Management and Disposal>>**.
   1. Comply with applicable regulations.
   2. Do not burn scrap on project site.
   3. Do not burn scraps that have been pressure treated.
   4. Do not send materials treated with pentachlorophenol, CCA, or ACA to co-generation facilities or “waste-to-energy” facilities.

B. Do not leave wood, shavings, sawdust, etc. on the ground or buried in fill.

DRAFT

C. Prevent sawdust and wood shavings from entering the storm drainage system.

END OF SECTION 061000

DRAFT

SECTION 064100
ARCHITECTURAL WOOD CASEWORK

PART 1 GENERAL

1.01 DEFINITIONS

A. Comply with **<<ANSI/AWI 0641>>**.

B. Exterior Surfaces: Exterior surfaces exposed to view when doors and drawers are closed, including:
   1. Cabinet bottoms more than 42 inches above finished floor.
   2. Cabinet tops more than 72 inches above finished floor.
   3. Knee spaces; front edges of stretchers, ends, divisions, tops, and bottoms; sloping tops of cabinets.

C. Exposed Interior Surfaces: Interior surfaces exposed to view in open cases or behind transparent doors, including:
   1. Shelves, including edgebanding.
   2. Front edge of divisions and partitions.
   3. Interior faces of sides, backs, and bottoms. Interior surfaces of cabinet top members 36 inches or more above finished floor.
   4. Interior face of door and applied drawer fronts.

D. Semi-Exposed Surfaces: Interior surfaces exposed to view when doors and drawers are open, including:
   1. Top and bottoms of shelves, including front edgebanding.
   2. Front edge of divisions and partitions.
   3. Interior faces of sides, backs, and bottoms. Interior surfaces of cabinet top members 36 inches or more above finished floor.
   4. Drawer sides, sub fronts, backs, and bottoms.
   5. Underside of cabinet bottoms between 24 and 42 inches above finished floor.
   6. Security panels or drawer stretchers.

E. Concealed Surfaces: Exterior and interior surfaces that are covered or not normally exposed to view, including:
   1. Toe spaces.
   2. Sleepers, stretchers, and solid sub tops.
   3. Underside of cabinet bottoms less than 24 inches above finished floor.
   4. Flat tops of cabinets more than 80 inches above finished floor, except if visible from an upper floor or building level.
   5. Three non-visible edges of adjustable shelves.
   6. Underside of knee spaces, aprons, and drawer boces that are less than 36 inches above finished floor.
   7. Faces of cabinet ends of adjoining units that butt together.

1.02 REFERENCE STANDARDS

A. ADA Standards - 2010 ADA Standards for Accessible Design.

B. ANSI/AWI 0400 - Factory Finishing.

C. ANSI/AWI 0620 - Finish Carpentry/Installation.

DRAFT

D. ANSI/AWI 0641 - Architectural Wood Casework.

E. ANSI/AWI SMA 0643 - Wood Stair, Handrail, and Guard Systems.

F. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

G. ASTM D1037 - Standard Test Methods for Evaluating Properties of Wood-Base Fiber and Particle Panel Materials.

H. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

I. AWI 100 - Submittals.

J. AWI 200 - Care and Storage.

K. AWI 300 - Materials.

L. AWI 0622.0646 - Millwork & Wood Trim.

M. AWI 1236 - Countertops.

N. AWI/AWMAC/WI (AWS) - Architectural Woodwork Standards, 2nd Edition.

O. BHMA A156.9 - Cabinet Hardware.

P. BHMA A156.18 - Standard for Materials and Finishes.

Q. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers Version 1.2.

R. CARB (ATCM) - Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products.

S. CARB (SCM) - Suggested Control Measure for Architectural Coatings; California Air Resources Board.

T. HPVA HP-1 - American National Standard for Hardwood and Decorative Plywood.

U. ICC A117.1 - Accessible and Usable Buildings and Facilities.

V. ISFA 2-01 - Classification and Standards for Solid Surfacing Material.

W. ISO 4586-3 - High-Pressure Decorative Laminates (HPL, HPDL) – Sheets Based on Thermosetting Resins (Usually Called Laminates) – Part 3: Classification and Specifications for Laminates Less than 2 mm Thick and Intended for Bonding to Supporting Substrates.

X. MPI (APSM) - Master Painters Institute Architectural Painting Specification Manual.

Y. NEMA LD 3 - High-Pressure Decorative Laminates.

Z. NSF 2 - Food Equipment.

AA. PS 1 - Structural Plywood.

BB. PS 20 - American Softwood Lumber Standard.

CC. SCAQMD 1113 - Architectural Coatings.

DD. SCAQMD 1168 - Adhesive and Sealant Applications.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate schedule of climate-controlled rooms with schedule of storage of wood and wood-based materials requiring climate-controlled environments.

DRAFT

2. Coordinate work of this section with installation of **<< wood blocking; wood backing; wood furring; metal strapping; other anchorage; and _____>>** that provides casework **<< backing; structural support; and _____>>**.
3. Coordinate work of this section with **<< rough-in plumbing; rough-in electrical; and _____>>** integrally-related with casework.

B. Preinstallation Meeting: Convene preinstallation meeting not less than **<< one week; or _____>>** prior to completion of framing behind casework; require attendance of **<< contractor; framing contractor; casework fabricator; casework installer; and _____>>**.
1. Review locations of casework backing and structural support.

1.04 SUBMITTALS

A. AWI QCP Program Submittal Requirements: Comply with **<<AWI 100>>**. ******Use AWI QCP Program if not planning to indicate AWI licensed fabricators.******

B. Product Data: Submit manufacturer's published, product descriptive data.
1. HPDL Laminates: For each type, indicate **<< description; thickness; finish; pattern; color; flame spread index; smoke developed index; impact-resistance rating; surface-wear-resistance rating; high-temperature rating; and _____>>**.
2. ABS Edgebanding: For each type.
3. Transparent Finish Systems: For each system, include **<< manufacturer's name; complete list of products to be used; general product categories; product names; and _____>>**.
4. Hardware: For each type of **<< cabinet; drawer; and _____>>** hardware.
5. Locks: For each type of **<< cabinet; drawer; and _____>>** lock.
6. Accessory Components: For each type of **<< glass; grommet; and _____>>**.

C. Shop Drawings: Indicate materials, component profiles, fastening methods, jointing details, and accessories.
1. Include field measurements and indicate where field measurements differ from documents.

D. Samples:
1. **<< AWI QCP Program; or _____>>** Requirements for Samples: Comply with **<<AWI 100>>**.
2. Selection Samples: Submit manufacturer's color charts indicating full range of available colors, for each product requiring color selection.
3. Verification Samples: Submit physical samples, manufacturer's standard size, for each specified finish and color of the following materials:
   a. For each type of architectural woodwork profile and paneling, minimum 8 inches square or 8 linear inches in length, illustrating proposed shapes, sizes, and finishes of panels, moldings, and other profiles
   b. For each solid wood or wood veneered product indicated to receive transparent finish, provide at least three samples illustrating standard range of wood grain, stain color, and sheen, for selected color.
   c. Plastic laminate.
   d. Solid surface.
   e. ABS edge banding.

E. Certificates, AWI: At end of AWI Quality Certification Program process, provide **<< two; three; or _____>>** samples indicating casework complies with specified performance requirements.

DRAFT

******Required if participating in AWI QCP program. Not required if using AWI licensed fabricators.******

F. AWI Test Reports: Provide report confirming casework conforms to Architectural Woodwork Institute specified performance requirements. Provide test reports confirming: ******Required if using AWI licensed fabricators.******
   1. Casework awarded duty level.
   2. Casework conforms to **<< aesthetic requirements; installation requirements; contract documents; and _____>>**.

G. AWI Field Quality Control Inspection Reports: Provide report of inspection results first to architectural wood fabricator. After ten days, provided updated report to **<<Architect>>**, **<<Owner>>**, and **<<Contractor>>**. ******Required if participating in AWI QCP program. Not required if using AWI licensed fabricators.******

1.05 QUALITY ASSURANCE

A. Fabricator Qualifications: **<< AWI QCP-licensed woodworking firm; WI-accredited millwork company; or _____>>**. ******Indicate this paragraph if using an AWI licensed fabricator.******

B. Installer Qualifications: **<< AWI QC-accredited installer; WI QCP-accredited installer; or _____>>**. ******Indicate this paragraph when registering the project with the AWI-QCP program.******

C. Architectural Woodwork Institute (AWI) Quality Certification Program (QCP):
   1. Project Number: Project has been registered as AWI-QCP project number **<< _____>>**. ******Register project with AWI-QCP program during design.******
   2. Scope of Work:
      a. Shop drawing review provided by AWI QCP-appointed inspector.
      b. Casework fabrication provided by AWI QCP-licensed woodworking **<< company; manufacturer; firm; fabricator; or _____>>**.
      c. Fabrication inspection performed by AWI QCP-appointed inspector.
      d. Installation inspection preformed by AWI QCP-appointed inspector.
      e. Installation inspection performed by unlicensed **<< woodworking; casework; or _____>> << company; manufacturer; firm; fabricator; supplier; or _____>>**.
   3. Provide AWI QCP labels on each casework elevation indicating casework fabrication**<< and installation; _____; or None - N/A>>** complies with requirements of specified aesthetic grades and performance levels.

1.06 DELIVERY, STORAGE, AND HANDLING

A. See Section **<< 017419 - Construction Waste Management and Disposal>>** for packaging waste requirements.

B. Deliver products in original packaging materials bearing product identification.

C. Store products prior to installation on flat, level, clean surfaces; elevate products above floors and protect from sunlight.

D. Store products in interior rooms with completed **<< wet work; overhead work; and _____>>**.

E. Relative Humidity Conditions for Storing **<< Wood; Wood-Based; and _____>>** Core Products:
   1. Maintain relative humidity between **<< 25 and 45; 30 and 55; 43 and 65; or _____>>** percent.

DRAFT

F. Store **<< non-wood-based products; and _____>> << under cover and elevated above grade; or _____>>**.
   1. Protect from excessive moisture and standing water.

G. For products other than **<< wood; wood-based; and _____>>** products, store and handle in accordance with **<< fabricator's; supplier's; manufacturer's; or _____>>** documented instructions.

H. Handle materials and products to prevent damage to edges, ends, or surfaces.

I. Handle **<< wood; wood-based; and _____>>** products with clean hands or gloves; protect from marks or damage.

1.07 FIELD CONDITIONS

A. Ambient Conditions for **<< Acclimation; Installation; Post-Installation; and _____>>** of **<< Wood; Wood-Based; and _____>>** Products:
   1. Acclimation Period Prior to Installation: **<< 72 hours; or _____>>** minimum, inside installation environment.
   2. Temperature Conditions During **<< Acclimation; Installation; Post-Installation; and _____>>**: Maintain temperature between **<< 60 degrees F; or ____ degrees F>>** and **<< 90 degrees F; or ____ degrees F>>**.
   3. Relative Humidity Conditions During **<< Acclimation; Installation; Post-Installation; and _____>>**: Maintain relative humidity between **<< 25 and 45; 30 and 55; 43 and 65; or _____>>** percent.
   4. Maximum Sustained Time outside Specified **<< Relative Humidity; and _____>>** Range: **<< 24; or _____>>** hours.

PART 2 PRODUCTS

2.01 SOURCE QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>** for additional requirements.

B. Inspection Services: Provide AWI QCP fabrication inspection services.
   1. Inspect for compliance with contract documents; on subjects that contract documents are silent, inspect for compliance with specified AWI grade.
   2. Provide report of inspection results first to architectural woodwork fabricator. After ten days, provide updated report to **<<Architect>>**, **<<Owner>>**, and **<<Contractor>>**.

C. Single Source Responsibility: Provide and install this work from single **<< fabricator; supplier; and manufacturer>>**.
   1. It is acceptable to subcontract portions of the work to a separate specialty subcontractor (for example, pre-fabricated plastic-laminate-faced casework); however, each fabricator shall be independently accredited; submit accreditation for each fabricator. The primary woodwork contractor shall be responsible for ensuring the work of all Division 06 sections is well coordinated and properly fabricated and installed.

2.02 ARCHITECTURAL WOOD CASEWORK, GENERAL

A. Provide casework and casework components in **<< sizes; profiles; and _____>>** as indicated on drawings.
   1. Interior Clearances: Comply with specified performance requirements.

B. Adjustable Shelves, Number of Shelves Per Cabinet Unit:

DRAFT

1. Base Cabinets: **<< As indicated on drawings; <u>One shelf for each cabinet unit</u>; Two shelves for each cabinet unit; Three shelves for each cabinet unit; or _____>>**.
2. Wall Cabinets: **<< As indicated on drawings; One shelf for each cabinet unit; <u>Two shelves for each cabinet unit</u>; Three shelves for each cabinet unit; Four shelves for each cabinet unit; or _____>>**.

C. Hinges, Number of Hinges for Each Cabinet Door:
1. Comply with specified performance requirements.
2. Door Heights Under **<< <u>48 inches</u>; or _____ inches>>**: Not less than **<< <u>two</u>; three; or _____>>** hinges per door.
3. Door Heights Between **<< <u>48 inches</u>; or _____ inches>>** and **<< <u>84 inches</u>; or _____ inches>>**: Not less than **<< <u>three</u>; four; or _____>>** hinges per door.
4. Door Heights Greater than **<< <u>84 inches</u>; or _____ inches>>**: Not less than **<< <u>four</u>; or _____>>** hinges per door.

D. Scribed Fillers:
1. Finish and Materials: Same materials and finish as exposed surfaces.
2. Material thickness: **<< As indicated on drawings; Fabricator's option; Supplier's option; Manufacturer's option; <u>Comply with specified performance requirements</u>; or _____>>**.

2.03 PERFORMANCE REQUIREMENTS

A. Architectural Woodwork Institute (AWI) Performance Requirements:
1. Comply with **<<AWI 300>>**, **<<ANSI/AWI 0641>>**, **<<ANSI/AWI 0400>>**, and **<<ANSI/AWI 0620>>** as applicable for specified casework finish, aesthetic grade, and performance duty level.
   a. Aesthetic Grade: Custom, unles.
   b. Product Performance Duty Level: **<< <u>Duty Level 3</u>; or Duty Level 4>>**. ******Duty Level 3 for casework unless noted otherwise.******
2. Panel and Material Thicknesses: Provide panels and materials as required to meet specified performance duty level, subject to minimum thickness requirements of **<<AWI 300>>** and **<<ANSI/AWI 0641>>** and flatness requirements indicated below.
3. Panel Flatness: Provide panels with maximum variation from flat in **<< <u>12 inches</u>>>** as measured diagonally across panel.
   a. Custom Grade: Plus or minus **<< <u>0.063 inch</u>>>** maximum.
4. Cabinet Door Flatness:
   a. Comply with specified performance requirements.

B. Surface Burning Characteristics: Flame spread index of 25, maximum; smoke developed index of 450, maximum; when tested in accordance with **<<ASTM E84>>**, unless noted otherwise.

C. Countertop surfaces shall comply with **<<NSF 2>>**.
1. Countertop Corners: Provide minimum 1 inch radius at exposed corners.

D. Construct casework to comply with the requirements of **<<ADA Standards>>** and **<<ICC A117.1>>**.

E. Sustainability Characteristics:
1. Ultra-Low-Emitting Formaldehyde (ULEF) Resins: Comply with **<<CARB (ATCM)>>**.
2. No-Added Formaldehyde Based (NAUF) Resins: Comply with **<<CARB (ATCM)>>**.
3. Paints and Coatings: Comply with **<<CAL (CDPH SM)>>**, **<<CARB (SCM)>>**, or **<<SCAQMD 1113>>**.

DRAFT

4. Adhesives and Sealants: Comply with **<<CAL (CDPH SM)>>** and **<<SCAQMD 1168>>**.

F. Bio-Based Materials: Provide sustainably harvested wood; include chain-of-custody certification. Lumber and wood products shall be certified by American Tree Farm System (ATFS), Forest Stewardship Council (FSC), or Sustainable Forestry Initiative (SFI).

2.04 MATERIALS

A. **<<AWI 200>>** Wood Moisture Content Requirements:
   1. Climate Zone 2: Between 6 and 10 percent.

B. **<<AWI 300>>** General Requirements for Wood.
   1. Provide wood that is sound, free of decay, shake, pith, wane, and warp**<< ; plain-sawn unless otherwise indicated; ; _____; or None - N/A>>**.
   2. Provide wood in accordance with **<<AWI 300>>**.

C. Plywood: Comply with **<<PS 1>>**. ******MCPS prefers plywood core only. No particleboard.******
   1. Structural I, Grade **<< C-D, Exposure I; C-C, Exterior Exposure; or _____>>**.
   2. Performance Category: 3/4 minimum.

D. Wood Boards: Comply with **<<PS 20>>**.
   1. Thickness: 11/16 inch**<< 11/16 inch; or _____ inch>>**, actual, minimum.

E. Moisture-Resistant Wood: Where moisture-resistant wood is specified or indicated on drawings for cabinet base components, provide wood with thickness swelling of not more than 5 percent when tested in accordance with **<<ASTM D1037>>**. ******MCPS prefers moisture-resistant plywood cores at sinks.******

F. Wood Anchoring Strips:
   1. Materials and Size: **<< Fabricator's choice; Manufacturer's choice; Supplier's choice; or _____>>** subject to requirements of **<<ANSI/AWI 0641>>**.
   2. Application: As indicated on drawings.

G. Hardwood Face Veneers Intended to Receive Transparent Finish:
   1. Species and Cut: As specified in this section with wood casework for transparent finish.
   2. Face Veneer Grade: As specified in this section with wood casework intended for transparent finish; associated with **<< applicable surface exposures; specified performance requirements; and _____>>**.
   3. Face Veneer Special Characteristics: **<< In accordance with specified aesthetic grade; In accordance with specified grade; As required to match solid wood panels; Natural; Heartwood; or _____>>**.

H. High-Pressure Decorative Laminate (HPDL): Sheet consisting of fibrous material impregnated with thermosetting resins; bonded by high-pressure process.
   1. Products:
      a. Arborite.
      b. Formica Corporation.
      c. Panolam Industries International, Inc.
      d. Wilsonart LLC.
      e. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
   2. Type: Comply with specified performance requirements.
   3. Color and Pattern: As selected by Architect from manufacturer's full range.

I. Solid Surface: Slab consisting of bonded resins and pigments.

DRAFT

1. Products:
   a. Avonite Surfaces, a Brand of Aristech Surfaces, LLC; Avonite.
   b. E. I. du Pont de Nemours and Company; Corian.
   c. Formica Group; Solid Surfacing.
   d. Hanwha L&C; Hanex.
   e. LG Hausys America; HI-MACS.
   f. Lotte Advanced Materials Co. Ltd.; Staron.
   g. Meganite, Inc; Meganite Acrylic Solid Surface.
   h. US Surface Warehouse; LivingStone.
   i. Wilsonart LLC; Solid Surface.
2. Thickness: **<< 1/2 inch; or 3/4 inch>>**. ******Use 1/2 thickness for most countertop applications and to minimize cost. Use 3/4 inch for heavy-duty applictions.******
3. Color and Pattern: As selected by Architect from manufacturer's full range.

J. Edgebanding: ABS, flat, finish; width to match component thickness.
1. Color: As selected by **<<Architect>>** from manufacturers' standard range.
2. Thickness: 3 mm.

K. Glazing: See Section **<< 088000 - Glazing>>**.

L. Cabinet Connectors:

M. Fasteners: Size and type to suit application.

N. Concealed Joint Fasteners: Threaded steel.

O. Bolts, Nuts, Washers, Lags, Pins, and Screws: Of size and type to suit application; **<< galvanized; chrome-plated; or _____>>** finish in concealed locations and **<< stainless steel; chrome-plated; or _____>>** finish in exposed locations.

P. Adhesives: **<< Type recommended by AWI/AWMAC to suit application; Type recommended by WI to suit application; Type recommended by fabricator to suit application; or _____>>**.

2.05 CABINETS AND COMPONENTS

A. Types: More than one type of cabinet construction is indicated. Refer to drawings for locations. ******Indicate this when using both wood veneer and laminate clad casework on a project.******

B. Wood Casework with Transparent Finish: ******MCPS prefers wood casework for cubbies and teacher mail units.******
1. Finishing Method:
   a. Shop-applied transparent finish.
2. Casework Construction:
   a. Frameless Cabinet and Door Interface: Flush overlay.
   b. Door and Drawer Front Profile: Flush.
   c. Reveal Dimensions: Comply with specified performance requirements.
3. Wood Species for Exposed Exterior and Interior Surfaces:
4. Hardwood Species and Cut: **<< Birch; Cherry; Maple; Red oak; Sapele; Walnut; White oak; As indicated on drawings; or _____>>**; **<< plain-sliced; quarter-sliced; rotary-sliced; rift-sliced; as indicated on drawings; or _____>>**.
5. Custom Grade - Wood Casework with Transparent Finish:

DRAFT

a. Comply with specified performance requirements for exposed exterior surfaces, exposed interior surfaces, semi-exposed surfaces, panels, and wood veneers.

6. Wood Drawer Boxes - Wood Casework with Transparent Finish:
   a. Comply with specified performance requirements.
   b. Wood Drawer Joinery: Fabricator's choice subject to specified performance requirements.
7. Exposed Exterior Surfaces, Matching of Veneer Leaves:
   a. Matching of Veneer Leaves: **<< Book match; Slip match; Random match; Swing match; End match; Butt match; As indicated on drawings; and _____>>**.
   b. **<< Matching of; Sequencing of; or _____>> << Veneer Leaves Within Cabinet Unit Face; Veneer Leaves Within Panel Unit Face; or _____>>**: **<< Running match; Balance match; Balance and center match; Slip Center match; As indicated on drawings; or _____>>**.
   c. **<< Matching Between; Sequencing Between; or _____>> << Doors; Drawers; Adjacent Panels; and _____>>**: **<< Blueprint matched; Sequence matched; Nonsequence matched; Sequence matched and custom width; As indicated on drawings; or _____>>**.
8. End Matching of Veneer Leaves: **<< End match; Random match; As indicated on drawings; or _____>>**.
9. Veneers from a Single Flitch:
   a. Provide veneers for **<< each elevation; each cabinet; or _____>>** from a single flitch.
10. Grain Direction of Exposed Surfaces:
    a. Fascia and Filler Panels: **<< Vertical; Horizontal; As indicated on drawings; or _____>>**.
    b. Tops: **<< Side to side; Front to back; As indicated on drawings; or _____>>**.
    c. Soffits and Bottoms: **<< Side to side; Front to back; As indicated on drawings; or _____>>**.
    d. Door: **<< Vertical; Vertical with continuous vertical matching; Horizontal; Horizontal with continuous end matching; or _____>>**.
    e. Drawer Fronts: Premium Grade, comply with specifed performance requirements.
    f. Face Frame Members: **<< Lengthwise along members; As indicated on drawings; or _____>>**.
    g. Knee Space Panels: **<< Vertical; Horizontal; As indicated on drawings; or _____>>**.
    h. Aprons and Light Valances: **<< Vertical; Horizontal; As indicated on drawings; or _____>>**.
    i. End and Divider Panels: **<< Vertical; Horizontal; As indicated on drawings; or _____>>**.
11. Edgebanding Applications for Wood Casework with Transparent Finish:
    a. Comply with specified performance requirements for all edges.
12. Edgebanding Materials for Wood Casework with Transparent Finish:
    a. ABS: Well-matched to exposed face; radiused and beveled on edges and corners if thickness is greater than 0.039 inch.

C. Wood Casework with Laminate Cladding:
   1. Casework Construction:
      a. Frameless Cabinet and Door Interface: Flush overlay.

DRAFT

b. Door and Drawer Front Profile: Flush.
c. Reveal Dimensions: Comply with performance requirements.

2. Wood Drawer Boxes with Laminate Cladding:
   a. Comply with specified performance requirements.

D. Custom Grade - Laminate-Clad Wood Casework:
   a. Comply with specified performance requirements for exposed exterior surfaces, exposed interior surfaces, and semi-exposed surfaces.

E. Edgebanding Applications for Laminate-Clad Wood Casework:
   a. Comply with specified performance requirements for all edges.

F. Edgebanding Materials for Laminate-Clad Wood Casework:
   a. ABS: Well-matched to exposed face; radiused and beveled on edges and corners if thickness is greater than 0.039 inch.

G. Concealed Cabinet Base Components: ******Applies to both wood veneer and laminate clad casework.******
   1. Cabinet Base **<< Toe-Kick Subfronts; or _____>>**:
      a. Materials and Size: **<< Fabricator's choice; Manufacturer's choice; Supplier's choice; or _____>>** subject to requirements of **<<ANSI/AWI 0641>>**.
      b. Height Above **<< Subfloor; or _____>>**: **<< 4 inches; 4-1/2 inches; 5 inches; ____ inches; As indicated on drawings; or _____>>**.
      c. Finished Face of **<< Toe Kick Subfronts; or _____>>**: **<< Transparent finish; Opaque finish; As indicated on drawings; or _____>>**.
   2. Cabinet **<< Base Blocking; Stretchers; and _____>>**:
      a. Materials and Size: **<< Fabricator's choice; Manufacturer's choice; Supplier's choice; or _____>>** subject to requirements of **<<ANSI/AWI 0641>>**.
      b. Height Above **<< Subfloor; or _____>>**: **<< 4 inches; 4-1/2 inches; 5 inches; ____ inches; As indicated on drawings; or _____>>**.
   3. Cabinet Base Sleepers:
      a. Materials and Size: **<< Fabricator's choice; Manufacturer's choice; Supplier's choice; or _____>>** subject to requirements of **<<ANSI/AWI 0641>>**.
      b. Height Above **<< Subfloor; or _____>>**: **<< 4 inches; 4-1/2 inches; 5 inches; ____ inches; As indicated on drawings; or _____>>**.

H. Countertops:
   1. Architectural Woodwork Institute (AWI) Performance Requirements:
      a. Comply with **<<AWI 1236>>** as applicable for specified countertop material, aesthetic grade, and performance requirements.
         1) Aesthetic Grade: Custom.
   2. Types: More than one type is required. Refer to drawings for locations. ******Indicate this when using both plastic laminate and solid surface countertops on a project.******
   3. Plastic Laminate Countertops:
      a. Custom Grade - Laminate-Clad Countertops:
         1) Comply with specified performance requirements for exposed surfaces, joints, and edgebanding applications for laminate-clad countertops.
      b. Core: Plywood, build up core material for total countertop thickness indicated.
      c. Back **<< and End; or None - N/A>>** Splashes: 3/4-inch thick core material. Comply with specified performance requirements.

DRAFT

4. Solid Surface Countertops**<< and Window Stools; or None - N/A>>**:
   a. CustomGrade - Solid Surface Countertops:
      1) Comply with specified performance requirements for exposed surfaces, joints and edge treatment for solid surface countertops.
   b. Core: Plywood, build up core material for total countertop thickness indicated.
   c. Shop-fabricate cutouts and holes in solid surface for plumbing fixtures, deck-mounted soap dispensers, and other items indicated on Drawings in compliance with specified performance requirements.
   d. Window Stools: Scribe window stools to fit jamb conditions as indicated.

2.06 FINISHED WALL PANELS

A. Wood Veneer Panels:
   1. Description: Panels consisting of wood face veneers applied to cores; panel layup with face ply, back ply, and core of either single layer or odd number of inner plies, to produce balanced construction panel; comply with **<<HPVA HP-1>>**.
      a. Panels subject to **<< size limitations; minimum thickness requirements; fabrication tolerances; and _____>>** of specified **<< aesthetic grade; performance duty level; and _____>>** in accordance with **<<AWI 300>>** and **<<ANSI/AWI 0641>>**.
   2. Back: **<< Comply with backer requirements of AWI 300; Balancing backer; Manufacturer's choice; Thermally fused laminate; Hardwood veneer; or _____>><< ; grade 1; ; grade 2; ; grade 3; ; grade 4; ; _____; or None - N/A>>**.
   3. Panel Cores: Plywood.

B. HPDL-Clad Panels:
   1. Description: Panels consisting of High-Pressure Decorative Laminate (HPDL) faces applied to cores; panel layup with face ply, back ply, and core of either single ply or odd number of inner plies, to produce balanced construction panel.
      a. Panels subject to **<< size limitations; minimum thickness requirements; fabrication tolerances; and _____>>** of specified **<< aesthetic grade; performance duty level; and _____>>** in accordance with **<<AWI 300>>** and **<<ANSI/AWI 0641>>**.
   2. HPDL Laminates Less than **<< 0.08 inch>>** Thick: Comply with **<<ISO 4586-3>>**.
      a. Exposed Backer Materials:
         1) Same materials, thickness and color as laminate face.
      b. Concealed Backer Materials:
         1) Laminate materials **<< as required for balanced construction panel; recommended by laminate manufacturer for application; and _____>>**.
   3. Panel Cores: Plywood.

C. Finished Wall Panel Reveals:
   1. Comply with specified performance requirements.
   2. Painted Reveals: Black, paint substrate prior to panel installation.
   3. Metal Reveals: **<<ASTM B221>>** extruded aluminum, 6063-T5 alloy.
      a. Width: 1/2 inch.
      b. Depth: Match depth of finish wall panels.
      c. Finish: As selected by Architect from manufacturers full range.
      d. Manufacturers:

DRAFT

1) Flannery, Inc.
2) Fry Reglet.
3) Gordon, Inc.
4) Pittcon Industries.
5) Tamlyn.

2.07 SOLID WOOD AND FINISHED CARPENTRY COMPONENTS

A. Solid Wood Profiled Trim and Moulding: Compatible in color with wood veneer.
   1. Comply with requirements for custom grade aesthetic level and structural performance in accordance with **<<AWI 0622.0646>>**.

B. Closet and Utility Shelving: Comply with requirements of **<<AWI 0622.0646>>**.

C. Learning Stair Wood Flooring, Treads, and Risers: Veneered wood with transparent finish on exposed surfaces in accordance with **<<ANSI/AWI SMA 0643>>**.
   1. Aesthetic Grade: Custom.
   2. Structural Performance: Comply with specified performance requirements.
   3. Core Material: Plywood.
   4. Contrasting Strips: Wood veneer of contrasting color in accordance with ADA requirements.
   5. Cellulose-Based Fiber Board Underlayment: Refer to **<< 061000 - Rough Carpentry>>**.
   6. FRT Plywood Subflooring: Refer to **<< 061000 - Rough Carpentry>>**.

2.08 HARDWARE

A. Workstation Brackets: Fixed, L-shaped, corner reinforced, face-of-stud mounting.
   1. Size: Nominal sizes as indicated unles noted otherwise.
      a. For 30 inch deep countertops: 21 inches high by 28 inches deep.
      b. For 25 inch deep countertops: 21 inches high by 21 inches deep.
      c. Provide additional sizes as indicated on drawings.
   2. Materials: Formed steel shapes.
      a. Finish: Manufacturer's standard, factory-applied,**<< textured; veined; _____; or None - N/A>> << powder coat; primer; or _____>>**.
      b. Color: As selected by Architect from manufacturer's full range.
   3. Load Capacity: 1000 pounds minimum per pair of brackets, tested at 16 inches on center.
   4. Product:
      a. A&M Hardware, Inc; Standard Brackets.
      b. Best Brackets: ADA Workstation Support Standard Steel Bracket.
      c. FastCap; SpeedBrace.
      d. Lyman Associates; Counter Top Supports.
      e. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Hinges, Number of Hinges for Each Cabinet Door:
   1. Comply with specified performance requirements.
   2. Door Heights Greater than 84 inches: Not less than **<< four; or _____>>** hinges per door.

C. Hinges: **<< Full surface (decorative); Semiconcealed; European style concealed; Concealed (fully mortised); Butt; Pivot (knife); or _____>> << self-closing; _____; or**

DRAFT

None - N/A>> type, **<<BHMA A156.9>>**, Grade 1, 2-3/4 inch, 5-knuckle **<< steel with nickel-plated finish; steel with polished finish; steel with satin finish; bronze with satin finish; or _____>>**. Provide with antifriction bearings and rounded hospital tips.

1. Provide two hinges for doors less than 48 inches high, and three hinges for doors more than 48 inches high.

D. Hinges, Self-Closing, Integrated Damper Hinges:
   1. Description: Self-closing hinges with integrated damper mechanisms.
   2. Comply with **<<BHMA A156.9>>**.
   3. Material and Finish: **<<BHMA A156.18>>**, 627 or 628 satin aluminum.

E. Cabinet Pulls:
   1. Description: **<< Back-mounted; Surface-mounted; Flush and mortised; or _____>>** pulls.
   2. Comply with specified performance requirements.
   3. Comply with **<<BHMA A156.9>>**, **<< B02011; B02041; B02201; and _____>>**.
   4. Design: **<< As indicated on drawings; U-shape wire pulls; Bar shaped; Rectangular; Oval; Round; Oblong; or _____>>**.
   5. Center-to-Center Mounting Dimension: **<< 4 inches; or _____ inches>>**.
   6. Material and Finish: **<<BHMA A156.18>>**, **<< 600 or 715 primed for painting; 613 or 640 dark oxidized satin bronze; 625 or 651 bright chromium; 626 or 652 satin chromium; 630 or 654 satin stainless steel; 627 or 628 satin aluminum; 672 or 712 or 717 bright chromium; or _____>>**.

F. Adjustable Shelf Support Systems, Standards and Shelf Rests:
   1. Description: Slotted vertical standards with shelf rests for supporting shelves; standards mounted in evenly spaced, cleanly bored holes.
   2. Load Capacity: Comply with with specified structural performance duty level.
   3. Adjustment Increment: **<< 1 inch; 1-1/4 inches; or ____ inches>>**.
   4. **<< Surface-Mounted; or Mortise-Mounted>>** Standards: Comply with **<<BHMA A156.9>>**, **<< B04063; or _____>>**.
   5. Closed Shelf Rests: Comply with **<<BHMA A156.9>>**, **<< B04083; B04081; or _____>>**.
   6. Open Shelf Rests: Comply with **<<BHMA A156.9>>**, **<< B04093; B04091; or _____>>**.
   7. Material and Finish: **<<BHMA A156.18>>**, **<< 600 or 715 primed for painting; 613 or 640 dark oxidized satin bronze; 625 or 651 bright chromium; 626 or 652 satin chromium; 630 or 654 satin stainless steel; 627 or 628 satin aluminum; 672 or 712 or 717 bright chromium; or _____>>**.

G. Drawer Slides:
   1. Description: Hardware units that suspend drawers and provide controlled drawer sliding.
   2. Comply with specified performance requirements.
   3. Comply with **<<BHMA A156.9>>** and as follows:
      a. **<< Standard Duty Grade 1; Standard Duty Grade 2; Heavy Duty Grade 1HD-100; Heavy Duty Grade 1HD-200; or _____>>**, supports minimum 100 pounds per foot for standard box drawers less than 30 inches wide.
      b. **<< Standard Duty Grade 1; Standard Duty Grade 2; Heavy Duty Grade 1HD-100; Heavy Duty Grade 1HD-200; or _____>>**, supports minimum 200 pounds per foot for file drawers or drawers more than 30 inches wide.

DRAFT

4. Features: **<< Self-closing; Soft-closing; Self-closing and soft-closing; or _____>>**.
5. Mounting: **<< Bottom-edge mounted; Bottom-center mounted; Center-top mounted; Side-mounted; Side-mounted self-closing; Ball-bearing side-mounted; Ball-bearing rail-mounted; Undermount concealed; or _____>>**.
6. Extension: **<< Full extension; 3/4 extension; Full extension with overtravel; or _____>>**.
7. Material and Finish: **<<BHMA A156.18>>**, **<< 600 or 715 primed for painting; 613 or 640 dark oxidized satin bronze; 625 or 651 bright chromium; 626 or 652 satin chromium; 630 or 654 satin stainless steel; 627 or 628 satin aluminum; 672 or 712 or 717 bright chromium; or _____>>**.
8. Manufacturers:
   a. Accuride International, Inc.
   b. Fulterer USA
   c. Grass America Inc
   d. Knape & Vogt Manufacturing Company.

H. Cabinet Door Keyed Locks with Dead Bolts:
1. Description: Keyed cylinder locks for securing cabinet doors.
2. Mounting: Half-mortised into back of door.
   a. Comply with specified performance requirements.
3. Key Control: Master keyed, 4 master keys that can operate all casework locks for new casework.
4. Material and Finish: **<<BHMA A156.18>>**, **<< 600 or 715 primed for painting; 613 or 640 dark oxidized satin bronze; 625 or 651 bright chromium; 626 or 652 satin chromium; 630 or 654 satin stainless steel; 627 or 628 satin aluminum; 672 or 712 or 717 bright chromium; or _____>>**.

I. Garment Hooks:
1. Description: Devices with one or more arms projecting from attachment bases; for hanging garments.
2. Mounting: **<< Surface mounted; Recessed; or _____>>**.
3. **<< Material; Finish; Color; and _____>>**: **<< Bright chromium-plated nickel; Satin chromium-plated nickel; Bright stainless steel; Satin stainless steel; Steel with nickel-plated finish; Steel with polished finish; Steel with polished finish; Steel with zinc coating finish; Steel with powder-coat finish; or _____>>**.

J. Base Cabinet Support Levelers:
1. Description: Adjustable Base Cabinet Support Levelers.
2. Starting Installation Height: **<< 4 inches; 5-7/8 inches; or _____ inches>>**.
3. **<< Material; Finish; Color; and _____>>**: **<< Bright chromium-plated nickel; Satin chromium-plated nickel; Bright stainless steel; Satin stainless steel; Steel with nickel-plated finish; Steel with polished finish; Steel with polished finish; Steel with zinc coating finish; Steel with powder-coat finish; Satin anodized aluminum; or _____>>**.

K. Grommets: Plastic, with matching slotted caps; round.
1. Applications: **<< Where indicated on drawings; or _____>>**.
2. Shape: **<< Round; or _____>>**.
3. Inside Diameter: **<< 1-1/2 inches; or _____ inches>>**.

DRAFT

4. Color: **<< Black; White; Brown; Gray; White; As indicated on drawings; or _____>>**.

L. Metal Hanging Systems:
1. Description: Cleated, z-shaped clips and rails, hanging systems.
2. Material: **<< Extruded aluminum; alloy 6005-T6 tempered in accordance with ASTM B221; or _____>>**.

2.09 FABRICATION

A. Shop-fabricate casework to **<< dimensions; profiles; details; and _____>>** indicated on drawings.

B. Fabricate to maximum extents plausible, including **<< doors; drawers; hardware; and _____>>**; fabricate units in sizes transportable through building openings.

C. When necessary to cut and fit on site, provide materials with sufficient allowance for cutting.

D. Wood Casework with Laminate Cladding: Apply laminates in full uninterrupted sheets consistent with manufactured sizes. Fit corners and joints hairline.

E. Matching Wood Grain: Comply with requirements of quality standard for specified Grade **<< and as follows:; or _____>>**

F. Provide cutouts for **<< plumbing fixtures; plumbing lines; appliances; electrical lines; outlet boxes; inserts; communication lines; computer equipment; audio-visual equipment; similar items; hardware; and _____>>**; verify locations of cutouts from on-site dimensions. Sand and **<< seal; prime paint; or _____>>** cut edges.

G. Edgebanding: Apply where specified; do not use more than one piece for any single length.

H. Hardware: Install hardware in accordance with hardware manufacturer's written instructions; use fasteners supplied by hardware manufacturer.

I. Fabrication Tolerances: Comply with specified performance requirements.

2.10 SHOP FINISHING

A. Surface Preparation: Comply with:
1. **<<ANSI/AWI 0400>>** for specified aesthetic grade.

B. Shop Finishing: Shop finish architectural wood casework.
1. Comply with **<<ANSI/AWI 0400>>** for specified aesthetic grade.

C. Grain Fillers: Apply to **<< open-grained; or _____>>** wood substrates; tint to match wood; work fillers into wood grain; wipe excess from surfaces.

D. Wash Coats: Apply to**<< closed-grained; _____; or None - N/A>>** wood substrates.

E. Transparent Finish System:
1. **<<ANSI/AWI 0400>>** Finish System: TR-2A - Lacquer, post-catalyzed or TR-4 - Varnish, conversion. ******Both options are widely available and score high on performance for interior casework, paneling, ornamental work, stairs, frames, windows, blinds, shutters, and doors. TR-2A is repairable and resistant to stains, heat, abrasion, and chemicals. TR-4 is durable.******
2. Stain: As selected by **<<Architect>>** from stain manufacturer's full range of colors.

F. Opaque Finish System: Refer to **<< 099100 - Painting>>**.

DRAFT

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify casework and materials required for installation have been delivered, handled and stored as specified.

B. Verify **<< wood blocking; wood backing; wood furring; and _____>>** that provides casework **<< backing; structural support; and _____>>** is installed as indicated on **<< drawings; and _____>>**.

C. Verify location and sizes of **<< rough-in plumbing; rough-in electrical; rough-in _____; and _____>>** associated with work of this section.

D. Verify location and sizes of cutouts for **<< appliances; special equipment; sinks; and _____>>** to be mounted in or adjacent to casework.

3.02 PREPARATION

A. Acclimate casework to environments indicated for installation.

3.03 INSTALLATION

A. Install and secure work of this section in accordance with specified performance requirements.

B. Install work of this section rigid, plumb, and level and in accordance with **<< fabricator's; manufacturer's; supplier's; or _____>>** documented instructions**<< ; secure casework as indicated on drawings; ; _____; or None - N/A>>**.

1. Align and secure adjoining cabinet units with fasteners in concealed locations.

C. **<< Wall; Base and Wall; or _____>>** Cabinet Anchorage Support Construction:

1. See Section **<< 061000>>** for**<< load-bearing; non-load-bearing; _____; or None - N/A>>** wood **<< stud framing; in-wall blocking; furring; and _____>>** providing **<< backing; support; structural support; and _____>>** for casework.

D. Install cabinet hardware in accordance with hardware manufacturer's documented instructions using hardware manufacturer's furnished fasteners.

E. Install scribe fillers**<< , as indicated on drawings,; , _____; or None - N/A>>** to close gaps between casework and adjacent walls.

F. See Section **<< 088000>>** for site-glazing of glass applications installed in casework components.

3.04 TOLERANCES

A. Comply with specified performance requirements for tolerances.

3.05 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>** for additional requirements.

B. AWI QCP Inspection Services: Provide AWI QCP installation inspection services. ******Indicate this if not specifying a licensed fabricator.******

1. Inspect for compliance with contract documents; on subjects contract documents are silent, inspect for compliance with specified AWI aesthetic grade.

3.06 ADJUSTING

A. Adjust joinery and hardware for smooth operation in accordance with hardware manufacturer's documented instructions.

DRAFT

B. Repair casework damaged by construction work and to remove defects.

C. Replace casework that cannot be repaired.

3.07 CLEANING

A. See Section **<< 017000 - Execution and Closeout Requirements>>** for additional requirements.

B. Clean exposed and semi-exposed surfaces of **<< casework; shelving; hardware; and _____>>**.

C. Clean, lubricate, and adjust hardware.

D. Touch up shop-applied finishes where damanged or soiled.

3.08 PROTECTION

A. Protect installed casework from subsequent construction operations.

END OF SECTION 064100

DRAFT

SECTION 070150.19
PREPARATION FOR RE-ROOFING

PART 1 GENERAL ******VERIFY IF DOING A COMPLETE TEAR-OFF OR PARTIAL REPLACEMENT. FOR FULL TEAR-OFF, SOME PARTS OF THIS SPECIFICATION (SUCH AS EXISTING WARRANTY) MAY BE OMITTED******

1.01 PRICE AND PAYMENT PROCEDURES ******HELPFUL TO PROVIDE QUANTITY ALLOWANCES IF CONCEALED COMPONENTS MAY NEED TO BE REPLACED AND CONDITION IS UNKNOWN******

A. Coordinate with Division 1 Allowance and Unit Price sections, for quantity allowance requirements.
   1. Provide quantity allowances in amounts indicated on Bid Form to cover removal and replacement of **<< cover board, insulation, air barrier/vapor retarder, and substrate board>>**. ******Edit list as required******

1.02 ADMINISTRATIVE REQUIREMENTS

A. Coordinate with affected mechanical and electrical work associated with roof penetrations.

B. Preinstallation Meeting: Convene four (4) weeks before starting work of this section.
   1. Attendees:
      a. Architect.
      b. Contractor.
      c. Owner.
      d. Roofing Installer.
      e. Roofing system manufacturer's field representative.
      f. Inspection and Testing Agency Representatives, if applicable.
   2. Meeting Agenda: Provide agenda to participants prior to meeting in preparation for discussions on the following:
      a. Removal and installation schedule.
      b. Necessary preparatory work.
      c. Protection before, during, and after roofing system installation.
      d. Removal of existing roofing system.
      e. Cleaning of existing roofing system indicated to remain.
      f. Installation of new roofing system.
      g. Patching new roofing to existing roofing to remain, where indicated.
      h. Temporary roofing and daily terminations.
      i. Transitions and connection to and with other work.
      j. Inspections and testing of installed systems.

1.03 SUBMITTALS

A. Product Data: Submit for each type of material.

B. Shop Drawings: Indicate size, configuration, and installation details.

C. Installer's Qualification Statement.

DRAFT

1.04 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing work of the type specified and with experience in re-roofing projects similar in size and scope.
   1. When same installer as new roofing system, comply with related requirements of section indicated for new roofing system.
   2. Where existing roof is covered by warranty, the Installer shall be approved by existing roofing system warrantor to work on existing warranted roof system.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Ensure storage and staging of materials does not exceed static and dynamic load-bearing capacities of roof decking.

1.06 FIELD CONDITIONS

A. Existing Roofing Assembly: **<< _____>>**. ******Provide complete description of full roof assembly to greatest extent possible to allow for accurate pricing by bidding contractors.******

B. Do not remove existing roofing membrane when weather conditions threaten the integrity of building contents or intended continued occupancy.

C. Maintain continuous temporary protection prior to and during installation of new roofing system.

D. Unless MCPS has provided written confirmation that building will be fully unoccupied, provide at least 7 days notice before starting activities that will affect normal building operations.

E. Owner will continue to occupy building areas directly below re-roofing area.
   1. Provide Owner with at least 7 days written notice of roofing activities that may affect their operations and to allow them to prepare for upcoming activities as necessary.
   2. Do not disrupt Owner's operations or activities.
   3. Maintain access of Owner's personnel to corridors, existing walkways, and adjacent buildings.
   4. Provide a secure, fenced off area or enclosed chute for removal of roofing material to the ground.
   5. If work is being performed that is hazardous to occupants below, perform walk-through of affected spaces prior to beginning work to ensure all occupants are evacuated from those areas. Provide temporary signage and/or barriers to ensure occupants do not enter those areas.

DRAFT

1.07 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Existing Warranties: Perform this work using methods and materials that will maintain existing roof system warranties.
   1. The existing roof system is currently covered under warranty by **<< _____>>**. ******Coordinate existing warranty with MCPS and include as much info as is available.******
   2. Notify existing roof system warrantor prior to starting this work and obtain written instructions for procedures necessary to maintain this existing warranty.
   3. Upon completion of this work, notify warrantor of reroofing completion and obtain documentation to verify that existing roofing system has been inspected and warranty is still in effect.
      a. Submit documentation upon project closeout.

PART 2 PRODUCTS

2.01 COMPONENTS

A. Refer to Division 7 roofing section(s) for additional information on components relating to this work.

2.02 MATERIALS

A. Temporary Roofing Protection Materials:
   1. It shall be the Contractor's responsibility to select appropriate materials for temporary protection of roofing areas as determined necessary for this work.
   2. Materials used shall not damage existing components to remain.

2.03 ACCESSORIES

A. Roof Vent Pipe Extensions: Where existing pipes require extension due to increased insulation R-value, tapered insulation layout, provide solid-wall PVC fitting consisting of pipe and splice sleeve inserts, configured for insertion and sealing to existing plumbing vent piping, sized to fit inside diameter of plumbing vent piping, enabling extension of piping to field-determined height to meet local building code requirements for plumbing vent pipe height above existing roof level.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that existing roof surface has been cleared of materials being removed from existing roofing system and ready for next phase of work as required.

3.02 PREPARATION

A. Sweep roof surface clean of loose matter.

B. Remove loose refuse and dispose of properly off-site.

3.03 MATERIAL REMOVAL ******EDIT THE PARAGRAPHS BELOW TO CORRESPOND WITH SCOPE ON CASE-BY-CASE BASIS******

A. General: Coordinate with Division 2 Demolition and with Division 1 Construction Waste Management for additional requirements for material removal and demolition.

B. Remove only existing roofing materials that can be replaced with new materials on the same day, or as weather will permit.

C. Remove metal counter flashings.

D. Remove roofing ballasts.
   1. Rinse roofing ballast with clean water and store on site for re-installation after re-roofing process is complete.

E. Remove roofing membranes, mechanical fasteners, perimeter base flashings, penetration flashings, pitch pockets, and other associated components.

F. Remove cover board and all associated components and fasteners.

G. Remove insulation, cant strips, blocking, and other associated components and fasteners.

H. Remove vapor retarder/air barrier and any other underlayments.

I. Remove substrate board and associated components and fasteners.

DRAFT

J. Roof Deck: Field verify condition of existing roof deck and coordinate with Structural Drawings.

3.04 INSTALLATION

A. Coordinate scope of this work with requirements for installation of new roofing system, refer to Division 7 roofing section(s) for additional requirements.

3.05 FIELD QUALITY CONTROL

A. Existing Warranty Inspection: Roofing manufacturer responsible for the original warranty shall inspect work and provide confirmation that existing warranty remains in place for the existing portions of roof.

3.06 PROTECTION

A. Provide protection of existing roofing system that is not having work performed on it.

B. Provide temporary protective sheeting over uncovered deck surfaces.

C. Turn sheeting up and over parapets and curbing. Retain sheeting in position with weights.

D. Provide for surface drainage from sheeting to existing drainage facilities.

E. Do not permit traffic over unprotected or repaired deck surface.

END OF SECTION 070150.19

DRAFT

SECTION 071113
BITUMINOUS DAMPPROOFING

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM C272/C272M - Standard Test Method for Water Absorption of Core Materials for Sandwich Constructions.

B. ASTM D1187/D1187M - Standard Specification for Asphalt-Base Emulsions for Use as Protective Coatings for Metal.

C. ASTM D1227/D1227M - Standard Specification for Emulsified Asphalt Used as a Protective Coating for Roofing.

D. ASTM D1621 - Standard Test Method for Compressive Properties of Rigid Cellular Plastics.

E. ASTM D1668/D1668M - Standard Specification for Glass Fabrics (Woven and Treated) for Roofing and Waterproofing.

F. ASTM D6506/D6506M - Standard Specification for Asphalt-Based Protection Board for Below-Grade Waterproofing.

G. NRCA (WM) - The NRCA Waterproofing Manual.

1.02 SUBMITTALS

A. Product Data: Provide properties of primer, bitumen, and mastics.

1.03 FIELD CONDITIONS

A. Maintain ambient temperatures above 40 degrees F for 24 hours before and during application until dampproofing has cured, unless otherwise required by dampproofing manufacturer.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers:
   1. Henry Company.
   2. Karnak Corporation.
   3. Mar-flex Waterproofing & Building Products.
   4. W. R. Meadows, Inc.

B. Source Limitations: Provide dampproofing and primer products produced by a single manufacturer and obtained through a single supplier. Auxiliary materials shall be provided by primary dampproofing manufacturer, or by manufacturer recommended by primary dampproofing manufacturer.

2.02 BITUMINOUS DAMPPROOFING

A. Bituminous Dampproofing: Cold-applied water-based emulsion; asphalt with mineral colloid or chemical emulsifying agent; with or without fiber reinforcement; asbestos-free; suitable for application on vertical and horizontal surfaces.
   1. Emulsified Asphalt Coating: **<<ASTM D1227/D1227M>>**, Type II, Class 1, consisting of mineral colloid emulsifying agents with fibrous reinforcement.
   2. VOC Content: 30 g/L or less.

DRAFT

2.03 ACCESSORIES

A. Primers, Mastics, and Related Materials: Type as recommended by dampproofing manufacturer.
   1. Primer: ASTM D1227, Type III, Class 1. Provide diluted by water when recommended by manufacturer.
   2. Asphalt-Coated Glass Fabric: **<<ASTM D1668/D1668M>>**, Type I.

B. Patching Compound: Epoxy or latex-modified repair mortar of type recommended in writing by dampproofing manufacturer.

C. Protection Board: Where protection board is indicated, provide one of the following: ******Verify application location requires protection board.******
   1. Nominal 1/8-inch thick, multi-ply board fabricated of mineral-fortified asphaltic core with outer layers of asphalt-impregnated reinforced mats; in accordance with **<<ASTM D6506/D6506M>>**.
   2. Nominal 1/4-inch thick, XPS insulation board, fan-folded; with film facer on one or both sides; minimum compressive strength of 8 psi in accordance with **<<ASTM D1621>>** and maximum water absorption of 0.6% in accordance with **<<ASTM C272/C272M>>**.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing substrate conditions are acceptable prior to starting this work. Dampproofing applicator shall be present during substrate examination.
   1. Verify substrate surfaces are durable, free of matter detrimental to adhesion or application of dampproofing system.
   2. Verify that items penetrating surfaces to receive dampproofing are securely installed.

B. Commence with installation after noncompliant conditions are corrected.

3.02 PREPARATION

A. Mask or cover adjacent surfaces not designated to receive dampproofing to prevent staining, spotting or coating with dampproofing.
   1. Protect weep holes and drains to prevent dampproofing from clogging drainage routes.

B. Clean and prepare surfaces to receive dampproofing in accordance with manufacturer's instructions. Remove all substances that would prevent dampproofing from bonding to intended substrate.

C. Do not apply dampproofing to surfaces unacceptable to manufacturer.

D. Apply patching compound to seal penetrations, small cracks, or minor honeycombs in substrate. Cover patched areas with asphalt-coated glass fabric.

3.03 APPLICATION

A. Perform this work in accordance with manufacturer's instructions.

B. Where required by manufacturer, prime surfaces and allow primer to dry thoroughly before application of dampproofing.

C. Foundation Walls: Apply dampproofing to structural CMU (back-up) wythe of foundation wall, from 2 inches below finished grade level to top of footing, and extend a minimum of 6 inches horizontally onto top of footing, unless otherwise indicated on Drawings.

DRAFT

1. Apply dampproofing in a single coat, via brushed or sprayed application, at a rate not less than 3 gallons per 100 square feet.
2. Extend dampproofing 12 inches onto adjacent walls and footings where they will be concealed in the finished work.
3. Do not apply dampproofing where it will be exposed in the finished work.
4. Provide reinforcing at corners, joints, cracks, and changes of plane with a strip of asphalt-coated glass fabric embedded in a heavy coat of dampproofing.
5. Provide additional coat of dampproofing where required due to thin or uneven coverage; ensure that entire substrate has an uninterrupted and smooth coating of dampproofing.

D. Follow manufacturer's instructions for drying and cure times before application of a subsequent coat or before backfilling.

E. At items that penetrate through dampproofing surface, seal watertight with manufacturer's recommended mastic.

F. Where protection board is indicated, place protection board directly over dampproofing, butt joints, and adhere to tacky dampproofing (within 24 hours of application). Scribe and cut protection boards around projections, penetrations, and interruptions. ******Verify application location requires protection board.******

END OF SECTION 071113

DRAFT

SECTION 071300
SHEET WATERPROOFING

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM C578 - Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation.

B. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers--Tension.

C. ASTM D570 - Standard Test Method for Water Absorption of Plastics.

D. ASTM D1970/D1970M - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection.

E. ASTM D4541 - Standard Test Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers.

F. ASTM D5385/D5385M - Standard Test Method for Hydrostatic Pressure Resistance of Waterproofing Membranes.

G. ASTM D6135 - Standard Practice for Application of Self-Adhering Modified Bituminous Waterproofing.

H. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene at the Project site; at minimum two weeks prior to commencing work of this section.

1. Attendees: Owner, Owner's Insurer (if applicable), Architect, Contractor, waterproofing applicator, waterproofing manufacturer's representative, concrete subcontractor, and other installers whose work interfaces with waterproofing for this Project, including but not limited to masonry, flashing, and air barrier installers.
2. Review and finalize the construction schedule, verify availability of materials, verify installation personnel, equipment, and facilities required to perform work and avoid delays.
3. Review required surface/substrate conditions and preparations, field conditions for application and curing/drying time, special installation details and procedures, inspection, and protection and repair.
    a. Waterproofing manufacturer's representative shall submit a report detailing observations from substrate inspection.
    b. Waterproofing manufacturer's representative and installer shall discuss specific manufacturer requirements and conditions effecting performance, and note compliance of completed construction.
4. Document the proceedings, including potential corrective measures and actions required, and distribute a copy for record to each participant.

1.03 SUBMITTALS

A. Product Data: Provide data for each waterproofing membrane product and for each required accessory product, including but not limited to drainage panel, primer, detailing materials, and sealants.

DRAFT

B. Shop Drawings: Provide drawings showing complete layout and extents of waterproofing. Indicate special joint or termination conditions and conditions of interfaces and tie-ins with other waterproofing or other adjacent materials.
   1. Provide details for joint and crack conditions, flashings, penetrations, and inside and outside corners.

C. Field Inspection Reports:
   1. Submit report by manufacturer's technical representative detailing substrate conditions.
   2. Submit progress field inspection reports by manufacturer's technical representative detailing

D. Sustainable Design Submittals: Refer to Division 1 Section "Sustainable Design Requirements."

E. Installer's qualification statement.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing work of the type specified; approved and/or certified in writing by manufacturer for installation of specified products.

B. Source Limitations: Provide waterproofing products from a single manufacturer and through a single source. Accessory products shall be provided by primary waterproofing manufacturer or by a manufacturer specifically approved in writing by waterproofing manufacturer.
   1. If it is necessary to provide products by different manufacturers to proceed with the work, the Contractor shall submit written compatibility statements from each manufacturer that the submitted products will properly bond.

1.05 FIELD CONDITIONS

A. Maintain ambient temperatures above 40 degrees F for 24 hours before and during application and until liquid or mastic accessories have cured.

B. Do not apply waterproofing when the substrate is damp or wet, or during snow, rain, fog, mist, or other wet conditions.

C. Ensure that adequate ventilation is maintained throughout application of waterproofing.

1.06 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Contractor shall correct defective Work within period of five years after Date of Substantial Completion; remove and replace materials concealing waterproofing at no extra cost to Owner.

C. Provide five year manufacturer materials-only warranty for material failure or waterproofing failing to resist penetration of water, except where such failures are the result of structural failures of building. Hairline cracking of concrete due to temperature change or shrinkage is not considered a structural failure.

PART 2 PRODUCTS

2.01 SHEET WATERPROOFING MATERIALS

A. Self-Adhered Modified Bituminous Sheet Membrane:
   1. Total Thickness: 60 mil, 0.060-inch, minimum.
      a. Construction: 56 mil rubberized asphalt, laminated to a 4 mil polyethylene-film reinforcement, with release liner on adhesive side.
   2. Performance Properties:

DRAFT

a. Tensile Strength: 250 psi, minimum, measured in accordance with **<<ASTM D412>>** Method A, using die C and at spindle-separation rate of 2 inches per minute.

b. Elongation at Break: 300 percent, minimum, measured in accordance with **<<ASTM D412>>**.

c. Water Vapor Permeance: 0.05 perm, maximum, measured in accordance with **<<ASTM E96/E96M>>**.

d. Low Temperature Flexibility: Unaffected when tested in accordance with **<<ASTM D1970/D1970M>>** at **<< minus 20 degrees F>>**, 180 degree bend on **<< 1 inch>>** mandrel.

e. Water Absorption: 0.2 percent increase in weight, maximum, measured in accordance with **<<ASTM D570>>**, 24 hour immersion.

f. Hydrostatic Pressure Resistance: Membrane resists leakage for at least one hour from pressure equivalent to 200 feet head of water applied in accordance with test method **<<ASTM D5385/D5385M>>**.

g. Puncture Resistance: 40 lb, minimum, measured in accordance with **<<ASTM E154/E154M>>**.

3. Adhesives, Sealants, Tapes, and Accessories: As recommended by membrane manufacturer.

4. Available Products:

a. GCP Applied Technologies; Bituthene 4000.

b. Henry Company; Blueskin WP 200 or MiraDRI 860/861.

c. Polyglass; Mapethene 60 HT/LT.

d. Polyguard Products; Polyguard 650.

e. W. R. Meadows, Inc; MEL-ROL.

B. Underslab Sheet Membrane: HDPE, thermoplastic, or elastomeric sheet recommended by manufacturer for placement below concrete slabs and on outside face of below grade walls before placement of concrete. Underslab waterproofing shall form an integral bond to poured concrete.

1. Application: Underslab at elevator pit.

a. Coordinate with modified bituminous product for vertical walls above. Manufacturer shall ensure compatible chemistry between the two products or shall provide a compatible transition product or separation layer for a complete waterproofing system at elevator pit.

2. Low Temperature Flexibility: Unaffected when tested in accordance with **<<ASTM D1970/D1970M>>** at **<< minus 20 degrees F>>**, 180 degree bend on **<< 1 inch>>** mandrel.

3. Hydrostatic Pressure Resistance: Membrane resists leakage for at least one hour from pressure equivalent to **<< 231 feet; or ___ feet>>** head of water applied in accordance with test method **<<ASTM D5385/D5385M>>**.

4. Elongation at Break: 300 percent, minimum, measured in accordance with **<<ASTM D412>>**.

5. Adhesion: **<< 150 psi; or ____ psi>>**, minimum, measured in accordance with **<<ASTM D4541>>**.

6. Water Vapor Permeance: **<< 0.01 perm; or ____ perm>>**, maximum, measured in accordance with **<<ASTM E96/E96M>>**.

7. Water Absorption: 0.5 percent increase in weight, maximum, measured in accordance with **<<ASTM D570>>**, 24 hour immersion.

DRAFT

8. Adhesives, Sealants, Tapes, and Accessories: As recommended by membrane manufacturer.
9. Products:
   a. GCP Applied Technologies; Preprufe 300R Plus/LT.
   b. Henry Company; Blueskin PreSeal 435 or MiraPLY-H with SeamLock.
   c. Polyglass; Mapeproof AL Pro.
   d. Polyguard Products; Underseal Underslab Membrane.
   e. W. R. Meadows, Inc; PRECON.

2.02 ACCESSORIES

A. General: Provide all accessories required by waterproofing manufacturer for a complete waterproof assembly for substrate and installation type indicated.

B. Primer or Surface Conditioner: Liquid product recommended by waterproofing manufacturer for substrate preparation.

C. Seaming Materials: As recommended by membrane manufacturer.

D. Detail Strip: Self-adhering waterproofing strips, fabricated of same material and thickness as waterproofing membrane, minimum 6 inch wide, unless otherwise indicated, for use at joints and details.

E. Detailing Liquid Membrane: Manufacturer's recommended two-component trowel grade liquid membrane.

F. Membrane Sealant: As recommended by membrane manufacturer.

G. Sealant for Cracks and Joints In Substrates: Resilient elastomeric joint sealant compatible with substrates and waterproofing materials.

H. Drainage Panel: Drainage layer with non-woven geotextile filter fabric on earth side.
   1. Composition: Dimpled molded-plastic-sheet core; polypropylene or polyester filter fabric bonded to one side, and a polymeric film bonded to the other side. Compressive strength of 15,000 psi.
   2. Thickness: 0.40-inch, minimum.
   3. Products: One of the following or comparable product by one of the waterproofing manufacturers listed above.
      a. American Hydrotech, Inc.; Hydrodrain 400.
      b. GCP Applied Technologies; Hydroduct 220.
      c. Henry Company; MiraDRAIN 6200.
      d. W.R. Meadows, Inc; Mel-Drain**<< 5012; 5012-B; 5035; 5035-B; 7055; 7555; 7572; 9055; _____; or None - N/A>>**.

I. Below-Grade Board Insulation: Extruded polystyrene (XPS) board; comply with **<<ASTM C578>>** Type IV, 25 psi; unfaced, with ship lap or tongue-and-groove edges. ******Verify insulation is detailed where needed. 25 psi is OK unless you have a very tall foundation wall (10 ft+).******

J. Termination Bars: Aluminum or stainless steel; 1 inch by 1/8-inch; compatible with membrane and adhesives. Termination bar shall be predrilled for fasteners at maximum 12 inch spacing, and no more than 1 inch from ends.

K. Adhesives: As recommended by membrane manufacturer.

DRAFT

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions are acceptable prior to starting work.

B. Verify horizontal/underslab subgrade surfaces are well compacted, dry, smooth, and ready to receive waterproofing system.

C. Verify substrate surfaces are durable; free of matter detrimental to adhesion or application of waterproofing system.

D. Verify that items penetrating surfaces to receive waterproofing are securely installed.

E. Do not proceed with work until unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Protect adjacent surfaces from damage not designated to receive waterproofing.

B. Clean and prepare surfaces to receive waterproofing in accordance with manufacturer's instructions.

C. Do not apply waterproofing to surfaces unacceptable to membrane manufacturer.

D. Crack and Joint Repair: Ensure that cracks and joints are clear of dust and dirt before filling.

1. Prime area around cracks and joints before application of detailing membrane.
2. Fill nonmoving joints and cracks with a liquid detailing membrane or cover with detailing strip.
    a. For cracks larger than 1/16-inch, saw cut crack to 1/4-inch wide by 1/4-inch deep and fill with liquid detailing membrane.
3. Seal moving cracks with sealant and nonrigid filler, using procedures recommended by sealant and waterproofing manufacturers.
4. Unless otherwise required by manufacturer, provide minimum 6-inch wide detailing strips or liquid membrane, centered over crack or joints. Overlap ends of strips at least 3 inches.
5. At expansion joints, prepare in strict accordance with waterproofing manufacturer's approved detail.

3.03 INSTALLATION

A. General: Install membrane waterproofing in accordance with manufacturer's instructions.

1. For self-adhered modified bituminous waterproofing, comply with installation recommendations of **<<ASTM D6135>>**.
2. Roll out membrane to relax, and minimum wrinkles and bubbles.

B. Horizontal (Underslab) Membrane: Form membrane around footing construction and extend up to top of footing.

C. Apply primer at manufacturer's required rate.

D. At all vertical and horizontal inside corners, apply a 3/4-inch cant bead of detailing liquid membrane.

E. Provide 12 inch wide detailing strip at all outside corners, include top corner of all footings, extended 6 inches each direction from corner.

F. Where inside and outside corners meet horizontal planes, provide manufacturer's preformed corner elements, or field form details in strict accordance with manufacturer's detailing instructions.

DRAFT

G. Self-Adhering Membrane: Remove release paper layer, and roll out onto substrate with a mechanical roller to provide full contact bond.
   1. Install in horizontal rows from bottom to top to provide shingling effect.

H. Overlap edges and ends, minimum 3 inches, seal permanently waterproof by method recommended by manufacturer, and apply uniform bead of sealant to joint edge.

I. Offset or stagger end laps of each row by at minimum 8 inches, unless otherwise required by manufacturer.

J. Reinforce membrane with multiple thickness of membrane material over joints, whether joints are static or dynamic.

K. Weather lap joints on sloped substrate in direction of drainage, and seal joints and seams.

L. Install building expansion joints at locations as indicated on drawings.

M. Flexible Flashings: Seal items watertight that penetrate through waterproofing membrane with flexible flashings.

N. Seal membrane and flashings to adjoining surfaces.
   1. Install termination bar along edges.
   2. Install counterflashing over exposed edges.

3.04 INSTALLATION - DRAINAGE PANEL

A. Place drainage panel directly against membrane, butt joints, place to encourage drainage downward; scribe and cut boards around projections, penetrations, and interruptions. At footings, extend drainage panel horizontally over footing and down face of footing and overlap bottom of sheet waterproofing a minimum of 2 inches. Set drainage panels in manufacturer's recommended adhesive.
   1. Where insulation is indicated, install board insulation with manufacturer's recommended adhesive prior to installation of drainage panels.

3.05 FIELD QUALITY CONTROL

A. Manufacturer's technical representative shall provide inspection service of at least one review per building elevation (minimum of 4) in addition to initial substrate review performed at preinstallation meeting. Inspections shall be performed prior to full installation of drainage/protection board and shall review membrane application, flashings, and protection and drainage components.

B. Prepare and submit field quality control reports.

C. Where field inspection identifies deficiencies, the Contractor shall be responsible for performing repairs, patching, or for removal and reapplication of waterproofing.

3.06 PROTECTION, REPAIR, AND CLEANING

A. Do not permit traffic over unprotected or uncovered membranes.

B. Until backfill can be completed, provide temporary protection measures to protect installed waterproofing system from damage and abuse, weather exposure, and UV exposure.

C. Immediately prior to backfill, perform a visual inspection of waterproofing system with Installer present; provide repairs and cleaning to ensure integrity of waterproofing after backfill is completed.

DRAFT

D. Clean waterproofing system of soiling, staining, and marking left by other construction activities. Use only cleaning materials and procedures approved by waterproofing manufacturer.

END OF SECTION 071300

DRAFT

SECTION 072100
THERMAL INSULATION

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM C518 - Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus.

B. ASTM C578 - Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation.

C. ASTM C612 - Standard Specification for Mineral Fiber Block and Board Thermal Insulation.

D. ASTM C665 - Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing.

E. ASTM C1029 - Standard Specification for Spray-Applied Rigid Cellular Polyurethane Thermal Insulation.

F. ASTM C1289 - Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board.

G. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

H. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials.

I. ASTM E136 - Standard Test Method for Assessing Combustibility of Materials Using a Vertical Tube Furnace at 750 Degrees C.

J. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers Version 1.2.

K. CAN/ULC-S705.1 - Standard for Thermal Insulation - Spray Applied Rigid Polyurethane Foam, Medium Density - Material Specification.

L. NFPA 259 - Standard Test Method for Potential Heat of Building Materials.

M. NFPA 285 - Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Wall Assemblies Containing Combustible Components.

N. UL (GGG) - GREENGUARD Gold Certified Products.

DRAFT

1.02 SUBMITTALS

A. Product Data: Provide data on **<< product characteristics; performance criteria; product limitations; and _____>>**.

B. Sustainable Design Submittals: Refer to Division 1 Section "Sustainable Design Requirements."

C. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

1.03 QUALITY ASSURANCE

A. **<<NFPA 285>>** Tested Assembly: Provide foam plastic insulation products located in exterior wall assemblies that have been tested in accordance with NFPA 285 which represent those exterior wall assemblies for this Project.

1. Potential heat in Btu per square feet shall not exceed the potential heat of the foam plastic insulation contained in the wall assembly tested as determined by tests in accordance with **<<NFPA 259>>**.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Protect foam-plastic insulation from physical damage, including chipping, cracking, or soiling. Do not use boards that are damaged due to delivery or handling.

B. Store insulation in a manner that protects from damage or deterioration, including moisture, soiling, or UV exposure.

1.05 FIELD CONDITIONS

A. Do not install insulation adhesives when temperature or weather conditions are detrimental to successful installation.

B. Coordinate with insulation manufacturer for UV exposure requirements and coordinate the schedule of construction to ensure insulation is concealed in a timely manner.

PART 2 PRODUCTS

2.01 INSULATION MATERIALS, GENERAL

A. Recycled Content: Provide insulation products with recycled content as follows:
   1. Polystyrene (XPS) Insulation: Minimum 15%.
   2. Mineral Wool: Minimum 75%.
   3. Glass Fiber: Minimum 20%.

B. Low-Emitting Materials (Insulation): Insulation that is exposed to the interior of the building shall be certified compliant with **<<CAL (CDPH SM)>>** Standard Method v1.1 or with **<<UL (GGG)>>** GREENGUARD Gold.

2.02 FOAM BOARD INSULATION MATERIALS

A. Extruded Polystyrene (XPS) Board Insulation: Comply with **<<ASTM C578>>** with either natural skin or cut cell surfaces.
   1. Type and Compressive Resistance: **<< Type XII, 15 psi (104 kPa); Type X, 15 psi (104 kPa); Type XIII, 20 psi (138 kPa); Type IV, 25 psi (173 kPa); Type VI, 40 psi (276 kPa); Type VII, 60 psi (414 kPa); or Type V, 100 psi (690 kPa)>>**, minimum.
   2. Flame Spread Index (FSI): **<< Class A - 0 to 25; Class B - 26 to 75; or Class C - 76 to 200>>**, when tested in accordance with **<<ASTM E84>>**.
   3. Smoke Developed Index (SDI): 450 or less, when tested in accordance with **<<ASTM E84>>**.
   4. Type and Thermal Resistance, **<< R-value>>**: **<< Type XII, 4.6 (0.81); Type X, 5.0 (0.88); Type XIII, 3.9 (0.68); Type IV, 5.0 (0.88); Type VI, 5.0 (0.88); Type VII, 5.0 (0.88); or Type V, 5.0, (0.88)>>**, minimum, per **<< 1 inch>>** thickness at **<< 75 degrees F>>** mean temperature.
   5. Embodied Carbon: Maximum 0.8 kg CO_2eq / bd ft.
   6. Complies with fire resistance requirements as part of an exterior non-load-bearing exterior wall assembly when tested in accordance with **<<NFPA 285>>**.
   7. Board Edges: **<< Square; Shiplap; Tongue-and-groove; Scored square; or _____>>**.
   8. Water Absorption: 0.3 percent by volume, maximum, by total immersion.
   9. Products: (Low-GWP Products)
      a. DuPont de Nemours, Inc; Styrofoam XPS Grey (Reduced GWP)
      b. Kingspan Insulation LLC; GreenGuard **<< GG25-LG; GG40-LG; GG60-LG; or _____>>** XPS Insulation Board.

DRAFT

c. Owens Corning Corporation; FOAMULAR NGX (Next Generation Extruded).

B. Polyisocyanurate (ISO) Board Insulation: Rigid cellular foam, comply with **<<ASTM C1289>>**. ******Foil-faced polyiso can be an option at some NFPA 285 assemblies******

1. Classifications:
   a. Type I: Faced with aluminum foil on both major surfaces of the core foam.
      1) Class 1 - Non-reinforced core foam.
      2) Grade 1 or 2: Minimum compressive strength of 20 psi.
      3) Thermal Resistance: Minimum R-13.0 at 2 inches thick and R-16.0 at 2.5 inches thick; at 75 degrees F.
2. Flame Spread Index (FSI): **<< Class A - 0 to 25; Class B - 26 to 75; or Class C - 76 to 200>>**, when tested in accordance with **<<ASTM E84>>**.
3. Smoke Developed Index (SDI): 450 or less, when tested in accordance with **<<ASTM E84>>**.
4. Water Vapor Permeance: 0.1 perm, maximum, at 1 inch thickness, and when tested in accordance with **<<ASTM E96/E96M>>**, desiccant method.
5. Comply with fire resistance requirements as part of an exterior non-load-bearing exterior wall assembly when tested in accordance with **<<NFPA 285>>**.
6. Board Edges: **<< Square; Shiplap; Channel vented; or _____>>**.
7. Products:
   a. Atlas Roofing Corporation; EnergyShield Pro.
   b. Hunter Panels; Xci Foil (Class A).
   c. Johns Manville; AP Foil-Faced.
   d. Rmax Inc; ECOMAXci FR.

2.03 MINERAL FIBER BOARD INSULATION MATERIALS

A. Mineral Wool Block and Board Thermal Insulation: Complying with **<<ASTM C612>>**. ******For use in exterior cavity walls in lieu of XPS. May be required for certain NFPA 285 assemblies******

1. Facing: None, unfaced.
2. Flame Spread Index: 25 or less, when tested with facing, if any, in accordance with **<<ASTM E84>>**.
3. Smoke Developed Index: 50 or less, when tested with facing, if any, in accordance with **<<ASTM E84>>**.
4. Board Thickness: Manufacturer's standard; as required to meet total thickness indicated on Drawings.
5. Board Edges: Square.
6. Thermal Conductivity (R-value): Minimum R-value of 4 per inch, at **<< 75 degrees F>>** when tested in accordance with **<<ASTM C518>>**.
7. Maximum Density: 11 pcf, nominal.
8. Products:
   a. Johns Manville; CladStone 110.
   b. Owens Corning Corporation; Thermafiber RainBarrier ci HC Plus.
   c. ROCKWOOL; COMFORTBOARD 110.

2.04 BLANKET INSULATION MATERIALS

A. Fiberglass Batt Insulation: Preformed insulation, complying with **<<ASTM C665>>**; friction fit.

DRAFT

1. Flame Spread Index: 25 or less, when tested in accordance with **<<ASTM E84>>**.
2. Smoke Developed Index: 50 or less, when tested in accordance with **<<ASTM E84>>**.
3. Combustibility: Non-combustible, when tested in accordance with **<<ASTM E136>><< , except for facing, if any; , _____; or None - N/A>>**.
4. Facing: Unfaced.
5. Manufacturers:
   a. CertainTeed Corporation.
   b. Johns Manville.
   c. Knauf Insulation.
   d. Owens Corning Corporation.

B. Mineral Wool Batt Insulation: Flexible or semi-rigid preformed insulation, complying with **<<ASTM C665>>**.
1. Flame Spread Index: Zero (0), when tested in accordance with **<<ASTM E84>>**.
2. Smoke Developed Index: Zero (0), when tested in accordance with **<<ASTM E84>>**.
3. Facing: Unfaced.
4. Products:
   a. Johns Manville; MinWool SAFB.
   b. ROCKWOOL; COMFORTBATT.
   c. Thermafiber, Inc; SAFB.

2.05 MISCELLANEOUS GAP / CRACK FILLER

A. General: Fill miscellaneous joints and cracks with mineral wool batt insulation (specified above) or with closed-cell polyurethane foam at Contractor's option.

B. Closed Cell Polyurethane Foam:
1. Provide insulation that conforms to **<<CAN/ULC-S705.1>>**, "Standard for Thermal Insulation - Spray Applied Rigid Polyurethane Foam, Medium Density - Material" or **<<ASTM C1029>>**, Type II, and performance requirements listed.
2. Flame-spread index of 0 and maximum smoke development index of 5, when tested in accordance with ASTM E84.
3. Products:
   a. Dow; Enerfoam Professional Foam Sealant.
   b. Dupont; Great Stuff Pro Gaps & Cracks.
   c. Hilti; CF-AS Crack and Joint All Seasons.

2.06 ACCESSORIES

A. Insulation Fasteners: Impaling clip of galvanized steel with washer retainer and clips, to be secured to surface to receive insulation, of type and length to suit insulation thickness and substrate, capable of securely and rigidly fastening insulation in place.

B. Adhesive: Type recommended by insulation manufacturer for application.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that substrate, adjacent materials, and insulation materials are dry and that substrates are ready to receive insulation and adhesive.

DRAFT

B. Verify substrate surfaces are flat, free of honeycomb, fins, irregularities, or materials or substances that may impede adhesive bond.

3.02 BOARD INSTALLATION AT FOUNDATION PERIMETER

A. Apply adhesive to back of boards per manufacturer's instructions, but not less than three continuous beads per board length.

B. Install boards horizontally on foundation perimeter.
   1. Place boards to maximize adhesive/substrate contact.
   2. Install in running bond pattern.
   3. Butt edges and ends tightly to adjacent boards and to protrusions.

C. Cut and fit insulation tightly to protrusions or interruptions to the insulation plane.

3.03 BOARD INSTALLATION AT CAVITY WALLS

A. Secure impaling fasteners to substrate to manufacturer's required quantity and spacing.

B. Apply adhesive to back of boards per manufacturer's instructions, but not less than three continuous beads per board length.

C. Install boards to fit snugly between wall ties or continuous insulation framing system, as applicable.

D. Install boards horizontally on walls.
   1. Place boards to maximize adhesive/substrate contact.
   2. Install in running bond pattern.
   3. Butt edges and ends tightly to adjacent boards and protrusions.
   4. Place impale fastener locking discs.

E. Cut and fit insulation tightly to protrusions, penetrations, and other interruptions to the insulation plane.

3.04 BATT INSTALLATION

A. Install insulation in accordance with manufacturer's instructions.

B. Install in exterior framed spaces, where indicated on Drawings, without gaps or voids. Do not compress insulation.

C. Trim insulation neatly to fit spaces. Insulate miscellaneous gaps and voids.

D. Fit insulation tightly in cavities and tightly to exterior side of mechanical and electrical services within the plane of the insulation.

3.05 MISCELLANEOUS GAP/CRACK FILLER

A. Install mineral wool batt insulation or sprayed polyurethane gap and crack filler to fill miscellaneous voids in exterior insulation. Install in accordance with manufacturer's instructions to completely fill the required space. If using sprayed polyurethane, ensure that it is not exposed to the interior space unless covered by a compatible thermal barrier product.

3.06 PROTECTION

A. Do not permit installed insulation to be damaged prior to its concealment.

END OF SECTION 072100

DRAFT

SECTION 072700
AIR BARRIERS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers--Tension.

B. ASTM D1970/D1970M - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection.

C. ASTM D2178/D2178M - Standard Specification for Asphalt Glass Felt Used in Roofing and Waterproofing.

D. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

E. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials.

F. ASTM E2178 - Standard Test Method for Determining Air Leakage Rate and Calculation of Air Permeance of Building Materials.

G. ASTM E2357 - Standard Test Method for Determining Air Leakage Rate of Air Barrier Assemblies.

H. NFPA 285 - Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Wall Assemblies Containing Combustible Components.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene at the Project site; at minimum two weeks prior to commencing work of this section.

1. Attendees: Owner, Owner's Insurer (if applicable), Architect, Contractor, air barrier Installer, air barrier manufacturer's representative, and other installers whose work interfaces with the air barrier for this Project, including but not limited to masonry, sheathing, flashing, roofing, waterproofing, cladding systems, curtainwall/storefront, doors, windows, and louvers.
2. Review and finalize the construction schedule, verify availability of materials, verify installation personnel, equipment, and facilities required to perform work and avoid delays.
3. Review required surface/substrate conditions and preparations, field conditions for application and curing/drying time, special installation details and procedures, inspection, and protection and repair.
    a. Air barrier manufacturer's representative shall submit a report detailing observations from substrate inspection.
    b. Air barrier manufacturer's representative and installer shall discuss specific manufacturer requirements and conditions effecting performance, and note compliance of completed construction.
4. Document the proceedings, including potential corrective measures and actions required, and distribute a copy for record to each participant.

1.03 SUBMITTALS

A. Product Data: Provide data on material characteristics, performance criteria, and limiatations.

1. Provide product data on transition membranes, including reports indicating compatibility with primary air barrier material(s).

DRAFT

2. Provide separate product data for manufacturer's low-temperature product if application temperature is expected to be below 40 deg F.

B. Shop Drawings: Provide project-specific drawings of location and extent of air barrier assemblies. Details shall include methods for maintaining air barrier continuity.
   1. Provide termination, transition, and joint details. Include specific details for the following:
      a. Bridging of gaps in construction, including expansion joints.
      b. Inside and outside corners.
      c. Sealing around penetrations at pipes, conduits, and boxes.
      d. Continuity of air barrier at flashings, ledge and shelf angles, and similar interruptions.
      e. Continuity of air barrier at foundation.
      f. Continuity of air barrier at roof.

C. Sustainable Design Submittals: Refer to Division 1 Section "Sustainable Design Requirements."

D. Compatibility Data: Provide manufacturer's data indicating compatibility between submitted primary air barrier material and transition membrane products.

E. ABAA Field Quality Control Submittals: Submit third-party reports of testing and inspection required by ABAA QAP.

F. ABAA Manufacturer Qualification: Submit documentation of current evaluation of proposed manufacturer and materials.

G. ABAA Installer Qualification: Submit documentation of current contractor accreditation and current installer certification; keep copies of each contractor accreditation and installer certification on site during and after installation, and present on-site documentation upon request.

H. Testing agency qualification statement.

1.04 QUALITY ASSURANCE

A. Air Barrier Association of America (ABAA) Quality Assurance Program (QAP):
   1. Installer Qualification: Use accredited contractor, certified installers, evaluated materials, and third-party field quality control audit.

B. Air Barrier Association of America (ABAA) Evaluated Air Barrier Assemblies: Use evaluated materials from a single manufacturer regularly engaged in air barrier material manufacture, and use secondary materials approved in writing by primary material manufacturer.

C. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of the type specified in this section.

1.05 MOCK-UPS

A. Integrated Exterior Mockups: Attend preinstallation conference for and provide air barrier components for integrated exterior mockup as **<< indicated on Drawings and as ; or None - N/A>>**specified in Division 1 Section "Quality Requirements."

1.06 FIELD CONDITIONS

A. Maintain temperature and humidity recommended by materials manufacturers before, during, and after installation.

1.07 WARRANTY

A. Special Warranty: Provide a 5 year warranty starting at the date of Substantial Completion. Warranty shall cover all components of the air barrier assembly, including loss of airtight seal,

DRAFT

loss of watertight seal, loss of adhesion, loss of cohesion, failure to cure properly, and compatibility and bonding with transition membranes and other adjacent materials.

PART 2 PRODUCTS

2.01 AIR BARRIER ASSEMBLY, GENERAL

A. Air Barrier Material: An air barrier material is an airtight barrier made of material that is virtually air impermeable, and may be water vapor permeable or impermeable, with sealed seams and sealed joints to adjacent surfaces.
   1. Air Permeance (Material): 0.004 cfm/sq ft, maximum, when tested in accordance with **<<ASTM D2178/D2178M>>**.

B. Air Barrier Assembly: An air barrier assembly is multiple air barrier materials, including the primary air barrier membrane, transition membranes, termination strips, sealants, mastics, tapes, and other accessory materials that
   1. Air Permeance (Assembly): 0.04 cfm/sq ft, maximum, when tested in accordance with **<<ASTM E2357>>**.

C. Source Limitations and Compatibility: All air barrier materials shall be manufactured by the primary air barrier membrane manufacturer, or by manufacturers specifically approved in writing by the primary air barrier membrane manufacturer. Provide compatibility data indicating that submitted accessory products are compatible with air barrier membrane and with each other.
   1. Coordinate with roof manufacturer to ensure that transition membrane between wall air barrier and roof air barrier/roof membrane are compatible and submit written confirmation.

2.02 AIR BARRIER MATERIALS (WATER VAPOR PERMEABLE) ******PERMEABLE AIR BARRIER IS REQUIRED IF USING A HYBRID INSULATION SYSTEM (INSULATION IN STUD FRAMING WITH CONTINUOUS INSULATION OUTBOARD)******

A. Air Barrier Sheet, Self-Adhered: Vapor permeable, minimum 20 mils thick.
   1. Material: Manufacturer's breathable membrane with release film; for installation over primer when required.
   2. Air Permeance: **<< 0.004 cfm/sq ft>>**, maximum, when tested in accordance with **<<ASTM E2178>>**.
   3. Water Vapor Permeance: 10 perms, minimum, when tested in accordance with **<<ASTM E96/E96M>>** using Procedure A - Desiccant Method, at **<< 73.4 degrees F>>**.
   4. Ultraviolet (UV) and Weathering Resistance: Approved by manufacturer for up to 90 days of weather exposure, minimum.
   5. Surface Burning Characteristics: Flame spread index of 25 or less, smoke developed index of 450 or less, Class A when tested in accordance with **<<ASTM E84>>**.
   6. Comply with **<<NFPA 285>>** requirements for wall assembly.
   7. Seam and Perimeter Tape: As recommended by sheet manufacturer.
   8. Products:
      a. GCP Applied Technologies; Perm-A-Barrier VPS 30.
      b. Henry Company; Blueskin VP160.
      c. Polyglass; Vertiwrap VPS.
      d. Soprema, Inc; SOPRASEAL Stick VP.
      e. VaproShield, LLC; RevealShield SA - Self-Adhered.
      f. W. R. Meadows, Inc; Air-Shield SMP.

DRAFT

B. Air Barrier, Fluid Applied: Vapor permeable, elastomeric waterproofing.
   1. Material: Water-based acrylic.
   2. Dry Film Thickness (DFT): Comply with manufacturer requirements to achieve air and water vapor permeance performance.
   3. Air Permeance: **<< 0.004 cfm/sq ft>>**, maximum, when tested in accordance with **<<ASTM E2178>>**.
   4. Water Vapor Permeance: 11 perms, minimum, when tested in accordance with **<<ASTM E96/E96M>>** using Procedure B - Water Method, at **<< 73.4 degrees F>>**.
   5. Ultraviolet (UV) and Weathering Resistance: Approved by manufacturer for up to 90 days of weather exposure, minimum.
   6. Elongation: 300 percent, minimum, when tested in accordance with **<<ASTM D412>>**.
   7. Surface Burning Characteristics: Flame spread index of 25 or less, smoke developed index of 450 or less, Class A when tested in accordance with **<<ASTM E84>>**.
   8. Nail Sealability: Pass, when tested in accordance with **<<ASTM D1970/D1970M>>**.
   9. VOC Content: 50 g/L maximum.
      a. Sealants, Tapes and Accessories: As recommended by coating manufacturer.
   10. Low-Temperature Formulation: If application temperature is expected to be below 40 degrees F, provide complementary low-temperature product if manufacturer's standard listed product below is not approved for low temperatures. Low-temperature product shall comply with other performance requirements listed and shall be submitted for approval.
   11. Products:
      a. GCP Applied Technologies; Perm-A-Barrier VPL 50.
      b. Henry Company; Air-Bloc 17MR.
      c. Polyglass; VertiWrap VPL.
      d. Sika; Sikagard AWB 660.
      e. Sto Corp; Sto AirSeal.
      f. Tremco Commercial Sealants & Waterproofing; ExoAir 230.
      g. W.R. Meadows, Inc; Air-Shield LMP.

2.03 AIR BARRIER MATERIALS (WATER VAPOR IMPERMEABLE) ******MAY USE IMPERMEABLE IF ALL INSULATION IS OUTBOARD OF THE AIR BARRIER******

A. Air and Vapor Barrier Sheet, Self-Adhered:
   1. Air Permeance: **<< 0.004 cfm/sq ft>>**, maximum, when tested in accordance with **<<ASTM E2178>>**.
   2. Water Vapor Permeance: 0.1 perm, maximum, when tested in accordance with **<<ASTM E96/E96M>>** using Procedure B - Water Method.
   3. Ultraviolet (UV) and Weathering Resistance: Approved in writing by manufacturer for up to 90 days of weather exposure, minimum.
   4. Surface Burning Characteristics: Flame spread index of 25 or less, smoke developed index of 450 or less, Class A when tested in accordance with **<<ASTM E84>>**.
   5. Complies with **<<NFPA 285>>** requirements for wall assembly.
   6. Seam and Perimeter Tape: As recommended by sheet manufacturer.
   7. Products:
      a. GCP Applied Technologies; Perm-A-Barrier NPS.
      b. Henry Company; Blueskin SA or CCW 705.
      c. Polyglass; VertiWrap NPS.

DRAFT

d. Polyguard Products, Inc; Airlok 200 BU/NP.
e. Tremco Commercial Sealants & Waterproofing; ExoAir 110.

B. Air and Vapor Barrier, Fluid-Applied:
1. Material: Synthetic acrylic coating.
2. Dry Film Thickness (DFT): Comply with manufacturer requirements to achieve air and water vapor permeance performance.
3. Air Permeance: **<< 0.004 cfm/sq ft>>**, maximum, when tested in accordance with **<<ASTM E2178>>**.
4. Water Vapor Permeance: **<< 1 perm; 0.1 perm; or ___ perm>>**, maximum, when tested in accordance with **<<ASTM E96/E96M>>** using Procedure A - Desiccant Method, at **<< 73.4 degrees F>>**.
5. Water Penetration Resistance Around Nails: Pass, when tested in accordance with **<<ASTM D1970/D1970M>>**.
6. Ultraviolet (UV) and Weathering Resistance: Approved in writing by manufacturer for up to 90 days of weather exposure, minimum.
7. Surface Burning Characteristics: Flame spread index of 25 or less, smoke developed index of 450 or less, Class A when tested in accordance with **<<ASTM E84>>**.
8. Complies with **<<NFPA 285>>** requirements for wall assembly.
9. Seam and Perimeter Tape: As recommended by sheet manufacturer.
10. Low-Temperature Formulation: If application temperature is expected to be below 40 degrees F, provide complementary low-temperature product if manufacturer's standard listed product below is not approved for low temperatures. Low-temperature product shall comply with other performance requirements listed and shall be submitted for approval.
11. Products:
a. GCP Applied Technologies; Perm-A-Barrier NPL 10.
b. Henry Company; Air-Bloc 16MR or Barritech NP.
c. Hohmann & Barnard, Inc; ENVIRO-BARRIER.
d. Polyglass; VertiWrap NPL.
e. Polyguard Products; Airlok Flex.
f. Sika; Sikagard AWB 660 I.
g. TK Products; TK-AIRMAX 2102.
h. Tremco Commercial Sealants & Waterproofing; ExoAir 130.
i. W.R. Meadows, Inc.; Air-Shield LSR.
j. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

DRAFT

2.04 ACCESSORIES

A. Sealants, Tapes, and Accessories for Sealing Air Barrier and Adjacent Substrates: As indicated or in compliance with air barrier manufacturer's installation instructions.

B. Compatibility of Materials: Provide sealants, tapes, transition membranes, and other accessory materials that are tested to be compatible with the primary air barrier material and with each other. Provide compatibility charts with product data submittal indicating material compatibility.

C. Primer: Liquid applied polymer, of type recommended by air-barrier manufacturer for substrate.

D. Membrane at Transitions in Substrate and Connections to Adjacent Elements: Nominal 40-mil thick, impermeable, self-adhering sheet membrane.

1. Provide product manufactured by or approved in writing by primary air barrier manufacturer above. Available Products:
    a. GCP; Perm-A-Barrier Flashing.
    b. Henry Company; Blueskin SA or CCW-705.
    c. Polyguard Products; Airlok Sheet 400 NP.
    d. Tremco, Inc.; ExoAir 110.
    e. W. R. Meadows, Inc.; Air Shield.

E. Counterflashing for Masonry Through-Wall Flashing: Nominal 40-mil thick, impermeable, self-adhering membrane.
1. Available Products: Provide one of the following or comparable product manufactured by or approved in writing by primary air barrier manufacturer above.
    a. Grace Construction Products; Perm-A-Barrier Flashing.
    b. Henry Company; Blueskin TWF or CCW-705 TWF.
    c. Polyguard Products; Airlok Sheet 400 NP.
    d. Tremco, Inc.; ExoAir TWF.
    e. W. R. Meadows, Inc.; Detail Strip.

F. Preformed Transition Membrane: Semirigid silicone or polyester composition, tapered edges, tear resistant.
1. Products: Provide one of the following or comparable product manufactured by or approved in writing by primary air barrier manufacturer above.
    a. Dow; DOWSIL Silicone Transition Strip and System.
    b. Elbex; Elbex HS Silicone Sheeting, with compatible GE or Dow sealant.
    c. Tremco Commercial Sealants & Waterproofing; ProGlaze ETA System 1.

G. Stainless Steel Flashing: Self-adhering flexible flashing with 2 mil, 0.002 inch thick Type 304 stainless steel sheet, 8 mil, 0.008 inch of butyl adhesive and siliconized release liner.
1. Overlap joints at least **<< 2 inches>>**.
2. Products:
    a. Momentive Performance Materials, Inc/GE Silicones; GE Elemax SS Flashing.
    b. York Flashings; York 304 SA.

DRAFT

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that surfaces and conditions are ready for work of this section.

B. Where existing conditions are responsibility of another installer, notify Architect of unsatisfactory conditions.

C. Do not proceed with this work until unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Protect adjacent surfaces from damage not designated to receive air barrier.

B. Remove projections, protruding fasteners, and loose or foreign matter that might interfere with proper installation.

C. Clean substrate surfaces to receive adhesives and sealants in accordance with manufacturer's installation instructions.

D. For rough surfaces such as CMU, grind smooth any sharp protrusions and fins exceeding 1/4-inch, and fill and smooth any bugholes or voids that are 1/4-inch or larger with manufacturer's recommended sealant filler or patching compound.

E. Verify that substrates are dry and clear of debris or contaminants before proceeding with application.

F. When required by manufacturer for indicated substrates, apply primer at manufacturer's recommended rate.

G. Do not prime surfaces unless air barrier membrane will be applied on the same day.

3.03 INSTALLATION

A. Install materials in accordance with manufacturer's installation instructions.

B. Air Barriers: Install continuous airtight barrier over surfaces indicated, with sealed seams and with sealed joints to adjacent surfaces.

C. Apply sealants and adhesives within recommended temperature range in accordance with manufacturer's installation instructions.

D. Self-Adhered Sheets:
   1. Prepare substrate in accordance with sheet manufacturer's installation instructions; fill and tape joints in substrate and between dissimilar materials.
   2. Lap sheets shingle fashion to shed water and seal laps airtight.
   3. Once sheets are in place, press firmly into substrate with resilient hand roller; ensure that laps are firmly adhered with no gaps or fishmouths.
   4. Use same material, or other material approved by sheet manufacturer, to seal to adjacent substrates, and as flashing.
   5. At wide joints, provide extra flexible membrane allowing joint movement.

E. Fluid-Applied Coatings or Membranes:
   1. Prepare substrate in accordance with manufacturer's installation instructions; treat joints in substrate and between dissimilar materials as indicated.
   2. Where exterior masonry veneer is being installed, install masonry anchors before installing air barrier over masonry; provide airtight seal around anchors.
   3. Apply fluid-applied air barrier coating in accordance with manufacturer's instructions and to manufacturer's required thickness, but no less than 30 mils dry film thickness (DFT).
   4. Apply bead or trowel coat of mastic sealant with minimum thickness of 1/4-inch along coating seams, rough cuts, and as recommended by manufacturer.
   5. Use flashing to seal to adjacent construction and to bridge joints in coating substrate.

F. Openings and Penetrations in Exterior Air Barriers:
   1. Install flashing over sills, covering entire sill frame member, extending at least 5 inches onto air barrier and at least 6 inches up jambs; mechanically fasten stretched edges.
   2. At openings with nonflanged frames, seal air barrier to each side of framing at opening using flashing at least 9 inches wide, and covering entire depth of framing.
   3. At head of openings, install flashing under air barrier extending at least 2 inches beyond face of jambs; seal air barrier to flashing.
   4. At interior face of openings, seal gap between window/door frame and rough framing, using joint sealant over backer rod.
   5. Service and Other Penetrations: Form flashing around penetrating item and seal to air barrier surface.

DRAFT

3.04 FIELD QUALITY CONTROL

A. ABAA Tests and Inspections:
   1. The Contractor shall arrange and provide for testing and inspection required by ABAA QAP.
   2. Notify ABAA in writing of schedule for air barrier work, and allow adequate time for testing and inspection.
   3. Cooperate with ABAA testing agency.
   4. Allow access to air barrier work areas and staging.

B. Manufacturer's Field Inspections: Air barrier manufacturer's technical representative shall provide a minimum of 3 field reviews during installation and provide technical reports to Contractor, Owner, and Architect.

C. Corrections to the Work: If testing and inspection reveals any defects, promptly remove and replace defective work at no additional expense to the Owner.
   1. Patch air barrier work that was removed or damaged due to testing.

D. Do not cover installed air barriers until all required inspections have been completed.

E. Obtain approval of installation procedures from air barrier manufacturer based on a mock-up installed in place, prior to proceeding with remainder of installation.

F. Take digital photographs of each portion of installation prior to covering up air barriers.

3.05 PROTECTION

A. Do not leave materials exposed to weather/UV light longer than recommended by manufacturer.

B. Protect air barrier assemblies from damage during subsequent construction activities per manufacturer recommendations.

C. Protect air barrier assemblies from incompatible materials that may cause degradation or loss of adhesion. Immediately clean soiled areas with cleaning materials and procedures that are approved by air barrier manufacturer.

END OF SECTION 072700

DRAFT

SECTION 072736
SPRAYED FOAM (SPF) AIR BARRIER

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM C518 - Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus.

B. ASTM C1029 - Standard Specification for Spray-Applied Rigid Cellular Polyurethane Thermal Insulation.

C. ASTM D2842 - Standard Test Method for Water Absorption of Rigid Cellular Plastics.

D. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

E. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials.

F. ASTM E2178 - Standard Test Method for Determining Air Leakage Rate and Calculation of Air Permeance of Building Materials.

G. ASTM E2357 - Standard Test Method for Determining Air Leakage Rate of Air Barrier Assemblies.

H. CAN-ULC-S705.1 - Standard for Thermal Insulation - Spray Applied Rigid Polyurethane Foam, Medium Density - Material Specification.

I. CAN-ULC-S705.2 - Standard for Thermal Insulation - Spray Applied Rigid Polyurethane Foam, Medium Density - Application.

J. NFPA 259 - Standard Test Method for Potential Heat of Building Materials.

K. NFPA 285 - Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Wall Assemblies Containing Combustible Components.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene one week prior to commencing work of this section.

1.03 SUBMITTALS

A. Product Data: Provide product description, insulation properties, and preparation requirements.
   1. Provide current Evaluation Service Report upon request.

B. Shop Drawings: Provide project-specific drawings of location and extent of air barrier assemblies.
   1. Provide details for each wall assembly substrate condition. Include field adhesion test value requirements for each substrate indicated.
   2. Provide termination, transition, and joint details. Details shall include methods for maintaining air barrier continuity and continuous insulation (CI). Include specific details for the following:
      a. Bridging of gaps in construction.
      b. Inside and outside corners.
      c. Perimeter of window and door openings.
      d. Sealing around penetrations at pipes, conduits, and boxes.
      e. Spray-stop / screed angle, including transition membrane.
      f. Continuity of air barrier at flashings, ledge and shelf angles, and similar interruptions.

DRAFT

C. Sustainable Design Submittals: Refer to Division 1 Section "Sustainable Design Requirements."

D. Compatibility Data: Provide manufacturer's data indicating compatibility between submitted SPF and transition membrane products.

E. ABAA Field Quality Control Submittals: Submit third-party reports of testing and inspection as required by ABAA QAP.

F. ABAA Manufacturer Qualification: Submit documentation of current evaluation of proposed manufacturer and materials.

G. ABAA Installer Qualification: Submit documentation of current contractor accreditation and current installer certification. Keep copies of all contractor accreditation and installer certification on site during and after installation. Present on-site documentation upon request.

1.04 QUALITY ASSURANCE

A. Air Barrier Association of America (ABAA) Quality Assurance Program (QAP):

1. Installer Qualification: Use accredited contractor, certified installers, evaluated materials, and third-party field quality control audit.

a. Install shall also be certified by ABAA/BPQI (Building Performance Quality Institute) in accordance with the training requirements outlined in the **<<CAN-ULC-S705.2>>** Installation Standard. Installers shall have their photo-identification certification cards in their possession and available on the project site, for inspection upon request.

2. Manufacturer Qualification: Use evaluated materials from a single manufacturer regularly engaged in air barrier material manufacture. Use secondary materials approved in writing by primary material manufacturer.

B. **<<NFPA 285>>** Tested Assembly: Provide foam plastic insulation products located in exterior wall assemblies that have been tested in accordance with NFPA 285 which represent those exterior wall assemblies for this Project.

1. Potential heat in Btu per square feet shall not exceed the potential heat of the foam plastic insulation contained in the wall assembly tested as determined by tests in accordance with **<<NFPA 259>>**.

1.05 MOCK-UPS

A. Integrated Exterior Mockups: Attend preinstallation conference for and provide spray-foam components for integrated exterior mockup as **<< indicated on Drawings and as ; or None - N/A>>**specified in Division 1 Section "Quality Requirements."

1.06 FIELD CONDITIONS

A. Do not apply foam when temperature is below that specified by the manufacturer for ambient air and substrate.

1.07 WARRANTY

A. Material Warranty: Manufacturer's standard warranty against manufacturing defects, for a minimum period of 3 years.

B. Installation Warranty: Air barrier subcontractor's installation warranty, effective from date of Substantial Completion for a minimum period of 2 years. Installation warranty shall include all components of the air barrier assembly, including loss of airtight seal, loss of watertight seal, loss of adhesion, loss of cohesion, or failure to cure properly.

DRAFT

PART 2 PRODUCTS

2.01 MATERIALS

A. Spray Polyurethane Foam (SPF) Air Barrier/Insulation: Medium-density, rigid, closed cell polyurethane foam; foamed on-site, using blowing agent of water or non-ozone-depleting gas.
   1. Provide insulation that conforms to **<<CAN-ULC-S705.1>>** or **<<ASTM C1029>>**, Type II, and performance requirements listed.
   2. Thermal Resistance: **<< R-value>>** of 6.9, minimum, per **<< 1 inch>>** thickness at **<< 75 degrees F>>** mean temperature when tested in accordance with **<<ASTM C518>>**.
   3. Density: Minimum 1.9 pounds per cubic foot.
   4. Water Vapor Permeance: Vapor retarder; **<< 2 perms; or ___ perms>>**, maximum, when tested at intended thickness in accordance with **<<ASTM E96/E96M>>**, desiccant method.
   5. Water Absorption: Less than 2 percent by volume, maximum, when tested in accordance with **<<ASTM D2842>>**.
   6. Air Permeance (Material): Not to exceed 0.004 cfm per square foot, when tested at intended thickness in accordance with **<<ASTM E2178>>** at 1.57 psf.
   7. Ozone Depletion Potential (ODP): Zero.
   8. Closed Cell Content: At least 90 percent.
   9. Surface Burning Characteristics: Flame spread/smoke developed index of 25/450, maximum, when tested in accordance with **<<ASTM E84>>**.
   10. Products:
      a. BASF Corporation; WALLTITE US.
      b. Carlisle Spray Foam; SealTite Pro One Zero.
      c. Green Valley Products; GVP Pro 2.0 HFO.
      d. Henry Company; Henry HFO Closed Cell Spray Foam.
      e. Huntsman Building Solutions; Heatlok HFO Pro.
      f. Johns Manville; JM Corbond IV.
      g. NCFI Polyurethanes; InsulBloc HFO.

B. Air Barrier Assembly Performance: Air barrier assembly, including primary air barrier and auxiliary materials, including joints and transitions to adjacent materials, shall have an air leakage rate not to exceed 0.04 cfm per square foot, at 1.57 psf pressure differential when tested per **<<ASTM E2357>>**. The air barrier assembly shall also serve as liquid water control layer, and shall be flashed to direct moisture to the exterior.

2.02 ACCESSORIES

A. Compatibility of Materials: Provide sealants, tapes, transition membranes, and other accessory materials that are tested to be compatible with the primary air barrier material and with each other. Provide compatibility charts with product data submittal indicating material compatibility.

B. Primer: As required by insulation manufacturer.

C. Membrane at Transitions in Substrate and Connections to Adjacent Elements: Nominal 40-mil thick, impermeable, self-adhering sheet membrane.
   1. Available Products:
      a. Carlisle Coatings and Waterproofing; CCW-705.
      b. Grace Construction Products; Perm-A-Barrier Flashing.
      c. Henry Company; Blueskin SA.

DRAFT

d. Polyguard; Airlok Sheet 400 NP.
e. Tremco, Inc.; ExoAir 110.
f. W. R. Meadows, Inc.; Air Shield.

D. Membrane at Transitions between Spray Foam Air Barrier and Roofing and Other Adjacent Materials: Provide impermeable transition membrane that complies with both air barrier manufacturer's recommendations and adjacent material manufacturer's recommendations.

E. Spray Foam Stop and Screed: L-shaped stop and screed designed as a spray foam termination accessory, fabricated of stable UV-resistant plastic and acceptable to spray foam manufacturer. Outer leg shall be sized to match spray foam thickness indicated. **<< "Jam-Ex" by Exo-Tec Manufacturing, Inc., or equivalent product.; or None - N/A>>**

F. Counterflashing for Masonry Through-Wall Flashing: Nominal 40-mil thick, impermeable, self-adhering membrane.
1. Available Products:
a. Grace Construction Products; Perm-A-Barrier Flashing.
b. Henry Company; Blueskin TWF or CCW-705 TWF.
c. Polyguard; Airlok Sheet 400 NP.
d. Tremco, Inc.; ExoAir TWF.
e. W. R. Meadows, Inc.; Detail Strip.

G. Preformed Transition Membrane: Semirigid silicone or polyester composition, tapered edges, tear resistant.
1. Products:
a. Dow; DOWSIL Silicone Transition Strip and System.
b. Elbex; Elbex HS Silicone Sheeting, with compatible GE or Dow sealant.
c. Tremco Commercial Sealants & Waterproofing; ProGlaze ETA System 1.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify work within construction spaces or crevices is complete before insulation application.

B. Verify that surfaces are clean, dry, and free of matter that may inhibit insulation adhesion.

3.02 PREPARATION

A. Mask and protect adjacent surfaces from over spray or dusting.

B. Apply primer in accordance with manufacturer's instructions.

3.03 APPLICATION

A. Apply insulation in accordance with manufacturer's instructions.

B. Apply insulation by spray method, to a uniform monolithic density without voids.

C. Apply to the minimum cured thickness indicated on Drawings.

D. Patch damaged areas.

E. Where applied to voids and gaps assure space for expansion to avoid pressure on adjacent materials that may bind operable parts.

DRAFT

F. Building Expansion Joints: Do not bridge joints with spray foam material. Provide a L-shaped stop/screed on each side of joint, pack joint with compressible insulation, and bridge the joint with flexible transition membrane to provide continuous air barrier assembly.

G. Trim excess away for applied trim or remove as required for continuous sealant bead.

3.04 FIELD QUALITY CONTROL

A. Field inspections and tests will be performed by a third party ABAA testing agency.

B. Inspection will include verification of insulation thickness and density.

C. Coordination of ABAA Tests and Inspections:

1. Arrange and pay for testing and inspection required by ABAA QAP.
    a. Testing and inspection shall verify conformance with ABAA Quality Assurance Program, the **<<CAN-ULC-S705.2>>** Installation Standard, manufacturer's written installation instructions, and other requirements of this section.
    b. Unless indicated otherwise, provide ABAA Quality Assurance Program audits in accordance with current "Frequency & Cost of Audits" posted on ABAA website. Forward written inspection reports to the Architect within 10 working days of the inspection and test being performed. In the case of deficiencies, the ABAA-licensed inspector may verbally advise the licensed installer at time of inspection.
2. Notify ABAA in writing of schedule for air barrier work. Allow adequate time for testing and inspection.
3. Cooperate with ABAA testing agency.
4. Allow access to air barrier work areas and staging.
5. Do not cover air barrier work until tested, inspected, and accepted.

D. In addition to the ABAA site inspector, coordinate and provide access for air barrier manufacturer's technical representative to provide a minimum of 3 field reviews during installation and provide technical reports to Contractor, Owner, and Architect.

E. Patch air barrier work that was removed or damaged due to testing.

F. If testing and inspection reveals any defects, promptly remove and replace defective work at no additional expense to the Owner.

3.05 PROTECTION

A. Do not permit subsequent construction work to disturb applied insulation.

END OF SECTION 072736

DRAFT

SECTION 073113
ASPHALT SHINGLES

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM C1289 - Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board.

B. ASTM D226/D226M - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing.

C. ASTM D1970/D1970M - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection.

D. ASTM D3462/D3462M - Standard Specification for Asphalt Shingles Made from Glass Felt and Surfaced with Mineral Granules.

E. ASTM D4586/D4586M - Standard Specification for Asphalt Roof Cement.

F. ASTM D4869/D4869M - Standard Specification for Asphalt-Saturated Organic Felt Underlayment Used in Steep Slope Roofing.

G. ASTM D7158/D7158M - Standard Test Method for Wind Resistance of Asphalt Shingles (Uplift Force/Uplift Resistance Method).

H. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

I. ASTM E108 - Standard Test Methods for Fire Tests of Roof Coverings.

J. ASTM F1667/F1667M - Standard Specification for Driven Fasteners: Nails, Spikes, and Staples.

K. ICC-ES AC188 - Acceptance Criteria for Roof Underlayments.

L. NRCA (RM) - The NRCA Roofing Manual.

M. PS 2 - Performance Standard for Wood Structural Panels.

1.02 SUBMITTALS

A. Product Data: Provide data indicating **<< material characteristics; performance criteria; limitations; and _____>>**.

B. Shop Drawings: For metal flashings, indicate **<< specially configured metal flashings; jointing methods and locations; fastening methods and locations; installation details; and _____>>**.

C. Samples: Submit **<< two; or ____>>** samples of each shingle color indicating color range and finish texture/pattern**<< ; for color selection; or None - N/A>>**.

D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

E. Installer's qualification statement.

1.03 CLOSEOUT SUBMITTALS

A. Warranty Documentation: Submit manufacturer warranty and ensure forms have been completed in **<<Owner>>**'s name and registered with manufacturer.

B. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.

1. Extra Shingles: Provide one square (100 sq ft / 3 bundles) of each type and color.

DRAFT

1.04 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in installing asphalt shingles, with certification from shingle manufacturer for installation of specified products.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store materials with labels intact in manufacturer's unopened packaging until ready for installation.

B. Store materials under dry and waterproof cover, well ventilated, and elevated above grade on a flat surface.

C. Protect materials from harmful environmental elements, construction dust, direct sunlight, and other potentially detrimental conditions.

D. When storing roofing materials on roofing system ensure no damage occurs to supporting members and other materials.

1.06 FIELD CONDITIONS

A. Do not install shingles or underlayment when surface, ambient air, or wind chill temperatures are below 45 degrees F.

1.07 WARRANTY

A. Provide a minimum **<< 40 year; or 50 year>>** manufacturer warranty for materials, with at least the first **<< 10 years; 15 years; 20 years; or None - N/A>>** nonprorated.

B. Provide **<< lifetime; or 10 year>>** manufacturer's warranty for coverage against black streaks caused by algae.

C. Provide **<< 5-year; or 15 -year>>** manufacturer's warranty for **<< wind damage; or _____>>**.

1. Wind damage warranty shall cover damage due to wind speeds up to **<< 110 mph; or 130 mph>>**.

D. Installer's Extended Correction Period: Correct defective work within **<< 2-year; or ____>>** period commencing on Date of Substantial Completion. Refer to Installer's Warranty form at the end of this section.

DRAFT

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Asphalt Shingles:

1. Atlas Roofing Corporation.
2. Certainteed Roofing.
3. GAF.
4. IKO Industries Inc.
5. Owens Corning Corp.
6. TAMKO Building Products.

2.02 ASPHALT SHINGLES

A. Asphalt Shingles: Asphalt-coated glass felt, mineral granule surfaced, complying with **<<ASTM D3462/D3462M>>**.

1. Fire Resistance: Class A, complying with **<<ASTM E108>>**.

2. Wind Resistance (Uplift): **<< Class D; Class G; or Class H>>**, when tested in accordance with **<<ASTM D7158/D7158M>>**.
3. Warranted Wind Speed: **<< tested wind resistance; 60 mph; 90 mph; 110 mph; 115 mph; 150 mph; 190 mph; or ___ mph>>**.
4. Algae resistant.
5. **<< Self-sealing; Interlocking; Self-sealing or interlocking; or _____>>** type.
6. Style: Laminated overlay (architectural shingles).
7. Color: To be selected by Architect from manufacturer's **<< full; or standard>>** range.

2.03 UNDERLAYMENT

A. Underlayment: Self-adhering rubber-modified asphalt sheet complying with **<<ASTM D1970/D1970M>>**; 40 mil minimum total thickness; with strippable release film and woven polypropylene or polyethylene-film top surface, and with non-slip granule surfacing.
   1. Minimum Requirements: Comply with **<<ICC-ES AC188>>**.
   2.
   3. Self Sealability: Passing nail sealability test specified in **<<ASTM D1970/D1970M>>**.
   4. Low Temperature Flexibility: Passing test specified in **<<ASTM D1970/D1970M>>**.
   5. Ultraviolet (UV) Resistance and Weatherability: Approved in writing by manufacturer for exposure to weather for minimum of **<< six months; twelve months; or 3 months>>** (90 days).
   6. Performance: Meet or exceed requirements for **<<ASTM D226/D226M>>**, Type II asphalt-saturated organic felt.
   7. Liquid Water Transmission: Passes **<<ASTM D4869/D4869M>>**.
   8. Products:
      a. Certainteed Roofing; Vycor Ice and Water Shield.
      b. GAF; WeatherWatch Ice & Water Leak Barrier.
      c. GCP Applied Technologies; Grace Ice & Water Shield.
      d. Henry Company; Blueskin RF200 Ice & Water Barrier

2.04 SHEATHING

A. Roof Sheathing, Vented: Wood construction panel and **<< 1 inch; or _____ inch>>** spacers attached to insulation board. ******Provide vented sheathing if there is rigid roof insulation below shingles. Not required for vented attic.******
   1. Construction Panel: Minimum 5/8 inch APA rated CDX plywood; Exposure 1.
   2. Spacers: 1 inch thickness; solid lumber or high compressive strength EPS spacer blocks, as standard with manufacturer.
   3. Insulation Board: Rigid polyisocyanurate (ISO) insulation board, **<<ASTM C1289>>**, Type II, Class I (faced with glass fiber reinforced cellulosic felt facers on both major surfaces); Grade 2 - 20 psi, minimum.
   4. Products:
      a. Atlas; ACFoam CrossVent.
      b. GAF; ThermaCal 1 Ventilated Roof Insulation Panels.
      c. Hunter Panels; Cool-Vent.
      d. Johns Manville; Vented Nailboard.
      e. Substitutions: **<< See Section 016000 - Product Requirements; Not permitted; or _____>>**.

DRAFT

B. Roof Sheathing: APA rated, **<<PS 2>>** type; Structural I Sheathing. ******Provide standard plywood sheathing for vented attic applications.******
   1. Bond Classification: **<< Exterior; Exposure 1; or _____>>**.
   2. Span Rating: **<< 16; 20; 24; 32; 40; 48; 54; 60; or 48/24>>**.
   3. Performance Category: **<< 7/16 PERF CAT; 1/2 PERF CAT; 5/8 PERF CAT; 3/4 PERF CAT; or ___ PERF CAT>>**.

2.05 INSULATION

A. Surface Burning Characteristics: Foam plastic insulation shall have a maximum flame spread index of 75, and maximum smoke developed index of 450, when tested in accordance with**<<ASTM E84>>** at maximum thickness intended for use.

B. Polyisocyanurate (ISO) Board Insulation: Rigid cellular foam, complying with **<<ASTM C1289>>**.
   1. Classifications: Type II, Class I (faced with glass fiber reinforced cellulosic felt facers on both major surfaces); Grade 2 - 20 psi, minimum.

2.06 FLASHING

A. Metal Flashings: Provide sheet metal **<< eave edge; gable edge; ridge; ridge vents; open valley flashing; chimney flashing; dormer flashing; other flashing as indicated; and vent pipe flashings and other flashings as required for roof conditions indicated>>**.
   1. Fabricate flashings from prefinished aluminum, minimum 0.040-inch thick, or galvanized steel, minimum 24 gauge (0.028-inch); and in accordance with Division 7 Section "Sheet Metal Flashing and Trim."
   2. Form flashings **<< to profiles indicated on drawings; to protect roofing materials from physical damage and shed water; or _____>>**.
   3. Form sections square and accurate to profile, in maximum possible lengths, free from distortion or defects detrimental to appearance or performance.
   4. Hem exposed edges of flashings minimum 1/4 inch on underside.
   5. Coat concealed surfaces of flashings with bituminous paint.

2.07 ACCESSORIES

A. Roofing Nails: Standard round wire shingle type, **<< galvanized steel; stainless steel; aluminum roofing nails; copper roofing nails; or _____>>**, minimum **<< 3/8-inch; or ___-inch>>** head diameter, **<< 12-gauge, 0.109-inch; or ___-gauge, ___-inch>>** nail shank diameter, **<< 1 inch; 1-1/2 inches; or ___ inches>>** long and complying with **<<ASTM F1667/F1667M>>**.

B. Asphalt Roof Cement: **<<ASTM D4586/D4586M>>**, asbestos-free.

C. Bituminous Paint: Acid and alkali resistant type; black color.

D. Lap Cement: Fibrated cutback asphalt type, recommended for use in application of underlayment, free of toxic solvents.

E. Rigid Ridge Vents: Extruded, high-density polypropylene or other UV-stabilized plastic, with vent openings that do not permit direct water or weather entry; with minimum 18 square inches of net free area per linear foot; with internal rib reinforcing, external wind baffle, and flanges to receive ridge shingles. Include screening to prevent insect entry. Provide 11 or 11.5 inch wide as standard with manufacturer to receive 12 inch wide ridge shingles; no greater than 1 inch high.
   1. Products:
      a. Air Vent; Shingle Vent II.

DRAFT

b. Cor-A-Vent; V-600E.
c. DCI Products; SmartRidge II.
d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

F. Eave Vents: Low-profile, extruded, high-density polypropylene or other UV-stabilized plastic; with baffles to protect from weather and insect screening. Vent shall be installed under shingles. Coordinate with sheathing below to provide cut outs to allow air flow into unconditioned attic space per manufacturer's instructions.
1. Products:
a. Cor-A-Vent; IN-Vent.
b. DCI Products; SmartVent.
c. GAF; Cobra IntakePro.
d. Lomanco, Inc; Deck-Air Vent (DA-4).
e. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

G. Roof-to-Wall Vents: Extruded, high-density polypropylene or other UV-stabilized plastic; with baffles to protect from weather and insect screening. Vent shall be installed under shingles to vent roof at high point where roof meets vertical wall. Coordinate with metal flashing and cap shingles to cover over vent per manufacturer's instructions.
1. Products:
a. Cor-A-Vent; Roof-2-Wall Vent.
b. DCI Products; SmartVent Shed Wall.
c. Lomanco, Inc; Omni-Wall Vent.
d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

H. Eave Ventilation Baffles (Vent Chutes): Tear resistant, extruded polystyrene sheet, sized to fit between roof framing members; provides ventilation from eave into unconditioned attic spaces.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions prior to starting this work.
B. Verify roof deck is of sufficient thickness to accept fasteners.
C. Verify roof penetrations and plumbing stacks are in place and flashed to deck surface.
D. Verify roof openings are correctly framed.
E. Verify deck surfaces are dry, free of ridges, warps, or voids.

3.02 PREPARATION

A. Seal roof deck joints wider than 1/16 inch as recommended by shingle manufacturer.
B. Broom clean deck surfaces before installing underlayment or eave protection.
C. Protect surrounding areas and adjacent surfaces from damage during execution of this work.
D. Install **<< eave edge; and gable edge>>** flashings tight with fascia boards, weather lap joints **<< 2 inches; or ____ inches>>** and seal with roof cement, and secure flange with nails spaced **<< no greater than 12 inches>>** on center.

DRAFT

3.03 INSTALLATION

A. Underlayment:

1. Roof Slopes Up to 4:12: Install two layers of underlayment over **<< entire roof area; area not protected by eave protection; or _____>>**, with ends and edges weather lapped minimum **<< 4 inches; 6 inches; or ____ inches>>**; stagger end laps of each consecutive layer and nail in place.
2. Roof Slopes Greater Than 4:12: Install underlayment perpendicular to slope of roof, with ends and edges weather lapped minimum **<< 4 inches; 6 inches; or ____ inches>>**; stagger end laps of each consecutive layer, nail in place, and weather lap minimum **<< 4 inches; or ____ inches>>** over eave protection.
3. Weather lap and seal watertight with plastic cement any items projecting through or mounted on roof.

B. Valley Protection:

1. Install valley flashing in accordance with manufacturer's instructions**<< and NRCA (RM) applicable requirements; and _____; or None - N/A>>**.
2. Weather lap joints minimum **<< 2 inches; or ____ inches>>**.
3. Nail in place minimum **<< 18 inches; or ____ inches>>** on center, **<< 1 inch; or ____ inch>>** from edges.
4. At Exposed Valleys: Install one layer of sheet metal flashing, minimum **<< 24 inches; or ____ inches>>** wide, centered over open valley and crimped to guide water flow. Weather lap joints with minimum **<< 2-inch; or ____-inch>>** wide band of lap cement along each edge and nail in place minimum **<< 18 inches; or ____ inches>>** on center and **<< 1 inch; or ____ inch>>** from edges.

C. Metal Flashing:

1. Weather lap joints minimum **<< 2 inches; or ____ inches>>** and seal weather tight with plastic cement.
2. Secure in place with nails at **<< maximum 18 inches>>** on center, and conceal fastenings.
3. Items Projecting Through or Mounted on Roofing: Flash and seal weather tight with plastic cement.

D. Shingles:

1. Install shingles in accordance with **<< manufacturer's instructions; NRCA (RM) applicable requirements; and _____>>**.
   a. Fasten strip shingles using minimum four nails per strip, or as required by manufacturer and local building code, whichever is greater.
2. Place shingles in **<< straight; or _____>>** coursing pattern with **<< 5-inch; or ____-inch>>** weather exposure to produce **<< double; triple; or _____>>** thickness over full roof area**<< , and provide double course of shingles at eaves; , and provide triple course of shingles at eaves; , _____; or None - N/A>>**.
3. Project first course of shingles **<< 3/4 inch; or ____ inch>>** beyond fascia boards.
4. Extend shingles **<< 1/2 inch; or ____ inch>>** beyond face of gable edge fascia boards.
5. Cap **<< hips; and ridges>>** with individual shingles, maintaining **<< 5-inch; or ___-inch>>** weather exposure, and place to avoid exposed nails.
6. After installation, place **<< one daub; or ____ daubs>>** of plastic cement **<< 1-inch; or ___-inch>>** diameter under each individual shingle tab exposed to weather to prevent lifting.

DRAFT

7. Coordinate installation of roof mounted components or work projecting through roof with weathertight placement of counterflashings.
8. Complete installation to provide weathertight service.

3.04 CLEANING

A. See Section **<< 017000 - Execution and Closeout Requirements>>** for additional requirements.

B. Clean exposed work upon completion of installation; remove grease and oil films, excess joint sealer, handling marks, and debris from installation, leaving work clean and unmarked, free from dents, creases, waves, scratch marks, or other damage to finish.

3.05 PROTECTION

A. Do not permit traffic over finished roof surface; protect roofing until completion of project.

B. Touch-up, repair, or replace damaged asphalt shingles or accessories before Date of Substantial Completion.

END OF SECTION 073113

DRAFT

SECTION 074113
METAL ROOF PANELS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix).

B. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

C. ASTM A792/A792M - Standard Specification for Steel Sheet, 55% Aluminum-Zinc Alloy-Coated by the Hot-Dip Process.

D. ASTM C1177/C1177M - Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing.

E. ASTM C1289 - Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board.

F. ASTM D1970/D1970M - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection.

G. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

H. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials.

I. ASTM E1592 - Standard Test Method for Structural Performance of Sheet Metal Roof and Siding Systems by Uniform Static Air Pressure Difference.

J. ASTM E1646 - Standard Test Method for Water Penetration of Exterior Metal Roof Panel Systems by Uniform Static Air Pressure Difference.

K. ASTM E1680 - Standard Test Method for Rate of Air Leakage through Exterior Metal Roof Panel Systems.

L. ASTM E2178 - Standard Test Method for Determining Air Leakage Rate and Calculation of Air Permeance of Building Materials.

M. FM 4470 - Examination Standard for Single-Ply, Polymer-Modified Bitumen Sheet, Built-Up Roof (BUR) and Liquid Applied Roof Assemblies for Use in Class 1 and Noncombustible Roof Deck Construction.

1.02 SUBMITTALS

A. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Storage and handling requirements and recommendations.
   2. Installation methods.
   3. Include confirmation from metal roof panel manufacturer that submitted snow guard attachment is compatible with roof panel standing seam configuration and warranty requirements.

B. Shop Drawings: Include layouts of roof panels, details of edge and penetration conditions, spacing and type of connections, flashings, underlayments, and special conditions.
   1. Show work to be field-fabricated or field-assembled.

DRAFT

2. Include details of vapor barrier/underlayment connection to membrane roofing system or other boundary construction to accomplish continuous air barrier system for an airtight building enclosure.

C. Selection Samples: For each roofing system specified, submit color chips representing manufacturer's full range of available colors and patterns.

D. Verification Samples: For each roofing system specified, submit samples of minimum size 12 inches square, representing actual roofing metal, thickness, profile, color, and texture.

E. Installer's qualification statement.

F. Test Reports: Indicate compliance of metal roofing system to specified requirements.

G. Warranty: Submit specified manufacturer's warranty and ensure that forms have been completed in **<<Owner>>**'s name and are registered with manufacturer.

1.03 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing work of the type specified and approved by manufacturer for installation of specified products.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Provide strippable plastic protection on prefinished roofing panels for removal after installation.

B. Store roofing panels on project site as recommended by manufacturer to minimize damage to panels prior to installation.

1.05 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Finish Warranty: Provide manufacturer's special warranty covering failure of factory-applied exterior finish on metal roof panels and agreeing to repair or replace panels that show evidence of finish degradation, including significant fading, chalking, cracking, or peeling within specified warranty period of twenty (20) years from Date of Substantial Completion.

C. Waterproofing Warranty: Provide manufacturer's warranty for weathertightness of roofing system, including agreement to repair or replace roofing that fails to keep out water due to material or workmanship, within specified warranty period of twenty (20) years from Date of Substantial Completion.

DRAFT

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Standing Seam Metal Roof Panels:
1. Architectural Metal Systems; Loc-Seam 360.
2. ATAS International, Inc; 2" Field-Lok.
3. Berridge Manufacturing Company; Double-Lock Zee-Lock Panel.
4. Construction Metal Products, Inc; Series 2500.
5. Drexel Metals Inc; 200S Profile.
6. Elevate; UNA-CLAD UC-6.
7. Englert, Inc; S2500.
8. Fabral; Stand N Seam.
9. IMETCO; Twin-Lok 2.0.
10. MBCI; SuperLok.

11. Merchant and Evans; 2" Zip Lok.
12. Metal Roofing Systems, Inc; System 2500 Metal Roof Panels.
13. Metal Sales Manufacturing Corporation; Magna-Loc 180.
14. Morin Corporation; SLR Standing Seam.
15. Petersen Aluminum Corporation; Tite-Loc Plus Panel.
16. Sentrigard; ML200 2" Mechanical Lock Panel.

2.02 PERFORMANCE REQUIREMENTS

A. Metal Roof Panels: Provide complete roofing assemblies, including roof panels, clips, fasteners, connectors, and miscellaneous accessories, tested for compliance with the following minimum standards:

1. Structural Design Criteria: Provide panel assemblies designed to safely support design loads at support spacing indicated, with deflection not to exceed **<< L/180; L/140; or L/___>>** of span length(L) when tested in accordance with **<<ASTM E1592>>**.
   a. Live Loads: As required by ASCE 7 and per the requirements on the Structural Drawings.
   b. PV Ready: Manufacturer's panel assembly shall be "PV-ready" and approved to safely support photovoltaic assemblies to be installed at a later date, using non-penetrating (clamping) means. Installation of roof-mounted panels shall not void manufacturer's warranty. Photovoltaic panels **<< are not; or are>>** a part of this Project.
2. Overall: Complete weathertight system tested and approved in accordance with **<<ASTM E1592>>**.
3. Air Infiltration: Maximum **<< 0.06 cfm/sq ft; or ___ cfm/sq ft>>** at air pressure differential of **<< 6.24 lbf/sq ft; or 1.57 lbf/sq ft>>**, when tested according to **<<ASTM E1680>>**.
4. Water Penetration: No water penetration when tested according to procedures and recommended test pressure of **<< 2.86 lbf/sq. ft.; or 6.24 lbf/sq. ft.>>** according to **<<ASTM E1646>>**. **<< None - N/A; or Perform test immediately following air infiltration test.>>**
5. Thermal Movement: Design system to accommodate without deformation anticipated thermal movement over ambient temperature range of **<< 100 degrees F; 120 degrees F; or ___ degrees F>>**.
6. Thermal Resistance: Provide a minimum total roof assembly R-value of R-30. Polyiso insulation R-value shall be based on an industry standard Long Term Thermal Resistance (LTTR) of 5.7 per inch.
7. Thermal Resistance: Provide a minimum system R-value of R-30 in accordance with **<<ASTM C1289>>**.
8. Accelerated Weathering Test: Demonstrate physical integrity over the working life of the roof based upon 2,000 hours of exposure to accelerated weathering tests conducted in accordance with ASTM G152, ASTM G155, or ASTM G154.
9. Impact Resistance: Resist impact damage based on the results of tests in accordance with ASTM D3746, ASTM D4272, CGSB 37-GP-52M, or the "Resistance to Foot Traffic Test" in Section 5.5 of **<<FM 4470>>**.

2.03 METAL ROOF PANELS

A. Metal Roof Panels: Provide complete engineered system complying with specified requirements and capable of remaining weathertight while withstanding anticipated movement of substrate and thermally induced movement of roofing system.

DRAFT

B. Metal Panels: Factory-formed panels with **<< factory-applied; mill; or _____>>** finish.
   1. Steel Panels:
      a. Zinc-coated steel complying with **<<ASTM A653/A653M>>**; minimum **<< G60; G90; or ___>>** galvanizing.
      b. Aluminum-zinc alloy-coated steel complying with **<<ASTM A792/A792M>>**; minimum **<< AZ50; AZ55; AZ60; or _____>>** coating.
      c. Steel Thickness: Minimum **<< 24 gauge, 0.028 inch; 22 gauge, 0.030 inch; or _____>>**.
   2. Profile: Standing seam, with minimum 1.75 inch seam height, and with intermediate ribs or striations; concealed fastener system for field seaming.
      a. Panels shall be double-seamed (manufacturer's "double-lock", or 180 degree seam).
   3. Texture: Smooth.
   4. Length: Maximum possible length to minimize lapped joints. Where lapped joints are unavoidable, space laps so that each sheet spans over three or more supports.
      a. End Lap Joints/Splices:
         1) Coordinate splice location and fixed clip "point of fixity" with manufacturer's detailing to ensure entire roof system is coordinated for thermal movement.
         2) Lap panels with a minimum 6-inch lap; in shingle fashion to shed water to low side of roof.
   5. Width: Panel coverage of 16 inches.

C. Metal Soffit Panels:
   1. Profile: Flush, with **<< venting provided (perforated panels); or venting not provided (solid panels)>>**; total panel height of 7/8-inch.
   2. Width: Panel coverage of 12 inches.
   3. Material: Precoated aluminum sheet, **<< 20 gauge, 0.032 inch; 18 gauge, 0.0403 inch; 16 gauge, 0.0508 inch; or ___ gauge, ___ inch>>** minimum thickness.
   4. Color: To be selected by **<<Architect>>** from Manufacturer's **<< full; or standard>>** range.

2.04 ATTACHMENT SYSTEM

A. Concealed System: Provide manufacturer's standard **<< stainless steel; nylon-coated aluminum; or _____>>** concealed anchor clips designed for specific roofing system and engineered to meet performance requirements, including anticipated thermal movement.
   1. Provide a combination of fixed and floating clips to provide point of fixity at center of panel lengths; allowing for equal thermal movement toward each end.

2.05 FABRICATION

A. Panels: Provide **<< factory; field; or _____>>** fabricated panels**<< with applied finish; _____; or None - N/A>>** and accessory items, using manufacturer's standard processes as required to achieve specified appearance and performance requirements.
   1. Portable Roll-Forming Equipment for Field-Fabricated Panels: Where panel length exceeds transportation capacity, use of UL-certified portable roll-forming equipment to produce full length panels on site is acceptable. Panels shall be warranted by manufacturer to be same as factory-formed products. Maintain UL certification of equipment for duration of the Work.

B. Joints: Provide captive gaskets, sealants, or separator strips at panel joints to ensure weathertight seals, eliminate metal-to-metal contact, and minimize noise from panel movements.

DRAFT

2.06 FINISHES

A. Fluoropolymer Coil Coating System: Polyvinylidene fluoride (PVDF) multi-coat superior performing organic coatings system complying with **<<AAMA 2605>>**, including at least 70 percent PVDF resin, and at least 80 percent of coil coated metal surfaces having minimum total dry film thickness (DFT) of **<< 0.9 mil, 0.0009 inch>>**; color and gloss **<< as scheduled; to match sample; as indicated on drawings; as selected by Architect from manufacturer's standard line; or _____>>**.

B. Concealed Surfaces: For interior surfaces of panels that will not be exposed in the finished work, provide epoxy primer and light-colored silicone-modified polyester (SMP) enamel or acrylic enamel topcoat, with minimum dry film thickness (DFT) of 0.5 mil.

2.07 ACCESSORIES

A. Miscellaneous Sheet Metal Items: Provide **<< flashings; gutters; downspouts; trim; moldings; closure strips; preformed crickets; caps; equipment curbs; _____; and similar sheet metal items>>** of the same material, thickness, and finish as used for the roofing panels. Items completely concealed after installation may optionally be made of stainless steel.

B. Rib and Ridge Closures: Provide prefabricated, close-fitting components of **<< steel with corrosion resistant finish; closed-cell synthetic rubber, neoprene, or PVC; combination steel and closed-cell foam; or _____>>**.

C. Sealants:
   1. Exposed Sealant: Elastomeric, silicone, polyurethane, or silyl-terminated polyether/polyurethane.
   2. Concealed Sealant: Non-curing butyl sealant or tape sealant.
   3. Seam Sealant: Factory-applied, non-skinning, non-drying type.

D. Deck Sheathing: Glass mat faced gypsum panels, **<<ASTM C1177/C1177M>>**, fire resistant type, 1/2-inch-thick.
   1. Products:
      a. CertainTeed Corporation; GlasRoc Sheathing.
      b. Georgia-Pacific Corporation; DensDeck Prime.
      c. National Gypsum Company; Gold Bond eXP Extended Exposure Sheathing.
      d. USG Corporation; Securock Glass Mat Roof Board.

E. Vapor Retarder/Air Barrier Sheet; Self-Adhered: Minimum 30 mils.
   1. Air Permeance: **<< 0.004 cfm/sq ft>>**, maximum, when tested in accordance with **<<ASTM E2178>>**.
   2. Water Vapor Permeance: 0.1 perms, maximum, when tested in accordance with **<<ASTM E96/E96M>>** using Procedure A - Desiccant Method, at **<< 73.4 degrees F>>**.
   3. Surface Burning Characteristics: Flame spread index of 25 or less, smoke developed index of 450 or less, Class A when tested in accordance with **<<ASTM E84>>**.
   4. Seam and Perimeter Tape: As recommended by sheet manufacturer.
   5. Products:
      a. GCP Applied Technologies; Ice and Water Shield.
      b. Henry Company; Blueskin RF200.
      c. Owens Corning; WeatherLock.
      d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

DRAFT

F. Thermal Insulation: Polyisocyanurate (ISO) board insulation, rigid cellular foam, complying with ASTM C 1289.
   1. Classification: Type II.
      a. Class 1 or Class 2 - Faced with glass fiber reinforced cellulosic felt or glass-fiber mat on both major surfaces of core foam.
      b. Compressive Strength: **<< Classes 1-2-3, Grade 1 - 16 psi (110 kPa); Classes 1-2-3, Grade 2 - 20 psi (138 kPa); Classes 1-2-3, Grade 3 - 25 psi (172 kPa); Class 4, Grade 1 - 80 psi (551 kPa); Class 4, Grade 2 - 110 psi (758 kPa); or Class 4, Grade 3 - 140 psi (965 kPa)>>**, minimum.
      c. Thermal Resistance, R-value: Minimum Long Term Thermal Resistance of 5.7 per inch.

G. High-Temperature Underlayment: Self-adhering rubber-modified asphalt sheet complying with **<<ASTM D1970/D1970M>>**; **<< 22 mil; or 30 mil>>** minimum total thickness; with strippable release film and slip-resistant **<< woven polypropylene or polyethylene sheet; woven polyolefin; fiberglass mat; or _____>>** top surface.
   1. Self Sealability: Nail sealability in accordance with **<<ASTM D1970/D1970M>>**.
   2. Low Temperature Flexibility: Comply with **<<ASTM D1970/D1970M>>**.
   3. High Temperature Resistance: Passes thermal stability test at 240 degrees F, as specified in ASTM D 1970.
   4. Products:
      a. Carlisle Coatings and Waterproofing; WIP 300HT.
      b. Drexel Metals; MetShield.
      c. GCP Applied Technologies, Inc.; Ultra.
      d. Henry Company**<< ; Blueskin PE200HT; ; ____; or None - N/A>>**.
      e. Kirsch Building Products, LLC; Sharkskin Ultra SA.
      f. Owens Corning; WeatherLock Metal High Temperature Underlayment.
      g. Polyglass USA, Inc**<< ; Polystick MTS Self-Adhered High Temperature Roof Underlayment; ; Polystick TU Plus Self-Adhered High Temperature Roof Underlayment; ; ____; or None - N/A>>**.

2.08 SNOW GUARDS

A. Bar-Type Snow Guard: Continuous snow guard; provide manufacturer's standard assembly with an extruded aluminum bar/channel with slot for insertion of metal trim piece matching roof panel color. Metal panel manufacturer shall coordinate to provide matching metal trim.
   1. Products:
      a. Alpine SnowGuards; SnowMax.
      b. AceClamp by PMC Industries, Inc; Color Snap.
      c. S-5!; ColorGard.
   2. Clamps for Standing Seam Roof: Structural aluminum or stainless steel clamps secured to vertical standing seams of roof panels; non-penetrating.
   3. Ice Flag Accessory: Provide accessory product that mounts to bar component and extends down to surface of roof panel to prevent snow and ice migration under the snow guard. Provide at all snow guard locations, and evenly space at midpoint between ribs.

DRAFT

PART 3 EXECUTION

3.01 EXAMINATION

A. Do not begin installation of preformed metal roof panels until substrates have been properly prepared.

3.02 PREPARATION

A. Coordinate roofing work with provisions for roof drainage, flashing, trim, penetrations, and other adjoining work to ensure that completed roof will be free of leaks.

B. Remove protective film from surface of roof panels immediately prior to installation; strip film carefully to avoid damage to prefinished surfaces.

C. Separate dissimilar metals by applying a bituminous coating, self-adhering rubberized asphalt sheet, or other permanent method approved by metal roof panel manufacturer.

D. Protect surrounding areas and adjacent surfaces from damage during execution of this work.

E. At locations where metal will be in contact with wood or other absorbent material subject to wetting, seal joints with sealing compound and apply one coat of heavy-bodied bituminous paint.

3.03 INSTALLATION

A. Overall: Install roofing system in accordance with**<< approved shop drawings and; or None - N/A>>** metal roof panel manufacturer's instructions and recommendations, as applicable to specific project conditions; securely anchor components of roofing system in place allowing for thermal and structural movement.

1. Install roofing system with concealed clips and fasteners**<< , except as otherwise recommended by manufacturer for specific circumstances; or None - N/A>>**.
2. Minimize field cutting of panels. Where field cutting is required, use methods that will not distort panel profiles. Use of torches for field cutting is prohibited.

B. Accessories: Install necessary components that are required for complete roofing assembly, including **<< flashings; gutters; downspouts; trim; moldings; closure strips; preformed crickets; caps; equipment curbs; rib closures; ridge closures; similar roof accessory items; and _____>>**.

C. Insulation: Install insulation in a minimum of two layers, with joints of each succeeding layer staggered at least 6 inches in each direction. Install in total thickness as required for a total roofing assembly Long Term Thermal Resistance (LTTR) value of R-30 (minimum of 5.2 inches).

D. Underlayment: Apply primer to substrate if required per manufacturer's instructions. Install self-adhering high temperature underlayment full coverage across entire roof surface, as the layer directly under metal roof panels. Apply from eaves to ridge in shingle fashion, overlapping horizontal joints a minimum of 3-1/2 inches. Overlap side and end laps a minimum of 6 inches and stagger at least 24 inches between courses. Roll all laps with a roller.

1. Comply with manufacturer's instructions for temperature and exposure requirements; but do not leave underlayment exposed for more than 14 days.

E. Roof Panels: Install metal roof panels in accordance with manufacturer's installation instructions, minimizing transverse joints except at junction with penetrations.

1. Form weathertight standing seams incorporating concealed clips, using an automatic mechanical seaming device approved by panel manufacturer.
2. Install sealant or sealant tape at end laps and side joints as recommended by metal roof panel manufacturer.

DRAFT

F. Snow Guards: Secure base clamps to metal roof panel seams at spacing recommended by manufacturer. Do not penetrate the metal roof panels. Provide one row of snow guards continuous along length of metal roofing, mounted at 24 inches up from gutter or eave, unless otherwise indicated.

3.04 CLEANING

A. Clean exposed sheet metal work at completion of installation. Remove grease and oil films, excess joint sealer, handling marks, and debris from installation, leaving the work clean and unmarked, free from dents, creases, waves, scratch marks, or other damage to the finish.

3.05 PROTECTION

A. Do not permit storage of materials or roof traffic on installed roof panels. Provide temporary walkways or planks as necessary to avoid damage to completed work. Protect roofing until completion of project.

B. Touch-up, repair, or replace damaged roof panels or accessories before Date of Substantial Completion.

END OF SECTION 074113

DRAFT

SECTION 074213
METAL WALL PANELS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix).

B. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

C. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

D. NFPA 285 - Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Wall Assemblies Containing Combustible Components.

1.02 SUBMITTALS

A. Product Data - Wall System: Manufacturer's data sheets on each product to be used, including:
   1. Physical characteristics of components shown on shop drawings.
   2. Storage and handling requirements and recommendations.
   3. Installation instructions and recommendations.

B. Shop Drawings: Indicate dimensions, layout, joints, construction details, support clips**<< , _____; or None - N/A>>**, and methods of anchorage.

C. Sustainable Design Submittals: Refer to Division 1 Section "Sustainable Design Requirements."

D. Selection Samples: Submit manufacturer's color charts representing manufacturer's **<< standard; or full>>** range of available colors.

E. Verification Samples: Submit physical samples in manufacturer's standard size indicating panel profile and selected color, for each type of product required.

F. Test Reports: Submit test report verifying compliance with **<<NFPA 285>>** for **<< previously-tested; project-specific; or _____>>** exterior wall assembly.

1.03 QUALITY ASSURANCE

A. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of the type specified in this section.

1.04 MOCK-UPS

A. Integrated Exterior Mockups: Attend preinstallation conference for and provide metal wall panel work for integrated exterior mockup as **<< indicated on Drawings and as ; or None - N/A>>**specified in Division 1 Section "Quality Requirements."

1.05 DELIVERY, STORAGE, AND HANDLING

A. Protect panels from accelerated weathering by removing or venting sheet plastic shipping wrap.

B. Store prefinished material off the ground and protected from weather; prevent twisting, bending, or abrasion; provide ventilation; slope metal sheets to ensure proper drainage.

C. Prevent contact with materials that may cause discoloration or staining of products.

DRAFT

1.06 FIELD CONDITIONS

A. Do not install wall panels when air temperature or relative humidity are outside manufacturer's limits.

1.07 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Finish Warranty: Correct defective work within a **<< five; ten; twenty; or ____>>** year period after Date of Substantial Completion for degradation of panel finish, including color fading caused by exposure to weather.

C. Weathertightness Warranty: Correct defective work within a **<< five; or ____>>** year period after Date of Substantial Completion, including defects in **<< water tightness; integrity of seals; and _____>>** for metal wall panels.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Metal Wall Panels - Concealed Fasteners: ******For some profiles or wall panel types, may need to verify with listed manufacturers to ensure which ones offer the design profiles******

1. ATAS International, Inc.
2. Centria.
3. Construction Metal Products, Inc.
4. Dimensional Metals, Inc.
5. Englert, Inc.
6. Fabral.
7. McElroy Metal.
8. Metal Roofing Systems, Inc.
9. Morin Corporation.
10. Petersen Aluminum Corporation.

2.02 METAL WALL PANEL SYSTEM

A. Wall Panel System: Factory fabricated prefinished metal panel system, site assembled.

1. Design and size components to support assembly dead loads, and to withstand live loads caused by positive and negative wind pressure acting normal to plane of wall.
2. Design Pressure: In accordance with ASCE 7 and requirements on Structural Drawings.
3. Fire Performance: Tested in accordance with, and complying with acceptance criteria of **<< NFPA 285; or _____>>**.
4. Maximum Allowable Deflection of Panel: **<< L/180; L/90; L/60; or L/ ___>>** for length(L) of span.
5. Movement: Accommodate movement within system without damage to components or deterioration of seals, movement between system and perimeter components when subject to seasonal temperature cycling; dynamic loading and release of loads; and deflection of structural support framing.
6. Drainage: Provide positive drainage to exterior for moisture entering or condensation occurring within panel system.
7. Fabrication: Formed true to shape, accurate in size, square, and free from distortion or defects; pieces of longest practical lengths.

DRAFT

8. Corners: Factory-fabricated in one continuous piece with minimum **<< 2-inch; 18-inch; or ___-inch>>** returns.

B. Exterior Wall Panels:
1. Basis-of-Design Product: **<< _____>>**. ******Provide BOD if desired******
2. Profile: **<< _____>>**. ******Add description of panel profile here, add multiple types as required******
3. Side Seams: **<< Double-interlocked, tight-fitting; Double-interlocked with reveal; Batten-covered; or _____>>**, **<< sealed with continuous gaskets; sealed with continuous bead of sealant; or _____>>**.
4. Material: Precoated steel sheet, 22 gauge, 0.0299-inch minimum thickness. ******22 gauge steel is standard; aluminum (below) is an option******
5. Material: Precoated aluminum sheet, 0.040-inch minimum thickness. ******Delete if using standard steel******
6. Panel Width: **<< _____>>**. ******Panel width depends on selected profile/BOD. Coordinate.******
7. Color: To be selected by **<<Architect>>** from manufacturer's **<< full; or standard>>** range.

C. Soffit Panels: ******Coordinate with Metal Roofing - if providing both specs, soffit panels should default to roofing spec******
1. Profile: Flush panel without reveal, with manufacturer's standard venting provided. ******Verfiy profile and venting and modify if needed******
2. Material: Precoated aluminum sheet, 20 guage, 0.032 inch minimum thickness.
3. Color: To be selected by **<<Architect>>** from manufacturer's **<< full; or standard>>** range.

D. Internal and External Corners: Same material, thickness, and finish as exterior sheets; profile to suit system; **<< shop cut and factory mitered; or brake formed>>** to required angles.

E. Expansion Joints: Same material, thickness and finish as exterior sheets; **<< manufacturer's standard brake formed; infill; or _____>>** type, of profile **<< to suit system; or as detailed>>**.

F. **<< Trim; Closure Pieces; Caps; Flashings; Facias; Infills; and _____>>**: Same material, thickness and finish as exterior sheets; brake formed to required profiles.

G. Anchors: **<< Galvanized steel; Aluminum; Stainless steel; or _____>>**.

2.03 MATERIALS

A. Precoated Steel Sheet: Hot-dipped galvanized steel sheet, **<<ASTM A653/A653M>><< , Structural Steel (SS) or Forming Steel (FS); , _____; or None - N/A>>**, with **<< G90/Z275; G115/Z350; or _____>>** coating; continuous coil-coated on exposed surfaces with specified finish coating and on panel back with specified panel back coating.

B. Precoated Aluminum Sheet: **<<ASTM B209/B209M>><< , 3105 alloy, O temper; , ___ alloy, ___ temper; or None - N/A>>**, with **<< smooth surface texture; stucco embossed; or _____>>**; continuous-coil-coated on exposed surfaces with specified finish coating and on panel back with specified panel back coating.

2.04 FINISHES

A. Fluoropolymer Coil Coating System: Polyvinylidene fluoride (PVDF) multi-coat superior performing organic coatings system complying with **<<AAMA 2605>>**, including at least 70 percent PVDF resin, and at least 80 percent of coil coated metal surfaces having minimum total

DRAFT

dry film thickness (DFT) of **<< 0.9 mil, 0.0009 inch>>**; color and gloss **<< as scheduled; to match sample; as indicated on drawings; as selected by Architect from manufacturer's standard line; or _____>>**.

B. Panel Backside Finish: Panel manufacturer's standard siliconized polyester wash coat.

2.05 ACCESSORIES

A. Cladding Support System: Refer to Division 5 Section "Continuous Insulation Framing System."

B. Gaskets: Manufacturer's standard type suitable for use with system, permanently resilient**<< ; ultraviolet and ozone resistant; or None - N/A>>**.

C. Concealed Sealants: Non-curing butyl sealant or tape sealant, see Section **<< 079200>>**

D. Exposed Sealant: Elastomeric; silicone, polyurethane, or silyl-terminated polyether/polyurethane.

E. Fasteners: Manufacturer's standard type to suit application;**<< with soft neoprene washers,; _____ ,; or None - N/A>> << steel, hot dip galvanized; stainless steel; or _____>>.<< Fastener cap same color as exterior panel.; Exposed fasteners same finish as panel system.; _____; or None - N/A>>**

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that building subframing members are ready to receive panels, and that air barrier and insulation work is complete, inspections are completed, and ready for installation of cladding.

3.02 PREPARATION

A. Install subgirts/furring perpendicular to panel length, securely fastened to substrates and shimmed and leveled to uniform plane, and spaced at **<< intervals indicated; 24 inches on center, maximum; or ___ inches on center, maximum>>**.

B. Protect surrounding areas and adjacent surfaces from damage during execution of this work.

3.03 INSTALLATION

A. Install panels on **<< walls; soffits; and _____>>** in accordance with manufacturer's instructions.

B. Fasten panels to structural supports; aligned, level, and plumb.

C. Locate joints over supports.

D. Lap panel ends **<< 2 inches; or ___ inches>>**, minimum.

E. Provide **<< expansion; control; and _____>>** joints where length exceeds that recommended by manufacturer.

F. Use concealed fasteners unless otherwise indicated by **<<Architect>>**.

3.04 TOLERANCES

A. Offset From True Alignment Between Adjacent Members Abutting or In Line: **<< 1/16 inch; or ___ inch>>**, maximum.

B. Variation from Plane or Location As Indicated on Drawings: **<< 1/4 inch; 1/8 inch; or ____ inch>>**, maximum.

DRAFT

3.05 CLEANING

A. Remove site cuttings from finish surfaces.

B. Remove protective material from wall panel surfaces.

C. Clean and wash prefinished surfaces with mild soap and water; rinse with clean water.

3.06 PROTECTION

A. Protect metal wall panels until completion of project.

B. Touch-up, repair, or replace damaged wall panels or accessories before Date of Substantial Completion.

END OF SECTION 074213

METAL COMPOSITE MATERIAL WALL PANELS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix).

B. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.

C. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

D. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.

E. ASTM A276/A276M - Standard Specification for Stainless Steel Bars and Shapes.

F. ASTM A480/A480M - Standard Specification for General Requirements for Flat-Rolled Stainless and Heat-Resisting Steel Plate, Sheet, and Strip.

G. ASTM A666/A666M - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.

H. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

I. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

J. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric).

K. ASTM C920 - Standard Specification for Elastomeric Joint Sealants.

L. ASTM D1781 - Standard Test Method for Climbing Drum Peel for Adhesives.

M. ASTM D1929 - Standard Test Method for Determining Ignition Temperature of Plastics.

N. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

O. ASTM E283/E283M - Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Skylights, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen.

P. ASTM E330/E330M - Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.

Q. ASTM E331 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference.

R. NFPA 285 - Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Wall Assemblies Containing Combustible Components.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Pre-Installation Meeting: Convene one week before starting work of this section to verify project requirements, coordinate with installers of other work, establish condition and completeness of building substrate, and review manufacturers' installation instructions and warranty requirements.

DRAFT

1. Require attendance by MCM installer, CI framing installer (if a different entity), and other relevant sub-contractors (such as aluminum storefront/curtain wall, air barrier, insulation).
2. Include MCM sheet manufacturer's representative and wall system manufacturer's representative to review procedures.
3. Review in detail the schedule, personnel, and installation of adjacent materials and substrate.
4. Review project specific details including joint details (both panel-to-panel joints and panel to adjacent construction), penetrations, openings.
5. Review field testing, inspection, and other quality assurance requirements.
6. Review procedures for protection of work and other construction.

1.03 SUBMITTALS

A. Product Data - MCM Sheets: Manufacturer's data sheets on each product to be used, including thickness, physical characteristics, and finish, and:
   1. Finish manufacturer's data sheet showing physical and performance characteristics.
   2. Storage and handling requirements and recommendations.
   3. Fabrication instructions and recommendations.
   4. Specimen warranty for finish, as specified herein.

B. Product Data - Wall System: Manufacturer's data sheets on each product to be used, including:
   1. Physical characteristics of components shown on shop drawings.
   2. Storage and handling requirements and recommendations.
   3. Installation instructions and recommendations.
   4. Specimen warranty for wall system, as specified herein.

C. Shop Drawings: Show layout and elevations, dimensions and thickness of panels, connections, details and location of joints, sealants and gaskets, method of anchorage, support clips, number of anchors, supports, reinforcement, trim, flashings, and accessories.
   1. Indicate panel numbering system.
   2. Differentiate between shop and field fabrication.
   3. Indicate substrates and adjacent work with which the wall system must be coordinated.
   4. Include large-scale details of anchorages and connecting elements.
   5. Include large-scale details or schematic, exploded or isometric diagrams to fully explain **<< flashing; drainage system; rainscreen interface; and _____>>** at a scale of not less than **<< 1-1/2 inches per 12 inches; or ____ inches>>**.
   6. Include design engineer's stamp or seal on shop drawings for attachments and anchors.

D. Sustainable Design Submittals: Refer to Division 1 Section "Sustainable Design Requirements."

E. Selection Samples: Submit manufacturer's color charts representing manufacturer's **<< full; standard; custom; or _____>>** range of available colors.

F. Verification Samples: For each finish product specified, submit physical sample in manufacturer's standard size indicating selected colors.

G. Test Report: Submit report of full-size mock-up tests for air infiltration, water penetration, and wind performance.

H. Test Report: Submit test report verifying compliance with **<<NFPA 285>>** for **<< previously-tested; project-specific; or _____>>** exterior wall assembly utilizing identical products and components to those submitted for installation on this project.

DRAFT

I. Manufacturer's Field Reports: Provide within 48 hours of field review. State what was observed and what changes, if any, were requested or required.

J. Installer's qualification statement.

K. Testing agency's qualification statement.

L. Maintenance Data: Care of finishes and warranty requirements.

1.04 QUALITY ASSURANCE

A. Field Measurements: Verify actual dimensions by field measurement before fabrication; show recorded measurements on shop drawings.

B. Installer Qualifications: Company specializing in performing work of type specified in this section.
   1. Approved / certified in writing by wall panel system manufacturer.

C. Testing Agency Qualifications: Independent agency experienced in testing assemblies of the type required for this project and having the necessary facilities for full-size mock-up testing of the type specified.

1.05 MOCK-UPS

A. Integrated Exterior Mockups: Attend preinstallation conference for and provide metal composite material panels and associated components for integrated exterior mockup as **<< indicated on Drawings and as ; or None - N/A>>**specified in Division 1 Section "Quality Requirements."

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver products in manufacturer's original, unopened, undamaged containers with identification labels intact.
   1. Protect finishes by applying heavy-duty removable plastic film during production.
   2. Package for protection against transportation damage.
   3. Provide markings to identify components consistently with drawings.
   4. Exercise care in unloading, storing, and installing panels to prevent bending, warping, twisting, and surface damage.

B. Store products protected from exposure to harmful weather conditions and at temperature conditions recommended by manufacturer.
   1. Store in well-ventilated space out of direct sunlight.
   2. Protect from moisture and condensation with tarpaulins or other suitable weathertight covering installed to provide ventilation.
   3. Store at a slope to ensure positive drainage of accumulated water.
   4. Do not store in enclosed space where ambient temperature can exceed 120 degrees F.
   5. Avoid contact with other materials that might cause staining, denting, or other surface damage.

1.07 FIELD CONDITIONS

A. Do not install panels when air temperature or relative humidity are outside manufacturer's limits.

1.08 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

DRAFT

B. Special Warranty: Provide **<< 2-year; 5-year; or ____>>** warranty covering water tightness and integrity of seals of wall panels. Complete forms in **<<Owner>>**'s name and register with warrantor.

C. Finish Warranty: Provide **<< 5-year; 10-year; 20-year; or _____>>** manufacturer warranty against excessive degradation of exterior finish. Include provision for replacement of units with excessive fading, chalking, or flaking. Complete forms in **<<Owner>>**'s name and register with warrantor.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Metal Composite Material (MCM) Sheet Manufacturers:
1. ALUCOBOND by 3A Composites USA; Alucobond Plus.
2. Alcoa, Inc.; Reynobond FR.
3. Alfrex, LLC; Alfrex FR.
4. ALPOLIC Materials; ALPOLIC/fr (Fire Retardant core).
5. Fairview Architectural LLC; Vitrabond FR (Non-Combustible).

2.02 WALL PANEL SYSTEM

A. Wall Panel System: Metal panels, fasteners, and anchors designed to be supported by framing or other substrate provided by others; provide installed panel system capable of maintaining specified performance without defects, damage, or failure.
1. Provide structural design by or under direct supervision of a Structural Engineer licensed in **<<the State in which the Project is located>>**.
2. **<< Wet-Seal System:>>** Provide panel jointing and weatherseal using a "wet" sealant-sealed system.
3. **<< Dry-Seal System:>>** Provide panel jointing and weatherseal using mechanically-retained gaskets. "Wet seal" exposed sealant joints are unacceptable except for perimeter and horizontal joints.
4. **<< Rainscreen System:>>** Provide panel jointing using a drained and back-ventilated (D/BV) rainscreen type system with an open reveal joint and a separate MCM strip or spline at the rear of the reveal. "Wet seal" exposed sealant joints are unacceptable except for perimeter joints and exposed horizontal joints.
5. Anchor panels to supporting framing without exposed fasteners.

B. **<<NFPA 285>>** Fire Propagation Test: Exterior metal-faced composite material wall panel assemblies shall be tested and pass NFPA 285; assembly shall have been tested using identical products and components to those submitted for installation on this project.

2.03 PERFORMANCE REQUIREMENTS

A. Thermal Movement: Provide for free and noiseless vertical and horizontal thermal movement due to expansion and contraction under material temperature range of **<< minus 20 degrees F; or ____ degrees F>>** to **<< 180 degrees F; or ____ degrees F>>** without buckling, opening of joints, undue stress on fasteners, or other detrimental effects; allow for ambient temperature at time of fabrication, assembly, and erection procedures.
1. Wind Performance: Provide system **<< tested in accordance with ASTM E330/E330M; or that will perform>>** without permanent deformation or failures of structural members under the following conditions:

DRAFT

a. Design Wind Pressure: In accordance with ASCE 7 and requirements on Structural Drawings.
b. Maximum deflection of perimeter framing member of L/175 normal to plane of the wall; maximum deflection of individual panels of L/60.
c. Maximum anchor deflection in any direction of **<< 1/16 inch>>** at connection points of framing members to anchors.

B. Air Leakage: **<< 0.10 cfm/sq ft; or ___ cfm/sq ft>>** maximum leakage when tested at **<< 1.57 psf; or ___ psf>>** pressure difference in accordance with **<<ASTM E283/E283M>>**. ******N/A at rainscreen system******

C. Water Penetration: No water penetration under static pressure when tested in accordance with **<<ASTM E331>>** at a differential of **<< 10 percent; or _____>>** of inward acting design load, **<< 6.27 psf; or ___ psf>>** minimum, after 15 minutes. ******N/A at rainscreen system******
1. Water penetration is defined as the appearance of uncontrolled water on the interior face of the wall.
2. Design to drain leakage and condensation to the exterior face of the wall.

D. Fire Performance: Provide panels that have been tested in approved assemblies, in accordance with, and complying with acceptance criteria of **<< NFPA 285; or _____>>**.

2.04 PANELS

A. Panels: 1 inch deep pans formed of metal composite material sheet by routing back edges of sheet, removing corners, and folding edges.
1. Provide concealed attachment to supporting structure by adhering attachment members to back of panel; attachment members may also function as stiffeners.
2. Maintain maximum panel bow of 0.8 percent of panel dimension in width and length; provide stiffeners of sufficient size and strength to maintain panel flatness without showing local stresses or read-through on panel face.
3. Secure members to back face of panels using structural silicone sealant approved by MCM sheet manufacturer.
4. For directional finishes such as metallics, maintain consistent grain direction of MCM sheet; specifically, do not rotate sheet purely to avoid waste. Coordinate with manufacturer.
5. Fabricate panels under controlled shop conditions.
6. Where final dimensions cannot be established by field measurement before commencement of manufacturing, make allowance for field adjustments without requiring field fabrication of panels.
7. Fabricate as indicated on drawings and as recommended by MCM sheet manufacturer.
a. Make panel lines, breaks, curves, and angles sharp and true.
b. Keep plane surfaces free from warp or buckle.
c. Keep panel surfaces free of scratches or marks caused during fabrication.
8. Column Covers/Radiused Panels: Where curved or radiused panels are indicated, roll round faces to a precise radius, accounting for joints, to provide a constant, consistent radius across the complete assembly.
9. Provide joint details providing a watertight and structurally sound wall panel system that allows no uncontrolled water penetration on inside face of panel system.
10. For "dry" jointing, secure extrusions to returned pan edges with stainless steel rivets.
11. Provide means of concled drainage for panel condensation and water that might accumulate in members of system; drill perforated weep holes on underside return of each panel, and provide insect baffle at each weep hole.

DRAFT

2.05 MATERIALS

A. Metal Composite Material (MCM) Sheet: Fire-retardant composite panel fabricated of two sheets of **<< aluminum; stainless steel; zinc; copper; or _____>>** sandwiching a mineral-filled core; no foamed insulation material content.

1. Overall Sheet Thickness: 4 mm (0.157 inch) minimum nominal thickness.
2. Face Sheet Thickness: 0.020 inches (0.5 mm), minimum, equal thickness for both exterior and interior facings. Unequal facings are not acceptable.
3. Bond and Peel Strength: No adhesive failure of the bond between the core and the skin nor cohesive failure of the core itself below **<< 22.4 inch-pound/inch; or ____ inch-pound/inch>>** with no degradation in bond performance, when tested in accordance with **<<ASTM D1781>>**, simulating resistance to panel delamination, after 8 hours of submersion in boiling water and after 21 days of immersion in water at **<< 70 degrees F>>**.
4. Surface Burning Characteristics: Flame spread index of **<< 25; 10; or ___>>**, maximum; smoke developed index of 450, maximum; when tested in accordance with **<<ASTM E84>>**.
5. Flammability: Self-ignition temperature of **<< 650 degrees F>>** or greater when tested in accordance with **<<ASTM D1929>>**.

B. Metal Framing Members: Coordinate with Division 5 Section "Continuous Insulation Framing System". Provide manufacturer's recommended sub-girts/furring channels, installation clips, base and sill angles and channels, as required for complete installation over continuous insulation framing system.

1. Provide material strength, dimensions, configuration as required to meet applied loads and in compliance with applicable building code.
2. Aluminum Components: **<<ASTM B209/B209M>>**; or **<<ASTM B221>>** (**<<ASTM B221M>>**).

2.06 FINISHES

A. Fluoropolymer Coil Coating System: Polyvinylidene fluoride (PVDF) multi-coat superior performing organic coatings system complying with **<<AAMA 2605>>**, including at least 70 percent PVDF resin, with at least 80 percent of coil coated metal surfaces having minimum total dry film thickness (DFT) of **<< 0.9 mil, 0.0009 inch>>**. ******Select design choice from options below******

1. Color/Texture: To be selected by Architect from manufacturer's standard or stock range.
2. Color/Texture: To be selected by Architect from manufacturer's full and complete range including metallics, premiums, and micas.
3. Color/Texture: Custom color shall be required to match Architect's sample; manufacturer's standard texture.

2.07 ACCESSORIES

A. Flashing: Sheet aluminum, 0.040-inch thick, minimum; finish and color to match MCM sheet.

B. CI Framing System: Refer to Division 5 Section "Continuous Insulation Framing System".

C. Anchors, Clips, and Accessories: Use one of the following:

1. Stainless steel complying with **<<ASTM A276/A276M>>**, **<<ASTM A480/A480M>>**, or **<<ASTM A666/A666M>>**.
2. Steel complying with **<<ASTM A36/A36M>>** and hot-dip zinc coating to **<<ASTM A153/A153M>>**.

DRAFT

3. Steel complying with **<<ASTM A36/A36M>>** and hot-dip galvanized to **<<ASTM A123/A123M>>**, with Coating Thickness Grade of **<< 100; 75; 50; 35; or ___>>**.

D. Fasteners:
1. Screws: Self-drilling or self-tapping Type 410 stainless steel or zinc-alloy steel hex washer head, with EPDM or PVC washer under heads of fasteners bearing on weather side of metal wall panels.
2. Bolts: Stainless steel.
3. Fasteners for Flashing and Trim: Blind fasteners of high-strength aluminum or stainless steel.

E. Joint Sealer: Provide in color selected by Architect; exterior silicone sealant of type specified in Division 7 Section "Joint Sealants," approved by MCM sheet manufacturer, and in compliance with **<<ASTM C920>>**.

F. Provide panel system manufacturer's and installer's **<< standard corrosion resistant; stainless steel; hot-dipped galvanized; or _____>>** accessories, including fasteners, clips, anchorage devices, and attachments.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine dimensions, tolerances, and interfaces with other work.
1. Verify that air barrier system/insulation and CI framing system are properly installed.

B. Examine substrate on-site to determine that conditions are acceptable for product installation in accordance with manufacturer's written instructions.

C. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

D. Notify Architect in writing of conditions detrimental to proper and timely completion of work, and do not proceed with erection until unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Protect adjacent work areas and finish surfaces from damage during installation.

3.03 INSTALLATION

A. Do not install products that are defective, including warped, bowed, dented, and broken members, and members with damaged finishes.

B. Comply with instructions and recommendations of MCM sheet manufacturer and wall system manufacturer**<< , as well as with approved shop drawings; or None - N/A>>**.

C. Install wall system securely allowing for necessary thermal and structural movement; comply with wall system manufacturer's instructions for installation of concealed fasteners.

D. Do not handle or tool products during erection in manner that damages finish, decreases strength, or results in visual imperfection or failure in performance. Return component parts that require alteration to shop for refabrication, if possible, or for replacement with new parts.

E. Do not form panels in field unless required by wall system manufacturer and approved by the Architect; comply with MCM sheet manufacturer's instructions and recommendations for field forming.

F. Separate dissimilar metals; use gasket fasteners, isolation shims, or isolation tape where needed to eliminate possibility of electrolytic action between metals.

DRAFT

G. Where joints are designed for field-applied sealant, seal joints completely with specified sealant.

H. Install flashings as indicated on shop drawings. At flashing butt joints, provide a lap strap under flashing and seal lapped surfaces with a full bed of non-hardening sealant.

I. Install square, plumb, straight, and true, accurately fitted, with tight joints and intersections maintaining the following installation tolerances:
   1. Variation From Plane or Location: 1/2-inch in 30 feet of length and up to 3/4-inch in 300 feet, maximum.
   2. Deviation of Vertical Member From True Line: 0.1 inch in 25 feet run, maximum.
   3. Deviation of Horizontal Member From True Line: 0.1 inch in 25 feet run, maximum.
   4. Offset From True Alignment Between Two Adjacent Members Abutting End To End, In Line: 0.03 inch, maximum.

J. Replace damaged products.
   1. Exception: Field repairs of minor damage to finishes are permitted only when approved in writing by **<<Architect>>**, panel manufacturer, and fabricator.
   2. Field Repairs to Finishes: Using materials and methods sufficient that repairs are not discernible when viewed at distance of **<< 10 feet; or ___ feet>>** under all typical light conditions experienced at the project.

3.04 FIELD QUALITY CONTROL

A. Wall System Manufacturer's Field Services: Provide field services consisting of product use recommendations and periodic site visits for inspection of product installation in accordance with instructions.

3.05 CLEANING

A. Ensure weep holes and drainage channels are unobstructed and free of dirt and sealants.

B. Remove protective film after installation of joint sealers, after cleaning of adjacent materials, and immediately prior to completion of work.

C. Remove temporary coverings and protection of adjacent work areas.

D. Clean installed products in accordance with manufacturer's instructions.

3.06 PROTECTION

A. Protect installed panel system from damage until Date of Substantial Completion.

END OF SECTION 074213.23

DRAFT

SECTION 075100
BUILT-UP BITUMINOUS ROOFING

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures.

B. ASTM C1177/C1177M - Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing.

C. ASTM C1289 - Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board.

D. ASTM D41/D41M - Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing.

E. ASTM D312/D312M - Standard Specification for Asphalt Used in Roofing.

F. ASTM D1863/D1863M - Standard Specification for Mineral Aggregate Used on Built-Up Roofs.

G. ASTM D2178/D2178M - Standard Specification for Asphalt Glass Felt Used in Roofing and Waterproofing.

H. ASTM D3909/D3909M - Standard Specification for Asphalt Roll Roofing (Glass Felt) Surfaced with Mineral Granules.

I. ASTM D4586/D4586M - Standard Specification for Asphalt Roof Cement.

J. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

K. ASTM E1980 - Standard Practice for Calculating Solar Reflectance Index of Horizontal and Low-Sloped Opaque Surfaces.

L. FM (AG) - FM Approval Guide.

M. ITS (DIR) - Directory of Listed Products.

N. NRCA (RM) - The NRCA Roofing Manual.

O. UL (DIR) - Online Certifications Directory.

P. UL (FRD) - Fire Resistance Directory.

DRAFT

1.02 ADMINISTRATIVE REQUIREMENTS

A. Coordinate with installation of associated counterflashings installed by other sections as the work of this section proceeds.

B. Preinstallation Meeting: Convene two weeks minimum before starting work of this section.

1. Review preparation and installation procedures and coordinating and scheduling required with related work.

1.03 SUBMITTALS

A. Product Data: Provide data indicating membrane and bitumen materials, base flashings, cover board, insulation, vapor retarder/air barrier, substrate board, and surfacing materials.

B. Shop Drawings: Indicate **<< joint or termination detail conditions; conditions of interface with other materials; setting plan for tapered insulation; mechanical fastener layout; and _____>>**.

C. Sustainable Design Submittals: Refer to Division 1 Section "Sustainable Design Requirements."

D. Manufacturer's Certificate: Certify that products meet or exceed **<< specified requirements; or _____>>**.
   1. Submit in the form of manufacturer's assembly letter, indicating each component of the roofing assembly as specified, and that assembly meets performance requirements and manufacturer's warranty conditions.

E. Manufacturer's Field Reports: Indicate **<< procedures followed; ambient temperatures; humidity; wind velocity during application; supplementary instructions given; and _____>>**.

F. Manufacturer's qualification statement.

G. Installer's qualification statement.

H. Warranty: Submit manufacturer warranty and ensure forms have been completed in **<<Owner>>**'s name and registered with manufacturer.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacture of products specified, with UL-listed roof assemblies for roof systems indicated.

B. Installer Qualifications: Company specializing in performing the work of this section. Installer shall be certified by primary roofing membrane material manufacturer for installation of specified roofing assembly.

C. Insulation Manufacturer Qualifications: Approved by roof membrane manufacturer, and approved and labeled under third party quality program as required by applicable building code.
   1. Insulation Labeling: All foam insulation shall bear the label of testing/inspection agency, and shall include manufacturer identification, product identification, performance characteristics, and other information as necessary to verify code compliance for intended end use.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's original containers, dry and undamaged, with seals and labels intact.

B. Store materials in weather protected environment, clear of ground and moisture.

C. Ensure storage and staging of materials does not exceed static and dynamic load-bearing capacities of roof decking.

D. Protect foam insulation from direct exposure to sunlight.

1.06 FIELD CONDITIONS

A. Do not install roofing materials during unsuitable weather, or when unsuitable weather is expected. Proceed only when field conditions are in accordance with roofing manufacturer's installation and warranty requirements.

B. Do not expose materials vulnerable to water**<< or sun damage; None - N/A; or _____>>** in quantities greater than can be weatherproofed the same day.

C. Schedule applications so that no partially completed sections of roof are left exposed at end of workday.

1.07 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

DRAFT

B. Special Warranty - Manufacturer: Manufacturer's warranty form, customized for project-specific conditions.
   1. Manufacturer's warranty shall be a "total system" or "edge-to-edge" warranty; no dollar limit ("NDL").
   2. Include all components of roofing system including, but not limited to, roofing membrane, roof insulation, adhesives and fasteners, flashings, edge metals and copings, **<< substrate board; vapor retarder/air barrier; cover board; roof insulation; roof paver system; and walkway pads>>**.
   3. Provide wind coverage to 74 mph and hail coverage.
   4. Manufacturer's Total System Warranty Period: 25 years, from date of Substantial Completion.

C. Special Warranty - Installer: Installer shall sign and submit per warranty form attached at end of this section.
   1. Installer's warranty shall cover all components of roofing system, matching manufacturer's warranty above.
   2. Installer's Warranty Period: 2 years, from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Built-Up Bituminous Roofing (Primary Membrane):
   1. Carlisle SynTec; SureMB Type VI Glass Ply Felt.
   2. GAF; GAFGLAS Type VI.
   3. Johns Manville; GlasPly Premier.
   4. Polyglass USA, Inc; Polyglass Ply VI.
   5. Soprema; SOPRA VI.
   6. Tremco, Inc; THERMglass Premium VI.

2.02 ROOFING - CONVENTIONAL APPLICATION

A. Built-up Bituminous Roofing: Asphalt felt membrane, four plies plus base sheet, over cover board, polyiso insulation, air barrier/vapor retarder, and substrate board on metal roof deck.

B. Roofing Assembly Requirements:
   1. General: Installed roofing assembly and all associated components shall remain secure and watertight and shall withstand weather exposure, wind uplift pressures specified, and thermal movements. Roofing manufacturer shall certify that all roofing assembly components are compatible with each other and with adjacent materials for applications indicated.
   2. Roof Covering External Fire Resistance Classification: **<< ITS (DIR); UL (DIR); UL (FRD); or _____>>** Class A.
   3. Assembly Resistance to Internal Fire: Manufacturer's assembly shall be tested to and satisfactorily pass NFPA 276 or UL 1256.
   4. Wind / Uplift Design: Membrane roofing system shall be identical to system that has been successfully tested by a qualified testing and inspecting agency to resist uplift pressures calculated according to **<<ASCE 7>>** as established by applicable building code and loading indicated.
      a. Corner, Perimeter, Field-of-Roof Uplift Pressures: Per applicable building code and values indicated on Structural Drawings.

DRAFT

b. Static Uplift: In addition to uplift requirements above, system shall be tested for static uplift per FM 4474, UL 580, or UL 1897.

5. Assembly Thermal Resistance (R-Value): Provide roof assembly with a minimum assembly R-value of R-30 in accordance with applicable IECC requirement for commercial roofing.
6. Accelerated Weathering: 2,000 hours minimum exposure, when tested in accordance with ASTM G152, ASTM G154, or ASTM G155.
7. Ponding Water: Ponding water shall not remain on the roof 24 hours after a rainfall event.
8. Solar Reflectance Index (SRI): **<< 78; or ___>>**, minimum, calculated in accordance with **<<ASTM E1980>><< , based on 3-year aged data; _____; or None - N/A>>**.
   a. Field applied coating **<< may not; may; or _____>>** be used to achieve specified SRI.

2.03 SHEET MATERIALS

A. Base Sheets: **<<ASTM D2178/D2178M>> << Type IV; Type VI; or _____>>**; asphalt-coated glass fiber, unperforated.

B. White Cap Sheet: Asphalt-saturated glass fiber roll roofing surfaced with flexible acrylic coating**<< and ceramic granules; _____; or None - N/A>>**, complying with **<<ASTM D3909/D3909M>>**.
   1. Solar Reflectance: **<< 0.75; or _____>>**, minimum, initial, and **<< 0.60; or _____>>**, minimum, 3-year aged, certified by Cool Roof Rating Council.
   2. Thermal Emissivity: **<< 0.80; or _____>>**, minimum, initial, and **<< 0.85; or _____>>**, minimum, 3-year aged, certified by Cool Roof Rating Council.

2.04 BITUMINOUS MATERIALS

A. Bitumen: **<<ASTM D312/D312M>>**, **<< Type I; Type II; Type III; Type IV; or _____>>**, asphalt.

B. Asphalt Primer: **<<ASTM D41/D41M>>**, asphalt type.

C. Asphalt Roof Cement: **<<ASTM D4586/D4586M>>**, Type I, asbestos-free.

2.05 DECK SHEATHING

A. Deck Sheathing: Glass-mat faced gypsum panels, **<<ASTM C1177/C1177M>>**.
   1. Thickness: 1/2-inch, fire-resistant.
   2. Products:
      a. CertainTeed Corporation; GlasRoc Sheathing.
      b. Georgia-Pacific; DensDeck Prime.
      c. National Gypsum Company; DEXcell Glass Mat Roof Board.
      d. USG Corporation; Securock Ultralight Glass-Mat Roof Board.

2.06 INSULATION

A. Surface Burning Characteristics: Foam plastic insulation shall have a maximum flame spread index of 75, and maximum smoke developed index of 450, when tested in accordance with**<<ASTM E84>>** at maximum thickness intended for use.

B. Polyisocyanurate (ISO) Board Insulation: Rigid cellular foam, complying with **<<ASTM C1289>>**.
   1. Classifications:

DRAFT

a. Type II: Faced with either cellulosic facers or glass fiber mat facers on both major surfaces of the core foam.
   1) Class 1 - Faced with glass fiber reinforced cellulosic facers on both major surfaces of the core foam.
   2) Compressive Strength: Grade 2 - 20 psi, minimum.
   3) Thermal Resistance: Nominal R-value of 5.7 per inch at 75 degrees F.

2. Tapered Board: Slope as indicated, but no lower than 1/4 inch per foot; minimum thickness 1/2-inch; fabricate of fewest layers possible.
3. Preformed Shapes: Provide saddles crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated, but no less than 1/4 inch per 12 inches, and no less than 1/8 inch per 12 inches in valleys.

2.07 SURFACING MATERIALS<< , CONVENTIONAL; OR NONE - N/A>>

A. Aggregate: **<< ASTM D1863/D1863M; or None - N/A>>** Sound, hard **<< washed river gravel; roofer's pea gravel; white dolomite chips; crushed shale; stone; or _____>>**; **<< 1/4-inch; or ___-inch>>** minimum to **<< 1/2-inch; or ____-inch>>** maximum size.

2.08 ACCESSORIES

A. Cant and Edge Strips: Bitumen-impregnated wood fiberboard, compatible with roofing materials**<< ;; or None - N/A>><< cants formed to 45-degree angle; tapered edge strips; other configurations as detailed; and _____>>**.

B. Stack Boots: Provide manufacturer's standard preformed flexible flashings, using clamps and tents, to secure roof penetrations watertight. Pitch pockets shall be avoided to the greatest extent possible.
   1. Pitch Pocket: Where pitch pocket is unavoidable due to penetration's complexity of shape, fill pitch pockets with pourable urethane sealer.

C. Insulation Fasteners: Appropriate for purpose intended**<< and approved by roofing manufacturer; and approved by FM (AG) Factory Mutual and roofing manufacturer; _____; or None - N/A>>**.
   1. Length as required for thickness of insulation material and penetration of deck substrate**<< , with metal washers; None - N/A; or _____>>**.

D. Strip Reglet Devices: **<< Galvanized steel; Extruded plastic; or _____>>**, maximum possible lengths per location, with attachment flanges.

E. Insulation Perimeter Restraint: **<< Stainless steel; Metal; or _____>>** edge device configured to restrain insulation boards in position and provide top flashing over ballast.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that surfaces and site conditions are ready to receive work.

B. Verify deck is supported and secure.

C. Verify deck is clean and smooth, flat, free of depressions, waves, or projections, properly sloped and suitable for installation of roof system.

D. Verify deck surfaces are dry and free of snow or ice.

E. Verify that roof openings, curbs, and penetrations through roof are solidly set, and **<< cant strips; nailing strips; reglets; and _____>>** are in place.

DRAFT

3.02 PREPARATION - METAL DECK

A. Install deck sheathing on metal deck:
   1. Lay with long side at right angle to flutes; stagger end joints; provide support at ends.
   2. Cut sheathing cleanly and accurately at roof breaks and protrusions to provide smooth surface.
   3. Tape joints.
   4. Mechanically fasten sheathing to roof deck, in accordance with roofing manufacturer's instructions and per the following:
      a. At locations where metal roof deck will be exposed from below in the finished work, carefully coordinate fastener attachment such that fasteners do not penetrate the bottom flanges of the metal deck. Remove fasteners that penetrate the bottom flanges and replace with properly located fasteners, and restore metal deck to Owner's satisfaction.

3.03 INSTALLATION - AIR BARRIER/VAPOR RETARDER AND INSULATION

A. Install vapor retarder over substrate surface in accordance with manufacturer's instructions.
   1. Extend vapor retarder under under cant strips and blocking to deck edge.
   2. Install flexible flashing from vapor retarder to air seal material of wall construction, lap and seal to provide continuity of the air barrier plane. Coordinate with installer of wall air barrier assembly for transition membrane information and tie in.

B. Ensure vapor retarder is clean and dry, continuous, and ready for application of roofing system.

C. Attachment of Insulation:
   1. Mechanically fasten first layer of insulation to deck in accordance with roofing manufacturer's instructions.
      a. At locations where metal roof deck will be exposed from below in the finished work, carefully coordinate fastener attachment such that fasteners do not penetrate the bottom flanges of the metal deck. Remove fasteners that penetrate the bottom flanges and replace with properly located fasteners, and restore metal deck to Owner's satisfaction.
   2. Embed each subsequent layer of insulation into flood coat mopping of hot bitumen in accordance with roofing and insulation manufacturers' instructions.
   3. Install a minimum of two layers of insulation, with a minimum total thickness of 5.2 inches, followed by a cover board (R-0.5), to achieve a cumulative roof assembly Long Term Thermal Resistance (LTTR) value of 30 per ASTM C1289.

D. Lay subsequent layers of insulation with joints staggered minimum **<< 6 inches; or ___ inches>>** from joints of preceding layer.

E. Place tapered insulation to the required slope pattern in accordance with manufacturer's instructions.

F. On metal deck, place boards **<< parallel; perpendicular; or _____>>** to flutes with insulation board **<< edges; ends; or _____>>** bearing on deck flutes. ******Keep this paragraph if no substrate/sheathing board******

G. Lay boards with edges in moderate contact without forcing. Cut insulation to fit neatly to perimeter blocking and around penetrations through roof.

H. At roof drains, use **<< factory-tapered boards; boards cut to slope; or _____>>** to slope down to roof drains over a distance of **<< 18 inches; 24 inches; or ____ inches>>**.

I. Do not apply more insulation than can be covered with membrane in same day.

DRAFT

J. Cover Boards: Secure cover boards in accordance with roofing manufacturer's instructions. Install cover boards with joints staggered minimum 6 inches from joints of preceding insulation layer.

3.04 INSTALLATION - MEMBRANE

A. Install built-up bituminous roofing system in accordance with manufacturers recommendations**<< and NRCA (RM) applicable requirements; _____; or None - N/A>>**.

B. Equiviscous Temperature (EVT) at Point of Application: Comply with **<< NRCA (RM) recommendations; or _____>>**.

C. Apply membrane plies, weather lap edges and ends, and mop with **<< 20 lb/100 sq ft; or ___ lb/100 sq ft>>** of bitumen per ply unless otherwise required by manufacturer. **<< Apply plies two on two in same direction.; Apply plies two on two in opposite direction.; _____ .; or None - N/A>>**

D. Apply smooth, free from air pockets, wrinkles, fish-mouths, or tears.

E. At end of day's operation, install two plies membrane and bitumen glaze coat for cut-off. Glaze exposed felts. Remove cut-off before resuming roofing.

F. At intersections with vertical surfaces:

1. Extend membrane**<< and base sheet; None - N/A; or _____>>** over cant strips and up a minimum of **<< 4 inches; 6 inches; or ____ inches>>** onto vertical surfaces.
2. Mop on base flashing of two additional plies of felt and one ply of base flashing material.

G. At gravel stops, extend membrane**<< and base sheet; None - N/A; or _____>>** under gravel stop and to the outside face of the wall.

H. Around roof penetrations, mop in and seal flanges and flashings with two additional plies of felt.

I. Coordinate installation of roof **<< drains; sumps; and _____>>** and related flashings.

3.05 APPLICATION - AGGREGATE SURFACING<< , CONVENTIONAL; OR NONE - N/A>>

A. Apply uniform flood coat of bitumen at rate of **<< 60 lb/100 sq ft>>**.

B. While flood coat is hot, embed aggregate at rate of **<< 400 lb/100 sq ft; 300 lb/100 sq ft; or ___ lb/100 sq ft>>**.

C. Evenly distribute aggregate and ensure bond with flood coat; extend aggregate to bottom edge of cant strips.

3.06 CLEANING

A. Remove bituminous markings from finished surfaces.

B. In areas where finished surfaces are soiled by bitumen or other source of soiling caused by work of this section, consult manufacturer of surfaces for cleaning advice and comply with their**<< documented; None - N/A; or _____>>** instructions.

C. Repair or replace defaced or damaged finishes caused by work of this section.

3.07 PROTECTION

A. Protect installed roofing and flashings from construction operations.

B. Where traffic must continue over finished roof membrane, protect surfaces using durable materials.

END OF SECTION 075100

DRAFT

SECTION 075423
TPO MEMBRANE ROOFING

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures.

B. ASTM C177 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus.

C. ASTM C552 - Standard Specification for Cellular Glass Thermal Insulation.

D. ASTM C1177/C1177M - Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing.

E. ASTM C1289 - Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board.

F. ASTM D6878/D6878M - Standard Specification for Thermoplastic Polyolefin-Based Sheet Roofing.

G. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

H. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials.

I. ASTM E1980 - Standard Practice for Calculating Solar Reflectance Index of Horizontal and Low-Sloped Opaque Surfaces.

J. ASTM E2178 - Standard Test Method for Determining Air Leakage Rate and Calculation of Air Permeance of Building Materials.

K. FM (AG) - FM Approval Guide.

L. NRCA (RM) - The NRCA Roofing Manual.

M. NRCA (WM) - The NRCA Waterproofing Manual.

N. UL (FRD) - Fire Resistance Directory.

DRAFT

1.02 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene at the Project site on **<< <u>one week</u>; or _____>>** before starting work of this section.

1. Review preparation and installation procedures and coordinating and scheduling required with related work.

1.03 SUBMITTALS

A. Product Data: Provide data indicating membrane materials, **<< <u>flashing materials</u>; <u>insulation</u>; <u>vapor retarder</u>; <u>surfacing</u>; <u>fasteners</u>; and _____>>**.

B. Shop Drawings: Submit drawings that indicate **<< <u>joint or termination detail conditions</u>; <u>conditions of interface with other materials</u>; setting plan for tapered insulation; mechanical fastener layout; paver layout; and _____>>**.

1. Include details of tapered insulation and crickets.
2. Include edge conditions showing details of roofing assembly connection to wall air barrier material to maintain a continuous air barrier system.

C. Sustainable Design Submittals: Refer to Division 1 Section "Sustainable Design Requirements."

D. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.
   1. Submit in the form of manufacturer's assembly letter, indicating each component of the roofing assembly as specified, and that assembly meets performance requirements and manufacturer's warranty conditions.

E. Manufacturer's Field Reports: Indicate **<< procedures followed; ambient temperatures; humidity; wind velocity during application; supplementary instructions given; and _____>>**.

F. Manufacturer's qualification statement.

G. Installer's qualification statement.

H. Warranty Documentation:
   1. Submit manufacturer warranty and ensure that forms have been completed in **<<Owner>>**'s name and registered with manufacturer.
   2. Submit installer's written verification that installation complies with warranty conditions for waterproof membrane.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacture of products specified, with UL-listed roof assemblies for roof systems indicated.

B. Installer Qualifications: Company specializing in installation of roof systems indicated, and approved / certified by roofing manufacturer to install products specified.

C. Insulation Manufacturer Qualifications: Approved by roof membrane manufacturer, and approved and labeled under third party quality program as required by applicable building code.
   1. Insulation Labeling: All foam insulation shall bear the label of testing/inspection agency, and shall include manufacturer identification, product identification, performance characteristics, and other information as necessary to verify code compliance for intended end use.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's original containers, dry and undamaged, with seals and labels intact, unless otherwise indicated.

B. Store materials in weather protected environment, clear of ground and moisture.

C. Ensure storage and staging of materials does not exceed static and dynamic load-bearing capacities of roof decking.

D. Protect foam insulation from direct exposure to sunlight.

1.06 FIELD CONDITIONS

A. Do not install roofing materials during unsuitable weather, or when unsuitable weather is expected. Proceed only when field conditions are in accordance with roofing manufacturer's installation and warranty requirements.

B. Do not expose materials vulnerable to water or sun damagein quantities greater than can be weatherproofed the same day.

C. Schedule applications so that no partially completed sections of roof are left exposed at end of workday.

1.07 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

DRAFT

B. Special Warranty - Manufacturer: Manufacturer's warranty form, customized for project-specific conditions.
   1. Manufacturer's warranty shall be a "total system" or "edge-to-edge" warranty; no dollar limit ("NDL").
   2. Include all components of roofing system including, but not limited to, roofing membrane, roof insulation, adhesives and fasteners, flashings, edge metals and copings, **<< substrate board; vapor retarder/air barrier; cover board; roof insulation; roof paver system; and walkway pads>>**.
   3. Manufacturer's Total System Warranty Period: 20 years, from date of Substantial Completion.

C. Special Warranty - Installer: Installer shall sign and submit per warranty form attached at end of this section.
   1. Installer's warranty shall cover all components of roofing system, matching manufacturer's warranty above.
   2. Installer's Warranty Period: 2 years, from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Thermoplastic Polyolefin (TPO) Membrane Roofing Materials:
   1. Carlisle Roofing Systems, Inc.
   2. Elevate.
   3. GAF.
   4. Johns Manville.

2.02 ROOFING

A. Thermoplastic Membrane Roofing: One ply membrane, **<< mechanically fastened; fully adhered; spot adhered; or _____>><< , over insulation; , over vapor retarder and insulation; None - N/A; or , over cover board, insulation, vapor retarder/air barrier, substrate board, and metal roof decking>>**.

B. Roofing Assembly Performance Requirements:
   1. General: Installed roofing assembly and all associated components shall remain secure and watertight and shall withstand weather exposure, wind uplift pressures specified, and thermal movements. Roofing manufacturer shall certify that all roofing assembly components are compatible with each other and with adjacent materials for applications indicated.
   2. Solar Reflectance Index (SRI): Minimum of 64 based on three-year aged value; if three-year aged data is not available, minimum of 82 initial value.
      a. Calculate SRI in accordance with **<<ASTM E1980>>**.
      b. A field applied coating may not be used to achieve specified SRI.
   3. Roof Covering External Fire Resistance Classification: **<< ITS (DIR); UL (DIR); UL (FRD); or _____>>** Class A.
   4. Assembly Resistance to Internal Fire: Manufacturer's assembly shall be tested to and satisfactorily pass NFPA 276 or UL 1256.
   5. Wind / Uplift Design: Membrane roofing system shall be identical to system that has been successfully tested by a qualified testing and inspecting agency to resist uplift pressures calculated according to **<<ASCE 7>>** as established by applicable building code and loading indicated.

DRAFT

a. Corner, Perimeter, Field-of-Roof Uplift Pressures: Per applicable building code and values indicated on Structural Drawings.
b. Static Uplift: In addition to uplift requirements above, system shall be tested for static uplift per FM 4474, UL 580, or UL 1897.

6. Assembly Thermal Resistance (R-Value): Provide roof assembly with a minimum assembly R-value of R-30 in accordance with applicable IECC requirement for commercial roofing.
7. Accelerated Weathering: 2,000 hours minimum exposure, when tested in accordance with ASTM G152, ASTM G154, or ASTM G155.
8. Ponding Water: Ponding water shall not remain on the roof 24 hours after a rainfall event.

2.03 MEMBRANE ROOFING AND ASSOCIATED MATERIALS

A. Membrane Roofing Materials:
1. TPO: Thermoplastic polyolefin (TPO) complying with **<<ASTM D6878/D6878M>>**, sheet contains reinforcing fabrics or scrims.
a. Thickness: 80 mil, 0.080-inch, minimum.
1) Where roof membrane is applied to vertical surfaces (roof-to-wall, parapet, and similar applications), 60 mil thickness is acceptable.
2. Sheet Width: **<< Factory fabricated into widest possible sheets.; _____; or None - N/A>>**
3. Color: White.

B. Seaming Materials: **<< As recommended by membrane manufacturer; or _____>>**.

C. Flexible Flashing Material: **<< Same material as membrane; Material recommended by membrane manufacturer; or _____>>**.

2.04 DECK SUBSTRATE BOARD

A. Deck Substrate Board: Glass-mat faced gypsum panels complying with **<<ASTM C1177/C1177M>>**.
1. Thickness: 1/2-inch, fire-resistant.
2. Products:
a. CertainTeed Corporation; GlasRoc Sheathing.
b. Georgia-Pacific; DensDeck Prime.
c. National Gypsum Company; DEXcell Glass Mat Roof Board.
d. USG Corporation; Securock Ultralight Glass-Mat Roof Board.

2.05 VAPOR RETARDER / AIR BARRIER

A. Vapor Retarder / Air Barrier Sheet, Self-Adhered: Composite sheet fabricated of rubberized asphalt factory laminated to polyethylene/polypropylene film with release liner. Product shall be approved by primary roofing manufacturer, and comply with the following:
1. Total Thickness: 30 mils, minimum.
2. Air Permeance: Less than 0.004 cfm/sq.ft. when tested per **<<ASTM E2178>>**.
3. Vapor Permeance: Less than 0.1 perm when tested per **<<ASTM E96/E96M>>**.
4. Products:
a. Carlisle; VapAir Seal 725 TR.
b. Elevate; V-Force Vapor Barrier.
c. GAF; SA Vapor Retarder XL.

DRAFT

d. Johns Manville; JM Vapor Barrier SA.

2.06 COVER BOARDS

A. Cover Board: High compressive strength polyisocyanurate (ISO) board insulation complying with **<<ASTM C1289>>**, and the following characteristics:

1. Classifications:
   a. **<< Type II - Faced with either cellulosic facers or glass fiber mat facers on both major surfaces of the core foam; or Type ___ - _____>>**.
      1) **<< Class 4 - Faced with coated or uncoated glass fiber mat facers on both major surfaces of the core foam. This product is used at a maximum thickness of 1/2 inch (12.7 mm); or Class ___ - _____>>**.
         (a) Compressive Strength: 80 psi, minimum.
2. Board Size: 48 by 48 inches, maximum.
3. Board Thickness: 1/2-inch.
4. Thermal Resistance: **<< R-value>>** of 2.5, minimum, at **<< 1/2 inch>>** thick and **<< 75 degrees F>>** mean temperature.
5. Products:
   a. Carlisle; SecurShield HD.
   b. Elevate; Isogard HD Cover Board.
   c. GAF; EnergyGuard HD.
   d. Johns Manville; ProtectoR.

2.07 INSULATION

A. Surface Burning Characteristics: Foam plastic insulation shall have a maximum flame spread index of 75, and maximum smoke developed index of 450, when tested in accordance with**<<ASTM E84>>** at maximum thickness intended for use.

B. Polyisocyanurate (ISO) Board Insulation: Rigid cellular foam, complying with **<<ASTM C1289>>**.

1. Classifications:
   a. Type II:
      1) **<< Class 1 - Faced with glass fiber reinforced cellulosic felt facers on both major surfaces of core foam; Class 2 - Faced with coated polymer-bonded glass fiber mat facers on both major surfaces of core foam; Class 3 - Faced with uncoated polymer-bonded glass fiber mat facers on both major surfaces of core foam; or Class 4 - Faced with coated or uncoated polymer-bonded glass fiber mat facers on both major surfaces of core foam; maximum thickness of 1/2 inch (12.7 mm)>>**.
      2) Compressive Strength: **<< Grade 2 - 20 psi; Grade 3 - 25 psi; or _____>>**, minimum.
2. Tapered Board: Slope as indicated, but no lower than 1/4 inch per foot; minimum thickness 1/2 inch; fabricate of fewest layers possible.
3. Preformed Shapes: Provide saddles crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated, but no less than 1/4 inch per 12 inches, and no less than 1/8 inch per 12 inches in valleys.

2.08 ACCESSORIES

DRAFT

A. Stack Boots: Prefabricated flexible boot and collar for pipe stacks through membrane; **<< same material as membrane; elastomeric material compatible with membrane; or _____>>**.

B. Sheathing Joint Tape: **<< Paper; Heat resistant; or _____>>** type, self adhering.

C. Insulation Fasteners: Appropriate for purpose intended**<< and approved by roofing manufacturer; and approved by Factory Mutual and roofing manufacturer; None - N/A; or _____>>**.

1. Length as required for thickness of insulation material and penetration of deck substrate**<< , with metal washers; None - N/A; or _____>>**.

D. Membrane Adhesive: As recommended by membrane manufacturer.

E. Insulation Adhesive: As recommended by insulation manufacturer.

F. Sealants: As recommended by membrane manufacturer.

G. Walkway Pads: Suitable for maintenance traffic, contrasting color or otherwise visually distinctive from roof membrane.

1. Composition: **<< Asphaltic with mineral granule surface; Rubber with mineral granule surface; Porous rubber with natural surface; Roofing membrane manufacturer's standard; or _____>>**.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that surfaces and site conditions are ready to receive work.

B. Verify deck is supported and secure.

C. Verify deck is clean and smooth, flat, free of depressions, waves, or projections, properly sloped and suitable for installation of roof system.

D. Verify deck surfaces are dry and free of snow or ice.

E. Verify that roof openings, curbs, and penetrations through roof are solidly set, and other accessories are in place.

3.02 PREPARATION - METAL DECK

A. Install deck sheathing on metal deck:

1. Lay with long side at right angle to flutes; stagger end joints; provide support at ends.
2. Cut sheathing cleanly and accurately at roof breaks and protrusions to provide smooth surface.
3. Tape joints.
4. Mechanically fasten substrate board to roof deck, in accordance with roofing manufacturer's instructions and per the following:
   a. At locations where metal roof deck will be exposed from below in the finished work, carefully coordinate fastener attachment such that fasteners do not penetrate the bottom flanges of the metal deck. Remove fasteners that penetrate the bottom flanges and replace with properly located fasteners, and restore metal deck to Owner's satisfaction.

3.03 INSTALLATION, GENERAL

A. Perform work in accordance with **<< manufacturer's instructions; NRCA (RM); NRCA (WM); and _____>>** applicable requirements.

DRAFT

B. Do not apply roofing membrane during cold or wet weather conditions.

C. Do not apply roofing membrane when ambient temperature is outside the temperature range recommended by manufacturer.

D. Do not apply roofing membrane to damp or frozen deck surface or when precipitation is expected or occurring.

E. Do not expose materials vulnerable to water**<< or sun damage; _____; or None - N/A>>** in quantities greater than can be weatherproofed the same day.

F. Coordinate this work with installation of associated counterflashings installed by other sections as the work of this section proceeds.

3.04 INSTALLATION - AIR BARRIER/VAPOR RETARDER AND INSULATION, UNDER MEMBRANE

A. Install vapor retarder over substrate surface in accordance with manufacturer's instructions.
   1. Extend vapor retarder under blocking to deck edge.
   2. Install flexible flashing from vapor retarder to air seal material of wall construction, lap and seal to provide continuity of the air barrier plane. Coordinate with installer of wall air barrier assembly for transition membrane information and tie in.

B. Ensure vapor retarder is clean and dry, continuous, and ready for application of insulation.

C. Attachment of Insulation:
   1. Mechanically fasten first layer of insulation to deck in accordance with roofing manufacturer's instructions.
      a. At locations where metal roof deck will be exposed from below in the finished work, carefully coordinate fastener attachment such that fasteners do not penetrate the bottom flanges of the metal deck. Remove fasteners that penetrate the bottom flanges and replace with properly located fasteners, and restore metal deck to Owner's satisfaction.
   2. Embed subsequent layer(s) of insulation into either ribbons or full bed of adhesive as required to comply with performance or warranty requirements, and in accordance with roofing and insulation manufacturers' instructions.
   3. Install a minimum of two layers of insulation, with a minimum total thickness of 5 inches, to achieve a cumulative Long Term Thermal Resistance (LTTR) value of 28.5 per ASTM C 1289, followed by a R-2.5 cover board for total system LTTR of R-31.

D. Lay subsequent layers of insulation with joints staggered minimum 6 inches from joints of preceding layer.

E. Place tapered insulation to the required slope pattern in accordance with manufacturer's instructions.

F. On metal deck, place boards parallel to flutes with insulation board edges bearing on deck flutes. ******Keep this paragraph if no substrate/sheathing board******

G. Lay boards with edges in moderate contact without forcing. Cut insulation to fit neatly to perimeter blocking and around penetrations through roof.

H. At roof drains, use **<< factory-tapered boards; boards cut to slope; or _____>>** to slope down to roof drains over a distance of **<< 18 inches; 24 inches; or ___ inches>>**.

I. Do not install more insulation than can be covered with membrane in same day.

J. Cover Boards: Secure cover boards in accordance with roofing manufacturer's instructions with manufacturer's insulation adhesive. Install cover boards with joints staggered minimum 6 inches from joints of preceding insulation layer.

DRAFT

3.05 INSTALLATION - MEMBRANE

A. Roll out membrane, free from wrinkles or tears. Place sheet into place without stretching.

B. Shingle joints on sloped substrate in direction of drainage.

C. Fully Adhered Application: Apply adhesive to substrate per manufacturer's instruction. Fully embed membrane in adhesive except in areas directly over or within **<< 3 inches; or ___ inches>>** of expansion joints. Fully adhere one roll before proceeding to adjacent rolls.

D. Overlap edges and ends and seal seams by heat welding, minimum **<< 3 inches; or ___ inches>>**. Seal permanently waterproof.

E. At intersections with vertical surfaces other than parapets:
   1. Extend membrane over cant strips and up a minimum of 8 inches onto vertical surfaces and secure with a termination bar.
   2. Coordinate with Division 7 "Sheet Metal Flashing and Trim" for counterflashing.

F. Around roof penetrations, seal flanges and flashings with flexible flashing.

G. Install roofing expansion joints where indicate**<< where indicated; None - N/A; or _____>>**. Make joints watertight.

H. Coordinate installation of roof **<< drains; sumps; and _____>>** and related flashings.

I. Install walkway pads in layout indicated. If not indicated, provide from roof access hatch/door to each major piece of rooftop equipment and fully around perimeter of equipment. **<< Space pad joints to permit drainage.; _____ .; or None - N/A>>**

3.06 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>** for additional requirements.

B. Provide on-site inspection by roofing manufacturer's technical representative **<< at least three times (deck/substrate examination, in-progress, and warranty inspection); before beginning installation (deck/substrate examination), weekly, at minimum, during installation, and post-installation (warranty inspection); or daily>>** during installation of this work.

C. Repair or replace roofing components where inspection determines they are defective.
   1. Repair or replace roofing system where ponding occurs in excess of specified requirement.

3.07 CLEANING

A. See Section **<< 017000 - Execution and Closeout Requirements>>** for additional requirements.

B. In areas where finished surfaces are soiled by work of this section, consult manufacturer of surfaces for cleaning advice and comply with their**<< documented; _____; or None - N/A>>** instructions.

C. Repair or replace defaced or damaged finishes caused by work of this section.

D. Provide a final cleaning of the roof membrane immediately prior to Substantial Completion to remove dirt, clay and other soiling.

3.08 PROTECTION

A. Protect installed roofing and flashings from construction operations.

B. Where traffic must continue over finished roof membrane, protect surfaces using durable materials.

DRAFT

DRAFT

ROOFING INSTALLER'S WARRANTY

WHEREAS _____

of (Address) _____

herein called "Contractor," has provided roofing and associated "work" for the following project:

Owner: _____

Address: _____

Area of Work: _____ Date of Acceptance: _____

Warranty Period: _____ Date of Expiration: _____

Roofing Contractor: _____

Address: _____

1.

AND WHEREAS Contractor has contracted directly with the Owner to warrant said work against leaks and faulty or defective materials and workmanship for designated Warranty Period.

NOW THEREFORE the (General) Contractor shall maintain the entire roof system in a completely watertight condition at no cost to the Owner for two (2) years from date of final acceptance; except this watertight guarantee shall not be enforced when the Contractor can prove water damage was caused by the Owner.

This guarantee covers the roofing membrane and flashing, metal flashing, parapet copings and edge metals, and properly detailed penetrations of the roofing membrane for such things as stacks, curbs, and expansion joints which exist when the work is performed

The Roofing Contractor shall guarantee its materials and workmanship associated with the roofing, flashings, and sheet metal work incidental to the work required under the roofing subcontract, against defect due to faulty materials or workmanship for a period of two (2) years from the date of completion of such work. It is understood and agreed by all parties hereto that the responsibility of the roofing contractor under this guarantee form or any contract document shall be limited to the limited guarantee herein expressed by said roofing contractor.

The undersigned named Owner agrees, from the date of acceptance of the project, to maintain the roof in accordance with the manufacturer’s written requirements and agrees to avoid damage to the roof surface by any parties under his control working or walking on the roof. The Owner recognizes his responsibility to inspect the roof semi-annually.

IN WITNESS THEREOF, this instrument has been duly executed this

_____ day of _____, 20_____ .

END OF SECTION 075423

SECTION 075563
VEGETATED PROTECTED MEMBRANE ROOFING

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM E2397/E2397M - Standard Practice for Determination of Dead Loads and Live Loads Associated with Vegetative (Green) Roof Systems.

B. ASTM E2398/E2398M - Standard Test Method for Water Capture and Media Retention of Geocomposite Drain Layers for Vegetative (Green) Roof Systems.

C. ASTM E2399/E2399M - Standard Test Method for Maximum Media Density for Dead Load Analysis of Vegetative (Green) Roof Systems.

D. ASTM E2777 - Standard Guide for Vegetative (Green) Roof Systems.

E. CSA A123.24 - Standard Test Method for Wind Resistance of Vegetated Roof Assembly.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Conduct a preinstallation meeting one week prior to start of this work; attendance required by each affected installer.

1. Review installation procedures and coordination required with related work.

1.03 SUBMITTALS

A. Product Data: Provide product data on each component of vegetated roof.

B. Shop Drawings: Indicate size and outline of roof, location and type of materials, and details of accessories and edge treatments.

C. Manufacturer Certification: Submit written approval by membrane manufacturer of the proposed vegetated roof assembly and its components.

D. Preinstallation Field Report: Provide documentation that membrane installation has been approved by manufacturer and has passed specified testing.

E. Installer's Qualification Statement.

F. Project Record Documents: Record actual locations of planted areas, hardscape features, existing concealed drains, and irrigation system (if provided).

G. Maintenance Data: Submit manufacturer requirements for maintenance of materials and plants.

H. Warranty Documentation:

1. Submit manufacturer warranty and ensure that forms have been completed in **<<Owner>>**'s name and registered with manufacturer.
2. Submit installer's documentation that installation complies with warranty conditions for waterproof membrane.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: Installer shall be a company specifically certified by the vegetated roof manufacturer to provide installation, maintenance, and warranty services for assembly specified herein.

B. Single Source Responsibility: Provide and install products from single source.

DRAFT

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to project site in original, unopened containers or wrappings.

B. Store materials under cover and elevated above grade.

C. Store roll material lying down and on pallets fully protected from moisture.

D. Ensure storage and staging of materials does not exceed static and dynamic load-bearing capacities of roof assembly.

E. Remove damaged materials from job site, and replace damaged materials.

1.06 FIELD CONDITIONS

A. Ambient Conditions: Install vegetated roofing in accordance with local climate hardiness zones, unless otherwise indicated, or recommended in writing by manufacturer.

1.07 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Manufacturer Warranty: Provide a 50-year manufacturer warranty on components of module assembly (trays and accessories).

C. Special Warranty on Plant Growth: Provide a 2-year warranty on plantings and plant medium, covering unsatisfactory growth and plant death. Warranty shall not cover abuse or neglect by Owner or end users. Coordinate with plant maintenance contract; Installer/plant grower/supplier shall provide seasonal maintenance for the duration of the warranty period.

D. Overburden Warranty: Vegetated Roof Manufacturer shall provide a 20 year overburden removal warranty covering removal and reinstallation of vegetated roof components in order to facilitate roofing repairs.

PART 2 PRODUCTS

2.01 VEGETATED ROOF ASSEMBLY USING MODULAR ROOF TRAYS

A. Vegetated Roofing Assembly: Modular trays and protective layers installed over roof waterproofing system.

1. Structural Design Load: Provide vegetated roof assembly with superimposed dead load not greater than **<< load as indicated on Drawings; ___ lb/sq ft; or _____>>**; base calculations on the saturated weight of vegetated roof assembly components and maximum media density at saturation of growing media following test method **<<ASTM E2397/E2397M>>**.
2. Water Retention Capacity: Provide vegetated roof assembly with a water retention capacity of approximately 65-70% of water, value includes combined water retention capacities of growing media and drainage layers; growing media water retention is calculated using a difference between dry and saturated weight by following test method **<<ASTM E2399/E2399M>>**; drainage panel water retention capacity is calculated using test method **<<ASTM E2398/E2398M>>**.
3. Wind Resistance: Provide vegetated roof assembly that complies with dynamic wind uplift and wind flow resistance requirements of test method **<<CSA A123.24>>**.
4. Number of protective materials may be reduced provided equivalent protection and functionality is achieved, and approved by roof waterproofing system manufacturer.

B. Trays: Prevegetated, modular roof trays with manufacturer's standard growing media and other necessary components.

DRAFT

1. Plants: Drought-resistant mix of selected plantings suitable for placement in trays with growing media. Plant grower shall select plant types and species that are native species or are specifically suited for climate at project location.
2. Size: Provide manufacturer's standard size trays.
3. Extensive System - Depth and Weight: 4.25 inches nominal soil depth, and weighing less than 30 lb/sq ft fully saturated.
    a. Extensive vegetated roof systems feature plants that can be sustained in shallow media layers with **<< 6 inches>>** or less of growing media, and typically utilize non-woody, drought-tolerant herbs, sedums and grasses.
4. Manufacturers:
    a. LiveRoof.
    b. Bioroof Systems, Inc.
    c. GreenGrid.
    d. Sika Roofing & Waterproofing.
5. Protection Layer: Provide membrane roofing manufacturer's recommended fabric or sacrificial membrane for location between trays and membrane roofing system.

2.02 ROOF PAVERS SYSTEMS

A. Pavers and Pedestals: Coordinate with Division 7 Section "Roof Pavers."

2.03 ACCESSORIES

A. Drain Inspection Box: Where roof-mounted drains are indicated, provide accessory product allowing access to drain; formed from stainless steel or powder-coated aluminum sheet with lockable lid, bottom flange, and perforated at the drainage course level
    1. Size: Not less than 12 inches square, and matching depth of vegetated roof assembly.

B. Edge Treatment: Provide dividers and edge elements to separate vegetated portion of roof from other areas as indicated on drawings.
    1. Aluminum: Natural anodized; manufacturer's standard profiles and sizes.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that roofing membrane work is complete.

B. Verify that surface of roofing membrane is ready to accept vegetated roofing components.

C. Verify that roof slope of vegetated roofing substrate is at least 2 percent.

D. Inspections and Testing Prior to Installation of Vegetated Roof Components:
    1. Verify that installed roof waterproofing system has been inspected by manufacturer's representative.
    2. Verify that installed roof waterproofing system has been tested by controlled flooding, electronic testing or other leak detection method approved by manufacturer.
    3. Provide documentation that roof waterproofing system installation has been approved by manufacturer and passed specified testing.

3.02 PREPARATION

A. Clean roof waterproofing system surfaces of ponded water, snow, ice, dirt, debris, and foreign materials.

DRAFT

3.03 INSTALLATION, GENERAL

A. Dry surfaces thoroughly before vegetated roofing work begins.

B. Protect roof waterproofing system as necessary to prevent damage during installation of vegetated roofing system.

C. Provide temporary ballast in partially completed sections of vegetated roofing system to protect overburden from wind effects during installation; ensure ballast has no sharp edges, protrusions, chemical contaminants, or other compositions that could damage roof waterproofing system.

3.04 INSTALLATION - MODULAR ROOF TRAYS

A. Unroll protection fabric directly over membrane and provide minimum 2 inches side and end overlap.

B. Extend fabric up vertical surfaces, such as walls, curbs, and parapets, to height at top of growing media layer.

C. Under windy conditions, provide temporary ballast.

D. Install modular roof trays as recommended by tray manufacturer.

1. Place trays on protection layer as indicated in approved shop drawings, do not drag trays into position, and ensure that trays with interlocking or overlapping edges are fully engaged with adjacent trays.
2. After installation of water trays, comply with manufacturer standards for amount of water, rate of application and degree of saturation, and do not wash growing media out of trays by excessive watering.
3. Do not install trays over ponded water, saturated roof surfaces or under freezing conditions.
4. Fasten trays to each other in accordance with manufacturer's published or written recommendations, using approved fasteners at the manufacturer's on center spacing indicated.

E. Install vegetated roof accessories and apply edge treatment as indicated in approved shop drawings.

DRAFT

3.05 FIELD QUALITY CONTROL

A. Roof Membrane Manufacturer's Inspection: Coordinate with Division 7 roof membrane manufacturer to provide inspection at the start of installation to ensure overburden requirements are met; including proper installation of protection fabric layer.

3.06 CLEANING

A. See Section **<< 017000 - Execution and Closeout Requirements>>** for additional requirements.

B. In areas where finished surfaces are soiled by work of this section, consult manufacturers of surfaces for cleaning advice and comply with their**<< documented; _____; or None - N/A>>** instructions.

C. Repair or replace defaced or damaged finishes caused by work of this section.

3.07 PROTECTION

A. Protect installed vegetated roof system from construction traffic and subsequent construction operations.

B. Provide substantial barricades or other barriers where necessary to prevent traffic across vegetation.

3.08 MAINTENANCE

A. Initial Maintenance: Maintain plants within vegetated roofing system for two years commencing on Date of Substantial Completion.

B. Provide a separate maintenance contract proposal for extended maintenance service beyond the two-year initial period.

END OF SECTION 075563

DRAFT

SECTION 076200
SHEET METAL FLASHING AND TRIM

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix).

B. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

C. ASTM A666/A666M - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.

D. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

E. ASTM B370 - Standard Specification for Copper Sheet and Strip for Building Construction.

F. ASTM C920 - Standard Specification for Elastomeric Joint Sealants.

G. ASTM D4586/D4586M - Standard Specification for Asphalt Roof Cement.

H. SMACNA (ASMM) - Architectural Sheet Metal Manual.

1.02 SUBMITTALS

A. Product Data: Manufacturer's data sheets on each product to be used including technical material properties.
   1. Include installation instructions and manufacturer's recommendations for installation and maintenance.
   2. Include ANSI/SPRI/FM 4435/ES-1 wind pull-off performance data for systems that will be used in edge metal conditions.

B. Shop Drawings: Indicate material profile, jointing pattern, jointing details, fastening methods, flashings, terminations, and installation details.

C. Selection Samples: Provide manufacturer's color charts for each product and material requiring color selection.

D. Verification Samples: Submit physical samples, manufacturer's standard size, for each selected color.

1.03 QUALITY ASSURANCE

A. Perform work in accordance with **<< SMACNA (ASMM); CDA A4050; and _____>>** requirements**<< and standard details; _____; or None - N/A>>**, except as otherwise indicated.

B. Fabricator and Installer Qualifications: Company specializing in sheet metal work, with experience in projects of size and scope similar to this Project.

1.04 MOCK-UP

A. See Section **<< 014000 - Quality Requirements>>** for additional requirements.

B. Integrated Exterior Mockup: Attend preinstallation conference and provide metal flashing/trim work for integrated exterior mockup as indicated on Drawings and as specified in Division 1 Section "Quality Requirements."

DRAFT

1.05 DELIVERY, STORAGE, AND HANDLING

A. Stack material to prevent twisting, bending, and abrasion, and to provide ventilation. Slope metal sheets to ensure drainage.

B. Prevent contact with materials that could cause discoloration or staining.

PART 2 PRODUCTS

2.01 SHEET MATERIALS

A. Pre-Finished Galvanized Steel: **<<ASTM A653/A653M>>**, with **<< G90/Z275; or ____>>** zinc coating; minimum 24 gauge (0.028-inch) thick base metal, shop pre-coated with **<< modified silicone; PVDF; or _____>>** coating.

1. Polyvinylidene Fluoride (PVDF) Coating: Superior performing organic powder coating, **<<AAMA 2605>>**; multiple coat, thermally cured fluoropolymer finish system.
2. Color: To be selected by **<<Architect>>** from Manufacturer's **<< full; or standard>>** range.

B. Pre-Finished Aluminum: **<<ASTM B209/B209M>>**; **<< 18 gauge, 0.040 inch; 20 gauge, 0.032 inch; or ___ gauge, ___ inch>>** thick; **<< plain; embossed; or _____>>** finish shop pre-coated with **<< silicone modified polyester; acrylic polyester; fluoropolymer; PVDF; FEVE; or _____>>** coating.

1. Polyvinylidene Fluoride (PVDF) Coating: Superior performing organic powder coating, **<<AAMA 2605>>**; pretreated metal with **<< two-coat system including primer and color coat; three-coat system including primer, color coat, and clear top coat; or _____>>** with at least 70 percent PVDF coating.
2. Color: To be selected by **<<Architect>>** from Manufacturer's **<< full; or standard>>** range.

C. Stainless Steel: **<<ASTM A666/A666M>>**, Type **<< 304; or ____>>** alloy, soft temper, 24 gauge (0.025-inch)**<< 28 gauge, 0.0156 inch; 26 gauge, ___ inch; or None - N/A>>** thick; **<< smooth; or _____ patterned>><< No. 4 - Brushed; or No. 2D>>** finish.

D. Copper: **<<ASTM B370>>**, cold rolled **<< 16 oz/sq ft, 24 gauge, 0.0216 inch; 20 oz/sq ft, 22 gauge, 0.027 inch; or ___ oz/sq ft, ___ gauge, ___ inch>>** thick; **<< natural; lacquered; or _____>>** finish.

2.02 FABRICATION

A. Form sections true to shape, accurate in size, square, and free from distortion or defects.

B. Form pieces **<< in longest possible lengths; in single length sheets; or _____>>**.

C. Hem exposed edges on underside **<< 1/2 inch; or ____ inch>>**; miter and seam corners.

D. Form material with **<< standing; batten; flat lock; or _____>>** seams, except where otherwise indicated; at moving joints, use sealed lapped, bayonet-type or interlocking hooked seams.

E. Tin edges of copper sheet to be soldered; solder shop formed metal joints, and after soldering, remove flux, wipe and wash solder joints clean; provide weathertight joints.

F. Fabricate corners from one piece with minimum **<< 18-inch; or ____-inch>>** long legs; **<< seam; solder; or _____>>** for rigidity, seal with sealant.

1. Hem exterior corners of flashings and drip edges, in a manner that eliminates sharp, exposed cut metal edges, at locations below 6'-0" above grade (locations within reach range of building occupants).

DRAFT

G. Fabricate vertical faces with bottom edge formed outward **<< 1/4 inch; or ____ inch>>** and hemmed to form drip.

2.03 GUTTERS AND DOWNSPOUTS

A. General: Provide minimum 0.040-inch aluminum extrusions for gutters and minimum **<< 0.032-inch; or 0.080-inch>>** aluminum for downspouts. Finish all parts of gutter/downspout system a single color to match, including brackets, elbows and bends, and exposed fastener heads.

B. Gutters: **<< SMACNA (ASMM) Rectangular profile; SMACNA (ASMM) Square profile; SMACNA (ASMM) Semi-circular profile; ____ Rectangular profile; ____ Square profile; ____ Semi-circular profile; Profile as indicated; or SMACNA Ogee profile (Style K)>>**; unless otherwise indicated.

C. Downspouts: **<< Rectangular profile; Square profile; Round profile; _____ profile; or Profile as indicated>>**; unless otherwise indicated.

D. Gutter and Downspout Sizing: Unless otherwise indicated, provide 4-inch deep by 5-inch wide downspouts, with gutter depth to accept 4-inch deep downspout.

E. Conductor Heads: Fabricate in accordance with **<<SMACNA (ASMM)>>** standards, Figure 1-25F box-type conductor head, or standard design of fabricator where approved by Architect. Conductor heads shall be fabricated of minimum 0.032-inch aluminum. Finish to match gutter and downspout finish.

F. Scuppers: Fabricate scuppers in accordance with **<<SMACNA (ASMM)>>** standards; scupper shall outlet directly into conductor head per Figure 1-27A. Fabricate of minimum 16 oz copper or 26 gauge (0.01875 inch) stainless steel where scupper penetrates masonry. Provide manufacturer's recommended separation barrier between dissimilar metals of scupper and conductor head fabrications.

G. Accessories: Profiled to suit gutters and downspouts. Provide additional elbows, bends, extended bracket depths, and other accessories as required for downspouts to avoid conflict with cladding profiles, masonry or precast extrusions, and other surface ornamentation on wall.

1. Anchorage Devices: **<< In accordance with SMACNA (ASMM) requirements; Type recommended by fabricator; or _____>>**.
2. Gutter Supports: **<< Brackets; Straps; Spikes and ferrules; or _____>>** and spacer bars (SMACNA figure 1-17), spaced no more than 24 inches on center.
3. Downspout Supports: **<< Brackets; Straps; or _____>>**; spaced no more than 60 inches on center.
4. Downspout Strainers: Provide ball-type mesh strainer at each downspout; pre-fabricated, non-corrosive construction compatible with gutter/downspout material.

H. Splash Blocks: Precast concrete type, of **<< size; sizes; or _____>>** and profiles indicated; minimum **<< 3000 psi; or _____ psi>>** at 28 days, with minimum 5 percent air entrainment. Lightweight "patio" blocks are not acceptable.

1. Provide a splash block at all conditions where downspout is not indicated to connect to downspout boot, and at conditions where downspout empties onto lower roof.

I. Downspout **<< Boots; Shoes; or _____>>**: **<< Steel; Cast iron; Plastic; or _____>>**, inlet sized to match downspout; outlet sized for underground drainage piping. Coordinate with Plumbing Drawings and Division 22.

J. Seal metal joints.

DRAFT

2.04 ACCESSORIES

A. Fasteners: **<< Galvanized steel; Aluminum; Stainless steel; Copper; Same material and finish as flashing metal; or _____>><< , with soft neoprene washers; , _____; or None - N/A>>**.

B. Primer Type: **<< Zinc chromate; Galvanized iron; Iron oxide linseed oil; or _____>>**.

C. Concealed Sealants: Non-curing butyl sealant.

D. Exposed Sealants: **<<ASTM C920>>**; elastomeric sealant, with minimum movement capability as recommended by manufacturer for substrates to be sealed; **<< black; white; translucent; color to match adjacent material; color as selected by Architect; or _____>>**.

E. Asphalt Roof Cement: **<<ASTM D4586/D4586M>>**, Type I, asbestos-free.

F. Reglets and Counterflashings (Masonry): Embedded type, **<< copper; or stainless steel>>**. Coordinate with Division 4 Section "Unit Masonry."

1. Existing Brick: Saw cut joint in brick joints to uniform 3/4-inch depth. Insert preformed metal receiver/reglet piece to full depth of saw cut and secure it with lead wedges at 12-inches o.c. Place continuous backer rod and elastomeric sealant in cut joint reglet. Insert the separate counterflashing piece into reglet so that bottom of flashing makes permanent spring clamping contact with base flashing.

G. Reglets and Counterflashings (Non-Masonry): **<< Surface mounted; Recessed; or _____>>** two-piece reglet and counterflashing, or one-piece counterflashing, fabricated of pre-finished aluminum or **<< galvanized steel; rigid extruded PVC; or _____>>**.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify roof openings, curbs, pipes, sleeves, ducts, and vents through roof are solidly set, reglets in place, and nailing strips located.

B. Verify roofing termination and base flashings are in place, sealed, and secure.

3.02 PREPARATION

A. Install starter and edge strips, and cleats before starting installation.

B. Install surface mounted reglets and one-piece counterflashings true to lines and levels, and seal tops with sealant.

C. Back paint concealed metal surfaces with protective backing paint to a minimum dry film thickness of **<< 15 mil, 0.015 inch; or ___ mil, ___ inch>>**.

3.03 INSTALLATION

A. Comply with SMACNA installation instructions and drawing details.

B. For reglets installed into masonry veneer, furnish reglets to mason for installation as Division 4 Unit Masonry work progresses.

C. Insert flashings into reglets to form tight fit; secure in place with wedges**<< ; pack remaining spaces with lead wool; ; _____; or None - N/A>>**; seal flashings into reglets with sealant.

D. Apply plastic cement compound between metal flashings and felt flashings.

E. Fit flashings tight in place; make corners square, surfaces true and straight in planes, and lines accurate to profiles.

DRAFT

F. Seal metal joints watertight.

G. Secure gutters and downspouts in place with concealed fasteners.

H. Slope gutters 1/4 inch per 10 feet, minimum.

I. Connect downspouts to **<< downspout boots; downspout shoes; storm sewer system; or _____>>**, and **<< grout; seal; or _____>>** connection watertight.

J. At low roof conditions, and where not indicated to connect to downspout boots, provide a bottom elbow and set splash **<< pans; pads; or blocks>>** under **<< downspouts; roof and canopy drain outlets; roof and canopy overflow outlets; and _____>><< , and set in place with _____; or None - N/A>>**.

END OF SECTION 076200

SECTION 077100
ROOF SPECIALTIES

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix).

B. ANSI/SPRI/FM 4435/ES-1 - Test Standard for Edge Systems Used with Low Slope Roofing Systems.

C. NRCA (RM) - The NRCA Roofing Manual.

D. SMACNA (ASMM) - Architectural Sheet Metal Manual.

1.02 SUBMITTALS

A. Product Data: Provide data on shape of components, materials and finishes, anchor types and locations.

1. Include test data/confirmation that copings and edge metals conform to ANSI/SPRI/FM 4435/ES-1 performance requirements.

B. Shop Drawings: Indicate configuration and dimension of components, adjacent construction, required clearances and tolerances, and other affected work.

C. Samples for Selection: Provide manufacturer's color charts for each product and material requiring color selection.

D. Samples for Verification: Submit physical samples, manufacturer's standard size, for each selected color.

1.03 MOCK-UP ******INCLUDE IF DOING FULL MOCKUP WITH ROOF COMPONENTS******

A. Integrated Exterior Mockup: Attend preinstallation conference and provide roof specialty work for integrated exterior mockup as indicated on Drawings and as specified in Division 1 Section "Quality Requirements."

DRAFT

PART 2 PRODUCTS

2.01 ROOF EDGE METALS

A. Roof Edge Metals, General: Factory fabricated to sizes required; corners ; concealed fasteners.

1. Pull-Off Resistance: Tested in accordance with **<<ANSI/SPRI/FM 4435/ES-1>>** using test methods RE-1 and RE-2 to positive and negative design wind pressure as defined by applicable version of Maryland Building Code.
2. Manufacturers: Provide private-labeled products by one of the roofing manufacturers listed in Division 7 roofing section(s) as required to meet requirements and comply with terms of manufacturer's total system warranty.
3. Factory Fabrication: Edge metals and copings shall be factory pre-fabricated; field-fabricated brake-metal assemblies are not acceptable.

B. Copings (Cavity Walls): Fabricate to minimum 8 foot long sections, but not exceeding 10 feet long; all corners mitered. Seal and solder or weld watertight.

1. Roofing Manufacturer Approval: Primary roofing manufacturer shall provide written approval of coping in writing, including confirmation that the fabricated copings maintain the terms of manufacturer's warranty.
2. Configuration: Provide double-lock standing seam coping profile in accordance with **<<SMACNA (ASMM)>>**, Figure 3-4A.
    a. Provide concealed continuous hold-down cleats at exterior leg. Drill elongated holes for gasketed fasteners on interior leg.
    b. Provide internal splice piece at cleat joints fabricated of same material, thickness, and finish as cap; concealed stainless steel fasteners.
    c. Size copings to allow for cavity ventilation; do not block top of cavity with continuous nailers, and do not seal between coping and front veneer.
3. Pull-Off Resistance: Coping profile shall be tested in accordance with **<<ANSI/SPRI/FM 4435/ES-1>>** using test method RE-3 to positive and negative design wind pressure, as defined by applicable version of Maryland Building Code.
4. Wall Width: As indicated on Drawings.
5. Outside Face Height: 6 inches, unless otherwise indicated.
6. Inside Face Height: 4 inches, unless otherwise indicated.
7. Material: Formed aluminum sheet, 0.050-inch thick, minimum, for wall thickness up to 15 inches. Provide minimum 0.063-inch thick where total wall thickness is over 15 inches.
8. Finish: AAMA 2605, 70 percent polyvinylidene fluoride (PVDF).
    a. Color: To be selected by Owner and Architect from Manufacturer's full range.

C. Drip Edge/Gravel Stop: Factory fabricated to sizes required; all corners mitered; concealed fasteners.
1. Configuration: Concealed hold down cleats; internal splice piece at joints of same material, thickness, and finish as cap; concealed stainless steel fasteners.
    a. Provide drip edge at bottom eave edges where water will drain off roof. Unless otherwise detailed, provide gravel stop at sides and top edge of sloped roofs not subject to water runoff.
2. Pull-Off Resistance: Tested in accordance with **<<ANSI/SPRI/FM 4435/ES-1>>** using test method RE-2 to positive and negative design wind pressure as defined by applicable version of Maryland Building Code.
3. Wall Width: As indicated on Drawings.
4. Outside Face Height: 6 inches, unless otherwise indicated.
5. Material: Formed aluminum sheet, 0.040-inch thick, minimum.
6. Finish: AAMA 2605, 70 percent polyvinylidene fluoride (PVDF).
7. Color: To be selected by Owner and Architect from Manufacturer's full range.
8. Products: Provide roofing manufacturer's private labeled product to maintain terms of manufacturer's total system warranty; provide one of the following or comparable:
    a. Carlisle; SecurEdge Drip Edge and Gravel Stop.
    b. Elevate; Elevate Drip Edge and Gravel Stop.
    c. GAF; EverGuard Drip Edge and Gravel Stop.
    d. Johns Manville; Johns Manville Drip Edge and Gravel Stop.

2.02 ROOF PENETRATION SYSTEMS

A. General: Provide roof penetration systems manufactured by or approved by primary roofing manufacturer for compatibility with roofing products and to maintain conditions of manufacturer's warranty.

DRAFT

B. Roof Penetration Sealing Systems: Provide premanufactured components and accessories as required to preserve integrity of roofing system and maintain roof warranty; suitable for conduits and roofing system to be installed; designed to accommodate existing penetrations where applicable.

C. Multiple Penetration/Pipe Housing: Where multiple penetrations are required in close proximity, provide pipe chase housing fabricated of structural aluminum or galvanized steel curb, pre-finished aluminum chase housing with removable top cover, and individual gasketed pipe seals which exit the side walls of the housing. Size housing and provide number and size of pipe seals as required for each application.
   1. Manufacturers:
      a. Alta Products, LLC; Sigrist Pipe Chase Housing.
      b. Roof Penetration Housings, LLC; the Vault.

2.03 ELASTIC ROOF EXPANSION JOINTS

A. Elastic Expansion Joints (Bellows-Type): Pre-fabricated joint assembly, consisting of a elastomeric flashing forming the primary joint membrane in a “bellows” shape, with 16 oz. copper flanges on each side; custom size and profile to suit project conditions indicated. Provide with manufacturer’s standard polymeric moisture barrier and insulation on underside of expansion joint as indicated. Provide complete assembly with splicing and accessory materials as required.
   1. Elastic-type expansion joint shall be approved by roofing manufacturer for compliance with roofing products and to maintain conditions of manufacturer’s warranty.
   2. Curb Flange Type: Metal L-shaped flange on each side of bellows, formed to curb size indicated.
   3. Wall-to-Curb Type: Metal flanged edges; 4-inch flat flange at vertical wall condition and L-shaped flange at curb side of bellows, formed to curb size indicated.

2.04 FINISHES

A. Metal surfaces shall be prepared, pre-treated, and coated in accordance with coating and resin manufacturer's instructions.

B. Superior Performing Organic Coatings System: Manufacturer's standard multi-coat superior performing organic coatings system complying with **<<AAMA 2605>>**, including at least 70 percent polyvinylidene fluoride (PVDF) resin, and at least 80 percent of aluminum extrusion and panels surfaces having minimum total dry film thickness (DFT) of **<< 1.2 mils, 0.0012 inch>>**.

2.05 ACCESSORIES

A. Sealant for Joints in Linear Components: As recommended by component manufacturer.

B. Mechanical Fasteners: Same material as or compatible with materials being fastened; type consistent with design and specified quality level.
   1. Provide stainless steel fasteners for all exterior construction and for fastening aluminum and stainless steel fabrications.

C. Adhesive for Anchoring to Roof Membrane: Compatible with roof membrane and approved by roof membrane manufacturer.

DRAFT

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that deck, curbs, roof membrane, base flashing, and other items affecting work of this Section are in place and positioned correctly.

3.02 INSTALLATION

A. Install components in accordance with manufacturer's instructions and applicable reqiurements of **<<NRCA (RM)>>**. Sheet metal components shall be fabricated in accordance with **<<SMACNA (ASMM)>>**.

B. Install components weathertight; make corners square, surfaces true and straight in planes, and lines accurate to profiles.

C. Seal joints within components when required by component manufacturer.

D. Anchor components securely.

E. Coordinate installation of components of this section with installation of roofing membrane and base flashings.

F. Coping Installation: Install coping cleats and chair with concealed fasteners. Anchor as required to meet ANSI/SPRI performance requirements and manufacturer's instructions, but at spacing of no greater than 36 inches on center.

G. Coordinate installation of sealants and roofing cement with work of this section to ensure water tightness.

END OF SECTION 077100

DRAFT

SECTION 077200
ROOF ACCESSORIES

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. UL (DIR) - Online Certifications Directory.

1.02 SUBMITTALS

A. Product Data: Manufacturer's data sheets on each product to be used.
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Installation methods.
   4. Maintenance requirements.
   5. For smoke and heat vents, submit evidence of approval by evaluation agency specified.

B. Shop Drawings: Submit detailed layout developed for this project and provide dimensioned location and number for each type of roof accessory.

1.03 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Store products under cover and elevated above grade.

PART 2 PRODUCTS

2.01 ROOF CURBS

A. General: Coordinate with Division 22, 23, and 26 for roof curbs and equipment supports specified with specific pieces of equipment.

B. Roof Curbs Manufacturers:
   1. AES Industries Inc.
   2. Curbs Plus, Inc.
   3. The Pate Company.
   4. LMCurbs.
   5. Roof Products & Systems (RPS).
   6. Thybar Corporation.

C. Roof Curbs Mounting Assemblies: Factory fabricated hollow sheet metal construction, internally reinforced, and capable of supporting superimposed live and dead loads and designated equipment load with fully mitered and sealed corner joints welded or mechanically fastened, and integral counterflashing with top and edges formed to shed water.
   1. Roof Curb Mounting Substrate: Curb substrate consists of **<< standing seam metal roof panel system; concealed fastener metal roof panel system; exposed fastener metal roof panel system; corrugated metal roof deck with insulation; flat roof deck sheathing with insulation; or _____>>**.
   2. Sheet Metal Material: Galvanized (zinc-coated) or galvalume (aluminum-zinc alloy) steel sheet; minimum 18 gauge (0.052-inch) thick; mill finish.

D. Equipment Rail Curbs: Straight curbs on each side of equipment, with top of curbs horizontal and level with each other for equipment mounting.

DRAFT

1. Provide preservative treated wood nailers along top of rails.
2. Height Above Finished Roof Surface: 8 inches, minimum.

E. Pipe, Duct, or Conduit Mounting Curbs: Vertical posts, minimum **<< 8 inches; or ___ inches>>** square unless otherwise indicated.
1. Height Above Finished Roof Surface: 8 inches, minimum.

2.02 ROOF HATCHES AND VENTS

A. Roof Hatch Manufacturers:
1. Bilco Company; Model **<< S-50TB; E-50TB; F-50TB; NB-50TB; or L-50TB>>**. ******Bilco models cover in order: 36x30, 36x36, 48x48, 30x54, and 30x96. Coordinate with size options below******
2. Milcor, Inc; Thermal Pro TP-1.
3. Nystrom, Inc; ThermalMAX RHTA.

B. Roof Hatches: Factory-assembled aluminum frame and cover, complete with operating and release hardware.
1. Mounting Substrate: Provide frames and curbs suitable for mounting on low slope roof deck.
a. Coordinate with roof insulation height, including tapered insulation design as indicated, to provide a minimum 8 inch curb height above the highest adjacent point of roof membrane.
2. Thermally Broken Hatches: Provide manufacturer's standard insulation and thermally-broken frame and cover.
3. For Ladder Access: Single leaf; 30 by 36 inches.
4. For Ladder Access: Single leaf, 36 by 36 inches.
5. For Ladder Access: Single leaf; 48 by 48 inches.
6. For Ships Ladder Access: Single leaf; 30 by 54 inches.
7. For Stair Access: Single leaf; 30 by 96 inches.
8. Operation and Hardware: Provide with manufacturer's standard gas springs with assisted lift and automatic hold open arm. Provide interior and exterior turn handles and interior padlock hasp (padlock NIC).

C. Frames and Curbs: One-piece curb and frame with integral cap flashing to receive roof flashings; extended bottom flange to suit mounting.
1. Material: Mill finished aluminum, **<< 11 gauge, 0.0907 inch; or ___ gauge, _____ inch>>** thick.
2. Insulation: Manufacturer's standard; **<< 1 inch; 2 inches; 3 inch; or ___ inch>>** rigid **<< glass fiber; wood fiber board; polyisocyanurate; or ____>>**, located on **<< outside face of curb; inside hollow curb; or _____>>**.
3. Curb Height: Minimum 8 inches above finished surface of roof.

D. Metal Covers: Flush, insulated, hollow metal construction.
1. Capable of supporting **<< 40 psf; or __ psf>>** live load.
2. Material: Mill finished aluminum; outer cover **<< 11 gauge, 0.0907 inch; or ___ gauge, _____ inch>>** thick, liner **<< 0.04 inch; or ___ inch>>** thick.
3. Insulation: Manufacturer's standard **<< 1 inch; 2 inches; 3 inch; or ___ inches>>** rigid **<< glass fiber; fiberboard; polyisocyanurate; or ____>>**.
4. Gasket: **<< Neoprene; EPDM; Santoprene; or _____>>**, continuous around cover perimeter.

DRAFT

E. Safety Railing System: Roof hatch manufacturer's standard accessory safety rail system mounted directly to curb. Do not install safety railing to roof assembly.
   1. Posts and Rails: **<< Fiberglass reinforced polymer tubing; Aluminum tubing; Steel tubing; Galvanized steel tubing; or Manufacturer's standard galvanized steel, aluminum pipe, or fiberglass pipe; pre-finished in safety yellow color>>**.
   2. Products:
      a. BILCO Company; Bil-Guard 2.0.
      b. Milcor, Inc.; SAF-T-RAIL.
      c. Nystrom, Inc.; Roof Hatch Safety Railing SRC.

2.03 SMOKE AND HEAT VENTS

A. Smoke and Heat Vent Manufacturers:
   1. BILCO Company; Type ACDSV - Automatic Smoke Vent.
   2. Milcor, Inc; Model U-LP; custom size.
   3. Nystrom, Inc; Double Door AcousticMAX; Model SVX.

B. Smoke and Heat Vents: Factory-assembled galvanized steel frame and cover, complete with operating and release hardware. Heat and smoke vents shall be UL 793 listed.
   1. Mounting Substrate: Provide frames and curbs suitable for mounting on flat or low-slope roof deck sheathing with insulation.
      a. Coordinate with roof insulation height, including tapered insulation design as indicated, to provide a minimum 8 inch curb height above the highest adjacent point of roof membrane.
   2. Sound Rated Hatches: Two sets of double leaf doors with air space between upper and lower doors; upper doors to open upward, lower doors to open downward; minimum Sound Transmission Coefficient (STC) of 48.
   3. Thermally Broken Hatches: Provide manufacturer's standard insulation and thermally-broken frame and cover.
   4. Size: **<< 48 inches by 120 inches>>** nominal. ***Verify size with project specific requirements and with manufacturers' standard options***
   5. Operation and Hardware: Provide with manufacturer's standard gas springs with assisted lift and automatic hold open arm. Provide interior and exterior pull release cables.
      a. Interior emergency release cable shall be run horizontally along roof deck and then down the wall to allow access from floor level. Provide signage indicating "Smoke Vent - Emergency Manual Release".
   6. Vent Operation: Provide both of the following operation features.
      a. Smoke Alarm Connection: Provide 24 VDC electric solenoid release device and coordinate smoke detector interconnections so that vents will automatically operate upon activation of smoke alarm system.
      b. Electro-Thermal Release Mechanism: Automatic opening on melting of replaceable **<<UL (DIR)>>** listed fusible link at 165 degrees F.

2.04 NON-PENETRATING ROOFTOP RAILING ASSEMBLIES

A. Refer to Division 5 Section "Metal Fabrications" for non-penetrating rooftop railings.

PART 3 EXECUTION

3.01 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

DRAFT

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.02 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using methods recommended by manufacturer for achieving acceptable results for applicable substrate under project conditions.

3.03 INSTALLATION

A. Install in accordance with manufacturer's instructions, in manner that maintains roofing system weather-tight integrity.

B. Roof Curbs and Equipment Supports: Install in lengths and in a manner such that curbs and equipment supports span multiple structural framing members, with adequate blocking and supports to distribute the equipment loads over metal decking and structural members without crushing.

3.04 CLEANING

A. Clean installed work to like-new condition.

3.05 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Date of Substantial Completion.

END OF SECTION 077200

DRAFT

SECTION 077600
ROOF PAVERS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures.

B. ASTM C936/C936M - Standard Specification for Solid Concrete Interlocking Paving Units.

C. ASTM D1929 - Standard Test Method for Determining Ignition Temperature of Plastics.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene two weeks minimum before starting work of this section.
   1. Review preparation and installation procedures and coordinating and scheduling required with related work.

1.03 SUBMITTALS

A. Product Data: Provide data indicating paver and pedestal materials.

B. Shop Drawings: Submit shop drawings that indicate paver and pedestal layout, including overall plan and detail drawings of system components.

C. Sustainable Design Submittals: Refer to Division 1 Section "Sustainable Design Requirements."

D. Samples of Pavers: Submit two samples for each type, color and texture indicated.

E. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

F. Installer's qualification statement.

1.04 CLOSEOUT SUBMITTALS

A. Warranty Documentation:
   1. Submit manufacturer warranty and ensure that forms have been completed in **<<Owner>>**'s name and registered with manufacturer.
   2. Submit documentation from installer that installation complies with warranty conditions for roof paver system.

B. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project:
   1. Provide two of manufacturer's special tool for use in lifting roofpavers.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing the work of this section with documented experience working on roof paver and pedestal systems of the type specified; references shall be made available upon request.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's original containers, dry and undamaged, with seals and labels intact.

B. Store materials at least **<< 4 inches>>** above ground in dry location, and covered with polyethylene sheet to protect from contact with materials that may cause staining or discoloration.

DRAFT

1.07 FIELD CONDITIONS

A. Do not install roof paver components during cold or wet weather conditions.

1.08 WARRANTY

A. Manufacturer Warranty: Provide **<< 2-year; 10-year; or ____>>** manufacturer warranty to replace material that shows manufacturing defects. Complete forms in **<<Owner>>**'s name and register with manufacturer.

B. Installer Warranty: Provide **<< 2-year; 3-year; 5-year; or ____>>** warranty for defects of labor and/or workmanship commencing on the Date of Substantial Completion. Complete forms in **<<Owner>>**'s name and register with installer.

C. Roofing Warranty: Coordinate with primary roofing membrane manufacturer; provide written approval for installation of paver and pedestal system. Comply with any special requirements of roofing manufacturer in order to maintain the terms of roofing warranty.

PART 2 PRODUCTS

2.01 ROOF PAVERS

A. Roofing System: Refer to other Division 7 sections for information on roofing system where pavers are being installed.

B. Precast Concrete Roof Pavers: Precast concrete tiles, with texture and color as indicated; supported by adjustable pedestal system.

1. Comply with local wind load resistance requirements of **<<ASCE 7>>** and requirements on Structural Drawings.
2. Texture and Color: To be selected by Owner and Architect from Manufacturer's full range.
3. Length and Width: 24 inches by 24 inches, nominal. ***Verify size with manufacturers; 24 x 24 is standard***
4. Thickness: 1-3/4 to 2 inches, nominal.
5. Compressive Strength: <**<ASTM C936/C936M>>**, not less than 7,000 psi.
6. Absorption: **<<ASTM C936/C936M>>**, not greater than 5 percent.
7. Weight: 25 lbs per square foot, maximum.
8. Products:
   a. Belgard Commercial; Classic Plaza Slab.
   b. Hanover Architectural Products; Prest Pavers.
   c. Tile-Tech Pavers; Stamp-Tech Flat Design.
   d. Wausau Tile; H-Series Pavers.

2.02 PEDESTALS

A. Pedestals: High impact copolymer polypropylene components to level and adjust height of pavers by using a screw-jack base pedestal and modular couplers or PVC pipe; with minor height adjustments made by screw-adjustment or with stackable cap accessory.

1. Comply with local wind load resistance requirements of **<<ASCE 7>>**.
2. Self-Ignition Temperature: Provide plastic pedestal components with self-ignition temperature greater than 650 degrees in accordance with **<<ASTM D1929>>** test method.
3. Base Diameter: 6 inches nominal.
4. Roof Slope Correction: Zero to 8 percent, with use of base slope plates.

DRAFT

5. Pedestal Height: Shall allow for at minimum a range of 2 inches to 21 inches, with use of modular screw-on couplers or 4-3/16 inch diameter SDR-35 PVC pipe, with maximum static load of 2,000 lb per pedestal in system.
    a. Provide additional reinforcing cross-bracing when pedestal heights exceed 16 inches, unless otherwise required by manufacturer.
6. Pedestal Spacing: Verify with manufacturer for paver size indicated; do not exceed manufacturer's maximum spacing.
7. Buffer Pad: Provide buffer pad component under each pedestal to provide protection to roof membrane.
8. Accessories: Provide pedestal manufacturer's standard accessories, including but not limited to spacer tabs, shims, perimeter edge restraint, flashings, and other components as indicated on Drawings and as required for a complete paver and pedestal assembly.
9. Products:
    a. Belgard; Screwjack Adjustable Pedestals.
    b. Hanover Architectural Products; Elevator Pedestal System.
    c. Tile Tech Inc; Pedestal System.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that surfaces and site conditions are ready to receive this work.

B. Verify substrate is supported and secure.

C. Verify substrate is clean and smooth, dry and free of snow or ice, flat without depressions, waves or projections, properly sloped and suitable for installation of roof paver system.

D. Verify that roof openings, curbs, and penetrations through roof are solidly set.

E. Verify system elevations, required pedestal heights, and substrate dimensions.

3.02 PREPARATION

A. Use of pedestal system is for pedestrian traffic only and each side of deck system must be restrained containing decking panels with perimeter blocking or walls; movement of decking panels laterally is not permitted.

B. Membrane waterproofing and protection board surfaces used to support pedestals to be broom clean, free of frost, dirt, oil or any rough foreign matter that may impair substrate material manufacturer's warranty requirements.

C. Provide substrate for pedestals with slope and positive drainage in accordance with applicable building codes.

D. Substrate surface that will support paver and pedestal system must be structurally capable of carrying dead and live loads anticipated.

3.03 INSTALLATION

A. Perform work in accordance with manufacturer's written installation instructions and applicable requirements in coordination with project attributes, paver type being installed, pattern, grid layout, starting point, and finished elevation as indicated on approved shop drawings.

B. Install pavers on pedestals in accordance with manufacturer's instructions.
    1. Fully support edges; shim and adjust pavers to provide level surface.

DRAFT

2. Provide approximately 1/8- to 1/4-inch space between pavers to permit surface water drainage.

3.04 FIELD QUALITY CONTROL

A. Inspect during installation to ensure that grid spacer lines are being maintained in a straight and consistent pattern and that deck roof pavers are level and not rocking.

B. Unless otherwise specified in writing to allow for expansion, inspect to ensure that spacing between pavers at perimeter walls does not exceed a tab width.

C. Inspect during installation to ensure that pedestrian entry or access points to roof paver areas are level and that pavers are not randomly raised or uneven creating a tripping or safety hazard.

D. Verify that deck pedestal heights in excess of 16 inches have been braced in accordance with manufacturers written installation instructions.

3.05 CLEANING

A. Remove markings from finished surfaces, or replace defaced components of roof pavers system if markings cannot be removed.

B. In areas where finished surfaces are soiled by work of this section, consult manufacturer of surfaces for cleaning advice and comply with their documented instructions.

C. Repair or replace defaced or damaged finishes caused by work of this section.

3.06 PROTECTION AND MAINTENANCE

A. Protect installed roof pavers from construction operations.

B. Where traffic must continue over finished roof pavers, protect surfaces using durable materials.

C. Periodically check pavers, including immediately prior to Substantial Completion, for rocking or settling; provide maintenance adjustments. Check spacer tabs and immediately replace broken tabs to limit deck movement.

3.07 DEMONSTRATION

A. Demonstration: Instruct Owner on procedures for routine maintenance of pavers, including checking for rocking pavers and performing minor adjustments, including use of special lifting tool.

END OF SECTION 077600

DRAFT

SECTION 078100
APPLIED FIRE PROTECTION

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

B. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.

C. ASTM E605/E605M - Standard Test Methods for Thickness and Density of Sprayed Fire-Resistive Material (SFRM) Applied to Structural Members.

D. ASTM E736/E736M - Standard Test Method for Cohesion/Adhesion of Sprayed Fire-Resistive Materials Applied to Structural Members.

E. ASTM E759/E759M - Standard Test Method for Effect of Deflection on Sprayed Fire-Resistive Material Applied to Structural Members.

F. ASTM E760/E760M - Standard Test Method for Effect of Impact on Bonding of Sprayed Fire-Resistive Material Applied to Structural Members.

G. ASTM E859/E859M - Standard Test Method for Air Erosion of Sprayed Fire-Resistive Materials (SFRMs) Applied to Structural Members.

H. ASTM E937/E937M - Standard Test Method for Corrosion of Steel by Sprayed Fire-Resistive Material (SFRM) Applied to Structural Members.

I. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

J. AWCI Technical Manual 12-B - Standard Practice for the Testing and Inspection of Thin-Film Intumescent Fire-Resistive Materials; an Annotated Guide.

K. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers Version 1.2.

L. CARB (SCM) - Suggested Control Measure for Architectural Coatings; California Air Resources Board.

M. SCAQMD 1113 - Architectural Coatings.

N. SCAQMD 1168 - Adhesive and Sealant Applications.

O. UL 263 - Standard for Fire Tests of Building Construction and Materials.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene two weeks minimum before starting work of this section.
   1. Review products to be installed, including density and bond strengths, unrestrained conditions, sequencing and schedule coordination, coordination with roofing work, surface conditions and preparation, environmental conditions, and quality-control testing and inspection.

B. Coordinate with placement of ceiling hanger tabs, mechanical component hangers, and electrical components.

C. Coordinate temporary enclosures to confine spraying operations and protect the environment and adjacent materials; and for protection of applied fire protection from environmental conditions and exposure to weather.

DRAFT

D. Coordinate with roofing work; do not apply fireproofing until installation of roofing, rooftop units, and other associated work is completed.

E. Coordinate with subsequent construction operations; avoid unnecessary exposure of fire-resistive materials to abrasion and other damage likely to occur after application.

1.03 SUBMITTALS

A. Product Data: Provide data indicating product characteristics, performance criteria, and limitations of use.

B. Shop Drawings: Submit drawings that indicate extent of applied fire protection, for each type and rating.
   1. Include assembly designations by UL or other qualified test agency at each location.
   2. Include required thicknesses to achieve indicated ratings, at each location.

C. Sustainable Design Submittals: Refer to Division 1 Section "Sustainable Design Requirements."

D. Manufacturer's Certificate: Certify that applied fireproofing products meet or exceed requirements of Contract Documents.

E. Test Reports: Reports from reputable independent testing agencies for proposed products, indicating compliance with specified criteria, conducted under conditions similar to those on project, as follows:
   1. Bond strength.
   2. Bond impact.
   3. Compressive strength.
   4. Fire tests using substrate materials similar those on project.

F. Field Quality Control Submittals: Submit field test report.

G. Manufacturer Reports: Indicate procedures followed, environmental conditions that applied fireproofing materials were installed, and supplementary instructions given.

H. Installer's Qualification Statement.

I. Warranty: Submit manufacturer warranty and ensure forms have been completed in **<<Owner>>**'s name and registered with manufacturer.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing work of the type specified and certified in writing by fireproofing manufacturer.

1.05 FIELD CONDITIONS

A. Do not apply fireproofing when temperature of substrate material and surrounding air is below 40 degrees F or when temperature is predicted to be below said temperature for 24 hours after application.

B. Provide ventilation in areas to receive fireproofing during application and 24 hours afterward, to dry applied material.

C. Provide temporary enclosure to prevent spray from contaminating air.

D. Do not allow roof traffic during installation of fireproofing under roof deck, and during drying period.

DRAFT

1.06 WARRANTY

A. Special Warranty - Installer: Installer shall submit warranty form agreeing to repair or replace applied fire protection that fails in materials or workmanship within the specified period.
   1. Installer's warranty shall cover cracking, spalling, flaking, peeling, or delamination of fire protection from substrates.
   2. Warranty shall not cover failure due to damage by occupants or Owner's personnel, exposure to environmental conditions outside those tested and approved, and other causes not reasonably foreseeable under conditions of normal use.
   3. Installer's Warranty Period: 2 years, from date of Substantial Completion.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. General Fireproofing Assembly Design:
   1. Fire-Resistance Designs: As indicated on Drawings; products specified in this section shall be certified fire-resistance designs and shall have been tested by a qualified testing agency in accordance with **<<ASTM E119>>** or **<<UL 263>>**. Provide applicable markings identifying testing agency on product containers/packaging.
   2. All design applications for this project are for unrestrained conditions unless explicitly stated otherwise in the contract documents for specific locations.
   3. Fire-resistance design thicknesses for open web steel joists shall be based on testing at a maximum allowable stress of 30 ksi matching SJI's "Standard Specifications Load Tables and Weight Tables for Steel Joists and Joist Girders."

B. Asbestos-Containing Material: All fire-resistive products and accessory products shall be certified by Contractor as containing no asbestos.

C. Low-Emitting Materials (Paints and Coatings): Paints and coatings field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet applicable VOC limits of **<<CARB (SCM)>>** or **<<SCAQMD 1113>>**.

D. Low-Emitting Materials (Adhesives and Sealants): Adhesives and sealants field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet the chemical content requirements of **<<SCAQMD 1168>>**.

2.02 MATERIALS

A. Applied Fire Protection Material for Concealed Interior Applications and Exposed Interior Applications that are Not Susceptible to Damage: Manufacturer's standard factory mixed material, which when combined with water is capable of providing indicated fire resistance, and complying with following requirements:
   1. Bond Strength: 330 pounds per square foot, minimum, when tested in laboratory in accordance with **<<ASTM E736/E736M>>**. Refer to Part 3 article "Field Quality Control" for field testing requirements.
   2. Dry Density: 15 lb/cu. ft., ("Standard" density) minimum, when tested in accordance with **<<ASTM E605/E605M>>**.
   3. Compressive Strength: 10 lbf/sq. in., minimum, when tested in accordance with **<<ASTM E761/E761M>>**.
   4. Effect of Impact on Bonding: No cracking, spalling or delamination, when tested in accordance with **<<ASTM E760/E760M>>**.

DRAFT

5. Corrosivity: No evidence of corrosion, when tested in accordance with **<<ASTM E937/E937M>>**.
6. Air Erosion Resistance: Weight loss of 0.025 g/sq. ft., maximum, when tested in accordance with **<<ASTM E859/E859M>>** after 24 hours.
7. Surface Burning Characteristics: Maximum flame spread index of 0 (zero) and maximum smoke developed index of 0 (zero), when tested in accordance with **<<ASTM E84>>**.
8. Effect of Deflection: No cracking, spalling, or delamination, when tested in accordance with **<<ASTM E759/E759M>>**.
9. Fungal Resistance: No growth after 28 days when tested according to **<<ASTM G21>>**.
10. Manufacturers:
    a. GCP Applied Technologies; Monokote MK-6.
    b. Isolatek International; Cafco 300.
        1) Cafco Blaze-Shield II is acceptable for concealed locations only.
    c. Southwest Fireproofing Products Co.; Type 5GP.

2.03 ACCESSORIES

A. Primer Coating: Of type recommended by applied fire protection manufacturer.

B. Topcoat: At exposed applications, provide decorative tintable topcoat; of type approved in writing by primary fireproofing manufacturer. Topcoat color shall be selected by Architect from manufacturer's full range.

C. Water: Clean, potable.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that surfaces are ready to receive fireproofing. Repair existing fireproofing using same method as original installation or trowel installation techniques recommended by manufacturer.

B. Verify that clips, hangers, supports, sleeves, and other items required to penetrate fireproofing are in place.

C. Verify that ducts, piping, equipment, or other items that would interfere with application of fireproofing have not been installed.

D. Verify that voids and cracks in substrate have been filled.

E. Verify that projections have been removed where fireproofing will be exposed to view as a finish material.

3.02 PREPARATION

A. Perform tests as recommended by fireproofing manufacturer in applications where adhesion of fireproofing to substrate is in question.

B. Remove incompatible materials that could effect bond by scraping, brushing, scrubbing, or sandblasting.

C. Prepare substrates to receive fireproofing in strict accordance with instructions of fireproofing manufacturer.

D. Protect surfaces not scheduled for fireproofing and equipment from damage by overspray, fall-out, and dusting.

E. Close off and seal duct work in areas where fireproofing is being applied.

DRAFT

3.03 APPLICATION

A. When required by manufacturer, apply primer coating in accordance with manufacturer's instructions.

B. Apply fireproofing in uniform thickness and density as necessary to achieve required ratings.

C. Where a protected steel member connects to another protected steel member with a greater thickness of applied fire-resistant material, provide applied fireproofing equal to the greater thickness on all members for a minimum distance of 18 inches from the point of attachment.

D. Where unprotected steel elements connect to protected steel members, the unprotected elements shall be coated with the same thickness of material applied to the protected members for a minimum distance of 18 inches from the point of attachment. Unprotected elements that shall be coated include structural steel members that do not otherwise require protection and also include any non-structural elements that connect to protected members, including CFSF members, clips, hangers, support sleeves, and similar items.

E. In concealed locations, provide manufacturer's standard spray-textured finish with no further treatment.

F. In exposed locations, provide skip-trowel finish for a smooth smooth texture and neat edges, using tools and procedures recommended by fireproofing manufacturer.

3.04 FIELD QUALITY CONTROL

A. Owner shall hire third-party special inspector to perform special inspections of installed fireproofing, and inspector shall submit field reports to Contractor and Architect.

1. Testing: All spray-applied fireproofing shall be tested after installation according to **<<ASTM E605/E605M>>** and **<<ASTM E736/E736M>>**, latest editions. Mastics shall be tested in accordance with **<<AWCI Technical Manual 12-B>>**.
    a. Standard Density SFRM: Minimum bond strength shall be 200 psf when field tested per **<<ASTM E736/E736M>>**.

B. Provide on-site inspection by applied fireproofing manufacturer's technical representative at least three times (substrate examination, in-progress, and warranty inspection) during installation of this work.

C. Repair or replace applied fireproofing at testing locations, and at locations where test results indicate fireproofing does not meet specified requirements.

D. Contractor shall be responsible for subsequent re-inspection of fireproofing, and shall provide periodic inspection for integrity of fire protection after installation of subsequent Work.

3.05 CLEANING

A. Remove excess material, overspray, droppings, and debris.

B. Remove fireproofing from materials and surfaces not required to be fireproofed.

C. At exposed fireproofing, clean surfaces that have become soiled or stained, using manufacturer's recommended procedures.

END OF SECTION 078100

DRAFT

SECTION 078123
INTUMESCENT FIRE PROTECTION

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. 40 CFR 59, Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings; U.S. Environmental Protection Agency.

B. ASTM D2240 - Standard Test Method for Rubber Property--Durometer Hardness.

C. ASTM D2794 - Standard Test Method for Resistance of Organic Coatings to the Effects of Rapid Deformation (Impact).

D. ASTM D4060 - Standard Test Method for Abrasion Resistance of Organic Coatings by the Taber Abraser.

E. ASTM D4541 - Standard Test Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers.

F. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

G. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.

H. AWCI Technical Manual 12-B - Standard Practice for the Testing and Inspection of Thin-Film Intumescent Fire-Resistive Materials; an Annotated Guide.

I. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers Version 1.2.

K. FM (AG) - FM Approval Guide.

L. SCAQMD 1113 - Architectural Coatings.

M. SCAQMD 1168 - Adhesive and Sealant Applications.

N. UL (FRD) - Fire Resistance Directory.

DRAFT

1.02 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene two weeks minimum before starting work of this section.
   1. Review products to be installed, including density and bond strengths, application thicknesses, sequencing and schedule coordination, surface conditions and preparation, environmental conditions, and quality-control testing and inspection.

1.03 SUBMITTALS

A. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Performance characteristics and test results.
   2. Preparation instructions and recommendations.
   3. Storage and handling requirements and recommendations.
   4. Installation methods.

B. Sustainable Design Submittals: Refer to Division 1 Section "Sustainable Design Requirements."

C. Selection Samples: For decorative top coat, color chips representing manufacturer's full range of available colors and sheens.

D. Verification Samples: For each thickness, color, sheen, and finish required, submit samples not less than 4 inches square on designated substrate illustrating finished appearance.

E. Certificates: Certify that intumescent fireproofing provided for this project meets or exceeds specified requirements in all respects.

F. Test Reports: Published fire resistive designs for structural elements of the types required for the project, indicating hourly ratings of each assembly.

G. Installer's qualification statement.

H. Warranty: Submit manufacturer warranty and ensure forms have been completed in **<<Owner>>**'s name and registered with manufacturer

1.04 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing work of the type specified and certified in writing by manufacturer.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's original, unopened containers with identification labels and testing agency markings intact and legible.

B. Store products in manufacturer's unopened packaging until ready for installation.
   1. Store at temperatures not less than 50 degrees F in dry, protected area.
   2. Protect from freezing, and do not store in direct sunlight.
   3. Dispose of any materials that have come into contact with contaminants of any kind prior to application.

C. Dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.

1.06 FIELD CONDITIONS

A. Protect areas of application from windblown dust and rain.

B. Maintain ambient field conditions, such as temperature, humidity, and ventilation, within limits recommended by manufacturer for optimum results. Do not install products under ambient conditions outside manufacturer's absolute limits.
   1. Provide temporary enclosures as required to control ambient conditions.
   2. Do not apply intumescent fireproofing when ambient temperatures are below 50 degrees F without specific approval from manufacturer.
   3. Ensure that relative humidity is between 40 and 60 percent in areas of application.
   4. Provide ventilation in enclosed spaces during application and for not less than 72 hours afterward.

1.07 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Correct defective Work within a **<< two; three; five; or ____>>** year period after Date of Substantial Completion.
   1. Include coverage for fireproofing to remain free from cracking, checking, dusting, flaking, spalling, separation, and blistering.
   2. Reinstall or repair failures that occur within warranty period.

DRAFT

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Intumescent Thin-Film Fire Protection for Metal:
   1. Albi Protective Coatings, a subsidiary of StanChem Polymers; Albi C**<< ; Albi Clad TF; or None - N/A>>**.
   2. Carboline Company; A/D Firefilm III.
   3. Hilti, Inc; Fire Finish Steel Protection Spray (CFP-SP WB Series).
   4. Isolatek International Corp; Cafco Spray Film WB.
   5. Sherwin-Williams; Firetex FX Series.

2.02 SYSTEM REQUIREMENTS

A. Fireproofing: Provide intumescent thin-film fire protection systems tested by an independent testing agency in accordance with **<<ASTM E119>>** and acceptable to authorities having jurisdiction (AHJ).
   1. Provide assemblies listed by **<< FM (AG); ITS (DIR); UL (FRD); or _____>><< and bearing listing agency label or mark; _____; or None - N/A>>**.
   2. Coordinate with Life Safety Drawings for components to be protected and required fire resistance ratings.

B. Low-Emitting Materials (Paints and Coatings): Paints and coatings field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet applicable VOC limits of **<<CARB (SCM)>>** or **<<SCAQMD 1113>>**.

C. Low-Emitting Materials (Adhesives and Sealants): Adhesives and sealants field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet the chemical content requirements of **<<SCAQMD 1168>>**.

2.03 MATERIALS

A. Fire Resistive Coating System: Thin-film intumescent fire protection system for **<< aluminum; concrete; concrete masonry units (CMU); gypsum board; oriented strand board (OSB); spray polyurethane foam (SPF); structural steel; wood; and _____>>**.
   1. Surface Burning Characteristics: Class A, flame spread/smoke developed index of 25/50, maximum, when tested in accordance with **<<ASTM E84>>**.
   2. For Interior Use: Provide products formulated specifically for both interior general purpose and interior conditioned space usage.
      a. Use only **<< water-based; solvent-based; epoxy-based; latex-based; or _____>>** products.
      b. Use only products without fiber content.
      c. VOC Content: Less than 25 g/L, when tested in accordance with **<<40 CFR 59, Subpart D>>** (EPA Method 24).
      d. Direct Impact Resistance: 40 in-lb, minimum, when tested per **<<ASTM D2794>>**.
      e. Abrasion Resistance: 0.65 gram/1000 cycles, maximum, when tested per**<<ASTM D4060>>**.
      f. Bond Strength: Minimum laboratory tested bond strength of 500 psi, when tested per **<<ASTM D4541>>**.
      g. Durometer Hardness, Type D: **<< 65; 45; or ___>>**, minimum, in accordance with **<<ASTM D2240>>**.

DRAFT

B. Protective and Decorative Top Coating: As recommended by fireproofing manufacturer for exposure and substrate conditions.
   1. Color and Gloss: To be selected by Owner and Architect from Manufacturer's full range.
   2. Coordinate with paint for color and sheen to match intumescent fireproof coating and adjacent painted surfaces; refer to Division 9 "Painting".

C. Sealers and Primer: As required by tested and listed assemblies, and recommended by fireproofing manufacturer to suit specific substrate conditions.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates to determine if they are in satisfactory condition to receive intumescent fire protection; verify that substrates are clean and free of oil, grease, incompatible primers, or other foreign substances capable of impairing bond to fireproofing system.

B. Do not begin installation until substrates have been properly prepared.

C. If substrate preparation is responsibility of another installer, notify **<<Architect>>** of unsatisfactory preparation before proceeding.

3.02 PREPARATION

A. Thoroughly clean surfaces to receive fireproofing.

B. Repair substrates to remove surface imperfections that could effect uniformity of texture and thickness of fireproofing system, and remove minor projections and fill voids that could telegraph through finished work.

C. Cover or otherwise protect other work that might be damaged by fallout or overspray of fireproofing system, and provide temporary enclosures as necessary to confine operations and maintain required ambient field conditions.

3.03 APPLICATION

A. Comply with manufacturer's instructions for each particular intumescent fire protection system installation application as indicated.

B. Apply manufacturer’s recommended primer to required coating thickness.

C. Apply fireproofing to full thickness over entire area of each substrate to be protected.

D. Apply coats at manufacturer’s recommended rate to achieve dry film thickness (DFT) as required for fire resistance ratings designated for each condition.

E. Apply intumescent fire protection by spraying to maximum extent possible, and as necessary complete coverage by roller application or other method acceptable to manufacturer.

3.04 FIELD QUALITY CONTROL

A. Owner shall hire third-party special inspector to perform special inspections and testing of installed fireproofing, and inspector shall submit field reports to Contractor and Architect.

B. Third-party special inspector shall inspect installed fire protection and test installed dry film thickness of intumescent fire protection in accordance with **<<AWCI Technical Manual 12-B>>**.

C. Repair or replace intumescent fire protection at locations where test results indicate fireproofing does not meet specified requirements.

DRAFT

3.05 CLEANING

A. Immediately after installation of fireproofing in each area, remove overspray and fallout from other surfaces and clean soiled areas.

3.06 PROTECTION

A. Protect installed intumescent fire protection from damage due to subsequent construction activities, so fireproofing is without damage or deterioration before Date of Substantial Completion.

B. Touch-up, repair or replace damaged products before Date of Substantial Completion.

END OF SECTION 078123

DRAFT

SECTION 078400
FIRESTOPPING

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.

B. ASTM E814 - Standard Test Method for Fire Tests of Penetration Firestop Systems.

C. ASTM E1966 - Standard Test Method for Fire-Resistive Joint Systems.

D. ASTM E2174 - Standard Practice for On-Site Inspection of Installed Firestop Systems.

E. ASTM E2307 - Standard Test Method for Determining Fire Resistance of Perimeter Fire Barriers Using Intermediate-Scale, Multi-Story Test Apparatus.

F. ASTM E2393 - Standard Practice for On-Site Inspection of Installed Fire Resistive Joint Systems and Perimeter Fire Barriers.

G. ASTM E2837 - Standard Test Method for Determining the Fire Resistance of Continuity Head-of-Wall Joint Systems Installed between Rated Wall Assemblies and Nonrated Horizontal Assemblies.

H. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

I. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers Version 1.2.

J. FM (AG) - FM Approval Guide.

K. FM 4991 - Approval Standard of Firestop Contractors.

L. ITS (DIR) - Directory of Listed Products.

M. SCAQMD 1113 - Architectural Coatings.

N. UL (DIR) - Online Certifications Directory.

O. UL (FRD) - Fire Resistance Directory.

P. UL 1479 - Standard for Fire Tests of Penetration Firestops.

Q. UL 2079 - Standard for Tests for Fire Resistance of Building Joint Systems.

1.02 SUBMITTALS

A. Schedule of Firestopping: List each type of penetration, fire rating of the penetrated assembly, and firestopping test or design number.

B. Product Data: Provide data on product characteristics, performance ratings, and limitations.

C. Test Reports: Include test reports from a qualified testing agency for each firestopping system submitted.

D. Sustainable Design Submittal: Submit VOC content documentation for nonpreformed materials.

E. Manufacturer's Certificate: Certify that products meet or exceed specified requirements. Manufacturer's certificate shall include a compatibility statement that firestopping materials shall be compatible with all indicated substrate materials.

F. Installer's qualification statement.

DRAFT

1.03 QUALITY ASSURANCE

A. Fire Testing: Provide firestopping assemblies of designs that provide the **<< specified; or scheduled>>** fire ratings when tested in accordance with **<< methods indicated; ASTM E119; ASTM E814; and _____>>**.
   1. Listing in **<< UL (FRD); FM (AG); ITS (DIR); or ___>>** will be considered as constituting an acceptable test report.
   2. Valid evaluation report published by ICC Evaluation Service, Inc. (ICC-ES) at www.icc-es.org will be considered as constituting an acceptable test report.
   3. Submission of actual test reports is required for assemblies for which none of the above substantiation exists.

B. Labeling: Provide permanent labels adjacent to each firestopping assembly. Labels shall be durable metal or plastic and fastened mechanically or with a self-adhering backing. Labels shall include the tested assembly/system number, fire rating of the adjacent building element/ firestopping, the firestopping installer and certification, date of installation, and specific instructions to "Do Not Disturb" and "Alert Building Personnel of Damage."
   1. Coordinate with Division 09 "Painting" for stenciled painted labeling of fire-rated walls and partitions.

C. Installer Qualifications: Company specializing in performing the work of this section and certified per the following:
   1. Installer shall be approved by Factory Mutual Research Corporation under **<<FM 4991>>**.
      a. Installer shall have a minimum of three years of documented experience installing firestopping comparable in size and scope to this Project.
      b. Installer shall have a minimum of five satisfactorily completed projects comparable in size and scope to this Project.
      c. Installer shall be licensed by local authorities having jurisdiction (LAHJ).
      d. Installer shall be a UL Qualified Firestop Contractor.
   2. Firestop manufacturer's willingness to sell products to Contractor or to an installer engaged by the Contractor does not confer qualifications to the buyer.
   3. Installation of firestopping systems shall be performed by a single qualified installer.

D. Source Limitations: Obtain each type of firestopping system from a single manufacturer, through a single supplier or source.

1.04 FIELD CONDITIONS

A. Comply with firestopping manufacturer's recommendations for temperature and conditions during and after installation; maintain minimum temperature before, during, and for three days after installation of materials.

B. Provide ventilation in areas where solvent-cured materials are being installed.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Firestopping Manufacturers:
   1. 3M Fire Protection Products.
   2. A/D Fire Protection Systems Inc.
   3. Hilti, Inc.
   4. HoldRite; an RWC brand.
   5. RectorSeal, a CSW Industrials Company.

DRAFT

6. Specified Technologies Inc.
7. Tremco Commercial Sealants & Waterproofing.

2.02 MATERIALS

A. Mold and Mildew Resistance: Provide firestopping materials with mold and mildew resistance rating of zero (0) in accordance with **<<ASTM G21>>**.

B. Primers, Sleeves, Forms, Insulation, Packing, Stuffing, and Accessories: Provide type of materials as required for tested firestopping assembly.

C. Low-Emitting Materials:

1. Paints and Coatings: Paints and coatings field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet applicable VOC limits of **<<CARB (SCM)>>** or **<<SCAQMD 1113>>**.
2. Adhesives and Sealants: Adhesives and sealants field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet the chemical content requirements of **<<SCAQMD 1168>>**.

2.03 FIRESTOPPING ASSEMBLY REQUIREMENTS

A. Perimeter Fire Containment Firestopping: Use system that has been tested according to **<<ASTM E2307>>** to have fire resistance F Rating equal to required fire rating of floor assembly. ******Provide when there is void between floor slab and exterior wall construction such as at multi-story curtainwall assemblies******

1. Movement: Provide systems that have been tested to show movement capability as indicated.
2. Temperature Rise: Provide systems that have been tested to show T Rating as indicated, but not less than 1 hour.
3. Air Leakage: Provide systems that have been tested to show L Rating as indicated.
4. Where floor assembly is not required to have a fire rating, provide systems that have been tested to show L Rating as indicated.

B. Head-of-Wall (HW) Joint System Firestopping at Joints Between Fire-Rated Wall Assemblies and Non-Rated Horizontal Assemblies: Use system that has been tested according to **<<ASTM E2837>>** to have fire resistance F Rating equal to required fire rating of wall assembly.

1. Movement: Provide systems that have been tested to show movement capability as indicated.

C. Floor-to-Floor (FF), Floor-to-Wall (FW), Head-of-Wall (HW), and Wall-to-Wall (WW) Joints, Except Perimeter, Where Both Are Fire-Rated: Use system that has been tested according to **<<ASTM E1966>>** or **<<UL 2079>>** to have fire resistance F Rating equal to required fire rating of the assembly in which the joint occurs.

1. Movement: Provide systems that have been tested to show movement capability as indicated.
2. Air Leakage: Provide systems that have been tested to show L Rating as indicated.
3. Watertightness: Provide systems that have been tested to show W Rating as indicated.
4. Listing by **<<FM (AG)>>**, **<<ITS (DIR)>>**, **<<UL (DIR)>>**, or **<<UL (FRD)>>** in their certification directories will be considered evidence of successful testing.

D. Through Penetration Firestopping: Use system that has been tested according to **<<ASTM E814>>** to have fire resistance F Rating equal to required fire rating of penetrated assembly.

DRAFT

1. Basis-of-Design: Montgomery County Public Schools preference for penetration sleeves is HoldRite "HydroFlame" series Firestop Sleeve.
2. Temperature Rise: Provide systems that have been tested to show T Rating as indicated.
3. Air Leakage (Smoke Barriers): Provide systems that have been tested to show L Rating of no more than 5.0 cfm/sq. ft., both at ambient and elevated 400 deg F temperatures in accordance with **<<UL 1479>>**.
4. Watertightness: Provide systems that have been tested to show W Rating as indicated.
5. Listing by **<<FM (AG)>>**, **<<ITS (DIR)>>**, **<<UL (DIR)>>**, or **<<UL (FRD)>>** in their certification directories will be considered evidence of successful testing.

2.04 FIRESTOPPING SYSTEMS

A. Firestopping: **<< Any material meeting requirements.; Foam.; Caulk or putty.; Manufactured device.; _____ .; or None - N/A>>**

1. Fire Ratings: Use system that is listed by **<< FM (AG); ITS (DIR); UL (FRD); or _____>>** and tested in accordance with **<< ASTM E814; ASTM E119; UL 1479; or _____>>** with F Rating equal to fire rating of penetrated assembly and**<< minimum; or None - N/A>>** T Rating **<< of ____; or Equal to F Rating>>** and in compliance with other specified requirements.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify openings are ready to receive the work of this section.

3.02 PREPARATION

A. Clean substrate surfaces of dirt, dust, grease, oil, loose material, or other materials that could adversely affect bond of firestopping material.

B. Remove incompatible materials that could adversely affect bond.

C. Install **<< backing; damming; or _____>>** materials to prevent liquid material from leakage.

3.03 INSTALLATION

A. Install materials in manner described in fire test report and in accordance with manufacturer's instructions, completely closing openings.

B. Do not cover installed firestopping until inspected by Owner's Independent Testing Agency.

C. Install labeling required by code.

1. Coordinate with Division 09 Painting contractor to ensure that all fire-rated walls and partitions are properly labeled.

3.04 FIELD QUALITY CONTROL

A. Independent Testing Agency: Inspection agency employed and paid by Owner, will inspect penetration firestopping in accordance with **<<ASTM E2174>>** and **<<ASTM E2393>>**.

1. Inspection of completed firestopping installations shall take place in successive stages as installation of firestopping systems proceeds. Do not proceed with installation of firestopping in the next area until the inspection agency determines that completed work shows compliance with requirements.
2. Inspection agency shall provide report after each stage indicating firestopping systems that comply and deviate from requirements.

DRAFT

3. Repair or replace penetration firestopping and joints at locations where inspection results indicate firestopping or joints do not meet specified requirements.
4. Additional inspections to verify compliance with replaced or additional work shall be performed at Contractor's expense.

3.05 CLEANING

A. Clean adjacent surfaces of firestopping materials. Coordinate with manufacturer of substrate material to ensure that proper cleaning materials and procedures are used to prevent damage.

3.06 PROTECTION

A. Protect adjacent surfaces from damage by material installation.

END OF SECTION 078400

DRAFT

SECTION 078426
THERMAL BARRIERS FOR PLASTICS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Concealed thermal barrier applied over foam plastics that are exposed to the interior of the building, exposed to open plenum, or exposed in cavity wall construction.

1.02 REFERENCE STANDARDS

A. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

B. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.

C. ASTM E605/E605M - Standard Test Methods for Thickness and Density of Sprayed Fire-Resistive Material (SFRM) Applied to Structural Members.

D. ASTM E736/E736M - Standard Test Method for Cohesion/Adhesion of Sprayed Fire-Resistive Materials Applied to Structural Members.

E. ASTM E814 - Standard Test Method for Fire Tests of Penetration Firestop Systems.

F. ASTM E2174 - Standard Practice for On-Site Inspection of Installed Firestop Systems.

G. ASTM E2393 - Standard Practice for On-Site Inspection of Installed Fire Resistive Joint Systems and Perimeter Fire Barriers.

H. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

I. AWCI Technical Manual 12-B - Standard Practice for the Testing and Inspection of Thin-Film Intumescent Fire-Resistive Materials; an Annotated Guide.

J. FM (AG) - FM Approval Guide.

K. FM 4880 - Examination Standard for Class 1 Fire Rating of Building Panels or Interior Finish Materials.

L. FM 4991 - Approval Standard of Firestop Contractors.

M. ITS (DIR) - Directory of Listed Products.

N. NFPA 275 - Standard Method of Fire Tests for the Evaluation of Thermal Barriers.

O. UL (FRD) - Fire Resistance Directory.

P. UL 1040 - Standard for Safety Fire Test of Insulated Wall Construction.

Q. UL 1479 - Standard for Fire Tests of Penetration Firestops.

R. UL 1715 - Standard for Safety Fire Test of Interior Finish Material.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene a preinstallation meeting at the Project site one week before starting work of this section. Include other relevant installers including installers of any foam plastic materials over which thermal barriers are to be installed.

1.04 SUBMITTALS

A. Product Data: Provide data on **<< product characteristics; performance ratings; limitations; and _____>>**.

DRAFT

B. Product Test Reports: Provide test data indicating compliance with both Temperature Transmission Test and Integrity Fire Test.

C. Evaluation/Compatibility Reports: Provide data indicating tested compatibility with submitted foam plastic material, for each assembly required.

D. Sustainable Design Submittal: Submit VOC content documentation for nonpreformed materials.

E. Installer's qualification statement.

F. Inspection Reports: Provide inspection reports certified by thermal barrier manufacturer's technical representative, indicating that thermal barrier has been installed in accordance with manufacturer's requirements.

1.05 QUALITY ASSURANCE

A. Fire Testing: Provide assemblies that provide 15-minute thermal barrier protection when tested in accordance with both the Temperature Transmission Fire Test and the Integrity Fire Test required by **<<NFPA 275>>**.
   1. Temperature Transmission Test: The thermal barrier product shall be tested for standard fire exposure in accordance with **<<ASTM E119>>** or ANSI/**<<UL 263>>**.
   2. Integrity Fire Test: The thermal barrier assembly, including the specific thermal barrier and foam plastic products submitted for this project, shall be tested as an assembly in accordance with NFPA 276, **<<FM 4880>>**, ANSI/**<<UL 1040>>**, or ANSI/**<<UL 1715>>**.
   3. Evidence of passing both test requirements shall be required.
      a. Listing in **<< UL (FRD); FM (AG); ITS (DIR); or ___>>** will be considered as constituting an acceptable test report.
      b. Valid evaluation report published by ICC Evaluation Service, Inc. (ICC-ES) at www.icc-es.org will be considered as constituting an acceptable test report.
      c. Submission of actual test reports is required for assemblies for which none of the above substantiation exists.

B. Surface-Burning Characteristics: Thermal barrier product shall be tested in accordance with**<<ASTM E84>>** and shall be rated for plenum exposure with maximum flame-spread index of 25 and maximum smoke-developed index of 50.

C. Installer Qualifications: Coordinate with Division 7 Section "Firestopping." A single qualified installer may provide the work of both sections. Thermal barrier installer shall specialize in performing the work of this section and:
   1. Installer shall be approved by Factory Mutual Research Corporation under **<<FM 4991>>**.
      a. Installer shall have a minimum of three years of documented experience installing thermal barriers comparable in size and scope to this Project.
      b. Installer shall have a minimum of five satisfactorily completed projects comparable in size and scope to this Project.
      c. Installer shall be licensed by local authorities having jurisdiction (LAHJ).
      d. Installer shall be a UL Qualified Firestop Contractor.
   2. Thermal barrier manufacturer's willingness to sell products to Contractor or to an installer engaged by the Contractor does not confer qualifications to the buyer.
   3. Installation of firestopping systems shall be performed by a single qualified installer.

D. Manufacturer's Inspection: Manufacturer's technical representative shall inspect foam plastic substrates prior to installation and in-progress work to ensure compliance with manufacturer's requirements, and shall provide inspection reports after each visit.

DRAFT

1. Thermal barrier installer shall coordinate with manufacturer to provide anticipated installation dates.

1.06 FIELD CONDITIONS

A. Comply with firestopping manufacturer's recommendations for temperature and conditions during and after installation; maintain minimum temperature before, during, and for **<< three; or ____>>** days after installation of materials.

B. Provide ventilation in areas where solvent-cured materials are being installed.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Thermal Barrier Manufacturers and Products:
   1. Fire-Resistive, Water-Based, Intumescent Mastic Coating for Cellular Foam:
      a. Thermal Product Research (TPR^2); Fireshell F10E.
      b. Flame Seal Products, Inc.; Flame Seal TB.
      c. International Fireproof Technology, Inc.; DC315.
      d. No-Burn, Inc; No-Burn Plus ThB.

2.02 ACCESSORY MATERIALS

A. Accessory Materials: Provide primers, sealants, and other accessory materials as required by manufacturer, that are compatible with the other materials in the thermal barrier assembly and that maintain the thermal barrier rating of the assembly.

B. Volatile Organic Compound (VOC) Content: Provide products having VOC content lower than that required by **<<SCAQMD 1168>>**.

C. Mold and Mildew Resistance: Provide thermal barrier and accessory materials with mold and mildew resistance rating of zero (0) in accordance with **<<ASTM G21>>**.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify openings are ready to receive the work of this section.

3.02 PREPARATION

A. Clean substrate surfaces of dirt, dust, grease, oil, loose material, or other materials that could adversely affect bond of firestopping material.

B. Remove incompatible materials that could adversely affect bond.

C. Install backing materials to prevent liquid material from leakage.

3.03 INSTALLATION

A. Install materials in manner described in fire test report and in accordance with manufacturer's instructions, completely closing openings.

B. Do not cover installed thermal barriers until special inspections are complete.

C. Install labeling required by code.

DRAFT

3.04 FIELD QUALITY CONTROL

A. Special Inspections: Inspection agency employed and paid by Owner, will examine all spray-applied fireproofing, including thermal barriers, in accordance with the IBC edition applicable to this Project.

1. Testing Services: All fireproofing/thermal barriers shall be tested according to **<<ASTM E605/E605M>>** and **<<ASTM E736/E736M>>**. Mastics shall be tested according to **<<AWCI Technical Manual 12-B>>**.
2. Inspection and testing of completed thermal barrier installations shall take place in successive stages as installation of thermal barriers proceeds. Do not proceed with installation of thermal barriers in the next area until the inspection agency determines that completed work shows compliance with requirements.
3. Inspection agency shall provide report after each stage indicating firestopping systems that comply and deviate from requirements.
4. Repair or replace penetration firestopping and joints at locations where inspection results indicate firestopping or joints do not meet specified requirements.
5. Additional inspections to verify compliance with replaced or additional work shall be performed at Contractor's expense.

3.05 CLEANING

A. Clean adjacent surfaces of thermal barrier overspray, clean all adjacent surfaces after application.

3.06 PROTECTION & REPAIR

A. Protect adjacent surfaces from damage by material installation.

B. If installed thermal barrier must be cut due to subsequent penetrations or other work, provide additional patching work as required to restore thermal barrier to a continuous, complete assembly at the time of Substantial Completion.

C. Repair damage to thermal barriers caused by construction activities; verify that repaired work maintains a continuous, complete thermal barrier assembly.

END OF SECTION 078426

DRAFT

SECTION 079200
JOINT SEALANTS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM C794 - Standard Test Method for Adhesion-in-Peel of Elastomeric Joint Sealants.

B. ASTM C834 - Standard Specification for Latex Sealants.

C. ASTM C919 - Standard Practice for Use of Sealants in Acoustical Applications.

D. ASTM C920 - Standard Specification for Elastomeric Joint Sealants.

E. ASTM C1087 - Standard Test Method for Determining Compatibility of Liquid-Applied Sealants with Accessories Used in Structural Glazing Systems.

F. ASTM C1193 - Standard Guide for Use of Joint Sealants.

G. ASTM C1248 - Standard Test Method for Staining of Porous Substrate by Joint Sealants.

H. ASTM C1311 - Standard Specification for Solvent Release Sealants.

I. ASTM C1521 - Standard Practice for Evaluating Adhesion of Installed Weatherproofing Sealant Joints.

J. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers Version 1.2.

K. CARB (SCM) - Suggested Control Measure for Architectural Coatings; California Air Resources Board.

L. SCAQMD 1113 - Architectural Coatings.

1.02 SUBMITTALS

A. Product Data: Submit manufacturer's technical datasheets for each product to be used; include the following:

1. Physical characteristics, including movement capability, VOC content, hardness, cure time, and color availability.
2. List of backing materials approved for use with the specific product.
3. Backing material recommended by sealant manufacturer.
4. Substrates that product is known to satisfactorily adhere to and with which it is compatible.
5. Substrates the product should not be used on.

B. Product Data for Accessory Products: Submit manufacturer's technical data sheet for each product to be used, including physical characteristics, installation instructions, and recommended tools.

C. Color Cards for Selection: Where sealant color is not specified, submit manufacturer's color cards showing standard colors available for selection.

D. Preconstruction Laboratory Test Reports: Submit at least four weeks prior to start of installation.

E. Preinstallation Field Adhesion Test Plan: Submit at least two weeks prior to start of installation.

F. Preinstallation Field Adhesion Test Reports: Submit filled out Preinstallation Field Adhesion Test Reports log within **<< 10 days; or _____>>** after completion of tests; include bagged test samples and photographic records.

DRAFT

G. Executed warranty.

1.03 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing the work of this section, and is approved and/or certified by manufacturer.

B. Preconstruction Laboratory Testing: Arrange for sealant manufacturer(s) to test each combination of sealant, substrate, backing, and accessories.
   1. Adhesion Testing: In accordance with **<<ASTM C794>>**.
   2. Compatibility Testing: In accordance with **<<ASTM C1087>>**.
   3. Allow sufficient time for testing to avoid delaying the work.
   4. Deliver sufficient samples to manufacturer for testing.
   5. Report manufacturer's recommended corrective measures, if any, including primers or techniques not indicated in product data submittals.

C. Preinstallation Field Adhesion Test Plan: Include destructive field adhesion testing of one sample of each combination of sealant type and substrate, except interior acrylic latex sealants, and include the following for each tested sample.
   1. Identification of testing agency.
   2. Preinstallation Field Adhesion Test Log Form: Include the following data fields, with known information filled out.
      a. Test date.
      b. Copy of test method documents.
      c. Age of sealant upon date of testing.
      d. Test results, modeled after the sample form in the test method document.
      e. Indicate use of photographic record of test.

D. Field Adhesion Test Procedures:
   1. Allow sealants to fully cure as recommended by manufacturer before testing.
   2. Have a copy of the test method document available during tests.
   3. Record the type of failure that occurred, other information required by test method, and the information required on the Field Quality Control Log.
   4. When performing destructive tests, also inspect the opened joint for proper installation characteristics recommended by manufacturer, and report any deficiencies.
   5. Deliver the samples removed during destructive tests in separate sealed plastic bags, identified with project, location, test date, and test results, to **<<Owner>>**.
   6. If any combination of sealant type and substrate does not show evidence of minimum adhesion or shows cohesion failure before minimum adhesion, report results to **<<Architect>>**.

E. Destructive Field Adhesion Test: Test for adhesion in accordance with **<<ASTM C1521>>**, using Destructive Tail Procedure.
   1. Sample: At least **<< 18 inches; or ___ inches>>** long.
   2. Minimum Elongation Without Adhesive Failure: Consider the tail at rest, not under any elongation stress; multiply the stated movement capability of the sealant in percent by two; then multiply **<< 1 inch; or ___ inch>>** by that percentage; if adhesion failure occurs before the 1-inch mark is that distance from the substrate, the test has failed.
   3. If either adhesive or cohesive failure occurs before minimum elongation, take necessary measures to correct conditions and retest; record each modification to products or installation procedures.

DRAFT

1.04 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Manufacturer Warranty: Provide **<< 2-year; or 5-year>>** manufacturer warranty for installed sealants and accessories that fail to achieve a watertight seal, exhibit loss of adhesion or cohesion, or do not cure. Complete forms in **<<Owner>>**'s name and register with manufacturer.

PART 2 PRODUCTS

2.01 JOINT SEALANT APPLICATIONS

A. Scope:
   1. Interior Joints: Do not seal interior joints unless specifically indicated to be sealed. Interior joints to be sealed include, but are not limited to, the following items.
      a. Joints between door, window, and other frames and adjacent construction.
      b. Wall and ceiling joints.
      c. Joints between plumbing fixtures and floor or wall construction.
      d. In sound-rated wall and ceiling assemblies, gaps at electrical outlets, wiring devices, piping, and other openings; between wall/ceiling and other construction; and other flanking sound paths.
         1) Exception: Intentional gaps and openings in gypsum board finished stud walls and suspended ceilings.
         2) Exception: Through-penetrations in sound-rated assemblies that are also fire-rated.
      e. Other joints indicated below.
   2. Do Not Seal:
      a. Intentional weep holes in masonry.
      b. Joints indicated to be covered with expansion joint cover assemblies or other covering devices.
      c. Joints where sealant is specified to be furnished and installed by manufacturer of product to be sealed.
      d. Joints where sealant installation is specified in other sections.

B. Exterior Joints: Use non-sag non-staining silicone sealant (Type **<< ES-1>>**), unless otherwise indicated.
   1. Type **<< ES-5>>** - Control and Expansion Joints in Concrete Paving: Self-leveling polyurethane "traffic-grade" sealant.
   2. Type **<< ES-1 or ES-2>>** - Joints between walls and frames of doors, windows, and louvers.
   3. Type **<< STS-1>>** - Butyl for bedding joints, and for lap joints in sheet metal fabrications and fabricated metal panels, unless sealant is factory-provided in laps.

C. Interior Joints: Use non-sag polyurethane sealant (**<< ES-4>>**), unless otherwise indicated.
   1. Type **<< ES-3>>** - Joints between Fixtures in Wet Areas and Floors, Walls, and Ceilings: Mildew-resistant silicone sealant; **<< white; clear; or _____>>**.
      a. Exception: Refer to Division 9 Section "Tiling" for sealants to be used for floor and wall tiles, including joints between tile and plumbing fixtures.
   2. Type **<< ES-5>>** - Floor Joints: Self-leveling polyurethane "traffic-grade" sealant.

DRAFT

3. Type **<< AS-1>>** - Joints at sound-rated or acoustic assemblies, and at full-height panel wall and partition assemblies indicated to have sound attenuation batts.
4. Type **<< LS-1>>** - Joints around perimeters of interior doors, windows, elevator entrances, and similar framed openings.

D. Interior Wet Areas: **<< Bathrooms; restrooms; kitchens; food service areas; food processing areas; and _____>>**; fixtures in wet areas include **<< plumbing fixtures; food service equipment; countertops; cabinets; other similar items; and _____>>**.

E. Sound-Rated Assemblies: Walls and ceilings identified as STC-rated, sound-rated, or acoustical.

2.02 JOINT SEALANTS - GENERAL

A. Low-Emitting Materials:
1. Paints and Coatings: Paints and coatings field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet applicable VOC limits of **<<CARB (SCM)>>** or **<<SCAQMD 1113>>**.
2. Adhesives and Sealants: Adhesives and sealants field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet the chemical content requirements of **<<SCAQMD 1168>>**.

2.03 NONSAG JOINT SEALANTS

A. Type **<< ES-1>>** - Low-Modulus Non-Staining Silicone Sealant: **<<ASTM C920>>**, Grade NS, Uses M and A; not expected to withstand continuous water immersion or traffic.
1. Movement Capability: **<< Plus 100 percent and minus 50 percent; Plus and minus 50 percent; Plus and minus 35 percent; Plus and minus 25 percent; or Plus and minus 50 percent>>**, minimum.
2. Nonstaining to Porous Stone: Nonstaining to light-colored natural stone when tested in accordance with **<<ASTM C1248>>**.
3. Dirt Pick-Up: Reduced dirt pick-up compared to other silicone sealants.
4. Color: To be selected by Owner and Architect from manufacturer's **<< full; standard; custom; or _____>>** range.
5. Products:
   a. Master Builders Solutions; MasterSeal NP 100.
   b. Momentive Performance Materials, Inc/GE Silicones**<< ; SCS9000 SilPruf NB - Non-Staining Silicone Weatherproofing Sealant; ; SCS 2000 SilPruf; or None - N/A>>**.
   c. Pecora Corporation**<< ; Pecora 890 NST (Non-Staining Technology); ; _____; or None - N/A>>** or 890 FST (Field Tint).
   d. Polymeric Systems, Inc.; PSI-641.
   e. Tremco Commercial Sealants & Waterproofing**<< ; Spectrem 3; ; ____; or None - N/A>>** or Spectrem 4-TS (Field Tint).
   f. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Type **<< ES-2>>** - Medium-Modulus Non-Staining Silicone Sealant: **<<ASTM C920>>**, Grade NS, Uses M and A; not expected to withstand continuous water immersion or traffic.
1. Movement Capability: **<< Plus 100 percent and minus 50 percent; Plus and minus 50 percent; Plus and minus 35 percent; Plus and minus 25 percent; or Plus and minus 50 percent>>**, minimum.

DRAFT

2. Non-Staining To Porous Stone: Non-staining to light-colored **<< natural stone; marble; or _____>>** when tested in accordance with **<<ASTM C1248>>**.
3. Dirt Pick-Up: Reduced dirt pick-up compared to other silicone sealants.
4. Color: To be selected by **<<Architect>>** from manufacturer's **<< full; standard; custom; or _____>>** range.
5. Manufacturers:
   a. Dow Chemical Company**<< ; DOWSIL 795 Silicone Building Sealant; ; ____; or None - N/A>>**.
   b. Momentive Performance Materials, Inc/GE Silicones**<< ; SCS9000 SilPruf NB - Non-Staining Silicone Weatherproofing Sealant; ; SCS 2000 SilPruf; or None - N/A>>**.
   c. Pecora Corporation**<< ; Pecora 864 NST (Non-Staining Technology); ; Pecora 895 NST (Non-Staining Technology); ; _____; or None - N/A>>**.
   d. Tremco Commercial Sealants & Waterproofing**<< ; Spectrem 2; ; ____; or None - N/A>>**.
   e. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

C. Type **<< ES-3>>** - Mildew-Resistant Silicone Sealant: **<<ASTM C920>>**, Grade NS, Uses M and A; single component, mildew resistant; not expected to withstand continuous water immersion or traffic. Neutral- or acid-curing per manufacturer standard.
1. Color: **<< White; Clear; Aluminum; Black; or _____>>**.
2. Products:
   a. Dow; DOWSIL 786 Mildew Resistant.
   b. Pecora Corporation**<< ; Pecora 898 NST (Non-Staining Technology); ; _____; or None - N/A>>**.
   c. Tremco Commercial Sealants & Waterproofing; Tremsil 600 or Tremsil 200.
   d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

D. Type **<< ES-4>>** - Polyurethane Sealant: **<<ASTM C920>>**, Grade NS, Uses M and A; **<< single or multi-component; single-component; multi-component; or _____>>**; not expected to withstand continuous water immersion or traffic.
1. Movement Capability: **<< Plus 100 percent, minus 50 percent; Plus and minus 50 percent; Plus and minus 35 percent; Plus and minus 25 percent; Plus and minus 12.5 percent; Plus and minus ____ percent; or _____>>**, minimum.
2. Color: To be selected by **<<Architect>>** from manufacturer's **<< full; standard; custom; or _____>>** range.
3. Products:
   a. ITW Polymers Sealants; Permathane SM 7200.
   b. Master Builders Solutions by BASF**<< ; MasterSeal NP1; ; MasterSeal NP2; or None - N/A>>**.
   c. Pecora Corporation**<< ; DynaTrol II; ; ____; or None - N/A>>**.
   d. Sika Corporation**<< ; Sikaflex-2c NS; ; _____; or None - N/A>>**.
   e. Tremco Commercial Sealants & Waterproofing**<< ; Dymeric 240 FC; ; ____; or None - N/A>>** or Vulkem 227.
   f. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

DRAFT

E. Type **<< LS-1>>** - Acrylic Emulsion Latex: Water-based; **<<ASTM C834>>**, single component, non-staining, non-bleeding, non-sagging; not intended for exterior use.
   1. Color: To be selected by **<<Architect>>** from manufacturer's **<< full; standard; custom; or _____>>** range.
   2. Grade: **<<ASTM C834>>**; **<< Grade Minus 18 Degrees C (0 Degrees F); Grade 0 Degrees C (32 Degrees F); Grade NF; or _____>>**.
   3. Products:
      a. Bostik, Inc; Chem-Calk 600.
      b. ITW Polymers Sealants; SM 8200.
      c. Master Builders Solutions**<< ; MasterSeal NP 520; ; _____; or None - N/A>>**.
      d. Pecora Corporation**<< ; AC-20 +Silicone; ; AIS-919; ; AVW-920; ; Tilt-Seal; ; ____; or None - N/A>>**.
      e. Tremco Commercial Sealants & Waterproofing**<< ; Tremflex 834; ; ____; or None - N/A>>**.
      f. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

F. Type **<< AS-1>>** - Acrylic Emulsion Latex: Water-based; **<<ASTM C834>>**, single component, non-staining, non-bleeding, non-sagging acoustical sealant.
   1. Color: **<< Standard colors matching finished surfaces; As shown on drawings; As scheduled; or _____>><< , Type OP (opaque); , Type C (clear or translucent); , _____; or None - N/A>>**.
   2. Grade: **<<ASTM C834>>**; **<< Grade 0 Degrees F (Minus 18 Degrees C); Grade 32 Degrees F (0 Degrees C); Grade NF; or _____>>**.
   3. Manufacturers:
      a. Accumetric LLC; BOSS 826 Acoustical Sound Sealant.
      b. Franklin International, Inc**<< ; Titebond GREENchoice Acoustical Smoke & Sound Sealant; ; Titebond Painter's Plus Caulk; ; Titebond Painter's Caulk; ; ____; or None - N/A>>**.
      c. Hilti, Inc**<< ; CP 506 Smoke and Acoustical Sealant; ; _____; or None - N/A>>**.
      d. Master Builders Solutions**<< ; MasterSeal NP 520; ; _____; or None - N/A>>**.
      e. Momentive Performance Materials, Inc/GE Silicones; RCS20 Acoustical.
      f. Pecora Corporation; AC-20 FTR or AIS-919.
      g. Specified Technologies Inc**<< ; Smoke N' Sound Acoustical Sealant; ; Smoke N' Sound Acoustical Spray; ; _____; or None - N/A>>**.
      h. Tremco Commercial Sealants & Waterproofing**<< ; Tremstop Smoke and Sound; ; ____; or None - N/A>>**.
      i. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

G. Type **<< SRS-1>>** - Butyl Sealant: Solvent-based; **<<ASTM C1311>>**; single component, nonsag; not expected to withstand continuous water immersion or traffic.
   1. Products:
      a. Bostik, Inc; Chem-Calk 300.
      b. Pecora Corporation**<< ; Pecora BC-158 Butyl Rubber Sealant; ; _____; or None - N/A>>**.
      c. Tremco Inc.; Tremco Butyl Sealant.
      d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

DRAFT

2.04 SELF-LEVELING JOINT SEALANTS

A. Type **<< ES-5>>** - Self-Leveling Polyurethane Sealant for Traffic: Polyurethane; **<<ASTM C920>>**, Grade P, Uses T, M and A; **<< single or multi-component; single component; multi-component; or _____>>**; explicitly approved by manufacturer for traffic exposure.
   1. Movement Capability: **<< Plus and minus 25 percent; Plus and minus ____ percent; or _____>>**, minimum.
   2. Products:
      a. Bostik, Inc.; Chem-Calk 550.
      b. Pacific Polymers, Inc; Elast-Thane 227 Type 1 (Self-Leveling).
      c. Pecora Corporation; Dynatrol II-SL.
      d. Polymeric Systems, Inc; PSI-270SL.
      e. Tremco Commercial Sealants & Waterproofing; Vulkem 445SSL.
      f. W. R. MEADOWS, Inc; POURTHANE SL.
      g. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.05 ACCESSORIES

A. Sealant Backing Materials, General: Materials placed in joint before applying sealants; assists sealant performance and service life by developing optimum sealant profile and preventing three-sided adhesion; type and size recommended by sealant manufacturer for compatibility with sealant, substrate, and application.

B. Backing Tape: Self-adhesive polyethylene tape with surface that sealant will not adhere to and recommended by tape and sealant manufacturers for specific application.

C. Masking Tape: Self-adhesive, nonabsorbent, nonstaining, removable without adhesive residue, and compatible with surfaces adjacent to joints and sealants.

D. Joint Cleaner: Noncorrosive and nonstaining type, type recommended by sealant manufacturer; compatible with joint forming materials.

E. Primers: Type recommended by sealant manufacturer to suit application; nonstaining.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that joints are ready to receive work.

B. Verify that backing materials are compatible with sealants.

C. Verify that backer rods are of the correct size.

D. Preinstallation Adhesion Testing: Install a sample for each test location indicated in the test plan.
   1. Test each sample as specified in PART 1 under QUALITY ASSURANCE article.
   2. Notify **<<Architect>>** of date and time that tests will be performed, at least **<< seven days; or _____ days>>** in advance.
   3. Record each test on Preinstallation Adhesion Test Log as indicated.
   4. If any sample fails, review products and installation procedures, consult manufacturer, or take other measures that are necessary to ensure adhesion; retest in a different location; if unable to obtain satisfactory adhesion, report to **<<Architect>>**.
   5. After completion of tests, remove remaining sample material and prepare joints for new sealant installation.

DRAFT

3.02 PREPARATION

A. Remove loose materials and foreign matter that could impair adhesion of sealant.

B. Clean joints, and prime as necessary, in accordance with manufacturer's instructions.

C. Perform preparation in accordance with manufacturer's instructions and **<<ASTM C1193>>**.

D. Mask elements and surfaces adjacent to joints from damage and disfigurement due to sealant work; be aware that sealant drips and smears may not be completely removable.

E. Concrete Floor Joints That Will Be Exposed in Completed Work: Test joint filler in an inconspicuous area to verify that it does not stain or discolor slab.

3.03 INSTALLATION

A. Install this work in accordance with sealant manufacturer's requirements for preparation of surfaces and material installation instructions.

B. Provide joint sealant installations complying with **<<ASTM C1193>>**.

C. Install acoustical sealant application work in accordance with **<<ASTM C919>>**.

D. Measure joint dimensions and size joint backers to achieve width-to-depth ratio, neck dimension, and surface bond area as recommended by manufacturer, except where specific dimensions are indicated.

E. Install bond breaker backing tape where backer rod cannot be used.

F. Install sealant free of air pockets, foreign embedded matter, ridges, and sags, and without getting sealant on adjacent surfaces.

G. Do not install sealant when ambient temperature is outside manufacturer's recommended temperature range, or will be outside that range during the entire curing period, unless manufacturer's approval is obtained and instructions are followed.

H. Nonsag Sealants: Tool surface **<< concave; flush; slightly recessed; or _____>>**, unless otherwise indicated; remove masking tape immediately after tooling sealant surface.

I. Concrete Floor Joint Filler: After full cure, shave joint filler flush with top of concrete slab.

3.04 FIELD QUALITY CONTROL

A. Perform field quality control inspection/testing as specified in PART 1 under QUALITY ASSURANCE article.

B. Destructive Adhesion Testing: If there are any failures in first **<< 1,000 linear feet; or ___ linear feet>>**, notify **<<Architect>>** immediately.

C. Remove and replace failed portions of sealants using same materials and procedures as indicated for original installation.

D. Repair destructive test location damage immediately after evaluation and recording of results.

3.05 CLEANING AND PROTECTION

A. Protect installed joint sealants from soiling or damage.

B. Where joint sealants have become soiled or damaged due to construction activities, the Contractor shall be responsible for cleaning joint sealants at the time of Substantial Completion.

C. Where cleaning does not restore finish to an acceptable level upon Owner's inspection, the Contractor shall be responsible for removing and replacing joint sealant.

END OF SECTION 079200

DRAFT

SECTION 079500
EXPANSION CONTROL

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ITS (DIR) - Directory of Listed Products.

B. UL (DIR) - Online Certifications Directory.

C. UL 2079 - Standard for Tests for Fire Resistance of Building Joint Systems.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Installation Templates: For frames and anchors to be embedded in concrete or masonry, furnish templates to relevant installers; include installation instructions and tolerances.

1.03 SUBMITTALS

A. Product Data: Provide joint assembly profiles, profile dimensions, **<< anchorage devices; available colors and finish; and _____>>**.

B. Shop Drawings: Indicate joint and splice locations, miters, layout of the work, **<< affected adjacent construction; anchorage locations; and _____>>**.

C. Selection Samples: Provide manufacturer's color charts, for exposed finish options for each expansion joint product.

PART 2 PRODUCTS

2.01 EXPANSION JOINT COVER ASSEMBLIES, GENERAL

A. Expansion Joint Cover Assemblies - General: Factory-fabricated and assembled; designed to completely fill joint openings, sealed to prevent passage of air, dust, water, smoke; suitable for traffic expected.

1. Source Limitations: Provide each type of joint through a single source from a single manufacturer.
2. Joint Dimensions and Configurations: Provide expansion joint covers sized for **<< 1-inch; 2-inch; 3-inch; 4-inch; or _____>>** joint widths, unless otherwise indicated.
   ******Architect/Structural Engineer to verify joint size on job-to-job basis******
3. Joint Movement Capability: If not indicated, provide minimum 50 percent (+25/-25) joint movement capability .
4. Lengths: Provide covers in full lengths required; avoid splicing wherever possible.
5. Anchors, Fasteners, and Fittings: Provided by cover manufacturer.
6. Finish: Color for all joints shall be selected from manufacturer's full range of available colors.
   a. Where length of expansion joint spans multiple finishes (for example, exterior wall assembly with face brick 1, precast sill/water table, and face brick 2), provide different finish joint color at each building finish material.

B. Floor Joint Covers: Coordinate with indicated floor coverings.

C. Exterior Joints at Cavity/Masonry Veneer Walls: Provide a "double" preformed foam joint at exterior joints, with aesthetic joint at face of veneer masonry, and a functional joint (manufacturer's standard neutral color) in the plane of insulation to maintain continuity of insulation and water and air barriers.

DRAFT

D. Covers in Gypsum Board Assemblies: Provide style with anchoring wings that can be completely covered by joint compound.

E. Covers in Fire Rated Assemblies: Provide manufacturer's standard fire barrier product, for a complete cover assembly having fire rating equivalent to that of assembly into which it is installed.
   1. Acceptable Evaluation Agencies: **<<UL (DIR)>>** and **<<ITS (DIR)>>**.

F. Roof Expansion Joints: Refer to Division 7 Section "Roof Specialties."

2.02 INTERIOR FLOOR JOINTS

A. Interior Floor Joints (Metal; Surface Mounted): Serrated, satin anodized aluminum plate with exposed fasteners.
   1. Products: (Floor-to-floor and floor-to-wall models)
      a. Balco; RPA-*x* and RPAL-*x*.
      b. Construction Specialties; PCS2G-*xxx* and PCWS2G-*xxx*.
      c. Erie Metal Specialties; ALCP-*xxx* and ALCPW-*xxx*.
      d. Inpro; 808-A01-*xxx* and 808-A02-*xxx*.
      e. MM Systems; X-U-*x* and X-W-*x*.

2.03 INTERIOR WALL JOINTS

A. Interior Wall Joints (Metal; Surface Mounted): Smooth, satin anodized aluminum; with mounting flange on one side of joint and "snap-on" cover installation; no exposed fasteners.
   1. Products: (Wall-to-wall and wall-to-corner models)
      a. Balco; WD-*x* and WDC-*x*.
      b. Construction Specialties; ASM-*xxx* and ASMC-*xxx*.
      c. Erie Metal Specialties; EBWF-*xxx* and EBWF-*xxx*W.
      d. Inpro; 811-A07-*xxx* and 811-A09-*xxx*.
      e. MM Systems; EX-K*x* and EX-L*x*.

2.04 INTERIOR CEILING JOINTS

A. Interior Ceiling Joints (Flush, with Resilient Infill, at Drop-In Ceilings): Coordinate with Division 9 Section "Acoustical Ceilings". ******Joint for use with acoustical ceiling panels******
   1. Products: (Ceiling-to-ceiling and ceiling-to-wall models)
      a. Balco; ACWW-*x* and ACWC-*x*.
      b. Construction Specialties; FCS-*xxx* and FCSC-*xxx*.
      c. Erie Metal Specialties; ELCE-*xxx* and ELCE-*xxx*W.
      d. Inpro; 115-A24-*xxx* and 115-A18-*xxx*.
      e. MM Systems; VSG-*xxx* and VSGL-*xxx*.

B. Interior Ceiling Joints (Surface Mounted, with Resilient Infill, at Gypsum Ceilings): Flanges shall be mud-in type to be covered by drywall finisher and shall not be exposed in finished work. ******Joint for use with gypsum board ceilings******
   1. Products: (Ceiling-to-ceiling and ceiling-to-wall models)
      a. Balco; GCWW-*x* and GCWC-*x*.
      b. Construction Specialties; FWF-*xxx* and FWFC-*xxx*.
      c. Inpro; 114-A07-*xxx* and 114-A09-*xxx*.
      d. MM Systems; VSW-*xxx* and VSWL-*xxx*.

DRAFT

2.05 EXTERIOR JOINTS

A. Exterior Wall Joints (Preformed Foam): Pre-compressed and self-expanding, open-cell urethane foam. Pre-coated with water repellant coating on exterior surface, and with adhesive coating on sides to fit in opening. Joint shall allow for minimum 50% total movement (25% expansion, 25% contraction).
   1. Products:
      a. Construction Specialties; Model VF.
      b. EMSEAL Joint Systems, Ltd.; Colorseal.
      c. Erie Metal Specialties; CSS-Series.
      d. MM Systems; Series ESS.
      e. Schul International Company, Inc.; Color Econoseal.
      f. Watson Bowman Acme Corp; WeatherSeal II.

B. Fire-Rated Wall and Floor Joints (Preformed Foam): Pre-compressed and self-expanding, open-cell urethane foam; suitable for exterior or interior joints. Pre-coated with water repellant coating on exterior surface, and with adhesive coating on sides to fit in opening. Material shall be 2 hour fire barrier, tested to **<<UL 2079>>**.
   1. Products:
      a. Construction Specialties; Model 2VFR (walls) and 2HFR (floors).
      b. EMSEAL Joint Systems, Ltd.; Emshield WFR2 (walls) and DFR2 (floors).
      c. Erie Metal Specialties; CSS(2FRV) (walls) and CST(2FRH) (floors).
      d. MM Systems; Model SIF-FR (walls) and EIS-FR (floors).
      e. Schul International Company, Inc.; Sealtite 2FR-V (walls) and 2FR-H (floors).
      f. Watson Bowman Acme Corp; Wabo FireShield FSV (walls) and FSH (floors).

2.06 ACCESSORIES

A. Anchors and Fasteners: As recommended by cover manufacturer.
   1. Metal Anchors: Provide galvanized anchors where embedded in concrete or in contact with cementitious materials.

B. Aluminum Components in Contact with Cementitious Materials: Provide protective coating of type recommended by manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that joint preparation and dimensions are acceptable and in accordance with manufacturer's requirements.

B. Verify that frames and anchors installed by others are in correct locations and suitable for installation of remainder of assembly.

3.02 INSTALLATION

A. Install components and accessories in accordance with manufacturer's instructions.

B. Align work plumb and level**<< , flush with adjacent surfaces; or None - N/A>>**.

C. Rigidly anchor to substrate to prevent misalignment.

3.03 PROTECTION

A. Do not permit traffic over unprotected floor joint surfaces.

DRAFT

B. Where applicable, provide strippable coating or tape to protect finish surface; remove immediately prior to Substantial Completion.

END OF SECTION 079500

DRAFT

SECTION 081113
HOLLOW METAL DOORS AND FRAMES

PART 1 GENERAL

1.01 REQUIREMENTS OF REGULATORY AGENCIES

A. Hollow Metal and installation shall comply with provisions and standards listed. The latest published edition of each standard applies.

B. ASTM - American Society for Testing and Materials
   1. ASTM A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
   2. ASTM A 924 - Standard Specification for General Requirements for Steel Sheet, Metallic Coated by the Hot Dip Process.
   3. ASTM A1008 - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, High Strength Low-Alloy and High-Strength Low-Alloy with Improved Formability.
   4. ASTM A1011 - Standard Specification for Steel, Sheet and Strip, Hot Rolled, Carbon, Structural, High-Strength Low-Alloy, High Strength Low-Alloy with Improved Formability, and Ultra-High Strength
   5. ASTM E90 - Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions.
   6. ASTM E413 - Classification for Rating Sound Insulation.
   7. ASTM E1332 - Classification for Rating Outdoor-Indoor Sound Attenuation.
   8. ASTM C1363 - Standard Test Method for Temperature Calibration of Thermomechanical Analyzes by means of hot box apparatus.

C. ANSI - American National Standards Institute
   1. ANSI/ASA A117.1 - Accessible and Useable Building and Facilities
   2. ANSI/BHMA A156.115 - American National Standard for Hardware Preparations in Steel Doors and Steel Frames.
   3. ANSI A156.7 - Hinge Template Dimensions.
   4. ANSI/SDI A250.3 - Test Procedure and Acceptance Criteria for Factory Applied Finish Coatings for Steel Doors and Frames.
   5. ANSI A250.4 - Test Procedure and Acceptance Criteria for Physical Endurance for Steel Doors and Hardware Reinforcing.
   6. ANSI A250.8 - SDI-100 Recommended Specifications for Standard Steel Doors and Frames.
   7. ANSI/S**<<ANSI/SDI A250.10>>** - Test Procedure and Acceptance Criteria for Prime Painted Steel Surfaces for Steel Doors and Frames.
   8. ANSI/SDI A250.11 - Recommended Erection Instructions for Steel Frames

D. SDI - Steel Door Institute
   1. SDI 111 - Recommended Details and Guidelines for Standard Steel Doors and Frames and Accessories.
   2. SDI 112 - Zinc-Coated (Galvanized/Galvannealed) Standard Steel Doors and Frames.
   3. SDI 113 - Standard Practice for Determining the Steady-State Thermal Transmission of Steel Door and Frame Assemblies
   4. SDI 117 - Manufacturing Tolerances for Standard Steel Doors and Frames.
   5. SDI 118 - Basic Fire Door Requirements.

DRAFT

6. SDI 122 - Installation and Troubleshooting Guide for Standard Steel Doors and Frames.
7. SDI 124 - Maintenance of Standard Steel Doors and Frames.

E. NAAMM/HMMA - Hollow Metal Manufacturers Association
1. HMMA 810 TN01-03 - Defined Undercuts
2. HMMA 820 TN01-03 - Grouting Hollow Metal Frames
3. HMMA 820 TN02-03 - Continuously Welded Frames
4. HMMA 820 TN03 - Guidelines for Glazing of Hollow Metal Doors and Frames
5. HMMA 830 TN01-18 - Electrified Hardware Preparations
6. HMMA 840 - Guide Specification for Installation and Storage of Hollow Metal Doors and Frames

F. Building Code references
1. IBC - International Building Code
2. NFPA 80 - Standard for Fire Doors and Other Opening Protectives.
3. NFPA 101 - Life Safety Code
4. NFPA 105 - Standard for the Installation of Smoke Door Assemblies and Other Opening Protectives
5. NFPA 252 - Standard Method of Fire Tests of Door Assemblies
6. ANSI/ASA S12.60 - Acoustical Performance Criteria, Design Requirements, and Guidelines for Schools
7. ANSI/UL 10C - Standard for Safety for Positive Pressure Fire Tests of Door Assemblies
8. UL 1784 - Air Leakage Tests of Door Assemblies
9. UL - Building Materials Directory; Underwriters Laboratories Inc
10. Intertek Testing Services (WH/Warnock Hersey)

DRAFT

1.02 SUPPLIER QUALIFICATIONS

A. Hollow Metal Supplier shall maintain at the location which will be managing the project, a credentialed Architectural Hardware Consultant (AHC), Certified Door Consultant (CDC) or Door and Hardware Consultant (DHC) as a full time employee, and member in good standing of DHI - Door Security + Safety Professionals.

B. Door Consultant on the project shall be available throughout the project to meet with the Contractor, Architect or Owner as requested.

C. The Door Supplier shall have completed a minimum of three education facilities over the last five years which were similar in size, material, design and extent to that indicated for the project as determined by the Architect. If requested by the Architect, submit a list of projects listing the project name, location, Owner, Architect and Contractor.

D. As a requirement, the Door and Frame Supplier shall maintain an office and warehouse complete with a hollow metal inventory within a one hundred (100) mile radius of the jobsite. Supplier shall further have a qualified field service staff available to service the project.

E. Failure to meet the above requirements will disqualify the bidder.

1.03 SUBMITTALS

A. Submit digital copies of the hollow metal shop drawing submittals with complete details for the project, including copies of technical information and other pertinent data required to indicate compliance with the specification.
1. Submit Shop Drawings which reference designations noted on the door schedule drawings. Shop Drawings shall include opening size, handing of doors, details of each

frame type, elevations of door types, location, hardware set numbers, details of splice connections, fire label requirements, temperature rise requirements, grout guard detail, hardware mounting locations, glass moldings, welding details, internal reinforcing, anchor details, high frequency hinge reinforcement, full width frame head reinforcement channel, top caps and other pertinent information.

B. Data submitted shall be job specific and shall include product data and printed information in sufficient detail and scope to verify compliance with requirements of the contract documents. Where contents of submitted literature from manufacturers include data NOT job specific, clearly identify products being submitted for review.

C. Provide copies of Certificate of Compliance for all fire rated door assemblies, all smoke and draft assemblies and all temperature fire rated assemblies.

D. The shop drawing submittal shall include copies of the latest edition of the following documents:
   1. ANSI/A250.11 - Recommended Erection Instructions for Steel Frames
   2. HMMA 810 TN01-03 - Defined Undercuts
   3. HMMA 820 TN01-03 - Grouting Hollow Metal Frames
   4. HMMA 820 TN02-03 - Continuously Welded Frames
   5. HMMA 820 TN03 - Guidelines for Glazing of Hollow Metal Doors and Frames
   6. HMMA 830 TN01-18 - Electrified Hardware Preparations
   7. HMMA 840 - Guide Specification for Installation and Storage of Hollow Metal Doors and Frames

E. If requested by the Architect, furnish two (2) hard copies of the submittals.

F. Contractor to stamp shop drawings verifying they have been coordinated and reviewed for completeness and compliance with the contract documents.

G. Shop drawings submitted without the above information will be considered incomplete and will be rejected.

H. Follow the same procedures for re-submittal as the initial submittal indicating the revised dates.

1.04 ENVIRONMENTAL SUBMITTAL

A. Provide data to ensure compliance with International Energy Conservation Code (IECC) regarding U-value of 0.61 or less at exterior swinging doors.

B. When required to be registered with the US Green Buildings Council and certified under the LEED Green Buildings Program, provide products and procedures necessary to obtain LEED credits required in this Section. Although other Sections may specify some requirements that contribute to LEED credits, the Contractor shall determine additional materials and procedures necessary to obtain LEED credits indicated. Contractor to determine a combination of credit options best suited for achieving credits required.

C. Building Product Disclosure and Optimization
   1. MRc2, Building Product Disclosure and Optimization, Environmental Product Declarations (EPD): Option 1. Specified product(s) must demonstrate a LEED v4, v4.1 compliant Environmental Product Declaration for permanently installed products which meet one of the disclosure criteria below:
      a. Product-Specific Declaration: Valued as one quarter (1/4) of a product.
      b. Industry-Wide (Generic) EPD: Valued as one half (1/2) of a product.
      c. Product-Specific Type III EPD: Valued as one whole product.
   2. MRc3, Building Product Disclosure and Optimization, Sourcing of Raw Materials: Option 1, Raw Material Source and Extraction Reporting. Specified Product Manufacturers must

DRAFT

be able to provide a GRI or ISO 26000 Sustainability Report which includes the Specified Product(s) raw material extraction location by country for at least 95% of the materials ingredients. The Sustainability Report should also explain the biodiversity impacts associated with the stated raw material extraction locations. The Report should be Third Party Assured.

3. MRc4, Building Product Disclosure and Optimization, Material Ingredients, Option 1: Material Ingredient Reporting. Specified Product(s) must be able to demonstrate the chemical inventory of the Specified Product(s) to at least 0.1% (1000 ppm), using one of the following disclosure criteria. Third Party Verified Material Ingredient Reports are preferred.
   a. Manufacturer Inventory (MI).
   b. Health Product Declarations (HPDs).
   c. Cradle to Cradle (C2C) Material Health Certificates or Certification.
   d. Declare Labels.

1.05 QUALITY ASSURANCE

A. Conform to applicable codes for fire ratings. It is the intent of the specification that doors and frames comply or exceed the standards for labeled openings. In case of conflict between types required for fire protection, furnish type required by NFPA, UL and ITS.

B. Supplier shall be responsible for the proper coordination, function and details of the doors and frames required for all openings.

C. In the case of conflict between the drawings and specifications, provide doors and frames of equal quality to that specified required to meet the intent of the specifications. The Contractor shall notify the Architect of discrepancies before materials are fabricated.

D. The Contractor shall field verify existing door opening conditions where existing doors or frames are to remain or be replaced in part, for coordination with the specified hardware and notify the Architect of conflicts prior to proceeding. The Contractor is responsible for details and accuracy and correlating all quantities and dimensions. Failure to notify the Architect of conflicts that result in additional work or material is the responsibility of the Contractor, with no cost to the Owner.

E. Work performed and materials furnished shall be in compliance with the intent of the design.

F. In the event the Architect finds the materials or the finished product in which materials used are not in complete conformity with the contract requirements and have resulted in an inferior or unsatisfactory product, the materials shall be removed and replaced.

G. Underwriters' Laboratories and Intertek Testing Services / Warnock Hersey, labeled fire doors and frames:
   1. Label fire doors and frames listed in accordance with Underwriters Laboratories standard UL 10C, and Positive Pressure Fire Tests of Door Assemblies.
   2. Construct and install doors and frames in accordance with NFPA 80.
   3. Manufacture fire rated doors under the UL or ITS/WH factory inspection program providing the degree of fire protection capability indicated by the door schedule drawings.
   4. Metal fire labels shall be permanently affixed to the door and frame in compliance with NFPA 80. Mylar or stamped labels are not permitted.
   5. No field modifications shall be made to the fire door assembly that would void the label. Field modifications to a fire door shall be in accordance with NFPA 80. Work shall be done by a licensed labeling service approved by the manufacturer.
   6. Labels are not to be removed, defaced or made illegible while the door is in service per NFPA 80.

DRAFT

7. Door and frame labels are not to be factory or field primed or painted. The Contractor shall be responsible for all costs incurred to clean labels.
8. Apply labels in locations that are clearly visible and convenient for identification by the AHJ, Owner and Architect after installation.
9. Fire doors and frames provided with continuous hinges shall have the physical label for the frame located on the rabbet of the head jamb and on the top channel of the door.

H. Oversize Construction Certification: For door assemblies required to be fire rated and exceeding limitations of labeled assemblies, submit certification of a testing agency acceptable to authorities having jurisdiction that each door and frame assembly has been constructed to comply with design, materials, and construction equivalent to requirements for labeled construction.

1.06 WARRANTY

A. Provide Manufacturer's standard warranty, signed by the Manufacturer, in which Manufacturer agrees to repair or replace doors that are defective in material or workmanship.

1.07 SAMPLES

A. If requested by the Architect, submit a cut-away sample door with provisions for lockset, hinge and corner section of frame.
1. Construct door sample to show vertical edge construction, top and bottom construction, insulation, face stiffeners and hardware reinforcements. Include louver sections and glazing stop where applicable.
2. Construct frame sample to show frame profile, welded corner joint, welded hinge reinforcement, dust cover boxes, floor anchors and wall anchors. Include panel and louver sections and glazing stops where applicable.
3. All samples submitted must represent, in all respects, the quality of work to be furnished.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Storage of Doors:
1. Store doors vertically in a dry area, under proper cover. Place the units on 4" high wood sills on floors in a manner that will prevent rust and damage. Any wraps or covers shall be removed from doors upon receipt at the jobsite. Provide ample air circulation between the doors. Proper storage shall meet the requirements of ANSI/SDI A250.10 and HMMA 840.

B. Storage of Frames:
1. Store frames in an upright position with heads uppermost under cover on wood sills on floors in a manner that will prevent rust and damage. Remove any wraps or covers upon receipt at the jobsite. Store assembled frames in a vertical position, five units maximum in a stack. Provide a 2" space between frames to permit air circulation.
2. Store all hollow metal products in a manner to prevent exposure to adverse environmental elements and maintain the requirements of ANSI/SDI A250.10 and HMMA 840.
3. Sand, touch up and clean prime painted surfaces prior to finish painting in accordance with the manufacturer’s instructions. Zinc base primer is to be used on all doors and frames.

1.09 COORDINATION

A. Coordinate Work with other sections involving manufacture or fabrication of internal cutouts and reinforcement for door hardware and electrified items.

B. Coordinate hardware mounting heights as specified under Section 087100.

DRAFT

C. Coordinate frame undercuts and door clearances with sill and floor details. Interior doors to have 3/8” clearance. Clearance is distance between the bottom of the door and the top of the material directly below the door. Contractor shall verify field conditions to ensure proper clearances.

D. Factory prep hollow metal frames to receive security components. Refer to security drawings for details, diagrams and locations.

E. The Contractor shall field verify existing door opening conditions where existing doors or frames are to remain or be replaced in part, for coordination with the specified hardware and notify the Architect of conflicts prior to proceeding. Failure to notify the Architect of conflicts that result in additional work or material is the responsibility of the Contractor, with no cost to the Owner.

F. Field dimensions need to be verified and approved prior to fabrication.

G. The supplier shall be responsible for proper coordination, templating, dimensions and all details required for doors, frames and hardware application.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Acceptable manufacturers for doors and frames specified are listed below. Only the products of the listed manufacturers will be accepted. No other alternates will be accepted.
   1. Curries.
   2. Metal Products Inc.
   3. Steelcraft.

B. The Manufacturers listed herein are capable of providing products that meet or exceed the specified requirements. Products that do not comply with specified requirements will be rejected.

C. Provide hollow metal doors and frames from a SDI certified manufacturer.

2.02 DOORS

A. Thermally Rated Door Assemblies:
   1. Fabricate exterior doors with U factor maximum to comply with ASHRAE 90.1 and the IECC for the project's specific geographic location and in accordance with ASTM C1363.

B. Construct exterior/interior doors as follows:
   1. Exterior Doors: Zinc-Iron Alloy-Coated galvannealed steel, ASTM A653/A653A Class A60, 16 gauge (0.053-inch)
      a. Include galvannealed components and internal reinforcements with galvannealed doors.
      b. Provide galvannealed top and bottom screw in caps on all exterior doors.
      c. Provide weep-holes in bottom of doors to permit entrapped moisture to escape.
      d. Coordinate door mid-rail location with mounting height of exit device per Section 087100.
   2. Interior Doors: Cold-rolled steel, 18 gauge (0.042) cold rolled steel. Provide door core to meet STC rating where required.
   3. Factory prime paint doors and frames to meet the requirements per ANSI/SDI A250.10.
   4. Hardware Reinforcements:
      a. Hinge reinforcements for full mortise hinges: minimum 7 gauge.
      b. Lock reinforcements: minimum 16 gauge.

DRAFT

c. Closer reinforcements: minimum 14 gauge.
d. Galvannealed doors: include galvannealed hardware reinforcements.
e. Projection weld hinge and lock reinforcements to the edge of the door.
f. Provided adequate reinforcements for hardware as required.

5. Glass moldings and stops (both labeled and non-labeled doors):
   a. Fabricate glass trim from 24 gauge steel conforming to:
      1) ASTM A 924 Zinc-Iron Alloy-Coated galvannealed steel (A60) at exterior openings.
      2) ASTM A 1008 cold rolled steel at interior openings
      3) Install glass trim into the door as a four sided welded assembly identical on both sides of the door with mitered, reinforced and welded corners. Provide same trim for both fire rated and non-fire rated doors.
      4) Exposed fasteners are not permitted.

C. Full Flush Type Doors Construction:
   1. Doors shall have been tested and certified meeting ANSI/SDI A250.4.
   2. Approved door core constructions:
      a. Honeycomb Core: Reinforced, stiffened, sound deadened and insulated with Kraft honeycomb core completely filling the inside of the doors and laminated to inside faces of both panels with contact adhesive applied to both panels.
      b. Polystyrene Core: Reinforced, stiffened, sound deadened and insulated with a rigid closed cell polystyrene core bonded to the inside faces of both panels. Core shall meet the requirements of ASTM C578.
      c. Steel Stiffened Core: Doors shall be stiffened by continuous vertically formed steel sections which, upon assembly, shall span the full thickness of the interior space between door faces. Vertical stiffeners shall be minimum 22 gauge thickness, spaced so that the vertical interior webs shall be not more than 6 inches apart and spot welded to both face sheets at a maximum of 5 inches on center vertically. Spaces between stiffeners shall be filled with sound deadening and heat retarding mineral fiber insulating material for full height of door.
         1) Temperature Rise Core: Fire door assemblies in interior exit stairways, exit passageways and ramps shall have a maximum transmitted temperature rise rating of not more than 250° F above ambient at the end of 30 minutes of standard fire test exposure.
      d. Door cores shall meet the STC provisions of ANSI/ASA S12.60 where required.
   3. Reinforce top and bottom of doors with 14 gauge inverted channel welded to both face sheets. Channels to be galvannealed at exterior and CRS at interior.
   4. Bevel hinge and lock door edges 1/8-inch in 2 inches**<< 2 inches>>**. Square edges on hinge or lock stiles are not acceptable.
   5. Vertical edge seams: Provide doors with continuous vertical mechanical inter-locking joints at lock and hinge edges with visible edge seams, or a one piece full height 12 gauge channel. Apply a continuous bead of structural epoxy in the internal vertical connection.
   6. Provide Z type metal astragal at double egress cross corridor doors.

D. Electrical Requirements:
   1. General: Make provisions for installation of electrical items specified in Section 087100.
      a. Provide cutouts and reinforcements required for hollow metal doors and frames to accept electrical door hardware and security system components. Coordinate with Security Drawings.

DRAFT

2.03 ACOUSTICAL DOORS

A. Acoustical Doors shall conform to the American National Standard Acoustical Performance Criteria, Design Requirements and Guidelines for Schools, ANSI/ASA S12.60.
   1. These spaces include, but are not limited to, classrooms, instructional pods or activity areas, group instruction rooms, conference rooms, libraries, speech clinics, offices used for educational purposes and music rooms for instruction, practice and performance.

B. The STC rating for hollow metal interior entry doors at multi-purpose, dining, gym, classrooms and other core learning spaces shall conform to the requirements of ANSI/ASA S12.60, with a minimum STC 30 operable rating. Doors to music rooms and doors between two classrooms shall be a minimum STC 40 operable rating. Comply with additional requirements as noted on the door schedule drawings.

C. Provide at STC rated doors Anemostat LoPro-STC vision lite system consisting of acoustical glass, lite kit and glazing tape of the proper size and thickness to meet or exceed the STC acoustical rating of the door and frame assembly.

D. Provide gasketing and door bottoms as specified under Section 087100.

E. Gasketing and door seals are not to be painted.

F. Door manufacturer shall provide a Letter of Certification (or copy of test report) from an independent testing laboratory accredited as an acoustical laboratory, verifying that conformance to the STC acoustical performance has been met with the specified gasketing, under Section 087100. Testing shall be performed at laboratories that are fully accredited under the National Voluntary Laboratory Accreditation Program (NVLAP).

G. Doors shall have a 3/8” clearance. Coordinate undercuts accordingly. Refer to "Coordination" article in Part 1 above.

H. Coordinate adjustable mortise door bottom as specified in Section 087100 with bottom door channel.

2.04 DOOR FRAMES

A. Construct exterior and interior metal door frames to profiles, designs and gauges
   1. Exterior Frames: Zinc-Iron Alloy-Coated galvannealed steel, ASTM A653 Class A60, 14 gauge (0.067-inch).
   2. Interior Frames in Masonry: Zinc-Iron Alloy-Coated galvannealed steel, ASTM A653 Class A60, 16 gauge (0.053-inch) galvannealed steel.
   3. All Frames in masonry are welded construction.
   4. Interior frames in masonry wider than 6'-0" shall be 14 gauge.
   5. Include galvannealed components and internal reinforcements with galvannealed frames.
   6. Interior KD Drywall Frames: 16 gauge cold rolled steel.

B. Flush Frames: knocked down for field assembly or set-up and welded with temporary spreader bars. Factory die-mitered corner connections reinforced with integral corner tabs tack welded to secure and interlock at jambs to head. Unless otherwise indicated, frame will have 2 inch faces and 5/8-inch stops. Frame depths per the architectural door schedule.
   1. Provide frames with a minimum of six wall anchors and two adjustable base anchors of manufacturer's standard design. Furnish anchors to meet wall conditions.
      a. Acceptable manufacturers:
         1) Curries.
         2) Metal Products Inc.
         3) Steelcraft.

DRAFT

2. Provide welded 3 sided frames:
    a. Face welded: Weld miter joints between head and jamb faces completely along their length either internally or externally. The remaining elements of the frame profile (soffit, stop and rabbets) are not welded unless otherwise specified. Grind and finish face joints smooth. Prime paint with zinc rich rust inhibitive primer.
3. All frames in masonry walls eight (8) inches or less shall be wrap around type frames.

C. Drywall Frames: 16 gauge
1. Form frames with double return backbends to prevent cutting into drywall surface. Design knock down frames to be securely installed in the rough opening after wallboard is applied.
    a. Drywall frames: knocked down for field assembly. Factory die-mitered corner connections reinforced at miters, including soffit tabs to secure and interlock at jambs to head
2. Locate adjustable anchors in each jamb 4” from the top of the door opening to hold frame in rigid alignment.
    a. Provide security anchor at strike jambs on all frames 7'-6" high and over.
3. Base anchors:
    a. Weld-in base anchor attaching plate in each jamb for field installation of loose base anchors to allow proper anchoring at base of frame.
    b. Acceptable Products:
        1) Curries: C with P0087.
        2) Metal Products, Inc; DW.
        3) Steelcraft; DW.
    c. Countersunk holes with face mounted screws at the base of the jamb is unacceptable.
    d. Contractor to provide at each jamb a piece of wood to be inserted in metal floor channel of size to accept adjustable lock-in base anchor screws.

D. Prepare frames to receive field inserted type door silencers (3) per strike jamb on single doors, and (2) per head for pair of doors. Stick-on silencers are not permitted.

E. Frame Hardware Reinforcements:
1. Mortise hinge reinforcement: minimum 7 gauge.
    a. Provide high frequency full mortise hinge reinforcement for top hinge in accordance with SDI 111-H, Example “A” Application on all frames for doors 3'-6" wide and greater.
2. Strike reinforcements: minimum 16 gauge and prepared for an ANSI-A 115.1-2 strike. Reinforcement to include a mortar box welded to the reinforcement.
3. Closer reinforcement: minimum 14 gauge steel.
4. Provide head reinforcement for frames more than 48 inches wide in masonry wall openings, provide continuous steel channel, 12 gauge thick for full width of opening, welded to back of frame at head, Head reinforcements shall not be used as a lintel or load bearing member for masonry.
5. Projection weld hinge and strike reinforcements to the door frame.
6. Provide metal mortar guards for mortised cutouts.
7. Provide adequate reinforcements for hardware as required.
8. Include galvanized hardware reinforcements in galvannealed frames.
9. Provide full height 16 gauge frame reinforcement at continuous hinges for doors more than 3'-6" wide.

DRAFT

10. Provide grout guard at grouted frames that are to receive continuous hinges.
    a. Grout guards shall be full height, 18 gauge, galvanized, welded in door rabbet, 3/4-inch depth with top and bottom capped. Provide detail.

F. Electrical Requirements:
1. Coordinate all electrical requirements for doors and frames.
    a. Provide cutouts and reinforcements required for metal door frames to receive electrical hardware and security components.
    b. Provide welded UL listed junction back boxes with 3/4-inch metal conduit or raceway to permit wiring from electrical door hardware.
    c. Junction/grout guard cover boxes are to be caulked by installation contractor.
    d. Refer to Section 087100 for electrified hardware.
2. Provide mortar box welded in head of door frame at exterior frames for future door security system components. Coordinate type, location and requirements provided by Owner and Security Drawings.

2.05 CONSTRUCTION OF ARCHITECTURAL STICK COMPONENTS

A. Fabricate architectural stick frame assemblies from standard frame components, fabricated from 14 gauge galvannealed steel A60 for exterior, and 16 gauge cold rolled steel for interior.

B. Construct architectural stick frame assemblies of standard frame components, fabricated as specified.
1. Exterior Frames: Zinc-Iron Alloy-Coated galvannealed steel, ASTM A653 Class A60, 14 gauge.
2. Interior Frames in Masonry: Zinc-Iron Alloy-Coated galvannealed steel, ASTM A653 Class A60, 16 gauge galvannealed steel.
3. Include galvannealed components and internal reinforcements with galvannealed frames.
4. Interior Frames in drywall construction: 16 gauge cold rolled steel frames.

C. Frame component requirements:
1. Prepare required components at door openings and frame assemblies for specified hardware.
2. Fabricate frame assemblies from three basic components:
    a. Open Sections (perimeter members) identical in configuration to standard frames.
    b. Closed sections (intermediate members) with identical jamb depth, face dimensions, and stops as open sections.
    c. Sill sections: Fabricated from galvanized steel, flush with both faces of adjacent vertical members. Cut individual components to length and notched to assure square joints and corners.
3. Externally welded face joints at meeting mullions or between mullions and other frame members on the face surfaces only. Grind and finish face joints smooth.
4. Ship frame assemblies to the jobsite completely welded. Field splice joints permissible only when the size of the total assembly exceeds shipping limitations. Fabricate oversized frames in sections designated for splicing in the field. Provide frames with joint reinforcements 14 gauge, 8 inch long. Field weld joint reinforcement inside and tack weld outside joint at both faces, grind, and finish smooth and uniform in appearance, after installation.
5. Frames shall be prime painted using zinc rich rust inhibitive primer.
6. All frame glass stops are to be furnished with manufacturers' standard fasteners.
7. Provide necessary anchors for jambs, heads, and sills of assemblies.

DRAFT

D. Verification of field dimensions required. Do not begin fabrication until all dimensions have been verified, submitted, and approved by the Architect.

2.06 FABRICATION

A. Face Welded Frames:
   1. Continuous face weld the joint between the head and jamb faces along their length either internally or externally. Grind, prime paint, and finish smooth face joints with no visible face seams.
   2. Externally weld, grind, prime paint, and finish smooth face joints at meeting mullions or between mullions and other frame members per ANSI/SDI A250.8.
   3. Provide two (2) temporary steel spreaders welded to the jambs at each rabbet of door openings on welded frames during shipment and handling. Remove temporary steel spreaders prior to installation of the frame.

2.07 FINISH

A. Doors, frames and frame components are required to be cleaned, phosphatized, and finished with one coat of baked-on rust inhibiting prime paint in accordance with ANSI/SDI A250.10 “Test Procedures and Acceptance Criteria for Prime Painted Steel Surfaces for Steel Doors and Frames.”

PART 3 EXECUTION

3.01 INSTALLATION

A. Install doors and frames in accordance with the latest edition of the Steel Door Institute’s recommended erection instructions for steel frames ANSI A 250.11.

B. Install fire rated doors and frames in accordance with NFPA 80. Clearances between the top and vertical edges of the door and the frame and the meeting edges of doors swinging in pairs shall meet the requirements of NFPA 80.

C. Drill and tap hollow metal frames to receive manufacturer’s approved machine screws for attachment of all closer arms, soffit shoe and shoe support, reference Section 087100. Use of self-reaming and self-tapping screws is unacceptable.

D. Spreader bars are for shipping and handling purposes only and must be removed before installing the frame.

E. Set frames accurately in position; plumb, align and brace until permanent anchors are set. After wall construction is complete, remove temporary wood spreaders.
   1. Field splice only at approved locations indicated on the shop drawings. Weld, grind, and finish as required to conceal evidence of splicing on exposed faces. Prime paint with zinc rich rust inhibitive primer.

F. Grouting Requirements:
   1. Hollow Metal Frames to receive grouting shall comply with ANSI/SDI A250.8 and HMMA 820 TN01-03, Grouting Hollow Metal Frames.
   2. Contractor to provide a metal mortar box at all hollow metal frames in masonry walls to receive electrical hardware and security components. Grout only the vertical jambs after mortar boxes and conduit are in place and field caulked. Do not grout frame heads.
   3. Provide and install temporary bottom and intermediate wood spreaders to maintain proper width and avoid bowing of jambs or deforming of frame members. Reference ANSI/SDI A250.11.

DRAFT

G. Glaze and seal exterior transom, sidelight and window frames in accordance with HMMA 820 TN03.

H. Contractor to inspect doors and frames prior to installation for any damage, manufacturing defects or any factory prime painting inconsistency.

I. Should there be any door or frame issues, do not proceed with installation. Contact supplier to correct unsatisfactory condition and proceed only after corrections have been made.

J. Install hardware in accordance with hardware manufacturers' instructions and Section 087100. Adjust door installation to provide uniform clearance at head and jambs, to achieve maximum operational effectiveness and appearance.

3.02 ADJUSTING

A. Adjust and check each operating item of door hardware and each door to ensure proper operation or function of each hardware component. Replace hardware components that cannot be adjusted to operate as intended.

B. The Contractor is to contact the Door and Hardware Supplier to coordinate the fire door inspection and advise MCPS of inspection schedule.

C. Fire Door Assembly Inspection and Testing: Upon completion of the installation, provide functional testing and inspection of each fire door assembly on the project to confirm proper operation and that it meets all criteria of a fire door assembly as per NFPA 80 - Inspection and Testing. Inspections shall be performed by individuals with knowledge and understanding of the operating components of the door being subjected to testing and who are certified by Intertek as a Fire Door Assembly Inspector (FDAI), a credentialed Architectural Hardware Consultant (AHC) or a Door and Hardware Consultant (DHC). Submit a written report to the Contractor, Architect and Owner and make available to the Authority Having Jurisdiction (AHJ). The report shall list each fire door assembly throughout the project, and include door number, location, hardware set and summary of deficiencies at each opening.
   1. Contractor shall correct all deficiencies and schedule a re-inspection of fire door assemblies noted as deficient on the inspection report. All deficiencies must be repaired without delay.
   2. Inspector shall re-inspect fire door assemblies after repairs are made.
   3. Additional re-inspections which are required due to incomplete repairs will be performed by the inspector at the expense of the Contractor.

D. Prime Coat Touch-Up: Immediately after erection, sand smooth rusted or damaged areas of prime coat, and apply touch-up with zinc rich rust inhibitive primer. Comply with HMMA-840-TN01.

3.03 PROTECTION

A. Provide protective measures required throughout the construction period to ensure that door and frame units will be without damage or deterioration, other than normal weathering, at time of acceptance.

END OF SECTION 081113

DRAFT

SECTION 081416
FLUSH WOOD DOORS

PART 1 GENERAL

1.01 REQUIREMENTS OF REGULATORY AGENCIES

A. Wood Doors and installation shall comply with provisions and standards listed. The latest published edition of each standard applies.

B. ASTM - American Society for Testing and Materials
   1. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements. (All doors tested shall be fully operable)
   2. ASTM E413 - Classification for Rating Sound Insulation.
   3. ASTM F476 - Standard Test Methods for Security of Swinging Door Assemblies, Section 18 - Security Test of Swinging Door Assemblies - Door Impact Test.

C. ANSI - American National Standards Institute
   1. ANSI/BHMA A156.115W - Specifications for Hardware Preparation in Wood Doors and Frames.
   2. ANSI/BHMA A156.7 - Hinge Template Dimensions.
   3. ANSI/HPVA HP-1 - American National Standard for Hardwood and Decorative Plywood.
   4. ANSI A208.1 - Particleboard.
   5. ANSI-ASA S12.60 - Standard Acoustical Performance Criteria, Design Requirements, and Guidelines for Schools.
   6. ANSI/A117.1 - Accessible and Useable Buildings and Facilities.
   7. ANSI/UL 10C - Standard for Safety for Positive Pressure Fire Tests of Door Assemblies.

D. ANSI/WDMA - Window and Door Manufacturers Association
   1. WDMA I.S. 1A-21 - Industry Standard for Architectural Flush Wood Doors.

E. Building Code references
   1. IBC - International Building Code.
   2. NFPA 80 - Standard for Fire Doors and Other Opening Protectives.
   3. NFPA 101 - Life Safety Code.
   4. NFPA 105 - Standard for the Installation of Smoke Door Assemblies and Other Opening Protectives.
   5. NFPA 252 - Standard Method of Fire Tests of Door Assemblies.
   6. UL 1784 - Air Leakage Tests of Door Assemblies.
   7. ITS/WH Certification - Certification Listings for Fire Doors.
   8. Consumer Products Safety Commission (CPSC) 16 CFR 1201 - Standard for Architectural Glazing US Green Building Council (USGBC).
   9. Green Globes Certification.
   10. LEED Leadership in Energy and Environmental Design rating system.

1.02 SUPPLIER QUALIFICATIONS

A. Wood Door Supplier shall maintain at the location which will be managing the project, a credentialed Architectural Hardware Consultant (AHC), Certified Door Consultant (CDC) or

DRAFT

Door and Hardware Consultant (DHC) as a full time employee and member in good standing of DHI - Door Security + Safety Professionals.

B. The Door Supplier shall have completed a minimum of three education facilities over the last five years which were similar in size, material, design and extent to that indicated for the project as determined by the Architect. If requested by the Architect, submit a list of projects listing the project name, location, Owner, Architect and Contractor.

C. As a requirement, the Wood Door Supplier shall maintain an office and warehouse complete with a wood door inventory within a one hundred (100) mile radius of the jobsite. The Supplier shall further have a qualified field service staff available to service the project.

D. Door Consultant on the project shall be available throughout the project to meet with the Contractor, Architect or Owner as requested.

E. Failure to meet the above requirements will disqualify the bidder.

1.03 SUBMITTALS

A. Submit digital copies of the wood door shop drawing submittals with complete details for the project, including copies of technical information and other pertinent data required for compliance with the specification.

1. Submit Shop Drawings which reference designations noted on the door schedule drawings. Shop Drawings shall include opening size, handing, door elevations, location, fire label requirements, temperature rise rating, hardware group numbers, hardware mounting height, locations, glass beads/moldings, accoustical STC glass kits, internal blocking, vertical edge detail, top and bottom rail details, underuts/clearance, beveling, wiring diagrams and other information specific to the project.

B. Data submitted shall be job specific and shall include product data and printed information in sufficient detail and scope to verify compliance with requirements of the contract documents. Where contents of submitted literature from manufacturers include data not pertinent to the submittal, clearly identify product being submitted for review. Submit only product data specific to the project.

C. Provide door construction details/drawings of vertical edges, top rail and SWE details for all doors.

D. Indicate location of cutouts for hardware and blocking to ensure doors are properly prepared and coordinated to receive hardware. Hardware mounting heights in accordance with Section 087100.

E. As part of the Shop Drawing submittal, provide copy of WDMA J1and J2, Job Site Information, "How to store, handle, finish, install and maintain wood doors."

F. Contractor to stamp Shop Drawings to certify they have been coordinated and reviewed for completeness and compliance with the contract documents.

G. The same procedures for re-submittal as the initial submittal shall apply with the revised dates noted in the shop drawings.

H. Shop drawings submitted without the above documentation will be considered incomplete, and will be rejected.

1.04 ENVIRONMENTAL SUBMITTAL

A. When required to be registered with the US Green Buildings Council and certified under the LEED Rating System the following shall apply:

B. LEED Requirements:

DRAFT

1. MR Credit: Building Product Disclosure and Optimization - Environmental Product Declarations. Option 1. For each product submit:
   a. If available, provide a product-specific Type III EPD - third-party certified EPD including external verification in accordance with ISO 14025.
   b. Alternatively, submit an industry-wide (generic) EPD - products with third-party certified EPD including external verification in accordance with ISO 14025 in which the manufacturer is explicitly recognized as a participant by the program operator.
   c. Alternatively, submit product specific declaration - publicly available, critically reviewed life-cycle assessment conforming to ISO 14044 that has at least a cradle to gate scope.
2. Materials and Resources: Product Disclosure and Optimization - Sourcing of Raw Materials. Option 2. Leadership Extraction Practices.
   a. Chain-of-Custody Certificates: For certified wood products. Include statements of costs.
   b. For each product submit:
      1) A letter stating the dollar value of the sum of post-consumer recycled content plus one-half the pre-consumer recycled content based on weight.
3. Products shall meet EPA (TSCA); Title VI for formaldehyde requirements for ultra-low-emitting formaldehyde.
4. For composite wood products, documentation indicating that products comply with the testing and product requirements of the current California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers." Provide products that are third party certified through SCS Indoor Advantage Gold or UL GREENGUARD.
   a. All composite wood and agrifiber products shall meet this requirement.
   b. In addition, provide products that are third party certified through SCS Indoor Advantage Gold or UL GREENGUARD.
5. EQ Prerequisite: Minimum Acoustic Performance: Building shell, classroom partitions, and other core learning space partitions meet STC (Sound Transmission Classification) requirements of ANSI/ASA S12.60.

1.05 QUALITY ASSURANCE

A. Quality Standard: WDMA I.S. 1A, Latest edition, Industry Standard for Architectural Flush Wood Flush Doors.

B. Comply with the requirements of the referenced standards. Submit manufacturers letter of compliance.

C. Underwriters' Laboratories or Intertek Testing Services / Warnock Hersey, Positive Pressure Category A labeled wood fire doors:
   1. Label fire doors listed in accordance with Underwriters Laboratories standard UL 10C, Positive Pressure Fire Tests of Door Assemblies and Air Leakage Tests of Door Assemblies - UL 1784.
   2. Construct and install doors in accordance with the standards of NFPA 80.
   3. Manufacture fire rated doors under the UL or ITS/WH factory inspection program providing the degree of fire protection capability indicated by the door schedule drawings.
   4. Provide metal labels permanently affixed to each fire door at an authorized and licensed facility as evidence of compliance with procedures of the labeling agency.

DRAFT

5. No field modifications shall be made to the fire door assembly that would void the label. Field modifications to a fire door shall be in accordance with NFPA 80. Work shall be done by a licensed labeling service approved by the manufacturer.
6. Labels are not to be removed, defaced or made illegible while the door is in service per NFPA 80. Fire labels are NOT to be painted or pre-finished.
7. Fire doors with continuous hinges shall have the physical label located on the top rail of the door.
8. Conform to applicable codes for fire ratings. It is the intent of this specification that wood doors comply or exceed the standards for labeled openings. In case of conflict between door types required for fire protection, furnish the type required by NFPA and UL.
9. Validate the Smoke and Draft Control ("S") Label for hardware sets that include Category H smoke and draft control seals.
10. All Category G seals required will be concealed in the door or applied to the top rail. No Category G seals will be allowed on the door frame.

1.06 WARRANTY

A. Provide Manufacturer's standard warranty form, in which manufacturer agrees to repair or replace doors that are defective in materials or workmanship for the life of the original installation of the door.

B. Manufacturers do not warrant doors where self-tapping or combination wood/metal screws to attach surface applied hardware. Provide manufacturer's proper fasteners.

1.07 SAMPLES

A. Provide color swatches with factory pre-finishing shall consist of four (4) finish samples. Samples to be manufacturer's standard size with specified veneer species. The sample should reasonably represent the color range of the veneer species expected in the finished work. Samples shall be protected from oxidation and light to preserve original color approvals. These samples shall be project specific.

B. If requested by the Architect, provide three (3) fire rated wood door samples demonstrating door construction with provisions for vertical stiles and top rails as specified herein.

C. If requested by the Architect, provide three (3) non-fire rated wood door samples demonstrating door construction with provisions for vertical stiles and top rails as specified herein.

D. All samples submitted must represent, in all respects, the quality of work to be furnished.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Provide protective measures throughout the construction period to safeguard doors from damage or deterioration from the time of acceptance.

B. Store and protect doors in accordance with manufacturer's recommendations and Section J-1 and J-2 of WDMA I.S. 1A - "How to Store, Handle, Finish, Install and Maintain Wood Doors."
   1. Store doors flat and off the floor on a level surface in a dry, well-ventilated building. Do not store on edge. Protect doors from dirt, water and abuse and allow for air circulation.
   2. Protect all doors from exposure to direct sunlight and artificial light after delivery.
   3. Do not subject interior doors to extremes of either heat or humidity. HVAC systems must be operational and balanced, providing a temperature range of 50 to 90 degrees Fahrenheit and 25% to 55% relative humidity.
   4. When handling doors, lift and carry when moving. Do not drag across other doors or surfaces. Handle with clean, dry hands or while wearing clean dry gloves.

DRAFT

5. Manufacturer shall mark each door on the top rail and top hinge pocket with the door opening number. In addition, the top rail shall be marked with manufacture's name, factory order number, and other additional markings to properly identify the door.

1.09 COORDINATION

A. Coordinate work with other sections involving manufacture or fabrication of internal cutouts and internal blocking for door hardware, electrified and mortised items. Provide necessary blocking in mineral core doors to prevent door failure from surface applied hardware.

B. Coordinate frame undercuts and door clearances with sill and floor details. Interior doors to have 3/8-inch clearance. Clearance is distance between the bottom of the door and the top of the material directly below the door. The Contractor shall verify field conditions to ensure proper clearances.

C. The Contractor shall field verify existing door opening conditions, where existing doors or frames are to remain or be replaced in part, for coordination with the specified hardware and notify the Architect of conflicts prior to proceeding. Failure to notify the Architect of conflicts that result in additional work or material is the responsibility of the Contractor, with no cost to the Owner.

D. The supplier shall be responsible for proper coordination, templating, dimensions and all details required for doors, frames and hardware application.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Acceptable manufacturers for wood doors specified are listed below. Only the products of the listed manufacturers will be accepted. No alternates will be accepted. The manufacturers listed are acceptable providing they adhere to the quality standards as noted herein.
   1. Masonite Architectural: Aspiro Series.
   2. Lambton Doors.
   3. V.T. Industries: Heritage Collection.

B. The manufacturers listed herein are capable of providing products that meet or exceed the specified requirements. Products that do not comply with the specified requirements and construction will be rejected.

C. If doors are rejected, replacement doors shall be furnished expeditiously, at no cost to the Owner.

2.02 DOORS

A. Quality Assurance Requirements: Flush Wood Doors: Comply with the ANSI/WDMA I.S. 1A Industry Standard for Architectural Wood Flush Doors.

B. Non-Fire Rated Wood Doors - All solid core flush wood doors shall meet WDMA Door Grade and WDMA Performance Duty Level specified.
   1. WDMA Aesthetic Grade: Custom "A grade" veneer per HPVA Summary Tables.
   2. WDMA Performance Duty Level: Extra Heavy Duty. All doors shall meet specified WDMA Performance Duty Level, including face screw holding requirement. Surface applied hardware shall be installed in accordance with Section 087100.
   3. Door Type - PC-5: Bonded Wood Based Particle Core, Stiles and rails securely bonded to the core and entire unit abrasively planed prior to application of faces to assure uniform thickness of all components.

C. Fire Rated Wood Doors:

DRAFT

1. Provide fire classifications with particleboard or mineral core as required to provide fire rating indicated. Doors shall carry UL or ITS (Warnock-Hersey) label based on testing for positive pressure in accordance with NFPA 252 and UL 10C.
2. New wood doors shall have the glazing and light kit installed at the door manufacturer or under label services approved by the door manufacturer. Wood glazing beads are allowed on 20 and 45 minute fire doors with particleboard core construction. Doors with 45, 60 or 90 minute mineral core construction shall have a LoPro metal vision kit/frame.
3. Provide Positive Pressure Doors Category A with intumescent included in door construction where required.
4. Temperature-Rise doors shall have a maximum transmitted temperature end point of not more than 250 degrees above ambient after 30 minutes of fire test.
5. Stiles (Vertical Edges) - Provide manufacturer's standard solid or laminated edge construction approved for each fire protection level with improved screw holding capability of 550 lbs in accordance with WDMA TM-10, Extra Heavy Duty.
    a. Outer stile to be minimum thickness of 1/4-inch after trim. Provide detail/cross section drawing of door edge construction.
6. Rails (Horizontal Edges) - Rails are fire resistive composite or other material contained in manufacturer's fire door approvals.
7. Blocking for fire doors must meet WDMA face screw pull values for surface hardware.
    a. All fire doors shall have a 6 inch minimum top rail after trim. Particleboard construction core 45 minute wood fire doors are not required to have a 6 inch combined blocking top rail provided assembly meets Extra Heavy Duty performance criteria.
8. Provide fire rated pairs with manufacturers approved stiles which match face veneer constructed as Category A. Veneered edges allowed where required to match face veneer. Exposed intumescent at door meeting edges or applied to frames is not acceptable.

D. Electrical Requirements:
    1. General: Make provisions for installation of electrical items specified in Section 087100.
        a. Provide all cutouts and blocking required for wood doors to accept electrical door hardware. Provide cutouts required by the security system vendor and all pre-wiring security system devices.

E. Acoustical Doors:
    1. Acoustical Doors shall conform to the latest edition of the American National Standard Acoustical Performance Criteria, Design Requirements and Guidelines for Schools, ANSI/ASA S12.60.
        a. These spaces include, but are not limited to, classrooms, instructional pods or activity areas, group instruction rooms, conference rooms, libraries, offices, speech clinics, offices used for educational purposes and music rooms for instruction, practice and performance.
    2. Doors into classrooms and other core learning spaces shall conform to the requirements of ANSI/ASA S12.60 with a minimum of a STC 30 operable rating. Doors to music rooms and doors between two classrooms shall be a minimum STC 40 operable rating. Comply with additional requirements as noted in the door schedule.
    3. Provide vision lite system consisting of acoustic glass, lite kit and glazing tape of the proper size and thickness to meet or exceed the STC acoustical rating of the door and frame assembly. Provide Anemostat LoPro-STC vision lite system. The vision lite system shall be factory installed on doors with a STC rating of 40 or greater.

DRAFT

4. Provide door manufacturer's Letter of Certification (or copy of test report) from an independent testing laboratory accredited as an acoustical laboratory verifying that conformance to the acoustical performance has been met. Testing shall be performed at laboratories that are fully accredited under the National Voluntary Laboratory Accreditation Program (NVLAP).
5. Coordinate door preparation for adjustable mortise door bottom as specified under Section 087100. Mortise prep to end 1/4-inch before edge of door at lock edge, Solid Wood Edge (SWE) prep configuration. Bottom rail shall be hardwood or structural composite lumber. Doors are to be factory prepped to receive the door bottom.
6. Doors shall have a 3/8-inch clearance. Coordinate undercuts with flooring or thresholds. The Contractor shall be responsible for providing the Door Supplier with the final floor thickness for each door opening requiring STC rating.
7. Sound seals and gasketing are not to be painted.

F. Veneer And Veneer Matching:
1. Architect to specify Veneer Species and Cut: **<< Plain Sliced Red Oak; or Plain Sliced White Maple>>**.
   a. Veneer Face Grade “A” as described in WDMA I.S. 1A and HPVA Door Veneer tables ANSI/HPVA-1.
2. Matching Between Leaves: Book match between leaves.
3. Veneer Match: Assembly of Spliced Veneer: Running match on door face.
4. Pair match all pairs and set of pairs separated only by mullions.
5. Set match all groups of pairs and/or individual doors indicated on the door schedule or plans.

G. Non Fire Rated Door:
1. Provide wood based particleboard core. Core to be securely bonded to the stiles and rails with Type I Adhesive.
2. Crossbands shall be a minimum thickness of 1/16-inch and extend the full width of the door and have no seams. Composite crossbands of high density fiberboard are permitted provided they meet or exceed the physical and mechanical properties as described in ANSI A208.2.
3. Vertical Edges to be same species as face veneer, constructed of two plies consisting of hardwood lumber outer layer (outer stile) and hardwood lumber or SCL inner layer (inner stile). The net stile width to be minimum 1 inch before trimming. Veneered edge banding is not acceptable. Provide detail/cross section drawing of door edge construction.
4. Horizontal Edges: Rails must be present on all doors. SCL is allowed for rails. Minimum rail after trim to be 7/8-inch. MDF is unacceptable.
5. Side Panels: Fabricate matching panels with same construction as the door. Side panels will be pair matched to the associated door and receive the same finish.

H. Fire-Rated Doors: Provide Positive Pressure Label Doors.
1. Positive Pressure labeled doors to be Category A.
2. Core material shall be dictated by manufacturer's fire door approvals.
   a. Provide 20 and 45 minute fire resistant particleboard core, bonded construction doors in accordance with manufacturers approvals. Mineral core construction is acceptable when requirements exceed particleboard core label procedures.
   b. All mineral core 45, 60 and 90 min doors shall have a 6 inch minimum top rail after trimming. Blocking must compy with Extra Heavy Duty performance.

DRAFT

3. Stiles (Vertical Edges) - Provide manufacturer's standard solid or laminated edge construction approved for each fire protection level with improved screw holding for capability of 550 lbs in accordance with WDMA TM-10, Extra Heavy Duty performance.
   a. Outer stile to be minimum thickness of 1/4-inch after trim. Provide detail/cross section drawing of door edge construction.
4. Rails (Horizontal Edges) - Rails shall be fire resistive composite or other material contained in manufacturer's fire door approvals.
5. Provide fire rated pairs with manufacturers approved stiles which match face veneer constructed as Category A. Veneered edges allowed where required to match face veneer and Category A construction. Exposed intumescent at door meeting edges or applied to frames is not acceptable.

2.03 DOOR FABRICATION

A. Factory pre-fit and pre-machine doors to receive hardware as specified under Section 087100.
   1. All doors shall be machined in accordance with manufacturer's procedures in order to maintain manufacturer's warranty and to avoid any machining conflicts.
   2. Doors are to be beveled at both hinge and lock edges.
   3. Factory pre-drill all hinge screw pilot holes for full mortise hinges.
   4. Doors shall have a 3/8-inch clearance. Refer to Coordination article in Part 1.
   5. Coordinate door undercuts per architect's details and hardware specified under Section 087100.
   6. All fire doors shall be in accordance with NFPA 80 for clearances and undercutting requirements.

B. Factory preparation for light openings:
   1. Factory preparation for new wood doors glazing materials in vision panels shall be installed in labeled glass light kits in accordance with the fire door listing and shall be installed in accordance with inspection service procedure and under label service per NFPA 80.
   2. Glass in new wood fire doors shall be installed by the door manufacturer or in a licensed door shop, approved by the door manufacturer.
   3. Fire protection glazing and fire resistance glazing shall meet all applicable impact safety standards.
   4. Provide metal vision kits at all fire labeled doors. Vision kits shall be Anemostat LoPro, 20 gage, with tamperproof screws and beige baked enamel finish. Install tamperproof screw heads on secure side of door. Vision kits shall have UL or W/H classification markings visible for inspection.
   5. Provide wood beads for lite openings in non-fire rated and 20 minute wood doors
      a. Provide manufacturer's standard solid wood straight beads flush design, matching veneer species of door faces. Include finish nails for removable stops in accordance with manufacturers recommendations. Architect to select wood bead design from maufacturer's standard options.

2.04 FACTORY FINISHING

A. All doors, including light beads and moldings, to be factory finished where indicated in schedules or on drawings as factory finished.

B. Finish Requirements:
   1. Manufacturer's standard UV Cured Acrylated Polyester/Urethanes, equal to WDMA TR-8.
      a. Coating - Clear.

DRAFT

b. Satin Gloss (Gloss range 30-40).

C. Package factory finished doors with manufacturers standard packaging to protect doors from damage during shipment.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install all wood doors in accordance with door manufacturer's instructions and all tolerances outlined in ANSI/WDMA I.S. 1A.

B. Do not install doors in buildings where wet work is still being conducted, such as the taping and floating of drywall or cement.

C. Install label doors in accordance with NFPA 80. Labels are not to be removed, defaced or made illegible while the door is in service.

D. Inspect doors prior to installation for any damage, manufacturing defects or pre-finish inconsistency. Notify supplier of any deficiencies prior to installation.

E. Remove and replace doors that are damaged or defective prior to fire door inspection.

F. Correct unsatisfactory conditions and proceed with installation only after corrections have been made.

3.02 ADJUSTING

A. Adjust and check each operating item of door hardware and each door to ensure proper operation or function of each hardware component. Replace hardware components that cannot be adjusted to operate as intended.

B. The Contractor is to contact the Door and Hardware Supplier to coordinate the fire door inspection and advise the Owner of inspection schedule.

C. Fire Door Assembly Inspection and Testing: Upon completion of the installation, provide functional testing and inspection of each fire door assembly on the project to confirm proper operation and that it meets all criteria of a fire door assembly in accordance with NFPA 80 - Inspection and Testing. Inspections shall be performed by individuals with knowledge and understanding of the operating components of the door being subjected to testing and who are certified by Intertek as a Fire Door Assembly Inspector (FDAI) or a credentialed Architectural Hardware Consultant (AHC) or a Door and Hardware Consultant (DHC). Submit a written report to the Owner, Contractor, Architect and made available to the Authority Having Jurisdiction (AHJ). The report shall list each fire door assembly throughout the project, and include each door number, location, hardware set and summary of deficiencies at each opening.

1. Contractor shall correct all deficiencies and schedule a re-inspection of fire door assemblies noted as deficient on the inspection report. All deficiencies must be repaired without delay.
2. Inspector shall re-inspect fire door assemblies after repairs are made.
3. Additional re-inspections required due to incomplete repairs will be performed by the inspector at the expense of the Contractor.

3.03 PROTECTION

A. Provide protective measures required throughout the construction period to ensure that doors will be without damage or deterioration at time of acceptance.

END OF SECTION 081416

DRAFT

SECTION 083100
ACCESS DOORS AND PANELS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ITS (DIR) - Directory of Listed Products.

B. UL (FRD) - Fire Resistance Directory.

1.02 SUBMITTALS

A. Product Data: Provide sizes, types, finishes, hardware, scheduled locations, and details of adjoining work.

B. Shop Drawings: Indicate exact position of each access door and/or panel unit.

1. Include a schedule indicating wall/ceiling type, door types, sizes, and hardware for each access door required.

C. Sustainability Submittals: Refer to Division 1 Section "Sustainable Design Requirements."

1.03 COORDINATION

A. Verification: Determine specific locations and sizes for access doors needed to gain access to concealed plumbing, mechanical, or other concealed work, and indicate in the schedule specified in “Submittals” Article.

1. This (083100) material specification includes access doors required for Divisions 21 (Fire Suppression), Division 22, (Plumbing), 23 (HVAC) and Division 26 (Electrical) work and any other access doors indicated on Drawings.
2. All doors for all trades shall be keyed alike. Coordinate with "Latch/Lock" paragraph below for additional information.

PART 2 PRODUCTS

2.01 WALL- AND CEILING-MOUNTED ACCESS UNITS

A. Manufacturers:

1. Activar Construction Products Group, Inc. - JL Industries.
2. ACUDOR Products Inc.
3. Babcock-Davis.
4. Best Access Doors.
5. Cendrex, Inc.
6. Karp Associates, Inc.
7. Larsen's Manufacturing Company.
8. Milcor, Inc.
9. Nystrom, Inc.
10. Williams Brothers Corporation of America.

B. Wall- and Ceiling-Mounted Units (Interior): Factory-fabricated door and frame, fully assembled units with corner joints welded, filled and ground flush; square and without rack or warp; coordinate requirements with type of installation assembly being used for each unit.

DRAFT

1. Material: **<< Steel; Steel, hot-dipped zinc or zinc-aluminum-alloy coated; Stainless steel; Stainless steel, Type 304; Aluminum; Aluminum extrusions with gypsum board inlay; or _____>>**.
2. Style (Gypsum Board locations): **<< Exposed frame with door surface flush with frame surface; Frame concealed by door panel; Recessed door panel for infill with wall/ceiling finish; or _____>>**.
   a. Gypsum Board Mounting Criteria: Use drywall bead type frame.
3. Style (Masonry locations): Exposed frame, with door surface flush with frame surface.
4. Door Style: **<< Single thickness with rolled or turned in edges; Double-skinned hollow panel; or _____>>**.
5. Frames: 16-gauge, 0.0598-inch minimum thickness.
6. Double-Skinned Hollow Steel Sheet Door Panels: 16-gauge, 0.0598-inch minimum thickness, on both sides and along each edge.
7. Units in Fire-Rated Assemblies: Fire rating as required by applicable code for fire-rated assembly that access doors are being installed.
   a. Provide products listed by **<< ITS (DIR); UL (FRD); or _____>>** as suitable for purpose indicated.
   b. Provide certificate of compliance from authorities having jurisdiction indicating approval of fire rated doors.
   c. Fire-rated door assemblies shall conform with and be installed in accordance with (1) NFPA 80, (2) door and frame manufacturer's installation instructions, and (3) listing requirements of qualified testing agency.
   d. Provide manufacturer's standard mineral fiber insulation and gasketing.
8. Steel Finish: Factory-primed; for field topcoat to match that used for hollow metal steel doors and frames. Refer to Division 9 Section "Painting" for topcoat information.
9. Hardware:
   a. Hardware for Fire-Rated Units: As required for listing.
   b. Hinges for Non-Fire-Rated Units: **<< Concealed, constant force closure spring type; Continuous piano hinge; Concealed, hinged-arm guide at top and bottom of panel; Heavy duty butt hinges; or ___>>**.
   c. Latch/Lock (Ceiling Units): Screw driver slot for quarter turn cam latch.
   d. Latch/Lock (Wall Units): Cylinder lock-operated cam latch, two keys for each unit. All access doors shall be master keyed to each other (shall not be keyed to the building Door Hardware keying system).

DRAFT

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that rough openings are correctly sized and located.

B. Begin installation only after substrates have been properly prepared, and if the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.02 PREPARATION

A. Clean surfaces thoroughly prior to proceeding with this work.

B. Prepare surfaces using methods recommended by manufacturer for applicable substrates in accordance with project conditions.

3.03 INSTALLATION

A. Install units in accordance with manufacturer's instructions.

B. Install frames plumb and level in openings, and secure units rigidly in place.

C. Position units to provide convenient access to concealed equipment when necessary.

END OF SECTION 083100

DRAFT

SECTION 083313
COILING COUNTER DOORS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

B. ITS (DIR) - Directory of Listed Products.

C. NEMA MG 00001 - Motors and Generators.

D. UL (DIR) - Online Certifications Directory.

1.02 SUBMITTALS

A. Product Data: Submit manufacturer's standard literature showing materials and details of construction and finish. **<< Include data on electrical operation.; or None - N/A>>**

B. Shop Drawings: Indicate rough and actual opening dimensions, anchorage methods, hardware locations, and installation details.

C. Samples: Submit manufacturer's color charts indicating standard range of powder coat finishes.

D. Operation and Maintenance Data: Indicate modes of operation, lubrication requirements and frequency, and periodic adjustments required.

E. Project Record Documents: Include as-built electrical diagrams for electrical operation and connection to fire alarm system.

1.03 QUALITY ASSURANCE

A. Products Requiring Electrical Connection: Listed and classified by **<< ITS (DIR); UL (DIR); testing firm acceptable to authorities having jurisdiction; or _____>>** as suitable for the purpose specified in this section and indicated on the drawings.

B. Manufacturer Logo/Label: Manufacturer's logo and/or label shall not be visible on exposed surfaces of door or hood.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Coiling Counter Doors:
1. Alpine Overhead Doors, Inc.
2. Amarr.
3. C.H.I. Overhead Doors.
4. Clopay Building Products.
5. Cornell Iron Works, Inc.
6. McKeon Rolling Steel Door Co., Inc.
7. Overhead Door Corporation.
8. Raynor Garage Doors.
9. The Cookson Company.
10. Wayne-Dalton, a Division of Overhead Door Corporation.

DRAFT

2.02 COILING COUNTER DOORS

A. Coiling Counter Doors, Non-Fire-Rated: **<< Galvanized steel; Stainless steel; Aluminum; or _____>>** slat curtain.

1. Mounting: **<< Between jambs, within prepared opening; Exterior face mounted; Interior face mounted; As indicated on drawings; or _____>>**.
2. Nominal Slat Size: **<< 1-1/4 inches; 2 inches; or ____ inches>>** wide.
3. Slat Profile: **<< Flat; Curved; or _____>>**.
4. Finish, Galvanized Steel: **<< No additional finish; Factory primed; Factory baked enamel; Factory powder coated; or _____>>**.
5. Color: To be selected by Owner and Architect from manufacturer's **<< full; standard; or custom>>** range.
6. Guides: Formed track; same material and finish unless otherwise indicated.
7. Hood Enclosure: **<< Manufacturer's standard; As indicated on drawings; or _____>><< ; primed steel; ; galvanized steel; ; aluminum; or ; _____>>**. Finish to match slats.
8. **<< Manual>>** push-up operation. ******Verify motorized vs manual operation******
9. **<< Electric>>** operation.

2.03 COMPONENTS

A. Metal Curtain Construction: Interlocking, single-thickness slats.

1. Slat Ends: **<< Alternate slats; or Each slat>>** fitted with end locks to act as wearing surface in guides and to prevent lateral movement.
2. Curtain Bottom: Fitted with **<< angles; tube; or _____>>** to provide reinforcement and positive contact in closed position**<< None - N/A; ; neoprene astragal along bottom edge; ; vinyl astragal along bottom edge; or ; _____ along bottom edge>>**.
3. Steel Slats: **<<ASTM A653/A653M>>** galvanized steel sheet, with minimum **<< G60/Z180; G90/Z275; or ____>>** coating; minimum thickness **<< 22 gauge, 0.03 inch; 20 gauge, 0.04 inch; 18 gauge, 0.05 inch; 16 gauge, 0.06 inch; or ___ gauge, ___ inch>>**.

B. Guide Construction: Continuous, of profile to retain door in place, with mounting brackets of same metal.

C. Hood Enclosure: Internally reinforced to maintain rigidity and shape.

D. Lock Hardware: ******Verify with motorized vs manual operation******

1. For **<< motor operated>>** units, additional lock or latching mechanisms are not required.
2. For **<< manual>>** units, provide slide bolt on single-jamb side, extending into slot in guides, with padlock hasp (padlock is NIC).

E. Roller Shaft Counterbalance: Steel pipe and torsion steel spring system, capable of producing torque sufficient to ensure smooth operation of curtain from any position and capable of holding position at mid-travel; with adjustable spring tension; requiring 25 lb nominal force to operate.

2.04 ELECTRIC OPERATION

A. Operator, Controls, Actuators, and Safeties: Listed and classified by **<< ITS (DIR); UL (DIR); testing agency acceptable to authorities having jurisdiction (AHJ); or _____>>** as suitable for purpose specified and indicated.

1. Provide interlock switches on motor operated units.

B. Electric Operators:

DRAFT

1. Mounting: **<< Side mounted; Center mounted; or _____>>**.
2. Motor Enclosure: **<<NEMA MG 00001>>**.
3. Motor Rating: **<< As recommended by manufacturer; 1/3 hp; 1/2 hp; 3/4 hp; or ____ hp>>**; continuous duty.
4. Motor Voltage: **<< Manufacturer's standard; 110-120 VAC, single phase, 60 Hz; 220-240 VAC, 3 phase, 60 Hz; 440-480 VAC, 3 phase, 60 Hz; or _____>>**.
5. Opening Speed: **<< 6 inches per second; 12 inches per second; or ____ inches per second>>**.
6. Manual override in case of power failure.

C. Control Station: Surface mounted, key-operated three button (OPEN-STOP-CLOSE) momentary control for each electrical operator.
   1. Controls: **<< 24 VAC; 24 VDC; 115 VAC; or _____>>** circuit.

D. Safety Edge: Located at bottom of curtain, full width, **<< electro-mechanical; pneumatic; or _____>>** sensitized type, wired to **<< stop; or reverse>>** operator upon striking object, hollow **<< neoprene; rubber; or _____>>** covered.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that adjacent construction is suitable for door installation.

B. Verify that electrical services have been installed and are accessible.

C. Verify that door opening is plumb, header is level, and dimensions are correct.

D. Notify **<<Architect>>** of any unacceptable conditions or varying dimensions.

E. Commencement of installation indicates acceptance of substrate and door opening conditions.

3.02 INSTALLATION

A. Install units in accordance with manufacturer's instructions.

B. Use anchorage devices to securely fasten assembly to wall construction and building framing without distortion or stress.

C. Securely and rigidly brace components suspended from structure. **<< Secure guides to structural members only.; or None - N/A>>**

D. Fit and align assembly including hardware; level and plumb, to provide smooth operation.

E. Coordinate installation of electrical service with Division 26 electrical specifications and requirements on Electrical Drawings.

F. Complete wiring from disconnect to unit components.

3.03 TOLERANCES

A. Maintain dimensional tolerances and alignment with adjacent work.

B. Maximum Variation From Plumb: 1/16-inch.

C. Maximum Variation From Level: 1/16-inch.

D. Longitudinal or Diagonal Warp: Plus or minus 1/8-inch per 10 ft straight edge.

3.04 ADJUSTING

A. Adjust operating assemblies for smooth and noiseless operation.

DRAFT

3.05 CLEANING

A. Clean installed components.

B. Remove labels and visible markings.

3.06 FIELD QUALITY CONTROL, DEMONSTRATION, AND INITIAL MAINTENANCE SERVICE

A. Field Testing and Demonstration: Field testing shall be performed by manufacturer's authorized service representative.
   1. Complete final installation, testing, and adjustment procedures in accordance with manufacturer's instructions.
   2. Provide a minimum of 2 hours training and demonstration to Owner's maintenance personnel for operation, adjustment, and maintenance of doors.

B. Provide an Initial Maintenance Contract for maintenance of coiling door system and components for a period of 12 months. Maintenance shall include maximum quarterly intervals (minimum of 4 visits for initial contract), and shall include adjustment, lubrication, and other preventive maintenance, and repair or replacement of defective or worn parts or equipment.
   1. Provide service during regular working hours throughout period of this maintenance contract.

END OF SECTION 083313

DRAFT

SECTION 083323
OVERHEAD COILING DOORS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.

B. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

C. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

D. ITS (DIR) - Directory of Listed Products.

E. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

F. NEMA ICS 2 - Industrial Control and Systems Controllers, Contactors and Overload Relays Rated 600 Volts.

G. NEMA MG 00001 - Motors and Generators.

H. UL (DIR) - Online Certifications Directory.

I. UL 325 - Standard for Door, Drapery, Gate, Louver, and Window Operators and Systems.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate the installation of coiling doors with size, location and installation of service utilities, including electrical, access control, and smoke/fire alarm, as required.

B. Preinstallation Meeting: Conduct a preinstallation meeting one week prior to the start of the work of this section; require attendance by all affected installers.

1.03 SUBMITTALS

A. Product Data: Provide **<< general construction; electrical equipment; component connections and details; and _____>>**.

1. Include product data for automatic closing device for fire shutter application, with testing and resetting instructions.

B. Shop Drawings: Indicate pertinent dimensioning, anchorage methods, hardware locations, and installation details.

1. Include diagrams indicating motors, controls, and electrical wiring.
2. Indicate coordination with smoke and/or fire alarm systems, and show locations of detectors, replaceable fusible links, and release devices.

C. Selection Samples: Manufacturer's color charts, showing full range of factory finishes.

D. Verification Samples: Manufacturer's standard size sample on curtain slat material indicated.

E. Installer's qualification statement.

F. Maintenance Data: Indicate **<< lubrication requirements and frequency; periodic adjustments required; and _____>>**.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing work of type specified, approved by manufacturer for installation of specified products. Installer shall be located no more than two hours from Project site to allow for maintenance callbacks.

DRAFT

B. Products Requiring Electrical Connection: Listed and classified by **<< ITS (DIR); UL (DIR); testing firm acceptable to authorities having jurisdiction; or _____>>** as suitable for purpose specified and indicated.

C. Source Limitations: Provide coiling doors from a single manufacturer, sourced through a single supplier. Obtain operators and controls from door manufacturer or from a manufacturer that is approved by door manufacturer for compatibility.

1.05 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Manufacturer Warranty: Provide two (2) year manufacturer warranty for materials and workmanship for all components of coiling doors. Complete forms in Owner's name and register with manufacturer.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Overhead Coiling Metal Doors:
1. Alpine Overhead Doors, Inc.
2. Amarr.
3. C.H.I. Overhead Doors.
4. Clopay Building Products.
5. Cornell Iron Works, Inc.
6. McKeon Rolling Steel Door Co., Inc.
7. Overhead Door Corporation.
8. Raynor Garage Doors.
9. The Cookson Company.
10. Wayne-Dalton, a Division of Overhead Door Corporation.
11. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.02 COILING DOORS

A. Exterior Coiling Doors: **<< Steel; Stainless steel; Aluminum; or _____>>** slat curtain.
1. Capable of withstanding positive and negative wind loads of **<< 20 psf; or ____ psf>>** without undue deflection or damage to components.
2. Sandwich Slats: Manufacturer's standard, with core of **<< foamed-in-place polyurethane; or _____>>** insulation; minimum **<< R-value of 4.88; R-value of 8.1; or R-value of ___>>**.
   a. Surface Burning Characteristics: Provide insulation with flame spread index of **<< 25 or less; or 75 or less>>** and smoke developed index of **<< 450 or less; or _____>>**, when tested in accordance with **<<ASTM E84>>**.
3. Slat Size: Manufacturer's standard height and thickness to meet performance requirements; length as required for rough opening width indicated.
4. Guide, Angles: **<< Galvanized steel; Primed steel; Stainless steel; or Powder coated steel>>**.
5. Hood Enclosure: **<< Manufacturer's standard; As indicated on drawings; or _____>>**; **<< primed steel; galvanized steel; aluminum; or powder coated steel>>**.
6. Electric operation.

DRAFT

7. Mounting: **<< Surface mounted; Within framed opening; As indicated on drawings; or _____>>**.
8. Finish: As selected by Architect from manufacturer's full range of powder coat finishes.

2.03 MATERIALS

A. Metal Curtain Construction: **<< Interlocking; Hinged; or _____>>** slats.
1. Curtain Bottom for Slat Curtains: Fitted with steel **<< angles; or _____>>** to provide reinforcement and positive contact in closed position; powder coated to match curtain slats.
2. Weatherstripping for Exterior Doors: Moisture and rot proof, resilient type, located at **<< jamb edges; bottom of curtain; where curtain enters hood enclosure; and _____>>** of **<< all doors; exterior doors; doors indicated; or _____>>**.
3. Steel Slats: Minimum thickness, **<< 22 gauge, 0.0299 inch; 20 gauge, 0.0359 inch; 18 gauge, 0.0478 inch; or _____>>**; **<<ASTM A653/A653M>>** galvanized steel sheet, unless otherwise indicated.
   a. Galvanizing: Minimum **<< G90; or G___ >>** coating at all doors.

B. Guide Construction: Continuous, of profile to retain door in place**<< with snap-on trim; _____; or None - N/A>>**, mounting brackets of same metal.

C. Guides - Angle: Two **<<ASTM A36/A36M>>** metal angles, size **<< as indicated; as required for wind loading; or _____>>**, but not less than 1-1/2 by 1-1/2 by 1/8 inch.
1. **<< Prime painted; Powder coated; or _____>>** to match curtain slats.

D. Hood Enclosure and Trim: Internally reinforced to maintain rigidity and shape.
1. Minimum Thickness: 0.028-inch; **<<ASTM A653/A653M>>** galvanized steel sheet with G90 coating.
2. Provide with end mounting brackets and with intermediate reinforcing brackets to prevent sagging.
3. **<< Prime painted; Prepare for site painted finish; or Powder coated to match curtain slats>>**.

E. Lock Hardware:
1. For **<< motor operated>>** units, additional lock or latching mechanisms are not required.
2. For **<< manual units with push-up operation>>**, provide slide bolt on single-jamb side, extending into slot in guides, with padlock hasp (padlock is NIC).
3. For **<< manual units with chain operation>>**, provide padlockable chain keeper on guide (padlock is NIC).

F. Roller Shaft Counterbalance: Steel pipe and**<< helical; _____; or None - N/A>>** steel spring system, capable of producing torque sufficient to ensure smooth operation of curtain from any position and capable of holding position at mid-travel; with adjustable spring tension; requiring 25 lb nominal force to operate.

2.04 ELECTRIC OPERATION

A. Operator, Controls, Actuators, and Safeties: Comply with **<<UL 325>>**; provide products listed by **<< ITS (DIR); UL (DIR); testing agency acceptable to authorities having jurisdiction; or _____>>**.
1. Provide interlock switches on motor operated units.
2. Operation Cycles: Provide operators and components that are tested and rated for a minimum of 20,000 cycles, unless otherwise indicated.

B. Electric Operators:

DRAFT

1. Mounting: **<< Side mounted; Center mounted; or _____>>**.
2. Motor Enclosure:
   a. Exterior Coiling Doors: **<<NEMA MG 00001>>**, **<< Type 4; Type 4X; or Type ___>>**; **<< open drip proof; totally enclosed fan cooled (TEFC); or _____>>**.
   b. Interior Coiling Doors: **<<NEMA MG 00001>>**, **<< Type 1; Type 4; or Type ___>>**; **<< open drip proof; totally enclosed fan cooled (TEFC); or _____>>**.
3. Motor Rating: **<< 1/3 HP; 1/2 HP; 3/4 HP; 1 HP; 2 HP; or ____ HP>>**; continuous duty.
4. Motor Voltage: **<< 120; 208; or ___>>** volts, **<< single; three; or _____>>** phase, 60 Hz.
5. Motor Controller: **<<NEMA ICS 2>>**, full voltage, reversing magnetic motor starter.
6. Controller Enclosure: **<<NEMA EN 10250>>**, **<< Type 4; Type 4X; or Type ___>>**.
7. Brake: **<< Manufacturer's standard; Adjustable friction clutch; or _____>>** type, activated by motor controller.
8. Manual override in case of power failure.
9. Refer to Division 26 and electrical drawings for electrical connections.

C. Control Station: Provide key-operated three button, 'Open-Close-Stop' momentary-contact control device for each operator complying with **<<UL 325>>**.
   1. Surface mounted, adjacent to interior door jamb, unless otherwise indicated.
   2. Entrapment Protection Devices: Provide sensing devices and safety mechanisms complying with **<<UL 325>>**.
      a. Primary Device: Provide NEMA 4x photo eye sensor as required with momentary-contact control device; sensor shall be mounted no more than 6 inches above finish floor level.
      b. Secondary Device: Provide non-monitored pneumatic sensing edge; may also serve as weatherstripping for bottom of door.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that adjacent construction is suitable for door installation.

B. Verify that electrical services have been installed and are accessible.

C. Verify that door opening is plumb, header is level, and dimensions are correct.

D. Notify **<<Architect>>** of any unacceptable conditions or varying dimensions.

E. Commencement of installation indicates acceptance of substrate and door opening conditions.

3.02 INSTALLATION

A. Install units in accordance with manufacturer's instructions.

B. Use anchorage devices to securely fasten assembly to wall construction and building framing without distortion or stress.

C. Securely and rigidly brace components suspended from structure.**<< Secure guides to structural members only.; _____ .; or None - N/A>>**

D. Fit and align assembly including hardware; level and plumb, to provide smooth operation.

E. Coordinate installation of electrical service with Division 26 electrical sections.

F. Complete wiring from disconnect to unit components.

DRAFT

G. Install enclosure and perimeter trim.

3.03 TOLERANCES

A. Maintain dimensional tolerances and alignment with adjacent work.

B. Maximum Variation From Plumb: 1/16 inch.

C. Maximum Variation From Level: 1/16 inch.

D. Longitudinal or Diagonal Warp: Plus or minus 1/8 inch per 10 feet straight edge.

3.04 ADJUSTING

A. Adjust operating assemblies for smooth and noiseless operation.

B. Adjust seals around entire perimeter to ensure a weather-tight installation.

3.05 CLEANING

A. Clean installed components.

B. Remove labels and visible markings.

3.06 FIELD QUALITY CONTROL, DEMONSTRATION, AND INITIAL MAINTENANCE SERVICE

A. Field Testing and Demonstration: Field testing shall be performed by manufacturer's authorized service representative.
   1. Complete final installation, testing, and adjustment procedures in accordance with manufacturer's instructions.
   2. Provide a minimum of 2 hours training and demonstration to Owner's maintenance personnel for operation, adjustment, and maintenance of doors.

B. Provide an Initial Maintenance Contract for maintenance of coiling door system and components for a period of 12 months. Maintenance shall include maximum quarterly intervals (minimum of 4 visits for initial contract), and shall include adjustment, lubrication, and other preventive maintenance, and repair or replacement of defective or worn parts or equipment.
   1. Provide service during regular working hours throughout period of this maintenance contract.

OVERHEAD COILING GRILLES

OVERHEAD COILING GRILLES

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ITS (DIR) - Directory of Listed Products.

B. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

C. NEMA ICS 2 - Industrial Control and Systems Controllers, Contactors and Overload Relays Rated 600 Volts.

D. NEMA MG 00001 - Motors and Generators.

E. UL (DIR) - Online Certifications Directory.

F. UL 325 - Standard for Door, Drapery, Gate, Louver, and Window Operators and Systems.

1.02 SUBMITTALS

A. Product Data: Provide general construction component connections and details**<< , and electrical equipment; or None - N/A>>**.

B. Shop Drawings: Indicate pertinent dimensioning, anchorage methods, hardware locations, and installation details.

C. Installer's qualification statement.

D. Evaluation Report: Provide an ICC-ES evaluation report covering the provisions of **<< Section 1008.1.9.8 of the 2012 IBC; or Section 1010.1.9.8 of the 2015 IBC>>** for electrical operated access-controlled egress coiling grilles.

1.03 QUALITY ASSURANCE

A. Products Requiring Electrical Connection: Listed and classified by **<< ITS (DIR); UL (DIR); testing firm acceptable to authorities having jurisdiction; or _____>>** as suitable for purpose specified.

DRAFT

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Overhead Coiling Grilles:

1. Alpine Overhead Doors, Inc.
2. C.H.I. Overhead Doors.
3. Cornell Iron Works, Inc.
4. The Cookson Company.
5. Raynor Garage Doors.
6. Wayne-Dalton, a Division of Overhead Door Corporation.

2.02 GRILLES AND COMPONENTS

A. Grille: **<< Aluminum; Galvanized steel; Stainless steel; or Bronze>>**; horizontal bar curtain, coiling on overhead counterbalanced shaft.

1. Finish: Clear anodized, AAMA 611, AA-M12C22A41, Class I, 0.018 mm.

2. Electric operation.
3. Mounting: **<< Surface mounted; Within framed opening; As indicated on drawings; or _____>>**.

B. Curtain: Round horizontal bars connected with vertical links.
1. Horizontal bars: **<< 5/16 inch; or ____ inch>>** diameter.
2. Bar spacing: **<< 1-1/2 inch; 3-1/4 inch; or ____ inch>>** on center.
3. Tube spacers: **<< 1/2 inch; or ____ inch>>** diameter.
4. Spacer spacing: **<< 3-1/4 inch; or ____ inch>>** on center.
5. Link spacing: **<< 6 inch; 9 inch; or ____ inch>>** on center.
6. Bar Ends: Provide with **<< nylon; or polypropylene pile>>** runners for quiet operation.
7. Bottom Bar: Back-to-back angles**<< with tubular resilient cushion; _____; or None - N/A>>**.

C. Guides: **<< Extruded aluminum; Galvanized steel; Stainless steel; or Bronze>>** angles, of profile to retain grille in place, mounting brackets of same metal.
1. Guide Supports/Mounting: As detailed and per the below. Guides and guide support assembly shall be coordinated such that face of guides are flush to face of wall as indicated.
a. Steel Tube Support: Provide steel tubes at each jamb, sized for door width, but not less than 3 inch by 3 inch by 3/16 inch. At Contractor's option, steel tubes shall be provided by coiling grille manufacturer or in coordination with Division 5 Metal Fabrications miscellaneous steel supplier.

D. Lock Hardware:
1. Emergency Response Grille Concealed Self Locking Mechanism: Provide manual lifting jamb lock assemblies that will prevent forced opening of a closed grille. Lock mechanism shall not interfere with normal electric operation, fail-safe, or emergency response self opening features.
2. For motor operated units, additional lock or latching mechanisms are not required.

E. Roller Shaft Counterbalance: Steel pipe and**<< helical; _____; or None - N/A>>** steel spring system, capable of producing torque sufficient to ensure smooth operation of curtain from any position and capable of holding position at mid-travel; with adjustable spring tension; requiring **<< 25 lb; or ____ lb>>** nominal force to operate.

2.03 MATERIALS

A. Aluminum: **<<ASTM B221>>** (**<<ASTM B221M>>**).

2.04 ELECTRIC OPERATION

A. Operator, Controls, Actuators, and Safeties: Comply with **<<UL 325>>**; provide products listed by **<< ITS (DIR); UL (DIR); testing agency acceptable to authorities having jurisdiction; or _____>>**.
1. Provide interlock switches on motor operated units.

B. Electric Operators:
1. Mounting: **<< Side mounted; or Center mounted>>**.
2. Motor Enclosure:
a. Interior Coiling Grilles: **<<NEMA MG 00001>>**, Type **<< 1; 4; or ____>>**; **<< open drip proof; totally enclosed fan cooled (TEFC); or _____>>**.
3. Motor Rating: **<< 1/3 hp; 1/2 hp; 3/4 hp; or ____ hp>>**; continuous duty.

DRAFT

4. Motor Voltage: **<< 120; or ___>>** volts, **<< single; or three>>** phase, 60 Hz.
5. Motor Controller: **<<NEMA ICS 2>>**, full voltage, reversing magnetic motor starter.
6. Controller Enclosure: **<<NEMA EN 10250>>** Type **<< 1; 4; or ____>>**.
7. Opening Speed: **<< 6 inches per second; 12 inches per second; 24 inches per second; or ____ inches per second>>**.
8. Brake: Adjustable friction clutch type, activated by motor controller.
9. Manual override in case of power failure.
10. Refer to Division 26 sections and Electrical Drawings for electrical connections.

C. Control Station: Provide standard **<< three button; key-operated; or _____>>** (Open-Close-Stop) **<< momentary-contact; or continuous-contact>>** control device for each operator complying with **<<UL 325>>**. Provide a control station on each side of each grille, unless otherwise indicated.
1. **<< 24; or ____>>** volt circuit.
2. **<< Surface; Recess; or _____>>** mounted, at **<< interior door jamb; exterior location as indicated on drawings; or _____>>**.
3. Entrapment Protection Devices: Provide sensing devices and safety mechanisms complying with **<<UL 325>>**.
   a. Primary Device: Provide **<< electric sensing edge; wireless sensing; NEMA 1 photo eye sensors; NEMA 4X photo eye sensors; or _____>>** as required with momentary-contact control device.

D. Emergency Opening Mechanism: Provide manufacturer's standard grille mechanism to automatically open grille when activated by fire alarm, emergency push button, or power failure. Mechanism shall be fail-safe and shall open without the need for power or battery backup. Coordinate with Division 26/28 Contractor as follows:
1. Division 26/28 electrical subcontractor shall:
   a. Provide flush outlet boxes at push button locations and operator locations, and empty conduit concealed in wall or ceiling between them.
   b. Provide electrical service and connections for powered operators and accessories. These emergency egress door applications shall be connected to emergency generator circuits.
   c. Provide fire alarm control interface to door operator and to signal door operator to open upon fire alarm condition.
2. Division 8 overhead coiling grille subcontractor shall:
   a. Provide approved mushroom type emergency push button and device plated mounted on each side of door (to permit egress from either direction), and shall provide 6-inch egress sign reading "PUSH TO EXIT - ALARM WILL SOUND" at each push button.
   b. Provide control wiring between push button and operator.
   c. Provide local horn/strobe alarm for emergency exit push-button station, and all control wiring between local horn/strobe alarm and push button.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that adjacent construction is suitable for door installation.

B. Verify that electrical services have been installed and are accessible.

C. Verify that door opening is plumb, header is level, and dimensions are correct.

DRAFT

D. Notify **<<Architect>>** of any unacceptable conditions or varying dimensions.

E. Commencement of installation indicates acceptance of substrate and door opening conditions.

3.02 INSTALLATION

A. Install grille unit assembly in accordance with manufacturer's instructions.

B. Use anchorage devices to securely fasten assembly to wall construction and building framing without distortion or stress.

C. Securely and rigidly brace components suspended from structure.**<< Secure guides to structural members only.; _____ .; or None - N/A>>**

D. Fit and align assembly including hardware; level and plumb, to provide smooth operation.

E. Coordinate installation of electrical service with Division 26 and Electrical Drawings.

F. Complete wiring from disconnect to unit components.

3.03 TOLERANCES

A. Maintain dimensional tolerances and alignment with adjacent work.

B. Maximum Variation From Plumb: **<< 1/16 inch; or ___ inch>>**.

C. Maximum Variation From Level: **<< 1/16 inch; or ___ inch>>**.

D. Longitudinal or Diagonal Warp: Plus or minus **<< 1/8 inch per 10 ft; or ____ inch per 10 ft>>** straight edge.

3.04 ADJUSTING

A. Adjust grille, hardware and operating assemblies for smooth and noiseless operation.

3.05 CLEANING

A. Clean grille and components.

B. Remove labels and visible markings.

3.06 INITIAL MAINTENANCE CONTRACT

A. Provide an Initial Maintenance Contract for maintenance of coiling grille system and components for a period of 12 months. Maintenance shall include maximum quarterly intervals (minimum of 4 visits for initial contract), and shall include adjustment, lubrication, and other preventive maintenance, and repair or replacement of defective or worn parts or equipment.

1. Provide service during regular working hours throughout period of this maintenance contract.

END OF SECTION 083326

DRAFT

SECTION 084313
ALUMINUM-FRAMED STOREFRONTS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. AAMA 503 - Voluntary Specification for Field Testing of Newly Installed Storefronts, Curtain Walls and Sloped Glazing Systems.

B. AAMA 611 - Specification for Anodized Architectural Aluminum.

C. AAMA 1503 - Voluntary Test Method for Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections.

D. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix).

A. AAMA CW-10 - Care and Handling of Architectural Aluminum from Shop to Site.

B. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures.

C. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

D. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric).

E. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

F. ASTM E283/E283M - Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Skylights, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen.

G. ASTM E330/E330M - Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.

H. ASTM E331 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference.

I. ASTM E1105 - Standard Test Method for Field Determination of Water Penetration of Installed Exterior Windows, Skylights, Doors, and Curtain Walls, by Uniform or Cyclic Static Air Pressure Difference.

J. NFRC 200 - Procedure for Determining Fenestration Product Solar Heat Gain Coefficient and Visible Transmittance at Normal Incidence.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Conduct a preinstallation meeting a miminum of two weeks, but not more than four weeks, before starting work of this section; require attendance by all affected installers.

1.03 SUBMITTALS

A. Product Data: Provide component dimensions, describe components within assembly, anchorage and fasteners, glass and infill, door hardware, and internal drainage details.

B. Shop Drawings: Indicate system dimensions, framed opening requirements and tolerances, affected related work, expansion and contraction joint location and details, and field welding required.

DRAFT

C. Selection Samples: Submit manufacturer's color charts representing manufacturer's full range of available colors, for each type of product required.

D. Verification Samples: Submit physical samples in manufacturer's standard size indicating actual panel material and selected colors, for each type of product required.

E. Hardware Schedule: Complete itemization of each item of hardware to be provided for each door, cross-referenced to door identification numbers in Contract Documents.

F. Field Quality Control Submittals: Report of field testing for water penetration**<< and air leakage; or None - N/A>>**.

G. Installer's qualification statement.

H. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing work of type specified and with at least **<< three; or _____>>** years of**<< documented; _____; or None - N/A>>** experience**<< and approved by manufacturer; _____; or None - N/A>>**.

1.05 MOCK-UPS

A. Integrated Exterior Mockup: Attend preinstallation conference and provide storefront work for integrated exterior mockup as indicated on Drawings and as specified in Division 1 Section "Quality Requirements."

1.06 DELIVERY, STORAGE, AND HANDLING

A. Handle products of this section in accordance with **<<AAMA CW-10>>**.

B. Protect finished aluminum surfaces with **<< wrapping; strippable coating; or _____>>**. Do not use adhesive papers or sprayed coatings that bond to aluminum when exposed to sunlight or weather.

1.07 FIELD CONDITIONS

A. Do not install sealants when ambient temperature is less than 40 degrees F. Maintain this minimum temperature during and 48 hours after installation.

1.08 WARRANTY

A. Material/Labor Warranty: Provide a 2-year material and workmanship warranty, beginning on the date of Substantial Completion, covering failures including but not limited to, structural and performance failures, excessive material deterioration, failure of operating components, and water or air infiltration. Complete forms in Owner's name and register with warrantor.

B. Finish Warranty: Provide 10 year manufacturer warranty, beginning on the date of Substantial Completion against excessive degradation of exterior finish. Include provision for replacement of units with excessive fading, chalking, or flaking. Complete forms in Owner's name and register with warrantor.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Aluminum-Framed Storefront - Exterior High-Performance - Double Thermal Break - Center Set - 2" x 4.5":

1. EFCO Corp; 403X.

DRAFT

2. Kawneer North America; 451UT.
3. Oldcastle Building Envelope; 3000 XT.
4. Tubelite, Inc; TU 24000 Therml=block.
5. YKK AP America, Inc; YES 45 XT.

B. Aluminum-Framed Storefront - Interior - Non-Thermal - Center Set - 2" x 4.5":
1. EFCO Corp; 402.
2. Kawneer North America; Trifab VG 451.
3. Oldcastle Building Envelope; FG 3000.
4. Tubelite, Inc; E14000 Non-Thermal.
5. YKK AP America, Inc; YES 45 FI.

C. Aluminum-Framed Entrance - Exterior - Thermally Broken/Insulated - Wide Stile. Thickness varies by manufacturer; coordinate hardware requirements with submitted product depth:
1. EFCO Corp; 2" ThermaStile Aluminum Swing Entrance Doors. (2")
2. Kawneer North America; 500T Insulpour. (2-1/4")
3. Oldcastle Building Envelope; WS-500TC. (2-1/4")
4. Tubelite, Inc; Therml=Block Entrance. (1-3/4")
5. YKK AP America Inc; 50T. (2")

D. Aluminum-Framed Entrance - Interior - Standard - Uninsulated - 1.75-inch Thick - Wide Stile:
1. EFCO Corp; D500.
2. Kawneer North America; 500.
3. Oldcastle Building Envelope; 500.
4. Tubelite, Inc; Standard Wide Stile Doors.
5. YKK AP America, Inc; 50D.

DRAFT

2.02 ALUMINUM-FRAMED STOREFRONT

A. Aluminum-Framed Storefront: Factory fabricated, factory finished aluminum framing members with infill, and related flashings, anchorage and attachment devices.
1. Fabrication: Joints and corners flush, hairline, and weatherproof, accurately fitted and secured; prepared to receive anchors and hardware; fasteners and attachments concealed from view; reinforced as required for imposed loads.
2. Construction: Eliminate noises caused by wind and thermal movement, prevent vibration harmonics, and prevent "stack effect" in internal spaces.
3. System Internal Drainage: Drain to the exterior by means of a weep drainage network any water entering joints, condensation occurring in glazing channel, and migrating moisture occurring within system.
4. Expansion/Contraction: Provide for expansion and contraction within system components caused by cycling temperature range of 170 degrees F over a 12 hour period without causing detrimental effect to system components, anchorages, and other building elements.
5. Movement: Allow for movement between storefront and adjacent construction, without damage to components or deterioration of seals.
6. Perimeter Clearance: Minimize space between framing members and adjacent construction while allowing expected movement. Coordinate with rough opening sizes to provide sealant joints on all sides of 3/8-inch to 1/2-inch.

B. Performance Requirements:

1. Wind Loads: Design and size components to withstand the specified load requirements without damage or permanent set, when tested in accordance with **<<ASTM E330/E330M>>**, using loads **<< 1.5 times; or _____>>** the design wind loads and **<< 10 second; or _____>>** duration of maximum load.
   a. Design Wind Loads: Comply with requirements of **<<ASCE 7>>** and as indicated on Structural drawings.
   b. Member Deflection: Limit member deflection to **<< flexure limit of glass; 1/175; or _____>>** in any direction, with full recovery of glazing materials.
2. Water Penetration Resistance on Manufactured Assembly: No uncontrolled water on interior face, when tested in accordance with **<<ASTM E331>>** at pressure differential of 10 psf.
3. Air Leakage: 0.06 cfm/sq ft maximum leakage of fixed storefront wall area and 1.00 cfm/sq ft maximum leakage at swinging entrance doors, when tested in accordance with **<<ASTM E283/E283M>>** at 1.57 psf pressure difference.
4. Condensation Resistance Factor of Framing: 56, minimum, measured in accordance with **<<AAMA 1503>>**.
5. Overall U-value Including Glazing (Fixed Fenestration): 0.36 Btu/(hr sq ft deg F), maximum. ******U-values and SHGC are based on 2021 Maryland Energy Code (Climate Zone 4A Mixed-Humid******
6. Overall U-value Including Glazing (Entrance Doors): 0.63 Btu/(hr sq ft deg F), maximum.
7. Solar Heat Gain Coefficient (SHGC) Including Glazing: 0.36, maximum, measured in accordance with **<<NFRC 200>>**.

2.03 COMPONENTS

A. Aluminum Framing Members: Tubular aluminum sections, double-thermally broken between interior and exterior sections, with drainage holes and internal weep drainage system.
   1. Framing members for interior applications need not be thermally broken.
   2. Glazing Stops: Flush.
   3. Glazing Position: Center-set.
   4. Cross-Section: 2 inches wide by 4-1/2 inches deep, unless otherwise indicated on drawings.

B. Glazing: Refer to Division 8 Section "Glazing".

C. Insulating Metal Infill Panels (Glazing Type **<< _____>>**): Insulated, **<< aluminum; steel; or _____>><< , with edges formed to fit glazing channel; or None - N/A>><< and sealed; unsealed to permit air movement; or _____>>**.
   1. Total Nominal Thickness: 1 inch.
   2. Surface Burning Characteristics: Provide assemblies with Class A rating, with flame spread index of 25 or less and smoke developed index of 450 or less, when tested in accordance with **<<ASTM E84>>**.
   3. Face Sheets (Front and Back): Equal 0.024-inch smooth aluminum faces bonded to nominal 1/8-inch exterior grade hardboard or high-density corrugated polypropylene.
   4. Core: Rigid polyisocyanurate insulation core; minimum total panel R-value of R-6.
   5. Finish: Same as storefront.
   6. Products:
      a. Citadel Architectural Products; GlazeGuard 1000 WR+.
      b. Laminators, Inc; Thermolite/Omega Foam-Ply.
      c. Mapes Architectural Products; Mapes-R Infill.

DRAFT

D. Swing Doors: **<< Glazed aluminum; Flush aluminum; or _____>>**.
   1. Exterior Door Thickness: Varies by manufacturer; refer to product list above.
   2. Interior Door Thickness: 1-3/4 inches.
   3. Top Rail: 7 inches wide, unless otherwise indicated.
   4. Vertical Stiles: **<< 4-1/2 inches; or 5 inches>>** wide (wide stile).
   5. Bottom Rail: 12 inches wide, unless otherwise indicated.
   6. Glazing Stops: Beveled.
   7. Finish: Same as storefront.

2.04 MATERIALS AND ACCESSORIES

A. Extruded Aluminum: **<<ASTM B221>>** (**<<ASTM B221M>>**).

B. Fasteners: **<< Stainless; Galvanized; or _____>>** steel.

C. Metal Extrusions and Accessories:
   1. Metal Trim, Filler, and Closures (Brake Metal): Form interior filler panels for closing ends of partition systems, concealing adjacent structural elements, and for other applications as indicated on Drawings. Form from minimum 0.050-inch aluminum sheet coil, producing a panel of same thickness as partitions or mullions unless otherwise indicated. Incorporate reveals, trim, and concealed anchorages for attaching to adjacent surfaces. Finish trim to match storefront unless otherwise indicated.
   2. Offset Anchorage System: Provide frame anchorage incorporating L-shaped offset anchors or strap anchor component, and finished extruded interlocking L-shaped cover trim matching storefront framing. Anchorage "clip and cover" system shall be engineered by storefront manufacturer.
   3. Enhanced (High Performance) Sill Flashing: Provide thermally-broken extruded aluminum sill flashing with 2-inch tall back leg and bottom profile with outboard trough and weep holes to direct water to exterior. Provide full-frame-depth end dams mechanically attached to sill flashing extrusion and sealed with silicone. Provide silicone sill flashing splice sleeves and sealant as required at end dams and penetrations for anchorage. Provide finish to match framing.

D. Sill Flashing Sealant: Elastomeric silicone; compatible with flashing material.

E. Sealant for Setting Thresholds: Non-curing butyl type.

F. Glazing Gaskets: Type to suit application to achieve weather, moisture, and air infiltration requirements. Coordinate with Division 8 Section "Glazing."

2.05 FINISHES

A. Metal surfaces shall be prepared, pre-treated, and coated in accordance with coating and resin manufacturer's instructions.

B. Class I Natural Anodized Finish: **<<AAMA 611>><< AA-M12C22A41; _____; or None - N/A>>** Clear anodic coating not less than **<< 0.7 mils>>** thick.

C. Superior Performing Organic Coatings System: Manufacturer's standard multi-coat superior performing organic coatings system complying with **<<AAMA 2605>>**, including at least 70 percent polyvinylidene fluoride (PVDF) resin, and at least 80 percent of aluminum extrusion and panels surfaces having minimum total dry film thickness (DFT) of **<< 1.2 mils, 0.0012 inch>>**.

D. Color: To be selected by Owner and Architect from manufacturer's full range.

E. Touch-Up Materials: As recommended by coating manufacturer for field application.

DRAFT

2.06 HARDWARE

A. For each door, include weatherstripping, sill sweep strip, and threshold.

B. Other Door Hardware: Refer to Division 8 Section "Door Hardware".

C. Weatherstripping: Manufacturer's standard synthetic pile, continuous and replaceable; provide on all doors.

D. Sill Sweep Strips: Resilient seal type,**<< retracting,; None - N/A; or _____>>** of **<< neoprene; or _____>>**; provide on **<< all doors; all exterior doors; or _____>>**.

E. Threshold: Extruded aluminum, one piece per door opening, **<< ribbed; non-slip; or _____>>** surface; provide at all exterior doors.

F. Other Door Hardware: Refer to and coordinate with Division 8 Section "Door Hardware".

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify dimensions, tolerances, and method of attachment with other work.

B. Verify that storefront wall openings and adjoining water-resistive and/or air barrier seal materials are ready to receive work of this section.

3.02 INSTALLATION

A. Install wall system in accordance with manufacturer's instructions.

B. Attach to structure to permit sufficient adjustment to accommodate construction tolerances and other irregularities.

C. Provide alignment attachments and shims to permanently fasten system to building structure.

D. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances**<< , aligning with adjacent work; , _____; or None - N/A>>**.

E. Provide thermal isolation where components penetrate or disrupt building insulation.

F. Install **<< sill; and _____ >>** flashings. Turn up ends and edges; seal to adjacent work to form water tight dam.

G. Where fasteners penetrate sill flashings, make watertight by seating and sealing fastener heads to sill flashing.

H. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.

I. Set thresholds in bed of sealant and secure.

J. Install glass**<< and infill panels; _____; or None - N/A>>** using **<< glazing method required to achieve performance criteria; exterior wet/dry glazing method; exterior dry glazing method; _____ glazing method; or _____>>**; refer to Division 8 Section "Glazing."

K. Touch-up minor damage to factory applied finish; replace components that cannot be satisfactorily repaired.

3.03 TOLERANCES

A. Maximum Variation from Plumb: **<< 0.06 inch per 3 feet; or ____ inch per 3 feet>>** non-cumulative or **<< 0.06 inch per 10 feet; or ____ inch per 10 feet>>**, whichever is less.

B. Maximum Misalignment of Two Adjoining Members Abutting in Plane: **<< 1/32 inch; or ____ inch>>**.

DRAFT

3.04 FIELD QUALITY CONTROL

A. Provide services of storefront manufacturer's field representative to observe for proper installation of system and submit report.

B. Provide field testing of installed storefront system by**<< AAMA accredited; _____; or None - N/A>>** independent laboratory in accordance with **<<AAMA 503>>** during construction process and before installation of interior finishes.

1. Perform a minimum of **<< two; three; or _____>>** tests in each designated area **<< as indicated on drawings; as directed by Architect; or _____>>**.
2. Conduct tests in each area prior to **<< 10 percent; 35 percent; 50 percent; 70 percent; and ___ percent>>** completion of this work.
3. Field test for water penetration in accordance with **<<ASTM E1105>>** with uniform static air pressure difference (Procedure A) not less than **<< 4.18 psf; or ___ psf>>**.
    a. Maximum allowable rate of water penetration in 15-minute test is **<< 0.5 ounce>>** that is not contained in an area with provisions to drain to exterior, or collected on surface of interior horizontal framing member.

C. Repair or replace storefront components that have failed designated field testing, and retest to verify performance complies with specified requirements.

3.05 ADJUSTING

A. Adjust operating components and hardware for smooth operation. Coordinate with Division 8 Door Hardware for hardware adjustments.

3.06 CLEANING

A. Remove protective material from pre-finished aluminum surfaces.

B. Wash down surfaces with a solution of mild detergent in warm water, applied with soft, clean wiping cloths, and take care to remove dirt from corners and to wipe surfaces clean.

3.07 PROTECTION

A. Protect installed products from damage until Date of Substantial Completion.

END OF SECTION 084313

DRAFT

SECTION 084413
GLAZED ALUMINUM CURTAIN WALLS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. AAMA 501.2 - Quality Assurance and Diagnostic Water Leakage Field Check of Installed Storefronts, Curtain Walls, and Sloped Glazing Systems.

B. AAMA 501.4 - Recommended Static Test Method for Evaluating Window Wall, Curtain Wall and Storefront Systems Subjected to Seismic and Wind-Induced Inter-Story Drift.

C. AAMA 503 - Voluntary Specification for Field Testing of Newly Installed Storefronts, Curtain Walls and Sloped Glazing Systems.

D. AAMA 1503 - Voluntary Test Method for Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections.

E. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix).

A. AAMA CW-10 - Care and Handling of Architectural Aluminum from Shop to Site.

B. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures.

C. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.

D. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

E. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

F. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

G. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric).

H. ASTM C794 - Standard Test Method for Adhesion-in-Peel of Elastomeric Joint Sealants.

I. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

J. ASTM E283/E283M - Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Skylights, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen.

K. ASTM E331 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference.

L. ASTM E783 - Standard Test Method for Field Measurement of Air Leakage Through Installed Exterior Windows and Doors.

M. ASTM E1105 - Standard Test Method for Field Determination of Water Penetration of Installed Exterior Windows, Skylights, Doors, and Curtain Walls, by Uniform or Cyclic Static Air Pressure Difference.

N. NFRC 200 - Procedure for Determining Fenestration Product Solar Heat Gain Coefficient and Visible Transmittance at Normal Incidence.

O. SSPC-Paint 20 - Zinc-Rich Coating (Type I - Inorganic, and Type II - Organic).

DRAFT

1.02 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Conduct a preinstallation meeting a miminum of two weeks, but not more than four weeks, before starting work of this section; require attendance by all affected installers.

1.03 SUBMITTALS

A. Product Data: Provide component dimensions, describe components within assembly, anchorage and fasteners, internal drainage details, glazing, and infill.

B. Shop Drawings: Indicate system dimensions, framed opening requirements and tolerances, affected related Work, expansion and contraction joint location and details, and field welding required.

C. Selection Samples: Submit manufacturer's color charts representing manufacturer's full range of available colors, for each type of product required.

D. Verification Samples: Submit physical samples in manufacturer's standard size indicating actual panel material and selected colors, for each type of product required.

E. Manufacturer's Certificate: Certify that the products supplied meet or exceed the specified requirements.

F. Design Data: Provide framing member structural and physical characteristics and engineering calculations, and identify dimensional limitations; include load calculations at points of attachment to building structure. Structural data shall be signed and sealed by the Professional Structural Engineer responsible for their preparation.

G. Field Quality Control Submittals: Report of field testing for water penetration**<< and air leakage; _____; or None - N/A>>**.

H. Designer's Qualification Statement.

I. Installer's Qualification Statement.

J. Warranty: Submit manufacturer warranty and ensure forms have been completed in **<<Owner>>**'s name and registered with manufacturer.

1.04 QUALITY ASSURANCE

A. Designer Qualifications: Design curtain wall and its structural support framing components under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the State of Maryland.

B. Installer Qualifications: Company specializing in performing work of type specified and with at least **<< three; or _____>>** years of**<< documented; _____; or None - N/A>>** experience**<< and approved by manufacturer; or None - N/A>>**.

1.05 MOCK-UPS

A. Integrated Exterior Mockup: Attend preinstallation conference and provide curtain wall work for integrated exterior mockup as indicated on Drawings and as specified in Division 1 Section "Quality Requirements."

1.06 DELIVERY, STORAGE, AND HANDLING

A. Handle products of this section in accordance with **<<AAMA CW-10>>**.

B. Protect finished aluminum surfaces with **<< wrapping; strippable coating; or _____>>**. Do not use adhesive papers or sprayed coatings that bond to aluminum when exposed to sunlight or weather.

DRAFT

1.07 FIELD CONDITIONS

A. Do not install sealants when ambient temperature is less than 40 degrees F. Maintain this minimum temperature during and 48 hours after installation.

1.08 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Material/Labor Warranty: Provide a two (2) year material and workmanship warranty, beginning on the date of Substantial Completion, covering failures including but not limited to, structural and performance failures, excessive material deterioration, failure of operating components, and water or air infiltration. Complete forms in Owner's s name and register with warrantor.

C. Finish Warranty: Provide 10 year manufacturer warranty, beginning on the date of Substantial Completion, against excessive degradation of exterior finish. Include provision for replacement of units with excessive fading, chalking, or flaking. Complete forms in Owner's name and register with warrantor.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Glazed Aluminum Curtain Wall - Exterior High-Performance - Fiberglass Pressure Plates - Front Set:
   1. EFCO Corp; 5600 XTherm.
   2. Kawneer North America; 1600UT.
   3. Oldcastle Building Envelope; Reliance Thermal.
   4. Tubelite, Inc; 400T Curtainwall.
   5. YKK AP America, Inc; YCO 750 XT.

B. Aluminum-Framed Entrance - Exterior - Thermally Broken/Insulated - Wide Stile. Thickness varies by manufacturer; coordinate hardware requirements with submitted product depth:
   1. EFCO Corp; 2" ThermaStile Aluminum Swing Entrance Doors. (2")
   2. Kawneer North America; 500T Insulpour. (2-1/4")
   3. Oldcastle Building Envelope; WS-500TC. (2-1/4")
   4. Tubelite, Inc; Therml=Block Entrance. (1-3/4")
   5. YKK AP America Inc; 50T. (2")

2.02 CURTAIN WALL

A. Aluminum-Framed Curtain Wall: Factory fabricated, factory finished aluminum framing members with infill, and related flashings, anchorage and attachment devices.
   1. Outside glazed, with pressure plate and mullion cover**<< , where indicated on drawings; , _____; or None - N/A>>**.
   2. Fabrication Method: **<< Either shop/factory or field fabricated system; Shop/factory unitized system; Field fabricated stick system; Shop/factory unit and mullion system; or _____>>**.
   3. Glazing Method: **<< Either shop/factory or field glazed system; Shop/factory glazed system; Field glazed system; or _____>>**.
   4. Provide flush joints and corners, weathersealed, accurately fitted and secured; prepared to receive anchors; fasteners and attachments concealed from view; reinforced as required for imposed loads.

DRAFT

5. Construction: Eliminate noises caused by wind and thermal movement, prevent vibration harmonics, and prevent "stack effect" in internal spaces.
6. System Internal Drainage: Drain to the exterior by means of a weep drainage network any water entering joints, condensation occurring in glazing channel, and migrating moisture occurring within system.
7. Maintain continuous air barrier and/or vapor retarder seal throughout assembly, primarily in line with**<< inside; _____; or None - N/A>>** pane of glazing**<< and inner sheet of infill panel; _____; or None - N/A>>** and heel bead of glazing compound.
8. Perimeter Clearance: Minimize space between framing members and adjacent construction while allowing expected movement.

B. Structural Performance Requirements: Design and size components to withstand the following load requirements without damage or permanent set.
1. Design Wind Loads: Comply with **<< the following:; the applicable code.; the requirements of _____ code.; the requirements of ASCE 7; or _____ .>>** and as indicated on Structural drawings.
   a. Member Deflection: For spans less than **<< 13 feet 6 inches; or _____ feet>>**, limit member deflection to **<< flexure limit of glass; 1/175; or _____>>** in any direction, and maximum of **<< 1/175 of span; or _____>>** or **<< 3/4 inch; or _____ inch>>**, whichever is less and with full recovery of glazing materials.
   b. Member Deflection: For spans over **<< 13 feet 6 inches; or _____ feet>>** and less than **<< 40 feet; or ____ feet>>**, limit member deflection to **<< flexure limit of glass; 1/175; or _____>>** in any direction, and maximum of **<< 1/175 of span; 1/240 of span plus 1/4 inch; or _____>>**, with full recovery of glazing materials.
2. Interstory Differential Lateral Movement: Meeting pass/fail criteria of **<<AAMA 501.4>><< for Use Group I, Standard Occupancy; for Use Group II, High Occupancy Assembly; for Use Group III, Essential Facilities; _____; or None - N/A>>**, when tested at design displacement of **<< 0.010; 0.020; or _____>>** times greater adjacent story height, maximum, and 1.5 times design displacement**<< , through three complete cycles; , ____; or None - N/A>>**.
3. Movement: Accommodate the following movement without damage to components or deterioration of seals:
   a. Expansion and contraction caused by **<< 180 degrees F; or ____ degrees F>>** surface temperature.
   b. Expansion and contraction caused by cycling temperature range of **<< 170 degrees F; or ____ degrees F>>** over a **<< 12; or ____>>** hour period.
   c. Movement of curtain wall relative to perimeter framing.
   d. Deflection of structural support framing**<< , under permanent and dynamic loads; or None - N/A>>**.

C. Water Penetration Resistance on Manufactured Assembly: No uncontrolled water on indoor face when tested as follows:
1. Test Pressure Differential: **<< 12; or 15>>** psf.
2. Test Method: **<<ASTM E331>>**.

D. Air Leakage: **<< 0.06 cfm/sq ft; or ___ cfm/sq ft>>** maximum leakage of wall area when tested in accordance with **<<ASTM E283/E283M>>** at **<< 6.24 psf; or ___ psf>>** pressure difference across assembly.

E. Thermal Performance Requirements:

DRAFT

1. Condensation Resistance Factor of Framing: 56, minimum, measured in accordance with **<<AAMA 1503>>**.
2. Overall U-Factor Including Glazing (Fixed Fenestration): 0.36 Btu/(hr sq ft deg F), maximum.
3. Overall U-value Including Glazing (Entrance Doors): 0.63 Btu/(hr sq ft deg F), maximum.
4. Solar Heat Gain Coefficient (SHGC) Including Glazing: 0.36, maximum, measured in accordance with **<<NFRC 200>>**.

2.03 COMPONENTS

A. Aluminum Framing Members: Tubular aluminum sections**<< , thermally broken with interior section insulated from exterior; , _____; or None - N/A>>**, drainage holes and internal weep drainage system.
   1. Framing members for interior applications need not be thermally broken.
   2. Cross-Section: As indicated on drawings. ******Verify cross-sectional depth required based on curtainwall size and height. Coord with manufacturer if necessary******
   3. Structurally Reinforced Members: **<< Extruded; Formed sheet; or _____>>** aluminum with internal reinforcement of structural steel member.

B. Glazing: Refer to and coordinate with Division 8 Section "Glazing."

C. Infill Spandrel Panels (Glazing Type **<< _____>>**): Insulated, aluminum sheet face and back, with edges formed to fit glazing channel and sealed. ******Verify glazing type******
   1. Surface Burning Characteristics: Provide assemblies with Class A rating, with flame spread index of 25 or less and smoke developed index of **<< 450 or less; or _____>>**, when tested in accordance with **<<ASTM E84>>**.
   2. Total Panel Thickness: 1 inch.
   3. Face Sheets (Front and Back): Equal 0.024-inch smooth aluminum faces bonded to nominal 1/8-inch exterior grade hardboard or high-density corrugated polypropylene.
   4. Core: Rigid polyisocyanurate insulation core; minimum total panel R-value of R-6.
   5. Finish: Same as curtain wall.
   6. Products:
      a. Citadel Architectural Products; GlazeGuard 1000 WR+.
      b. Laminators, Inc; Thermolite/Omega Foam-Ply.
      c. Mapes Architectural Products; Mapes-R Infill.

D. Shadow Box Panels: Insulated back pan, with edges of pan formed to fit dimensions between mullions both horizontally and vertically. Front face of shadow box shall be 0.125-inch plate aluminum face panel; color selected from aluminum panel manufacturer's full range.
   1. Surface Burning Characteristics: Provide assemblies with Class A rating, with flame spread index of 25 or less and smoke developed index of **<< 450 or less; or _____>>**, when tested in accordance with **<<ASTM E84>>**.
   2. Ventilation: Provide ventilation from cavity between insulated glass unit and back pan; ventilation shall be to the exterior. Seal around perimeter of back pan to ensure a complete air and vapor barrier to the interior.
   3. Firestopping: Where shadow box/back pan at break between floor levels, coordinate with Section **<< 078400 - Firestopping; or _____>>** to provide a complete perimeter containment system that includes insulated back pan as part of a tested and approved perimeter assembly.
   4. Total Panel Thickness: As indicated on Drawings.
   5. Core: Mineral wool insulation core; minimum total panel **<< R-value of 8>>**.

DRAFT

6. Aluminum Face Panel Finish: **<< Class I natural anodized; Class II natural anodized; Class I color anodized; Class II color anodized; Natural anodized with organic seal; Color anodized with organic seal; Pigmented organic coatings; High performance organic coatings; High performance silicone-modified polyester (SMP) organic coatings; Superior performing organic coatings; or _____>>**; color as selected by Architect from manufacturer's full range.

2.04 MATERIALS

A. Extruded Aluminum: **<<ASTM B221>>** (**<<ASTM B221M>>**).

B. Sheet Aluminum: **<<ASTM B209/B209M>>**.

C. Structural Steel Sections (Reinforcing): **<<ASTM A36/A36M>>**; galvanized in accordance with requirements of **<<ASTM A123/A123M>>**.

D. Structural Supporting Anchors Attached to Structural Steel: Design for **<< bolted; welded; or _____>>** attachment.

E. Fasteners: **<< Stainless; Galvanized; or _____>>** steel; type as required or recommended by curtain wall manufacturer.

F. Concealed Flashings: Stainless steel, **<< 26 gauge, 0.0187 inch; or ___ gauge, ___ inch>>** minimum thickness or sheet aluminum, 22 gauge, 0.026 inch minimum thickness.

G. Firestopping: Refer to and coordinate with Division 7 Section "Firestopping."

H. Weatherseal Sealant: Silicone, with adhesion in compliance with **<<ASTM C794>>**; **<< compatible with glazing accessories; compatible with structural sealant glazing (SSG) adhesive; type recommended by structural sealant glazing (SSG) adhesive manufacturer; or _____>>**.

I. Sill Flashing Sealant: Elastomeric, silicone or polyurethane, and compatible with flashing material.

J. Glazing Gaskets: Type to suit application to achieve weather, moisture, and air infiltration requirements. Coordinate with Division 8 Section "Glazing."

K. Touch-Up Primer for Galvanized Steel Surfaces: **<< SSPC-Paint 20, zinc rich; or _____>>**.

2.05 FINISHES

A. Metal surfaces shall be prepared, pre-treated, and coated in accordance with coating and resin manufacturer's instructions.

B. Superior Performing Organic Coatings System: Manufacturer's standard multi-coat superior performing organic coatings system complying with **<<AAMA 2605>>**, including at least 70 percent polyvinylidene fluoride (PVDF) resin, and at least 80 percent of aluminum extrusion and panels surfaces having minimum total dry film thickness (DFT) of **<< 1.2 mils, 0.0012 inch>>**.

C. Color: To be selected by Owner and Architect from manufacturer's full range.

D. Touch-Up Materials: As recommended by coating manufacturer for field application.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify dimensions, tolerances, and method of attachment with other related work.

B. Verify that curtain wall openings and adjoining water-resistive and air barrier seal materials are ready to receive work of this section.

DRAFT

C. Verify that anchorage devices have been properly installed and located.

3.02 INSTALLATION

A. Install curtain wall system in accordance with manufacturer's instructions.

B. Attach to structure to permit sufficient adjustment to accommodate construction tolerances and other irregularities.

C. Provide alignment attachments and shims to permanently fasten system to building structure.

D. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances**<< , aligning with adjacent work; , _____; or None - N/A>>**.

E. Provide thermal isolation where components penetrate or disrupt building insulation.

F. Install **<< sill; head; eave edge; and _____>>** flashings. Turn up ends and edges; seal to adjacent work to form water tight dam.

G. **<< Install; Coordinate installation of; or _____>>** firestopping at each floor slab edge in accordance with tested assembly.

H. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.

I. Pressure Plate Framing: Install glazing using exterior dry glazing (gasketed) method, unless otherwise required to meet performance requirements. Refer to and coordinate with Division 8 Section "Glazing."

J. Touch-up minor damage to factory applied finish; replace components that cannot be satisfactorily repaired.

3.03 TOLERANCES

A. Maximum Variation from Plumb: 0.06 inch per 3 feet noncumulative or 0.5 inches per 100 feet, whichever is less.

B. Maximum Misalignment of Two Adjoining Members Abutting in Plane: 1/32-inch.

C. Sealant Space Between Curtain Wall Mullions and Adjacent Construction: Maximum of 3/4-inch and minimum of 1/4-inch.

3.04 FIELD QUALITY CONTROL

A. Provide services of curtain wall manufacturer's technical representative to inspect for proper installation of system and submit report.

B. Water-Spray Test: Provide water spray quality test of installed curtain wall components in accordance with **<<AAMA 501.2>>** during construction process and before installation of interior finishes.

1. Perform a minimum of **<< two; three; or _____>>** tests in each designated area **<< as indicated on drawings; as directed by Architect; or _____>>**.
2. Conduct tests in each area prior to **<< 10 percent; 35 percent; 50 percent; 70 percent; and ___ percent>>** completion of this work.

C. Provide field testing of installed curtain wall system by**<< AAMA accredited; _____; or None - N/A>>** independent laboratory in accordance with **<<AAMA 503>>** during construction process and before installation of interior finishes.

1. Perform a minimum of **<< two; three; or _____>>** tests in each designated area **<< as indicated on drawings; as directed by Architect; or _____>>**.
2. Conduct tests in each area prior to **<< 10 percent; 35 percent; 50 percent; 70 percent; and ___ percent>>** completion of this work.

DRAFT

3. Field test for water penetration in accordance with **<<ASTM E1105>>** with uniform static air pressure difference (Procedure A) not less than **<< 4.18 psf; or ___ psf>>**.
   a. Maximum allowable rate of water penetration in 15-minute test is **<< 0.5 ounce>>** that is not contained in an area with provisions to drain to exterior, or collected on surface of interior horizontal framing member.
4. Field test for air leakage in accordance with **<<ASTM E783>>** with uniform static air pressure difference of **<< 1.57 psf; 2.86 psf; 4.50 psf; 6.20 psf; or ___ psi>>**.
   a. Maximum allowable rate of air leakage is **<< 0.09 cfm/sq ft>>**.

D. Repair or replace curtain wall components that have failed designated field testing, and retest to verify performance complies with specified requirements.

3.05 ADJUSTING

A. Adjust operating components and hardware for smooth operation. Coordinate with Division 8 Door Hardware for hardware adjustments.

3.06 CLEANING

A. Remove protective material from pre-finished aluminum surfaces.

B. Wash down surfaces with a solution of mild detergent in warm water, applied with soft, clean wiping cloths, take care to remove dirt from corners, and wipe surfaces clean.

3.07 PROTECTION

A. Protect installed products from damage until Date of Substantial Completion.

END OF SECTION 084413

DRAFT

SECTION 085113
ALUMINUM WINDOWS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. AAMA 502 - Voluntary Specification for Field Testing of Newly Installed Fenestration Products.

B. AAMA 1503 - Voluntary Test Method for Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections.

C. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix).

D. AAMA CW-10 - Care and Handling of Architectural Aluminum from Shop to Site.

A. AAMA/WDMA/CSA 101/I.S.2/A440 - North American Fenestration Standard/Specification for Windows, Doors, and Skylights.

B. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures.

C. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

D. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

E. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

F. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric).

G. ASTM E283/E283M - Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Skylights, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen.

H. ASTM E331 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference.

I. ASTM E783 - Standard Test Method for Field Measurement of Air Leakage Through Installed Exterior Windows and Doors.

J. ASTM E1105 - Standard Test Method for Field Determination of Water Penetration of Installed Exterior Windows, Skylights, Doors, and Curtain Walls, by Uniform or Cyclic Static Air Pressure Difference.

K. ASTM F2090 - Standard Specification for Window Fall Prevention Devices with Emergency Escape (Egress) Release Mechanisms.

L. NFRC 200 - Procedure for Determining Fenestration Product Solar Heat Gain Coefficient and Visible Transmittance at Normal Incidence.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene a minimum of two weeks before starting work of this section.

1.03 SUBMITTALS

A. Product Data: Include **<< component dimensions; information on glass and glazing; internal drainage details; descriptions of hardware and accessories; and _____>>**.

DRAFT

B. Shop Drawings: Indicate opening dimensions**<< , elevations of different types; , _____; or None - N/A>>**, framed opening tolerances, anchorage locations**<< , _____; or None - N/A>>**, and installation requirements.

C. Sustainable Design Submittals: Refer to Division 1 Section "Sustainable Design Requirements."

D. Grade Substantiation: Prior to submitting shop drawings or starting fabrication, submit one of the following showing compliance with specified grade:

1. Evidence of AAMA Certification.
2. Evidence of WDMA Certification.
3. Evidence of CSA Certification.
4. Test report(s) by independent testing agency itemizing compliance**<< and acceptable to authorities having jurisdiction; _____; or None - N/A>>**.

E. Test Reports: Prior to submitting shop drawings or starting fabrication, submit test report(s) by independent testing agency showing compliance with performance requirements in excess of those prescribed by specified grade.

F. Field Quality Control Submittals: Report of field testing for water penetration and air leakage.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Comply with requirements of **<<AAMA CW-10>>**.

B. Protect finished surfaces with wrapping paper or strippable coating during installation. Do not use adhesive papers or sprayed coatings that bond to substrate when exposed to sunlight or weather.

1.05 FIELD CONDITIONS

A. Do not install sealants when ambient temperature is less than 40 degrees F.

B. Maintain this minimum temperature during and 24 hours after installation of sealants.

1.06 WARRANTY

A. Manufacturer Warranty: Provide 5-year manufacturer warranty against failure of glass seal on insulating glass units, including interpane dusting or misting. Include provision for replacement of failed units. Complete forms in **<<Owner>>**'s name and register with manufacturer.

B. Manufacturer Warranty: Provide 20-year manufacturer warranty against excessive degradation of exterior finish. Include provision for replacement of units with excessive fading, chalking, or flaking. Complete forms in **<<Owner>>**'s name and register with manufacturer.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Aluminum Window Manufacturers:

1. Arcadia, Inc.
2. Boyd Aluminum.
3. EFCO.
4. Quaker Window Products Company.
5. TRACO/Kawneer North America.
6. Wausau Window and Wall Systems.
7. Winco Window Company, Inc.

DRAFT

2.02 ALUMINUM WINDOWS

A. Aluminum Windows: Extruded aluminum frame and sash, factory fabricated, factory finished, with operating hardware, related flashings, and anchorage and attachment devices.

1. Window Types: Provide **<< fixed, non-operable type; outswinging awning type; and double-hung type>>**, as indicated on Drawings. ******Verify types needed on case-by-case basis******
2. Operable Units: Double weatherstripped.
3. Thermally Broken: All framing units shall be thermally broken.
4. Glazing: Provide factory-glazed units; double glazed IGUs with clear Low-E coating on #2 surface.
5. Fabrication: Joints and corners flush, hairline, and weatherproof, accurately fitted and secured; prepared to receive anchors; fasteners and attachments concealed from view; reinforced as required for operating hardware and imposed loads.
6. Perimeter Clearance: Minimize space between framing members and adjacent construction while allowing expected movement.
7. Movement: Accommodate movement between window and perimeter framing and deflection of lintel, without damage to components or deterioration of seals.
8. System Internal Drainage: Drain to the exterior by means of a weep drainage network any water entering joints, condensation occurring in glazing channel, and migrating moisture occurring within system.
9. Thermal Movement: Design to accommodate thermal movement caused by 180 **<< 180 degrees F>>** surface temperature without buckling stress on glass, joint seal failure, damaging loads on structural elements, damaging loads on fasteners, reduction in performance or other detrimental effects.

2.03 PERFORMANCE REQUIREMENTS

A. Grade: **<<AAMA/WDMA/CSA 101/I.S.2/A440>>** requirements for specific window type:

1. Performance Class and Grade (PC/PG): AW-50. ******Verify with components and claddings design pressures indicated on Structural Drawings******
2. Design pressure shall be calculated based on **<<ASCE 7>>** and requirements on Structural Drawings.

B. Member Deflection: Limit member deflection to **<< flexure limit of glass; 1/175; or _____>>** in any direction, with full recovery of glazing materials.

C. Water Leakage: No uncontrolled leakage on interior face when tested in accordance with **<<ASTM E331>>** at differential pressure of **<< 12.11 psf; 9.19 psf; or _____ psf>>**.

D. Air Leakage: **<< 0.1 cfm/sq ft; 0.3 cfm/sq ft; or ___ cfm/sq ft>>** maximum leakage per unit area of outside window frame dimension when tested in accordance with **<<ASTM E283/E283M>>**.

E. Thermal Performance Requirements:

1. Condensation Resistance Factor of Frame: 56, minimum, measured in accordance with **<<AAMA 1503>>**.
2. Overall U-Factor Including Glazing (Fixed Fenestration): 0.36 Btu/(hr sq ft deg F), maximum.
3. Overall U-value Including Glazing (Operable Fenestration): 0.45 Btu/(hr sq ft deg F), maximum.
4. Solar Heat Gain Coefficient (SHGC) Including Glazing: 0.36, maximum, measured in accordance with **<<NFRC 200>>**.

DRAFT

2.04 COMPONENTS

A. Frames: **<< _____>>** inch wide by **<< _____>>** inch deep profile, of **<< _____>>** inch thick section; thermally broken with interior portion of frame insulated from exterior portion; flush glass stops of screw-fastened type. ******Verify sizes with basis-of-design product. Sizes may vary by type (fixed vs operable). Confirm with manufacturer******

B. Glazing: Refer to and coordinate with Division 8 Section "Glazing."

C. Reinforced Mullion: Provide extruded aluminum mullion with integral reinforcement of shaped steel structural section where required by manufacturer due to window configuration or size.

D. Sills: Extruded aluminum; sloped for positive wash; fit under sash leg to 1/2 inch beyond wall face; one piece full width of opening.

E. Insect Screens: Extruded aluminum frame with mitered and reinforced corners; screen mesh taut and secure to frame; secured to window with adjustable hardware allowing screen removal without use of tools. ******Only for windows at kitchen, confirm with design layout******

1. Provide insect screens only at operable aluminum windows located in kitchen.
2. Hardware: Spring loaded steel pins; four per screen unit.
3. Screen Mesh: Vinyl-coated fiberglass, window manufacturer's standard mesh.
4. Frame Finish: Same as frame and sash.

F. Operable Sash Weatherstripping: Permanently resilient and replaceable, profiled to achieve effective weather seal.

1. For sliding/hung windows, provide fin pile weatherstripping with synthetic brush on each side of a central plastic fin.
2. For awning/casement windows, provide continous compression seal using bulb weatherstripping fabricated of EPDM, silicone, or thermoplastic.

G. Fasteners: Stainless steel; of type recommended by manufacturer for indicated substrates.

H. Sealant for Setting Sills and Sill Flashing: Non-curing butyl type.

2.05 MATERIALS

A. Extruded Aluminum: **<<ASTM B221>>** (**<<ASTM B221M>>**)**<< , 6063 alloy, T6 temper; , ____ alloy, __ temper; , _____; or None - N/A>>**.

B. Sheet Aluminum: **<<ASTM B209/B209M>><< , 5005 alloy, H12 or H14 temper; , ____ alloy, ___ temper; , _____; or None - N/A>>**.

C. Concealed Steel Items: Profiled to suit mullion sections; **<< galvanized in accordance with ASTM A123/A123M; primed with zinc oxide paint; or _____>>**.

2.06 HARDWARE

A. Sash Lock (Sliding Windows): Lever handle with cam lock.

B. Operator (Casement/Awning Windows): Lever action handle **<< Lever action handle; Geared rotary handle; or _____>>** fitted to projecting sash arms with limit stops.

C. Projecting Sash Arms: Cadmium plated steel, friction pivot joints with nylon bearings, removable pivot clips for cleaning.

D. Window Opening Control Devices (WOCD): Provide operable window sash hardware that limits window opening to prevent passage of 4-inch diameter rigid sphere and is easily releasable to allow full window opening without use of keys, tools, or special knowledge. Comply with **<<ASTM F2090>>**.

DRAFT

2.07 FINISHES

A. Metal surfaces shall be prepared, pre-treated, and coated in accordance with coating and resin manufacturer's instructions.

B. Superior Performing Organic Coatings System: Polyvinylidene fluoride (PVDF) multi-coat superior performing organic coatings system complying with **<<AAMA 2605>>**, including at least 70 percent PVDF resin, and at least 80 percent of aluminum extrusion and panels surfaces having minimum total dry film thickness (DFT) of **<< 1.2 mils, 0.0012 inch>>**.

C. Finish Color: To be selected by Owner and Architect from manufacturer's full range.

D. Operator and Exposed Hardware: Enameled to color as selected from manufacturer's standard line.

E. Apply one coat of bituminous coating to concealed aluminum surfaces in contact with dissimilar materials.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that wall openings and adjoining air/weather barrier materials are ready to receive aluminum windows.

3.02 WINDOW INSTALLATION

A. Install windows in accordance with manufacturer's instructions.

B. Install window assembly in accordance with **<<AAMA/WDMA/CSA 101/I.S.2/A440>>**.

C. Attach window frame and shims to perimeter opening to accommodate construction tolerances and other irregularities.

D. Align window plumb and level, free of warp or twist. Maintain dimensional tolerances and alignment with adjacent work.

E. Install sill and sill end angles/end dams. Set sill members and sill flashing in continuous bead of sealant.

F. Provide thermal isolation where components penetrate or disrupt building insulation. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.

G. Install operating hardware where not pre-installed by manufacturer.

3.03 TOLERANCES

A. Maximum Variation from Level or Plumb: 1/16-inch every 3 ft non-cumulative or 1/8-inch per 10 ft, whichever is less.

3.04 FIELD QUALITY CONTROL

A. Coordinate with Division 1 Section "Quality Requirements" for independent field testing and inspection requirements, and requirements for monitoring quality of specified product installations.

B. Provide field testing of installed aluminum windows by**<< AAMA accredited; _____; or None - N/A>>** independent laboratory in accordance with **<<AAMA 502>>** and **<<AAMA/WDMA/CSA 101/I.S.2/A440>>** during construction process and before installation of interior finishes.

DRAFT

1. Perform tests **<< on three individual windows; on one individual window of each type; or _____>>** in designated locations **<< as indicated on drawings; as directed by Architect; or _____>>**.
2. Conduct tests on individual windows prior to **<< 5 percent; 35 percent; 50 percent; 90 percent; and ___ percent>>** completion of this work.
3. Field test for water penetration in accordance with **<<ASTM E1105>>** using **<< Procedure B - cyclic; or Procedure A - uniform for AW windows>>** static air pressure difference; test pressure shall not be less than **<< 1.9 psf; or ___ psf>>**.
4. Field test for air leakage in accordance with **<<ASTM E783>>** with uniform static air pressure difference of **<< 1.57 psf; 6.27 psf; or ___ psi>>**.
   a. Maximum allowable rate of air leakage is **<< 0.10 cfm/sq ft; 0.30 cfm/sq ft; or ___ cfm/sq ft>>**.

C. Repair or replace fenestration components that have failed designated field testing, and retest to verify performance complies with specified requirements.

3.05 ADJUSTING

A. Adjust hardware for smooth operation and secure weathertight closure.

3.06 CLEANING

A. Remove protective material from factory finished aluminum surfaces.

B. Wash surfaces by method recommended and acceptable to window manufacturer; rinse and wipe surfaces clean.

C. Remove excess glazing sealant by moderate use of mineral spirits or other solvent acceptable to sealant and window manufacturer.

END OF SECTION 085113

DRAFT

SECTION 085619
PASS WINDOWS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. AAMA 611 - Specification for Anodized Architectural Aluminum.

B. ASTM A666/A666M - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.

C. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

D. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric).

1.02 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Furnish anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, to be embedded into concrete or masonry, with setting diagrams and installation, to applicable installer in time for installation.

B. Preinstallation Meeting: Prior to start of installation arrange a meeting on site to familiarize installer and installers of related work with requirements relating to this work.

1.03 SUBMITTALS

A. Product Data: Manufacturer's published data showing materials, construction details, dimensions of components, and finishes.

B. Shop Drawings: Drawings prepared specifically for this project, showing plans, elevations, sections, details of construction, anchorage to other work, hardware, and glazing.

1. For existing and in-place openings show verified field dimensions.
2. Show required opening dimensions and allowance for field deviation.

C. Selection Samples: Color charts for factory finishes.

D. Sustainable Design Submittals: Refer to Division 1 Section "Sustainable Design Requirements."

1.04 QUALITY ASSURANCE

A. Source Limitations: Provide each type of ticket or pass window from a single manufacturer; furnished through a single supplier.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver pre-fabricated items to project site in manufacturer's standard secure packaging. Transport and store on site in a manner that prevents exposure to the elements.

1.06 FIELD CONDITIONS

A. Existing Conditions: Verify rough opening sizes for pass windows by field measurements prior to fabrication; indicate field dimensions on shop drawings.

1.07 WARRANTY

A. Manufacturer Warranty: Provide manufacturer warranty for 3 years from Date of Substantial Completion. Complete forms in Owner's name and register with manufacturer. Warranty shall cover failures in material or workmanship due to, but not limited to, the following:

DRAFT

1. Structural failures or deterioration of metals and finishes beyond expected use and normal weathering.
2. Failure of glazing due to excessive deflection, warping, or bowing of supporting members.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Interior Pass/Cashier Windows:
   1. C.R. Laurence Co., Inc.
   2. Creative Industries, Inc.
   3. Frameless Hardware Company (FHC).
   4. Quikserv Corporation.

B. Exterior Ticket Windows:
   1. Armortex.
   2. C.R. Laurence Co., Inc.
   3. Quikserv Corporation.
   4. Ready Access, Inc.
   5. Total Security Solutions.

2.02 ASSEMBLIES

A. General Requirements:
   1. Design to fit openings indicated on drawings; design to accommodate deviation of actual construction from dimensions indicated on drawings.
   2. Fabricate frames and sash with corners mitered or coped full depth with concealed welded joints.
   3. Separate dissimilar metals to prevent corrosion by galvanic action by painting contact surfaces with primer or with sealant or tape recommended by manufacturer for the purpose.

2.03 INTERIOR PASS WINDOW ASSEMBLIES

A. Sliding Pass Window (Interior): Field fabricated unit consisting of fixed channel header and jambs, integral countertop, and two framed sliding windows; each window shall be independently operable.
   1. Basis-of-Design: C.R. Laurence; "Daisy" model.
   2. Configuration and Size: As indicated on Drawings.
   3. Framing: Manufacturer's standard, extruded aluminum; satin anodized finish. Provide double channel overhead track header to allow each sliding window leaf to move independently.
   4. Countertop: Provide integral countertop; fabricated of stainless steel sheet; 18 inches deep by 2 inches thick.
   5. Hardware: Provide manufacturer's standard top-hung ball bearing rollers. Provide unit with keyed lock.
   6. Provide spring loaded guide pin at countertop for each operable window panel.
   7. Provide with 1/4-inch tempered glazing.

B. Ticket Window (Interior): Prefabricated unit consisting of fixed channel header and jambs, integral countertop, and fixed glazing.

DRAFT

1. Basis-of-Design: C.R. Laurence; "Ticket Window" model SCW102C.
2. Configuration and Size: As indicated on Drawings.
3. Framing: Manufacturer's standard, extruded aluminum channels nominal 1-3/8 inch deep by 5/8 inch high; satin anodized finish.
4. Countertop: Provide integral countertop; fabricated of stainless steel sheet; 18 inches deep by 2 inches thick; full width of window.
    a. Accessibility Compliance: On the public side, countertop shall protrude less than 4 inches out from wall.
5. Transaction Opening: Provide glazing cut-out with either a half-round aluminum trim and cover plate with spring-loaded snap lock and retaining pin (10-1/2 clear opening width at counter), or with rectangular vertical lift window that is spring-loaded to close automatically (8-1/4 inch clear opening width at counter); satin anodized aluminum finish.
6. Communication Device: Manufacturer's standard 5-inch diameter stainless steel talk-thru.
7. Provide with 1/4-inch tempered glazing.

C. Cashier Window (Interior): Prefabricated unit consisting of fixed channel header and jambs, integral countertop, and fixed glazing.
    1. Basis-of-Design: C.R. Laurence; "Cashier Window" SCW103C.
    2. Configuration and Size: As indicated on Drawings.
    3. Framing: Manufacturer's standard, extruded aluminum channels nominal 1-3/8 inch deep by 5/8 inch high; satin anodized finish.
    4. Countertop: Provide integral countertop; fabricated of stainless steel sheet; 18 inches deep by 2 inches thick; full width of window.
        a. Accessibility Compliance: On the public side, countertop shall protrude less than 4 inches out from wall.
    5. Deal Tray: Recessed, integrally formed with countertop; stainless steel; approximately 12 inches wide by 9 inches deep.
    6. Communication Device: Manufacturer's standard 5-inch diameter stainless steel talk-thru.
    7. Provide with 1/4-inch tempered glazing.

2.04 EXTERIOR TICKET WINDOWS

A. Ticket Window (Exterior): Prefabricated unit consisting of fixed aluminum framed header and jambs, integral countertop and channel sill.
    1. Framing: Manufacturer's standard, extruded aluminum channels nominal 4-1/2 inches deep by 2 inches high; satin anodized finish.
    2. Countertop: Provide integral countertop; fabricated of stainless steel sheet; 12 inches deep by 2 inches thick; full width of window.
        a. Accessibility Compliance: On the public side, countertop shall protrude less than 4 inches out from wall.
    3. Deal Tray: Recessed, integrally formed with countertop; stainless steel; approximately 11-1/2 inches wide by 8 inches deep.
    4. Communication Device: Manufacturer's standard 5-inch diameter stainless steel talk-thru.
    5. Glazing: Provide with 1-inch insulated glazing unit with clear low-e coating on #2 surface.

2.05 ACCESSORIES

A. Communication Devices: Coordinate glazing cut out requirements with glazing fabricator.

DRAFT

1. Speaking Aperture Frame: Plastic snap-together ring with aluminum finish color; 5 inch outside diameter for use with a 4 inch glazing cut out. Conceals glazing edges and leaves an open talk-thru aperture. Basis-of-Design: C.R. Laurence Item #543.
2. Standard Talk-Thru: Stainless steel, round, allowing passage of speech at normal volume without distortion.

B. Fasteners: Provide stainless steel concealed fasteners of type recommended by manufacturer for substrates indicated.

2.06 MATERIALS

A. Aluminum Components: **<<ASTM B221>>** (**<<ASTM B221M>>**) extrusions of alloy and temper selected by manufacturer for strength, corrosion resistance, and finish required; not less that **<< 1/8 inch>>** thick at any location of frame and sash members.

B. Stainless Steel Sheet: **<<ASTM A666/A666M>>**, Type 304.

2.07 FINISHES

A. Class I Natural Anodized Finish: **<<AAMA 611>><< AA-M12C22A41; or None - N/A>>** Clear anodic coating not less than **<< 0.7 mils>>** thick.

B.

C. Stainless Steel: **<< No. 4; or ____>>** brushed/satin finish.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify rough window opening dimensions prior to fabrication; indicate field dimensions on shop drawings.

B. Verify that window openings are ready for installation of windows.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions and approved shop drawings.

B. Install windows in correct orientation (inside/outside or secure/non-secure).

C. Separate dissimilar metals, and metal members in contact with concrete and masonry, using bituminous paint.

3.03 ADJUSTING

A. Adjust operating components for smooth operation while also providing tight fit at contact points and a secure enclosure; lubricate operating hardware.

3.04 CLEANING AND REPAIR

A. Clean exposed surfaces promptly after installation without damaging finishes.

B. Remove and replace defective work.

END OF SECTION 085619

SECTION 088000
GLAZING

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials.

B. ANSI Z97.1 - American National Standard for Safety Glazing Materials Used in Buildings - Safety Performance Specifications and Methods of Test.

C. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures.

D. ASTM C864 - Standard Specification for Dense Elastomeric Compression Seal Gaskets, Setting Blocks, and Spacers.

E. ASTM C1036 - Standard Specification for Flat Glass.

F. ASTM C1048 - Standard Specification for Heat-Strengthened and Fully Tempered Flat Glass.

G. ASTM C1172 - Standard Specification for Laminated Architectural Flat Glass.

H. ASTM C1376 - Standard Specification for Pyrolytic and Vacuum Deposition Coatings on Flat Glass.

I. ASTM E1300 - Standard Practice for Determining Load Resistance of Glass in Buildings.

J. ASTM E2190 - Standard Specification for Insulating Glass Unit Performance and Evaluation.

K. ASTM F3561 - Standard Test Method for Forced-Entry-Resistance of Fenestration Systems After Simulated Active Shooter Attack.

L. GANA (GM) - GANA Glazing Manual.

M. IGMA TM-3000 - North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial & Residential Use.

N. NFRC 100 - Procedure for Determining Fenestration Product U-factors.

O. NFRC 200 - Procedure for Determining Fenestration Product Solar Heat Gain Coefficient and Visible Transmittance at Normal Incidence.

P. NFRC 300 - Test Method for Determining the Solar Optical Properties of Glazing Materials and Systems.

DRAFT

1.02 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene a preinstallation meeting at least two weeks before starting work of this section; require attendance by each of the affected installers.

1.03 SUBMITTALS

A. Product Data on Glazing Types: Provide structural, physical and environmental characteristics for each glazing type indicated. Include size limitations, special handling, and installation requirements.

B. Product Data on Glazing Compounds and Accessories: Provide chemical, functional, and environmental characteristics, limitations, special application requirements, and identify available colors.

C. Selection Samples: For each product requiring color selection, provide manufacturer's color charts.

D. Verification Samples: For each type of glazing other than standard interior and exterior glazings (glazing types 1 and 2), provide a 12 x 12 sample for review.

E. Certificate: Certify that **<< products of this section; or _____>>** meet or exceed **<< specified requirements; or _____>>**.

F. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

1.04 QUALITY ASSURANCE

A. Perform Work in accordance with **<< GANA (GM); GANA (SM); GANA (LGRM); IGMA TM-3000; and _____>>** for **<< glazing installation methods; or _____>>**. **<< Maintain one copy on site.; Maintain ____ copies on site.; or None - N/A>>**

1.05 MOCK-UPS

A. See Section **<< 014000 - Quality Requirements>>** for additional requirements.

B. Integrated Exterior Mockups: Provide glazing to match glazing systems required for Project, including glazing installation methods, for incorporation into integrated exterior mockup as indicated on Drawings and as specified in Division 01 "Quality Requirements."

1.06 DELIVERY, STORAGE, AND HANDLING

A. Comply with manufacturer's instructions. Deliver and store in a manner to prevent exposure to weather/moisture, direct sun/UV, and temperature changes.

1.07 FIELD CONDITIONS

A. Ambient Conditions: Do not install glazing, gasketing, or liquid sealants under adverse weather conditions, or when temperatures are above or below manufacturer's recommended limitations for sealant installation.

1. Do not install glazing when ambient temperature is less than **<< 40 degrees F; or ____ degrees F>>**.
2. Maintain minimum ambient temperature before, during and **<< 24; or ____>>** hours after installation of glazing compounds.

1.08 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Insulating Glass Units: Provide a **<< five (5); ten (10); or ____>>** year manufacturer warranty to include coverage for seal failure, interpane dusting or misting, including providing products to replace failed units.

C. Laminated Glass: Provide a **<< five (5); ten (10); or ____>>** year manufacturer warranty to include coverage for delamination, including providing products to replace failed units.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Float Glass Manufacturers:

1. Cardinal Glass Industries.
2. Guardian Glass, LLC.
3. Viracon.
4. Vitro Architectural Glass (formerly PPG Glass).

DRAFT

2.02 PERFORMANCE REQUIREMENTS - EXTERIOR GLAZING ASSEMBLIES

A. Provide type and thickness of exterior glazing assemblies to support assembly dead loads, and to withstand live loads caused by positive and negative wind pressure acting normal to plane of glass.
   1. Design Pressure: Calculated in accordance with **<< applicable codes; ASCE 7; or _____>>** and values indicated on Structural Drawings.
   2. Comply with **<<ASTM E1300>>** for design load resistance of glass type, thickness, dimensions, and maximum lateral deflection of supported glass.
   3. Provide glass edge support system sufficiently stiff to limit the lateral deflection of supported glass edges to less than 1/175 of their lengths under specified design load.
   4. Glass thicknesses listed are minimum.

B. Weather-Resistive Barrier Seals: Provide complete assemblies that maintain continuity of building enclosure water-resistive barrier, vapor retarder, and air barrier.

C. Thermal and Optical Performance: Provide exterior glazing products with performance properties as indicated. Performance properties are in accordance with manufacturer's published data as determined with the following procedures and/or test methods:
   1. Center of Glass U-Value: Comply with **<<NFRC 100>>** using Lawrence Berkeley National Laboratory (LBNL) WINDOW 6.3 computer program.
   2. Center of Glass Solar Heat Gain Coefficient (SHGC): Comply with **<<NFRC 200>>** using Lawrence Berkeley National Laboratory (LBNL) WINDOW 6.3 computer program.
   3. Solar Optical Properties: Comply with **<<NFRC 300>>** test method.

2.03 GLASS MATERIALS

A. Float Glass: Provide float glass based glazing unless otherwise indicated.
   1. Kind HS - Heat-Strengthened Type: Complies with **<<ASTM C1048>>**.
   2. Kind FT - Fully Tempered Type: Complies with **<<ASTM C1048>>**.
   3. Provide Type I, Quality-Q3, Class 1 (clear) glazing unless otherwise indicated.
      a. Tinted Glazing: Where tinted glazing is indicated, provide Class 2 (tinted).
   4. Fully Tempered Safety Glass: Complies with **<<ANSI Z97.1>>** or **<<16 CFR 1201>>** criteria for safety glazing used in hazardous locations.
   5. Tinted Type: **<<ASTM C1036>>**, Class 2 - Tinted**<< , Quality - Q3; , Quality - Q4; , _____; or None - N/A>>**, with color and performance characteristics as indicated.
   6. Spandrel Glass Type: ASTM C1048, Type I, Condition - B, Quality - Q3, glass coated with opacifying coating indicated; with performance characteristics matching those of adjacent non-spandrel units. Coating shall be water-based silicone; ceramic frit is not acceptable.
   7. Patterned Glass Type: ASTM C1048, Type II - Patterned Flat Glass**<< , Quality - Q5; , Quality - Q6; , _____; or None - N/A>>**, Form 3 - Patterned glass, with color and performance characteristics as indicated.
      a. "Frosted" Appearance: Provide non-directional acid-etch or simulated acid-etch "frosted"/translucent finish on one or both faces of glass lite.
   8. Bird-Friendly Glazing: Provide acid-etch pattern to provide full-surface bird protection.
      a. Pattern shall be applied to the #1 surface of IGU.
      b. Pattern shall have a threat factor of 25 or less in accordance with American Bird Conservancy tunnel test.
      c. Basis-of-Design Patterns:
         1) Non-directional 5 mm dots spaced 2 inches by 2 inches (Guardian Etch DX22). Threat Factor: 15.

DRAFT

2) Directional 6 mm dots spaced 2 inches by 4 inches (Guardian Etch DV24). Threat Factor: 25.
3) Non-directional 6 mm dots randomly spaced no more than 2 inches by 2 inches (Guardian Etch SqX22). Threat Factor: 20.
4) Non-directional 6 mm squares randomly spaced no more than 2 inches by 4 inches (Guardian Etch SqX24). Threat Factor: 25.

9. Low-Iron (Ultraclear) Glass: ASTM C1048, Type I, Class I, Quality - Q3.
   a. Products:
      1) Cardinal; Purevision.
      2) Guardian; UltraClear.
      3) Pilkington; Optiwhite.
      4) Vitro; Starphire.
10. Decorative Glass (Backpainted): ASTM C1048, Type I, Quality - Q3; with baked-on decorative coating. Manufacturer shall provide for custom backpaint colors matched to Pantone colors or Division 9 painting manufacturer. Paint shall be UV-stable for use in exterior IGUs. Where backpainted glass is indicated, provide coating applied to low-iron glass.
    a. Manufacturers:
       1) Bendheim; Back-Painted Glass.
       2) GGI - General Glass International; Alice Back-Painted.
       3) Goldray Industries, Inc; Backpainted Glass.
       4) M3 Glass Technologies; Colorbak Back Painted Glass.
       5) McGrory Glass; Back Painted Glass.
       6) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
11. Decorative Glass (Gradient): ASTM C1048
    a. Manufacturers:
       1) Bendheim.
       2) GGI - General Glass International.
       3) Goldray Industries, Inc.
       4) M3 Glass Technologies.
       5) McGrory Glass.
       6) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
12. Decorative Glass (Interlayer): ASTM C1172, laminated glass with decorative interlayer.
    a. Manufacturers:
       1) Bendheim.
       2) GGI - General Glass International.
       3) Goldray Industries, Inc.
       4) M3 Glass Technologies.
       5) McGrory Glass.
       6) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
13. Thicknesses: As indicated; provide greater thickness as required for exterior glazing wind load design.

DRAFT

B. Laminated Glass: Float glass laminated in accordance with **<<ASTM C1172>>**. Laminated glass shall be free of foreign substances and air or glass pockets.
   1. Laminated Safety Glass: Complies with **<<ANSI Z97.1>>** - **<< Class B; or Class A>>** or **<<16 CFR 1201>>** - **<< Category I; or Category II>>** impact test requirements.
   2. Ionoplast Interlayer: **<< 0.035 inch; 0.060 inch; 0.090 inch; 0.100 inch; or ___ inch>>** thick, minimum.
      a. Provide Kuraray "SentryGlas" or comparable ionoplast interlayer submitted as a properly formatted substitution request.
      b. Color: Clear.
      c. Interlayer Physical Properties:
         1) Young's Modulus:43 kpsi, when tested in accordance with ASTM D5026.
         2) Tensile Strength: 5.0 kpsi, when tested in accordance with ASTM D638.
         3) Elongation: 400%, when tested in accordance with ASTM D638.
         4) Flex Modulus: 50 kpsi, when tested in accordance with ASTM D790.
         5) Heat Deflection Temperature at 0.46 MPa: 110 degrees F, when tested in accordance with ASTM D648.

C. Active Shooter Tested Laminated Glass: Float glass laminated in accordance with **<<ASTM C1172>>**; free of foreign substances and air or glass pockets. Where indicated in exterior windows, provide laminated lite as the interior lite of insulated glazing unit.
   1. Laminated Safety Glass: Complies with **<<ANSI Z97.1>>** - **<< Class B; or Class A>>** or **<<16 CFR 1201>>** - **<< Category I; or Category II>>** impact test requirements.
   2. Active Shooter/Forced Entry Testing: Laminated glass assembly shall be tested in accordance with one of the following:
      a. **<<ASTM F3561>>**: Minimum Level 3.
      b. H.P. White 5aa-1: Minimum 6 minutes to failure after ballistic and forced entry attack.
   3. Laminated Lite Thickness: Nominal 7/16-inch (range between 3/8- and 1/2-inch).
   4. Products:
      a. School Guard Glass; SG4.
      b. McGrory Glass; DefendED.
      c. Kuraray; SentryGlas 0.090-inch SGP interlayer between two 3/16-inch heat-strengthened lites.
      d. Eastman-Saflex; Saflex Clear 0.090 PVB interlayer between two 3/16-inch heat-strengthened lites.
      e. Substitutions: **<< See Section 016000 - Product Requirements; Not permitted; or _____>>**.

2.04 INSULATING GLASS UNITS

A. Fabricator: Certified by glass manufacturer for type of glass, coating, and treatment involved and capable of providing specified warranty.

B. Insulating Glass Units: Types as indicated. IGU's shall be pre-assembled in factory of multiple lites, with dehydrated interspace.
   1. Durability: Certified by an independent testing agency to comply with **<<ASTM E2190>>**.
   2. Coated Glass: Comply with requirements of **<<ASTM C1376>>** for pyrolytic (hard-coat) or magnetic sputter vapor deposition (soft-coat) type coatings on flat glass; coated vision glass, Kind CV; coated overhead glass, Kind CO; or coated spandrel glass, Kind CS.
   3. Warm-Edge Spacers: Manufacturer's warm-edge technology design.

DRAFT

a. Spacer Width: **<< 1/2 inch; ___ inch; As required for specified insulating glass unit; As selected from manufacturer's standard sizes; or _____>>**.

b. Spacer Height: **<< Manufacturer's standard; 0.27 inch; or ___ inch>>**.

c. Products:

1) H.B. Fuller Construction Products Inc**<< ; Kodispace 4SG; ; ____; or None - N/A>>**.

2) Quanex IG Systems, Inc**<< ; Super Spacer TriSeal; ; ____; or None - N/A>>**.

3) Technoform Glass Insulation**<< ; TGI-Spacer; ; ____; or None - N/A>>**.

4) Substitutions: **<< See Section 016000 - Product Requirements; Not permitted; or _____>>**.

4. Spacer Color: **<< Black; White; Gray; Dark gray; Light Gray; Champagne; Bronze; Aluminum; or _____>>**.

5. Edge Seal:

a. Dual-Sealed System: Provide **<< polyisobutylene; or _____>>** sealant as primary seal applied between spacer and glass panes, and **<< silicone; polysulfide; polyurethane; or _____>>** sealant as secondary seal applied around perimeter.

b. Color: **<< Black; Gray; or _____>>**.

6. Purge interpane space with dry air, hermetically sealed.

2.05 ACCESSORIES

A. Setting Blocks: **<< EPDM; Silicone; Neoprene; Thermoplastic; or _____>>**, with **<< 80 to 90; or ____ to ____>>** Shore A durometer hardness**<< ; ASTM C864 Option I; ; ASTM C864 Option II; ; _____; or None - N/A>>**. Length of **<< 0.1 inch for each square foot>>** of glazing or minimum **<< 4 inch>>** by width of glazing rabbet space minus **<< 1/16 inch>>** by height to suit glazing method and pane weight and area.

B. Spacer Shims: **<< EPDM; Silicone; Neoprene; or _____>>**, **<< 50 to 60; or ____ to ____>>** Shore A durometer hardness**<< ; ASTM C864 Option I; ; ASTM C864 Option II; ; _____; or None - N/A>>**. Continuous by one half the height of the glazing stop by thickness to suit application**<< , self adhesive on one face; , _____; or None - N/A>>**.

C. Glazing Tape, Back Bedding Mastic Type: Preformed, butyl-based, 100 percent solids compound**<< with integral resilient spacer rod applicable to application indicated; _____; or None - N/A>>**; 5 to 30 cured Shore A durometer hardness; coiled on release paper; black color.

D. Glazing Splines and Gaskets: Resilient **<< polyvinyl chloride; silicone; or _____>>** extruded shape to suit glazing channel retaining slot**<< ; ASTM C864 Option I; ; ASTM C864 Option II; ; _____; or None - N/A>>**; color **<< black; as selected; or _____>>**.

PART 3 EXECUTION

3.01 VERIFICATION OF CONDITIONS

A. Verify that openings for glazing are correctly sized and within tolerances, including those for size, squareness, and offsets at corners.

B. Verify that surfaces of glazing channels or recesses are clean, free of obstructions that may impede moisture movement, weeps are clear, and support framing is ready to receive glazing system.

DRAFT

3.02 PREPARATION

A. Clean contact surfaces with appropriate solvent and wipe dry **<< immediately before glazing; within maximum of 24 hours before glazing; or _____>>**. Remove coatings that are not tightly bonded to substrates.

B. Seal porous glazing channels or recesses with substrate compatible primer or sealer.

C. Prime surfaces scheduled to receive sealant where required for proper sealant adhesion.

3.03 INSTALLATION, GENERAL

A. Install glazing in compliance with written instructions of glass, gaskets, and other glazing material manufacturers, unless more stringent requirements are indicated, including those in glazing referenced standards.

B. Do not exceed edge pressures around perimeter of glass lites as stipulated by glass manufacturer.

C. Set glass lites of system with uniform pattern, draw, bow, and similar characteristics.

D. Set glass lites in proper orientation so that coatings face exterior or interior as indicated.

E. Prevent glass from contact with any contaminating substances that may be the result of construction operations such as, and not limited to the following; weld splatter, fire-safing, plastering, mortar droppings, etc.

3.04 INSTALLATION - DRY GLAZING METHOD (GASKET GLAZING)

A. Application - Exterior and/or Interior Glazed: Set glazing infills from either the exterior or the interior of the building.

B. Place setting blocks at **<< 1/4; 1/3; or _____>>** points with edge block no more than **<< 6 inch; or ____ inch>>** from corners.

C. Rest glazing on setting blocks and push against fixed stop with sufficient pressure on gasket to attain full contact.

D. Install removable stops without displacing glazing gasket; exert pressure for full continuous contact.

3.05 FIELD QUALITY CONTROL

A. **<< Glass; Glazing; and _____>>** product manufacturers to provide field surveillance of the installation of their products.

B. Monitor and report installation procedures and unacceptable conditions.

3.06 CLEANING

A. Remove excess glazing materials from finish surfaces immediately after application using solvents or cleaners recommended by manufacturers.

B. Remove nonpermanent labels immediately after glazing installation is complete.

C. Clean glass and adjacent surfaces after sealants are fully cured.

D. Clean glass on both exposed surfaces **<< not more than 4 days; not more than ___ days; or _____>>** prior to Date of Substantial Completion in accordance with glass manufacturer's written recommendations.

DRAFT

3.07 PROTECTION

A. After installation, mark pane with an 'X' by using removable plastic tape or paste**<< ; do not mark heat absorbing or reflective glass units; , _____; or None - N/A>>**.

B. Remove and replace glass that is damaged during construction period prior to Date of Substantial Completion.

3.08 GLAZING SCHEDULE

A. **<< Type _____>>** - Monolithic Interior Vision Glazing:

1. Applications: Interior glazing unless otherwise indicated.
2. Glass Type: **<< Annealed; Heat-strengthened; Fully tempered; Laminated; or Heat-strengthened / fully-tempered>>** float glass. Provide with safety glazing labeling.
3. Tint: Clear.
4. Thickness: **<< 1/4 inch; or ____ inch>>**, nominal.
5. Glazing Method: **<< Dry glazing method, gasket glazing; Dry glazing method, tape and gasket spline; Wet glazing method, sealant and sealant; Wet/dry glazing method, preformed tape and sealant; Butt joint glazing method, sealant only; or ____>>**.

B. **<< Type _____>>** - Insulating Glass Units: Vision glass, double glazed.

1. Applications: Exterior glazing except where otherwise indicated.
2. Space between lites filled with **<< air; argon; krypton; or _____>>**.
3. Outboard Lite: **<< Annealed float glass; Heat-strengthened float glass; Fully tempered float glass; Laminated; Anti-reflective glass; or Heat-strengthened / fully-tempered float glass>>**, **<< 1/4 inch; or ____ inch>>** thick**<< , minimum; None - N/A; or , _____>>**.
   a. Tint: **<< Clear; Green; Blue; Gray; Bronze; or _____>>**.
   b. Coating: **<< Low-E (passive type); Low-E (solar control type); Highly reflective; or _____>>**, on #2 surface.
   c. Coating Products (Low-E; Clear):
      1) Cardinal; ES 28 #2.
      2) Guardian; SNX 62/27.
      3) Viracon; VNE 1-63.
      4) Vitro; Solarban 70.
4. Warm-edge spacer.
5. Inboard Lite: **<< Annealed; Heat-strengthened; Fully tempered; Laminated; Anti-reflective glass; or Heat-strengthened / fully-tempered>>** float glass, **<< 1/4 inch; or ____ inch>>** thick**<< , minimum; None - N/A; or , _____>>**.
   a. Tint: **<< Clear; Green; Blue; Gray; Bronze; or _____>>**.
6. Total Thickness: **<< 1 inch; or ____ inch>>**.
7. Thermal Transmittance (U-Value)**<< , Summer - Center of Glass; , Winter - Center of Glass; , _____; or None - N/A>>**: **<< 0.30>><< , nominal; , minimum; , maximum; , exactly; or , _____>>**.
8. Solar Heat Gain Coefficient (SHGC): **<< 0.25>><< , nominal; , minimum; , maximum; , exactly; or , _____>>**.
9. Glazing Method: **<< Dry glazing method, gasket glazing; Dry glazing method, tape and gasket spline; Wet glazing method, sealant and sealant; Wet/dry glazing method, preformed tape and sealant; Butt joint glazing method, sealant only; or ____>>**.

DRAFT

10. Provide with safety glazing labeling.

C. **<< Type _____>>** - Insulating Glass Units - Spandrel Glass.
   1. Applications: Exterior glazing where indicated..
   2. Space between lites filled with **<< air; argon; krypton; or _____>>**.
   3. Outboard Lite: **<< Annealed; Heat-strengthened; Fully tempered; Laminated; or _____>>** low-iron float glass, **<< 1/4 inch; or ____ inch>>** thick**<< , minimum; , _____; or None - N/A>>**.
      a. Tint: Clear.
      b. Coating: Low-E (passive type), on #2 surface.
      c. Coating Products (Clear; Low-E):
         1) AGC; Energy Select 28.
         2) Cardinal; ES 28 #2.
         3) Guardian; SNX 62/27.
         4) Viracon; #VNE 1-63.
         5) Vitro; Solarban 70.
   4. Warm-edge spacer.
   5. Inboard Lite: **<< Annealed; Heat-strengthened; Fully tempered; or _____>>** low-iron float glass, **<< 1/4 inch; or ____ inch>>** thick.
      a. Tint: **<< Clear; Green; Blue; Gray; Bronze; or _____>>**.
      b. Opacifier: Water-based silicone coating, on #4 surface. Ceramic frit is not acceptable.
      c. Opacifier Color: Selected by Architect from manufacturer's full range.
   6. Total Thickness: **<< 1 inch; or ____ inch>>**.
   7. Thermal (U-Value and SHGC): Match requirements of vision units.
   8. Glazing Method: **<< Dry glazing method, gasket glazing; Dry glazing method, tape and gasket spline; Wet glazing method, sealant and sealant; Wet/dry glazing method, preformed tape and sealant; Butt joint glazing method, sealant only; or ____>>**.
   9. Provide with safety glazing labeling.

D. **<< Type _____>>** - Insulating Metal Infill Panel - Refer to **<< 084313 - Aluminum-Framed Storefronts; 084413 - Glazed Aluminum Curtain Walls; and 085200 - Aluminum-Clad Wood Windows and Doors>>** for metal infill panels.

E. **<< Type _____>>** - Fire-Protection or Fire-Resistance Rated Glazing - Refer to **<< 088813 - Fire-Rated Glazing; or _____>>**.

F. **<< Type _____>>** - Bullet-Resistance-Rated Glazing - Refer to **<< 085653 - Security Windows>> << and 111950 Security Glass and Glazing.; or None - N/A>>**

G. **<< Type ____>>** - **<< Patterned; Obscure; Obscure - Patterned; or _____>>** ("Frosted") Interior Glazing:
   1. Applications: Interior glazing where indicated.
   2. Glass Type: **<< Fully tempered; Annealed; Laminated annealed; Insulating glass unit; or _____>>** float glass. Provide with safety glazing labeling.
   3. Thickness: 1/4 inch, nominal.
   4. Pattern: Non-directional "frosted" pattern applied by acid etch or simulated acid etch to one or both glass surfaces.

DRAFT

5. Glazing Method: **<< Dry glazing method, gasket glazing; Dry glazing method, tape and tape; Wet glazing method, compound and compound; Wet/dry glazing method, tape and sealant; or _____>>**.

H. **<< Type ____>> - << Patterned; Obscure; Obscure - Patterned; or _____>>** ("Frosted") Exterior Glazing:

I. **<< Type ____>>** - Back-Painted Interior Glazing: Back-painted on surface that will be concealed in the final work, highly opaque**<< , with low volatile organic compounds (VOC); , _____; or None - N/A>>**.

J. **<< Type ____>>** - Back-Painted Exterior Glazing: Back-painted on #3 surface and highly opaque; with low volatile organic compounds (VOC).

K. **<< Type ____>>** - Decorative Glazing with Gradient Pattern:

L. **<< Type ____>>** - Decorative Glazing with Decorative Interlayer:

M. **<< Type ___>>** - Insulating Glass Units With Light-Diffusing Translucent Core: Factory-assembled units consisting of sealed lites of glass with manufacturer's proprietary diffusing core material.

1. Products: Provide Okalux+ by OKALUX North America, Solera S R5+Aerogel by Advanced Glazings Ltd, or a comparable product submitted via properly formatted substitution request.
2. Applications: Exterior glazing where indicated.
3. Outboard Lite: **<< Annealed float glass; Heat-strengthened float glass; Fully tempered float glass; Laminated; Anti-reflective glass; or Heat-strengthened / fully-tempered float glass>>**, clear; **<< 1/4 inch; or ____ inch>>** thick**<< , minimum; None - N/A; or , _____>>**.
   a. Coating: **<< Low-E (passive type); Low-E (solar control type); Highly reflective; or _____>>**, on #2 surface.
4. Translucent Core: 1/2-inch thick; material as standard with manufacturer: either diffusing cloth layers with capillary slab material, and with air space filled with argon gas, or a honeycomb capillary insulation filled with manufacturer's proprietary aerogel.
5. Inboard Lite: **<< Annealed; Heat-strengthened; Fully tempered; Laminated; Anti-reflective glass; or Heat-strengthened / fully-tempered>>** float glass, clear; **<< 1/4 inch; or ____ inch>>** thick**<< , minimum; None - N/A; or , _____>>**.
6. Total Thickness: **<< 1 inch; or ____ inch>>**.
7. Thermal Transmittance (U-Value)**<< , Summer - Center of Glass; , Winter - Center of Glass; , _____; or None - N/A>>**: **<< 0.24>><< , nominal; , minimum; , maximum; , exactly; or , _____>>**.
8. Visible Light Transmittance (VLT): **<< 31>>** percent**<< , nominal; , minimum; , maximum; , exactly; or , _____>>**.
9. Solar Heat Gain Coefficient (SHGC): **<< 0.29>><< , nominal; , minimum; , maximum; , exactly; or , _____>>**.
10. Glazing Method: **<< Dry glazing method, gasket glazing; Dry glazing method, tape and gasket spline; Wet glazing method, sealant and sealant; Wet/dry glazing method, preformed tape and sealant; Butt joint glazing method, sealant only; or ____>>**.
11. Provide with safety glazing labeling.

N. **<< Type ____>>** - Transparent One-Way Mirror: Mirror quality float glass with pyrolytic (hard coat) type coating located on high light level surface of glass; **<<ASTM C1376>>**.

1. Applications: Locations as indicated on drawings.

DRAFT

2. Thickness: **<< 1/4 inch; or ____ inch>>**.
3. Glass Tint: **<< Grey; or _____>>**.
4. Glass Type: **<< Annealed; Fully tempered; Laminated annealed; Insulating glass unit; or _____>>**.
5. Lighting Ratio: Maintain at least 8:1 lighting level ratio between coated side (bright-observed side) and uncoated side (dim-observer side).
6. Glazing Method: **<< Gasket glazing; Interior dry method, tape and tape; Interior wet/dry method, tape and sealant; Interior wet method, glazing compound; or _____>>**.

O. **<< Type _____>>** - Active Shooter/Forced Entry Laminated Interior Glazing:
1. Applications: Interior glazing where indicated.
2. Glass Type: Nominal 7/16-inch nominal active shooter tested laminated assembly. Provide with safety glazing labeling.
3. Glazing Method: **<< Dry glazing method, gasket glazing; Dry glazing method, tape and gasket spline; Wet glazing method, sealant and sealant; Wet/dry glazing method, preformed tape and sealant; Butt joint glazing method, sealant only; or ____>>**.

P. **<< Type _____>>** - Active Shooter/Forced Entry Insulating Glass Units: Active shooter/forced entry tested; vision glass, double glazed.
1. Applications: Exterior glazing where indicated.
2. Space between lites filled with **<< air; argon; krypton; or _____>>**.
3. Outboard Lite: **<< Annealed float glass; Heat-strengthened float glass; Fully tempered float glass; Laminated; Anti-reflective glass; or Heat-strengthened / fully-tempered float glass>>**, **<< 1/4 inch; or ____ inch>>** thick**<< , minimum; None - N/A; or , _____>>**.
   a. Tint: **<< Clear; Green; Blue; Gray; Bronze; or _____>>**.
   b. Coating: **<< Low-E (passive type); Low-E (solar control type); Highly reflective; or _____>>**, on #2 surface.
   c. Coating Products (Low-E; Clear):
      1) Cardinal; ES 28 #2.
      2) Guardian; SNX 62/27.
      3) Viracon; VNE 1-63.
      4) Vitro; Solarban 70.
4. Warm-edge spacer.
5. Inboard Lite: Nominal 7/16-inch active shooter tested laminated assembly.
6. Total Thickness: As required by manufacturer to acieve thermal properties indicated. Do not exceed 1-1/8 inch.
7. Thermal Transmittance (U-Value)**<< , Summer - Center of Glass; , Winter - Center of Glass; , _____; or None - N/A>>**: **<< 0.30>><< , nominal; , minimum; , maximum; , exactly; or , _____>>**.
8. Solar Heat Gain Coefficient (SHGC): **<< 0.25>><< , nominal; , minimum; , maximum; , exactly; or , _____>>**.
9. Glazing Method: **<< Dry glazing method, gasket glazing; Dry glazing method, tape and gasket spline; Wet glazing method, sealant and sealant; Wet/dry glazing method, preformed tape and sealant; Butt joint glazing method, sealant only; or ____>>**.

DRAFT

10. Provide with safety glazing labeling.

END OF SECTION 088000

DRAFT

SECTION 088300
MIRRORS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials.

B. ANSI Z97.1 - American National Standard for Safety Glazing Materials Used in Buildings - Safety Performance Specifications and Methods of Test.

C. ASTM C1036 - Standard Specification for Flat Glass.

D. ASTM C1503 - Standard Specification for Silvered Flat Glass Mirror.

E. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers Version 1.2.

F. GANA (GM) - GANA Glazing Manual.

G. GANA (SM) - GANA Sealant Manual.

H. SCAQMD 1168 - Adhesive and Sealant Applications.

1.02 SUBMITTALS

A. Product Data on Mirror Types: Submit structural, physical and environmental characteristics, size limitations, and special handling and installation requirements.

B. Safety Mirror Certificate: Provide certification that mirrors with film backing used for this project are tested to and pass the requirements of safety glazing per **<<ANSI Z97.1>>** and CPSC **<<16 CFR 1201>>**, Category II.

C. Executed warranty.

1.03 DELIVERY, STORAGE, AND HANDLING

A. See Section **<< 017419 - Construction Waste Management and Disposal>>** for packaging waste requirements.

B. Transport, receive, and store mirrors in accordance with manufacturer's recommendations.

C. Perform Work in accordance with **<<GANA (GM)>>** for glazing installation methods, including GANA's "Glazing Manual" and "Mirrors: Handle with Extreme Care."

1.04 FIELD CONDITIONS

A. Do not install mirrors when ambient temperature is less than 50 degrees F.

B. Maintain minimum ambient temperature before, during, and 24 hours after installation of glazing compounds.

1.05 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Provide **<< five; or ____>>** year manufacturer warranty for deterioration of reflective coating on mirrors and replacement of same.

DRAFT

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Mirrors:
   1. Arch Aluminum and Glass Co., Inc.
   2. Binswanger Mirror/ACI Distribution.
   3. Gardner Glass Products.
   4. Gilded Mirrors, Inc.
   5. Guardian Industries Corp.
   6. Independent Mirror Industries, Inc.
   7. Lenoir Mirror Co.
   8. Messer Industries, Inc.
   9. Stroupe Mirror Co., Inc.
   10. Sunshine Mirror.
   11. Trulite Glass and Aluminum Solutions.
   12. Virginia Mirror Company, Inc.
   13. Walker Glass Company Ltd.

2.02 MIRROR MATERIALS

A. Mirror Design Criteria: Select materials and provide supports as required to limit mirror material deflection to **<< 1/200; or _____>>**, or to the flexure limit of glass, with full recovery of glazing materials, whichever is less.

B. Mirror Glass: **<<ASTM C1036>>**, Type 1 - Transparent Flat, Class 1 - Clear, Quality - Q1 (high-quality mirrors); silvering, protective coating, and quality requirements in compliance with **<<ASTM C1503>>**.
   1. Thickness: 1/4-inch nominal.
   2. Sizes: As indicated on drawings.
   3. Safety Glazing: Mirror glass shall be certified as safety glazing per ANSI Z97.1 and CPSC 16 CFR 1201, Category II.

2.03 ACCESSORIES

A. Setting Blocks: Manufacturer's recommended neoprene or silicone, nominal Shore A durometer hardness of 80 +/- 5.

B. Glazing Tape: Preformed polyethylene or acrylic foam tape; on release paper.

C. Glazing Clips: Manufacturer's standard type.

D. Fasteners/Anchors: Provide manufacturer's recommended fasteners and anchors for indicated substrates.
   1. Where metal or wood stud substrate is indicated, coordinate with Division 6 section Rough Carpentry and Division 9 section Cold-Formed Steel Framing - Non-Structural (CFSF-NS) to provide concealed blocking or reinforcing along full length of J-channel mounting locations to provide a solid substrate for fastening.

E. Mirror Adhesive/Mastic: Silicone pre-polymer based, chemically compatible with mirror coating and wall substrate.
   1. Low-Emitting Material: Provide mastic that is tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND that meets the chemical content requirements of **<<SCAQMD 1168>>**.

DRAFT

F. Aluminum Channel Frame: Provide J-channel framing, fabricated from minimum 0.045-inch clear anodized aluminum extrusions. Size all channel framing for 1/4 inch nominal mirror thickness, in lengths sized to cover edges of each mirror section with one continuous piece.
   1. Bottom Trim: J-channel with 3/8-inch exposure front leg, 3/4- or 7/8-inch rear leg. Available Products:
      a. Brunner Enterprises, Inc.; Mirror Lower "J" Channel.
      b. C.R. Laurence Co., Inc.; CRL Standard "J" Channel.
      c. Eagle Mouldings, Inc; Aluminum J-Cap - 3/8" Face for 1/4" Material.
   2. Top Trim: J-channel with 5/8-inch exposure front leg, 1- or 1-1/8-inch rear leg. Available Products:
      a. Brunner Enterprises, Inc.; Mirror Upper "J" Channel.
      b. C.R. Laurence Co., Inc.; CRL Deep "J" Channel.
      c. Eagle Mouldings, Inc; Aluminum J-Cap - 5/8" Face for 1/4" Material.
   3. Side Trim: H-shape division bar with 1/2-inch face, and approximately 1-1/4 inch rear leg. Available Products: ******Verify if side trim is necessary - if doing full length in fitness/weight room the mirrors may terminate at cornres******
      a. Brunner Enterprises, Inc.; Division Bar.
      b. C.R. Laurence Co., Inc.; CRL Aluminum Divider Bar.
      c. Eagle Mouldings, Inc; Aluminum Divider - 1/2" Face for 1/4" Material.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify openings for mirrored glazing are sized within tolerance of manufacturer's instructions.

B. Verify surfaces of mirror frames or recesses are clean, free of obstructions, and ready for installation of mirrors.

C. Notify **<<Architect>>** in writing of conditions detrimental to completion of work. Do not proceed with installation until detrimental conditions are corrected.

3.02 PREPARATION

A. Clean contact surfaces with solvent and wipe dry.

B. Seal porous mirror frames or recesses with substrate-compatible primer or sealer. Prime surfaces scheduled to receive sealant.

3.03 INSTALLATION

A. Install mirrors in accordance with manufacturer's recommendations and with **<<GANA (GM)>>**.

B. Install J-channel frame sections to the wall with mechanical fasteners. Install fasteners in a manner so that they do not cause point loads to impact the rear of mirror panels.

C. Install mirrors with mirror mastic; provide mastic in coverage amount recommended by manufacturer, and in coverage pattern allowing for air circulation behind mirrors.

D. Set mirrors plumb and level and free of optical distortion.

E. Set mirrors with edge clearance free of surrounding construction, including countertops or backsplashes.

F. Glazing Tape Installation in Frames:
   1. Cut glazing tape to length and set against permanent stops, projecting 1/16-inch above sight line.

DRAFT

2. Place setting blocks at one-quarter points with edge block no more than 6 inches from corners.
3. Rest mirrors on setting blocks and push against tape to ensure full contact at perimeter of pane or unit.
4. Place glazing tape on free perimeter of mirrors in same manner described above.
5. Install removable stop without displacement of tape. Exert pressure on tape for full continuous contact.
6. Trim protruding tape edge.

3.04 CLEANING

A. See Section **<< 017000 - Execution and Closeout Requirements>>** for additional requirements.

B. Remove wet glazing materials from finished surfaces.

C. Remove nonpermanent labels after work is complete.

D. Clean mirrors and adjacent surfaces immediately prior to Substantial Completion in accordance with manufacturer's recommendations.

3.05 PROTECTION

A. Protect installed mirrors from subsequent construction operations.

B. Remove and replace mirrors damaged during construction period prior to Substantial Completion.

END OF SECTION 088300

DRAFT

SECTION 088723
SAFETY AND SECURITY FILMS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM D882 - Standard Test Method for Tensile Properties of Thin Plastic Sheeting.

B. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

C. ASTM F1642/F1642M - Standard Test Method for Glazing and Glazing Systems Subject to Airblast Loadings.

1.02 SUBMITTALS

A. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Record of product certification for safety requirements.
   2. Preparation instructions and recommendations.
   3. Storage and handling requirements and recommendations.
   4. Installation methods.

B. Shop Drawings: Detailing installation of film, anchoring accessories, and sealant.

C. Samples: For each film product to be used, minimum size 8 inches by 12 inches, representing actual product, color, and patterns.

D. Test Reports: Detailed reports of full-scale chamber tests to specified criteria, using assemblies identical to those required for this project.

E. Specimen Warranty.

1.03 QUALITY ASSURANCE

A. Installer Qualifications: Certified by glazing film manufacturer.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of authorities having jurisdiction.

1.05 FIELD CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.06 WARRANTY

A. Provide 10 year manufacturer's replacement warranty to cover film against peeling, cracking, discoloration, and deterioration.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. 3M Window Film.

B. Avery Dennison.

DRAFT

C. Flexvue Films.

D. Llumar.

E. Madico, Inc.

2.02 MATERIALS ******NOTE: THIS IS A MINIMAL SECURITY FILM FOR IMPACT RESISTANCE AND DELAYING FORCED ENTRY. SHOULD NOT BE USED FOR ACTIVE SHOOTER/BALLISTIC RESISTANCE. IF USED ON NEW EXTERIOR INSULATED GLAZING, IT MAY VOID THE GLAZING MANUFACTURER'S WARRANTY******

A. Security Glazing Film: Transparent polyester film for permanent bonding to glass.
   1. Basis-of-Design Product: 3M Scotchshield Ultra S800.
   2. Thickness: 0.008 inch, minimum (8 mil).
   3. Color: Clear.
   4. Construction: Multi-ply laminate.
   5. Adhesive Type: Pressure sensitive acrylic.
   6. Tensile Strength: 25,000 psi minimum when tested in accordance with **<<ASTM D882>>**.
   7. Breaking Strength: 150 psi minimum when tested in accordance with **<<ASTM D882>>**.
   8. Surface Burning Characteristics: Flame spread index of 25, maximum, and smoke developed index of 450, maximum, when tested in accordance with **<<ASTM E84>>** (Class A).

B. Accessory Materials: As recommended or required by film manufacturer.

C. Supplementary Anchorage System: As required by performance criteria and acceptable to Architect. Basis-of-Design is 3M Impact Protection Adhesive attachment system.

D. Glass Cleaner: As recommended by glazing film manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

A. Field-Applied Film: Verify that existing conditions are adequate for proper application and performance of film.

B. Examine glass and frames. Verify that existing conditions are adequate for proper application and performance of film.

C. Verify glass is not cracked, chipped, broken, or damaged.

D. Verify that frames are securely anchored and free of defects.

E. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.02 PREPARATION

A. Clean glass of dust, dirt, paint, oil, grease, mildew, mold, and other contaminants that would inhibit adhesion.

B. Immediately prior to applying film, thoroughly wash glass with neutral cleaning solution.

C. Protect adjacent surfaces.

D. Do not begin installation until substrates have been properly prepared.

DRAFT

3.03 INSTALLATION

A. Do not apply glazing film when surface temperature is less that 40 degrees F or if precipitation is imminent.

B. Install in accordance with manufacturer's instructions, without air bubbles, wrinkles, streaks, bands, thin spots, pinholes, or gaps, as required to achieve specified performance.

C. Accurately cut film with straight edges to required sizes allowing 1/16-inch to 1/8-inch gap at perimeter of glazed panel unless otherwise required by anchorage method.

D. Seams: Seam film only as required to accommodate material sizes; form seams vertically without overlaps and gaps; do not install with horizontal seams.

E. Supplemental Adhesive Anchorage: Install in accordance with manufacturer's instructions and shop drawings.

F. Clean glass and anchoring accessories following installation. Remove excess sealants and other glazing materials from adjacent finished surfaces.

G. Remove labels and protective covers.

3.04 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Date of Substantial Completion.

Q. UL 10C - Standard for Positive Pressure Fire Tests of Door Assemblies.

R. UL 263 - Standard for Fire Tests of Building Construction and Materials.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene preinstallation meeting two weeks minimum before starting work of this section; require attendance by each of affected installers. Preinstallation meeting for this section may be included as part of Division 8 "Glazing" preinstallation meeting.

1.03 SUBMITTALS

A. Product Data on Glazing Types: Provide structural, physical, and environmental characteristics, size limitations, special handling and installation requirements.

B. Product Data on Glazing Compounds and Accessories: Provide chemical, functional, and environmental characteristics, limitations, special application requirements, and identify available colors.

C. Certificate: Certify that **<< products of this section; or _____>>** meet or exceed **<< specified requirements; or _____>>**.

DRAFT

1.04 QUALITY ASSURANCE

A. Perform work in accordance with **<< GANA (GM); GANA (SM); GANA (LGRM); IGMA TM-3000; and _____>>** for **<< glazing installation methods; or _____>>**.

B. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of type specified in this section.

1.05 FIELD CONDITIONS

A. Ambient Conditions: Do not install glazing when ambient temperature is less than 40 degrees F.

B. Maintain minimum ambient temperature before, during, and 24 hours after installation of glazing compounds.

1.06 WARRANTY

A. Manufacturer Warranty for Coated or Laminated Fire Glass: Provide 5-year manufacturer warranty coverage for coating deterioration or delamination, including providing products to replace failed units, and commencing on the Date of Substantial Completion. Complete forms in Owner's name and register with manufacturer.

PART 2 PRODUCTS

2.01 GLASS MATERIALS AND PERFORMANCE REQUIREMENTS, GENERAL

A. Coordinate with Division 8 Section "Glazing" for general glass material characteristics including float glass, heat-strengthening and tempering, laminated glass, and performance requirements including thermal and safety requirements.

2.02 GLAZING UNITS

A. Glazing Type **<< _____>>** - Fire-Resistance-Rated Glazing: Type, thickness, and configuration of glazing that contains flames, smoke, and blocks radiant heat, as required to achieve indicated fire rating period exceeding 45 minutes.

1. Applications: Provide in the following applications where glass sizes exceed that allowable for fire-protection-rated glazing:
   a. Glazing in fire-rated door assemblies.
   b. Glazing in fire-rated window/storefront/curtainwall assemblies.
   c. Glazing in sidelites, borrowed lites, and other glazed openings in fire-rated wall assemblies.
   d. Other locations as indicated on drawings.
2. Glass Type: Laminated annealed glass with intumescent fire retardant interlayer(s).
3. Provide products listed by **<< ITS (DIR); UL (DIR); or _____>>** and approved by authorities having jurisdiction.
4. Safety Glazing Certification: **<<16 CFR 1201>>** Category II.
5. Glazing Method: As required for fire rating.
6. Fire Rating Period: As indicated on Drawings.
7. Markings for Fire-Resistance-Rated Glazing Assemblies: Provide permanent markings on fire-resistance-rated glazing in compliance with **<< ICC (IBC); local building code; authorities having jurisdiction; and _____>>**.
   a. "W" - meets wall assembly criteria of **<<ASTM E119>>** or **<<UL 263>>** fire test standards.

DRAFT

b. "D" - meets fire door assembly criteria of **<<NFPA 252>>**, **<<UL 10B>>**, or **<<UL 10C>>** fire test standards.
c. "H" - meets fire door assembly hose stream test of **<<NFPA 252>>**, **<<UL 10B>>**, or **<<UL 10C>>** fire test standards.
d. 'T' - meets temperature rise of not more than **<< 450 degrees F>>** above ambient at end of 30 minutes fire exposure in accordance with **<<NFPA 252>>**, **<<UL 10B>>**, or **<<UL 10C>>** fire test standards.
e. "XXX" - placeholder that represents fire rating period, in minutes.

8. Products:
a. McGrory Glass, Inc; AGC Pyrobel Series.
b. SAFTIFIRST, a division of O'Keeffe's Inc; SuperLite II-XL.
c. Technical Glass Products; Pilkington Pyrostop.

B. Glazing Type **<< _____>>** - Fire-Protection-Rated Glazing: Type, thickness, and configuration of glazing that contains flame, smoke, and does not block radiant heat, as required to achieve indicated fire rating period(s) as indicated on Drawings.
1. Applications:
a. Vision lites in fire-rated door assemblies where glazing area does not exceed allowable.
b. Other locations as indicated on drawings.
2. Glass Type: Safety ceramic glass.
3. Provide products listed by **<< ITS (DIR); UL (DIR); or _____>>** and approved by authorities having jurisdiction.
4. Safety Glazing Certification: **<<16 CFR 1201>>** Category II.
5. Glazing Method: As required for fire rating.
6. Fire-Rating Period: As indicated on Drawings.
7. Markings for Fire-Protection-Rated Glazing Assemblies: Provide permanent markings on fire-protection-rated glazing in compliance with **<< ICC (IBC); local building code; authorities having jurisdiction; and _____>>**
a. "D" - meets fire door assembly criteria of **<<NFPA 252>>**, **<<UL 10B>>**, or **<<UL 10C>>** fire test standards.
b. "OH" - meets fire window assembly criteria, including hose stream test of **<<NFPA 257>>** or **<<UL 9>>** fire test standards.
c. "H" - meets fire door assembly hose stream test of **<<NFPA 252>>**, **<<UL 10B>>**, or **<<UL 10C>>** fire tests standards.
d. "XXX" - placeholder that represents fire-rating period, in minutes.
8. Products:
a. McGrory Glass, Inc; SCHOTT PYRAN Platinum Series.
b. SAFTIFIRST, a division of O'Keeffe's Inc; SuperLite X-45/60/90 (SuperClear 45-HS is acceptable for 45 minute glazing).
c. Technical Glass Products; Firelite NT.

2.03 ACCESSORIES

A. Setting Blocks: **<< Calcium silicate; Aluminum silicate; or _____>>**, with **<< 80 to 90; or ____ to ____>>** Shore A durometer hardness**<< ; ASTM C864 Option I; ; ASTM C864 Option II; ; _____; or None - N/A>>**. Length of **<< 0.1 inch for each square foot>>** of glazing or minimum **<< 4 inch>>** by width of glazing rabbet space minus **<< 1/16 inch>>** by height to suit glazing method and pane weight and area.

DRAFT

B. Spacer Shims: **<< EPDM; Silicone; Neoprene; or _____>>**, **<< 50 to 60; or ____ to ____>>** Shore A durometer hardness**<< ; ASTM C864 Option I; ; ASTM C864 Option II; ; _____; or None - N/A>>**. Continuous by one half the height of glazing stop by thickness to suit application**<< , self adhesive on one face; , _____; or None - N/A>>**.

C. Glazing Tape: Flexible tape made from spun calcium-magnesium-silica fibers in binder; designed to remain stable at temperatures up to **<< 2,012 degrees F; or ___ degrees F >>**.

1. Thickness: **<< As recommended by framing manufacturer for glazing application; or _____>>**.

D. Glazing Gaskets: Flexible intumescent seals.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that openings for glazing are correctly sized and within tolerances, including those for size, squareness, and offsets at corners.

B. Verify that minimum required face and edge clearances are provided.

C. Verify that surfaces of glazing channels or recesses are clean, free of obstructions that may impede moisture movement, weeps are clear, and support framing is ready to receive glazing system.

D. Verify that sealing between joints of glass framing members has been completed effectively.

E. Proceed with glazing system installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Clean contact surfaces with appropriate solvent and wipe dry **<< immediately before glazing; within maximum of 24 hours before glazing; or _____>>**. Remove coatings that are not tightly bonded to substrates.

B. Seal porous glazing channels or recesses with substrate compatible primer or sealer.

C. Prime surfaces scheduled to receive sealant where required for proper sealant adhesion.

3.03 INSTALLATION - GENERAL

A. Install glazing in compliance with written instructions of glass, gaskets, and other glazing material manufacturers unless more stringent requirements are indicated, including those in referenced glazing standards.

B. Install glazing sealants in accordance with **<<ASTM C1193>>**, **<<GANA (SM)>>**, and manufacturer's instructions.

C. Do not exceed edge pressures around perimeter of glass lites as stipulated by glass manufacturer.

D. Set glass lites of system with uniform pattern, draw, bow, and similar characteristics.

E. Set glass lites in proper orientation so that coatings face exterior or interior as indicated.

F. Prevent glass from contact with contaminating substances that may result from construction operations including, but not limited to weld spatter, fire-safing, plastering, mortar droppings, etc.

3.04 INSTALLATION - DRY GLAZING METHOD (TAPE AND TAPE)

A. Application - Interior Glazed: Set glazing infills from interior of building.

DRAFT

B. Cut glazing tape to length and set against permanent stops, projecting **<< 1/16 inch>>** above sightline.

C. Place setting blocks at **<< 1/4; 1/3; or _____>>** points with edge block no more than **<< 6 inches; or ____ inches>>** from corners.

D. Rest glazing on setting blocks and push against tape for full contact at perimeter of pane or unit.

E. Place glazing tape on free perimeter of glazing in same manner described above.

F. Install removable stop without displacement of tape. Exert pressure on tape for full continuous contact.

G. Carefully trim protruding tape with knife.

3.05 CLEANING

A. Remove excess glazing materials from finish surfaces immediately after application using solvents or cleaners recommended by manufacturers.

B. Remove nonpermanent labels immediately after glazing installation is complete.

C. Clean glass and adjacent surfaces after sealants are fully cured.

D. Clean glass on both exposed surfaces **<< not more than four days; not more than ___ days; or _____>>** prior to Date of Substantial Completion in accordance with glass manufacturer's written recommendations.

3.06 PROTECTION

A. After installation, mark pane with 'X' by using removable plastic tape or paste**<< ; do not mark heat-absorbing or reflective glass units; ; _____; or None - N/A>>**.

B. Remove and replace glass that is damaged during construction period prior to Date of Substantial Completion.

SECTION 089100
LOUVERS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix).

B. AMCA 500-L - Laboratory Methods of Testing Louvers for Rating.

C. AMCA 511 - Certified Ratings Program Product Rating Manual for Air Control Devices.

1.02 SUBMITTALS

A. Product Data: Provide data describing design characteristics, maximum recommended air velocity, design free area, materials and finishes.

B. Shop Drawings: Indicate louver layout plan and elevations, opening and clearance dimensions, and tolerances; head, jamb and sill details; blade configuration, screens, blank-off areas required, and frames.

C. Sustainability Submittals: Refer to Division 1 Section "Sustainable Design Requirements."

D. Samples: Manufacturer's color charts indicating full range of available colors.

E. Test Reports: Independent agency reports showing compliance with specified performance criteria.

F. Manufacturer's Certificate: Certify that products meet or exceed specified performance requirements.

1.03 WARRANTY

A. Provide five year manufacturer's warranty against distortion, metal degradation, and connection failures of louver components.
   1. Finish: Include twenty year coverage against degradation of exterior finish.

DRAFT

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Louvers:
   1. Airline Louvers.
   2. Airolite Company, LLC.
   3. American Warming and Ventilating.
   4. Construction Specialties, Inc.
   5. Greenheck Fan Corporation.
   6. Industrial Louvers, Inc.
   7. NCA, a brand of Metal Industries Inc.
   8. Pottorff.
   9. Reliable Products, Inc.
   10. Ruskin.
   11. United Enertech.

2.02 LOUVERS

A. Louvers, General: All louvers shall be factory fabricated and assembled, complete with frame, mullions, and accessories; AMCA Certified in accordance with **<<AMCA 511>>**; provide AMCA Certified seal/marking on all louvers.

B. Drainable-Blade Louvers: Horizontal blade, extruded aluminum construction. ******Standard drainable blade louver can be used at non-critical locations. Provide storm resistant louver below for high wind areas and intake louvers.******

1. Locations: Provide at all louvers**<< except where storm resistant louvers are indicated>>**.
2. Basis-of-Design Product: Construction Specialties; B-5157.
3. Free Area: 50 percent, minimum.
4. Free Area Velocity at Point of Beginning Water Penetration (0.01 oz. / ft^2): Minimum 1000 fpm.
5. Intake Pressure Drop at 0.01 oz/ft^2 free area velocity: 0.45 in. H_2O, maximum.
6. Blades: Drainable-blade.
7. Frame: 5 inches deep, channel profile; corner joints mitered and welded.
8. Aluminum Thickness: Frame 12 gauge, 0.080-inch minimum; blades 12 gauge, 0.080-inch minimum.

C. Storm-Resistance/Wind-Driven Rain Resistant Louvers: Horizontal blade, extruded aluminum construction. Provide at all intake louvers. ******Provide at all intake louvers, or just default to use at all louvers******

1. Locations: **<< Provide at all louvers; or Provide at all air intake louvers>>**.
2. Basis-of-Design Product: Construction Specialties; RS-7315.
3. Free Area: 50 percent, minimum.
4. Pressure Drop: 0.40 inches of water gauge maximum, per square foot of free area at velocity of 1,000 fpm, when tested in accordance with **<<AMCA 500-L>>**, test unit size 48 inch by 48 inch.
5. Wind-Driven Rain Performance: To maintain AMCA certified Class A rating: minimum 99 percent effectiveness when tested at a rainfall rate of 3.0 inches per hour, wind speed of 29 mph, and nominal core ventilation rate of 283 ft/min (1.5 m/s).
6. High-Velocity Wind Load Resistance: Design to comply with applicable requirements of **<<ICC 500>>** and **<<FEMA P-361>>**, including resistance to horizontal debris impact.
7. Blades: Inverted V-shaped, drainable. Provide with integral gutters to direct water to the exterior.
8. Frame: 7 inches deep, channel profile; corner joints mitered and welded.
9. Aluminum Thickness: Frame 0.068 inch minimum; blades 0.068 inch minimum.

2.03 MATERIALS

A. Extruded Aluminum: **<<ASTM B221>>** (**<<ASTM B221M>>**)**<< , ____ alloy, ____ temper; or None - N/A>>**.

2.04 FINISHES

A. Metal surfaces shall be prepared, pre-treated, and coated in accordance with coating and resin manufacturer's instructions.

B. Superior Performing Organic Coatings System: Polyvinylidene fluoride (PVDF) multi-coat superior performing organic coatings system complying with **<<AAMA 2605>>**, including at

DRAFT

least 70 percent PVDF resin, and at least 80 percent of aluminum extrusion and panels surfaces having minimum total dry film thickness (DFT) of **<< 1.2 mils, 0.0012 inch>>**.

C. Color: To be selected by Architect from manufacturer's full range.

2.05 ACCESSORIES

A. Blank-Off Panels: Aluminum face and back sheets, polyisocyanurate foam core, 1-1/2-inch thick, painted black on exterior side; provide where duct connected to louver is smaller than louver frame, sealing off louver area outside duct.
   1. Uninsulated aluminum sheet may be provided at uninsulated spaces; provide minimum 0.050-inch thick aluminum with black exterior face.

B. Screens: Frame of same material as louver, with reinforced corners; removable, screw attached; installed on inside face of louver frame. Provide insect screens at intake louvers and at non-ducted louvers, and provide bird screens at exhaust louvers
   1. Bird Screen: Interwoven wire mesh of steel, 14 gauge, 0.0641-inch diameter wire, 1/2 inch open weave.
   2. Insect Screen: 18 x 16 size aluminum mesh.

C. Fasteners: Concealed type; stainless steel. If exposed fasteners are unavoidable, provide color-matched heads to match framing color.

D. Flashings: Of same material as louver frame, formed to required shape, single length in one piece per location.

E. Sealant for Setting Sills and Sill Flashing: Non-curing butyl type.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that prepared openings and flashings are ready to receive this work and opening dimensions are as indicated on shop drawings.

3.02 INSTALLATION

A. Install louver assembly in accordance with manufacturer's instructions.

B. Install louvers level and plumb.

C. Set sill members and sill flashing in continuous bead of sealant.

D. Install flashings and align louver assembly to ensure moisture shed from flashings and diversion of moisture to exterior.

E. Secure louver frames in openings with concealed fasteners.

F. Coordinate with installation of mechanical ductwork.

3.03 CLEANING

A. Strip protective finish coverings.

B. Clean surfaces and components.

END OF SECTION 089100

DRAFT

SECTION 092216
COLD FORMED STEEL FRAMING - NON-STRUCTURAL (CFSF-NS)

PART 1 GENERAL

1.01 RELATED REQUIREMENTS

A. Refer to Section **<< 054000 - Cold-Formed Steel Framing - Structural (CFSF-S)>>**: Requirements for **<< structural, load-bearing, metal stud framing; exterior wall stud framing; and overhead/suspended/bulkhead framing>>**.

1.02 REFERENCE STANDARDS

A. AISI S220 - North American Standard for Cold-Formed Steel Nonstructural Framing.

B. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.

C. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

D. ASTM A1003/A1003M - Standard Specification for Steel Sheet, Carbon, Metallic- and Nonmetallic-Coated for Cold-Formed Framing Members.

E. ASTM C645 - Standard Specification for Nonstructural Steel Framing Members.

F. ASTM C665 - Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing.

G. ASTM C754 - Standard Specification for Installation of Steel Framing Members to Receive Screw-Attached Gypsum Panel Products.

H. ASTM C840 - Standard Specification for Application and Finishing of Gypsum Board.

1.03 SUBMITTALS

A. Product Data: Provide data describing **<< framing member materials and finish; product criteria; load charts; limitations; and _____>>**.

B. Product Data: Provide manufacturer's data on project-specific partition head to structure connectors, showing compliance with requirements.

C. Sustainability Submittals: Refer to Division 01, "Sustainable Design Requirements."

PART 2 PRODUCTS

2.01 FRAMING MATERIALS

A. Non-Loadbearing Framing System Components: **<<AISI S220>>**; sheet steel, of size and properties necessary for the spacing indicated, with maximum deflection of wall framing of **<< L/120 at 5 psf; L/120 at 7.5 psf; L/120 at 10 psf; L/240 at 5 psf; L/240 at 7.5 psf; L/240 at 10 psf; L/360 at 5 psf; L/360 at 7.5 psf; L/360 at 10 psf; or _____>>**.

1. Steel Thickness (Studs and Runners): Minimum 0.0179-inch (18 mil / 25 gauge) unless otherwise required to comply with **<<ASTM C754>>** for the spacing indicated, with maximum deflection of wall framing of L/240 at 5 psf, and as indicated below:
    a. Provide minimum 0.0329-inch thickness (33 mil / 20 gauge) for all partitions using 3-5/8-inch-deep studs where stud partition height is greater than 12 feet above floor level.

DRAFT

b. Provide minimum 0.0329-inch (33 mil / 20 gauge - Structural) for high-density board applications, such as ASTM C1178 tile backing panels and ASTM C1629 abuse- or impact-resistant gypsum board, and at door frames.

c. Provide minimum 0.0329-inch (33 mil / 20 gauge - Structural) for walls receiving heavy wall-hung items or loads, including but not limited to wall cabinets, wall-hung countertops, TV brackets, liquid tanks, folding and fixed seats, grab bars, handrails, exercise equipment, and shelving greater than 9 inches deep and over 3 feet in length.

2. Studs: C-shaped**<< with flat faces; with knurled or embossed faces; with ribbed webs and flanges with rolled-edge stiffeners; with _____; or None - N/A>>**.

3. Runners: U-shaped, sized to match studs.

4. Shaft Wall Studs and Accessories: ASTM C645; galvanized sheet steel, of size and properties necessary to comply with ASTM C754 and specified performance requirements.

a. Minimum Steel Thickness: Provide minimum 0.0329-inch (33 mil / 20 gauge - Structural) for all shaft wall stud applications.

b. Studs: C-T shaped shaft wall stud profile.

c. Runners and Jamb Struts: J-shaped with tabs, sized to match studs.

5. Furring: Hat-shaped sections, minimum depth of **<< 7/8 inch>>**.

6. Resilient Furring Channels: **<< Single leg; Double leg; Single or double leg; or _____>>** configuration; 1/2 inch channel depth.

B. Deflection and Firestop Track: Slotted; intumescent strip **<< factory-applied; field-applied; or _____>>** to track flanges expands when exposed to heat or flames to provide a perimeter joint seal. ******MCPS prefers slotted deflection and firestop track only.******

C. Non-Loadbearing Framing Accessories:

1. Partial Height Wall Framing Support: Provides stud reinforcement and anchored connection to floor.

a. Materials: **<<ASTM A36/A36M>>** formed sheet steel support member with factory-welded **<<ASTM A1003/A1003M>>** steel plate base.

2. Bracing and Bridging: **<<ASTM A653/A653M>>** G90 galvanized steel; cold-rolled channel / hat-section profile; for lateral bracing of wall studs with slots for engaging on-module studs.

3. Framing Connectors: **<<ASTM A653/A653M>>** steel clips; secures cold rolled channel to wall studs for lateral bracing.

4. Sheet Metal Backing: 0.036 inch thick flat strap/plate.

5. Fasteners: Self-tapping screws designed for attachment of metal framing and recommended by manufacturer.

6. Anchorage Devices: Powder actuated or screw anchors with sleeves, recommended by manufacturer for anchorage to indicated substrates.

7. Acoustic Insulation: **<<ASTM C665>>**; preformed mineral-fiber, friction fit type, unfaced. Thickness as indicated, or sized to fit stud depth indicated.

8. Acoustic Sealant: Refer to Division 07, "Joint Sealants."

D. Isolation Strips: Provide either closed-cell foam tape with rubberized adhesive membrane or asphalt-saturated organic felt (ASTM D226, Type I, No. 15).

2.02 GYPSUM BOARD SUSPENSION SYSTEM

A. For interior overhead gypsum board, in lieu of separate stick built fixed-framing bulkheads and soffits fabricated of Structural Cold-Formed Steel Framing (CFSF-S), Contractor may provide a

DRAFT

direct hung suspension system, per **<<ASTM C645>>**, composed of pre-fabricated beams and cross-furring members, specifically designed for use with gypsum board.

B. Products:
   1. Armstrong; Quikstix Drywall Grid System.
   2. Certainteed; 1-1/2" Drywall Suspension System.
   3. Rockfon; Chicago Metallic Drywall Grid System.
   4. USG; Drywall Suspension System.

2.03 FABRICATION

A. Fabricate assemblies of framed sections to sizes and profiles required.

B. Fit, reinforce, and brace framing members to suit design requirements.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify that rough-in utilities are in proper location.

3.02 INSTALLATION OF STUD FRAMING

A. Install in accordance with **<<ASTM C754>>**. Provide framing, including bracing, bridging, and anchorage accessories, to meet L/240 deflection limit at a lateral pressure of 5 psf unless indicated otherwise.
   1. Gypsum Board: At gypsum board partitions and assemblies, comply with applicable requirements of **<<ASTM C840>>** for framing installation.
   2. Install a continuous isolation strip where studs or stud-framed partitions directly abut dissimilar metals or exterior masonry wall.

B. Extend partition framing **<< to structure where indicated and to ceiling in other locations; to structure in all locations; to ceiling in all locations; or to deck at locations indicated, and to a height 4 inches above ceiling level at all other locations, unless otherwise indicated>>**.

C. Partitions Terminating to Deck: Secure partitions to building structure in accordance with Structural Drawings. Do not fasten runner directly to floor/roof deck; provide clearance for firestopping. Coordinate with Section **<< 078400 - Firestopping; or _____>>** for head-of-wall joint firestopping assemblies and firestopping around structural elements as required.

D. Partitions Terminating Above Ceiling: Attach studs to runner using specified mechanical devices in accordance with manufacturer's instructions. Brace runners to structural elements in accordance with Structural Drawings.

E. Align and secure top and bottom runners at maximum 24 inches on center.

F. At partitions indicated with an acoustic rating:
   1. Provide components and install as required to produce STC ratings as indicated, based on published tests by manufacturer conducted in accordance with **<<ASTM E90>>** with STC rating calculated in accordance with **<<ASTM E413>>**.
   2. Place acoustic sealant between runners and substrate, studs and adjacent construction.
   3. Place acoustic sealant between studs and adjacent vertical surfaces.
   4. Place acoustic sealant at top and bottom of partition

DRAFT

G. Fit runners under and above openings; secure intermediate studs to same spacing as wall studs.

H. Install studs vertically at 16 inches on center, unless otherwise indicated.

I. Align stud web openings horizontally.

J. Secure both sides of studs to tracks using method. Do not weld.

K. Stud splicing is not permissible.

L. Fabricate corners using a minimum of three studs.

M. Install double studs at wall openings, door and window jambs, not more than **<< 2 inches>>** from each side of openings.

N. Install bracing, bridging, and anchorage to brace stud framing system rigid.

O. Coordinate erection of studs with requirements of **<< door frames; window frames; and _____>>**; install supports and attachments.

P. Coordinate installation of bucks, anchors, and blocking with electrical, mechanical, and other work to be placed within or behind stud framing.

Q. Blocking: Use FRT wood blocking secured to studs. Provide blocking for support of **<< plumbing fixtures; toilet partitions; wall cabinets; toilet accessories; hardware; opening frames; and other built-in-place wall mounted items and equipment>>**.

R. Furring: **<< Install at spacing and locations shown on drawings; Coordinate with sound isolation clip spacing and locations; or _____>>**. Lap splices a minimum of **<< 6 inches>>**.

3.03 GYPSUM BOARD SUSPENSION SYSTEM

A. Install suspension system in accordance with manufacturer's instructions. Do not attach overhead suspension hangers to or suspend from steel floor or roof deck; fasten to primary structural beams/joists or provide intermediate slotted track as supplemental structure between primary structural elements.

3.04 TOLERANCES

A. Maximum Variation From True Position: 1/8 inch in 10 feet.

B. Maximum Variation From Plumb: 1/8 inch in 10 feet.

END OF SECTION 092216

DRAFT

SECTION 092900
GYPSUM BOARD

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ANSI A108.11 - American National Standard Specifications for Interior Installation of Cementitious Backer Units.

B. ANSI A118.9 - American National Standard Specifications for Test Methods and Specifications for Cementitious Backer Units.

C. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

D. ASTM C423 - Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method.

E. ASTM C475/C475M - Standard Specification for Joint Compound and Joint Tape for Finishing Gypsum Board.

F. ASTM C665 - Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing.

G. ASTM C840 - Standard Specification for Application and Finishing of Gypsum Board.

H. ASTM C1002 - Standard Specification for Steel Self-Piercing Tapping Screws for Application of Gypsum Panel Products or Metal Plaster Bases to Wood Studs or Steel Studs.

I. ASTM C1047 - Standard Specification for Accessories for Gypsum Wallboard and Gypsum Veneer Base.

J. ASTM C1177/C1177M - Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing.

K. ASTM C1178/C1178M - Standard Specification for Coated Glass Mat Water-Resistant Gypsum Backing Panel.

L. ASTM C1280 - Standard Specification for Application of Exterior Gypsum Panel Products for Use as Sheathing.

M. ASTM C1325 - Standard Specification for Fiber-Mat Reinforced Cementitious Backer Units.

N. ASTM C1396/C1396M - Standard Specification for Gypsum Board.

O. ASTM C1629/C1629M - Standard Classification for Abuse-Resistant Nondecorated Interior Gypsum Panel Products and Fiber-Reinforced Cement Panels.

P. ASTM C1658/C1658M - Standard Specification for Glass Mat Gypsum Panels.

Q. ASTM D3273 - Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber.

R. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.

S. ASTM E413 - Classification for Rating Sound Insulation.

T. ASTM E1414/E1414M - Standard Test Method for Airborne Sound Attenuation Between Rooms Sharing a Common Ceiling Plenum.

U. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

DRAFT

V. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers Version 1.2.

W. CARB (SCM) - Suggested Control Measure for Architectural Coatings; California Air Resources Board.

X. GA-216 - Application and Finishing of Gypsum Panel Products.

Y. GA-226 - Application of Gypsum Board to Form Curved Surfaces.

Z. GA-600 - Fire Resistance and Sound Control Design Manual.

AA. SCAQMD 1113 - Architectural Coatings.

BB. SCAQMD 1168 - Adhesive and Sealant Applications.

CC. UL (FRD) - Fire Resistance Directory.

1.02 SUBMITTALS

A. Product Data: Provide data on each type of product specified, including gypsum board, accessories, and joint finishing components.

B. Sustainable Design Submittals: Refer to Division 1 Section "Sustainable Design Requirements."

C. Samples: Provide two samples in manufacturer's standard length of each type of decorative trim indicated. ******Only needed for more decorative items, customize as needed. Not needed for standard gypsum products******

D. Evaluation Service Reports: Show compliance of grid suspension systems with specified requirements.

1.03 DELIVERY, STORAGE, HANDLING, AND FIELD CONDITIONS

A. Do not deliver or install until building is weather-tight and conditioned.

B. Store materials in dry and clean location until needed for installation. During installation, handle in a manner that will prevent damage and to prevent marring and soiling of finished surfaces.

C. Do not install gypsum products that have gotten wet or moldy, or show signs of past moisture damage.

D. Maintain uniform temperature and humidity at occupancy conditions during and after installation. Allow products to acclimatize prior to installation.

DRAFT

PART 2 PRODUCTS

2.01 GYPSUM BOARD ASSEMBLIES, GENERAL

A. Provide completed assemblies complying with **<<ASTM C840>>** and **<<GA-216>>**.

B. Fire-Resistance-Rated Assemblies: Provide with requirements of **<<GA-600>>**, and provide complete assemblies that are equivalent to a listed test assembly in **<<UL (FRD)>>**.

1. Coordinate with the work of other sections, including but not limited to cold-formed steel framing, joint sealants, and firestopping to ensure complete assembly is equivalent to tested listing. Coordinate with accessory products including joint treatments and fasteners to ensure they are compliant with tested listing.

C. Acoustic Rated Partitions: Provide complete assemblies with STC ratings indicated on Drawings, as calculated in accordance with **<<ASTM E413>>** and based on tests conducted in accordance with **<<ASTM E90>>**.

D. Shaft Walls: Provide complete assemblies with the following characteristics:

1. Air Pressure Within Shaft: Sustained loads of 5 lbf/sq ft with maximum mid-span deflection of L/240.
2. Acoustic Attenuation: STC of 35-39 calculated in accordance with ASTM E413, based on tests conducted in accordance with ASTM E90.

E. Sustainability Requirements:
1. Paints and Coatings: Paints and coatings field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet applicable VOC limits of **<<CARB (SCM)>>** or **<<SCAQMD 1113>>**.
2. Adhesives and Sealants: Adhesives and sealants field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet the chemical content requirements of **<<SCAQMD 1168>>**.

2.02 BOARD MATERIALS

A. Manufacturers - Gypsum-Based Board:
1. American Gypsum Company.
2. CertainTeed Corporation.
3. Georgia-Pacific Gypsum.
4. National Gypsum Company.
5. PABCO Gypsum.
6. USG Corporation.

B. Gypsum Wallboard: Paper-faced gypsum panels as defined in **<<ASTM C1396/C1396M>>**; sizes to minimize joints in place; with tapered edges.
1. Application: Use for vertical surfaces and ceilings, unless otherwise indicated.
2. Mold Resistance: Score of 10, when tested in accordance with **<<ASTM D3273>>**.
a. Mold-resistant board is required whenever gypsum board is indicated in rooms subject to steam or water, including mechanical rooms, toilet rooms, custodial rooms, and kitchens.
3. At Assemblies Indicated with Fire-Resistance Rating: Use type required by indicated tested assembly; if no tested assembly is indicated, use Type X board, UL or WH listed.
4. Thickness:
a. Vertical Surfaces: 5/8-inch.
b. Ceilings: 5/8-inch Type X, or manufacturer's 1/2-inch ceiling board with documented sag resistance equivalent to 5/8-inch Type X board.
c. Curved Surfaces: Provide flexible 1/4 inch thickness gypsum board, installed in two layers.

C. Abuse Resistant Wallboard: ******Abuse-resistant protects against scuffs and scratches, but not direct impacts. Recommended to use only within reach (to 8 ft height) then switch to regular gypsum above******
1. Application: High-traffic areas indicated.
2. Surface Abrasion: Level 2, minimum, when tested in accordance with **<<ASTM C1629/C1629M>>**.
3. Indentation: Level 1, minimum, when tested in accordance with **<<ASTM C1629/C1629M>>**.
4. Soft Body Impact: Level 2, minimum, when tested in accordance with **<<ASTM C1629/C1629M>>**.
5. Mold Resistance: Score of 10, when tested in accordance with **<<ASTM D3273>>**.

DRAFT

6. Paper-Faced Type: Gypsum wallboard, as defined in **<<ASTM C1396/C1396M>>**.
7. Glass Mat-Faced Type: Gypsum wallboard, as defined in **<<ASTM C1658/C1658M>>**.
8. Type: Fire-resistance-rated Type X, UL or WH listed.
9. Thickness: 5/8 inch.
10. Edges: Tapered.
11. Paper-Faced Products:
    a. American Gypsum Company; M-Bloc AR Type X.
    b. CertainTeed Corporation; Extreme Abuse Resistant Drywall with M2Tech.
    c. Georgia-Pacific Gypsum; ToughRock Fireguard X Mold-Guard Abuse-Resistant.
    d. National Gypsum Company; Gold Bond Hi-Abuse XP Gypsum Board.
    e. USG Corporation; USG Sheetrock Brand Mold Tough AR Firecode X Panels.
12. Glass Mat Faced Products:
    a. Georgia-Pacific Gypsum; DensArmor Plus Abuse-Resistant.
    b. National Gypsum Company; Gold Bond eXP Interior Extreme AR Gypsum Panel.
    c. USG Corporation; USG Sheetrock Brand Glass-Mat Panels Mold Tough AR Firecode X.

D. Impact Resistant Wallboard: ******Impact-resistant gypsum protects against scuffs and scratches but also direct impact. Recommended to use only within reach (to 8 ft height) then switch to regular gypsum above.******
1. Application: High-traffic areas indicated.
2. Surface Abrasion: Level 3, minimum, when tested in accordance with **<<ASTM C1629/C1629M>>**.
3. Indentation: Level 1, minimum, when tested in accordance with **<<ASTM C1629/C1629M>>**.
4. Soft Body Impact: Level 3, minimum, when tested in accordance with **<<ASTM C1629/C1629M>>**.
5. Hard Body Impact: Level 2, minimum, when tested in accordance with **<<ASTM C1629/C1629M>>**.
6. Mold Resistance: Score of 10, when tested in accordance with **<<ASTM D3273>>**.
7. Paper-Faced Type: Gypsum wallboard, as defined in **<<ASTM C1396/C1396M>>**.
8. Glass Mat-Faced Type: Gypsum wallboard, as defined in **<<ASTM C1658/C1658M>>**.
9. Type: Fire-resistance-rated Type X, UL or WH listed.
10. Thickness: 5/8-inch.
11. Edges: Tapered.
12. Paper-Faced Products:
    a. American Gypsum Company; M-Bloc IR Type X.
    b. CertainTeed Corporation; Extreme Impact Resistant Drywall with M2Tech.
    c. Georgia-Pacific Gypsum; ToughRock Fireguard X Mold-Guard MAX-Impact.
    d. National Gypsum Company; Gold Bond Hi-Impact XP Gypsum Board.
    e. USG Corporation; USG Sheetrock Brand Mold Tough VHI Firecode X Panels.
13. Glass Mat Faced Products:
    a. Georgia-Pacific Gypsum; DensArmor Plus Impact-Resistant.
    b. National Gypsum Company; Gold Bond eXP Interior Extreme IR Gypsum Panel.
    c. USG Corporation; USG Sheetrock Brand Glass-Mat Panels Mold Tough VHI.

E. Tile Backing Board:

DRAFT

1. Application: Surfaces behind tile in wet areas including **<< tub and shower surrounds; shower ceilings; and _____>>**.
2. Mold Resistance: Score of 10, when tested in accordance with **<<ASTM D3273>>**.
3. ANSI Cement-Based Board: Non-gypsum-based; cementitious panels with glass fiber mesh embedded in front and back surfaces complying with **<<ANSI A118.9>>** and ASTM C 1288 or **<<ASTM C1325>>**.
   a. Thickness: 5/8-inch.
   b. Available Products:
      1) USG Corporation; Durock Cement Board. ******MCPS preferred product.******
      2) FinPan, Inc.; Util-A-Crete Backer Board.
      3) National Gypsum Company; PermaBase Cement Board.
      4) USG Corporation; Durock Cement Board. ******MCPS preferred product.******
4. Glass Mat Faced Board: Coated glass mat water-resistant gypsum backing panel as defined in **<<ASTM C1178/C1178M>>**.
   a. Fire-Resistance-Rated Type: Type X core, thickness 5/8-inch.
   b. Mold Resistance: Score of 10, when tested in accordance with **<<ASTM D3273>>**.
   c. Available Products:
      1) USG Corporation; Durock Glass-Mat Tile Backerboard. ******MCPS preferred product.******
      2) CertainTeed Corporation; 5/8" GlasRoc Tile Backer Type X.
      3) Georgia-Pacific Gypsum; DensShield Tile Backer.
      4) National Gypsum Company; Gold Bond eXP Tile Backer.

F. Acoustical Sound Dampening Wall and Ceiling Board: Two layers of heavy paper-faced, high-density gypsum board separated by a viscoelastic polymer layer and capable of achieving STC rating of**<< 50; or ___ >>** or more in typical stud wall assemblies as calculated in accordance with **<<ASTM E413>>** and when tested in accordance with **<<ASTM E90>>**. ******Verify assembly STC rating required******
   1. Thickness: 5/8-inch.
   2. Long Edges: Tapered.
   3. Mold Resistance: Score of 10, when tested in accordance with **<<ASTM D3273>>**.
   4. Products:
      a. CertainTeed Corporation; SilentFX Quick Cut Gypsum Board.
      b. National Gypsum Company; Gold Bond SoundBreak XP Gypsum Board.
      c. PABCO Gypsum; Quiet Rock.

G. Exterior Sheathing Board for Ceilings and Soffits: Sizes to minimize joints in place; ends square cut.
   1. Mold Resistance: Score of 10, when tested in accordance with **<<ASTM D3273>>**.
   2. Fungal Resistance: No fungal growth when tested in accordance with **<<ASTM G21>>**.
   3. Glass Mat Faced Sheathing: Glass mat faced gypsum substrate as defined in **<<ASTM C1177/C1177M>>**.
   4. Board Type: Regular; 5/8-inch thick.
   5. Edges: Square**<< Square; or _____>>**.
   6. Available Glass Mat Faced Products:
      a. American Gypsum Company; M-Glass Exterior Sheathing.
      b. CertainTeed Corporation; GlasRoc Exterior Sheathing.

DRAFT

c. Georgia-Pacific Gypsum; DensGlass Sheathing.
d. National Gypsum Company; Gold Bond eXP Sheathing.
e. USG Corporation; USG Securock Brand Ultralight Glass-Mat Sheathing.

H. Shaftwall Liner Panels: Type X; 1 inch thick, square long edges, ends square cut.
1. Glass Mat Faced Type: Glass mat shaftliner gypsum panel or glass mat coreboard gypsum panel as defined in **<<ASTM C1658/C1658M>>**.
2. Mold Resistance: Score of 10, when tested in accordance with **<<ASTM D3273>>**.
3. Glass Mat Faced Products:
a. American Gypsum Company; M-Glass Shaft Liner.
b. CertainTeed Corporation; GlasRoc Shaftliner Type X.
c. Georgia-Pacific Gypsum; DensGlass Shaftliner (mold-resistant).
d. National Gypsum Company; Gold Bond eXP Shaftliner.
e. USG Corporation; Sheetrock Brand Glass-Mat Liner Panels Mold Tough 1 in.

2.03 SEAMLESS SOUND-ABSORBING GYPSUM BOARD CEILING SYSTEM

A. Sound-Absorbing Gypsum Board Ceiling System: Perforated seamless mineral fiber panels or perforated gypsum board with acoustic backer panels; with acoustically transparent spray-applied finish.
1. Thickness, Perforated Gypsum Board: 5/8-inch.
2. Thickness, Backer Panels: 1 inch.
3. Spray-Applied Finish: Acoustically transparent, acrylic-based finish coating.
a. Finish Color: Manufacturer's standard, flat white.
4. Noise Reduction Coefficient (NRC): Not less than 0.80 when measured and calculated in accordance with **<<ASTM C423>>**.
5. Ceiling Attenuation Class (CAC): Not less than 44 when tested in accordance with **<<ASTM E1414/E1414M>>** and classified in accordance with **<<ASTM E413>>**.
6. Suspension System: Refer to Division 09 Section "Cold-Formed Steel Framing - Non-Structural (CFSF-NS)" for drywall suspension system.
7. Products:
a. Armstrong Ceilings; Acoustibuilt Seamless Acoustical Ceiling Sytem.
b. Rockfon; Mono Acoustic.
c. USG Corporation; Ensemble Acoustical Drywall Ceiling System.

2.04 GYPSUM BOARD ACCESSORIES

A. Acoustic Accessories:
1. Sound Attenuation Batts: **<<ASTM C665>>**; preformed glass fiber, friction fit type, unfaced. Thickness sized to fit metal stud cavity.
2. Acoustic Sealant: Acrylic emulsion latex or water-based elastomeric sealant; do not use solvent-based non-curing butyl sealant. **<< Refer to sealant AS-1 in Division 07 Section "Joint Sealants."; or None - N/A>>**
3. Putty Pads: Non-hardening endothermic material, in pad form, faced on both sides with poly liner, designed to seal around penetrations and wiring devices, enhancing acoustic performance.
a. Nominal Size: 7-1/4 x 7-1/4 x 3/16 inches.
b. Available Products:
1) 3M; Fire Barrier Moldable Putty Pads MPP+.

DRAFT

2) Hilti; Firestop Putty Pad, CFS-P PA.
3) Specified Technologies, Inc.; SpecSeal Putty Pad.

B. Beads, Joint Accessories, and Other Trim: **<<ASTM C1047>>**, galvanized steel, rolled zinc, or PET/PVC, unless noted otherwise.
1. Corner Beads: Bullnosed, with minimum 7/8-inch flanges each side. Provide at outside corners of vertical partitions in public-facing spaces. Do not provide at bulkheads, windows, and back of house areas.
a. Bullnose Radius: 3/4-inch.
b. Products:
1) Basis-of-Design: CertainTeed Corporation; AquaBead Bullnose Corner Reinforcement. ******MCPS preferred product******
2) ClarkDietrich; PRO-Bull 3/4" Corner Bead.
3) Flannery, Inc; Expanded Flange Bullnose Corner.
4) Phillips Manufacturing Co; gripSTIK 3/4" Bullnose Corner Bead.
5) Trim-Tex, Inc; 3/4-inch Large Bullnose.
2. L-Bead, LC-Bead, and U-Bead: Sized to fit gypsum wallboard size(s) indicated.
a. Provide LC-bead at exposed panel edges and U-bead at concealed panel edges, unless otherwise indicated. Provide L-bead at locations indicated.

C. Decorative Metal Trim:
1. Material: Extruded aluminum alloy 6063-T5 temper.
2. Finish: **<< Anodized, clear; Anodized, _____ color; Factory primed for field painting; or _____>>**.
3. Reveal Trim: Provide 1/2-inch wide by either 1/2-inch or 5/8-inch deep, as standard with manufacturer.
a. Products:
1) Fry Reglet; Model DRM-625-50.
2) Flannery, Inc; Model DWR 625-50.
3) Gordon, Inc; Part # 512-5/8.
4) Pittcon Industries; Model SWR-050-063.
5) Tamlyn; Model RV5-12.
4. "F" Reveal Molding: 1/2-inch wide by 5/8-inch deep with 7/8-inch flange on one side only for reveals where drywall terminates against jamb, ceiling, or other finish material.
a. Products:
1) Fry Reglet; Model DRMF-625-50.
2) Flannery, Inc; Model DWRF 625-50.
3) Gordon, Inc; Part # 412-5/8.
4) Pittcon Industries; Model SWR-050U-063.
5) Tamlyn; Model MCR5-12.
5. L-Trim Molding: "L" angle molding where drywall raised panel terminates at other substrates.
a. Products:
1) Fry Reglet: Model DRML-625.
2) Flannery, Inc; Model DWL 625.
3) Gordon, Inc; Part # 258.
4) Pittcon Industries; Model ST-063.

DRAFT

5) Tamlyn; Model MLR-58.

6. Stepped Outside Corner: Exposed metal reveal profile for 90 degree outside corners.
   a. Products:
      1) Fry Reglet: Model DRMW 625-625.
      2) Flannery, Inc; Model DWRW 625-625.
      3) Gordon, Inc; Part # 945-2X-58.
      4) Pittcon Industries; Model SCS-2X 063-063.
      5) Tamlyn; (no product - provide custom to match profiles above).

D. Metal Edge Trim for "Cloud" Suspended Ceilings: Steel or extruded aluminum; provide attachment clips, splice plates, and preformed corner pieces for a complete trim system.
   1. Trim Height: **<< 4 inches; 6 inches; 8 inches; or _____>>**.
   2. Finish: Baked enamel; **<< color as selected by Architect from manufacturer's full range; white; or _____>>**.
   3. Available Products:
      a. Armstrong World Industries, Inc.; Axiom Classic.
      b. Certainteed; Terminus Perimeter Trim.
      c. Chicago Metallic Corp.; Infinity System.
      d. USG Corporation; Compasso Suspension Trim.

E. Acoustic Partition Closure at Storefront or Curtain Wall: Multi-piece rectangular-section assembly of nested U-shape aluminum extrusions for finished closure between aluminum storefront or curtainwall system vertical mullion (and glass where indicated), and partition assembly. Closure shall allow for movements of framing and glass it attaches to, and shall not allow direct metal to glass contact. Fill cavity of partition closure with acoustic batt insulation.
   1. Thickness: Aluminum closure plates not less than 0.125-inch thick.
   2. Acoustic Rating: Provide product with a minimum tested STC rating of 55.
      a. Acoustic Material: Fungi- and microbe-resistant foam, Class A rated when tester per ASTM E 84.
   3. Acoustical Sealant: Seal both ends of partition closure with acoustical sealant.
   4. Finish: **<< Match adjacent storefront/curtain wall; or Powder coat; color selected by Architect from manufacturer's full range>>**.
   5. Available Products:
      a. Gordon, Inc; Mullion Mate.
      b. Mull-It-Over Products; Mull-It-Over.

F. Moisture Guard Trim: **<<ASTM C1047>>**, rigid plastic, **<< 48 inch>>** length, applied to bottom edge of gypsum board.
   1. Height: 1-3/4 inch.
   2. Depth: Match gypsum board thickness.
   3. In lieu of moisture guard trim; Contractor may at its option install gypsum board with a maximum 5/8-inch gap at base of wall.

G. Joint Materials: **<<ASTM C475/C475M>>**, and as recommended by gypsum board manufacturer for project conditions.
   1. Joint Tape: 2-inch wide; provide creased paper tape for paper-faced board products, and provide 10-by-10 coated glass fiber tape for glass-fiber-faced board products and for exterior locations.
   2. Joint Compound: Drying type, vinyl-based, ready-mixed.

DRAFT

H. High Build Drywall Surfacer: Vinyl acrylic latex-based coating for spray application, designed to take the place of skim coating and separate paint primer in achieving Level 5 finish.

I. Screws for Fastening of Gypsum Panel Products to Cold-Formed Steel Studs and Wood Members: **<<ASTM C1002>>**, self-piercing tapping screws, corrosion-resistant.

J. Adhesives: Manufacturer's recommended type; provide adhesive only where required by approved tested fire- or acoustic-rated assembly, unless otherwise indicated.

K. Exterior Soffit Vents: One piece, perforated, **<< ASTM A653/A653M galvanized steel with G90 coating; ASTM B221 6063 T5 alloy aluminum; solid vinyl; or _____>>**, with edge suitable for direct application to gypsum board and manufactured especially for soffit application. Provide continuous vent unless otherwise indicated.

1. Available Manufacturers:
   a. Fry Reglet.
   b. Gordon, Inc.
   c. Pittcon Industries.
   d. Stockton Products.
2. Flat, horizontal-to-horizontal application: **<< 3/4-inch wide with one row of vent slots for a minimum of 1 square inch of opening per linear foot; 2-inch wide with three rows of vent slots for a minimum of 3 square inches of opening per linear foot; or 3-inch wide with five rows of vent slots for a minimum of 5 square inches of opening per linear foot.>>**.
3. Finish: High performance organic coating; color selected by Architect from manufacturer's full range.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that project conditions are appropriate for work of this section to commence.

3.02 SHAFT WALL INSTALLATION

A. Shaft Wall Framing: Prior to beginning installation of shaft wall liner panels, verify that framing is properly installed at spacing required to meet performance requirements.

B. Shaft Wall Liner: Cut panels to accurate dimensions and install sequentially between special friction studs.

3.03 ACOUSTIC ACCESSORIES INSTALLATION

A. Sound Attenuation Batts: At all walls/partitions where sound attenuation batts are indicated, place tightly within spaces, around cut openings, behind and around electrical and mechanical items within partitions, and tight to items passing through partitions.

B. Acoustic Sealant: Install at all STC-rated walls/partitions, and at all walls indicated ot receive sound attenuation batts. Install in accordance with manufacturer's instructions.

C. Putty Pads: Install at all STC-rated walls/partitions, and at all walls indicated ot receive sound attenuation batts. Install putty pads on the backside of items penetrating gypsum board. Items include, but are not limited to, wiring devices, cable, conduit, and pipe. Completely cover and seal around each penetration.

DRAFT

3.04 BOARD INSTALLATION

A. Comply with **<<ASTM C840>>**, **<<GA-216>>**, and manufacturer's instructions. Install to minimize butt end joints, especially in highly visible locations.
   1. Do not overdrive screws. Install snug with head of screw slightly below face of gypsum board, without tearing or ripping of facer.

B. Single-Layer Nonrated: Install gypsum board in most econominal direction, with ends and edges occurring over firm bearing.

C. Double-Layer, Nonrated: Use gypsum board for first layer, placed parallel to framing or furring members, with ends and edges occurring over firm bearing. Use glass mat faced gypsum board at exterior walls and at other locations as indicated. Place second layer perpendicular to framing or furring members. Offset joints of second layer from joints of first layer.

D. Fire-Resistance-Rated Construction: Install gypsum board in strict compliance with requirements of assembly listing.

E. Exposed Gypsum Board in Interior Wet Areas: Seal joints, cut edges, and holes with water-resistant sealant.

F. At base of gypsum board wall/partitions, install gypsum board with moisture-guard trim or with an open horizontal joint (gap) not to exceed 5/8-inch above finished floor slab, and tape and finish vertical joints to bottom edge of board to afford a smooth substrate for applied wall base.

G. Exterior Soffits: Install exterior soffit board perpendicular to framing, with staggered end joints over framing members or other solid backing.
   1. Seal joints, cut edges, and holes with water-resistant sealant.

H. Cementitious Backing Board: Install over steel framing members where indicated, in accordance with **<<ANSI A108.11>>** and manufacturer's instructions.

I. Installation on Metal Framing: Use screws for attachment of gypsum board**<< except face layer of nonrated double-layer assemblies, which may be installed by means of adhesive lamination; _____; or None - N/A>>**.

J. Curved Surfaces: Apply gypsum board to curved substrates **<< in accordance with GA-226; or _____>>**.

3.05 INSTALLATION OF TRIM AND ACCESSORIES

A. Control Joints: Place control joints at locations indicated on Drawings; where not indicated provide in compliance with ASTM C840, consistent with lines of building spaces, and as follows:
   1. Not more than 30 feet apart on walls and ceilings over 50 feet long.
   2. At exterior soffits, not more than 30 feet apart in both directions.

B. Corner Beads: Install at external corners, using longest practical lengths.

C. Decorative Trim: Install at locations shown on drawings and in accordance with manufacturer's instructions.

D. Exterior Soffit Vents: Install according to manufacturer's written instructions and in locations indicated on drawings. Provide vents at locations indicated on Drawings.

E. Putty Pads: Install putty pads on the backside of items penetrating gypsum board on STC-rated walls/partitions. Items include, but are not limited to, wiring devices, cable, conduit, and pipe. Completely cover and seal around each penetration.

3.06 JOINT TREATMENT

A. Finish gypsum board in accordance with levels defined in **<<ASTM C840>>**, as follows:

DRAFT

1. Level 5: Walls and ceilings to receive semi-gloss or gloss paint finish and other areas specifically indicated.
2. Level 4: Walls and ceilings to receive paint finish or wall coverings, unless otherwise indicated.
3. Level 3: Walls to receive textured wall finish.
4. Level 2: In utility areas, behind cabinetry, and on backing board to receive tile finish.
5. Level 1: Wall areas above finished ceilings, whether or not accessible in the completed construction.
6. Level 0: Temporary partitions.
7. Level 0: Surfaces indicated to be finished in later stage of project.

B. Tape, fill, and sand exposed joints, edges, and corners to produce smooth surface ready to receive finishes.
   1. Feather coats of joint compound so that camber is maximum 1/32 inch.

C. Where Level 5 finish is indicated, spray apply high build drywall surfacer over entire surface after joints have been properly treated; achieve a flat and tool mark-free finish.

D. Fill and finish joints and corners of cementitious backing board as recommended by manufacturer.

3.07 TOLERANCES

A. Maximum Variation of Finished Gypsum Board Surface from True Flatness: 1/8-inch in 10 feet in any direction.

3.08 PROTECTION

A. Protect installed gypsum board assemblies from subsequent construction operations.

END OF SECTION 092900

DRAFT

SECTION 093000
TILING

PART 1 GENERAL

1.01 DEFINITIONS

A. General: Refer to definitions in the **<<ANSI A108/A118/A136>>** series of tile installation standards and in ANSI A137.1 for the Work of this Section unless indicated otherwise.

B. Module Size: Actual tile size plus indicated joint width.

C. Face Size: Actual tile size, not including spacer lugs.

1.02 REFERENCE STANDARDS

A. ANSI A108.1a - American National Standard Specifications for Installation of Ceramic Tile in the Wet-Set Method, with Portland Cement Mortar.

B. ANSI A108.1b - Installation of Ceramic Tile on a Cured Portland Cement Mortar Setting Bed with Dry-Set, Modified Dry-Set, or Improved Modified Dry-Set Cement Mortar.

C. ANSI A108.1c - Contractor's Option: Installation of Ceramic Tile in the Wet-Set Method with Portland Cement Mortar or Installation of Ceramic Tile on a Cured Portland Cement Mortar Setting Bed with Dry-Set, Modified Dry-Set, or Improved Modified Dry-Set Cement Mortar.

D. ANSI A108.2 - American National Standard General Requirements: Materials, Environmental and Workmanship.

E. ANSI A108.4 - American National Standard Specifications for Installation of Ceramic Tile with Organic Adhesive or Water Cleanable Tile-Setting Epoxy Adhesive.

F. ANSI A108.5 - Setting of Ceramic Tile with Dry-Set Cement Mortar, Modified Dry-Set Cement Mortar, EGP (Exterior Glue Plywood) Modified Dry-Set Cement Mortar, or Improved Modified Dry-Set Cement Mortar.

G. ANSI A108.6 - American National Standard Specifications for Installation of Ceramic Tile with Chemical Resistant, Water Cleanable Tile-Setting and -Grout Epoxy.

H. ANSI A108.9 - American National Standard Specifications for Installation of Ceramic Tile with Modified Epoxy Emulsion Mortar/Grout.

I. ANSI A108.10 - American National Standard Specifications for Installation of Grout in Tilework.

J. ANSI A108.13 - American National Standard for Installation of Load Bearing, Bonded, Waterproof Membranes for Thin-Set Ceramic Tile and Dimension Stone.

K. ANSI A108.19 - American National Standard Specifications for Interior Installation of Gauged Porcelain Tiles and Gauged Porcelain Tile Panels/Slabs by the Thin-Bed Method Bonded with Modified Dry-Set Cement Mortar or Improved Modified Dry-Set Cement Mortar.

L. ANSI A108.20 - American National Standard Specifications for Exterior Installation of Gauged Porcelain Tiles and Gauged Porcelain Tile Panels/Slabs.

A. ANSI A108/A118/A136 - American National Standard Specifications for the Installation of Ceramic Tile (Compendium).

B. ANSI A118.3 - American National Standard Specifications for Chemical Resistant, Water Cleanable Tile-Setting and -Grouting Epoxy and Water Cleanable Tile-Setting Epoxy Adhesive.

C. ANSI A118.4 - American National Standard Specifications for Modified Dry-Set Cement Mortar.

DRAFT

D. ANSI A118.7 - American National Standard Specifications for High Performance Cement Grouts for Tile Installation.

E. ANSI A118.10 - American National Standard Specifications for Load Bearing, Bonded, Waterproof Membranes for Thin-Set Ceramic Tile and Dimension Stone Installation.

F. ANSI A118.12 - American National Standard Specifications for Crack Isolation Membranes for Thin-Set Ceramic Tile and Dimension Stone Installation.

G. ANSI A118.15 - American National Standard Specifications for Improved Modified Dry-Set Cement Mortar.

H. ANSI A137.1 - American National Standard Specifications for Ceramic Tile.

I. ANSI A137.3 - American National Standard Specification for Gauged Porcelain Tile and Gauged Porcelain Tile Panels/Slabs.

J. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers Version 1.2.

K. CARB (SCM) - Suggested Control Measure for Architectural Coatings; California Air Resources Board.

L. SCAQMD 1113 - Architectural Coatings.

M. SCAQMD 1168 - Adhesive and Sealant Applications.

N. TCNA (HB) - Handbook for Ceramic, Glass, and Stone Tile Installation.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene a preinstallation meeting at the Project Site one week before starting work of this section; require attendance by affected installers.

1. Review substrate preparation requirements.
2. Review each type of tile, mortar, grout, and TCNA installation methods.
3. Review requirements for waterproofing and/or crack isolation membrane(s).
4. Review existing conditions, and specialty bedding and grout materials recommended by manufacturer's technical representative for tile applications over existing conditions.

1.04 SUBMITTALS

A. Product Data: Provide manufacturers' data sheets on tile, mortar, grout, and accessories. Include instructions for using grouts and adhesives.

B. Sustainability Submittals: Refer to Division 01, "Sustainable Design Requirements."

C. Shop Drawings: Indicate **<< tile layout; patterns; color arrangement; perimeter conditions; junctions with dissimilar materials; control and expansion joints; thresholds; ceramic accessories; setting details; and _____>>**.

1. Include waterproofing details at floor drains, shower pans, cove base, and thresholds.

D. Selection Samples: Manufacturer's standard size for each tile, trim piece, and grout. Include samples of accessories requiring color selection.

E. Waterproof Membrane Flood Test Reports.

F. Installer's Qualification Statement.

G. Material Test Reports: Indicating that mortars, grouts, and special purpose tiles meet specified requirements.

DRAFT

1.05 CLOSEOUT SUBMITTALS

A. Maintenance Data: Include recommended cleaning methods, cleaning materials, and stain removal methods.

B. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.

1. Extra Tile and Trim Units: 1 extra box for every 50 boxes installed of each type, size, color, pattern, and surface finish combination.

1.06 QUALITY ASSURANCE

A. Installer Qualifications: Installer shall have documented experience of work similar in scope, materials, and design to that indicated for this Project, with a record of successful in-service performance, with references upon request.

1. Installer Certification: Installer's employees have one of the following:

a. Ceramic Tile Education Foundation (CTEF): Certified Tile Installer (CTI).

b. Apprenticeship Program: Installer has achieved Journeyworker status through an apprenticeship from the International Union of Bricklayers and Allied Craftworkers (IUBAC) or a U.S. Department of Labor (DOL)-recognized program.

1.07 MOCK-UPS

A. See Section **<< 014000 - Quality Requirements>>** for general requirements for mock-up.

B. Construct tile mock-ups, incorporating all components specified for the location.

1. Provide mock-up of minimum 5 square feet for each type of floor tile, unless otherwise indicated.

2. Provide mock-up of minimum 5 square feet for each type of wall tile, unless otherwise indicated.

3. Approved mock-up may remain as part of the Work.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Store tile, grout, and mortar off the ground, protected from weather and water infiltration.

B. Store products in unopened containers or packages until ready for use.

C. Protect materials from freezing or overheating in accordance with manufacturer's instructions.

1.09 FIELD CONDITIONS

A. Do not install solvent-based products in an unventilated environment.

B. Maintain ambient and substrate temperature and humidity at levels required by referenced ANSI and TCNA tile standards, and per manufacturer's instructions.

PART 2 PRODUCTS

2.01 TILE

A. Source Limitations:

1. Tile: Provide tile of each type, color, and finish by the same manufacturer from the same production run. Quality of appearance and physical properties shall be consistent for continguous areas.

2. Mortar and Grout: Provide mortar, grout, adhesive, and aggregate of uniform quality by the same manufacturer or producer.

DRAFT

a. Provide mortar, grout, and crack isolation and waterproofing membranes from a single manufacturer. Portland cement, aggregate, and sheet membrane products are excepted.

3. Other Items: Provide each of the following from a single manufacturer:
   a. Stone thresholds.
   b. Crack isolation and waterproofing wamembrane.
   c. Metal edge strips.

B. General:
1. Provide tiles with types and compositions that comply with **<<ANSI A137.1>>**, standard grade.
2. Refer to SETTING MATERIALS and GROUTS articles in this section for specific ANSI standards.
3. Tiles with Color Variation: Provide factory blended units that show the same range of variation between packages and matching approved samples.
4. Factory Mounted Tile: Provide manufacturer's standard back or edge mounted tiles.
   a. Do not provide back or edge mounted tile for shower installation unless approved by tile manufacturer for this type of installation.

C. Ceramic Mosaic Tile: ***MCPS prefers wall tile or FRP at janitor sinks. Extend 24 to 30 inches above sink top.***
1. Certified by the Porcelain Tile Certification Agency. ******Indicate this only if using a porcelain based tile product.******
2. Size: **<< 1 by 1 inch; 1 by 2 inch; 2 by 2 inch; or ____by____ inch>>**, nominal.
3. Shape: **<< Square; Hexagon; Round; Rectangle; Multiple size rectangles; or _____>>**.
4. Edges: **<< Square; Cushioned; or _____>>**.
5. Surface Finish: **<< Unglazed; Matte glazed; Mottle glazed; Slip resistant; or _____>>**.
6. Color(s): To be selected by **<<Architect>>** from manufacturer's **<< standard; full; custom; or _____>>** range.
7. Trim Units: Matching **<< bead; cove; surface bullnose; and _____>>** shapes in **<< sizes indicated; sizes coordinated with field tile; or _____>>**.
8. Products:
   a. American Olean; a division of Dal-Tile Corporation.
   b. Dal-Tile Corporation.
   c. Deutsche Steinzeug America, Inc.
   d. Emser Tile.
   e. Porcelanite-Lamosa.
   f. Interceramic, USA.
   g. Lone Star Ceramics.
   h. Portobello America, Inc.
   i. Seneca Tiles, Inc.
   j. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

D. Glazed Wall Tile: ******MCPS prefers wall tile or FRP at janitor sinks. Extend 24 to 30 inches above sink top.******

DRAFT

1. Size: **<< 4-1/4 by 4-1/4 inch; 3 by 6 inch; 6 by 6 inch; or ____by____ inch>>**, nominal; 5/16-inch thick.
2. Edges: **<< Square; Cushioned; or _____>>**.
3. Surface Finish: **<< Matte glaze; Mottle glaze; High gloss; or _____>>**.
4. Color(s): To be selected by **<<Architect>>** from manufacturer's **<< standard; full; custom; or _____>>** range.
5. Trim Units: Matching **<< bead; bullnose; surface bullnose; cove; base; curb; counter trim; and _____>>** shapes in **<< sizes indicated; sizes coordinated with field tile; or _____>>**.
6. Products:
   a. American Olean; a division of Dal-Tile Corporation.
   b. Dal-Tile Corporation.
   c. Emser Tile.
   d. Interceramic, USA.
   e. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

E. Quarry Tile:
1. Size: **<< 4 by 8 inch; 6 by 6 inch; 8 by 8 inch; or ____by_____ inch>>**, nominal.
2. Thickness: **<< 1/2 inch; 3/4 inch; or ____ inch>>**, nominal.
3. Edges: **<< Cushioned; Square; or _____>>**.
4. Surface Finish: **<< Unglazed; Matte glazed; Non-slip; or _____>>**.
5. Color(s): To be selected by **<<Architect>>** from manufacturer's **<< standard; full; custom; or _____>>** range.
6. Trim Units: Matching **<< bullnose; double bullnose; cove; cove base; window sill or step nosing; and _____>>** shapes in **<< sizes indicated; sizes coordinated with field tile; or _____>>**.
7. Products:
   a. American Olean; a division of Dal-Tile Corporation.
   b. Dal-Tile Corporation.
   c. Metropolitan Ceramics.
   d. Summitville Tiles, Inc.
   e. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

F. Porcelain Tile:
1. Certified by the Porcelain Tile Certification Agency.
2. Size: **<< 6 by 6 inch; 8 by 8 inch; 12 by 12 inch; 18 by 18 inch; or ____by____ inch>>**, nominal.
3. Thickness: **<< 5/16 inch; 3/8 inch; 1/2 inch; or _____ inch>>**.
4. Edges: **<< Square; Cushioned; Interlocking shape; or _____>>**.
5. Surface Finish: **<< Unglazed; Matte glazed; Non-slip; or _____>>**.
6. Color(s): To be selected by **<<Architect>>** from manufacturer's **<< standard; full; custom; or _____>>** range.
7. Trim Units: Matching **<< bullnose; surface bullnose; double bullnose; cove base; cove; window sill or step nosing; and _____>>** shapes in **<< sizes indicated; sizes coordinated with field tile; or _____>>**.
8. Products:

DRAFT

a. American Marazzi Tile, Inc.
b. American Olean; a division of Dal-Tile Corporation.
c. Crossville, Inc.
d. Dal-Tile Corporation.
e. Florim USA.
f. GranitiFiandre; c/o Trans Ceramica, Ltd.
g. Interceramic.
h. Iris US.
i. Laufen.
j. Lone Star Ceramics Company.
k. Porcelanite-Lamosa.
l. Portobello America, Inc.
m. Seneca Tiles, Inc.
n. United States Ceramic Tile Company.
o. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

G. Gauged Porcelain Tiles and Panels/Slabs:
1. Certified by the Porcelain Tile Certification Agency. ******Indicate this only if using a porcelain based tile product.******
2. Size: Manufacturer's standard slab size.
3. Thickness: **<< 1/8 inch; 1/4 inch; or _____ inch>>**.
4. Edges: **<< Square; Cushioned; or _____>>**.
5. Surface Finish: **<< Glossy; Matte; or _____>>**.
6. Color(s): To be selected by **<<Architect>>** from manufacturer's **<< full; standard; or custom>>** range.
7. Products:
a. Atlas Concorde; Atlas Plan.
b. Cosentino; Dekton.
c. Crossville Studios; Laminam.
d. Dal-Tile Corporation; Panoramic Porcelain Surfaces.
e. Florim USA; Porcelain Slabs.
f. Porcelanosa Grupo; XLight.
g. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.02 TRIM AND ACCESSORIES

A. Ceramic Trim: Matching **<< bullnose; surface bullnose; double bullnose; cove base; cove; window sill or step nosing; and _____>>** ceramic shapes in **<< sizes indicated; sizes coordinated with field tile; or _____>>**.
1. Applications:
a. Open Edges: Bullnose.
b. Inside Corners: **<< Jointed; Coved; or _____>>**.
c. Floor to Wall Joints: **<< Cove; Straight; or _____>>** base.
2. Manufacturers: Same as for tile.

DRAFT

B. Non-Ceramic Trim: **<< Satin brass anodized extruded aluminum; Satin natural anodized extruded aluminum; Solid brass; Brushed stainless steel; Integrally colored extruded PVC; or _____>>**, style and dimensions to suit application, for setting using tile mortar or adhesive. ******Beveled metal transitions can be used at group restroom thresholds with no doors to common hallways.******
   1. Applications:
      a. Open edges of wall tile.
      b. Open edges of floor tile.
      c. Wall corners, outside and inside.
      d. Transition between floor finishes of different heights.
      e. Thresholds at door openings.
      f. Expansion and control joints, floor and wall.
      g. Floor to wall joints.
      h. Borders and other trim as indicated on drawings.
   2. Manufacturers:
      a. Blanke Corporation.
      b. Ceramic Tool Company.
      c. Genesis APS International.
      d. LATICRETE International.
      e. Schluter-Systems.
      f. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

C. Thresholds: **<< 2 inches; 4 inches; or ___ inches>>** wide by full width of wall or frame opening; **<< beveled; or rounded>>** edge on **<< both long edges; one long edge; or _____>>**; without holes, cracks, or open seams. ******MCPS standards: indicate 4 inches wide with beveled edge for marble thresholds at doors; indicate 2 inches wide with rounded edge for marble thresholds at showers.******
   1. Thickness: **<< 1/2 inch; 5/8 inch; 3/4 inch; 1 inch; ____ inch; thickness to fit application; or _____>>**.
   2. Material: Marble, **<< honed; polished; or _____>>** finish.
   3. Material: Solid surface acrylic resin, mineral filler, and pigments; non-porous, color and pattern consistent throughout thickness.
   4. Material: Artificial stone tile; 93 percent quartz aggregate, resin, color pigments.
   5. Color and Pattern: As selected by Architect from manufacturer's full range.
   6. Applications:
      a. At doorways where tile terminates.

2.03 SETTING MATERIALS

A. Provide setting and grout materials from same manufacturer.

B. Modified Dry-Set Mortar (Thinset): ANSI A118.4. ******For tiles with both sides smaller than 15 inches.******
   1. Applications: Use this type at all locations where thinset mortar is indicated, unless otherwise indicated.
   2. Products:
      a. Custom Building Products; VersaBond Professional Thin-Set Mortar.
      b. H.B. Fuller Construction Products, Inc.; TEC Full Flex TA 390/391.

DRAFT

c. LATICRETE International, Inc.; 252 Silver.
d. MAPEI Corporation; Ultraflex 2.
e. Summitville Tiles, Inc.; S-1000 MP Thin-Set Latex Mortar.
f. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

C. Latex-Portland Cement LHT Mortar (Medium-Bed): **<<ANSI A118.4>>**. ******For tiles with at least one side larger than 15 inches.******
1. Applications: Use this type of bond coat where Large and Heavy Tile (LHT) mortar is indicated, in a 1/4- to 3/8-inch thick medium-bed application.
2. Products:
a. ARDEX Engineered Cements; ARDEX X5.
b. Custom Building Products; ProLite Premium Rapid Setting Large Format Tile Mortar, with Multi-Surface Bonding Primer.
c. H.B. Fuller Construction Products, Inc; TEC Ultimate Large Tile Mortar.
d. LATICRETE International, Inc; 257 TITANIUM.
e. MAPEI Corporation; Ultraflex LFT.
f. Merkrete, by Parex USA, Inc; Merkrete 735 Premium Flex.
g. Summitville Tiles, Inc.; S-1200 MP Premium Medium Bed Mortar.
h. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

D. Improved Latex-Portland Cement Dry-Set Mortar (Thinset): **<<ANSI A118.15>>** and ISO 13007 "C2" classification. ******For exterior spaces exposed to freeze/thaw cycles and submerged/water immersion applications.******
1. Applications: Use this type of mortar where indicated.
2. Products:
a. ARDEX Engineered Cements; ARDEX S 28.
b. Custom Building Products; MegaFlex Crack Prevention Mortar.
c. H.B. Fuller Construction Products, Inc; TEC 3N1 Performance Mortar.
d. LATICRETE International, Inc; LATICRETE 254 Platinum.
e. MAPEI Corporation; Ultraflex 3.
f. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

DRAFT

2.04 GROUTS

A. Provide setting and grout materials from same manufacturer.

B. High Performance Polymer Modified Grout: **<<ANSI A118.7>>** polymer modified cement grout.
1. Applications: Use this type of grout where indicated and where no other type of grout is indicated.
2. Use sanded grout for joints **<< 1/8 inch>>** wide and larger; use unsanded grout for joints less than **<< 1/8 inch>>** wide.
3. Color(s): To be selected by **<<Architect>>** from manufacturer's full range.
4. Products:
a. ARDEX Engineered Cements; ARDEX FL.
b. Custom Building Products; Prism Color Consistent Grout.
c. H.B. Fuller Construction Products, Inc; TEC AccuColor Plus Grout.

d. LATICRETE International, Inc; LATICRETE PERMACOLOR Grout.
e. MAPEI Corporation; Ultracolor Plus.
f. Merkrete, by Parex USA, Inc; Merkrete Pro Grout.
g. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

C. Water-Cleanable Epoxy Grout: **<<ANSI A118.3>>** stain-resistant epoxy grout. ******For spaces that require increased stain resistance. Use in kitchens.******
1. Applications: Where indicated.
2. Heat Resistance: Tested by manufacturer for continuous exposure up to 140 deg F, and intermittent exposure up to 212 deg F.
3. Color(s): To be selected by **<<Architect>>** from manufacturer's full range.
4. Products:
a. ARDEX Engineered Cements; ARDEX WA.
b. Custom Building Products; CEG-Lite 100% Solids Commercial Epoxy Grout.
c. H.B. Fuller Construction Products, Inc; TEC AccuColor EFX Epoxy Special Effects Grout.
d. LATICRETE International, Inc; LATICRETE SPECTRALOCK PRO Premium Grout.
e. MAPEI Corporation; Kerapoxy CQ.
f. Merkrete, by Parex USA, Inc; Merkrete Pro Epoxy.
g. Sika Corp; SikaTile 825 Epoxy.
h. Summitville Tiles, Inc; S-500 Ultra Max.
i. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.05 MORTAR AND GROUT MIXING

A. Comply with referenced ANSI standards.
B. Comply with manufacturer's instructions.
C. Measure accurate proportions when adding materials, water, and additives.
D. Use equipment, speeds, containers, times, and procedures necessary to produce mortars and grouts suitable for best performance in indicated installations.

2.06 MAINTENANCE MATERIALS

A. Tile Sealants: Moisture- and mildew-resistant type sealants; one-part silicone for wall applications and multi-part urethane for floor applications. Sealants and accessories shall comply with requirements below and with requirements of Division 7 Section "Joint Sealants."
1. Color(s): As selected by **<<Architect>>** from manufacturer's full line. Sealant colors shall match grout colors in adjacent joints unless otherwise indicated.
2. Low-Emitting Materials:
a. Adhesives and Sealants: Adhesives and sealants field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet the chemical content requirements of **<<SCAQMD 1168>>**.
3. Silicone Sealant (Walls): ASTM C 920, Type S, Grade NS, Class 25; Uses NT (non-traffic), G (glass), A (aluminum), O (other substrates indicated).
a. Products:
1) GE Silicones, a division of GE Specialty Materials; SCS1700 Sanitary.

DRAFT

2) Pecora Corporation; Pecora 898 NST.
3) Tremco Inc.; Tremsil 200.
4) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

4. Urethane Sealant (Floors): ASTM C 920, Type M, Grade P, Class 25; Uses T (traffic), M (mortar), A (aluminum), O (other substrates indicated).
   a. Products:
      1) Master Builders Solutions; MasterSeal SL 2.
      2) Pecora Corporation; NR-200 Urexpan.
      3) Sika Corporation; Sikaflex-2c SL.
      4) Tremco Inc.; THC-901.
      5) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
5. Chemical-Resistant Sealant: For chemical-resistant floors, provide non-staining chemical-resistant elastomeric sealant, of type recommended by chemical-resistant grout manufacturer, compatible with tile and setting materials for applications indicated. ******Use for kitchens.******
   a. Manufacturers:
      1) Atlas Minerals & Chemicals, Inc.
      2) Master Builders Solutions.
      3) Sauereisen.
6. Sealant Accessories: Provide backer rod, primer, and other sealant accessories as recommended by sealant manufacturer for applications required.

B. Grout Sealer: Liquid-applied, penetrating, moisture and stain protection for existing or new Portland cement grout.
   1. Composition: Water-based colorless silicone.
   2. Products:
      a. Custom Building Products; Aqua Mix Sealer's Choice Go**<< ; Aqua Mix Sealer's Choice Gold; ; Aqua Mix Enrich 'N' Seal; ; Aqua Mix Penetrating Sealer; ; _____; or None - N/A>>**.
      b. Merkrete, by Parex USA, Inc; M**<< ; Merkrete Revive; ; Merkrete Grout Sealer; ; _____; or None - N/A>>**.
      c. SGM, Inc.; Grout Sealer.
      d. Summitville Tiles, Inc.; SL-99 Summitseal II.
      e. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

C. Tile Sealer: Stain protection for exposed surfaces of unglazed ceramic tile, other porous tile, and grout. Provide penetrating sealer with no sheen, preserving natural tile appearance.
   1. Products:
      a. Custom Building Products; Aqua Mix Sealer's Choice Gold.
      b. Rust-Oleum Corporation; Miracle Sealants 511 Impregnator Natural Looking Penetrating Sealer**<< ; Miracle Sealants 511 Impregnator Natural Looking Penetrating Sealer; ; Miracle Sealants 511 Porous Plus Penetrating Sealer; ; Miracle Sealants 511 Seal & Impregnating Color Enhancer; ; _____; or None - N/A>>**.
      c. STONETECH, a division of LATICRETE international, Inc; STONETECH Heavy Duty Sealer.

DRAFT

d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

D. Grout Release: Temporary, water-soluble pre-grout coating.

1. Products:
   a. Custom Building Products; Aqua Mix Grout Release.
   b. MAPEI Corporation; UltraCare Grout Release.
   c. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.07 ACCESSORY MATERIALS

A. Low-Emitting Materials:

1. Paints and Coatings: Paints and coatings field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet applicable VOC limits of **<<CARB (SCM)>>** or **<<SCAQMD 1113>>**.
2. Adhesives and Sealants: Adhesives and sealants field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet the chemical content requirements of **<<SCAQMD 1168>>**.

B. Concrete Floor Slab Crack Isolation Membrane: Material complying with **<<ANSI A118.12>>**; not intended as waterproofing.

1. Crack Resistance: No failure at 1/8 inch**<< 1/16 inch; 1/8 inch; 3/8 inch; or _____ inch>>** gap, minimum.
2. Peel-and-Stick Sheet Type: ******Choose peel and stick type or bonded sheet membrane type.******
   a. Material: Rubberized membrane laminated to reinforcing fabric.
   b. Thickness: 40 mils, nominal.
   c. Products:
      1) Boiardi Products Corp.; a QEP company; Elastiment 340 Sound Control Sheet Membrane Waterproofing and Anti-Fracture/Crack-Suppression System.
      2) Custom Building Products; Crack Buster Pro-Crack Prevention Mat Underlayment.
      3) MAPEI Corporation; Mapeguard 2.
      4) National Applied Construction Products, Inc.; ECB Anti-Fracture Membrane.
      5) Sika Corp; SikaTile 225 PNS.
      6) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
3. Bonded Sheet Membrane Type: ******Choose peel and stick type or bonded sheet membrane type.******
   a. Material: Polyethylene sheet membrane with polyester fleece laminated to underside, 1/8 inch thick.
   b. Products:
      1) Blanke Corporation; Blanke SecuMat.
      2) LATICRETE International, Inc; LATICRETE STRATAMAT Sheet Membrane.
      3) Mapei Corporation; Mapeguard UM 35 Membrane.
      4) Noble Company; Noble
      5) Schluter-Systems; DITRA.

DRAFT

6) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

C. Waterproofing Membrane: Specifically designed for bonding to cementitious substrate under thick mortar bed or thin-set tile; complying with **<<ANSI A118.10>>**.

1. Crack Resistance: No failure at 1/8 inch gap, minimum; comply with **<<ANSI A118.12>> << ; comply with ANSI A118.12; ; _____; or None - N/A>>**.
2. Fluid or Trowel Applied Type with embedded Reinforcing Fabric: ******Choose fluid/trowel applied type or bonded sheet membrane type.******
   a. Material: Synthetic rubber or Acrylic.
   b. Thickness: 30 mils, minimum, dry film thickness.
   c. Products:
      1) Custom Building Products; 9240 Waterproofing and Anit-Fracture Membrane.
      2) H.B. Fuller Construction Products, Inc; TEC HydraFlex Waterproofing Crack Isolation Membrane.
      3) LATICRETE International, Inc; 9235 Waterproofing Membrane.
      4) MAPEI Corporation; Mapelastic AquaDefense.
      5) Merkrete, by Parex USA, Inc; Merkrete Hydro Guard 2000.
      6) Sika Corp; Sika Tile 100 Moisture Guard.
      7) Summitville Tiles, Inc.; S-9000.
      8) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
3. Bonded Sheet Membrane Type: ******Choose fluid/trowel applied type or bonded sheet membrane type.******
   a. Material: Polyethylene sheet membrane with non-woven fabric laminated to both sides, 20 to 30 mils thick, nominal.
   b. Products:
      1) Blanke Corporation; Blanke Aqua-Shield.
      2) LATICRETE International, Inc; LATICRETE HYDRO BAN Sheet Membrane.
      3) Mapei Corporation; Mapeguard WP 200 Membrane.
      4) Noble Company; Noble TS.
      5) Schluter-Systems; KERDI.
      6) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify with installer present that surfaces are smooth and flat within the tolerances specified for that type of work, per ANSI A108.01, and are ready to receive tile.

B. Verify that wall surfaces are smooth and flat within the tolerances specified for that type of work, are dust-free, and are ready to receive tile.

C. Verify that subfloor surfaces are dust free and free of substances or coatings that could impair bonding of setting materials to subfloor surfaces, including but not limited to soap, wax, oil, or silicone.

D. Verify that concrete surfaces receiving bonded or thin-set mortar applications comply with the requirements of ANSI A108.01.

DRAFT

1. Mechanically scarify steel trowel finished surfaces.
2. Remove protrustions, bumps, and ridges by sanding or grinding.

E. Verify that required floor-mounted utilities, grounds, anchors, and recessed frames are in correct location and completed prior to tile installation.

F. Coordinate joints and cracks in substrates with tile joints with Architect if not coordinated prior to installation.

G. Commence with installation after noncompliant conditions are corrected.

3.02 PREPARATION

A. Protect surrounding work from damage.

B. Vacuum clean surfaces and damp clean.

C. Seal substrate surface cracks, holes, and depressions with manufacturer's standard trowelable leveling and patching compound. Level existing substrate surfaces to acceptable flatness tolerances.

D. For waterproofing installations with a reinforced mortar bed, comply with ANSI A108.1A and slope substrate 1/4 inch per foor (1:50) toward drains.

E. For tiles with color variations, confirm packaged tile is factory blended such that tiles from taken from package contain the same variation in color as tiles taken from another. Blend tiles at project site or return to manufacturer if packages are not factory blended.

F. For ease of cleaning and to prevent staining, precoat tile with temporary grout release without covering unexposed surfaces. For unglazed ceramic and other porous tile types, provide either combination tile sealer/grout release, or a temporary grout release with final tile sealer applied after tile installation.

3.03 INSTALLATION - GENERAL

A. Comply with requirements of TCNA (HB) installation methods indicated in this section and referenced **<<ANSI A108/A118/A136>>** Series or that apply to the setting and grout materials indicated.

1. Provide 95 percent mortar coverage for the following in compliance with procedures in **<<ANSI A108/A118/A136>>**Series:
   a. Exterior tile floors.
   b. Tile floors in wet areas.
   c. Tile floors with 8 by 8 inches tiles or larger.
   d. Tile floors with rib-backed tiles.

B. Mortar Types: Provide modified dry-set mortar in a standard thin-set bed except as indicated:

1. Provide LHT mortar in a 1/4- to 3/8-inch medium bed at all large format tile (tile 12 inches or greater in any dimension).

C. Grout Types: Grout all tile joints unless otherwise indicated. Provide high-performance polymer-modified grout except as indicated:

1. Provide epoxy grout in toilet, shower, and locker rooms, custodial/janitorial rooms, and other spaces subject to water.
2. Provide chemical- and heat-resistant epoxy grout in commercial kitchens.

D. Install **<< tile; thresholds; and _____>>** and grout in accordance with applicable requirements of **<<ANSI A108.1a>>** through **<<ANSI A108.20>>**, manufacturer's instructions, and **<<TCNA (HB)>>** recommendations.

DRAFT

E. Lay tile to pattern indicated. Do not interrupt tile pattern through openings or transition to adjacent floor material in centerline of openings under doorleafs. Cut or extend tiles to suit transitions where they occur. Lay tile to form complete covering extending into recesses and under or behind equipment and fixtures. At obstructions, edges, and corners, terminate tile without disprupting patterns or joint alignments.

F. Cut tile without marring visible surfaces and fit closely to penetrations through tile including but not limited to, electrical outlets, piping, and fixtures, leaving sealant joint space. Plates, collars, or covers shall overlap tile. Form corners and bases neatly. Form intersectiosn and returns accurately. **<< Align floor joints.; Align floor and base joints.; Align floor, base, and wall joints.; Align floor and wall joints.; Align base joints.; Align base and wall joints.; Align wall joints.; _____ .; or None - N/A>>** Grind tile edges adjacent to trim, finish, or built-in items to form straight and aligned joints.

G. Place tile joints uniform in width, subject to variance in tolerance allowed in tile size. Make grout joints without voids, cracks, excess mortar or excess grout, or too little grout. Center tile against each wall and lay out in a grid pattern unless indicated otherwise. Minimize pieces measuring less than half a tile.

1. Sheet Mounted Tile: Joints between tile sheets shall match joints within tile sheets so there is no variation in finished installation.
2. Adjoining Units: Align joints between floor wall, base, and trim units if their sizes match.
3. Whole Integer Units: Align joints where whole integer values of floor, base, wall, and trim units are indicated.

H. Install tile in accordance with manufacturer's standard recommendation maintaining module size. If manufacturer has no recommendation, provide the following:

1. Ceramic Mosaic Tile: 1/16 inch
2. Quarry Tile: 1/4 inch.
3. Porcelain Tile: 1/4 inch.
4. Glazed Wall Tile: 1/16 inch.
5. Thin

I. Lay out wainscots to heights indicated or next full tile beyond.

J. Form internal angles **<< square; coved; or _____>>** and external angles **<< bullnosed; square; or _____>>**.

K. Install non-ceramic trim where tile abuts adjacent materials in accordance with manufacturer's instructions. Use trim appropriate for application where adjacent finish is flush with top of tile and where adjacent finish is lower than top of tile.

L. Install thresholds where indicated.

M. Install sealants in accordance with Division 07, "Joint Sealants."

N. Sound tile after setting. Replace hollow sounding units.

O. Keep control and expansion joints free of mortar, grout, and adhesive.

P. Prior to grouting, allow installation to completely cure; minimum of 48 hours.

Q. At changes in plane and tile-to-tile control joints, use tile sealant instead of grout, with either bond breaker tape or backer rod as appropriate to prevent three-sided bonding.

3.04 INSTALLATION - COMBINATION WATERPROOFING AND CRACK ISOLATION MEMBRANE

A. Install combination waterproofing and crack isolation membrane in accordance with **<<ANSI A118.10>>** for waterproofing, **<<ANSI A118.12>>** for crack isolation, and manufacturer's requirements.

DRAFT

B. Install fluid-applied combination waterproofing and crack isolation membrane to achieve manufacturer's recommended uniform thickness and bond securely with substrate.

C. Turn membrane up the wall a minimum of 3 inches above the floor.
   1. Terminate edges of sheet membrane using manufacturer's standard termination strip. Seal edges to maintain waterproofing continuity.

D. Cure and test combination waterproofing and crack isolation membrane prior to installing tile and setting materials.

3.05 INSTALLATION - FLOORS - THIN-SET METHODS

A. Install crack isolation membranes in accordance with **<<ANSI A118.12>>** and manufacturer's requirements.

B. Over exterior concrete substrates, install in accordance with **<<TCNA (HB)>>** Method F102.

C. Crack Isolation Membrane:
   1. Full Application: Over new interior concrete substrates, install in accordance with TCNA (HB) Method F122/F122A, over combination waterproofing/crack-isolation membrane.
      a. Provide expansion joints, control joints, isolation joints where indicated during installation, setting, and grouting of tile. Do not saw-cut joints after tile installation is complete.
   2. Partial Application: Over existing interior concrete substrates on grade, install in accordance with TCNA (HB) Method F125-Full, over full coverage crack-isolation membrane.
      a. Install crack isolation membrane centered over subfloor control joints and existing cracks and measuring a minimum of two tiles wide. Terminate sheet crack isolation membranes with manufacturer's standard edge termination detail.
   3. Cure crack isolation membrane prior to installing tile and setting materials.

D. Install tile-to-tile floor movement joints in accordance with **<<TCNA (HB)>>** Method EJ171F.
   1. Lay cove metal strip at toe of tile base. Do not set toe of coved tile base on top of floor tile.

3.06 INSTALLATION METHODS - WALL TILE

A. Over cementitious backer units on studs, install in accordance with **<<TCNA (HB)>>** Method W244**<< , using membrane at toilet rooms; , using membrane at toilet rooms and kitchens; , using membrane at toilet rooms, kitchens, and locker rooms; , using membrane at toilet rooms and locker rooms; , using membrane at kitchens; , using membrane at kitchens and locker rooms; , using membrane at locker rooms; _____; or None - N/A>>**.

B. Over interior concrete / masonry install in accordance with **<<TCNA (HB)>>** Method W202.

3.07 INSTALLATION METHODS - SHOWER RECEPTOR WALLS AND DRAINS

A. At tiled shower receptors install in accordance with **<<TCNA (HB)>>** Method **<< B414, mortar bed floor, and W201, mortar bed over concrete or masonry walls; B415, mortar bed floor, and W244, thin-set over cementitious backer unit walls; B420, mortar bed floor, and W245, thin-set over coated glass mat backer board walls; or _____>>**.
******Indicate B414/W201 if floor and wall have mortar bed. Indicate B415/W244 floor has mortar bed and wall has cementitious backers. Indicate B420/W245 if floor has mortar bed and wall has glass mat backers.******

B. At tiled shower receptors in renovations install in accordance with TCNA (HB) Method **<< TR418, mortar bed floor, and W201, mortar bed over concrete or masonry walls; TR420, mortar bed floor, and W244, thin-set over cementitious backer unit walls; TR420, mortar**

DRAFT

bed floor, and W245, thin-set over coated glass mat backer board walls; or _____>> . ******Indicate TR418/W201 if floor and wall have mortar bed. Indicate TR420/W244 floor has mortar bed and wall has cementitious backers. Indicate TR420/W245 if floor has mortar bed and wall has glass mat backers.******

C. At integrated bonding flange drains install in accordance with TCNA (HB) Method B422. ******Use this for integral flange drains, similar to the integral Schluter type drain. Otherwise indicate Paragraphs A or B for standard drain details.******

D. Grout with latex-Portland cement.

3.08 FIELD QUALITY CONTROL

A. Perform a flood test of the waterproofing assembly a minimum of 24 hours after installation and prior to tile instllation.
   1. Plug drains or waste line. Dam periemter of waterproofing.
   2. Fill with water high enough to cover membrane connection at drain and floor to wall transition.
   3. Inspect waterproofing for leaks.
   4. Repair leaks and re-test until watertight.

B. Prepare test and inspection reports. Indicate corrective measures taken.

3.09 CLEANING

A. Clean tile and grout surfaces immediately after placement.

B. Remove epoxy and latex-portalnd cement ground residue as quickly as it becomes feasible.

C. Remove grout smears and haze in accordance with manufacturer's instructions a minimum of 10 days after installation. Use manufacturer's standard or recommended cleaners. Test the cleaner on a small area of the installation prior to full cleaning. Protect non-tile materials, plumbing fixtures, and metal surfaces during cleaning. Flush with water prior to and after cleaning.

3.10 PROTECTION

A. Do not permit foot or wheeled traffic over finished floor surface for minimum 7 days after installation.

B. Cover installed tile with kraft paper or durable flooring protection board during construction to prevent staining, damage, and wear. Apply manufacturer's recommended neutral protective tile cleaner.

C. Remove floor coverings and rinse neutral protective cleaner prior to final inspection.

END OF SECTION 093000

DRAFT

SECTION 095100
ACOUSTICAL CEILINGS

PART 1 GENERAL

1.01 DEFINITIONS

A. AC: Articulation Class.

B. CAC: Ceiling Attenuation Class.

C. LRC: Light Reflectance Coefficient.

D. NRC: Noise Reduction Coefficient.

1.02 REFERENCE STANDARDS

A. ASTM A641/A641M - Standard Specification for Zinc-Coated (Galvanized) Carbon Steel Wire.

B. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

C. ASTM B633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel.

D. ASTM C635/C635M - Standard Specification for Manufacture, Performance, and Testing of Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings.

E. ASTM C636/C636M - Standard Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels.

F. ASTM D3273 - Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber.

G. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

H. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.

I. ASTM E488/E488M - Standard Test Methods for Strength of Anchors in Concrete Elements.

J. ASTM E580/E580M - Standard Practice for Installation of Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels in Areas Subject to Earthquake Ground Motions.

K. ASTM E795 - Standard Practices for Mounting Test Specimens during Sound Absorption Tests.

L. ASTM E1264 - Standard Classification for Acoustical Ceiling Products.

M. NAAMM AMP 500-06 - Metal Finishes Manual.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene at the Project site on one week before starting work of this section.

1. Review preparation and installation procedures and coordinating and scheduling required with related work.

2. Coordinate layout and installation of acoustical ceilings with work in Divisions 21, 22, 23, and 26.

1.04 SUBMITTALS

A. Shop Drawings: Indicate **<< grid layout and related dimensioning; junctions with other ceiling finishes; mechanical and electrical items installed in the ceiling; and _____>>**.

DRAFT

B. Product Data: Provide data on **<< suspension system components; acoustical units; and specialty ceiling products as indicated>>**.

C. Manufacturer's Installation Instructions: Indicate **<< special procedures; perimeter conditions requiring special attention; and _____>>**.

D. Sustainablilty Submittals: Refer to Division 01, "Sustainable Design Requirements."

1.05 CLOSEOUT SUBMITTALS

A. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.
   1. Extra Acoustical Panels: 3 boxes, of each type.
   2. Extra Suspension System Components: 3 boxes, of each type.

B. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.06 QUALITY ASSURANCE

A. Source Limitations: Provide each acoustical ceiling assembly (ceiling panel and suspension system) from a single manufacturer to obtain manufacturer's system warranty.

B. Suspension System Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum **<< three; or _____>>** years**<< documented; or None - N/A>>** experience.

C. Acoustical Unit Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum **<< three; or _____>>** years**<< documented; or None - N/A>>** experience.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver until building is weather-tight and conditioned.

B. Deliver ceiling panels, suspension system parts, and accessories to site in manufacturer's unopened packaging.

C. Store materials in dry and clean location and protect from moisture, humidity, freeze/thaw cycles, direct sunlight, and surface contamination until needed for installation. During installation, handle in a manner that will prevent damage and to prevent marring and soiling of finished surfaces.

1.08 FIELD CONDITIONS

A. Sequence work to ensure acoustical ceilings are not installed until building is enclosed, sufficient heat is provided, dust generating activities have terminated, and overhead work is completed, tested, and approved.

B. Install products after work of other trades including painting and work above ceiling is complete. Do not install acoustical units until after interior wet work is dry.

C. Maintain uniform temperature and humidity at occupancy conditions during and after acoustical unit installation. Allow products to acclimatize prior to installation.

D. Operate ventilation systems in pressurized plenums a minimum of 48 hours prior to installing acoustical ceilings.

1.09 WARRANTY

A. System Warranty: Provide a single source system warranty covering both acoustical ceiling panels and suspension system.

DRAFT

1. Warranty shall cover material failures including sag, warping, shrinkage, or delamination, biologic growth including mold or mildew, and rusting of suspension system.
2. Warranty Period: Minimum 15 years, from date of Substantial Completion.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Surface Burning Characteristics: Each acoustical ceiling shall be Class A rated, with flame spread index of 25 or less, smoke developed index of 450 or less, when tested in accordance with **<<ASTM E84>>**.

B. Fire-Resistance Rating: Determined in accordance with test procedures in **<<ASTM E119>>** by UL or other qualified testing agency.

2.02 ACOUSTICAL PANELS

A. Acoustical Panels - General: **<<ASTM E1264>>**, Class A.
1. Mountin Method: E-400; in accordance with **<<ASTM E795>>** for measuring NRC with face of tested product is 15-3/4 inches away from the test surface.
2. VOC Content: Third-party tested and certified, according to California Department of Public Health (CDPH) Standard Method (CA Section 01350).
3. Antibacterial/Antimicrobial Treatment: Provide acoustical panels that have been factory-treated by manufacturer for resistance to bacteria, mold, mildew, and fungus in accordance with **<<ASTM D3273>>**.
4. Humidity/Sag Treatment: Provide acoustical panels that have been factory-treated by manufacturer for humidity and sag-resistance **<<ASTM D3273>>**.
5. Formaldehyde-Free: Provide acoustical panels with formaldhyde-free compositon.

******Mineral fiber core ceiling panels with holes. Use in classrooms, music rooms, language labs, and media centers.******

B. ******These are square edge products.****** Acoustical Panels: Painted mineral fiber, with the following characteristics:
1. Classification: **<<ASTM E1264>>**, Type A - Mineral Base.
   a. Form: A1.2 - with painted finish, wet formed.
   b. Pattern: "D" - fissured.
2. Size: **<< 24 by 24 inches; 24 by 48 inch; or ___ by ___ inches>>**.
3. Thickness: 7/8 inch.
4. Light Reflectance: Not less than 0.83, determined in accordance with **<<ASTM E1264>>**.
5. NRC Range: Not less than 0.75, determined in accordance with **<<ASTM E1264>>**.
6. Ceiling Attenuation Class (CAC): Not less than 35, determined in accordance with **<<ASTM E1264>>**.
7. Panel Edge: Square.
8. Color: White.
9. Suspension System: Exposed grid.
10. Products: ******The first choice option is the 24x24 product. The second choice option is the 24x48 product.******
    a. Armstrong World Industries, Inc; Fine Fissured High NRC**<< - Item #1754; or - Item #1755>>**.

DRAFT

b. CertainTeed; Fine Fissured High NRC**<< - Item #HHF-457 HNRCX; or - Item #HHF-497 HNRCX>>**.

c. USG Corporation; Radar Open Plan Acoustical Panels**<< - Item #22320; or - Item #22325>>**.

d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

C. ******These are beveled edge products.****** Acoustical Panels: Painted mineral fiber, with the following characteristics:

1. Classification: **<<ASTM E1264>>**, Type A - Mineral Base.
   a. Form: A1.2 - with painted finish, wet formed.
   b. Pattern: "D" - fissured.
2. Size: **<< 24 by 24 inches; or 24 by 48 inch>>**.
3. Thickness: 7/8 inch.
4. Light Reflectance: Not less than 0.83, determined in accordance with **<<ASTM E1264>>**.
5. NRC Range: Not less than 0.75, determined in accordance with **<<ASTM E1264>>**.
6. Ceiling Attenuation Class (CAC): Not less than 35, determined in accordance with **<<ASTM E1264>>**.
7. Panel Edge: Beveled.
8. Color: White.
9. Suspension System: Exposed grid.
10. Products: ******The first choice option is the 24x24 product. The second choice option is the 24x48 product.******

2.03 SUSPENSION SYSTEM(S)

A. Metal Suspension Systems - General: Complying with **<<ASTM C635/C635M>>**; die cut and interlocking components, with **<< perimeter moldings; stabilizer bars; clips; splices; and _____>>** as required.
1. Materials:

DRAFT

a. Steel Grid: **<<ASTM A653/A653M>>**, **<< G30; G60; G90; or _____>>** coating, unless otherwise indicated.
b. Standard Finish: Comply with **<<NAAMM AMP 500-06>>** and manufacturer's standard factory-applied finish.
c. High Humidity Finish: Comply with **<<ASTM C635/C635M>>** for "Coating Classification for Severe Environment Performance."

2. Cross Tee/Main Runner Connection: Override (stepped).
3. Main Runner End Coupling: Bayonet ("stab") type; knuckle type is not acceptable.
4. Recycled Content: 25 percent of product, equal to postconsumer recycled content plus 1/2 preconsumer recycled content.

B. Exposed Suspension System: Hot-dipped galvanized steel grid and cap.
1. Fire-Rated Assemblies: Where fire-rated ceiling assemblies are indicated, provide manufacturer's products that are UL tested for fire-rated assemblies. ******Do not indicate this for non-fire-rated assemblies.******
2. Structural Classification: **<< Intermediate-duty; or Heavy-duty>>**, when tested in accordance with **<<ASTM C635/C635M>>**.
3. Profile: Tee; 15/16 inch face width. ******MCPS prefers 15/16 inch grid. MCPS does not want 9/16 inch grid.******
4. Finish: Baked enamel.
5. Products:
a. Armstrong World Industries, Inc; Prelude XL 15/16".
b. CertainTeed Ceilings, Inc; 15/16" EZ Stab Classic System.
c. USG Corporation; Donn Brand DX/DXL 15/16 inch Acoustical Suspension System.
d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.04 ACOUSTICAL CLOUDS/CANOPIES

A. Acoustical Clouds/Canopies: Prefabricated shapes with consistent size and finish.
1. Classification: **<<ASTM E1264>>** Type XII.
a. Form: 2 cloth.
b. Pattern: "E" - Lightly Textured; or "G" - Smooth.
2. Shape: **<< Square; Circular; Hexagon; Parallelogram; Triangle; Convex; Concave; and _____>>**.
3. Panel Thickness: 7/8-inch minimum.
4. Suspension: Provide manufacturer's standard individual mounting kit for each panel, consisting of aircraft cables, anchors at each end, and method for fine adjustment after installation. Provide minimum 4 anchors/cables per panel.
5. Color: **<< White; As selected from manufacturer's standard range; or _____>>**.
6. Products:
a. Basis-of-Design: Armstrong World Industries, Inc; SoundScapes Shapes.
b. Certainteed; Ecophon Solo Clouds. (1-1/2 inch thick)
c. USG Corporation; Halcyon Canopies. (1 inch thick)

2.05 ACCESSORIES

A. Attachment Devices: Sized to hold 5 times the design load in direct-hung applications in accordance with **<<ASTM C635/C635M>>**, Table 1.

DRAFT

1. Concrete Anchors: Able to support weight 5 times the design load when tested in accordance with **<<ASTM E488/E488M>>** or ASTM E1512 by a qualified testing agency.
2. Type: Post-installed expansion anchors.
3. Corrosion Protection: Zinc plating on carbon-steel components in accordance with **<<ASTM B633>>**, Class Fe/Zn 5 (0.005 mm) for service condition Class 1.

B. Support Channels and Hangers: Galvanized steel **<<ASTM A641/A641M>>**, Class 1 zinc coating, soft temper; size and type to suit application and ceiling system flatness requirement specified.

C. Hanger Wire: 12 gauge, 0.08 inch galvanized steel wire, sized to provide a minimum of 0.0135 inch diameter wire when stress is 3 times the hanger design load in accordance with **<<ASTM C635/C635M>>**, Table 1 for direct hung applications.

D. Perimeter Moldings: Same metal and finish as grid.
1. Products:
   a. Armstrong World Industries, Inc; Axiom.
   b. CertainTeed; Infinity System.
   c. USG Corporation; Compasso.
2. Fascia: 4 inch wide clip-on system compatible with metal suspension system.
3. Finish: Match grid system finish.

E. Acoustical Sealant: Refer to Division 07, "Joint Sealants" for acoustical sealant for use in conjunction with suspended ceiling system.

F. Metal Edge Trim for "Cloud" Suspension Systems: Steel or extruded aluminum; provide attachment clips, splice plates, and preformed corner pieces for complete trim system. Manufacturer's standard fitting acoustical panel edges. Provide stepped edge molding matching depth and width of ceiling panels with reveal edges. Match diameter of circular penetrations to form tight fit.
1. Trim Height: **<< 2-1/4 inch; 4 inch; 6 inch; 8 inch; 10 inch; or _____ inch>>**.
2. Finish: Baked enamel.
3. Width: Match adjacent grid system width.
4. Color: Match adjacent grid system finish.
5. Products:
   a. Armstrong World Industries, Inc.; Axiom Classic.
   b. Certainteed; Terminus Perimeter Trim.
   c. USG Corporation; Compasso Suspension Trim.
   d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions of structural framing which acoustical ceilings anchor to with installer before starting work. Verify compliance with installation tolerances required by this section and others related to acoustical ceiling installation and anchoring.

B. Verify that layout of hangers will not interfere with other work.

C. Commence with installation after noncompliant conditions are corrected.

DRAFT

3.02 PREPARATION

A. Install after major above-ceiling work is complete.

B. Coordinate the location of hangers with other work.

C. Measure ceiling area prior to laying out system to achieve required balances.

D. Provide hanger clips during steel deck erection. Provide additional hangers and inserts as required.

3.03 INSTALLATION - SUSPENSION SYSTEM

A. Install suspension system in accordance with **<< ASTM C636/C636M; ASTM E580/E580M; and manufacturer's instructions>>** and as supplemented in this section.

B. Rigidly secure system, including integral mechanical and electrical components, for maximum deflection of **<< 1:360; 1:240; or ____>>**.

C. Lay out system to a balanced grid design with edge units no less than 50 percent of acoustical unit size. Install suspension runners squarely and securely.

D. Do not use and replace dented, bent, kinked, or damaged suspension members.

E. Perimeter Molding: Install at intersection of ceiling and vertical surfaces and at junctions with other interruptions.

1. Screw attach using longest practical lengths. Secure at a maximum of 16 inches on center and a minimum of 3 inches on center.
2. Do not use exposed fasteners such as pop rivets.
3. Miter corners and connect securely, avoiding sharp edges.
4. Apply acoustical sealant in a continuous bead at top edge of vertical legs of moldings after they are installed.

F. Suspension System, Non-Seismic: Hang suspension system independent of walls, columns, ducts, pipes and conduit. Where carrying members are spliced, avoid visible displacement of face plane of adjacent members.

1. Splay hangers around obstructions. Balance and offset horizontal forces with bracing, countersplaying, or comparable effective methods.
2. Use a minimum of three tight turns to secure wire hangers.
3. Connect hangers to steel structures or secured concrete anchoring devices that will not deteriorate or fail due to age, corrosion, or high temperatures.
4. Do not hang suspension system directly from steel floor or roof deck. Connect hangers to cast-in-place hanger inserts, post-installed concrete anchors, or power-actuated anchors extending through forms in concrete.
5. Install carrying channels or other supports to attach hanger wires where steel framing does not allow for installation of hangers.
6. Hanger Spacing: Manufacturer's standard recommendation with a maximum span of 48 inches along each suspension member supported by hangers. Install hangers a maximum of 8 inches away from each end of suspension member.
7. Provide supplemental suspension members and hangers of size to hold designed ceiling loads in accordance with referenced standards.

G. Where ducts or other equipment prevent the regular spacing of hangers, reinforce the nearest affected hangers and related carrying channels to span the extra distance.

H. Do not support components on main runners or cross runners if weight causes total dead load to exceed deflection capability.

DRAFT

I. Support fixture loads using supplementary hangers located within 6 inches of each corner, or support components independently.

J. Do not eccentrically load system or induce rotation of runners.

K. Form expansion joints as detailed. Form to accommodate plus or minus 1 inch movement. Maintain visual closure.

3.04 INSTALLATION - ACOUSTICAL UNITS

A. Install acoustical units in accordance with manufacturer's instructions.

B. Fit acoustical units in place, free from damaged edges or other defects detrimental to appearance and function.

C. Lay directional patterned units **<< with pattern parallel to longest room axis; with pattern parallel to shortest room axis; in basket weave pattern; or _____>>**.

D. Hide edges of square-edged panels from view behind suspension grid members.

E. Install reveal-edged panels firmly and securely against top of suspension grid members.

F. Fit border trim neatly against abutting surfaces.

G. Install acoustical units level, in uniform plane, and free from twist, warp, and dents.

H. Cutting Acoustical Units:

1. Make field cut edges of same profile as factory edges.

I. Where **<< round obstructions; bullnose concrete block corners; and ____>>** occur, provide preformed closures to match perimeter molding.

J. Protect work and products from Division 21, 23, and 26 sections during acoustical panel installation.

K. Canopies: Install in accordance with manufacturer's instructions and requirements of authorities having jurisdiction.

3.05 TOLERANCES

A. Maximum Variation from Flat and Level Surface: 1/8 inch in 10 feet.

B. Maximum Variation from Plumb of Grid Members Caused by Eccentric Loads: 2 degrees.

3.06 CLEANING

A. Clean acoustical panels, suspension grids, and accessories in accordance with manufacturer's instructions.

B. Remove and replace components that are not successfully cleaned and repaired.

END OF SECTION 095100

DRAFT

SECTION 095426
SUSPENDED WOOD CEILINGS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

B. ASTM C635/C635M - Standard Specification for Manufacture, Performance, and Testing of Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings.

C. ASTM C636/C636M - Standard Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels.

D. ASTM E580/E580M - Standard Practice for Installation of Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels in Areas Subject to Earthquake Ground Motions.

E. ASTM E1264 - Standard Classification for Acoustical Ceiling Products.

F. CISCA (WC) - Wood Ceilings Technical Guidelines.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Sequence work to ensure ceilings are not installed until building is enclosed, dust generating activities have terminated, and overhead work is completed.

1.03 SUBMITTALS

A. Shop Drawings: Indicate **<< grid layout and related dimensioning; attachment of wood ceiling components to grid; accessory attachments; junctions with other ceiling finishes; mechanical and electrical items installed in the ceiling; and _____>>**.

B. Product Data: Provide data on **<< wood ceiling components; suspension system components; and _____>>**.

C. Selection Samples: Submit manufacturer's color charts indicating full range of available finishes, for wood veneer species indicated.

D. Verification Samples: Submit two samples, manufacturer's standard size, illustrating material and finish of wood ceiling components.

E. Test Reports: Certified test data from an independent test agency verifying that panels meet specified requirements for **<< fire; acoustical; seismic; and _____>>** performance.

F. Installer's qualification statement.

G. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.

1. See Section **<< 016000 - Product Requirements>>** for additional provisions.
2. Wood Ceiling Components: Provide a quantity equal to 2 percent of total product installed.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing work of the type specified; certified or approved by manufacturer.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver wood ceiling components to project site in original, unopened packages.

B. Store in fully enclosed space, flat, level and off the floor.

DRAFT

1.06 FIELD CONDITIONS

A. Do not install suspended wood ceiling system until wet construction work is complete and permanent heat and air conditioning is installed and operating.

B. Maintain room temperature between 60 degrees F and 75 degrees F and relative humidity between 35 to 55 percent before, during, and after installation.

PART 2 PRODUCTS

2.01 SUSPENDED WOOD CEILING SYSTEM

A. Performance Requirements:
   1. Design for maximum deflection of 1/360 of span.
   2. Surface Burning Characteristics: Flame spread index of 25, smoke developed index of 450, when tested in accordance with **<<ASTM E84>>**.

B. Wood-Based Materials:
   1. Bio-Based Material: Provide sustainably harvested wood; include chain of custody certification. Lumber and wood products shall be certified by American Tree Farm System (ATFS), Forest Stewardship Council (FSC), or Sustainable Forestry Initiative (SFI).
   2. Composite Wood Panels: Containing no urea-formaldehyde resin binders.

C. Wood Veneer **<< Panels; or Planks>>**: Composite wood core with wood veneer finish.
   1. Panel Size: **<< 24 by 24 inch; 24 by 48 inches; or _____ by _____ inches>>**.
   2. Panel/Plank Thickness: 3/4 inch.
   3. Veneer Species: **<< Red oak; Maple; Cherry; Beech; Walnut; Bamboo, natural; Bamboo, carbonized; or _____>>**.
      a. Veneer Cut: **<< Plain sliced; Quarter cut; Rift cut; or _____>>**.
      b. Veneer Matching: **<< Random matched; Book matched; Slip matched; or _____>>**.
      c. End/Edge Matching: Manufacturer's recommended matching.
      d. Factory Finish: **<< Clear sealer; Wood stain as selected, clear sealer top coat; As scheduled; or _____>>**.
   4. Attachment to Suspension Grid: Either a double-shoulder slot cut into edge of panel (Armstrong "Vector" detail or similar), or a proprietary mounting system (9Wood "Lift & Shift" detail or similar). Attachment method shall allow for accessibility from below.
   5. Edge Profile: **<< Square; Reveal; or _____>>**.
   6. Suspension System: Type specified below.
   7. Products:
      a. 9Wood; 4300 Lift & Lock.
      b. Armstrong World Industries, Inc; Woodworks Vector.
      c. CertainTeed Ceilings, Inc; Lay-in Wood Ceiling Panels.
      d. Rulon International; Flat Veneer Panel.
      e. USG Corporation; True Wood Accessible Reveal Panels.
      f. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

D. Wood Veneer **<< Panels; or Planks>>**: Composite wood core with wood veneer finish.
   1. Classification: **<<ASTM E1264>>**, Class A, Type F, Form F1, perforated.

DRAFT

a. Pattern: **<< A - perforated, regularly spaced large holes; B - perforated, randomly spaced large holes; C - perforated, small holes; G - smooth; or _____>>**.
b. Backing: Glass fiber acoustical backing**<< Glass fiber acoustical backing; Mineral fiber acoustical backing; or _____>>**.

2. Panel Size: **<< 24 by 24 inch; 24 by 48 inches; or _____ by _____ inches>>**.
3. Panel/Plank Thickness: 3/4 inch.
4. Veneer Species: **<< Red oak; Maple; Cherry; Beech; Walnut; Bamboo, natural; Bamboo, carbonized; or _____>>**.
   a. Veneer Cut: **<< Plain sliced; Quarter cut; Rift cut; or _____>>**.
   b. Veneer Matching: **<< Random matched; Book matched; Slip matched; or _____>>**.
   c. End/ Matching: Manufacturer's recommended matching.
   d. Factory Finish: **<< Clear sealer; Wood stain as selected, clear sealer top coat; As scheduled; or _____>>**.
5. NRC Range: 0.40 to 0.45, determined in accordance with **<<ASTM E1264>>**.
6. Perforations:
   a. Pattern: **<< Square / parallel; Diagonal / staggered; or _____>>**.
   b. Shape: **<< Circular; Square; Slotted; or _____>>**.
   c. Size: **<< 1/4 inch (6 mm)>><< diameter; square; or _____>>**, spaced 0.9 inch o.c.
   d. Open Area: 5 to 6 percent.
7. Acoustical Fabric: Manufacturer's standard non-woven fabric\ **<< Manufacturer's standard non-woven fabric; or _____>>**, black color.
8. Attachment to Suspension Grid: Either a double-shoulder slot cut into edge of panel (Armstrong "Vector" detail or similar), or a proprietary mounting system (9Wood "Lift & Shift" detail or similar). Attachment method shall allow for accessibility from below.
9. Edge Profile: **<< Square; Reveal; or _____>>**.
10. Suspension System: Type specified below.
11. Products:
    a. 9Wood; 5100 Parallel Perf.
    b. Armstrong World Industries, Inc; Woodworks Vector - W2 Perf Pattern.
    c. CertainTeed Corporation; Lay-in Wood Ceiling Panels - P4 Perf Pattern.
    d. Rulon International; Aluratone 700.
    e. USG Corporation; True Wood Accessible Reveal Panels.
    f. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

E. Linear Wood Planks: Composite wood core with wood veneer finish**<< Composite wood core with wood veneer finish; Solid wood; or _____>>**.
   1. Type: Individual linear planks with pre-attached acoustic fabric reveals.
      a. Plank Size: **<< 4 by 96 inches; 6 by 96 inches; or _____ by ____ inches>>**, nominal.
      b. Plank Thickness: 3/4 inch.
      c. Plank Spacing (Reveal): 3/4 inch.
      d. Acoustical Fabric: Manufacturer's standard non-woven fabric, black color.

DRAFT

2. Veneer Species: **<< Red oak; Maple; Cherry; Beech; Walnut; Bamboo, natural; Bamboo, caramelized; or _____>>**.
   a. Veneer Cut: **<< Plain sliced; Quarter cut; Rift cut; or _____>>**.
   b. Veneer Matching: **<< Random matched; Book matched; Slip matched; or _____>>**.
   c. End/Edge Matching: Manufacturer's recommended matching.
   d. Factory Finish: **<< Clear sealer; Wood stain as selected, clear sealer top coat; As scheduled; or _____>>**.
3. NRC: 0.45 minimum, determined in accordance with **<<ASTM E1264>>**.
4. Suspension System: Type specified below.

F. Metal Suspension System:
1. General: Comply with **<<ASTM C635/C635M>>**; die cut and interlocking components, with **<< perimeter moldings; hold down clips; stabilizer bars; clips; splices; and _____>>** as required.
   a. Materials:
      1) Steel Grid: **<<ASTM A653/A653M>>**, **<< G30; G60; G90; or _____>>** coating, unless otherwise indicated.
2. Suspension System: **<< Hot-dipped galvanized steel; Aluminum; Stainless steel; or _____>>** grid and cap.
   a. Structural Classification: **<< Heavy-duty; Intermediate-duty; or _____>>**, when tested in accordance with **<<ASTM C635/C635M>>**.
   b. Profile: Tee; 15/16 inch face width. ******MCPS prefers 15/16 inch grid. MCPS does not want 9/16 inch grid.******
   c. Finish/Color: Baked enamel, black.
   d. Products: Provide suspension product approved by ceiling manufacturer for use with wood ceiling product specified.
      1) Armstrong World Industries; Prelude XL.
      2) Certainteed Corporation; 15/16 EZ Stab Classic System.
      3) Chicago Metallic Corporation; 1200 System / 211-219 Main Tee.
      4) USG Corporation; Donn Brand DX/DXL 15/16 System.
      5) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
3. Support Channels and Hangers: Galvanized steel; size and type to suit application, and ceiling system flatness requirement.

G. Accessories: Manufacturer's standard accessories for installation method indicated**<< seismic requirements; above-ceiling accessibility; and _____>>**.

2.02 FABRICATION

A. Shop fabricate wood ceiling components to the greatest extent possible.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

B. Do not install ceiling until after interior wet work is dry.

DRAFT

3.02 PREPARATION

A. Layout wood ceiling components in pattern according to reflected ceiling plan and as shown on shop drawings.

B. Acclimate wood ceiling materials by removing from packaging in installation area a minimum of 48 hours prior to installation.

3.03 INSTALLATION

A. General: Install suspended wood ceiling system in accordance with **<<CISCA (WC)>>**.

B. Suspension System:

1. Install suspension system in accordance with **<<ASTM C636/C636M>>**, **<<ASTM E580/E580M>>**, and manufacturer's instructions and as supplemented in this section.
2. Rigidly secure system, including integral mechanical and electrical components, for maximum deflection of 1:360.
3. Hang suspension system independent of walls, columns, ducts, pipes and conduit. Where carrying members are spliced, avoid visible displacement of face plane of adjacent members.
   a. Do not hang suspension system directly from steel floor or roof deck.
4. Where ducts or other equipment prevent the regular spacing of hangers, reinforce the nearest affected hangers and related carrying channels to span the extra distance.
5. Do not support components on main runners or cross runners if weight causes total dead load to exceed deflection capability.
6. Support fixture loads using supplementary hangers located within 6 inches of each corner, or support components independently.
7. Do not eccentrically load system or induce rotation of runners.

C. Wood Ceiling:

1. Install wood ceilings in accordance with manufacturer's instructions.
2. Fit wood components in place, free from damaged edges or other defects detrimental to appearance and function.
3. Install components in uniform plane, and free from twist, warp, and dents.
4. Cut to fit irregular grid and perimeter edge trim.
5. Make field cut edges of same profile as factory edges, seal and finish according to manufacturer.
6. Install **<< clips; stabilizer bars; other attachments; and _____>>** as indicated to secure wood ceiling components tight to the grid system.
7. Install acoustical backer above wood ceiling components; fit tight between grid members.

3.04 TOLERANCES

A. Maximum Variation from Flat and Level Surface: 1/8 inch in 10 feet.

3.05 CLEANING

A. See Section **<< 017000 - Execution and Closeout Requirements>>** for additional requirements.

B. Clean and touch up minor finish damage. Remove and replace components that cannot be successfully cleaned and repaired.

END OF SECTION 095426

DRAFT

SECTION 096400
WOOD FLOORING

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM D226/D226M - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing.

B. ASTM D4397 - Standard Specification for Polyethylene Sheeting for Construction, Industrial, and Agricultural Applications.

C. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring.

D. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride.

E. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes.

F. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers Version 1.2.

G. CARB (ATCM) - Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products.

H. CARB (SCM) - Suggested Control Measure for Architectural Coatings; California Air Resources Board.

I. EPA (TSCA); Title VI - Toxic Substances Control Act, Title VI: Formaldehyde Standards for Composite Wood Products.

J. MFMA (SPEC) - Guide Specifications for Maple Flooring Systems.

K. NWFA (IG) - Installation Guidelines.

L. NWFA/NOFMA - International Standards for Unfinished Wood Flooring.

M. SCAQMD 1113 - Architectural Coatings.

N. SCAQMD 1168 - Adhesive and Sealant Applications.

DRAFT

1.02 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meetings: Convene a preinstallation meeting one week before starting work of this section; require attendance by affected installers; review preparation and installation procedures and coordination and scheduling necessary for related work.

1.03 SUBMITTALS

A. Product Data: Provide data for all components of wood flooring assembly, including flooring species, grade, and dimensions, subflooring, and finishing products.

B. Shop Drawings: Indicate flooring assembly construction, including total assembly depth, sleeper/subfloor components and spacing, floor joint pattern and termination details.

1. Indicate provisions for expansion and contraction, wall base, and floor access covers as applicable.
2. Indicate size and type of fasteners and anchors.

C. Selection Samples: Submit manufacturer's color charts of wood flooring and stain colors for Architect's initial selection

D. Verification Samples: Submit physical sample of selected flooring and stain, approximately 12 inches long.

E. Concrete Subfloor Test Report: Submit a copy of the moisture and alkalinity (pH) test reports.

F. Sustainability Submittals: Refer to Division 01, "Sustainable Design Requirements."

1.04 CLOSEOUT SUBMITTALS

A. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.
   1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
   2. Extra Flooring Material: 1 box for every 50 installed from the same production run as installed flooring.

1.05 QUALITY ASSURANCE

A. Perform work of this section in accordance with **<< MFMA (SPEC); NWFA (IG); NWFA/NOFMA; and _____>>**.
   1. For maple flooring, perform work of this section in accordance with **<<MFMA (SPEC)>>**.

B. Bio-Based Materials: Provide sustainably harvested wood; include chain-of-custody certification. Lumber and wood products shall be certified by American Tree Farm System (ATFS), Forest Stewardship Council (FSC), or Sustainable Forestry Initiative (SFI).

C. Low-Emitting Materials:
   1. Paints and Coatings: Paints and coatings field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet applicable VOC limits of **<<CARB (SCM)>>** or **<<SCAQMD 1113>>**.
   2. Adhesives and Sealants: Adhesives and sealants field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet the chemical content requirements of **<<SCAQMD 1168>>**.
   3. Composite Wood Products: Composite wood products installed inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet requirements for **<<CARB (ATCM)>>** ultra-low-emitting formaldehyde (ULEF) or **<<CARB (ATCM)>>** or **<<EPA (TSCA); Title VI>>** no added formaldehyde resins (NAF).

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver wood flooring to site in manufacturer's original, unopened packaging.

B. Do not expose wood flooring to moisture. Store in dry and warm weathertight space after installation of concrete, masonry, plaster, ceramic tile, and similar wet work.

1.07 FIELD CONDITIONS

A. Do not deliver or install wood flooring until wet construction work is complete and ambient humidity in installation space has stabilized at occupancy conditions.

B. Provide heat, light, and ventilation prior to installation.

C. Store materials in area of installation for minimum period of 7 days prior to installation.

D. Maintain minimum room temperature between **<< 65 degrees F>>** and 75 degrees for a period of seven days prior to delivery of materials to installation space, during installation, and after installation.

E. Move wood flooring to space where it shall be installed at the beginning of the conditioning period. Do not relocate wood flooring into the space after the conditioning period has commenced. Open manufacturer's packaging immediately after relocating wood flooring to

DRAFT

allow acclimatization. Install wood flooring when it has adjusted to relative humidity and temperature of the space where it shall be installed.

F. Maintain temperature and relative humidity in space after wood flooring installation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Hardwood Strip and Plank Flooring:
   1. Anderson Tuftex.
   2. Armstrong World Industries, Inc.
   3. Somerset Hardwood Flooring.
   4. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**

2.02 SOURCE QUALITY CONTROL

A. Inspect and stamp species and grade on underside of each piece of wood flooring at factory.

2.03 MATERIALS

A. Wood Stage Flooring:
   1. Species: **<< Northern hard maple; White hard maple; Beech; White birch; or ____>>**.
   2. Grade: **<< Clear; Select and better; No. 1 Common and better; No. 2 Common and better; or ____>>**.
   3. Cut: **<< Edge grain; Plain sawn; Quarter sawn; Quarter/rift sawn; Rift sawn; or ____>>**.
   4. Actual Thickness: **<< 25/32 inch; 33/32 inch; 41/32 inch; or ____ inch>>**.
   5. Actual Width: **<< 1-1/2 inches; 2-1/4 inches; 3 inches; 3-1/4 inches; 3-1/2 inches; or ____ inches>>**.
   6. Edge: **<< Square; Tongue and groove; Bevelled; or _____>>**.
   7. End: **<< End matched; Square; or _____>>**.
   8. Length: Random, minimum of 9 inches.

B. Sleepers and Shims: Softwood lumber, pressure treated for moisture protection, 2 by 4 inch size, kiln dried to 15 percent maximum moisture content. Do not use and discard bowed and twisted pieces.

C. Subflooring: 23/32 inch thick plywood, APA Rated sheathing, with tongue and groove edges; Exposure 1**<< , sanded; , unsanded; or None - N/A>>**, fire-resistance treated; with machined anchor pockets for channels and factory applied resilient cushions.

D. Channels: Galvanized steel, 16-gauge; manufacturer's standard size and shape for system indicated.
   1. Channel Anchors: Steel drive pins, sized for minimum 1-inch penetration into concrete.

E. Resilient Cushioning: Manufacturer's standard hemisphere-shaped cushioning pads with air voids, factory-applied to bottom side of sleepers at manufacturer's standard spacing.
   1. Durometer Hardness: 60D or 70D or as determined.
   2. Material: EPDM.
   3. Thickness: 7/16 inch, unless indicated otherwise.

F. Vapor Retarder: **<<ASTM D4397>>**; Black polyethylene sheet, minimum 6 mil thick; 2 inch wide tape for joint sealing.

DRAFT

G. Sheathing Paper: **<<ASTM D226/D226M>>** Type 1, Asphalt saturated felt, unperforated.

H. Fasteners and Anchors: Manufacturer's standard type and size to suit application.

2.04 ACCESSORIES

A. Ventilating Wood Base: Same species as flooring, 4 inch high.

B. Ventilating Resilient Base: Molded rubber, **<< 4 inch>>** high with a **<< 3 inch>>** toe, pre-molded outside corners; black color.

C. Threshold: Saddle profile metal trim, fire-rated and UL10b listed, complies with ADA requirements for thresholds.

D. Moisture Vapor Treatment: Where wood flooring and accessories are installed over concrete slabs, provide alkaline-resistant product designed to control excessive moisture vapor transmission through concrete slab, per the following:

1. Products: Provide product approved by flooring manufacturer and complying with performance requirements below, equivalent to one of the following:
   a. Duraamen Engineered Products, Inc.; Perdure MVT.
   b. Maxxon Corporation; Maxxon MVP.
   c. Tnemec Company Inc.; Epoxoprime MVT, Series 208.
2. Performance Requirements:
   a. Verify with flooring manufacturer that submitted product maintains compliance with all provisions of flooring manufacturer's warranty.
   b. Low-VOC: Provide product with VOC content less than 15 g/L.
   c. Bond Strength to Concrete: Minimum 400 psi per ASTM D 4541 (100% concrete failure).
   d. Permeance: Maximum 0.1 perm per ASTM E 96, and 0.10 grains/hr/ft^2/in-Hg, per ASTM F3010.
   e. Applications: Provide MVT for all concrete slabs on-grade and lightweight concrete elevated slabs.

E. Floor Finish: See Section 099100, color Black. ******MCPS prefers for HS and MS behind stage curtain. Not required for ES.******

F. Floor Finish: Polyurethane, to achieve **<< high gloss; low sheen; satin sheen; or _____>>** surface; type recommended by flooring manufacturer. ******MCPS prefers for HS, MS, and ES in front of stage curtain.******

G. Sealer and Wax: Types recommended by flooring manufacturer.

H. Adhesive: Types recommended by flooring manufacturer.

I. Subfloor Filler: Manufacturer's standard trowelable leveling and patching compound, latex-modified, hydraulic-cement-based formulation.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions with installer before starting this work.

B. Verify that concrete subfloor surface is smooth and flat to manufacturer's requirements for moisture content, installation tolerances, and conditions for performance of wood flooring.

C. Cementitious Subfloor Surfaces: Verify that substrates are ready for resilient flooring installation by testing for moisture and alkalinity (pH).

DRAFT

1. Test as Follows: Perform one of each test per 1,000 sf of installation area.
   a. Alkalinity (pH): **<<ASTM F710>>** in accordance with manufacturer's instructions.
   b. Internal Relative Humidity: **<<ASTM F2170>>**, using in situ probes. Acceptable maximum of 75 percent relative humidity.
   c. Moisture Vapor Emission: **<<ASTM F1869>>**, anhydrous calcium chloride test. Acceptable maximum moisture vapor emission rate of 5 pounds of water for every 1000 square feet in 24 hours.
2. If test results are not within limits recommended by flooring manufacturer, apply moisture vapor treatment (MVT) in accordance with manufacturer's requirements.
3. After testing is complete, prepare concrete and install moisture vapor treatment (MVT) in accordance with manufacturer's written instructions. If testing indicates measurements are within acceptable levels for flooring installation with the need for MVT, the MVT may be omitted where approved by the Architect.

D. Verify that required floor-mounted utilities are in correct location.

E. Commence with installation after noncompliant conditions are corrected.

3.02 PREPARATION

A. Remove ridges and bumps in concrete substrate. Apply skim coat to fill minor low spots, cracks, joints, holes, and other defects with subfloor filler to achieve smooth, flat, hard surface.

B. Use mechanical methods to remove substances incompatible with adhesives, including soap, wax, oil, or silicone. Solvents may not be used.

C. Sleepers and Shims:
1. Place vapor retarder over entire subfloor surface, lapping edges and ends minimum 6 inches and tape seal; staple in place.
2. Place sleepers over vapor retarder at specified elevation; space sleepers at 12 inches on center. Secure sleepers 16 inches on center in rows.
3. Shim underside of sleepers to achieve level line of plus or minus 1/4 inch in 10 feet.
4. Allow minimum 1 inch space between sleepers and wall surface.

D. Secondary Subflooring: Place plywood subflooring over sleepers.
1. Lay perpendicular to the sleepers, with end joints over sleepers, and **<< nail; screw; or _____>>** at 12 inches on center.

E. Prepare substrate to receive wood flooring in accordance with **<< manufacturer's; MFMA; NWFA; and _____>>** instructions.

F. Sweep and vacuum clean substrate immediately prior to installing wood flooring.

3.03 INSTALLATION

A. Install wood flooring assembly in accordance with manufacturer's instructions.

B. Sheathing Paper: Place over wood subfloor; lap edges and ends **<< 2 inches>>**, staple in place.

C. Wood Flooring:
1. Install in accordance with **<< manufacturer's; NWFA; MFMA; and _____>>** instructions; predrill and blind nail to subfloor using a minimum of 2 nails. Use screws for flooring wider than 3 inches.
2. Lay flooring **<< parallel to length of room areas; parallel to width of room areas; in patterns indicated on drawings; or _____>>**. Verify alignment as work progresses.

DRAFT

3. Arrange flooring with **<< end matched grain; square ends; or _____>>** set flush and tight.
4. Terminate flooring at centerline of door openings where adjacent floor finish is dissimilar; provide divider strips and transition strips in accordance with flooring manufacturer's recommendations and as indicated. Extend into toe spaces, door reveals, closets, and similar openings.
5. Install edge strips at unprotected or exposed edges, and where flooring terminates.
6. Secure edge strips before installation of flooring with stainless steel screws.
7. Install flooring tight to floor access covers.
8. Provide minimum 1 inch expansion space at fixed walls and other interruptions.

D. Install base at floor perimeter to cover expansion space in accordance with manufacturer's instructions. Miter inside and outside corners.

E. Finishing:
1. Fill nail and screw holes with wood filler.
2. Fill open-grained hardwoods, flooring seams, and defects.
3. Mask off adjacent surfaces before beginning sanding.
4. Sand flooring to smooth even finish with no evidence of sander marks in accordance with **<<NWFA/NOFMA>>**. Remove offsets, ridges, and cups. Take precautions to contain dust. Remove dust by vacuum or wipe down with clean tack cloth.
5. Apply finish in accordance with floor finish manufacturer's instructions. Apply manufacturer's recommended number of coats to a minimum of one coat of floor sealer and three coats of floor finisher.
6. Apply stain evenly to create a uniform color distribution.
7. Apply water-based finishes in accordance with manufacturer's instructions to minimize grain raise.
8. Apply first coat, allow to dry, then buff lightly with steel wool to remove irregularities. Vacuum clean and wipe with damp cloth before applying succeeding coat.
9. Lightly buff between coats with steel wool and vacuum clean before applying succeeding coat.
10. Apply last coat of finish.

DRAFT

3.04 CLEANING

A. Clean and polish floor surfaces in accordance with floor finish manufacturer's instructions after last coat of finish has fully cured.

3.05 PROTECTION

A. Prohibit traffic on floor finish for 7 days after installation.

B. Pace durable and breathable protective coverings over finished floors. Prevent heavy wheeled traffic and foot traffic directly over wood flooring assembly.

C. Do not remove coverings until Date of Substantial Completion.

END OF SECTION 096400

SECTION 096453
STAGE FLOORING ASSEMBLY

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM C423 - Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method.

B. ASTM C665 - Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing.

C. ASTM D4397 - Standard Specification for Polyethylene Sheeting for Construction, Industrial, and Agricultural Applications.

D. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

E. ASTM E136 - Standard Test Method for Assessing Combustibility of Materials Using a Vertical Tube Furnace at 750 Degrees C.

F. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring.

G. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride.

H. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes.

I. NWFA (IG) - Installation Guidelines.

1.02 COORDINATION

A. Concrete Slab Recess Depth: Coordinate depressed slab depth required for submitted system with cast-in-place concrete installer prior to installation of concrete.

1.03 SUBMITTALS

A. Product Data: For each type of product indicated.
   1. Polymer flooring material.
   2. Suflooring system, vapor barrier, and accessories.

B. Installation Instructions:
   1. Sleeper-type subflooring system manufacturer’s installation instructions.
   2. Performance flooring material manufacturer’s installation instructions.

C. Shop Drawings: Show project specific installation details including location and layout of performance floor assembly and accessories, including additional components as indicated on Drawings. Include the following:
   1. Sleeper-type subfloor system layout.
   2. Additional subfloor panel layer and polymer flooring material.
   3. Expansion provisions and trim details.

D. Samples for Verification: For polymer performance flooring; approximately 12 inches long and of same thickness and material indicated for the Work.

1.04 CLOSEOUT SUBMITTALS

A. Maintenance Data: For polymer performance flooring to include in maintenance manuals.

DRAFT

B. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.
   1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
   2. Extra Flooring Material: 1 box for every 50 installed from the same production run as installed flooring.

1.05 QUALITY ASSURANCE

A. Single Installer Responsibility: Entire performance flooring system shall be installed by a single firm (herein called the Installer), for undivided responsibility. Include moisture barrier, anchorage system, subfloor assemblies, subflooring or underlayment, flooring, trim, expansion provisions, finish and other accessory items as indicated.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver polymer performance flooring materials in protective packaging.

B. Protect polymer performance flooring from exposure to moisture.

C. Store polymer performance flooring materials in a dry, ventilated, weathertight location.

PART 2 PRODUCTS

2.01 POLYMER PERFORMANCE FLOORING

A. Polymer Performance Sheet Flooring: Synthetic panel flooring material.
   1. Basis-of-Design Product: Polyonyx+ Performance Flooring manufactured by Productions Unlimited, Inc.
      a. Thickness: 1/4-inch.
      b. Surface texture selected by Owner for exposed flooring.
   2. Physical Properties:
      a. Tensile Strength: 3540 psi.
      b. Shore D Hardness: 98.
      c. Water Absorption: Not absorbed.
      d. Compressive Strength: 1123 psi.
   3. Alternate Products: The following stage flooring products are acceptable alternates to the Basis-of-Design.
      a. Stageboard; Renew Resources. (Recycled synthetic floor panel)
      b. Stagelam; GRT Genesis. (Engineered panelboard floor panel)

2.02 SUBFLOOR MATERIALS

A. Plywood Subflooring: One layer of 23/32 inch APA, Exposure 1, Structural sheathing; with machined anchor pockets for channels and factory applied resilient cushions.

B. Slip Sheet: Rosin-sized building paper, 3 lb/100 sq. ft. minimum.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      a. Fortifiber Building Systems Group; Red Rosin Paper.
      b. Trimaco; #35145 Red Rosin Medium Weight Paper.
      c. W.R. Meadows Construction Products; No. 763 Sealtight Red Rosin Paper.

DRAFT

2.03 SLEEPER-TYPE SUBFLOOR SYSTEM

A. Continuous Cushioned Sleeper-Type Subfloor Basis-of-Design System: Commercial subflooring system incorporating continuous plywood sleepers factory fastened to performance foam/shock pads, with 1/2-inch anchor sleepers set perpendicular to sleepers above and fastened to concrete subfloor with steel drive pins. Provide modifications to the basis-of-design system as necessary to provide all components indicated on Drawings. Basis-of-design slab depression is 2-1/4 inches; coordinate final slab depression depth of approved system with concrete subfloor installer.
   1. Coordinate with Division 09, "Wood Athletic Flooring."
   2. Design intent at stage is to provide subfloor system, single sourced with gym flooring system. Omit maple hardwood veneer from stage application indicated. On top of installed subfloor, provide 1/2-inch APA Exposure 1 plywood and 1/4-inch polymer stage flooring specified above.
   3. Subfloor and Sleeper Plywood Panels: APA rated, Exposure 1, structural sheathing of depths indicated.
   4. Shock Pad: Manufacturer’s standard resilient plastic or foam pads; of standard depth for flooring system.

2.04 ACCESSORY MATERIALS

A. Vapor Retarder: **<<ASTM D4397>>**, polyethylene sheet not less than 6.0 mils thick.

B. Fasteners: As recommended by manufacturer, but not less than that recommended in **<<NWFA (IG)>>**: "Wood Flooring.”

C. Resilient Wall Base: Molded, vented, rubber or vinyl cove base; 4 by 3 by 48 inches; with premolded outside corners.
   1. Color: Black.

D. Trowelable Leveling and Patching Compound: Latex-modified, hydraulic-cement-based formulation approved by sports-floor manufacturer.

E. Adhesive for Resilient Base: Manufacturer's standard for application indicated.

F. Wood Trim: Maple trim specified in Division 06, “Architectural Woodwork and Casework.” In same species and grade as wood flooring, unless otherwise indicated.

G. Sound Attenuation Mineral-Wool Fire Blanket Insulation: **<<ASTM C665>>**, Type I (blankets without membrane facing); consisting of fibers; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per **<<ASTM E84>>**; passing **<<ASTM E136>>** for combustion characteristics. Provide 2.5 pcf density.
   1. Acoustical Performance: Provide 0.85 NRC at 1-1/2-inch thickness tested in accordance with **<<ASTM C423>>** (Type A Mounting).
   2. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
      a. Johns Manville; MinWool.
      b. Roxul Inc.; AFB.
      c. Owens Corning; Thermafiber SAFB.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions with installer before starting this work.

DRAFT

B. Verify that concrete subfloor surface is smooth and flat to manufacturer's requirements for moisture content, installation tolerances to plus or minus 1/4 inch in 10 feet, and conditions for performance of stage flooring.

C. Cementitious Subfloor Surfaces: Verify that substrates are ready for resilient flooring installation by testing for moisture and alkalinity (pH).

1. Test as Follows: Perform one of each test per 1,000 sf of installation area.
   a. Alkalinity (pH): **<<ASTM F710>>** in accordance with manufacturer's instructions.
   b. Internal Relative Humidity: **<<ASTM F2170>>**, using in situ probes. Acceptable maximum of 75 percent relative humidity.
   c. Moisture Vapor Emission: **<<ASTM F1869>>**, anhydrous calcium chloride test. Acceptable maximum moisture vapor emission rate of 5 pounds of water for every 1000 square feet in 24 hours.
2. If test results are not within limits recommended by flooring manufacturer, apply moisture vapor treatment (MVT) in accordance with manufacturer's requirements.
3. After testing is complete, prepare concrete and install moisture vapor treatment (MVT) in accordance with manufacturer's written instructions. If testing indicates measurements are within acceptable levels for flooring installation with the need for MVT, the MVT may be omitted where approved by the Architect.

D. Verify that required floor-mounted utilities are in correct location.

E. Commence with installation after noncompliant conditions are corrected.

3.02 PREPARATION

A. Prepare substrate to receive wood flooring in accordance with manufacturer's instructions.

B. Remove ridges and bumps in concrete substrate. Apply skim coat to fill minor low spots, cracks, joints, holes, and other defects in subfloor filler to achieve smooth, flat, hard surface.

C. Use mechanical methods to remove substances incompatible with adhesives, including soap, wax, oil, or silicone. Solvents may not be used.

D. Sweep and vacuum clean substrate immediately prior to installing stage flooring.

3.03 INSTALLATION

A. General:

1. Tolerances: Level wood flooring system to a tolerance of 1/8" in 10'-0".
2. Expansion Spaces: Provide space as indicated or required by instructions and standards, at walls and other obstructions, interruptions and terminations of flooring. Cover spaces with bases, trim, saddles, and thresholds.
3. Coordination: Refer to Division 06, “Architectural Woodwork and Casework” for wood base, platform edge trim and wood stair treads and risers at platform.

B. Vapor Barrier: Cover entire slab with 6 mil polyethylene, sealing and lapping joints a minimum of 6 inches, and turning up 4 inches at walls.

C. Sleeper-Type Subfloor System:

1. Install subfloor system in accordance with manufacturer’s written installation instructions.
   a. Provide leveling measures and anchorage in accordance with subfloor system manufacturer’s requirements.
2. Install solid blocking at doorways, edges, and thresholds at boundary of recessed slab.

D. Provide mineral fiber sound attenuation blanket material as indicated. (Refer to

E. Subflooring:

DRAFT

1. Provide rosin paper slip sheet over sleeper/subflooring.
2. Apply plywood panels over slip sheet, square with sleepers/subfloor and nail to sleepers/subflooring. Place panels with 1/8-inch space between edges of sheets and nail.
3. Provide 1-1/2" expansion voids at perimeter and all vertical obstructions.

F. Performance Flooring: Install polymer performance flooring by nailing to subfloor, running crosswise with sleepers and blind nailing.

G. Coordinate and cooperate with installation of related finish carpentry trim.

3.04 CLEANING

A. Clean and polish floor surfaces in accordance with floor finish manufacturer's instructions after last coat of finish has fully cured.

3.05 PROTECTION

A. Protect installed polymer performance flooring during remainder of construction period with covering of heavy kraft paper or other suitable material. Do not use plastic sheet or film that might cause condensation.

1. Do not move heavy and sharp objects directly over kraft-paper-covered wood flooring. Protect flooring with plywood or hardboard panels to prevent damage from storing or moving objects over flooring.

END OF SECTION 096453

DRAFT

SECTION 096466
WOOD ATHLETIC FLOORING

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM D4397 - Standard Specification for Polyethylene Sheeting for Construction, Industrial, and Agricultural Applications.

B. ASTM D4541 - Standard Test Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers.

C. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials.

D. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring.

E. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride.

F. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes.

G. ASTM F3010 - Standard Practice for Two-Component Resin Based Membrane-Forming Moisture Mitigation Systems for Use Under Resilient Floor Coverings.

H. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers Version 1.2.

I. CARB (ATCM) - Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products.

J. CARB (SCM) - Suggested Control Measure for Architectural Coatings; California Air Resources Board.

K. DIN EN 14904 - Surfaces for Sports Areas – Indoor Surfaces for Multi-Sports Use – Specification.

L. EPA (TSCA); Title VI - Toxic Substances Control Act, Title VI: Formaldehyde Standards for Composite Wood Products.

M. MFMA (SPEC) - Guide Specifications for Maple Flooring Systems.

N. NWFA (IG) - Installation Guidelines.

O. NWFA/NOFMA - International Standards for Unfinished Wood Flooring.

P. SCAQMD 1113 - Architectural Coatings.

Q. SCAQMD 1168 - Adhesive and Sealant Applications.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate slab recess requirements for submitted wood flooring system with concrete installer.

B. Preinstallation Meetings: Convene a preinstallation meeting one week before starting work of this section; require attendance by affected installers; review preparation and installation procedures and coordination and scheduling necessary for related work.

DRAFT

1.03 SUBMITTALS

A. Product Data: Provide data for flooring, subflooring, floor finish materials, and resilient cushion, including construction details, material descriptions, and dimensions of components and profiles.

B. Shop Drawings: Indicate floor joint pattern and termination details.
   1. Indicate provisions for expansion and contraction, wall base, and game insert or socket devices.
   2. Indicate size and type of fasteners and anchors.
   3. Indicate location, size, design, and color of game markings.
   4. Indicate location of telescoping stands installed over wood athletic flooring assembly.

C. Samples: Submit samples in manufacturer's standard size of each wood atheltic flooring assembly and accessory showing full range of color and texture, finish, sheen, and game line and marker paint colors.

D. Concrete Subfloor Test Report: Submit a copy of the moisture and alkalinity (pH) test reports.

E. Sustainability Submittals: Refer to Division 01, "Sustainable Design Requirements."

F. Installer's qualification statement.

G. Warranty documentation.

1.04 CLOSEOUT SUBMITTALS

A. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.
   1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
   2. Extra Flooring Material: 12 boxes matching installed flooring from the same product run.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in installing products specified in this section similar in material, design, and scope with a successful record of performance.
   1. Minimum three years of documented experience.
   2. MFMA accredited and approved by flooring manufacturer.
   3. Responsibilities include field finishing the wood athletic flooring assembly and applying game lines and markers.

B. Perform work of this section in accordance with **<< MFMA (SPEC); NWFA (IG); NWFA/NOFMA; and _____>>**.
   1. For maple flooring, perform work of this section in accordance with **<<MFMA (SPEC)>>**.

C. Bio-Based Materials: Provide sustainably harvested wood; include chain-of-custody certification. Lumber and wood products shall be certified by American Tree Farm System (ATFS), Forest Stewardship Council (FSC), or Sustainable Forestry Initiative (SFI).

D. Low-Emitting Materials:
   1. Paints and Coatings: Paints and coatings field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet applicable VOC limits of **<<CARB (SCM)>>** or **<<SCAQMD 1113>>**.
   2. Adhesives and Sealants: Adhesives and sealants field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet the chemical content requirements of **<<SCAQMD 1168>>**.
   3. Composite Wood Products: Composite wood products installed inside the weatherproofing system shall be tested and determined compliant in accordance with

DRAFT

<<CAL (CDPH SM)>> AND shall meet requirements for **<<CARB (ATCM)>>** ultra-low-emitting formaldehyde (ULEF) or **<<CARB (ATCM)>>** or **<<EPA (TSCA); Title VI>>** no added formaldehyde resins (NAF).

1.06 DELIVERY, STORAGE, AND HANDLING

A. See Section **<< 017419 - Construction Waste Management and Disposal>>** for packaging waste requirements.

B. Deliver materials in manufacturer's original, unopened packaging and store off the floor in a well-ventilated, weather-tight space.

C. Do not expose wood flooring to moisture. Store in dry and warm weathertight space after installation of concrete, masonry, plaster, ceramic tile, and similar wet work.

1.07 FIELD CONDITIONS

A. Do not deliver or install wood flooring until wet construction work is complete and ambient humidity in installation space has stabilized at occupancy conditions.

B. Provide heat, light, and ventilation prior to installation.

C. Store materials in area of installation for minimum period of 7 days prior to installation.

D. Maintain minimum room temperature between **<< 65 degrees F>>** and 75 degrees for a period of seven days prior to delivery of materials to installation space, during installation, and after installation.

E. Move wood flooring to space where it shall be installed at the beginning of the conditioning period. Do not relocate wood flooring into the space after the conditioning period has commenced. Open manufacturer's packaging immediately after relocating wood flooring to allow acclimatization. Install wood flooring when it has adjusted to relative humidity and temperature of the space where it shall be installed.

F. Maintain temperature and relative humidity in space after wood flooring installation.

1.08 WARRANTY

A. Special Warranty - Manufacturer, Installer, and Contractor: Submit warranty signed by manufacturer, installer, and Contractor agreeing to repair or replace wood athletic flooring which shrinks, warps, cracks, or otherwise deteriorates excessively, or which buckles, delaminates, or breaks its anchorage or bond with the substrate or otherwise fails to perform as required or represented by manufacturer due to failures of materials and/or workmanship and not due to unusual exposure to moisture or other abusive forces or elements not anticipated for this application. Installer and Contractor shall assume responsibility for obtaining adequate warranties on materials from manufacturers.

1. Warranty Period: 3 years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Wood Athletic Flooring:

1. Action Floor Systems.
2. Connor Sports Flooring.
3. Robbins Sports Surfaces; Air-Channel Star. ******MCPS preferred Basis of Design.******
4. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**

DRAFT

2.02 WOOD ATHLETIC FLOORING

A. Provide wood athletic flooring in compliance with **<<DIN EN 14904>>**.

B. General: Wood athletic flooring, **<< MFMA (PUR) compliant for application indicated; ; or None - N/A>>**system components provided by single manufacturer.

C. System Description:

1. **<< Fixed; Floating; or _____>>**, cushioned sleeper with subfloor system, wood strip flooring.
2. Portable, floating, cushioned system, wood strip flooring, held in place with proprietary clip fasteners.
3. Fixed, pre-engineered subfloor anchored using **<< channels; retainers; clips; and _____>>**, wood strip flooring.

D. Coordinate depth of approved wood athletic flooring system with depression in concrete slab where wood athletic flooring shall be installed and with requirements of Division 03, "Cast-in-Place Concrete."

2.03 COMPONENTS

A. Wood Strip Flooring:

1. Provide MFMA grade-marked flooring, stamped as manufactured by MFMA member mill.
2. Species: Northern hard maple, kiln dried; tongue and groove edges, end matched.
3. Grade: **<< First; Second and better; Third and better; Third; or ____>>**.
4. Cut: Flat.
5. Thickness: **<< 25/32 inch; 33/32 inch; or ____ inch>>**.
6. Width: **<< 2-1/4 inches; 1-1/2 inches; or ____ inches>>**.
7. Backs: Channeled and kerfed for stress relief.

B. Sleepers: Softwood lumber, pressure treated for moisture protection, 2 by 4 inch size, kiln dried to 15 percent maximum moisture content. Do not use and discard bowed and twisted pieces.

C. Subflooring: One layer of 23/32 inch thick plywood, APA rated, Exposure 1, minimum span rating of 48/24; with machined anchor pockets for channels and factory applied resilient cushions.

1. Softwood lumber, **<< 2 by 4 inch; 2 by 3 inch; or _____ inch>>** nominal.
2. Confirm spacing of telescoping bleachers.

D. **<< Channels; Retainers; Clips; and _____>>**: Galvanized steel, 16-gauge; manufacturer's standard size and shape for system indicated.

1. Channel Anchors: Steel drive pins, sized for minimum 1-inch penetration into concrete.

E. Resilient Cushioning: Manufacturer's standard hemisphere-shaped cushioning pads with air voids, factory-applied to bottom side of sleepers at manufacturer's standard spacing with integral spacing device to reduce or eliminate routine spacing for expansion rows.

1. Durometer Hardness: 60D or 70D or as determined.
2. Material: EPDM.
3. Thickness: 7/16 inch, unless indicated otherwise.

F. Vapor Retarder: **<<ASTM D4397>>**; Polyethylene sheet, minimum 6mil thick; 2 inch wide tape for sealing sheet seams.

G. Fasteners and Anchors: Manufacturer's standard type and size to suit application.

DRAFT

2.04 FINISHES

A. Floor Finishes: Types recommended by flooring manufacturer and complying with MFMA specifcations.
   1. Sealer: **<< Oil based urethane; Oil based oleoresinous; or Water based urethane>>**; pliable, penetratating type.
   2. Finish Coats: **<< Oil based urethane; Epoxy; or Water based urethane>>**; **<< high gloss; low sheen; or satin sheen>>**.
   3. Game Marking Paint: Manufacturer's standard industrial enamel compatible with sealer and finish coats; colors as indicated on drawings.

2.05 ACCESSORIES

A. Ventilating Base: Molded rubber, **<< 4 inch>>** high with a **<< 3 inch>>** toe, pre-molded outside corners; **<< black color; brown color; color as selected by Architect; or _____>>**.

B. Threshold: Saddle profile metal trim, fire-rated and UL10b listed, complies with ADA requirements for thresholds.

C. Edge Strip: **<< Angle; Tee; or _____>>**; **<< mill finish; anodized; or _____>>** aluminum.

D. Transition Strip: Same species and finish as flooring material; profiles indicated.

E. Game Socket or Insert Devices: Refer to Division 11, "Gymnasium Equipment."

F. Moisture Vapor Treatment: Where wood flooring and accessories are installed over concrete slabs, provide alkaline-resistant product designed to control excessive moisture vapor transmission through concrete slab, per the following:
   1. Products: Provide product approved by flooring manufacturer and complying with performance requirements below, equivalent to one of the following:
      a. Duraamen Engineered Products, Inc.; Perdure MVT.
      b. Maxxon Corporation; Maxxon MVP.
      c. Tnemec Company Inc.; Epoxoprime MVT, Series 208.
   2. Performance Requirements:
      a. Verify with flooring manufacturer that submitted product maintains compliance with all provisions of flooring manufacturer’s warranty.
      b. Low-VOC: Provide product with VOC content less than 15 g/L.
      c. Bond Strength to Concrete: Minimum 400 psi per **<<ASTM D4541>>** (100% concrete failure).
      d. Permeance: Maximum 0.1 perm per **<<ASTM E96/E96M>>**, and 0.10 grains/hr/ft^2/in-Hg, per **<<ASTM F3010>>**.
      e. Applications: Provide MVT for all concrete slabs on-grade and lightweight concrete elevated slabs.

G. Adhesives: Types recommended by flooring manufacturer.

H. Subfloor Filler: Manufacturer's standard trowelable leveling and patching compound, latex-modified, hydraulic-cement-based formulation.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions with installer before starting this work.

DRAFT

B. Verify that concrete subfloor surface is smooth and flat to manufacturer's requirements for moisture content, installation tolerances to plus or minus 1/4 inch in 10 feet, and conditions for performance of wood athletic flooring.

C. Cementitious Subfloor Surfaces: Verify that substrates are ready for resilient flooring installation by testing for moisture and alkalinity (pH).

1. Test as Follows: Perform one of each test per 1,000 sf of installation area.
   a. Alkalinity (pH): **<<ASTM F710>>** in accordance with manufacturer's instructions.
   b. Internal Relative Humidity: **<<ASTM F2170>>**, using in situ probes. Acceptable maximum of 75 percent relative humidity.
   c. Moisture Vapor Emission: **<<ASTM F1869>>**, anhydrous calcium chloride test. Acceptable maximum moisture vapor emission rate of 5 pounds of water for every 1000 square feet in 24 hours.
2. If test results are not within limits recommended by flooring manufacturer, apply moisture vapor treatment (MVT) in accordance with manufacturer's requirements.
3. After testing is complete, prepare concrete and install moisture vapor treatment (MVT) in accordance with manufacturer's written instructions. If testing indicates measurements are within acceptable levels for flooring installation with the need for MVT, the MVT may be omitted where approved by the Architect.

D. Verify that required floor-mounted utilities are in correct location.

E. Commence with installation after noncompliant conditions are corrected.

3.02 PREPARATION

A. Prepare substrate to receive wood flooring in accordance with manufacturer's and MFMA instructions.

B. Remove ridges and bumps in concrete substrate. Apply skim coat to fill minor low spots, cracks, joints, holes, and other defects with subfloor filler to achieve smooth, flat, hard surface.

C. Use mechanical methods to remove substances incompatible with adhesives, including soap, wax, oil, or silicone. Solvents may not be used.

D. Sweep and vacuum clean substrate immediately prior to installing wood athletic flooring.

3.03 INSTALLATION

A. Place vapor retarder over concrete surface, overlap seams a minimum of 6 inches and seal with tape.

B. Sleepers with Plywood Subfloor:

1. Attach resilient pads to bottom of sleepers in accordance with manufacturer's instructions. Place sleepers at 90 degree angle to direction of finished floor; space 12 inches on center. Stagger end joints a minimum of 24 inches.
2. Anchor sleepers to concrete substrate with steel anchoring pins.
3. Fasten plywood subfloor over sleepers at 45 degree angle to direction of finished floor. Allow minimum 1/4 inch between plywood subfloor edges.

C. Install solid 7/8 inch blocking **<< at doorways; under stacked bleachers; under locations of heavy equipment; as shown on drawings; and _____>>** at a maximum of 12 inches on center, as applicable and in accordance with flooring manufacturer's recommendations. Attach resilient pads to bottom of blocking. Space to check floor deflection under bleachers.

D. Wood Flooring:

1. Install in accordance with manufacturer's and MFMA instructions.

DRAFT

2. Lay flooring parallel to length of main playing area. Blind nail or staple perpendicular to subfloor to a tolerance of 1/8 inch in 10 feet from level.
3. Install edge strips at unprotected or exposed edges, and where flooring terminates.
4. Provide 2 inch expansion space at walls and other interruptions.

E. Install base at floor perimeter to cover expansion space in accordance with manufacturer's instructions. Miter inside corners.

F. Install floor **<< sockets; inserts; cover plates; and _____>>** in accordance with Division 11, "Gymnasium Equipment."

G. Finishing:
1. Fill nail and screw holes with wood filler.
2.
3. Mask off adjacent surfaces before beginning sanding.
4. Sand flooring to smooth even finish with no evidence of sander marks. Remove offsets, ridges, and cup. Take precautions to contain dust. Remove dust by vacuum or wipe down with clean tack cloth.
5. Apply finishes in accordance with floor finish manufacturer's and MFMA instructions.
6. Apply manufacturer's recommended number of coats to a minimum of 4 total with a minimum of 2 being finish coats.
7. Apply first coat, allow to dry, then buff lightly with recommended pad to remove irregularities. Vacuum clean and wipe with damp, lint-free cloth before applying succeeding coats.
8. Apply **<< game lines/markers; logos; and _____>>** in accordance with layout indicated on drawings **<< layout indicated on drawings; layout indicated on shop drawings; or _____>>**.
   a. Apply paint after masking flooring to produce lines and markers with sharp edges.
   b. Break minor lines where game lines cross. Do not overlap lines.
9. Apply last coat of finish after game lines are cured.

3.04 CLEANING

A. Clean and polish floor surfaces in accordance with floor finish manufacturer's instructions after last coat of finish has fully cured.

3.05 PROTECTION

A. Prohibit traffic on finished floor for 7 days after installation.

B. Place durable and breathable protective coverings over finished floors. Prevent heavy wheeled traffic and foot traffic directly over wood athletic flooring assembly.

C. Do not remove coverings until Date of Substantial Completion.

END OF SECTION 096466

G. DIN EN 14904 - Surfaces for Sports Areas – Indoor Surfaces for Multi-Sports Use – Specification.

H. EPA (TSCA); Title VI - Toxic Substances Control Act, Title VI: Formaldehyde Standards for Composite Wood Products.

I. MFMA (SPEC) - Guide Specifications for Maple Flooring Systems.

J. SCAQMD 1113 - Architectural Coatings.

K. SCAQMD 1168 - Adhesive and Sealant Applications.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate slab recess depth requirement and floor flatness tolerances for submitted wood flooring system with concrete installer prior to concrete slab installation.

B. Preinstallation Meetings: Convene a preinstallation meeting one week before starting work of this section; require attendance by affected installers; review preparation and installation procedures and coordination and scheduling necessary for related work.

1.03 SUBMITTALS

A. Product Data: Provide data for all components of sprung dance floor assembly, including subflooring, resilient cushion, and floor finish materials.

B. Shop Drawings: Indicate flooring assembly construction, including total assembly depth, sleeper/subfloor components and spacing, floor joint pattern and termination details.

1. Indicate provisions for expansion and contraction, wall base, and floor access covers as applicable.
2. Indicate size and type fasteners and anchors.

C. Selection Samples: Submit manufacturer's color charts of resilient performance surface for Architect's initial selection.

D. Verification Samples: Submit physical samples of selected flooring in manufacturer's standard size.

E. Test Reports: Submit test reports showing compliance with DIN EN 18032 or ASTM F2772.

DRAFT

F. Concrete Subfloor Test Report: Submit a copy of the moisture and alkalinity (pH) test reports.

G. Manufacturer's Instructions: Indicate standard and special installation procedures.

H. Sustainability Submittals: Refer to Division 01, "Sustainable Design Requirements."

1.04 CLOSEOUT SUBMITTALS

A. Maintenance Data: Include **<< maintenance procedures; recommended maintenance materials; a suggested schedule for cleaning; stripping and re-finishing recommendations; stain removal methods; polishes and waxes; and _____>>**.

B. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.

1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
2. Extra Flooring Material: 2 boxes matching installed flooring from same product run.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in installing products specified in this section.

1. Minimum three years of documented experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. See Section **<< 017419 - Construction Waste Management and Disposal>>** for packaging waste requirements.

B. Deliver materials and store off the floor in a well-ventilated, weather-tight space.

1.07 FIELD CONDITIONS

A. Do not deliver or install flooring until wet construction work is complete and permanent heat and air conditioning is installed and operating.

B. Maintain room temperature between 55 degrees and 75 degrees and relative humidity between 35 to 50 percent for a period of seven days prior to delivery of materials to installation space, during installation, and after installation.

C. Acclimate flooring components and materials to installation space for a minimum of 7 days prior to installation. Do not relocate flooring after conditioning period has commenced. Open manufacturer's packaging immediately after moving into space to acclimate. Install flooring when it has adjusted to relative humidity and temperature in the space where it shall be installed.

DRAFT

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Dance Flooring System:

1. Gerstung.
2. Stagestep.
3. Harlequin.
4. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**

2.02 VINYL DANCE FLOORING ASSEMBLY

A. Application: Dance room.

B. System Description:

1. Semi-permanent installation.

2. Sprung dance floor system, consisting of cushioned pads with plywood tongue-and-groove joint subfloor panels, and vinyl dance flooring surface.
3. All components of dance floor system shall be provided by the primary dance flooring manufacturer, or by a manufacturer specifically approved in writing by dance flooring manufacturer.
4. Vinyl performance surface appropriate for all dance types, including tap dance.
5. Basis-of-Design System: Harlequin Flexity Sprung Floor System with Reversable Pro vinyl performance surface.
6. **<< Fixed; Floating; or _____>>**, double layer subfloor system, vinyl performance flooring.

C. Bio-Based Materials: Provide sustainably harvested wood; includ chain-of-custody certification. Lumber and wood products shall be certified by American Tree Farm System (ATFS), Forest Stewardship Council (FSC), or Sustainable Forestry Initiative (SFI).

D. Low-Emitting Materials:
1. Paints and Coatings: Paints and coatings field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet applicable VOC limits of **<<CARB (SCM)>>** or **<<SCAQMD 1113>>**.
2. Adhesives and Sealants: Adhesives and sealants field-applied inside the weatherproofing system shall be tested and determined compliant with **<<CAL (CDPH SM)>>** AND shall meet the chemical content requirements of **<<SCAQMD 1168>>**.
3. Composite Wood Products: Composite wood products installed inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet requirements for **<<CARB (ATCM)>>** ultra-low-emitting formaldehyde (ULEF) or **<<CARB (ATCM)>>** or **<<EPA (TSCA); Title VI>>** no added formaldehyde resins (NAF).

2.03 COMPONENTS

A. Resilient Flooring:
1. Provide manufacturer's standard resilient performance surface.

B. Sleepers: Softwood lumber, pressure treated for moisture protection, kiln dried to 15 percent maximum moisture content. Do not use and discard bowed and twisted pieces.
1. Length: **<< 48 inches; 96 inches; or _____ inch>>**.
2. Softwood lumber, 2 by 4 inch nominal.
3. Plywood, 7/8 inch by 4 inch nominal.

C. Subflooring: One layer of 23/32 inch thick plywood, APA rated, exposure 1, fire-resistance treated; with machined anchor pockets for channels and factory applied resilient cushions.

D. Channels: Galvanized steel, 16-gauge; manufacturer's standard size and shape for system indicated.
1. Channel Anchors: Steel drive pins, sized for minimum 1-inch penetration into concrete.

E. Resilient Cushioning: Manufacturer's standard hemisphere-shaped cushioning pads with air voids, factory-applied to bottom side of sleepers at manufacturer's standard spacing.
1. Durometer Hardness: 60D or 70D or as determined.
2. Material: EPDM.
3. Thickness: 7/16 inch, unless indicated otherwise.

F. Vapor Retarder: **<<ASTM D4397>>** Polyethylene sheet, minimum 6 mil thick; 2 inch wide tape for sealing sheet seams.

DRAFT

G. Fasteners and Anchors: Manufacturer's standard type and size to suit application.

2.04 FINISHES

A. Vinyl Performance Floor Finish: Black/Gray.

2.05 ACCESSORIES

A. Ventilating Base: Molded rubber, 4 inch high with a 3 inch toe, pre-molded outside corners; **<< black color; brown color; color as selected by Architect; or _____>>**.

B. Ramp: Provide type compatible with flooring system.

C. Edge Strip: **<< Angle; Tee; or _____>>**; **<< mill finish; anodized; or _____>>** aluminum.

D. Moisture Vapor Treatment: Where wood flooring and accessories are installed over concrete slabs, provide alkaline-resistant product designed to control excessive moisture vapor transmission through concrete slab, per the following:

1. Products: Provide product approved by flooring manufacturer and complying with performance requirements below, equivalent to one of the following:
   a. Duraamen Engineered Products, Inc.; Perdure MVT.
   b. Maxxon Corporation; Maxxon MVP.
   c. Tnemec Company Inc.; Epoxoprime MVT, Series 208.
2. Performance Requirements:
   a. Verify with flooring manufacturer that submitted product maintains compliance with all provisions of flooring manufacturer's warranty.
   b. Low-VOC: Provide product with VOC content less than 15 g/L.
   c. Bond Strength to Concrete: Minimum 400 psi per ASTM D 4541 (100% concrete failure).
   d. Permeance: Maximum 0.1 perm per ASTM E 96, and 0.10 grains/hr/ft^2/in-Hg, per ASTM F3010.
   e. Applications: Provide MVT for all concrete slabs on-grade and lightweight concrete elevated slabs.

E. Adhesives: Types recommended by flooring manufacturer.

F. Subfloor Filler: Manufacturer's standard trowelable leveling and patching compound, latex-modified, hydraulic-cement-based formulation.

DRAFT

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions with installer before starting this work.

B. Verify that concrete subfloor surface is smooth and flat to manufacturer's requirements for moisture content, installation tolerances to plus or minus 1/4 inch in 10 feet, and conditions for performance of dance flooring.

C. Cementitious Subfloor Surfaces: Verify that substrates are ready for resilient flooring installation by testing for moisture and alkalinity (pH).

1. Test as Follows: Perform one of each test per 1,000 sf of installation area.
   a. Alkalinity (pH): **<<ASTM F710>>** in accordance with manufacturer's instructions.
   b. Internal Relative Humidity: **<<ASTM F2170>>**, using in situ probes. Acceptable maximum of 75 percent relative humidity.

c. Moisture Vapor Emission: **<<ASTM F1869>>**, anhydrous calcium chloride test. Acceptable maximum moisture vapor emission rate of 5 pounds of water for every 1000 square feet in 24 hours.

2. If test results are not within limits recommended by flooring manufacturer, apply moisture vapor treatment (MVT) in accordance with manufacturer's requirements.
3. After testing is complete, prepare concrete and install moisture vapor treatment (MVT) in accordance with manufacturer's written instructions. If testing indicates measurements are within acceptable levels for flooring installation with the need for MVT, the MVT may be omitted where approved by the Architect.

D. Verify that required floor-mounted utilities are in correct location.

E. Commence with installation after noncompliant conditions are corrected.

3.02 PREPARATION

A. Prepare substrate to receive wood flooring in accordance with manufacturer's instructions.

B. Remove ridges and bumps in concrete substrate. Apply skim coat to fill minor low spots, cracks, joints, holes, and other defects with subfloor filler to achieve smooth, flat, hard surface.

C. Use mechanical methods to remove substances incompatible with adhesives, including soap, wax, oil, or silicone. Solvents may not be used.

D. Sweep and vacuum clean substrate immediately prior to installing dance flooring.

3.03 INSTALLATION

A. Place vapor retarder over prepared concrete surface, overlap seams a minimum of 6 inches and seal with tape.

B. Channels**<< with Plywood Subfloor; with Solid Lumber Subfloor; with _____; or None - N/A>>**:

1. Install subfloor assembly with channel sleepers at 90 degree angle to direction of finished floor. Stagger end joints a minimum of **<< 24 inches; or _____ inch>>**.
2. Anchor subloor assembs to concrete substrate with steel anchoring pins.

C. Install solid blocking **<< at doorways; under stacked bleachers; under locations of heavy equipment; as shown on drawings; and _____>>**, as applicable and in accordance with flooring manufacturer's recommendations.

D. Install floor sleeves and inserts to a depth sufficient to ensure flush top surface with floor surface.

E. Finishing:

1. Mask off adjacent surfaces before beginning sanding.
2. Sand flooring to smooth even finish with no evidence of sander marks. Remove dust by vacuum.
3. Apply finishes in accordance with **<< floor finish manufacturer's; MFMA; and _____>>** instructions.
4. Apply **<< one sealer coat; two sealer coats; _____; or None - N/A>>** and **<< three; two; or _____>>** finish coats.
5. Apply first coat, allow to dry, then buff lightly with **<< recommended pad; steel wool; or _____>>** to remove irregularities. Vacuum clean and wipe with damp, lint-free cloth before applying succeeding coats.
6. Apply **<< game lines/markers; logos; and _____>>** in accordance with **<< layout indicated on drawings; layout indicated on shop drawings; or _____>>**.

DRAFT

7. Apply last coat of finish.

3.04 CLEANING

A. Clean floor surfaces in accordance with floor finish manufacturer's instructions.

3.05 PROTECTION

A. Prohibit traffic on finished floor for **<< 72 hours; 48 hours; or _____>>** after installation.

B. Place protective coverings over finished floors; do not remove coverings until Date of Substantial Completion.

END OF SECTION 096467

DRAFT

SECTION 096500
RESILIENT FLOORING

PART 1 GENERAL

1.01 ~~RELATED REQUIREMENTS~~

A. ~~Section **<< 260526 - Grounding and Bonding for Electrical Systems>>**: Grounding and bonding of static control flooring to building grounding system.~~

1.02 DEFINITIONS

A. Grain: The apparent direction of a printed or inherent design of a tile.

B. Pattern: The color or geometric arrangement of multiple tiles on a surface.

1.03 REFERENCE STANDARDS

A. ASTM D4541 - Standard Test Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers.

B. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials.

C. ASTM E648 - Standard Test Method for Critical Radiant Flux of Floor-Covering Systems Using a Radiant Heat Energy Source.

D. ASTM F150 - Standard Test Method for Electrical Resistance of Conductive and Static Dissipative Resilient Flooring.

E. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring.

F. ASTM F1066 - Standard Specification for Vinyl Composition Floor Tile.

G. ASTM F1344 - Standard Specification for Rubber Floor Tile.

H. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride.

I. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes.

J. ASTM F3010 - Standard Practice for Two-Component Resin Based Membrane-Forming Moisture Mitigation Systems for Use Under Resilient Floor Coverings.

K. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers Version 1.2.

L. CARB (SCM) - Suggested Control Measure for Architectural Coatings; California Air Resources Board.

M. NFPA 253 - Standard Method of Test for Critical Radiant Flux of Floor Covering Systems Using a Radiant Heat Energy Source.

N. RFCI (RWP) - Recommended Work Practices for Removal of Resilient Floor Coverings.

O. SCAQMD 1113 - Architectural Coatings.

P. SCAQMD 1168 - Adhesive and Sealant Applications.

1.04 SUBMITTALS

A. Product Data: Provide data of specified products, describing physical and performance characteristics; including sizes, patterns and colors available; and installation instructions.

DRAFT

B. Shop Drawings: Indicate **<< seaming plans; floor patterns; dye lot; layout of grounding strips and connections to the building grounding system; and _____>>**.
   1. Include diagrams indicating flooring product layouts, edges, columns, doorways, enclosing partitions, built-in casework, and cutouts.
   2. Indicate details of special patterns.

C. Product Schedule: For resilient flooring products. Use same abbreviations as drawings.

D. Selection Samples: Submit manufacturer's complete set of color samples for **<<Architect>>**'s initial selection.

E. Verification Samples: Submit two samples of indicated resilient flooring products in manufacturer's standard size illustrating color and pattern.

F. Sustainability Submittals: Refer to Division 01, "Sustainable Design Requirements."

G. Concrete Subfloor Test Report: Submit a copy of the moisture and alkalinity (pH) test reports.

1.05 CLOSEOUT SUBMITTALS

A. Maintenance Data: Include maintenance procedures, recommended maintenance materials, and suggested schedule for cleaning, stripping, and re-waxing.

B. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.
   1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
   2. Extra Flooring Material: 1 box for every 50 boxes of each type, pattern, size, and color from the same production run.
   3. Extra Wall Base: Minimum 10 linear feet for every 500 linear feet of each type, pattern, size and color from the same production run.

C. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.06 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in installing specified flooring with minimum three years documented experience.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver resilient flooring products in manufacturer's standard unopened packaging indicating manufacturer name, product name, project name, and shipping and handling instructions.

B. Upon receipt, immediately remove any shrink-wrap and check materials for damage and the correct style, color, quantity and run numbers.

C. Store all materials off of the floor in an acclimatized, weather-tight space.

D. Maintain temperature in storage area between 55 degrees F and 90 degrees F.

E. Store tile products on a flat surface.

F. Protect roll materials from damage by storing on end.

1.08 FIELD CONDITIONS

A. Store materials for not less than 48 hours prior to installation in area of installation at a temperature of 70 degrees F to achieve temperature stability. Thereafter, maintain conditions above 55 degrees F.

B. Install resilient flooring products when they are the same temperature as the space they shall be installed.

DRAFT

C. Prevent floor and wheeled traffic in space during resilient flooring installation and for a time after in accordance with manufacturer's instructions.

D. Install resilient flooring products after wet work is complete and dry.

E. Install resilient flooring on concrete slabs that have cured the requisite amount of time and demonstrate a moisture content in accordance with manufacturer's requirements for establishing an adhesive bond.

1.09 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Manufacturer's Warranty: Provide a ten (10) year manufacturer warranty, covering defective material and installation.

C. Installer's Warranty: Installer shall warrant that the products have been installed in accordance with manufacturer's instructions.

1. The installer shall provide a ten (10) year warranty against product failure due to excessive moisture vapor transmission through the slab.

PART 2 PRODUCTS

2.01 RESILIENT FLOORING - GENERAL

A. Source Limitations: Provide resilient base, stair accessories, and molding accessories through a single source from a single manufacturer.

B. Low-Emitting Materials:

1. Paints and Coatings: Paints and coatings field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet applicable VOC limits of **<<CARB (SCM)>>** or **<<SCAQMD 1113>>**.
2. Adhesives and Sealants: Adhesives and sealants field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet the chemical content requirements of **<<SCAQMD 1168>>**.

2.02 RESILIENT TILE FLOORING

A. Vinyl Composition Tile: Homogeneous, color and pattern throughout thickness. Through-color is not acceptable.

1. Manufacturers:
   a. AHF Contract; Iliad/Highlights.
   b. Armstrong Flooring; Standard Excelon Imperial Texture.
   c. Tarkett Flooring; VCT II.
   d. Vinylasa; Nova.
   e. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
2. Minimum Requirements: Comply with **<<ASTM F1066>>**, Class 2 .
3. Critical Radiant Flux (CRF): Minimum 0.45 watt per square centimeter, when tested in accordance with **<<ASTM E648>>** or **<<NFPA 253>>**.
4. Size: 12 by 12 inch.
5. Thickness: 0.125 inch.
6. Color and Pattern: To be selected by **<<Architect>>** from manufacturer's full range.

DRAFT

B. Quartz Composition Tile: Homogeneous composition tile formulated of mined quartz suspended in vinyl matrix.
   1. Manufacturers:
      a. Altro Group; Altro Quartz Tile.
      b. Kahrs International; Quartz.
      c. Procedo Flooring; Versa Quartz US Collection.
      d. Rickett America; Quartz Tile.
      e. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
   2. Minimum Requirements: Comply with **<<ASTM F1066>>**, Class 2 - through pattern.
   3. Critical Radiant Flux (CRF): Minimum 0.45 watt per square centimeter, when tested in accordance with **<<ASTM E648>>** or **<<NFPA 253>>**.
   4. Size: 12 by 12 inch.
   5. Thickness: 0.125 inch.
   6. Color and Pattern: To be selected by **<<Architect>>** from manufacturer's full range.

C. Rubber Tile: Homogeneous, color and pattern throughout thickness.
   1. Manufacturers:
      a. American Biltrite; Marathon.
      b. Flexco, Inc; FlexTones.
      c. Mondo USA; Dharma.
      d. Nora Rubber Flooring; Norament.
      e. Roppe Corporation; Rubber Tile.
      f. Tarkett Flooring; Rubber Tile.
      g. VPI, LLC; Floor Products Division; Rubber Flooring.
      h. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
   2. Minimum Requirements: Comply with **<<ASTM F1344>>**, Class I-A (Homogeneous Rubber Tile, Solid Color).
   3. Critical Radiant Flux (CRF): Minimum 0.45 watt per square centimeter, when tested in accordance with **<<ASTM E648>>** or **<<NFPA 253>>**.
   4. Size: 18 by 18 inch, 20 by 20 inch, or 24 by 24 inch, nominal, as standard with manufacturer.
   5. Total Thickness: 0.125 inch.
   6. Texture: **<< Smooth; Raised circles; Raised squares; Hammered; Embossed; or _____>>**.
   7. Color and Pattern: To be selected by Architect .

D. Rubber Tile: Recycled SBR (styrene butadiene rubber) and colored EPDM (ethylene propylene diene monomer) granules with urethane binder.
   1. Manufacturers:
      a. Dinoflex Group; Evolution Commercial Flooring.
      b. Expanko Resilient Flooring, a Stonhard Brand; Reztec.
      c. Flexco Corporation; Tuflex Force Rubber Tile.
      d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
   2. Backing: Recycled black rubber, laminated to colored top layer.

DRAFT

3. Critical Radiant Flux (CRF): Minimum **<< 0.45; 0.22; or ____>>** watt per square centimeter, when tested in accordance with **<<ASTM E648>>** or **<<NFPA 253>>**.
4. Size: 18 **<< ___by ___inch; 18 by 18 inch; 28-1/2 by 28-1/2 inch; 37 by 37 inch; or As indicated on drawings>>**.
5. Thickness: **<< 1/8 inch; 5/16 inch; 3/8 inch; or ____ inch>>** minimum.
6. Tile Edge: **<< Interlocking shape; Straight; or _____>>**.
7. Color and Pattern: To be selected by **<<Architect>>** from manufacturer's full range.

E. Static Control Tile: Homogeneous; color and pattern throughout thickness.
1. Manufacturers:
   a. Flexco Corporation; ESD Rubber.
   b. Nora; noramentgrano ED.
   c. Roppe Corporation; ESD Rubber Static Control Tile.
   d. StaticWorx; SD Architectural Rubber.
   e. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
2. Minimum Requirements: Rubber tile complying with **<<ASTM F1344>>**, Class 1, Type B.
3. Electrical Resistance:
   a. Dissipative Tile: Resistance between 1.0 megohms and 1000 megohms as tested in accordance with **<<ASTM F150>>**.
4. Critical Radiant Flux (CRF): Minimum 0.45 watt per square centimeter, when tested in accordance with **<<ASTM E648>>** or **<<NFPA 253>>**.
5. Tile Size: Manufacturer's standard.
6. Total Thickness: 2 mm, minimum.
7. Color: To be selected by **<<Architect>>** from manufacturer's full range.

2.03 RESILIENT BASE

A. Resilient Base: **<<ASTM F1861>>**, Type TP, rubber, thermoplastic; Style B, Cove.
1. Products (Type TP):
   a. Armstrong World Industries, Inc.; Rubber Coved Toe Wall Base.
   b. Flexco (USA), Inc.; Flexco Base 2000 - Cove.
   c. Johnsonite, a Tarkett Company; Rubber Wall Base - Cove.
   d. Mannington Commercial; Burkebase Type TP - Coved.
   e. Nora Systems, Inc; nora wall base; Article 820.
   f. Roppe Corporation; 700 Series TPR Wall Base - Style B (Coved).
   g. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
2. Products (Type TS):
   a. Flexco (USA), Inc.; Wallflowers Premium - Cove.
   b. Johnsonite, a Tarkett Company; Baseworks; Coved (Toe) Profile.
   c. Mannington Commercial; Premium TS Molded Wall Base.
   d. Roppe Corporation; Pinnacle Rubber Wall Base - Cove Toe.
   e. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
3. Critical Radiant Flux (CRF): Minimum 0.45 watt per square centimeter, when tested in accordance with **<<ASTM E648>>** or **<<NFPA 253>>**.

DRAFT

4. Height: **<< 4 inch; or 6 inch>>**.
5. Thickness: 0.125 inch minimum.
6. Finish: Satin.
7. Length: Roll; manufacturer's standard length.
8. Color: To be selected by **<<Architect>>** from manufacturer's full range.

2.04 MOLDINGS, TRANSITIONS, AND EDGE STRIPS

A. Moldings, Transition and Edge Strips:
   1. Manufacturers:
      a. Flexco, Inc.
      b. Johnsonite.
      c. Mannington Commercial.
      d. R.C.A. Rubber Company (The).
      e. Roppe Corporation.
      f. VPI, LLC; Floor Products Division.
      g. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
   2. Molding/Transition Strip Profiles: Provide in sizes as required to suit flooring thicknesses and applications.
      a. Coved edge/cap for carpet.
      b. Joiner between carpet and resilient flooring or other materials with different heights.
      c. Transition strip between different types of materials that are the same height or between different styles/patterns of the same material.
      d. Slim transition strip with approximately 1/4-inch wide visible transition profile.
      e. Reducer strip at edges of flooring to reduce height to 0".
      f. Subfloor leveling accessory to transition between materials with height differences up to 1/2 inch.
   3. Material: Manufacturer's standard rubber or vinyl.
   4. Color: To be selected by Architect from manufacturer's full range.

2.05 ACCESSORIES

A. Leveling Compound: Blended cement mix, latex-modified, Portland cement based, or blended hydraulic-cement-based, for uses indicated.

B. Subfloor Filler: Type recommended by adhesive material manufacturer.

C. Primers, Adhesives, and Seam Sealer: Waterproof; types recommended by flooring manufacturer for resilient flooring products and indicated substrate conditions.
   1. For static-control flooring, provide types recommended by static control flooring manufacturer for maintaining static dissipative properties of flooring system and grounded connection.

D. Moisture Vapor Treatment: Where resilient flooring and accessories are installed over concrete slabs and where field testing indicates high moisture vapor testing through concrete slabs, provide alkaline-resistant product designed to control excessive moisture vapor transmission through concrete slab.
   a. Duraamen Engineered Products, Inc.; Perdure MVT.
   b. Maxxon Corporation; Maxxon MVP.
   c. Tnemec Company Inc.; Epoxoprime MVT, Series 208.

DRAFT

2. Performance Requirements:
    a. Verify with flooring manufacturer that submitted product maintains compliance with all provisions of flooring manufacturer's warranty.
    b. Low-VOC: Provide product with VOC content less than 15 g/L.
    c. Bond Strength to Concrete: Minimum 400 psi per **<<ASTM D4541>>** (100% concrete failure).
    d. Permeance: Maximum 0.1 perm per **<<ASTM E96/E96M>>**, and 0.10 grains/hr/ft^2/in-Hg, per **<<ASTM F3010>>**.
    e. Applications: Provide MVT for all concrete slabs on-grade and lightweight concrete elevated slabs.

E. Copper Grounding Strips: Type and size as recommended by static control flooring manufacturer.

F. Filler for Stair Treads: Manufacturer's standard or recommended two-part epoxy filler for nosings not conforming to tread contours.

G. Floor Polish: Fluid-applied polish recommended by resilient flooring manufacturer.
    1. MCPS Preferred Basis of Design: Provide Essential Industries: Green Essence 8801FFX, Green G2 Finish or comparable product.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify with installer that surfaces are flat to tolerances acceptable to flooring manufacturer, free of cracks that might telegraph through flooring, clean, dry, and free of curing compounds, surface hardeners, and other chemicals that might interfere with bonding of flooring to substrate.

B. Cementitious Subfloor Surfaces: Verify that substrates are ready for resilient flooring installation by testing for moisture and alkalinity (pH).
    1. Test as Follows: Perform one of each test per 1,000 sf of installation area.
        a. Alkalinity (pH): **<<ASTM F710>>** in accordance with manufacturer's instructions.
        b. Internal Relative Humidity: **<<ASTM F2170>>**, using in situ probes. Acceptable maximum of 75 percent relative humidity.
        c. Moisture Vapor Emission: **<<ASTM F1869>>**, anhydrous calcium chloride test. Acceptable maximum moisture vapor emission rate of 5 pounds of water for every 1000 square feet in 24 hours.
    2. If test results are not within limits recommended by flooring manufacturer, apply moisture vapor treatment (MVT) in accordance with manufacturer's requirements.
    3. After testing is complete, prepare concrete and install moisture vapor treatment (MVT) in accordance with manufacturer's written instructions. If testing indicates measurements are within acceptable levels for flooring installation with the need for MVT, the MVT may be omitted where approved by the Architect.

C. Verify that required floor-mounted utilities are in correct location.

D. Commence with installation after noncompliant conditions are corrected.

3.02 PREPARATION

A. Remove existing resilient flooring and flooring adhesives; follow the recommendations of **<<RFCI (RWP)>>**.

B. Prepare floor substrates as recommended by flooring and adhesive manufacturers.

DRAFT

C. Use mechanical methods to remove substances incompatible with adhesives, including soap, wax, oil, or silicone. Solvents may not be used.

D. Prepare concrete substrates in accordance with **<<ASTM F710>>**.

E. Install resilient flooring on dry substrates free of curing compounds, sealers, and hardeners.

F. Remove subfloor ridges and bumps. Apply skim coat to fill minor low spots, cracks, joints, holes, and other defects with subfloor filler to achieve smooth, flat, hard surface.

G. Prohibit traffic until filler is fully cured.

H. Sweep and vacuum clean substrate immediately prior to installing resilient flooring.

I. Examine substrates for evidence of moisture, alkalinity, carbonation, or dust. Correct these conditions prior to resilient flooring installation.

J. Apply primer to prevent telegraphing or interference with adhesion by substances that cannot be removed.

3.03 INSTALLATION - GENERAL

A. Starting installation constitutes acceptance of subfloor conditions.

B. Install in accordance with manufacturer's written instructions for full spread adhesive application.

C. Final installation shall be free of open cracks, voids, raising, and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

D. Hand roll resilient flooring where indicated in accordance with manufacturer's instructions.

E. Adhesive-Applied Static-Dissipative Installation:

1. Place copper grounding strip in conductive adhesive and apply additional adhesive to top side of strip before installing static control flooring. Allow strip to extend beyond flooring in accordance with static control flooring manufacturer's instructions. Coordinate with Division 26 for grounding and bonding to building grounding system.
2. Fit joints and butt seams tightly.
3. Set flooring in place, press with heavy roller to attain full adhesion.

F. Where type of floor finish, pattern, or color are different on opposite sides of door, terminate flooring under centerline of door.

G. Install edge/reducer strips at unprotected or exposed edges, where flooring terminates, and where indicated.

1. Metal Strips: Attach to substrate **<< before; after; or _____>>** installation of flooring using stainless steel screws.
2. Resilient Strips: Attach to substrate using adhesive.

H. Scribe flooring to walls, columns, cabinets, floor outlets, and other appurtenances to produce tight joints.

I. At movable partitions, install flooring under partitions without interrupting floor pattern.

J. Extend resilient flooring into toe spaces, door reveals, closets, and similar openings.

K. Indicate reference markers, holes, and openings for future cutting on installed resilient flooring to maintain placement using nonpermanent, non-staining devices.

L. Coordinate placement of resilient flooring with electrical ducts and devices and maintain pattern continuity with resilient flooring installed on top of floor covers and electrical devices. Adhere edges of resilient flooring tightly around and to covers.

DRAFT

3.04 INSTALLATION - TILE FLOORING

A. Mix tile from container to ensure shade variations are consistent when tile is placed, unless otherwise indicated in manufacturer's installation instructions.
   1. Follow sequence of numbered tiles if indicated in manufacturer's instructions.

B. Lay flooring with joints and seams **<< parallel; at 45 degrees; or _____>>** to building lines to produce symmetrical pattern. Tiles on opposite extents of space shall be of equal width.

C. Do not use and discard broken, chipped, cracked, or deformed tiles.

D. Install square tile to **<< quarter-turn; ashlar; basket weave; or _____>>** pattern. Allow minimum 1/2 full size tile width at room or area perimeter.

E. Install plank tile with a random offset of at least 6 inches from adjacent rows.

3.05 INSTALLATION - RESILIENT BASE

A. Fit joints tightly and make vertical. Maintain minimum dimension of 18 inches between joints.

B. Install base on solid backing. Bond tightly to wall and floor surfaces.
   1. Install base on permanent walls, columns, pilasters, and casework/cabinet knee and toe spaces, and other exposed vertical faces, unless noted otherwise.

C. Job form internal and external corners in accordance with manufacturer's instructions. Form corners by "V" cutting or scribing; do not bend material in a manner that creates stress whitening.

D. Scribe and fit to door frames and other interruptions.

E. Fill voids at top of base using manufacturer's recommended filler sealant or adhesive when installing on uneven substrates.

3.06 CLEANING

A. Remove excess adhesive from floor, base, and wall surfaces without damage.

B. Clean in accordance with manufacturer's written instructions.

C. Immediately after resilient flooring installation:
   1. Clear exposed resilient flooring surfaces of adhesive and other blemishes.
   2. Thoroughly sweep and vacuum clean resilient flooring surfaces.
   3. Remove marks and oil by damp mopping.

D. Select a classroom for mockup cleaning prior to general cleaning of all spaces. Arrange for inspection and approval by MCPS Building Services Manager. Approved classroom shall be used as a basis for general cleaning.

E. Vinyl Composition Tile (VCT) and Rubber Flooring:
   1. Stripping:
      a. Strip floor using a slow speed floor machine and black stripping pad. Use Essential Industries, Green Essence 8881FX, Green Strip only.
      b. Rinse floor at least twice with clean water and let dry. Use wet-dry vacuum to remove stripping solution and water.
   2. Apply Finish:
      a. Apply six coats (2,000 to 2,500 sf/gal) of Essential Industries, Green Essence, 8201FF, Green G2 Finish with clean pre-rinsed rayon mop, allowing a minimum of one hour dry time between each coat.
      b. Allow final coat to dry for 24 hours before allowing traffic on finished floor.

DRAFT

3.07 PROTECTION

A. Prohibit traffic on resilient flooring for 48 hours after installation.

B. Cover resilient flooring and accessories with heavy-duty, breathable, temporary flooring protection and protect from heavy construction traffic and equipment to prevent mars, marks, indentations, and other damage until Date of Substantial Completion.

END OF SECTION 096500

DRAFT

SECTION 096566
RESILIENT ATHLETIC FLOORING

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers--Tension.

B. ASTM D2240 - Standard Test Method for Rubber Property--Durometer Hardness.

C. ASTM D4541 - Standard Test Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers.

D. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials.

E. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring.

F. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride.

G. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes.

H. ASTM F3010 - Standard Practice for Two-Component Resin Based Membrane-Forming Moisture Mitigation Systems for Use Under Resilient Floor Coverings.

I. CARB (SCM) - Suggested Control Measure for Architectural Coatings; California Air Resources Board.

J. CHPS (HPPD) - High Performance Products Database.

K. SCAQMD 1113 - Architectural Coatings.

L. SCAQMD 1168 - Adhesive and Sealant Applications.

M. SCS (CPD) - SCS Certified Products.

N. UL (GGG) - GREENGUARD Gold Certified Products.

1.02 SUBMITTALS

A. Product Data: Manufacturer's printed data sheets for products specified.

B. Shop Drawings: Fabrication and installation details. Include layout, color(s), dye lot, and orientation.

1. Indicate columns, electrical outlets, athletic equipment inserts, and other floor penetrations or items installed through resilient athletic flooring.
2. Indicate border tiles, floor patterns, seam location, layout, colors, and widths of game lines, graphics, and other markings.

C. Selection Samples: Manufacturer's color charts for flooring materials specified and game line paints, indicating full range of colors and textures available.

D. Verification Samples: Actual flooring material specified, of each selected color, in manufacturer's standard size square samples.

1. Include samples of game lines, illustrating colors selected.
2. Include samples of each vinyl sheet flooring color and pattern required; with seam running lengthwise and in center of 6 by 9 inch sample applied to a rigid backing and prepared by installer for this project.

DRAFT

E. Installer's qualification statement.

F. Sustainability Submittals: Refer to Division 01, "Sustainable Design Requirements."

1.03 CLOSEOUT SUBMITTALS

A. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.
   1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
   2. Extra Flooring Material: 12 boxes matching installed flooring from same product run.

B. Maintenance Data: For resilient athletic flooring.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing work of the type specified and certified/approved by flooring manufacturer for installation of specified flooring system.

1.05 DELIVERY, STORAGE, AND HANDLING

A. See Section **<< 017419 - Construction Waste Management and Disposal>>** for packaging waste requirements.

B. Deliver materials to project site in manufacturer's unopened containers clearly labeled with manufacturer's name and identification of contents.

C. Store materials in dry and clean location until needed for installation. Store tiles flat. Store rolls upright. During installation, handle in a manner that will prevent marring and soiling of finished surfaces.

1.06 FIELD CONDITIONS

A. Maintain temperature in spaces to receive adhesively installed resilient flooring within range of **<< 70 to 95 degrees F>>** for not less than 48 hours before the beginning of installation and for not less than 48 hours after installation has been completed. Subsequently, do not allow temperature in installed spaces to drop below **<< 50 degrees F>>** or to go above **<< 100 degrees F>>**.

PART 2 PRODUCTS

2.01 PREFORMED ATHLETIC FLOORING

A. Vinyl Sheet Flooring:
   1. Wearing Surface: Pure polyvinyl chloride, mechanically extruded and uniformly resilient material with uniform color throughout thickness.
   2. Backing: **<< None; Foamed plastic; Unfoamed plastic; or _____>>**.
   3. VOC Content: Certified as Low Emission by one of the following :
      a. Product listing in **<<UL (GGG)>>**.
      b. FloorScore certified product listing in **<<SCS (CPD)>>**.
   4. Sheet Thickness: Minimum 7.5 mm.
      a. Wear Layer Thickness: Minimum 2.0 mm.
   5. Sheet Width: Minimum **<< 48 inches; 78 inches; or __ inches>>**.
   6. Sheet Lengths: As necessary to **<< eliminate; or minimize>>** transverse seams.
   7. Shock Absorption: Class 3 (minimum 34%), when tested per **<<ASTM F2772>>**.
   8. Tensile Strength: Minimum 1000 psi, per **<<ASTM D412>>**.

DRAFT

9. Durometer Hardness, Type A: Minimum of 65, when tested in accordance with **<<ASTM D2240>>**.
10. Seaming Method: Welding with **<< heat; or chemical>>**.
11. Surface Texture: Smooth.
12. Color: To be selected by Architect from manufacturer's full range.
13. Game Lines: Paint as approved by manufacturer of vinyl sheet flooring.
14. Top Coat: If required by manufacturer for additional UV protection, a clear polyurethane coating that protects game lines and wearing surface.
15. Products:
    a. Gerflor USA, Inc; Taraflex Sport M Plus with DryTex.
    b. Mondo America, Inc; Vinylsport.
    c. Tarkett Sports; Omnisports PurePlay with Tarkolay.
    d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Rubber Tile Flooring: Recycled rubber**<< and colored EPDM granules; or None - N/A>>** with urethane binder.
1. Backing: Recycled black rubber, laminated to colored top layer.
2. VOC Content: Certified as Low Emission by one of the following:
    a. Product listing in **<<UL (GGG)>>**.
    b. FloorScore certified product listing in **<<SCS (CPD)>>**.
    c. Product listing in **<<CHPS (HPPD)>>**.
3. Thickness: Nominal **<< 5/16 inch; 3/8 inch; 1/2 inch; or ___ inch>>**.
4. Size: Manufacturer's standard square tile.
5. Tensile Strength: Minimum 150 psi, per **<<ASTM D412>>**.
6. Tile Edge/Installation: Straight, adhesive installation.
7. Surface Texture: Smooth.
8. Color: To be selected by Architect from manufacturer's full range.
9. Products:
    a. Amarco; Sport-Fleck.
    b. American Floor Products Company (AFCO); Coronado 90 (FE-1015).
    c. Connor Sports; Elastimat.
    d. Dynamic Sports Construction, Inc.; DynaFit.
    e. Horner Sports Flooring; EcoTuff.
    f. Mats Inc.; Duo Tile.
    g. Mondo; Ramflex.
    h. Tarkett; Replay.
    i. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.02 ACCESSORIES

A. Low-Emitting Materials:
1. Paints and Coatings: Paints and coatings field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet applicable VOC limits of **<<CARB (SCM)>>** or **<<SCAQMD 1113>>**.

DRAFT

2. Adhesives and Sealants: Adhesives and sealants field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet the chemical content requirements of **<<SCAQMD 1168>>**.

B. Leveling Compound: Provide manufacturer's recommended latex-modified cement formulation as recommended by flooring manufacturer for substrate conditions.

C. Moisture Vapor Treatment: Where resilient flooring and accessories are installed over concrete slabs, provide alkaline-resistant product designed to control excessive moisture vapor transmission through concrete slab, per the following:

1. Products: Provide product approved by flooring manufacturer and complying with performance requirements below, equivalent to one of the following:
   a. Duraamen Engineered Products, Inc.; Perdure MVT.
   b. Maxxon Corporation; Maxxon MVP.
   c. Tnemec Company Inc.; Epoxoprime MVT, Series 208.
2. Performance Requirements:
   a. Verify with flooring manufacturer that submitted product maintains compliance with all provisions of flooring manufacturer’s warranty.
   b. Low-VOC: Provide product with VOC content less than 15 g/L.
   c. Bond Strength to Concrete: Minimum 400 psi per **<<ASTM D4541>>** (100% concrete failure).
   d. Permeance: Maximum 0.1 perm per **<<ASTM E96/E96M>>**, and 0.10 grains/hr/ft^2/in-Hg, per **<<ASTM F3010>>** ASTM F3010.
   e. Applications: Provide MVT for all concrete slabs on-grade and lightweight concrete elevated slabs.

D. Flooring Adhesive: Waterproof; types recommended by flooring manufacturer.

E. Game Line and Marker Paint: Provide paint type recommended by flooring manufacturer for compatibility and adhesion.

1. Provide two colors, selected by Architect from manufacturer's full range; primary (basketball) and secondary (volleyball).

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates with installer for conditions detrimental to installation of athletic flooring. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Verify that surfaces are flat to tolerances acceptable to flooring manufacturer, free of cracks that might telegraph through flooring, clean, dry, and free of curing compounds, surface hardeners, and other chemicals that might interfere with bonding of athletic flooring to substrate.

C. Cementitious Subfloor Surfaces: Verify that substrates are ready for resilient flooring installation by testing for moisture and alkalinity (pH).

1. Test as Follows: Perform one of each test per 1,000 sf of installation area.
   a. Alkalinity (pH): **<<ASTM F710>>** in accordance with manufacturer's instructions.
   b. Internal Relative Humidity: **<<ASTM F2170>>**, using in situ probes. Acceptable maximum of 75 percent relative humidity.
   c. Moisture Vapor Emission: **<<ASTM F1869>>**, anhydrous calcium chloride test. Acceptable maximum moisture vapor emission rate of 5 pounds of water for every 1000 square feet in 24 hours.

DRAFT

2. If test results are not within limits recommended by flooring manufacturer, apply moisture vapor treatment (MVT) in accordance with manufacturer's requirements.
3. After testing is complete, prepare concrete and install moisture vapor treatment (MVT) in accordance with manufacturer's written instructions. If testing indicates measurements are within acceptable levels for flooring installation with the need for MVT, the MVT may be omitted where approved by the Architect.

D. Verify that required floor-mounted utilities are in correct location.

E. Commence with installation after noncompliant conditions are corrected.

3.02 PREPARATION

A. Prepare floor substrates as recommended by flooring and adhesive manufacturers.

B. Remove ridges and bumps in concrete substrate. Apply skim coat to fill minor low spots, cracks, joints, holes, and other defects with leveling compound as necessary to achieve substrate flatness of plus or minus 1/8 inch within 10 ft radius.

C. Use mechanical methods to remove substances incompatible with adhesives, including soap, wax, oil, or silicone. Solvents may not be used.

D. Sweep and vacuum clean areas to receive athletic flooring immediately before beginning installation.

3.03 INSTALLATION

A. Starting installation constitutes acceptance of subfloor conditions.

B. Install in accordance with manufacturer's written instructions.

C. Resilient Sheet Flooring:
1. Unroll flooring and allow to relax before beginning installation.
2. Mix adhesive thoroughly and apply to substrate with notched trowel. Roll flooring into fresh adhesive, overlapping end seams and double cutting, butting factory edges and compression fitting.
3. Roll entire flooring surface with steel roller to assure adhesion to substrate and eliminate air bubbles.
4. Immediately remove any adhesive from flooring surface, using chemical recommended by flooring manufacturer.
5. Weld seams using techniques and equipment recommended by manufacturer.
6. Lay out game lines using tape and taping machine approved by flooring manufacturer. Obtain Owner approval of layout prior to paint application. Apply game line paint with roller, and allow to dry before removing tape.
7. Apply transparent top coat over flooring if recommended by manufacturer, to achieve a uniform finished appearance.

D. Rubber Tile Flooring:
1. Lay out center lines in spaces to receive tile flooring, based on location of principal walls. Start tile installation from center, and adjust as necessary to avoid tiles less than one-half width at perimeter.
2. Lay tiles square with room axis, unless otherwise indicated, matching for color and pattern by selecting from cartons and mixing as recommended by manufacturer. Do not used broken, cracked, chipped, or deformed tiles.
3. Spread only enough adhesive to permit installation of materials before initial set.
4. Fit joints and butt seams tightly; press with heavy roller to attain full adhesion.

DRAFT

E. Extend flooring into accessory spaces (such as closets, wall recesses, or toe spaces) and to center line of cased openings or center line of door leaf at door openings, unless otherwise indicated. Where transitions occur between resilient athletic flooring and other flooring types, extend or cut flooring to suit transition.

3.04 CLEANING

A. Clean flooring using methods recommended by manufacturer.

3.05 PROTECTION

A. Protect finished athletic flooring from construction traffic to ensure that it is without damage upon Date of Substantial Completion.

END OF SECTION 096566

DRAFT

SECTION 096623
RESINOUS MATRIX TERRAZZO FLOORING

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ANSI A118.4 - American National Standard Specifications for Modified Dry-Set Cement Mortar.

B. ANSI A118.12 - American National Standard Specifications for Crack Isolation Membranes for Thin-Set Ceramic Tile and Dimension Stone Installation.

C. ASTM D4541 - Standard Test Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers.

D. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials.

E. NTMA (EPOXY) - Epoxy Terrazzo Specifications.

F. NTMA (GRAD) - Aggregate Gradation Standards.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene a preinstallation meeting at the Project site one week before starting work of this section. Require attendance by concrete subcontractor and any other relevant installers.

1. Review the work of this section, including substrate requirements, including slab recesses, control joints, and preparation.
2. Review scheduling, material deliveries, and temporary facilities and equipment that will be required, and installation procedures.
3. Review specialty finishes, aggregates, patterns and designs. Review special conditions such as stair treads and nosings.
4. Review protection of the finished work, including traffic limitations and protection measures.

1.03 SUBMITTALS

A. Product Data: Provide data for **<< divider strips; control joint strips; expansion joints; sealer; and _____ >>**; include printed copy of current NTMA recommendations for type of terrazzo specified.

1. Include product data for manufacturer's moisture vapor treatment product.

B. Shop Drawings: Indicate complete terrazzo layout, including patterns and colors. Indicate divider strip and control and expansion joint layout, and details of adjacent components.

1. Include details of Owner's logo / seal.
2. Include stair tread, riser, and landing details.
3. For precast units, detail profile, edge, and anchorage requirements.

C. Verification Samples: Include terrazzo samples approximately 6 inches square illustrating project-specific colors, chip size and variation, chip gradation, and matrix color. Include samples of divider strips

D. Concrete Subfloor Test Report: Submit a copy of the moisture and alkalinity (pH) test reports.

E. Manufacturer's Qualification Statement.

F. Installer's Qualification Statement.

DRAFT

G. Cleaning and Maintenance Data: Include procedures for stain removal, stripping, and sealing. Include specific cleaners and chemicals that should not be used on terrazzo.

H. Manufacturer's Inspection Reports.

1.04 QUALITY ASSURANCE

A. Perform work in accordance with NTMA's "Terrazzo Specifications and Design Guide" and with recommendations as posted at their web site at www.ntma.com.

B. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section.
   1. Associate member firm of the National Terrazzo and Mosaic Association, Inc.

C. Installer Qualifications: Company specializing in performing the type of work specified in this section.
   1. Contractor member of the National Terrazzo and Mosaic Association, Inc.

D. Coordination: Epoxy terrazzo flooring manufacturer shall review and approve cast-in-place concrete contractor's quality control measures and shop drawings to ensure concrete slab placement, slab recesses, and finish are acceptable for application of terrazzo.

1.05 MOCK-UP

A. Construct mock-up of terrazzo illustrating appearance of finished work in each configuration required. Size mock-up to be not less than 100 square feet.
   1. Include control joint(s) with divider strip, and include multiple adjacent colors to verify color selections, as applicable.
   2. Include a section with terrazzo wall base.
   3. Include a mockup of, at minimum, three stair treads/risers.
   4. Construct mockup directly adjacent to existing terrazzo, to demonstrate material and color match and workmanship of blending to existing.

B. Locate where directed.

C. Approved mock-up may remain as part of the work.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Store terrazzo materials in a dry, secure area.

B. Maintain minimum temperature of 60 degrees F.

C. Keep products away from fire or open flame.

1.07 FIELD CONDITIONS

A. Do not install terrazzo when temperature is below 50 degrees F or above 90 degrees F.

B. Prior to and during each day of installation, the terrazzo contractor shall verify that the dew point is at least 5 degrees F less than the slab and air temperature.

C. Maintain temperature within specified range 24 hours before, during, and 72 hours after installation of flooring.

D. Provide ambient lighting with permanent lighting or with lighting that simulates facility's permanent lighting.

DRAFT

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Resinous Matrix Terrazzo Flooring:
1. Crossfield Products Corp.; Dex-O-Tex Division; Cheminert.
2. Key Resin Company; Key Epoxy Terrazzo System.
3. Master Terrazzo Technologies LLC; Morricite.
4. Quadrant Chemical Corporation; Quadset Epoxy Terrazzo.
5. Sherwin-Williams High Performance Flooring; Terrazzo 1100.
6. Sika Corporation; Sikafloor Terrazzo.
7. TEC Specialty Construction Brands, Inc; Tuff-Lite Epoxy Terrazzo.
8. Terrazzo & Marble Supply Companies; Terroxy Resin Systems.
9. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.02 EPOXY MATRIX TERRAZZO APPLICATIONS

A. Floors:
1. Thickness: **<< 3/8 inch>>**, nominal.
2. Color(s): **<< As selected by Architect; Match Architect's sample; Match existing; or As indicated on drawings>>** Match **<<Architect>>**'s sample.

B. Wall Base: **<< Integral epoxy terrazzo; Precast epoxy terrazzo; or None - N/A>>**.
1. Thickness: **<< 3/8 inch; 1/4 inch; or ___ inch>>**, minimum.
2. Style: **<< Coved; or _____>>**.
3. Color(s): Same as adjacent floor.
4. Color(s): As indicated on drawings.
5. Aggregate Type and Size: Same as floors.

C. Stairs - **<< Treads; Risers; Stringers; Landings; and _____>>**: Precast epoxy terrazzo. Landings: Poured epoxy terrazzo.
1. Thickness: **<< 1/2 inch; 1-1/2 inch; or ___ inch>>**, minimum.
2. Color(s): **<< Same as adjacent floor; or As indicated on drawings>>**.
3. Aggregate Type and Size: Same as floors.

D. Tile - Elevator cab floors: Precast epoxy terrazzo.
1. Thickness: **<< 1/2 inch>>**, minimum.
2. Color(s): **<< Same as adjacent floor; or As indicated on drawings>>**.
3. Aggregate Type and Size: Same as floors.

2.03 MATERIALS

A. Epoxy Matrix Terrazzo: Aggregate and matrix mix applied to substrate, troweled flat, and ground smooth.
1. Mix Proportions: As required to achieve appearance specified.

B. Matrix: Two component resin and epoxy hardener with mineral filler and color pigment, non-volatile, thermo-setting.

C. Aggregate: Type as indicated; sized in accordance with NTMA aggregate gradation standards; color(s) as indicated, uniform in color.
1. Color 1**<< - Field; or None - N/A>>**: **<< 100>>** percent marble chips.
2. Color 2**<< - Accent Field; or None - N/A>>**: **<< 100>>** percent marble chips.

DRAFT

3. Color x**<< - Special Accent; or None - N/A>>**: **<< 80>>** percent marble chips, **<< 10>>** percent glass, and **<< 10>>** percent mother of pearl.
4. Color x**<< - Basic Accent; or None - N/A>>**: **<< 80>>** percent marble chips, **<< 20>>** percent glass.
5. Color x**<< - Basic Accent; or None - N/A>>**: **<< 80>>** percent marble chips, **<< 20>>** percent glass.
6. Color x**<< - Basic Accent; or None - N/A>>**: **<< 80>>** percent marble chips, **<< 20>>** percent glass.
7. Color x**<< - Basic Accent; or None - N/A>>**: **<< 80>>** percent marble chips, **<< 20>>** percent glass.
8. Color x**<< - Basic Accent; or None - N/A>>**: **<< 80>>** percent marble chips, **<< 20>>** percent glass.

D. Finishing Grout: Epoxy, color to match terrazzo matrix.

E. Precast Epoxy Terrazzo Units: Fabricate to sizes and profiles indicated on drawings.
1. Setting Material: **<< Latex Portland cement mortar, ANSI A118.4; Epoxy adhesive, ANSI A118.3; or _____>>**.
2. Crack Isolation Material: Polyethylene sheet membrane, **<<ANSI A118.12>>**.

2.04 ACCESSORIES

A. Divider Strips: 1/8 inch thick zinc exposed top strip, zinc coated steel concealed bottom strip, with anchoring features.

B. Control Joint Strips:1/8 inch nominal width zinc exposed top strips, zinc coated steel concealed bottom strips, **<< 1/8 inch; 1/4 inch; or _____ inch>>** wide neoprene filler strip between vertical strips, with anchoring features.

C. **<< Divider; and Control Joint>>** Strip Height: To suit thickness of terrazzo topping, with allowance for grinding.

D. Base Cap, Base Divider Strip, and Separator Strip: Match divider strips.

E. Non-Slip Inserts: Provide channel-shaped inserts filled with a mixture of resin and fine, abrasive aggregate.

F. Anchors and Reinforcement for Precast Units: As recommended by manufacturer for type of installation.

G. Sealer: Colorless, non-yellowing, non-strippable, penetrating liquid urethane type to completely seal matrix surface, not detrimental to terrazzo components.
1. Products:
a. Essential Industries, Inc; T-Rx.
b. Master Terrazzo Technologies; Morricite WB Urethane Sealer 158.
c. Terrazzo & Marble Supply Companies; Terroxy WB Urethane Sealer.

H. Concrete Subfloor Flexible Joint Reinforcement and Crack Isolation Membrane: Manufacturer's standard resinous type with fiberglass scrim.

I. Primer: Manufacturer's recommended product; compatible with indicated substrate.

J. Moisture Vapor Treatment: Provide terrazzo manufacturer's recommended alkaline-resistant product designed to control excessive moisture vapor transmission through concrete slab, per the following:
1. Performance Requirements:

DRAFT

a. Verify with flooring manufacturer that submitted product maintains compliance with all provisions of flooring manufacturer's warranty.
b. Low-VOC: Provide product with VOC content less than 15 g/L.
c. Bond Strength to Concrete: Minimum 400 psi per **<<ASTM D4541>>** (100% concrete failure).
d. Permeance: Maximum 0.3 perm per **<<ASTM E96/E96M>>**.
e. Applications: Provide MVT for all concrete slabs on-grade and lightweight concrete elevated slabs.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that subfloor surfaces are smooth and flat within the tolerances specified for that type of work and are ready to receive terrazzo.

B. Cementitious Subfloor Surfaces: Install manufacturer's recommended moisture vapor treatment at all locations to receive terrazzo floor finish in accordance with manufacturer's instructions.

C. Verify that any required floor-mounted utilities are in correct location.

3.02 PREPARATION

A. Clean substrate of foreign matter.

B. Prepare concrete subfloor by shot-blasting surface in accordance with manufacturer's instructions, and according to ICRI Technical Guidelines for CSP 3 or 4 surface profile.
1. Acid washing and/or grinding of concrete slabs is not allowed.
2. Review vacuum blasted concrete slab substrate for cracks with the terrazzo manufacturer's technical representative. Rout out and fill significant non-moving cracks with epoxy resin, and patch lesser non-moving cracks with fine mesh strip set into wet primer and embedded in epoxy resin as recommended by technical representative.
3. Provide an epoxy or cementitious pre-fill material manufactured or recommended by epoxy flooring manufacturer and compatible with flooring system to fill low slab areas to attain acceptable substrate. This companion material is considered part of the epoxy terrazzo flooring system and shall be included in the system warranty. Gypsum composition underlayment pre-fill material is not acceptable.

C. Apply partial coverage of flexible reinforcing membrane to cracks and construction joints in the concrete subfloor in accordance with manufacturer's instructions. Reinforce with fiberglass scrim.
1. Use a full coverage application under intricate designs including, but not limited to, curves, logos, county seals, or areas with multiple color transitions in accordance with manufacturer's instructions. ******Leave this paragraph in if doing a logo insert, a highly complicated design, or a lot of curves.******

D. Apply primer in accordance with manufacturer's instructions.

3.03 INSTALLATION

A. Install control joint strips straight and flat to locations indicated.

B. Install divider strips according to pattern approved on shop drawings.

C. Install non-slip inserts in **<< floors; stair treads; and _____>>** where indicated.

D. Install recessed **<< floor mat; floor access panel; and _____>>** frames.

DRAFT

E. Install base**<< and border; or None - N/A>>** divider**<< and control joint; or None - N/A>>** strips to match floor pattern.

F. Install terminating cap strip at top of base; attach securely to wall substrate.

G. Place terrazzo mix over substrate to thickness indicated.

H. Anchor precast units as indicated on drawings.

I. Install precast units using specified setting material.

3.04 FINISHING

A. Finish terrazzo to NTMA requirements.

B. Grind terrazzo surfaces with power disc machine; sequence with coarse to fine grit abrasive to a minimum of **<< 800; 400; 1200; or _____>>** grit level for final finish, **<< using a wet method; using a dry grinder with vacuum to control dust; or _____>>**. ******800 grit level produces a decent shine. Go down to 400 grit for projects with smaller budgets. Go up to 1200 or higher grit for extremely polished floors if budget allows.******

C. Apply grout to fill voids exposed from grinding.

D. Remove grout coat by grinding, using a fine grit abrasive.

E. Hand grind vertical and curved surfaces similarly.

3.05 TOLERANCES

A. Maximum Variation from Flat Surface: 1/4 inch in 10 feet.

B. Maximum Variation from Level (Except Surfaces Sloping to Drain): 1/8 **<< 1/8 inch; or ____ inch>>**.

3.06 FIELD QUALITY CONTROL

A. Provide on-site inspection by terrazzo manufacturer's representative at minimum two times during installation of this work. Installing Contractor shall notify manufacturer of installation start date and scheduling. Manufacturer's representative shall provide written copies of inspection reports within 10 days of inspection date.

1. The first inspection shall be of the mockup, or, if no mockup is specified, of the first 100 square feet of the install.
2. The second inspection shall be at substantial completion.
3. The installing contractor shall be responsible for immediate repairs or corrections to the work.

3.07 CLEANING

A. Scrub and clean terrazzo surfaces with neutral pH cleaner in accordance with manufacturer's instructions. Let dry.

B. Immediately after terrazzo has dried, apply sealer in accordance with NTMA and manufacturer's instructions.

C. Polish surfaces in accordance with manufacturer's instructions.

3.08 PROTECTION

A. Do not allow traffic on installed terrazzo for the period required by manufacturer's instructions, or 24 hours, whichever is longer.

B. Protect finished terrazzo from damage due to subsequent construction until Date of Substantial Completion.

DRAFT

C. Leave the finished installation clean and free of cracked, chipped, broken, unbonded, and otherwise defective terrazzo work. Repair or replace defective terrazzo work to attain the specified NTMA standards for finished work. **<< The party responsible for the damaged or otherwise non-conforming work shall be responsible for the cost of repairs.; or None - N/A>>**

END OF SECTION 096623

DRAFT

SECTION 096700
RESINOUS FLOORING AND WALLS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM D4541 - Standard Test Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers.

B. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials.

C. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring.

D. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride.

E. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes.

F. ASTM F3010 - Standard Practice for Two-Component Resin Based Membrane-Forming Moisture Mitigation Systems for Use Under Resilient Floor Coverings.

G. ICRI 310.2R - Selecting and Specifying Concrete Surface Preparation for Sealers, Coatings, Polymer Overlays, and Concrete Repair.

H. SCAQMD 1113 - Architectural Coatings.

1.02 ADMINSTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene at project site seven calendar days prior to scheduled beginning of construction activities of this section to review section requirements.

1. Require attendance by representatives of manufacturer's technical representative, **<< installer; _____; and other entities directly affecting, or affected by, construction activities of this section>>**.
2. Review preparation, primers, installation methods, curing requirements, protection measures, and project cleaning requirements for each resinous system.
3. Notify Owner and **<<Architect>>** seven calendar days in advance of scheduled meeting date.

1.03 SUBMITTALS

A. Product Data: Provide technical data on specified products, describing physical and performance characteristics, sizes, patterns and colors available.

B. Selection Samples: Provide manufacturer's color charts illustrating full range of patterns and colors for each flooring material.

C. Verification Samples: Manufacturer's standard size physical samples, on rigid backing, illustrating each selected pattern and color. Verify that texture, clear coating thickness, and sheen is acceptable to the Owner and Architect prior to installation.

D. Sustainability Submittals: Refer to Division 01, "Sustainable Design Requirements."

E. Concrete Subfloor Test Report: Submit a copy of the moisture and alkalinity (pH) test reports.

F. Manufacturer's Installation Instructions: Indicate **<< special procedures; perimeter conditions requiring special attention; application rate for each coat; and _____>>**.

DRAFT

G. Manufacturer's Qualification Statement: Include signed certificates of each resinous flooring component.

H. Applicator's Qualification Statement.

I. Field Quality Control Reports: Submit inspection reports of manufacturer's technical representative.

1.04 CLOSEOUT SUBMITTALS

A. Maintenance Data: Include maintenance procedures, recommended maintenance materials, procedures for stain removal, repairing surface, and suggested schedule for cleaning.

B. Warranty Documentation.

1.05 QUALITY ASSURANCE

A. Applicator Qualifications: Company specializing in performing the work of this section; certified and approved by manufacturer in writing.
   1. Approved and certified by manufacturer for application of resinous systems.
   2. Employs persons trained and approved by manufacturer for application of resinous systems.

1.06 MOCK-UPS

A. Construct mock-up(s) of fluid applied flooring to serve as basis for evaluation of texture and workmanship.
   1. Number of Mock-Ups to be Prepared: One.
   2. Use same materials and methods for use in the work.
   3. Use approved design samples as basis for mock-ups.
   4. Locate where directed by Architect.
   5. Minimum Size: 48 inches by 48 inches.

B. See Section **<< 014000 - Quality Requirements>>** for additional requirements.

C. Obtain approval of mock-up by **<<Architect>>** before proceeding with work.

D. Approved mock-up may remain as part of the work.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver in manufacturer's original unopened packaging and containers with manufacturer's name and instructions for storing.

B. Store resin materials in a dry, secure area.

C. Store materials for three days prior to installation in area of installation to achieve temperature stability.

1.08 FIELD CONDITIONS

A. Maintain minimum temperature in storage area of 55 degrees F.

B. Store materials in area of installation for minimum period of 24 hours prior to installation.

C. Maintain ambient temperature required by manufacturer 72 hours prior to, during, and 24 hours after installation of materials.

D. Provide or simulate permanent lighting conditions during installation.

E. Prevent traffic during resinous system application for a minimum of 24 hours or manufacturer's suggested time, whichever is greater.

DRAFT

1.09 WARRANTY

A. Manufacturer's Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of resinous flooring system that fail in materials or workmanship withing a period of 3 years from date of acceptance by Owner or Substantial Completion, whichever is later.

PART 2 PRODUCTS

2.01 SOURCE LIMITATIONS

A. Obtain primary system components from a single source and a single manufacturer. Primary system materials include, but are not limited to, primers, resins, hardening agents, grouting coats, topcoats, and decorative flakes.

B. Obtain secondary system components from manufacturer's recommended source. Secondary system materials include, but are not limited to, patching and fill material, joint sealant, and repair materials.

2.02 FLUID-APPLIED FLOORING<< AND WALL; OR NONE - N/A>> SYSTEMS

A. ******MCPS prefers this product for stairs. Solid color polyurethane cement slurry. Use also in kitchens and showers.****** Fluid-Applied Flooring: Polyurethane cement slurry base coat(s) with broadcast aggregate.
   1. Aggregate: Fine silica sand.
   2. System Thickness: 1/4 inch, nominal, dry film thickness (DFT).
   3. VOC Content: Maxiumum 50 g in accordance with **<<SCAQMD 1113>>**.
   4. Texture: Slip resistant.
   5. Sheen: **<< High gloss; Gloss; Satin; Matte; or _____>>**.
   6. Color: To be selected by **<<Architect>>** from manufacturer's full range.
   7. Products:
      a. Elite Crete Systems; Hermetic 4.8S Urethane Cement Slurry.
      b. FlowResin, a Key Resin Company; FlowFresh SR System.
      c. Key Resin Company; Key Urecon SLT System.
      d. Neogard; Neocrete SL.
      e. PPG Flooring; 700 SL Urethane Cement with 700 UV Urethane top coat.
      f. Resinwerks; Bio-Chem SL.
      g. Sherwin-Williams Company; Poly-Crete SLB.
      h. Sika Corporation; Sikafloor PurCem Self-Leveling Broadcast System. ******MCPS preferred Basis of Design.******
      i. TNEMEC; Ultra-Tread ExcellaThane Pigmented High-Wear System.
      j. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. ******Decorative flake polyurethane cement slurry. Use for stairs, locker rooms, and group bathrooms.****** Fluid-Applied Flooring : Cementitious polyurethane moisture tolerant with broadcase aggregate.
   1. Aggregate: Vinyl flakes and fine silica sand.
   2. Top Coat: Manufacturer's recommended polyurethane.
   3. System Thickness: 1/8 inch, nominal, dry film thickness (DFT).
   4. VOC Content: Maximum 50 g/L in accordance with **<<SCAQMD 1113>>**.

DRAFT

5. Texture: Slip resistant.
6. Sheen: **<< <u>High gloss</u>; Matte; or _____>>**.
7. Color: To be selected by **<<Architect>>** from manufacturer's full range.
8. Products:
   a. FlowResin, a Key Resin Company; FlowFresh Ultra Flakes System.
   b. Key Resin Company; Key Urecon Chip/Flake #100 System.
   c. Neogard; Neoflake All Polyurethane System.
   d. Sika Corporation; Sikafloor Decoflake UEF System.
   e. Stonhard, Inc; Stontec TRF.
   f. TNEMEC; Ultra-Tread ExcellaThane Flake System.
   g. Substitutions: **<< <u>See Section 016000 - Product Requirements</u>; or Not permitted>>**.

C. ******Waterproofing system, solid color polyurethane or epoxy system. Use for stacked group bathrooms, stacked showers, or locker rooms at indoor pools.****** Fluid-Applied Flooring: Waterproof, crack-bridging, elastomeric epoxy or polyurethane with urethane top coat.
1. System Thickness: 1/8 inch, nominal, dry film thickness (DFT).
2. VOC Content: Maximum 50g/L in accordance with **<<SCAQMD 1113>>**.
3. Texture: Slip resistant.
4. Sheen: **<< <u>High gloss</u>; Matte; or _____>>**.
5. Color: To be selected by **<<Architect>>** from manufacturer's full range.
6. Products:
   a. Neogard; Peda-Gard.
   b. Sherwin-Williams Company; Resuflor Gard MR.
   c. Sika Corporation; Sikafloor Merflex-PS.
   d. Stonhard, Inc; Stongard MD.
   e. TNEMEC; Sub-Flex EP MER System.
   f. Substitutions: **<< <u>See Section 016000 - Product Requirements</u>; or Not permitted>>**.

D. ******Wall system, integrates seamlessly with floor resinous system. Use on shower walls.****** Fluid-Applied Wall System: Polyurethane or epoxy primer**<< <u>and CMU block filler</u>; or None - N/A>>** base coat(s) and pigmented polyurethane top coats. ******Indicate CMU block filler for CMU walls or None for gypsum walls.******
1. System Thickness: 11 mils, nominal, dry film thickness (DFT).
2. VOC Content: Maximum 50 g/L in accordance with **<<SCAQMD 1113>>**.
3. Texture: **<< Slip resistant; Orange peel; <u>Smooth</u>; or _____>>**.
4. Sheen: **<< High gloss; Gloss; <u>Satin</u>; Matte; or _____>>**.
5. Color: To be selected by **<<Architect>>** from manufacturer's full range.
6. Products:
   a. Key Resin Company; Epoxy/Urethane Wall System.
   b. Neogard; Wall-Gard HD.
   c. Sherwin-Williams; Resuwall Aqua.
   d. Sika Corporation; Sikagard-WB.
   e. TNEMEC; Enviro-Glaze Series 297 Top Coat with Enviro-Crete Series 156 Primer and Block Filler.

DRAFT

f. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.03 ACCESSORIES

A. Base Caps: **<< Zinc; Brass; Extruded anodized aluminum; Extruded mill finished aluminum; Extruded rigid PVC; or _____>>** with projecting base of 1/8 inch; color as selected by Architect. ******Indicate base caps when wall finish is a different thickness than base.******

B. Feathered Base: Integral wall base feathered down to transition seamlessly to the wall finish. ******Indicate feathered base when base dies into adjacent wall finish.******

C. Fillet Strips: Molded of flooring resin material.

D. Crack Isolation: Manufacturer's recommended urethane elastomer membrane for protecting fluid-applied floor system against cracking.

E. Joint Control: Manufacturer's recommended polyurethane sealant and backer rod to limit damage from moving joints in the floor.

F. Subfloor Filler: Type recommended by fluid-applied flooring manufacturer.

G. Block Filler: Type recommended by fluid-applied material manufacturer for concealing stricklines in CMU walls.

H. Primer: Type recommended by fluid-applied flooring manufacturer.

I. Moisture Vapor Treatment: Where fluid-applied flooring and accessories are installed over concrete slabs, provide alkaline-resistant product designed to control excessive moisture vapor transmission through concrete slab, per the following:

1. Products: Provide product approved by flooring manufacturer and complying with performance requirements below, equivalent to one of the following:
   a. Duraamen Engineered Products, Inc.; Perdure MVT.
   b. Maxxon Corporation; Maxxon MVP.
   c. Tnemec Company Inc.; Epoxoprime MVT, Series 208.
2. Performance Requirements:
   a. Verify with flooring manufacturer that submitted product maintains compliance with all provisions of flooring manufacturer’s warranty.
   b. Low-VOC: Provide product with VOC content less than 15 g/L.
   c. Bond Strength to Concrete: Minimum 400 psi per **<<ASTM D4541>>** (100% concrete failure).
   d. Permeance: Maximum 0.1 perm per **<<ASTM E96/E96M>>**, and 0.10 grains/hr/ft^2/in-Hg, per **<<ASTM F3010>>**.
   e. Applications: Provide MVT for all concrete slabs on-grade and lightweight concrete elevated slabs.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that subfloor surfaces are smooth and flat within the tolerances specified for that type of work and are ready to receive flooring.

B. Verify that wall surfaces are smooth and flat within the tolerances specified for that type of work, are dust-free, and are ready to receive flooring.

DRAFT

C. Verify that subfloor surfaces are dust-free and free of substances that could impair bonding of materials to subfloor surfaces, including laitance, glaze, efflorescence, curing compounds, form-release agents, grease, and oil.

D. Cementitious Subfloor Surfaces: Install manufacturer's recommended moisture vapor treatment at all locations to receive fluid-applied floor finish in accordance with manufacturer's instructions.

E. Verify that required floor-mounted utilities are in correct location.

3.02 PREPARATION

A. Remove subfloor ridges and bumps. Fill low spots, cracks, joints, holes, and other defects with subfloor filler.

B. Prepare concrete surfaces according to **<<ICRI 310.2R>>**, CSP 4, minimum, unless otherwise required by manufacturer's installation requirements.

1. Abrade the concrete surface through shot-blasting by vacuum pickup and in accordance with manufacturer's instructions.
2. Repair damaged and deteriorated surfaces to a quality acceptable by manufacturer for resinous system installation.
3. Test as Follows: Perform one of each test per 1,000 sf of installation area.
   a. Alkalinity (pH): **<<ASTM F710>>** in accordance with manufacturer's instructions.
   b. Internal Relative Humidity: **<<ASTM F2170>>**, using in situ probes. Acceptable maximum of 75 percent relative humidity.
   c. Moisture Vapor Emission: **<<ASTM F1869>>**, anhydrous calcium chloride test. Acceptable maximum moisture vapor emission rate of 5 pounds of water for every 1000 square feet in 24 hours.
4. If test results are not within limits recommended by flooring manufacturer, apply moisture vapor treatment (MVT) in accordance with manufacturer's requirements.
5. After testing is complete, prepare concrete and install moisture vapor treatment (MVT) in accordance with manufacturer's written instructions. If testing indicates measurements are within acceptable levels for flooring installation with the need for MVT, the MVT may be omitted where approved by the Architect.

C. Apply crack isolation compound to concrete slab in accordance with flooring manufacturer's instructions.

D. Apply, trowel, and float filler to achieve smooth, flat, hard floor surface. Grind irregularities above the surface level **<< Grind irregularities above the surface level. ; or None - N/A>>**Prohibit traffic until filler is cured.

E. Apply, trowel, and float block filler to achieve smooth, flat, hard wall surface. Grind irregularities above the surface level. Protect wall until filler is cured.

F. Vacuum clean substrate.

G. Apply primer to surfaces required by flooring manufacturer.

H. Mix resinous system components in accordance with manufacturer's instructions.

3.03 INSTALLATION - ACCESSORIES

A. Install fillet strips at base of walls and corners where flooring is to be extended up wall as base.

B. Install joint control sealant and backer rod where indicated on Drawings in accordance with flooring manufacturer's instructions.

C. Install terminating cap strip at top of base; attach securely to wall substrate.

DRAFT

3.04 INSTALLATION - FLOORING<< AND WALLS; OR NONE - N/A>>

A. Apply in accordance with manufacturer's instructions.

B. Apply each coat to minimum thickness required by manufacturer and confirm optimum adhesion between coats and to substrate.

C. Finish to smooth level surface.

D. Install flooring to the center of cased openings, and into door openings such that the transition to other floor material occurs under the center of the door leaf. Where transitions occur to another flooring material, extend resinous flooring to suit transition.

E. Cove at vertical surfaces and corners**<< and cap with metal base trim; and feather top of base for a seamless transition; or None - N/A>>**.

F. Allow the recommended amount of time for curing and prevent contamination of system while it cures.

3.05 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Provide services of manufacturer's technical representative to inspect for proper installation of fluid-applied flooring system and submit inspection report.

C. Owner may require material samples for testing in compliance with requirements at any time and as frequently as desired.

1. Owner shall engage qualified third party testing agency to take and test samples for compliance with requirements in accordance with referenced testing standards or manufacturer's product data.
2. Contractor shall pay for samples resulting in noncompliance, removal of noncomplying materials, preparation of surfaces, and reapplication of resinous systems in compliance with requirements.

3.06 PROTECTION

A. Prohibit traffic on floor finish for minimum 48 hours after installation. Cover flooring with materials in accordance with manufacturer's instructions.

B. Barricade area to protect flooring**<< and wall system; or None - N/A>>** until fully cured.

END OF SECTION 096700

DRAFT

SECTION 096813
TILE CARPETING

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM D2859 - Standard Test Method for Ignition Characteristics of Finished Textile Floor Covering Materials.

B. ASTM D4541 - Standard Test Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers.

C. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials.

D. ASTM E648 - Standard Test Method for Critical Radiant Flux of Floor-Covering Systems Using a Radiant Heat Energy Source.

E. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring.

F. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride.

G. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes.

H. ASTM F3010 - Standard Practice for Two-Component Resin Based Membrane-Forming Moisture Mitigation Systems for Use Under Resilient Floor Coverings.

I. CRI (GLP) - Green Label Plus Testing Program - Certified Products.

J. ILFI (DEC) - International Living Future Institute 'Declare' Program.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Substitutions/Prequalification: Manufacturers seeking consideration to bid their product as an acceptable alternative shall provide full product data and full range of selection samples during the bid period. Products that do not meet the technical and aesthetic criteria will not be accepted. No substitutions shall be permitted for carpet tile after receipt of bids.

1.03 SUBMITTALS

A. Product Data: Provide data on specified products, describing physical and performance characteristics; sizes, patterns, colors available, and method of installation.

B. Shop Drawings: Indicate **<< layout of joints; direction of carpet pile; dye lot; location of edge moldings; layout of flat wire system; and _____>>** and transition strips.

1. Where multiple carpet tile products are specified (including multiple products in a single space installed in an indicated pattern), indicate on the shop drawings the locations where each product is being installed.

C. Selection Samples: Submit manufacturer's color charts indicating full range of colors for carpet tiles and for accessories.

D. Verification Sample: Submit full size sample for each required color, pattern, and texture.

1. Submit samples in manufacturer's standard size for each accessory product.

E. Sustainable Design Submittal: Submit VOC content documentation for adhesives.

F. Sustainable Design Submittal: Submit a copy of **<<ILFI (DEC)>>** Declare Label for each product.

DRAFT

G. Operation and Maintenance Data: Include maintenance procedures, recommended maintenance materials, and suggested schedule for cleaning.
   1. Include specific procedures and materials that are not recommended, including those that may be harmful to carpet tile or that would void warranty.

H. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.
   1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
   2. Extra Carpet Tiles: Quantity equal to 5 percent of total installed of each color and pattern installed.

1.04 QUALITY ASSURANCE

A. Critical Radiant Flux: All carpet tiles shall be Class I rated, with a minimum CRF of 0.45 watts/sq cm, when tested by an independent testing agency in accordance with **<<ASTM E648>>** or **<<NFPA 253>>**.

1.05 FIELD CONDITIONS, STORAGE AND HANDLING

A. Comply with the Carpet and Rug Institute (CRI) Publication "CRI 104 - Standard for Installation of Commercial Carpet." Comply with Section 4.0 for storage and handling, Section 7.0 for ambient temperature and ventilation, and Section 9.0 for Product Acclimation.

1.06 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Carpet Tile Warranty: Provide a ten (10) year manufacturer warranty, covering defective material and faulty installation.
   1. Warranty shall cover excessive surface wear (defined as more than 10% loss by weight of face fiber), edge raveling, backing separation, shrinking, stretching, cupping, doming, static electricity, or color loss or fading.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Tile Carpeting: Provide the basis-of-design carpet tiles or a prequalified alternate tile. No substitutions will be considered after the award of Contract. ******If using this paragraph, turn off Manufacturers paragraph below.******

B. Manufacturers:
   1. Bentley Mills.
   2. EF Contract.
   3. Interface, Inc.
   4. J&J Flooring.
   5. Mannington Commercial.
   6. Milliken & Company.
   7. Mohawk Group.
   8. Patcraft.
   9. Shaw Contract.
   10. Tarkett.
   11. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

DRAFT

2.02 MATERIALS

A. Tile Carpeting: **<< Tufted; Fusion bonded; or _____>>**, manufactured in one color dye lot.
   1. Product: **<< _____>>** manufactured by **<< _____>>**.
   2. Tile Size: **<< 12 by 24 inch; 24 by 24 inch; 9 by 36 inch; 18 by 18 inch; 18 by 36 inch; or ____by____ inch>>**, nominal.
   3. Color: **<< _____>>**.
   4. Pattern: **<< _____>>**.
   5. Critical Radiant Flux: Minimum of 0.45 watts/sq cm, when tested in accordance with **<<ASTM E648>>** or **<<NFPA 253>>**.
   6. Surface Flammability Ignition: Pass **<<ASTM D2859>>** (the "pill test").
   7. Sustainability Requirement: Provide **<<ILFI (DEC)>>** certified Red-List Free product.
   8. VOC Content: Provide **<<CRI (GLP)>>** certified product**<< ; in lieu of labeling, independent test report showing compliance is acceptable; or None - N/A>>**.
   9. Pile Weight: **<< ____ oz/sq yd>>**.
   10. Primary Backing Material: **<< Polypropylene; or Manufacturer's standard; recycled vinyl with fiberglass reinforcing>>**.

2.03 ACCESSORIES

A. Subfloor Filler: Type recommended by flooring material manufacturer.

B. Edge Strips: **<< Embossed aluminum; or Rubber>>**, color as selected by Architect.

C. Moisture Vapor Treatment: Where carpeting and accessories are installed over concrete slabs, provide alkaline-resistant product designed to control excessive moisture vapor transmission through concrete slab, per the following:
   1. Products: Provide product approved by flooring manufacturer and complying with performance requirements below, equivalent to one of the following:
      a. Duraamen Engineered Products, Inc.; Perdure MVT.
      b. Maxxon Corporation; Maxxon MVP.
      c. Tnemec Company Inc.; Epoxoprime MVT, Series 208.
   2. Performance Requirements:
      a. Verify with flooring manufacturer that submitted product maintains compliance with all provisions of flooring manufacturer's warranty.
      b. Low-VOC: Provide product with VOC content less than 15 g/L.
      c. Bond Strength to Concrete: Minimum 400 psi per **<<ASTM D4541>>** (100% concrete failure).
      d. Permeance: Maximum 0.1 perm per **<<ASTM E96/E96M>>**, and 0.10 grains/hr/ft^2/in-Hg, per **<<ASTM F3010>>**.
      e. Applications: Provide MVT for all concrete slabs on-grade and lightweight concrete elevated slabs.

D. Carpet Tile Adhesive: Recommended by carpet tile manufacturer; releasable type.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that subfloor surfaces are smooth and flat within tolerances specified for that type of work and are ready to receive carpet tile.

DRAFT

B. Verify that subfloor surfaces are dust-free and free of substances that could impair bonding of adhesive materials to subfloor surfaces.

C. Cementitious Subfloor Surfaces: Verify that substrates are ready for flooring installation by testing for moisture and alkalinity (pH).
   1. Test as Follows: Perform one of each test per 1,000 sf of installation area.
      a. Alkalinity (pH): **<<ASTM F710>>**.
      b. Internal Relative Humidity: **<<ASTM F2170>>**.
      c. Moisture Vapor Emission: **<<ASTM F1869>>**.
   2. If test results are not within limits recommended by flooring manufacturer, apply moisture vapor treatment (MVT) in accordance with manufacturer's requirements.
   3. After testing is complete, prepare concrete and install moisture vapor treatment (MVT) in accordance with manufacturer's written instructions. If testing indicates measurements are within acceptable levels for flooring installation with the need for MVT, the MVT may be omitted where approved by the Architect.

D. Verify that required floor-mounted utilities are in correct location.

3.02 PREPARATION

A. Remove existing carpet tile.

B. Prepare floor substrates as recommended by flooring and adhesive manufacturers.

C. Remove subfloor ridges and bumps. Fill minor or local low spots, cracks, joints, holes, and other defects with subfloor filler.

D. Apply, trowel, and float filler to achieve smooth, flat, hard surface. Prohibit traffic until filler is cured.

3.03 INSTALLATION

A. Starting installation constitutes acceptance of subfloor conditions.

B. Install carpet tile in accordance with manufacturer's instructionsand**<<CRI 104>> << and CRI 104 (Commercial); and CRI 105 (Residential); and _____; or None - N/A>>**.

C. To ensure minimal color variation, ensure that each space/room uses only carpet from the same dye lot.

D. Cut carpet tile clean. Fit carpet tight to intersection with vertical surfaces without gaps.

E. Lay carpet tile in square pattern, with pile direction **<< parallel; or alternating>>** to next unit, set **<< parallel to building lines; aligned as indicated on shop drawings; or _____>>**, unless otherwise indicated.

F. Locate change of color or pattern between rooms or at transitions to other finish flooring material directly under the door leaf centerlines, or at the center of cased openings.

G. Fully adhere carpet tile to substrate.

H. Install carpet tile into wall recesses, knee spaces under cabinets or countertops, closets, and other similar spaces.

I. Trim carpet tile neatly at walls and around interruptions.

J. Complete installation of edge strips, concealing exposed edges.

3.04 CLEANING AND PROTECTION

A. Remove excess adhesive without damage, from floor, base, and wall surfaces.

DRAFT

B. Clean and vacuum carpet surfaces.

C. Protect installed carpet in accordance with CRI 104, Section 13.7 "Post Installation."

END OF SECTION 096813

I. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride.

J. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes.

K. ASTM F3010 - Standard Practice for Two-Component Resin Based Membrane-Forming Moisture Mitigation Systems for Use Under Resilient Floor Coverings.

L. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers Version 1.2.

M. CRI (GLP) - Green Label Plus Testing Program - Certified Products.

N. NFPA 253 - Standard Method of Test for Critical Radiant Flux of Floor Covering Systems Using a Radiant Heat Energy Source.

O. SCAQMD 1168 - Adhesive and Sealant Applications.

1.02 DEFINITION

A. Textile Composite Flooring: A hybrid floor covering consisting of a tufted loop nylon or polyester fiber wear layer thermally fused to a cushioned polyester backing, commonly referred to as textile composite flooring (TCF), vinyl cushion tufted textile (VCTT), or tufted textile flooring.

1.03 SUBMITTALS

A. Product Data: Provide data on specified products, describing physical and performance characteristics; sizes, patterns, colors available, and method of installation.

B. Shop Drawings: Showing the extent of installation, seam direction of TCF, and accessories. Check pattern match, if any, for matching during installation and possible waste factors in ordering required amounts. Show TCF dye lot. Indicate built in items such as casework, columns, and doorways, and locations where cutouts are required in TCF.

DRAFT

1. Maintain a copy of approved shop drawings on site during installation, available for review by Owner and Architect.

C. Selection Samples: Submit manufacturer's standard color charts illustrating color and pattern design for each TCF product specified.

D. Sustainable Design Submittal: Submit VOC content documentation for adhesives.

E. Manufacturer's Installation Instructions: Indicate **<< special procedures; perimeter conditions requiring special attention; and _____>>**.

F. Manufacturer's Qualification Statement.

G. Installer's Qualification Statement.

H. Maintenance Data: Include maintenance procedures, recommended maintenance materials, and suggested schedule for cleaning.

I. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.
1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
2. Extra TCF Tiles: Quantity equal to 5 percent of total installed of each color and pattern installed, but not less than 10 square yards.

J. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing specified textile composite flooring. Manufacturer shall have a technical field representative available for field observation and inspection.

B. Installer Qualifications: Company specializing in installing textile composite flooring, and complying with following:
1. Installer shall be a specialty contractor normally engaged in the installation of TCF flooring, with prior experience installing these floor materials. Flooring contractor shall submit a list of installers certified by TCF manufacturer prior to bid.
2. Flooring contractor shall be responsible for proper product installation, including floor substrate testing and preparation, in accordance with manufacturer's requirements and specifications.

1.05 FIELD CONDITIONS

A. Do not deliver or install until building is enclosed and HVAC system is operating at occupancy conditions.

B. Store materials in area of installation for minimum period of 24 hours prior to installation.

1.06 WARRANTY

A. Manufacturer's Warranty: The TCF warranty shall be the sole source responsibility of the manufacturer. Second source warranties or warranties that involve parties other than the TCF manufacturer are unacceptable.
1. Warranty Term: 10 years minimum.
2. In the event of failure due to material or workmanship, the warranty shall cover either repair or removal and replacement at manufacturer's discretion.
3. The warranty shall not exclude TCF installed on stairs, provided the product installation was approved by manufacturer's field representative during final inspection, and provide the product was properly maintained.

DRAFT

4. Wear Layer Warranty: Shall specifically define and cover against the following:
   a. Product performance.
   b. Colorfastness to light and crocking.
   c. Stain removal.
   d. Static protection.
   e. Zippering.
5. Backing Layer Warranty: Shall specifically define and cover against the following:
   a. Edge ravel.
   b. Delamination.
   c. Dimensional stability.
6. A 'tuft bind' warranty in lieu of edge ravel and zippering is not acceptable.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Textile Composite Flooring ("TCF"):
   1. J&J Flooring Group, Inc.; Kinetex.
   2. EF Contract Flooring; Kinetex.
   3. Forbo Flooring, Inc.; Flotex.
   4. Patcraft; Walk Right In II.
   5. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.02 PERFORMANCE CHARACTERISTICS

A. The following performance characteristics shall be met by all products:
   1. Critical Radiant Flux: Minimum of 0.45 watts/sq cm, when tested in accordance with **<<ASTM E648>>** or **<<NFPA 253>>**.
   2. Surface Flammability Ignition: Pass Federal Flammability CPSC FF 1-70 (also referenced as **<<ASTM D2859>>** - the "pill test").
   3. Maximum Electrostatic Charge: Pass **<<AATCC Test Method 134>>** (Step & Scuff): 3 Kv. or less at 20 percent relative humidity.
   4. Smoke Density: **<<ASTM E662>>** / NFPA 258: < 450 Flaming Mode.
   5. Static Coefficient of Friction: ASTM C1028: Passes ADA Guidelines for Accessible Routes (Minimum 0.60).
   6. Delamination of Secondary Backing of Pile Floor Coverings: ASTM D3936: Minimum 15 lbs.
   7. Lightfastness: **<<AATCC Test Method 16>>**: > 4 @ 100 hours.
   8. Vetterman Drum: ASTM D5417: Minimum 3 @ 22,000 cycles.
   9. Seam Integrity: Seam to remain intact after 50,000 cycles per Phillips Chair Test.

B. Low-Emitting Materials:
   1. Flooring Products: Flooring products shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>**.
   2. Adhesives and Sealants: Adhesives and sealants field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet the chemical content requirements of **<<SCAQMD 1168>>**.

DRAFT

2.03 MATERIALS

A. Textile Composite Flooring: Tufted or flocked, manufactured in one color dye lot.
   1. Product: **<< _____>>** manufactured by **<< _____>>**.
   2. Tile Size: **<< 24 by 24 inch; 18 by 36 inch; or ____by____ inch>>**, nominal.
   3. Color: **<< _____; or As selected by Architect from manufacturer's full range>>**.
   4. Pattern: **<< _____>>**.
   5. VOC Content: Provide **<<CRI (GLP)>>** certified product; in lieu of labeling, independent test report showing compliance is acceptable.
   6. Wear Layer: Manufacturer's standard, polyester or nylon.
   7. Primary Backing Material: 100% polyester felt cushion.

2.04 ACCESSORIES

A. Subfloor Filler: Type recommended by flooring material manufacturer.

B. Edge Strips: **<< Embossed aluminum; or Rubber>>**, color as selected by Architect.

C. Moisture Vapor Treatment: Where textile composite floor and accessories are installed over concrete slabs, provide alkaline-resistant product designed to control excessive moisture vapor transmission through concrete slab, per the following:
   1. Products: Provide product approved by flooring manufacturer and complying with performance requirements below, equivalent to one of the following:
      a. Duraamen Engineered Products, Inc.; Perdure MVT.
      b. Maxxon Corporation; Maxxon MVP.
      c. Tnemec Company Inc.; Epoxoprime MVT, Series 208.
   2. Performance Requirements:
      a. Verify with flooring manufacturer that submitted product maintains compliance with all provisions of flooring manufacturer's warranty.
      b. Low-VOC: Provide product with VOC content less than 15 g/L.
      c. Bond Strength to Concrete: Minimum 400 psi per **<<ASTM D4541>>** ASTM D 4541 (100% concrete failure).
      d. Permeance: Maximum 0.1 perm per **<<ASTM E96/E96M>>**, and 0.10 grains/hr/ft^2/in-Hg, per **<<ASTM F3010>>**.
      e. Applications: Provide MVT for all concrete slabs on-grade and lightweight concrete elevated slabs.

D. Adhesive: Recommended by textile composite flooring manufacturer; releasable type.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that subfloor surfaces are smooth and flat within tolerances specified for that type of work and are ready to receive textile composite flooring.

B. Verify that subfloor surfaces are dust-free and free of substances that could impair bonding of adhesive materials to subfloor surfaces.

C. Cementitious Subfloor Surfaces: Verify that substrates are ready for flooring installation by testing for moisture and alkalinity (pH).
   1. Test as Follows: Perform one of each test per 1,000 sf of installation area.
      a. Alkalinity (pH): **<<ASTM F710>>**.

DRAFT

b. Internal Relative Humidity: **<<ASTM F2170>>**.

c. Moisture Vapor Emission: **<<ASTM F1869>>**.

2. After testing is complete, prepare concrete and install moisture vapor treatment (MVT) in accordance with manufacturer's written instructions. If testing indicates measurements are within acceptable levels for flooring installation with the need for MVT, the MVT may be omitted where approved by the Architect.

3.02 PREPARATION

A. Prepare floor substrates as recommended by flooring and adhesive manufacturers.

B. Remove subfloor ridges and bumps. Fill minor or local low spots, cracks, joints, holes, and other defects with subfloor filler.

C. Apply moisture vapor treatment (MVT) in accordance with manufacturer's instructions.

D. Apply, trowel, and float filler to achieve smooth, flat, hard surface. Prohibit traffic until filler is cured.

3.03 INSTALLATION

A. Starting installation constitutes acceptance of subfloor conditions.

B. Install TCF in accordance with manufacturer's instructions.

C. Cut TCF tile clean. Fit TCF tight to intersection with vertical surfaces without gaps.

D. Lay TCF tile in square pattern, with pile direction **<< parallel; or alternating>>** to next unit, set **<< parallel to building lines; aligned as indicated on shop drawings; or _____>>**.

E. To ensure minimal color variation, ensure that each space/room uses only carpet from the same dye lot.

F. Locate change of color or pattern or transition trim between rooms under door centerline.

G. Fully adhere TCF tile to substrate.

1. Free-lay and stretch-in installations are not acceptable.

H. Trim TCF neatly at walls and around interruptions.

I. Complete installation of edge strips, concealing exposed edges.

3.04 FIELD QUALITY CONTROL

A. Engage manufacturer's technical field representative to observe during substrate preparation and during installation, and to provide a final inspection after completion.

B. Remove and replace TCF where manufacturer's field inspection indicates that installation is not in compliance with the specified requirements or with manufacturer's instructions.

3.05 CLEANING AND PROTECTION

A. Remove excess adhesive without damage, from floor, base, and wall surfaces.

B. Clean and vacuum TCF surfaces.

C. Protect installed TCF from heavy construction traffic, soiling, and damage for the remainder of the construction period.

END OF SECTION 096817

DRAFT

SECTION 097200
WALL COVERINGS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM D1308 - Standard Test Method for Effect of Household Chemicals on Clear and Pigmented Coating Systems.

B. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

C. ASTM F793/F793M - Standard Classification of Wall Coverings and Ceiling Coverings by Use Characteristics.

D. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers Version 1.2.

E. CARB (SCM) - Suggested Control Measure for Architectural Coatings; California Air Resources Board.

F. GA-214 - Levels of Finish for Gypsum Panel Products.

G. SCAQMD 1168 - Adhesive and Sealant Applications.

1.02 SUBMITTALS

A. Product Data: Manufacturer's data sheets for wall covering**<< and adhesive; _____; or None - N/A>>**. Indicate compliance with specified flame spread and smoke developed ratings.

B. Shop Drawings: Indicate wall elevations with seaming layout.

C. Selection Samples: Provide manufacturer's full range of color and pattern information.

D. Verification Samples: Submit physical samples of each type of wall covering, illustrating color, finish, and texture; samples shall be full width by minimum 36 inches long.

E. Manufacturer's Instructions: Indicate installation **<< special procedures; perimeter conditions requiring special attention; and _____>>**.

F. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in project maintenance:

1. See Section **<< 016000 - Product Requirements>>** for additional provisions.
2. Extra Stock Materials: 25 feet of each color and pattern of wall covering.
   a. Package and label each roll by manufacturer, color, pattern, and destination room number.

1.03 MOCK-UPS

A. See Section **<< 014000 - Quality Requirements>>** for additional requirements.

B. Provide panel, approximately 10 feet wide, full height, illustrating installed **<< wall covering; joint seaming technique; and _____>>**. Include inside and outside corner, as applicable.

C. Locate where directed by Architect.

D. Mock-up may remain as part of work.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Inspect roll materials for damage upon arrival.

B. Protect packaged adhesive from temperature cycling and cold temperatures.

C. Do not store roll goods on end.

DRAFT

1.05 FIELD CONDITIONS

A. Maintain adhesive and wall covering manufacturer's recommended temperature ranges 24 hours before, during, and after installation.

B. Provide lighting level of 80 fc measured mid-height at substrate surfaces.

PART 2 PRODUCTS

2.01 WALL COVERINGS

A. Performance Requirements:

1. Surface Burning Characteristics: Flame spread index of 25, maximum, and smoke developed index of 50, maximum, when tested in accordance with **<<ASTM E84>>**.
2. Chemical and Stain Resistance: No visible staining or discoloration and no damage to surface texture when tested in accordance with **<<ASTM D1308>>**.
3. Low-Emitting Materials:
   a. Paints and Coatings: Paints and coatings field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet applicable VOC limits of **<<CARB (SCM)>>** or **<<SCAQMD 1113>>**.
   b. Adhesives and Sealants: Adhesives and sealants field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet the chemical content requirements of **<<SCAQMD 1168>>**.

B. Wall Covering: Fabric-backed vinyl roll stock.

1. Comply with **<<ASTM F793/F793M>>**, Category **<< V, Type II; VI, Type III; or _____>>**.
2. Roll Width: 52 inches, minimum.
3. Backing: **<< Woven, osnaburg; Nonwoven, synthetic; or _____>>** fabric.
4. Backing Color: White.
5. Pattern: .
6. Pattern Match: **<< As indicated on drawings; Book; Random; Straight; or _____>>**.
7. Repeat: **<< 1 inch; 52 inches; or _____ inches>>**, **<< horizontally; vertically; or _____>>**.
8. Surface Texture: **<< Embossed; Smooth; or _____>>**.
9. Overcoating: Manufacturer's standard coating for stain resistance.
10. Manufacturers:
    a. F. Schumacher & Co.
    b. Koroseal/RJF International.
    c. Momentum Wallcoverings
    d. MDC Wallcoverings.
    e. National Wallcovering.
    f. Wolf-Gordon.
    g. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.02 DRY ERASE WALLCOVERINGS

A. Dry Erase Wallcovering: White pigmented vinyl or polyethylene sheet with dry erase film top layer on woven or paper backing.

DRAFT

1. Type II wallcovering.
2. Sheen: Manufacturer's standard gloss or semi-gloss.
3. Products:
   a. Koroseal Interior Products, LLC; Walltalkers, Just-Rite White 60 inch - #JR60-00.
   b. MDC Interior Solutions; Standard Dry Erase Wallcovering - #DEW15105.
   c. Wolf-Gordon, Inc; Wink, SCRIBE Wallcovering.
   d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Dry Erase Wallcovering with Magnet: White pigmented vinyl or polyethylene sheet bonded to ferrous sheet with dry erase film top layer on woven or paper backing.
1. Type II wallcovering.
2. Sheen: Manufacturer's standard gloss or semi-gloss.
3. Products:
   a. Koroseal Interior Products, LLC; Walltalkers, Mag-Rite White 48 - #M248-00.
   b. MDC Interior Solutions; Magnet-Receptive Dry Erase Wallcovering - #DEW15103.
   c. Wolf-Gordon, Inc; Wink, MAGNETIC Wallcovering.
   d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

C. Adhesive: **<< Flexible dry erase surface manufacturer's approved heavy-duty pre-mixed clay-based wallcovering adhesive; Flexible dry erase surface manufacturer's approved heavy-duty clay adhesive or extreme tack/vinyl over vinyl adhesives; ___; or None - N/A>>**.

D. Substrate Primer/Sealer: white acrylic base stain-blocking primer and sealer formulated for use with vinyl and/or polyester flexible dry erase surfaces in accordance with manufacturer's recommendations.

E. Aluminum Finishing Pieces:
1. Tray: Manufacturer's standard anodized snap-on marker and eraser tray with clips and end caps.
2. Trim: Manufacturer's standard anodized snap-on trim with clips.
3. J-Cap: Manufacturer's standard anodized low profile wallcovering trim.
4. Display rail: Manufacturer's standard anodized clip rail.

DRAFT

2.03 ACCESSORIES

A. Adhesive: Type recommended by wall covering manufacturer.

B. Substrate Filler: As recommended by adhesive and wall covering manufacturers; compatible with substrate.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify substrate surfaces are primed and meet manufacturer's requirements to receive work.

B. Measure moisture content of substrates with electronic moisture meter. Do not apply wall coverings if moisture content of substrate exceeds level recommended by wall covering manufacturer.

C. Verify flatness tolerance of surfaces does not vary more than 1/8 inch in 10 feet or at rate greater than 1/16 inch/ft.

D. Notify **<<Architect>>** of detrimental conditions affecting wall covering installation.

E. Correct detrimental conditions before starting installation.

F. Wall surfaces receiving dry erase wallcovering shall be prepared to a Level 5 finish in accordance with **<<GA-214>>**.

3.02 PREPARATION

A. Remove wall plates and accessories impeding wall covering installation.

B. Wash impervious surfaces with **<< tetra-sodium; tri-sodium; or _____>>** phosphate; rinse and neutralize; wipe dry.

C. Surface Appurtenances: Remove or mask electrical plates, hardware, light fixture trim, escutcheons, and fittings before preparing surfaces or finishing.

D. Surfaces: Correct defects and clean surfaces that affect work of this section. Remove existing coatings that exhibit loose surface defects.

E. Vacuum surfaces to remove loose particles.

3.03 INSTALLATION - WALLCOVERING

A. Apply adhesive and wall covering in accordance with manufacturer's instructions.

B. Apply adhesive to wall immediately before applying wall covering.

C. Use wall covering **<< in roll number sequence; in pattern sequence; or _____>>**.

D. Razor trim edges of wall covering. Do not razor trim on gypsum board surfaces.

E. Smoothly apply wall covering without wrinkles, gaps, or overlaps. Eliminate air pockets and ensure full bond to substrate surface.

F. Butt edges tightly.

G. Do not seam within 2 inches of internal corners or within 6 inches of external corners.

H. Install wall covering before installing **<< bases; cabinets; hardware; and _____>>** and items attached to, abutting, or located within 1 inch of wall surface.

I. Do not install wall covering more than 1/4 inch below top of resilient base.

J. Apply wall covering to **<< electrical; telephone; and _____>>** wall plates before replacing plates.

K. Remove excess adhesive from seams while wet and before proceeding to next wall covering sheet.

3.04 INSTALLATION - DRY ERASE WALLCOVERING

A. Install dry erase wallcovering in accordance with manufacturer's written instructions that are packaged with each roll of wallcovering.

B. Apply manufacturer's recommended primer to wall surface.

C. Apply manufacturer's recommended adhesive to wall surface immediately prior to application of dry erase wallcovering.

D. Razor trim edges on flat work table. Do not razor cut on the gypsum board surfaces.

E. Do not crease the dry erase surface.

DRAFT

F. Apply wall covering smooth, without wrinkles, gaps or overlaps. Eliminate air pockets and ensure full bond to substrate surface using a wallcovering smoother wrapped with a soft cloth. Do not use sharp edged smoothers on dry erase surface.

G. Butt edges tightly.

H. Seam the material out of the main writing and viewing areas of the wall. Do not seam within 2 inches of internal corners or within 6 inches of external corners.

I. Install dry erase wallcovering prior to installing aluminum trim, wall base, wall protection, or wainscot.

J. Remove excess adhesive immediately using a soft cloth in accordance with manufacturer's recommendations.

K. Allow wallcovering to cure for a minimum of 72 hours prior to initial use of dry erase surface.

L. Install aluminum trim in accordance with manufacturer's instructions.

3.05 CLEANING

A. See Section **<< 017000 - Execution and Closeout Requirements>>** for additional requirements.

B. Clean wall coverings of dust, dirt, excess adhesive, and other contaminants.

3.06 PROTECTION

A. Protect installed products from damage until Date of Substantial Completion.

END OF SECTION 097200

DRAFT

SECTION 098430
SOUND-ABSORBING WALL AND CEILING UNITS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM C423 - Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method.

B. ASTM C612 - Standard Specification for Mineral Fiber Block and Board Thermal Insulation.

C. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

D. ASTM E795 - Standard Practices for Mounting Test Specimens during Sound Absorption Tests.

1.02 SUBMITTALS

A. Product Data: Manufacturer's printed data sheets for products specified.

B. Shop Drawings: Fabrication and installation details, **<< panel layout; fabric orientation; wood grain orientation; and _____>>**.

C. Selection Samples: Manufacturer's color charts for fabric covering, indicating full range of fabrics, colors, and patterns available.

D. Verification Samples: Fabricated samples of each type of panel specified; 12 inch by 12 inch, showing construction, edge details, and fabric covering.

E. Test Reports: Certified test data from an independent test agency verifying that panels meet specified requirements for acoustical and fire performance.

F. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.

1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
2. Extra Panels: Quantity equal to 5 percent of total installed, but not less than one of each type.

1.03 DELIVERY, STORAGE, AND HANDLING

A. Protect acoustical units from moisture during shipment, storage, and handling. Deliver in factory-wrapped bundles; do not open bundles until units are needed for installation.

B. Store units flat, in dry, well-ventilated space; do not stand on end.

C. Protect edges from damage.

1.04 MOCK-UPS

A. See Section **<< 014000 - Quality Requirements>>** for additional mock-up requirements.

B. Construct mock-up of acoustical units at location as indicated by **<<Architect>>**.

1. Minimum mock-up dimensions; 96 by 96 inches.
2. Mock-up may remain as part of work.

1.05 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Correct defective work within a two-year period for failure of materials or workmanship **<< _____; or failure of materials or workmanship>>** commencing on the Date of Substantial Completion.

DRAFT

1. Failures include but are not limited to acoustic performance, fabric separation from core or fabric sagging, panel distortion or warping.

PART 2 PRODUCTS

2.01 FABRIC-COVERED SOUND-ABSORBING UNITS

A. Manufacturers:
   1. Acoustical Panel Systems, Inc. (APS); APS-R.
   2. Acoustical Solutions, Inc.; AlphaSorb.
   3. Armstrong Ceiling & Wall Solutions; Soundsoak.
   4. AVL Systems, Inc.; AcousTech.
   5. Decoustics, Ltd.; AP Acoustics Panel.
   6. LAMVIN; Sonic Standard Panel.
   7. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. General:
   1. Prefinished, factory assembled fabric-covered panels.
   2. Surface Burning Characteristics: Flame spread index of 25 or less and smoke developed index of 450 or less, when tested in accordance with **<<ASTM E84>>**.

C. Fabric-Covered Acoustical Panels for Walls:
   1. Panel Core: Manufacturer's standard rigid or semi-rigid fiberglass core.
   2. Core Density: 6 to 7 lb/cu ft.
   3. Sound Absorption: Noise Reduction Coefficient (NRC) of 0.80 or greater when tested in accordance with **<<ASTM C423>><< for Type A mounting, per ASTM E795; for Type E-400 mounting, per ASTM E795; or None - N/A>>**.
   4. Panel Size: **<< 24 inches by 48 inches; or As indicated on Drawings>>**.
   5. Panel Thickness: 1 inch, unless otherwise required by manufacturer for acoustic performance.
   6. Edges: Perimeter edges reinforced by **<< a formulated resin hardener; an aluminum frame; a galvanized steel frame; or _____>>**.
   7. Corners: **<< Radiused; Square; Mitered; As detailed; or _____>>**.
   8. Fabric: **<< Woven polyester; Non-woven polyester; Perforated vinyl; Polyolefin; or _____>>**.
   9. Color: To be selected by **<<Architect>>** from manufacturer's full range.
   10. Patterns: Where fabric with directional or repeating patterns or fabric with directional weave is used, mark for installation in same direction.
   11. Mounting Method: Back-mounted with mechanical fasteners.

2.02 WOOD VENEER SOUND-ABSORBING UNITS

A. Manufacturers:
   1. ASI Architectural; Microperf Wood
   2. Armstrong World Industries; Woodworks Walls.
   3. Murano Acoustics USA, by Bartley Group, Inc; Perforated Acoustic Wood Panels.
   4. RPG Acoustical Systems, Inc; Perfecto Micro Panel.
   5. Rulon International; Aluratone 7X0.
   6. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

DRAFT

B. Wood Veneer Acoustical **<< Baffles; Panels; and _____>>** for **<< Walls; Ceilings; and _____>>**: Medium density fiberboard (MDF) core panels with prime grade, finished face veneer and nonwoven acoustical fabric adhered to back of panel.

1. Surface Burning Characteristics: Flame spread index of 25 or less and smoke developed index of 450 or less, when tested in accordance with **<<ASTM E84>>**.
2. Sound Absorption: Noise Reduction Coefficient (NRC) of 0.80 minimum when tested in accordance with **<<ASTM C423>><< for Type A mounting, per ASTM E795; for Type E-400 mounting, per ASTM E795; for Type ____ mounting, per ASTM E795; or None - N/A>>**.
3. Acoustic Back-Up Material: Natural cotton panels, consisting of recycled denim, 100 percent formaldehyde free, **<< 4.5 lbs/cu ft>>** density.
   a. Color: Black
   b. Overall Thickness: 1 inch.
4. Panel Size: 24 by 48 inches.
5. Panel Thickness: 3/4 inch.
6. Provide MDF with no added urea formaldehyde (NAUF).
7. Surface Veneer Species: **<< Oak; Maple; Cherry; Sapele; Beech; Anigre; Walnut; Bamboo Wheat; Bamboo Natural; Bamboo Caramelized; or _____>>**.
   a. Grain Direction: **<< Flat; Vertical; or _____>>**.
   b. Factory Finish: **<< Clear sealer; Wood stain as selected; Opaque paint as selected; Semi-transparent paint as selected; As scheduled; or _____>>**.
8. Perforated Panel:
   a. Hole Diameter: Manufacturer's standard microperforation.
   b. Spacing: Manufacturer's standard.
9. Mounting: Use fixing clips to attach to **<< wood furring strips; metal hat channels; or _____>>** anchored to wall substrate.
   a. Edge Profile: **<< Reveal; Square; Tongue and groove; or _____>>**.

2.03 WOOD FIBER SOUND-ABSORBING UNITS

A. Manufacturers:

1. Armstrong World Industries, Inc; Tectum Direct-Attach.
2. Sound Seal; EchoWool Acoustical Wall and Ceiling Panels.
3. Cardinal Acoustics; Direct Attached Panel.
4. Conwed; Arborcoustic.
5. Troy Acoustics Corporation; Troy Board.
6. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Wood Fiber Acoustical Panels for Walls: Cementitious wood fiber.

1. Size: **<< 24 by 24 inches; 24 by 48 inches; or _____ by _____ inches>>**.
2. Thickness: **<< 1 inch; 1-3/8 inches; 1-1/2 inches; 2 inches; or ____ inches>>**.
3. Noise Reduction Coefficient (NRC): 0.80 **<< 0.70 to 0.80; 0.80 to 0.90; or 0.80 minimum>>** when tested in accordance with **<<ASTM C423>><< for Type A mounting, per ASTM E795; for Type E-400 mounting, per ASTM E795; for Type C-20 mounting, per ASTM E795; or None - N/A>>**.
4. Panel Edge: **<< Square; or Beveled>>**.
5. Surface Pattern: Coarse.

DRAFT

6. Surface Color: **<< White; Natural; Custom color; As indicated on drawings; or Manufacturer's standard; panels shall be field-painted>>**.
7. Installation Method (Wall): Direct-attached over **<< 1 inch; or 2 inch>>** depth furring strips and 3 lb rigid/semi-rigid glass fiber acoustic board.
   a. Fiberboard Insulation: Rigid/semi-rigid mineral fiber, **<<ASTM C612>>**, unfaced flame spread index of 0 (zero) when tested in accordance with **<<ASTM E84>>**.
8. Mounting: Use fixing clips to attach to **<< wood furring strips; metal hat channels; or _____>>** anchored to wall substrate.

2.04 PLASTIC SOUND-DIFFUSING UNITS

A. Manufacturers:
   1. Acoustical Solutions, Inc.; AlphaDiffuser Fabric Wrapped Sound Diffuser.
   2. AVL Systems, Inc.; Disorb Convex Diffuser-Absorber.
   3. Conwed; Diffusers: Barrel.
   4. Lamvin; Pyramid Diffuser.
   5. RPG Acoustical Systems, Inc; Clearsorber Panel.
   6. Wenger; Lay-In Convex Ceiling Diffuser Panel.
   7. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Thermoformed Copolymer Plastic Acoustical Panels for Ceilings:
   1. Surface Burning Characteristics: Flame spread index of 25 or less and smoke developed index of 450 or less, when tested in accordance with **<<ASTM E84>>**.
   2. Panel Size: **<< 24 inches by 24 inches; 48 inches by 48 inches; or _____ inches by _____ inches>>**, unless otherwise indicated.
   3. Surface Pattern: **<< Pyramid shapes; Barrel shapes; or _____>>**.
   4. Mounting: Lay-in panel for suspended ceiling system, exposed grid.
      a. Suspension System: See Section **<< 095100>>**.

2.05 POLYESTER (FELT) ACOUSTIC PANELS

A. Manufacturers:
   1. 3Form
   2. Acoufelt.
   3. Kirei USA.
   4. MDC.
   5. Novaform.
   6. Turf Design.

B. Polyester Acoustic Panels: 100% polyester.
   1. Size: As indicated on Drawings.
   2. Thickness: 9- to 12-mm baffle, as standard with manufacturer.
   3. Surface Burning Characteristics: Flame spread index of 25 or less and smoke developed index of 450 or less, when tested in accordance with **<<ASTM E84>>**.
   4. Noise Reduction Coefficient (NRC): 0.60 at 24 mm panel thickness when tested in accordance with **<<ASTM C423>><< for Type E mounting, per ASTM E795; _____; or None - N/A>>**.
   5. Color: Solid color as selected from manufacturer's full range of available colors.
   6. Mounting Method (Wall): Back-mounted with Z-clips and mechanical fasteners.

DRAFT

7. Mounting Method (Ceiling): Manufacturer's standard system fabricated of aluminum cross runners, aircraft cable and manufacturer's standard joinery and connection hardware to fasten baffles to suspension system. Cable and joinery shall allow for fine adjustment to ensure a level installation at height indicated.
    a. In lieu of aluminum cross runners, manufacturer may mount suspension system to 1-5/8" by 7/8" slotted channel framing or directly to structural joists/framing; refer to Section **<< 055000 - Metal Fabrications; or _____>>** for slotted channel.
    b. Suspension system shall mount to cross runner, galvanized slotted track, or directly to structural joists/framing. Do not mount directly to steel roof deck.

2.06 FABRICATION

A. Fabric Wrapped, General: Fabricate panels to sizes and configurations as indicated, with fabric facing installed without sagging, wrinkles, blisters, or visible seams.
    1. Where radiused or mitered corners are indicated, install fabric to avoid seams or gathering of material.

B. Tolerances: Fabricate to finished tolerance of plus or minus 1/16 inch for thickness, overall length and width, and squareness from corner to corner.

C. Factory-applied finishes on wood veneer panels to be uniform, smooth, and without blemishes.

2.07 ACCESSORIES

A. Back-Mounting Accessories: Manufacturer's standard accessories for concealed support, designed to allow panel removal, and as follows:
    1. Two-part clip and base-support bracket system; brackets designed to support full weight of panels and clips designed for lateral support, with one part mechanically attached to back of panel and the other attached to substrate.
    2. Z-clip hanger and magnet system with magnets recessed into panel frame and designed to engage steel mounting plates secured to substrate with screws.
    3. Mechanically Mounted Metal-Framed Panels: Metal panel-clip system designed to engage metal framing of panels.

B. Fixing Clips: Manufacturers standard for application as indicated.

C. Furring Strips: Metal hat channel.

DRAFT

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates for conditions detrimental to installation of acoustical units. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install acoustical units in locations as indicated, following manufacturer's installation instructions.

B. Install mounting accessories and supports in accordance with shop drawings.

C. Align panels accurately, with edges plumb and top edges level. Scribe to fit accurately at adjoining work and penetrations.

D. **<< Suspend; or Attach>>** ceiling baffles at locations and heights as indicated.

E. Furring Mounted Wood Veneer Panels:

1. Install furring strip along meeting edges of adjacent panels to ensure they are attached to same furring strip along abutted edge; **<< 24 inch>>** on center, maximum.
2. Install acoustic back-up material between furring as required for application.
3. Adhere first panel from edge to furring strip, and attach subsequent panels using fixing clips.

F. Furring-Mounted Cementitious Wood Fiber Panels:
1. Install furring strip along meeting edges of adjacent panels to ensure they are attached to same furring strip along abutted edge; **<< 24 inches>>** on center, maximum.
2. Install acoustic insulation between furring as indicated on drawings.
3. Adhere first panel from edge to furring strip; attach subsequent panels using fasteners.

G. Install acoustical units to construction tolerances of plus or minus 1/16 inch for the following:
1. Plumb and level.
2. Flatness.
3. Width of joints between panels; where applicable.

3.03 CLEANING

A. Clean sound-absorptive panels upon completion of installation from dust and other foreign materials, following manufacturer's instructions.

3.04 PROTECTION

A. Provide protection of installed acoustical panels until Date of Substantial Completion.

B. Replace panels that cannot be cleaned and repaired to satisfaction of the **<<Architect>>**.

END OF SECTION 098430

DRAFT

SECTION 099100
PAINTING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Surface preparation.

B. Field application of paints.

C. Scope: Finish exterior and interior surfaces exposed to view, unless fully factory-finished and unless otherwise indicated. Specific items include (but are not limited to) the following:

1. Fire- and Smoke-Rated Wall Identification: Permanently label fire- and smoke-rated walls, partitions, and barriers per requirements of applicable building code. Labeling shall include fire-resistance rating, type of assembly, and instruction to protect openings/penetrations. Example text: "ONE HOUR FIRE BARRIER - PROTECT ALL OPENINGS".
    a. Locate lettering in concealed accessible floor, floor-ceiling plenums, and attic spaces, located no more than 15 feet from end of wall and at horizontal intervals not exceeding 30 feet, with stenciled lettering not less than 3 inches high with minimum 3/8-inch strokes. Locate directly inside of access doors or panels that provide access to rated walls. Do not paint walls where exposed to view except in support spaces (mechanical / electrical rooms and similar spaces).
    b. Refer to the life safety plans and partition schedule on the drawings for rated wall and partition locations.
2. Exposed side and exposed edges of plywood backboards for electrical and telecom equipment before installing equipment.
3. Elevator pit ladders.
4. Prime surfaces to receive wall coverings.
5. Mechanical and Electrical:
    a. **<< In finished areas; In all areas; or _____>>**, paint **<< insulated and exposed pipes; conduit; boxes; insulated and exposed ducts; hangers, brackets, collars and supports; mechanical equipment; electrical equipment; and _____>>**, unless otherwise indicated.
    b. Paint interior surfaces of air ducts and convector and baseboard heating cabinets that are visible through grilles and louvers with one coat of flat black paint to visible surfaces.
    c. Paint dampers exposed behind louvers, grilles, and convector and baseboard cabinets to match face panels.
6. Shop-Primed Items: **<< In finished areas; In all areas; or _____>>**, paint shop-primed items. Unless specifically indicated that additional field primer is not required, provide a tie coat primer over the shop primer before top coat(s) are applied.

D. Do Not Paint or Finish the Following Items:

1. Items factory-finished unless otherwise indicated; materials and products having factory-applied primers are not considered factory finished.
2. Items indicated to receive other finishes.
3. Items indicated to remain unfinished.
4. Fire rating labels, equipment serial number and capacity labels, bar code labels, and operating parts of equipment.

DRAFT

5. Stainless steel, anodized aluminum, bronze, terne-coated stainless steel, and lead items.
6. Marble, granite, slate, and other natural stones.
7. Floors, unless specifically indicated.
8. Ceramic and other tiles.
9. Brick, architectural concrete, architectural precast, cast stone, and integrally colored plaster, fiberglass, or stucco.
10. Glass.
11. Acoustical materials, unless specifically indicated.
12. Concealed pipes, ducts, and conduits.

1.02 REFERENCE STANDARDS

A. ASTM D4442 - Standard Test Methods for Direct Moisture Content Measurement of Wood and Wood-Based Materials.

B. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers Version 1.2.

C. MPI (APSM) - Master Painters Institute Architectural Painting Specification Manual.

D. SSPC-SP 1 - Solvent Cleaning.

E. SSPC-SP 6 - Commercial Blast Cleaning.

F. SSPC-SP 6/NACE No.3 - Commercial Blast Cleaning.

1.03 SUBMITTALS

A. Product Data: Provide complete list of products to be used, with the following information for each:
   1. Manufacturer's name, product name and/or catalog number, and general product category (e.g., "alkyd enamel").
   2. Cross-reference to specified paint system(s) product is to be used in; include description of each system.

B. Certification: By manufacturer that paints and finishes comply with VOC limits specified.

C. Manufacturer's Instructions: Indicate **<< special surface preparation procedures; substrate conditions requiring special attention; and _____>>**.

D. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.
   1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
   2. Extra Paint and Finish Materials: 1 gallon of each **<< color; type; surface texture; and _____>>**; from the same product runstore where directed.
   3. Label each container with **<< color; type; texture; room locations; and _____>>** in addition to the manufacturer's label.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to site in sealed and labeled containers; inspect to verify acceptability.

B. Container Label: Include manufacturer's name, type of paint, brand name, lot number, brand code, coverage, surface preparation, drying time, cleanup requirements, color designation, and instructions for mixing and reducing.

C. Paint Materials: Store at minimum ambient temperature of **<< 45 degrees F>>** and a maximum of **<< 90 degrees F>>**, in ventilated area, and as required by manufacturer's instructions.

DRAFT

1.05 FIELD CONDITIONS

A. Do not apply materials when surface and ambient temperatures are outside the temperature ranges required by the paint product manufacturer.

B. Follow manufacturer's recommended procedures for producing best results, including testing of substrates, moisture in substrates, and humidity and temperature limitations.

C. Do not apply materials when relative humidity exceeds 85 percent, at temperatures less than **<< 5 degrees F>>** above the dew point, or to damp or wet surfaces.

D. Minimum Application Temperatures for Paints: 50 degrees F for interiors unless required otherwise by manufacturer's instructions.

E. Provide lighting level of 80 ft candles measured mid-height at substrate surface.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Paints:
   1. Benjamin Moore.
   2. PPG Paints.
   3. Sherwin-Williams Company.

2.02 PAINTS AND FINISHES - GENERAL

A. Paints and Finishes: Ready-mixed, unless intended to be a field-catalyzed paint.
   1. Provide paints and finishes of a soft paste consistency, capable of being readily and uniformly dispersed to a homogeneous coating, with good flow and brushing properties, and capable of drying or curing free of streaks or sags.
   2. Supply each paint material in quantity required to complete entire project's work from a single production run.
   3. Do not reduce, thin, or dilute paint or finishes or add materials unless such procedure is specifically described in manufacturer's product instructions.

B. Low-Emitting Materials (Paints and Coatings): Paints and coatings field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet applicable VOC limits of **<<CARB (SCM)>>** or **<<SCAQMD 1113>>**.

C. Flammability: Comply with applicable code for surface burning characteristics.

D. Sheens: Provide the sheens specified; where sheen is not specified, sheen will be selected later by **<<Architect>>** from the manufacturer's full line.

E. Colors: **<< To be selected from manufacturer's full range of available colors; As indicated on drawings; As indicated in Color Schedule; or _____>>**.
   1. Selections shall be made by Owner and Architect after award of contract.
   2. **<< In finished areas; In all areas; or _____>>**, finish pipes, ducts, conduit, and equipment the same color as the wall/ceiling under which they are mounted.

2.03 ACCESSORY MATERIALS

A. Accessory Materials: Provide primers, sealers, cleaning agents, cleaning cloths, sanding materials, and clean-up materials as required for final completion of painted surfaces.

B. Patching Material: Latex filler.

DRAFT

C. Fastener Head Cover Material: Latex filler.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that surfaces are ready to receive work as instructed by the product manufacturer.

B. Examine surfaces scheduled to be finished prior to commencement of work. Report any condition that may potentially affect proper application.

C. Test shop-applied primer for compatibility with subsequent cover materials.

D. Measure moisture content of surfaces using an electronic moisture meter. Do not apply finishes unless moisture content of surfaces is below the following maximums:

1. Gypsum Wallboard: 12 percent.
2. Masonry, Concrete, and Concrete Masonry Units: 12 percent.
3. Interior Wood: 15 percent, measured in accordance with **<<ASTM D4442>>**.
4. Concrete Floors and Traffic Surfaces: 8 percent.

3.02 PREPARATION

A. Clean surfaces thoroughly and correct defects prior to application.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

C. Remove or repair existing paints or finishes that exhibit surface defects.

D. Remove or mask surface appurtenances, including electrical plates, hardware, light fixture trim, escutcheons, and fittings, prior to preparing surfaces or finishing.

E. Seal surfaces that might cause bleed through or staining of topcoat.

F. Concrete:

1. Remove release agents, curing compounds, efflorescence, and chalk. Do not coat surfaces if moisture content or alkalinity of surfaces to be coated exceeds that permitted in manufacturer's written instructions.

G. Masonry:

1. Remove efflorescence and chalk. Do not coat surfaces if moisture content, alkalinity of surfaces, or if alkalinity of mortar joints exceed that permitted in manufacturer's written instructions. Allow to dry.

H. Concrete Floors and Traffic Surfaces: Remove contamination, acid etch and rinse floors with clear water. Verify required acid-alkali balance is achieved. Allow to dry.

I. Gypsum Board: Fill minor defects with filler compound. Spot prime defects after repair.

J. Aluminum: Remove surface contamination and oils and wash with solvent according to **<<SSPC-SP 1>>**.

K. Copper: Remove contamination by steam, high-pressure water, or solvent washing.

L. Galvanized Surfaces and Non-Ferrous Metals:

1. Remove surface contamination and oils and wash with solvent according to **<<SSPC-SP 1>>**.

M. Ferrous Metal:

1. Solvent clean according to **<<SSPC-SP 1>>**.

DRAFT

2. Remove rust, loose mill scale, and other foreign substances using methods recommended in writing by paint manufacturer and blast cleaning according to **<<SSPC-SP 6/NACE No.3>>** "Commerical Blast Cleaning". Protect from corrosion until coated.

N. Wood Surfaces to Receive Opaque Finish: Wipe off dust and grit prior to priming. Seal knots, pitch streaks, and sappy sections with sealer. Fill nail holes and cracks after primer has dried; sand between coats. Back prime concealed surfaces before installation.

O. Metal Doors to be Painted: Prime metal door top, side, and, bottom edge surfaces if not primed by manufacturer.

3.03 APPLICATION

A. Remove unfinished louvers, grilles, covers, and access panels on mechanical and electrical components and paint separately.

B. Apply products in accordance with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual".

C. Where adjacent sealant is to be painted, do not apply finish coats until sealant is applied.

D. Do not apply finishes to surfaces that are not dry. Allow applied coats to dry before next coat is applied.

E. Apply each coat to uniform appearance in thicknesses specified by manufacturer.

F. Dark Colors and Deep Clear Colors: Regardless of number of coats specified, apply as many coats as necessary for complete hide.

G. Sand **<< wood; metal; and _____>>** surfaces lightly between coats to achieve required finish.

H. Vacuum clean surfaces of loose particles. Use tack cloth to remove dust and particles just prior to applying next coat.

I. Reinstall electrical cover plates, hardware, light fixture trim, escutcheons, and fittings removed prior to finishing.

3.04 CLEANING

A. Collect waste material that could constitute a fire hazard, place in closed metal containers, and remove daily from site.

3.05 PROTECTION

A. Protect finishes until completion of project.

B. Touch-up damaged finishes after Substantial Completion.

3.06 EXTERIOR PAINT SCHEDULE

A. General: Provide the following Paint systems for the various substrates, as indicated. Dry film thickness is noted as “DFT.” Provide compatibility test areas on existing painted substrates.

B. Zinc-Coated or Zinc-rich Primer-Coated Metal with Direct to Metal (“DTM”) Gloss Acrylic Enamel Finish: 2 topcoats of DTM gloss enamel over primer, with min. total DFT of 2.5 mils.

1. Prime Coat (Tie-Coat): Lead-free, acrylic base interior/exterior galvanized metal primer, premium grade. Apply over shop primer.
   a. Moore: HP04 Ultra Spec HP Acrylic Metal Primer.
   b. PPG: 90-1908 Pitt-Tech Plus EP Acrylic Primer/Finish.
   c. S-W: B66W1310 Pro Industrial Pro-Cryl Universal Acrylic Primer.
2. First and Second Coats: DTM Acrylic Gloss Enamel.

DRAFT

a. Moore: HP28 Ultra Spec HP Acrylic Gloss Enamel.
b. PPG: 90-1510 Pitt-Tech Plus EP DTM Acrylic Gloss.
c. S-W: B66W1051 Pro Industrial DTM Acrylic Coating (Gloss).

C. Field-Applied Coatings for Ferrous Metal (AESS): Aliphatic urethane system of intermediate coat and topcoat**<< with clear finish coat; or <u>None - N/A</u>>>**. Provide scheduled products for exposed steel fabrications indicated as AESS.
1. Field Touch-up: Match moisture curing urethane zinc-rich shop primer.
2. Intermediate Coat: Moisture curing urethane and micaceous iron oxide or epoxy.
a. Moore: Corotech V160 Epoxy Mastic Coating.
b. PPG: PMC Amerlock 600.
c. S-W: Macropoxy 646 Fast Cure Epoxy, B58-600/B58v600.
3. Top Coat: Aliphatic urethane at 2.0 – 3.0 mils DFT.
a. Moore: Corotech V500 Aliphatic Acrylic Urethane.
b. PPG: 95-812 Pitthane Ultra Gloss Urethane Enamel.
c. S-W: Corothane I Aliphatic Finish Coat B65.

D. Coatings to Repaint Exterior Ferrous Metal: Aliphatic urethane topcoat system over surface-tolerant epoxy mastic. Provide to repaint existing exposed steel fabrications with extended weather exposure deterioration and surface rust.
1. Preparation: Clean steel to SSPC SP-3 Power Tool Cleaning to remove all rust scale, mill scale and loose rust, oil, grease and other contaminants.
2. Primer: Surface-tolerant fast curing polyamide epoxy (mastic). 5.0 – 10.0 mils DFT.
a. Moore: P45 Mastic Epoxy Gloss Coating.
b. PPG: PMC Amerlock 600.
c. S-W: Macropoxy 646 Fast Cure Epoxy.
3. First and Second Top Coats: Aliphatic urethane at 3.0 – 4.0 mils DFT per coat
a. Moore: P74 Aliphatic Acrylic Urethane.
b. PPG: 95-8930 Pitthane Ultra LS.
c. S-W: B65-300 Series / B60V30 Hi-Solids Polyurethane.

E. Concrete: Acrylic latex satin finish, two finish coats over alkali-resistant primer with minimum total DFT of not less than 3.5 mils.
1. Prime Coat: Exterior Acrylic weathered masonry sealer/primer.
a. Moore: 608 Ultra Spec Masonry Int/Ext 100% Acrylic Sealer/Primer.
b. PPG: 4-603 Perma-Crete Int/Ext Alkali Resistant Primer.
c. S-W: A24w8300, Loxon Concrete & Masonry Primer.
2. First and Second Finish Coats: Exterior 100% Acrylic – Satin sheen; premium grade.
a. Moore: N401 Regal Select Exterior Paint High Build Low Lustre Finish.
b. PPG: 76-45 Sun-Proof Ext House & Trim, Satin.
c. S-W: A82 Series A-100 Exterior Latex Satin.

F. Concrete Masonry Units: Acrylic latex satin finish, two finish coats over primer with minimum total DFT of not less than 3.5 mils.
1. Prime Coat: Exterior Acrylic weathered masonry sealer/primer.
a. Moore: 571 Ultra Spec Hi-Build Masonry Block Filler.
b. PPG: 6-15 Speedhide Int/Ext Acrylic Masonry Block Filler.
c. S-W: A24W200 Loxon Block Surfacer.

DRAFT

2. First and Second Finish Coats: Exterior 100% Acrylic – Satin sheen; premium grade.
    a. Moore: N401 Regal Select Exterior Paint High Build Low Lustre Finish.
    b. PPG: 76-45 Sun-Proof Ext House & Trim, Satin.
    c. S-W: A 82 Series A-100 Exterior Latex Satin.

G. Exterior Gypsum Soffit Board with Smooth Finish 100% Acrylic Coating: Top coat(s) for total DFT of 10.0 mils minimum over primer-sealer.
1. Prime Coat (Tie-Coat): Bonding primer-sealer.
    a. Moore: N023 Fresh Start All Purpose 100% Acrylic Int/Ex Latex Primer.
    b. PPG: 17-921 Seal-Grip Gripper Interior/Exterior 100% Acrylic Latex Primer.
    c. S-W: B51-450, Multi-Purpose Primer.
2. First and Second Finish Coats: Exterior 100% Acrylic – Flat finish; premium grade.
    a. Moore: N400 Regal Select Exterior Paint High Build Flat Finish.
    b. PPG: 72-45 Sun-Proof Ext House & Trim. Flat Latex 100% Acrylic
    c. S-W: A6 Series A-100 Exterior Latex Flat

H. General Painted Wood and Plywood with Acrylic Latex Satin Finish: 2 finish coats over primer with total DFT not less than 3.5 mils.
1. Prime Coat: Alkyd-based wood sealer/primer.
    a. Ben Moore: 024 Fresh Start Multi-Purpose Oil Based Primer.
    b. PPG: 17-941 Seal-Grip Interior/Exterior Alkyd Universal Primer.
    c. S-W: Y24W8020 Exterior Oil Wood Primer.
2. First and Second Finish Coats: Exterior 100% Acrylic – Satin sheen; premium grade.
    a. Moore: N401 Regal Select Exterior Paint High Build Low Lustre Finish.
    b. PPG: 76-45 Sun-Proof Ext House & Trim, Satin.
    c. S-W: A82 Series A-100 Exterior Latex Satin.

I. Exterior Wood Dumpster Enclosure Siding and Trim with Solid Color Latex-Emulsion Stain: 2 Finish coats.
1. Stain Coat: Acrylic latex solid color stain.
    a. Moore: 610 ArborCoat Exterior Stain - Solid Ultra Flat.
    b. Cabot: Cabot O.V.T. Solid Color Acrylic Stain.
    c. PPG: FLD820, Flood Solid Color 100% Acrylic Latex Base Stain.
    d. S-W: A16, Woodscapes Exterior Solid Acrylic Stain.

DRAFT

3.07 INTERIOR PAINT SCHEDULE

A. General: Provide the following paint systems for the various substrates, as indicated. Dry film thickness is noted as “DFT.” Provide compatibility test areas on existing painted substrates.

B. Concrete Masonry Units: Low-VOC Acrylic Semi-Gloss Finish. Provide 2 finish coats over 2 block filler coats, with total DFT not less than 2.5 mils. (Provide for CMU except where “epoxy finish” is indicated.)
1. Block Filler Coats, 100% Acrylic. Apply filler coat at a rate to ensure complete coverage. Brush, spray or roller apply and back roll or squeegee for smooth, pinhole-free treatment.
    a. Moore: 571 Ultra Spec Hi-Build Masonry Block Filler.
    b. PPG: 16-90 Pitt Glaze WB Acrylic Interior Exterior Block Filler.
    c. S-W: B46W150 Pro Industrial Heavy Duty Block Filler. (PrepRite not acceptable)

2. Waterproofing Filler Coats – Showers & Wet Applications: Cementitious resin or epoxy block filler applied by brush, spray or roller and back rolled or squeegeed for smooth, pinhole-free treatment.
    a. Moore: P31 Waterborne Epoxy Block filler.
    b. PPG: 95-217 Epoxy Ester Cementitious Waterproofing Block Filler.
    c. S-W: B42W400/B42V401 Kem Cati-Coat HS Epoxy Filler/Sealer.
3. Bonding Primer (previously painted): Acrylic bonding primer for exceptional adhesion to hard, glossy surfaces. Test for adhesion. Brush, spray or roller apply and back roll.
    a. Moore: Stix Bonding Primer.
    b. PPG: 17-921 PPG Seal Grip Acrylic Universal Primer/Sealer.
    c. S-W: B51W150 Extreme Bond Interior/Exterior Primer.
4. First & Second Finish Coats: Commercial Interior Low-VOC Acrylic Semi-gloss Finish. Provide for wall finishes unless noted or directed otherwise.
    a. Moore: N539 Ultra Spec 500 Interior Semi-Gloss Finish.
    b. PPG: 6-500ZV Speedhide Interior Semi-Gloss Latex.
    c. S-W: B31-2600 ProMar 200 Zero VOC Interior Latex Semi-Gloss.

C. Concrete Masonry Units - Semi-Gloss Water-Borne Epoxy Finish: 2 finish coats over 2 block filler coats:
1. Block Filler Coats: Acrylic-latex or as required by manufacturer for topcoat. Brush, spray or roller apply and back roll for smooth pinhole-free treatment.
    a. Moore: 571 Ultra Spec Hi-Build Masonry Block Filler.
    b. PPG: 6-15 Speedhide Int/Ext Acrylic Masonry Block Filler.
    c. PPG: 16-90 Pitt-Glaze WB Int/Ext Block Filler Latex.
    d. S-W: B46W150 Pro Industrial Heavy Duty Block Filler.
2. First & Second Finish Coats: Two-component, semi-gloss water born polyamide epoxy enamel applied at a DFT of 1.5 to 4.0 mils per coat.
    a. Moore: Corotech V400 Polyamide Epoxy Coating.
    b. PPG: 98E-xx Base / 98E-100 Aquapon WB EP Water Based Epoxy – Semi-Gloss.
    c. S-W: B73W360 / B73V300 Pro Industrial Water Based Catalyzed Epoxy.

D. Concrete Floor with Semi-Gloss Water-Base Acrylic Floor Enamel: 2 Coats over primer on cured surface. Concrete must cure a minimum of 30 days before painting and have pH of 10.0 or lower. Prepare per SSPC-SP13, shot blast or prepare floor by other means acceptable to paint manufacturer (accepted in writing) prior to painting.
1. Primer Coat: Acrylic, self-priming finish enamel; brush or roller applied over prepared concrete.
    a. Moore: 122 Moore's Latex Floor and Patio Enamel (thinned 1 pint/gallon).
    b. PPG: 3-510 Pittsburgh Floor, Porch & Deck Satin Latex.
    c. S-W: B90 Armorseal Tread-Plex.
2. First and Second Finish Coats: Semi-gloss water-based acrylic floor enamel or comparable performance enamel. Provide 1.5 - 2.0 mils DFT per coat.
    a. Moore: 122 Moore’s Latex Floor and Patio Enamel.
    b. PPG: 3-510 Pittsburgh Floor, Porch & Deck Satin Latex.
    c. S-W: B90 Armorseal Tread-Plex.

E. Concrete Floor with Gloss Water-Base Epoxy Floor Enamel: 2 Coats over primer on cured surface. Concrete must cure a minimum of 30 days before painting and have pH of 10.0 or

DRAFT

lower. Prepare per SSPC-SP13, shot blast or prepare floor by other means acceptable to paint manufacturer (accepted in writing) prior to painting.

1. Primer Coat: Epoxy primer, brush or roller applied over prepared concrete. Provide 1.5 - 2.0 mils DFT per coat or as recommended by manufacturer.
    a. Moore: P41 Fast Dry Epoxy Floor Sealer/Finish.
    b. PPG: 98E-1 Series Aquapon WB EP Water Base Epoxy 2.0 mils to 3.0 mils DFT per coat.
    c. S-W: B70-8100/B70V8100 Armorseal 8100 Water based Epoxy Floor Coating.
2. Two Finish Coats: Two-component waterborne catalyzed polyamide epoxy floor enamel or comparable performance enamel. Provide 1.5 - 2.0 mils DFT per coat or as recommended by manufacturer.
    a. Moore: P42 Waterborne Polyamide High Gloss Epoxy Enamel 2.0 mils to 3.0 mils DFT per coat.
    b. PPG: 98E-1 Series Aquapon WB EP Water Base Epoxy 2.0 mils to 3.0 mils DFT per coat.
    c. S-W: B70-8100/B70V8100 Armorseal 8100 Water based Epoxy Floor Coating.

F. Gypsum Board Systems with Latex Finish: Semi-gloss finish at walls and flat finish on ceilings except as indicated otherwise. Provide 2 finish coats over 2 filler coats. Provide best commercial Zero-VOC formulation with 0 VOC per EPA test method 24.
    1. Filler Coats: 0 VOC (per EPS test method 24) Latex Primer.
        a. Moore: N534 Ultra Spec 500 Interior Latex Primer.
        b. PPG: 9-900 Pure Performance Interior Latex Primer.
        c. S-W: B28-2600 ProMar 200 Zero VOC Interior Latex Primer.
    2. First & Second Finish Coats: Interior Zero-VOC Acrylic Semi-Gloss Finish. Provide for wall finishes unless indicated otherwise.
        a. Moore: N539 Ultra Spec 500 Interior Semi-Gloss Finish.
        b. PPG: 6-500ZV Speedhide Interior Semi-Gloss Latex.
        c. S-W: B31-2600 ProMar 200 Zero VOC Interior Latex Semi-Gloss.
    3. First & Second Finish Coats: Interior Zero-VOC Acrylic Flat Finish. Provide for ceiling applications unless indicated otherwise.
        a. Moore: N536 Ultra Spec 500 Interior Flat.
        b. PPG: 6-70ZV Speedhide Interior Latex Flat.
        c. S-W: B30-2600 ProMar 200 Zero VOC Interior Latex Flat or B30-4650 ProMar 400 Zero VOC Interior Latex Flat.

G. Gypsum Board Systems with Water-Borne Polyamide Epoxy Finish (“EPX”): Provide 2 finish coats over 2 filler coats.
    1. Filler Coats: Manufacturer’s recommended primer.
        a. Moore: 217 Fresh Start Alkyd Enamel Underbody.
        b. PPG: 6-2 Speedhide Interior Latex Sealer.
        c. S-W: B28W2600 ProMar 200 Zero VOC Primer.
    2. First and Second Coats: Two-component, water born polyamide epoxy enamel applied at a DFT of 1.5 to 4.0 mils per coat. Provide semi-gloss finish unless directed otherwise.
        a. Moore: Corotech V440 Waterborne Amine Epoxy.
        b. PPG: 98E-xx Base / 98E-100 Aquapon WB EP Water Based Epoxy – Semi-Gloss.
        c. S-W: B73W360 / B73V300 Water Based Catalyzed Epoxy.

DRAFT

H. Gypsum Board Systems with “Dry-Erase Coating” Finish: Gloss finish designed for use as a dry-erase marker surface.**<< Prepare gypsum board with Level 5 finish.; or None - N/A>>**
   1. Filler Coat: **<< Primer as specified for gypsum board with latex finish; or Dry erase coating manufacturer’s recommended primer>>**.
   2. Finish Color Coat: Interior Low-VOC Acrylic Satin Finish as specified for CMU/gypsum board with latex finish.
   3. Dry-Erase Surface Coat: Interior Gloss Finish developed for dry-erase whiteboard application. Roller-**<< or spray-; or None - N/A>>**apply coating to WFT of 4 – 8 mils (2 – 4 mils DFT). 10-year warranty on application.
      a. DesignTex.: “WriteUp 1”**<< Clear; or None - N/A>>**.
      b. MDC: “Ideapaint” **<< White; Clear; or None - N/A>>** (non-isocyanate).
      c. Master Coating: “Wink.”
      d. S-W: KB65C2000 “Dry Erase Coating”**<< Clear; or None - N/A>>** (2-component WB polyurethane).

I. Gypsum Board Systems with “Chalkboard” Finish: Eggshell/flat finish designed for use as a chalkboard surface. **<< Prepare gypsum board with Level 5 finish.; or None - N/A>>**
   1. Filler Coat: **<< Primer as specified for gypsum board with latex finish; or Chalkboard coating manufacturer’s recommended primer>>**.
   2. Chalkboard Surface Coat: Acrylic-latex interior eggshell/flat black finish developed for chalkboard application. Roller-**<< or spray-; or None - N/A>>**apply coating to manufacturer's recommended thickness. 10-year warranty on application.
      a. Ben Moore: 308 ben Chalkboard Paint.
      b. Rust-Oleum: 206540 ChalkBoard.
      c. S-W: K05223000 Krylon Chalkboard Paint.

J. Gypsum Board Systems with “Abuse-Resistant Coating” Finish: Satin (egg-shell) sheen abuse-resistant finish.
   1. Filler Coat:
      a. Moore: N534 Ultra Spec 500 Interior Latex Primer.
      b. Master Coating: Scuffmaster “Primemaster” Primer/Sealer.
      c. S-W: B28W2600 ProMar 200 Zero VOC Primer.
   2. First & Second Finish Coats: Interior Satin Finish. (Low lustre/Satin = 25-45% @60°) Provide for abuse-resistant wall finishes indicated.
      a. Moore: 485 Ultra Spec “SCUFF-X” proprietary single component acrylic copolymer.
      b. Master Coating: Scuffmaster “Scrubtough” 2-component polyurethane-fortified coating.
      c. S-W: S23W0051 Scuff Tuff Interior Waterbased Enamel.

K. Ferrous Metal with Latex Dry Fog Finish: One finish coat over primed exposed construction. Provide nominal 50 square foot sample area to test for paint compatibility with substrates.
   1. Prime Coat: (Acrylic or recommended VOC-compliant metal primer for surfaces not pre-primed.) 2.0 mils DFT.
      a. Moore: N110 Superkote 5000 DryFall Latex Flat.
      b. PPG: 90-1908 Pitt-Tech Plus EP Acrylic Primer/Finish.
      c. S-W: B66-1300 Series Pro Industrial Pro-Cryl Universal Acrylic Primer.
   2. Top Coat: All exposed structure as scheduled. Acrylic Dry Fog 3.0 mils DFT. Provide color finish as selected by Architect from manufacturer's full range.
      a. Moore: N110 Superkote 5000 DryFall Latex Flat.

DRAFT

b. PPG: 6-725XI Speedhide Super Tech WB Int. Dry-Fog Flat Latex Flat.
c. S-W: B42W1181 / B42B81 Waterborne Acrylic Dry Fall, Flat.

L. Ferrous Metal: Direct to Metal ("DTM") Acrylic Enamel Finish: 2 Coats over primer, with total DFT not less than 2.5 mils. **<< Provide satin finish at hollow metal steel doors and frames, and semi-gloss at other applications.; or _____>>**
1. Prime Coat: Lead-free, acrylic base primer. Not required on shop primed items.
a. Moore: HP29 Ultra Spec HP DTM Acrylic Semi-Gloss.
b. PPG: 90-1908 Pitt-Tech Plus EP Acrylic Primer/Finish.
c. S-W: B66W11 Pro Industrial DTM Acrylic Primer/Finish (or B66 W200).
2. Bonding Primer (previously painted): Acrylic bonding primer designed for previously painted ferrous metal to ensure secure bond. Brush, spray or roller apply and back roll.
a. Moore: SXA-110 Insl-X Waterborne Bonding Primer.
b. PPG: 90-1908 Pitt-Tech Plus EP Acrylic Primer/Finish.
c. S-W: B66A50 DTM Bonding Primer.
3. First and Second Coat: DTM Acrylic Semi-Gloss Enamel. (30-40 units @ 60°)
a. Moore: HP29 Ultra Spec HP DTM Acrylic Semi-Gloss.
b. PPG: 90-1610 Pitt-Tech Plus EP DTM Acrylic Semi-Gloss.
c. S-W: B66W1151 Pro Industrial DTM Acrylic Semi-Gloss Coating.
4. First and Second Coat: DTM Acrylic Satin Enamel. **<< Provide for hollow metal steel doors and frames.; or _____ >>** (15-25 units @ 60°)
a. Moore: HP25 Ultra Spec HP DTM Acrylic Low Lustre.
b. PPG: 90-1710 Pitt-Tech Plus EP DTM Acrylic Satin.
c. S-W: B66W1251 Pro Industrial DTM Acrylic Eg-Shel.

M. Zinc-Coated Metal: Semi-Gloss Direct to Metal ("DTM") Acrylic Enamel Finish: 2 Coats over primer, with min. total DFT of 2.5 mils.
1. Prime Coat: Lead-free, acrylic base interior galvanized metal primer, premium grade.
a. Moore: HP04 Ultra Spec HP Acrylic Metal Primer.
b. PPG: 90-1908 Pitt-Tech Plus EP Acrylic Primer/Finish.
c. S-W: B66W1151 Pro Industrial DTM Acrylic Semi-Gloss Coating.
2. First and Second Coats: DTM Acrylic Semi-Gloss Enamel. Same as for ferrous metal.

N. Intumescent Mastic-Coated Metal: Semi-Gloss Direct to Metal ("DTM") Acrylic Enamel Finish as approved by intumescent coating manufacturer: 2 Coats, with min. total DFT of 2.5 mils.

O. Painted Woodwork and Hardboard: Semi-Gloss Acrylic Enamel Finish: Two topcoats over undercoater. Provide at painted wood shelving, electrical panel boards, and as noted.
1. Prime Coat: Interior Oil Undercoat.
a. Moore: 024 Fresh Start Multi-Purpose Interior/Exterior Oil Based Primer.
b. PPG: 17-941NF Seal Grip Int/Ext. Alkyd Universal Primer.
c. S-W: B49 W8820 Multi-Purpose Oil-Based Primer.
2. Prime Coat: Interior Latex Undercoat, for medium-duty, low-VOC formulation.
a. Moore: N023 Fresh Start Multi-Purpose Latex Primer.
b. PPG: 17-921 Seal Grip Int/Ext Acrylic Universal Primer.
c. S-W: B28 W811 Premium Wall & Wood Primer.
3. First and Second Finish Coats: DTM Acrylic Semi-Gloss Enamel. DFT 3.5 Mils min.
a. Moore: HP29 Ultra Spec DTM Acrylic Semi-Gloss.

DRAFT

b. PPG: 90-1110 Pitt-Tech Int/Ext Satin DTM Industrial Enamel.
c. S-W: B66W1150 Series Pro Industrial DTM Acrylic Semi-Gloss Coating.

4. First and Second Finish Coats: Premium Acrylic Semi-Gloss Enamel <150 g/L. DFT 3.5 Mils min.
   a. Moore: 551 Regal Select Semi-Gloss.
   b. PPG: 87-6 Manor Hall Interior Semi-Gloss Acrylic Latex.
   c. S-W: B31W20 ProClassic Waterborne.

P. Stained woodwork with transparent finish is specified in Division 6 Sections by woodworker.

END OF SECTION 099100

DRAFT

SECTION 101100
VISUAL DISPLAY UNITS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ANSI A135.4 - Basic Hardboard.

B. ANSI A208.1 - American National Standard for Particleboard.

C. ASTM A424/A424M - Standard Specification for Steel, Sheet, for Porcelain Enameling.

D. ASTM C208 - Standard Specification for Cellulosic Fiber Insulating Board.

E. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

1.02 SUBMITTALS

A. Product Data: Provide manufacturer's data on **<< porcelain enamel steel markerboard; tackboard; tackboard surface covering; trim; and accessories>>**.

B. Shop Drawings: Indicate wall elevations, dimensions, joint locations, and special anchor details.

C. Sustainable Design Requirements:

D. Selection Samples: Color charts for selection of color and texture of **<< tackable surface covering; and composition cork>>**.

E. Verification Samples: Provide physical samples, nominal 8 x 12 inches, for each selected color of materials indicated above.

F. Test Reports: Show compliance to specified surface burning characteristics requirements.

G. Maintenance Data: Include data on regular cleaning, stain removal**<< , and _____; or None - N/A>>**.

1.03 DELIVERY, STORAGE AND HANDLING

A. Factory-fabricate visual display units and deliver as fully assembled units to greatest extent possible.

B. Deliver and store visual display units with protective packaging. Do not remove protective covers until ready to install.

C. Store visual display units in a dry, enclosed space. Do not install until installation spaces are enclosed and conditioned at occupancy conditions.

1.04 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Provide fifty year warranty for **<< chalkboard; and markerboard>>** porcelain face surface to include warranty against **<< discoloration due to cleaning; crazing or cracking; staining; and _____>>**.

PART 2 PRODUCTS

2.01 VISUAL DISPLAY UNITS

A. Porcelain Enamel Steel Markerboards: Magnetic, porcelain-enamel steel face sheet bonded to nominal 3/8-inch MDF or particleboard core.

DRAFT

1. Color: White.
2. Backing: Provide with 0.005-inch aluminum foil backer, laminated to core.
3. Height: 60 inches, unless otherwise indicated on Drawings.
4. Length: **<< 6 feet; 8 feet; 10 feet; 12 feet; 16 feet; or ___ inches>>**, in one piece. ******Refer to MCPS ED Spec for length requirements.******
5. Frame: Extruded aluminum, with concealed fasteners.
6. Frame Finish: Anodized, natural.
7. Accessories: Provide full length **<< marker tray; map rail; flag holder; and ____>>**. ******MCPS prefers no marker trays on gymnasium boards.******
8. Special Markings: Provide markerboards with the following integral markings at locations indicated. Markings shall be factory-painted or fused to surface of porcelain enamel.
   a. Music staff lines.
9. Products:
   a. AARCO Products, Inc.
   b. ASI Visual Display Products.
   c. Bangor Cork Company, Inc.
   d. Claridge Products and Equipment, Inc.
   e. Egan Visual Corporation.
   f. Ghent; a GMI Company.
   g. Marsh Industries, Inc; Visual Products Group.
   h. MooreCo, Inc.
   i. Nelson Adams NACO.
   j. Platinum Visual Systems.
   k. Polyvision Corporation.

B. Tackboards: **<< Fine-grained, homogeneous natural cork; Composition cork; Fabric laminated to cork; Fabric laminated to fiberboard; or ____>>**.
   1. Cork Thickness: **<< 1/8 inch; 1/4 inch; 7/32 inch; or ___ inch>>**.
   2. Fabric: **<< Non-woven PVC-free coated fabric; Vinyl-coated fabric; Burlap; or _____>>**. ******MCPS prefers fabric cover in kitchens.******
   3. Color: To be selected by Architect from manufactuter's **<< full; or standard>>** range.
   4. Backing: **<< Fiberboard; Hardboard; or _____>>**, **<< 1/4 inch; 3/8 inch; or ___ inch>>** thick, laminated to tack surface.
   5. Surface Burning Characteristics: Flame spread index of 25, maximum, and smoke developed index of 450, maximum, when tested in accordance with **<<ASTM E84>>**.
   6. Height: 48 inches, unless otherwise indicated on Drawings.
   7. Length: **<< 6 feet; 8 feet; 10 feet; 12 feet; 16 feet; or ___ inches>>**, in one piece. ******Refer to MCPS ED Spec for length requirements.******
   8. Frame: Extruded aluminum, with concealed fasteners.
   9. Frame Profile: As indicated on drawings.
   10. Frame Finish: Anodized, natural.
   11. Accessories: Provide **<< map rail; flag holder; and ____>>**.
   12. Products:
      a. AARCO Products, Inc.
      b. ASI Visual Display Products.
      c. Bangor Cork Company, Inc.

DRAFT

d. Claridge Products and Equipment, Inc.
e. Egan Visual Corporation.
f. Ghent; a GMI Company.
g. Marsh Industries, Inc; Visual Products Group.
h. MooreCo, Inc.
i. Nelson Adams NACO.
j. Platinum Visual Systems.
k. Polyvision Corporation.

C. Tackable Wall Panels: **<< Fine-grained, homogeneous natural cork; Fabric laminated to fiberboard; or ____>>**; factory-fabricated.
1. Color, Pattern, and Texture: To be selected by Architect from manufacturer's full range.
2. Backing: **<< Fiber board; or _____>>**, **<< 1/2 inch; 3/4 inch; or ___ inch>>** thick, laminated to tack surface.
3. Surface Burning Characteristics: Flame spread index of 25, maximum, and smoke developed index of 450, maximum, when tested in accordance with **<<ASTM E84>>**.
4. Size: As indicated on drawings.
5. Height: **<< Full height of room or wall; As indicated on drawings; or ___ inches>>**; no horizontal seams.
6. Edge Treatment: Square edge unless detailed otherwise.
7. Edge Molding: Provide metal "J-mold" type edge trim for exposed edges at door and window openings and similar conditions.
8. Adhesives: Provide manufacturer's recommended adhesive, primer, and sealer, produced for use on substrate shown on drawings. Provide materials which are mildew-resistant and non staining to wallcovering.
9. Products:
a. Claridge Products and Equipment, Inc; Tack Walls.
b. Koroseal Interior Products; Walltalkers Tac-Wall.
c. MDC Interior Solutions; Cork.
d. National Solutions; TackNow.

D. Tackstrips: **<< Fine-grained, homogeneous natural cork; Linoleum-modified cork; Vinyl laminated to cork; or ____>>**.
1. Cork Thickness: **<< 1/8 inch; 1/4 inch; 7/32 inch; or ___ inch>>**.
2. Surface Burning Characteristics: Flame spread index of 25, maximum, and smoke developed index of 450, maximum, when tested in accordance with **<<ASTM E84>>**.
3. Height: **<< 1 inch; 2 inches; or ___ inches>>**.
4. Length: **<< ___ inches; or As indicated on drawings>><< , in one piece; None - N/A; or ____>>**. Where indicated to be installed over markerboard, match length of markerboard.
5. Frame and End Stops: Extruded aluminum with concealed fasteners.
6. Frame Profile: **<< As indicated on drawings; Manufacturer's standard; or _____>>**.
7. Frame Finish: Anodized, natural.

E. Bulletin Board Cabinets: Factory-fabricated **<< wood-framed; aluminum-framed; or _____>>** unit with tackable panel on back inside surface and glazed doors at front.
1. Manufacturers:
a. Claridge Products and Equipment, Inc.

DRAFT

b. Ghent, a GMI Company.
c. Platinum Visual Systems.

2. Location: **<< Interior; Exterior; or _____>>**.
3. Mounting: **<< Recessed; Surface mounted; or _____>>**.
4. Width: **<< 3 feet; 4 feet; 5 feet; 6 feet; 8 feet; 10 feet; 12 feet; _____ feet; or As indicated on drawings>>**.
5. Height: **<< 3 feet; 4 feet; ____ feet; or As indicated on drawings>>**.
6. Depth: **<< 3 inches; 4 inches; ____ inches; As indicated on drawings; Manufacturer's standard; or _____>>**.
7. Aluminum Frames: Extruded aluminum, with concealed fasteners. **<< Anodized, natural; Anodized, medium bronze; Anodized, dark bronze; Anodized, ____; Baked enamel, ____; Powder coat, ____; or _____>>** finish.
   a. Exterior Bulletin Boards: Weather-resistant construction with vents to dissipate trapped moisture, weather-resistant tackable panels, and weather-stripped hinged doors.
8. Frame Profile: **<< Square; Radiused; or _____>>** frame section with **<< square; radiused; or _____>>** cabinet corners.
9. Components:
   a. Glazed Doors: **<< Sliding; Hinged; or _____>>**, **<< tempered glass; clear acrylic sheet; or _____>>**.
      1) Number of Doors: **<< One pair; Two pair; Three pair; Four pair; As indicated on drawings; or _____>>**.
   b. Tackable Back Panel: **<< Fine-grained, homogeneous natural cork; Composition cork; Fabric laminated to cork; Fabric laminated to fiberboard; or ____>>**.
   c. Lighting: LED**<< Fluorescent; LED; _____; or None>>**.

2.02 MATERIALS

A. Porcelain Enameled Steel Sheet: **<<ASTM A424/A424M>>**, Type I, Commercial Steel, with fired-on vitreous finish.

B. **<< Non-woven PVC-free Coated; Vinyl-Coated ; or None - N/A>>** Fabric: Roll stock, complying with the following:
   1. Content: **<< Polyurethane; Silicone; PVC-free Vinyl; Vinyl; or _____>>**.
   2. Color: As selected by Architect from manufacturer's full range.
   3. Manufacturers:
      a. Architex.
      b. Arc-Com.
      c. Carnegie.
      d. Designtex.
      e. Maharam.
      f. Momentum Textiles and Wallcovering.
      g. Pallas.
      h. Wolf-Gordon, Inc.

C. Natural Cork: Natural ground cork, homogeneous and self-healing, laminated to manufacturer's standard backer with no additional resin or plastic additive.

DRAFT

D. Composition Cork: Natural ground cork mixed with resinous or polymeric binders, linseed oil, and color pigments laminated to manufacturer's standard backer to create a seamless, self-sealing sheet.

E. Burlap: Tightly woven, flame retardant treated.

F. Hardboard for Cores: **<<ANSI A135.4>>**, Class 1 - Tempered, **<< S2S (smooth two sides); S1S (smooth one side); or _____>>**.

G. Particleboard: **<<ANSI A208.1>>**; wood chips, shavings, or flakes, set with waterproof resin binder, sanded faces.

H. Fiber Board: **<<ASTM C208>>**, cellulosic fiber board.

I. Foil Backing: Aluminum foil sheet, 0.005 inch thick. Provide foil backing on units indicated to be mounted on exterior walls.

J. Aluminum Sheet Backing: 27 gauge, 0.014 inch thick.

K. Adhesives: As recommended by manufacturer.

2.03 ACCESSORIES

A. Map Rail: Extruded aluminum, manufacturer's standard profile, with cork insert and runners for accessories**<< ; 1 inch wide overall; ; ___ inch wide; or None - N/A>> << , full width of frame; or None - N/A>>**.

B. Map Supports: Formed aluminum sliding **<< hooks; roller brackets; and _____>>** to fit map rail.

C. Temporary Protective Cover: Sheet polyethylene, **<< 8 mil; or ____ mil>>** thick.

D. Flag Holders: Cast aluminum bored to receive 1 inch diameter flag staff, bracketed to fit top rail of board. Provide one per classroom.

E. Cleaning Instruction Plate: Provide instructions for **<< markerboard; chalkboard; or _____>>** cleaning on a **<< metal; plastic; or _____>>** plate fastened to perimeter frame near **<< chalkrail; marker rail; or _____>>**.

F. **<< Marker; Chalk; or _____ >>** Tray: Aluminum**<< , manufacturer's standard profile; , manufacturer's standard extruded profile; , manufacturer's standard formed profile; , style as indicated on drawings; , _____; or None - N/A>><< , one piece full length of markerboard; , one piece full length of chalkboard; , _____; or None - N/A>><< , molded ends; , closed ends; , _____ ends; or None - N/A>>**, **<< concealed fasteners; manufacturer's standard fastening method; or _____>>**, **<< same finish as frame; or _____>>**.

G. Mounting Brackets: Concealed.

H. Mounting Accessories and Fasteners: Provide concealed Z-clips and hangers, and stainless steel screws or anchors for mechanical attachment of visual display units.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that internal wall blocking is ready to receive work and positioning dimensions are as **<< indicated on shop drawings; instructed by the manufacturer; or _____>>**. Refer to Division 6 Section "Rough Carpentry."

C. Verify flat wall surface for frameless adhesive-applied boards.

DRAFT

3.02 PREPARATION

A. Acclimatize tackable wall panels by removing from packaging in installation area not less than 24 hours before application.

B. Remove switchplates, wall plates, and surface-mounted fixtures where tackable wall paneling is applied. Reinstall items on completion of installation.

C. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.03 INSTALLATION

A. Install boards in accordance with manufacturer's instructions.

B. Install with bottom of perimeter frame **<< top of marker tray; or bottom of perimeter frame>>** at **<< 18 inches; 24 inches; 36 inches; or ___ inches>>** above finished floor. ******MCPS prefers 18 inches for Pre-K and K, 24 inches for Grade 1-5, 24 inches for ES Art/Music/Gym/Dual Purpose Rooms, and 36 inches for HS, MS, and Staff Areas.******

1. Mount continuous tackstrip directly above each porcelain markerboard in all classrooms.

C. Secure units level and plumb.

D. Adhesive Attachment: Install continuous bottom angle using mechanical fasteners at heights indicated. Install all markerboard and tackboard units with golf-ball size globs of heavy-duty construction adhesive at approximate 12 inch spacing. Do not apply adhesive closer than 6 inches to any edge. Set visual display unit on bottom angle and press firmly to the wall.

1. Provide secondary securement of board with mechanical fasteners through bottom trim and through bottom angle.
2. Brace board against wall for minimum 48 hours to ensure adhesive is fully dried.

E. Install porcelain markerboards and tackboards with backs mounted directly against wall surface.

F. Install tackable wall panels in accordance with manufacturer's recommendations on specified substrates with concealed attachments.

1. Fabricate re-wrapped edges where partial panels abut each other, or adjacent surfaces or trim.
2. Re-wrap top, bottom or side edges for cutting panels around door or window openings, abutting trim, protruding objects, and at other openings, including x-cut at receptacles, light switches, and other openings.
   a. Wrap minimum **<< 2 inches>>** around back of panel.

3.04 CLEANING

A. Clean board surfaces in accordance with manufacturer's instructions.

B. Cover with protective cover, taped to frame.

C. Remove temporary protective cover at Date of Substantial Completion.

END OF SECTION 101100

DRAFT

SECTION 101200
DISPLAY CASES

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. AAMA 611 - Specification for Anodized Architectural Aluminum.

B. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

C. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric).

D. ASTM C1048 - Standard Specification for Heat-Strengthened and Fully Tempered Flat Glass.

E. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

F. AWS D1.2/D1.2M - Structural Welding Code - Aluminum.

1.02 SUBMITTALS

A. Product Data: Submit complete printed data and installation details indicating products to be provided as specified.

B. Shop Drawings: Submit complete installation details. Include dimensioned elevations.

C. Selection Samples: Submit color charts indicating manufacturer's full range of available options for tackable fabric panels.

D. Verification Samples: Submit physical samples, manufacturer's standard size, of each selected color of tackable fabric material, and of trim material, to illustrate finish, color, and texture.

E. Manufacturer's Qualification Statement.

F. Installer's Qualification Statement.

1.03 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing factory-fabricated display cases as specified in this section.

B. Installer Qualifications: Installation crew directly employed by manufacturer of products, or a company approved by manufacturer for installation of specified products.

1.04 DELIVERY, STORAGE AND HANDLING

A. Deliver display cases and materials to the Project site with manufacturer’s protective crate covering and do not open until ready for use.

B. Protect display cases before, during, and after installation. In case of damage, immediately provide necessary repairs and replacements.

1.05 FIELD CONDITIONS

A. Field Measurements: Verify field measurements for recessed application for display cases before preparation of shop drawings and before fabrication to ensure proper installation.

1.06 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

DRAFT

B. Provide **<< five; or ____>>** year manufacturer warranty against defects and in materials, finish product and workmanship; beginning at the Date of Substantial Completion.

PART 2 PRODUCTS

2.01 DISPLAY CASES

A. Manufacturers:
1. Claridge Products and Equipment, Inc.
2. MooreCo, Inc.
3. Nelson Adams NACO.
4. Platinum Visual Systems.
5. Poblocki Sign Company, LLC.
6. The Tablet & Ticket Co. (Basis-of-Design).

B. General: Provide only factory-fabricated and factory-assembled display cases. Display cases that are "stick-built" at the Project site or that are shipped disassembled for assembly on site are not acceptable.
1. Provide welded aluminum frames with tight mitered joints. Comply with **<<AWS D1.2/D1.2M>>** for welding aluminum. Clean and finish exposed welds to remove flux and blend surfaces smooth so that welded surface matches adjacent surface.
2. Fabricate display cases with no visible fasteners.

C. Recessed Display Case: Factory-fabricated aluminum-framed display case with adjustable glass shelves, finished interior, and **<< wood; aluminum; or _____>>** trim on face to cover edge of recessed opening.
1. Dimensions: As indicated on Drawings.
2. Components:
a. Glazed Doors: **<< Sliding; Hinged; or _____>>**.
1) Number of Doors: **<< One pair; Two pair; Three pair; Four pair; As indicated on drawings; or _____>>**.
b. Side, Top, and Bottom Panels: **<< Stained veneer plywood; Laminate-faced substrate; or _____>>**.
c. Back Panel: **<< Tackable; Laminate-faced; Stained veneer plywood; or _____>>** fabric over cork.
d. Top Panel: **<< Stained veneer plywood; Laminate-faced substrate; or _____>>**.
e. Bottom Panel: **<< Stained veneer plywood; Laminate-faced substrate; or _____>>**.
f. Lighting: LED.

D. Semi-Recessed Display Case: Factory-fabricated aluminum-framed display case with adjustable glass shelves, finished interior, and **<< wood; aluminum; or _____>>** trim on face to cover edge of recessed opening.
1. Dimensions: As indicated on Drawings.
2. Components:
a. Glazed Doors: **<< Sliding; Hinged; or _____>>**.
1) Number of Doors: **<< One pair; Two pair; Three pair; Four pair; As indicated on drawings; or _____>>**.
b. Side Panels: **<< Stained veneer plywood; Laminate-faced substrate; or _____>>**.

DRAFT

c. Back Panel: **<< Tackable; Laminate-faced; Stained veneer plywood; or _____>>** fabric over cork.
d. Top Panel: **<< Stained veneer plywood; Laminate-faced substrate; or _____>>**.
e. Bottom Panel: **<< Stained veneer plywood; Laminate-faced substrate; or _____>>**.
f. Lighting: LED.

E. Surface-Mounted Display Case: Factory-fabricated **<< wood-framed; aluminum-framed; or _____>>** display case with adjustable glass shelves, finished interior.
1. Dimensions as indicated on Drawings.
2. Components:
a. Glazed Doors: **<< Sliding; Hinged; or _____>>**.
1) Number of Doors: **<< One pair; Two pair; Three pair; Four pair; As indicated on drawings; or _____>>**.
b. Side Panels: **<< Tempered clear glass; Stained veneer plywood; Laminate-faced substrate; Extruded aluminum; or _____>>**.
c. Back Panel: **<< Tackable; Laminate-faced; Tempered clear glass; or _____>>**.
d. Top Panel: **<< Stained veneer plywood; Laminate-faced substrate; Extruded aluminum; or _____>>**.
e. Bottom Panel: **<< Stained veneer plywood; Laminate-faced substrate; Extruded aluminum; or _____>>**.
f. Lighting: LED.

2.02 COMPONENTS

A. Wood Case Construction: 3/4 inch 7-ply **<< maple; oak; cherry; walnut; or _____>>** veneer plywood with manufacturer's **<< standard; custom; or _____>>** stain.

B. Aluminum Framed Case Construction: 1-1/2 inch by 2 inch extruded aluminum tube frame with **<< tempered glass; laminate-faced; stained veneer plywood; and _____>>** (white maple) panels at top, bottom, and sides.

C. Face Frame Trim for Recessed Installation: **<< 2 inch; 3-1/2 inch; 4 inch; or _____ inch>> << flat; radiused; or _____>>** face dimension extruded aluminum trim mitered with corner clips and mechanical fasteners.

D. Glazed Sliding Doors:
1. 3/8 inch clear tempered glass with plastic finger pulls.
2. Door track: Extruded aluminum glass shoe with bottom rollers and top plastic guide.
3. Lock: **<< Glass door cylinder lock; Track plunger lock; Ratchet lock; or _____>>**.

E. Glazed Hinged Doors:
1. 1/4 inch clear tempered glass framed with 1/2 inch by 1 inch extruded aluminum trim.
2. Hinges: 1 inch by 0.040 inch nickel-plated steel-continuous piano hinges.
3. Lock: **<< Glass door cylinder lock; Track plunger lock; Ratchet lock; or _____>>**.

F. Glass Shelves:
1. 3/8 inch clear tempered glass with flat-polished edges.
2. Shelf Depth: **<< 4 inches; 6 inches; 8 inches; 10 inches; 12 inches; _____ inches; or As indicated on drawings>>**.
3. Shelves per Unit: **<< Two; Three; As indicated on drawings; or _____>>**.

DRAFT

G. Shelf Standards and Brackets: Single-slotted channel standards for brackets adjustable in **<< 1 inch>>** increments along entire length of standard, drilled and countersunk for screws.
   1. Standards Mounting: Recess-mounted into back panel.
   2. Face Width: 5/8 inch.
   3. Material: Minimum 16 gauge, 0.0589 inch sheet steel.
   4. Standard Lengths: Extend all standards full height of display cases.
   5. Brackets: Boltless with lip front; minimum **<< 16 gauge, 0.0598 inch>>** sheet steel, reinforced, locking into slots; size to suit shelves; same finish as standards.

H. Tackable Back Panel: **<< Fine-grained, homogeneous natural cork; Composition cork; Linoleum-modified cork; Fabric laminated to cork; Fabric laminated to fiberboard; Vinyl laminated to cork; Vinyl laminated to fiberboard; or ____>><< None - N/A; on hardboard; on fiberboard; or _____>>**.
   1. Cork Thickness: **<< 1/8 inch; 1/4 inch; 7/32 inch; or ___ inch>>**.
   2. Fabric: **<< Vinyl fabric; Non-woven PVC-free fabric; Burlap; or _____>>**; minimum fabric weight: **<< 13 oz/sq yd; 15 oz/sq yd; 16 oz/sq yd; 25 oz/sq yd; or ___ oz/sq yd>>**.
   3. Color, Texture, Weave, and Pattern: **<< As selected from manufacturer's full range; As indicated on drawings; or _____>>**.
   4. Backing: **<< Fiberboard; Hardboard; or _____>>**, **<< 1/4 inch; 3/8 inch; 1/2 inch; or ___ inch>>** thick, factory laminated to tack surface.
   5. Surface Burning Characteristics: Flame spread index of 25, maximum, and smoke developed index of **<< 450; or ___ >>**, maximum, when tested in accordance with **<<ASTM E84>>**.

I. Laminate Back Panel: High-pressure laminate on one face of **<< plywood; hardboard; or _____>>** substrate.
   1. Laminate Color and Texture: **<< As selected from manufacturer's full range; As indicated on drawings; or _____>>**.

J. Lighting: Manufacturer's standard LED light fixture housed at top of case with louvered aluminum access door with keyed lock.
   1. Surface Mounted: Under cabinet type fixture.
   2. Controls: On/Off using **<< dedicated wall switch; switch mounted on display case; room overhead lighting switch; or _____>>**.

DRAFT

2.03 MATERIALS

A. Aluminum Extrusions: **<<ASTM B221>>** (**<<ASTM B221M>>**), **<< 6063; or ____>>** alloy, **<< T5; or ____>>** temper.
   1. Finish: Factory anodized; **<<AAMA 611>>**: **<< Clear anodized; Medium bronze anodized; Dark bronze anodized; _____ anodized; Color as selected by Architect; Color as selected from manufacturers standard line; or _____>>**.

B. Plywood: Softwood plywood with **<< veneer; lumber; or particleboard>>** core, waterproof glue, 3/4 inch thick.

C. Heat-Strengthened and Fully Tempered Glass: **<<ASTM C1048>>**, Kind FT.

D. Fasteners: Provide screws, bolts, and other fasteners as recommended by manufacturer for substrates indicated, and in sizes and lengths required for secure attachment of display case product to substrate.
   1. For fastening to masonry substrates, provide stainless steel or galvanized steel fasteners.

PART 3 EXECUTION

3.01 EXAMINATION & PREPARATION

A. Examination: Verify that rough openings match field measurements and that rough openings and conditions are acceptable for product installation.

B. Verify that electrical conduit, wiring, and other work that will be concealed by display case is complete and ready for installation.

C. Provide blocking, grounds, and shims as required for display cases to be mounted securely, plumb and level, within rough openings.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Locate fastening devices to secure cases securely to sides of rough opening.
   1. Locate at manufacturer's required spacing, but not more than 16 inches o.c.
   2. Fasteners shall be concealed in the final installation.

C. Install recessed display cases plumb and level in wall openings.

D. Refer to drawings for display case mounting heights.

E. Provide mitered and wrapped hairline joints for all trims.

F. Coordinate with electrical installer to ensure lighting is properly connected and operational.

3.03 ADJUSTING AND CLEANING

A. Verify that all accessories are installed as detailed for each unit.

B. Restore and touch up damaged or worn areas of factory finishes.

C. At completion of work, clean glass surfaces, back panels and trim in accordance with manufacturer’s recommendations leaving units ready for use.

END OF SECTION 101200

DRAFT

SECTION 101400
SIGNAGE

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. 36 CFR 1191 - Americans with Disabilities Act (ADA) Accessibility Guidelines for Buildings and Facilities; Architectural Barriers Act (ABA) Accessibility Guidelines.

B. ADA Standards - 2010 ADA Standards for Accessible Design.

C. ICC A117.1 - Accessible and Usable Buildings and Facilities.

D. UL 879 - Electric Sign Components.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Allowance: Interior and exterior panel signage shall be covered by allowance; refer to Division 1 Section "Allowances."

B. Pre-Fabrication Meeting: The signage contractor shall meet with representatives of the Owner to develop a Signage Schedule, including signage style and layout, individual sign locations, including locations of code required signage and wayfinding signage, and final room naming and numbering. The Architect will provide the graphics contractor with reproducible floor plan drawings for use in determining sign locations.

1.03 SUBMITTALS

A. Product Data: Manufacturer's printed product literature for each type of sign, indicating sign styles, font, foreground and background colors, locations, overall dimensions of each sign.

B. Signage Schedule**<< (After Pre-Fabrication Meeting); or None - N/A>>**: Submit schedule with information sufficient to completely define each sign for fabrication, including room number, room name, other text to be applied, sign and letter sizes, fonts, and colors.

1. Submit for approval by **<<Owner>>** through **<<Architect>>** prior to fabrication.

C. Selection Samples: Where colors are not specified, submit color selection charts or chips for each type of signage.

D. Verification Samples: Submit samples, manufacturer's standard size, showing selected colors for each type of signage.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Package signs as required to prevent damage before installation.

B. Package room and door signs in sequential order of installation, labeled by floor or building.

C. Store tape adhesive at normal room temperature.

1.05 FIELD CONDITIONS

A. Do not install tape adhesive when ambient temperature is lower than recommended by manufacturer.

B. Maintain this minimum temperature during and after installation of signs.

DRAFT

PART 2 PRODUCTS

2.01 SIGNAGE APPLICATIONS

A. Accessibility Compliance: Signs are required to comply with **<<ADA Standards>>** and **<<ICC A117.1>><< and applicable building codes; _____; or None - N/A>>**, unless otherwise indicated; in the event of conflicting requirements, comply with the most comprehensive and specific requirements.

B. Room and Door Signs: Provide a sign for every doorway, whether it has a door or not, not including corridors, lobbies, and similar open areas.

1. Sign Type: **<< Flat; Curved; or _____>>** signs with **<< engraved; injection molded; applied character; etched metal; or _____>>** panel media as specified.
2. Provide "tactile" signage, with letters raised minimum **<< 1/32 inch>>** and Grade II braille.
3. Toilet room signage shall include pictograms and international symbol of accessibility.

C. Plaque: See Allowance for details.

2.02 PANEL SIGNAGE TYPES

A. ******Coordinate Signage with wall protection if using 4 foot high rigid wall protection wainscot. Refer to Division 10****** General: Interior and exterior panel signage shall be provided via lump-sum allowance; refer to Division 1 Section "Allowances."

B. Manufacturers:

1. **Adcorp.**
2. Allen Industries Architectural Signage.
3. APCO Graphics, Inc.
4. ASI-Modulex, Inc.
5. **Bayuk Graphic Systems, Inc.**
6. **Best Sign Systems, Inc.**
7. **Digital Color Graphics.**
8. Gemini Incorporated.
9. Innerface Sign Systems, Inc.
10. InPro Corporation.
11. Matthews International Corporation, Bronze Division.
12. **Mohawk Sign Systems.**
13. Nelson-Harkins Industries.
14. Seton Identification Products.
15. **Signs and Wonders.**
16. **The Supersine Company.**
17. Welch Sign Company.
18. Worth Higgins and Associates.

C. Photopolymer Panel Signage: Signage media **<< without; in aluminum; in matching plastic; or _____>>** frame.

1. Signage Material: 0.032-inch water wash photopolymer face layer over a 0.160-inch phenolic or 0.120-inch PETG base layer.
   a. Thickness: 0.080 inch.
2. Edges: Bevelled.
3. Corners: Round.

DRAFT

4. Wall Mounting of One-Sided Signs: **<< Tape adhesive; Concealed screws; Concealed or exposed screws; or _____>>**. Finish perimeter with sealant.
   a. For signs mounted to glass, such as at door sidelights, provide a rear cover plate so the backside of sign will not be visible through the glass.
5. Tactile Signage: Provide "tactile" signage, with letters raised minimum 1/32 inch and Grade II braille.

D. Color and Font: Unless otherwise indicated, panel signage, font, and color shall be **<< selected from manufacturer's full range; custom designed in collaboration with Architect; or _____>>**.

E. Code-Required Signage: In addition to the room signage, provide panel signage required by accessibility regulations and requirements of authorities having jurisdiction, including, but not limited to, the following:
1. Tactile exit signs, stairway identification signs, room maximum capacity signs, elevator signs, and accessible space signs.
2. Refer to Division 26 and Electrical Drawings for illuminated exit and area of refuge signs.

2.03 PLAQUES

A. Manufacturers:
1. Advance Corporation; Braille-Tac Division.
2. A.R.K. Ramos.
3. Gemini Incorporated.
4. Matthews International Corporation, Bronze Division.
5. Metal Arts; Division of L&H Manufacturing Co.
6. Mills Manufacturing Company.
7. Nelson-Harkins Industries.
8. The Southwell Company.
9. Worth Higgins and Associates.

B. Metal Plaques:
1. Metal: **<< Aluminum casting; Bronze casting; Brass casting; Bronze sheet, flat, etched; Copper sheet, flat, etched; Brass sheet, flat, etched; Stainless steel sheet, flat, etched; Aluminum sheet, flat, etched; Magnesium sheet, flat, etched; Zinc sheet, flat, etched; or _____>>**.
2. Size: For bid purposes assume one 18 inch wide by 12 inch high plaque, with raised text. Confirm final size and desired information, text, and typeface, with Owner.
3. Text and Typeface:
   a. Character Font: Helvetica.
4. Surface Finish: **<< Brushed, satin; Polished; As selected by Architect from manufacturer's full range; or _____>>**.
5. Painted Background Color: **<< Light oxide stain; Dark oxide stain; Dark green; Metallic gray; Black; Natural sandblast; Light bronze; Medium bronze; Dark bronze; As selected by Architect from manufacturer's standard background colors; or _____>>**.
6. Protective Coating: **<< Manufacturer's standard clear coating; None; or _____>>**.
7. Mounting: Stud mounted, with concealed studs.

2.04 DIMENSIONAL LETTERS

A. Manufacturers:

DRAFT

1. A.R.K. Ramos.
2. ASI-Modulex, Inc.
3. Charleston Industries, Inc.
4. Gemini Incorporated.
5. Innerface Sign Systems, Inc.
6. Matthews International Corporation, Bronze Division.
7. Metal Arts; Division of L&H Manufacturing Co.
8. Mills Manufacturing Company.
9. Mohawk Sign Systems.
10. Superior Signs.
11. Worth Higgins and Associates.
12. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Metal Letters:

1. Metal: **<< Aluminum casting; Bronze casting; Aluminum sheet, flat; Bronze sheet, flat; Stainless steel sheet, flat; Stainless steel sheet, formed; Brass sheet, flat; Weathering steel sheet, flat; Aluminum sheet, fabricated reverse channel; Stainless steel sheet, fabricated reverse channel; or _____>>**.
2. Letter Thickness: Provide manufacturer's standard for height indicated, or as follows:
   a. 9 inches high or less: 3/4 inch thick.
   b. 10- to 14-inches high: 1 inch thick.
   c. 15- to 17-inches high: 1-1/4 inches thick.
   d. 18 inches high or more: 1-1/2 inches thick.
3. Letter Height: **<< _____ inches; As indicated on drawings; As indicated on signage schedule; or _____>>**.
4. Text and Typeface: As indicated; where not indicated, as selected by Architect from manufacturer's full range of fonts.
5. Finish: **<< Brushed, satin; Polished; As selected by Architect from manufacturer's full range; or Painted; color as selected by Architect from manufacturer's full range>>**.
6. Mounting: Fabricate dimensional lettering for the following mounting types:
   a. Projected Wall Mounted: Cast studs into the back of each letter for wall mounting at location indicated. Studs shall be sized to extend through cladding and fasten to structural substrate. Provide for a 1/2-inch gap between back of letter and face of cladding. Do not mount directly flush to wall surface.
   b. Flush Wall Mounted: Cast studs into back of each letter for mounting to wall. Mount flush to wall surface with no gap behind letters.
   c. Bottom Stud Mount: Provide characters with studs cast into bottom and with flattened base, and fasten directly to structural substrate below.
   d. Bottom Rail Mount: Provide characters with flattened base, and fasten to an aluminum C-channel rail with stainless steel screws. Rail shall have black enamel finish. Provide vertical post supports extending to structural substrate and fasten securely and seal penetrations watertight.

2.05 APPLIED VINYL CHARACTERS

A. Applied Vinyl Letters/Numbers: Provide die cut vinyl film characters of 3 mil minimum nominal thickness. Characters shall have manufacturer's standard adhesive backing suitable for outdoor or indoor installation. Refer to Drawings for locations.

DRAFT

2.06 LED VIDEO DISPLAY (ELECTRONIC MESSAGE CENTER)

A. Manufacturers:
   1. Daktronics, Inc.
   2. LG Electronics.
   3. Stewart Signs.
   4. ThinkSign Inc.

B. System Type: Single-sided, outdoor/exterior; capable of both graphics and text.
   1. Provide products that are listed and labeled as complying with **<<UL 879>>**, where applicable.
   2. Size: 96 inch by 36 inch viewing area, unless otherwise indicated.
   3. Pixel Pitch: 10 mm.
   4. Brightness: 7,500 Nits.
   5. Mounting: Custom wall mount into recessed masonry rough opening. Coordinate total rough opening size required with masonry contractor.
   6. Electrical Characteristics: 120V, 60 Hz, single phase.
   7. Control Interface: Provide secure wireless/remote cellullar connection as standard with manufacturer, and with cloud-based software.
      a. Contractor shall provide training for school staff in access to and usage of software.

2.07 ACCESSORIES

A. Applied Vinyl Film (Characters): Provide nominal 3 mil thickness vinyl film; die cut into characters required. Film shall have pressure-sensitive adhesive backing, and shall be suitable for both interior and exterior application to glazing surfaces.

B. Concealed Screws: Stainless steel, or other non-corroding metal.

C. Tape Adhesive: Double sided tape, permanent adhesive.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that substrate surfaces are ready to receive work.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install neatly, with horizontal edges level.

C. Locate signs and mount at heights indicated on drawings and in accordance with **<<ADA Standards>>** and **<<ICC A117.1>>**.
   1. Room Signs: Mount on latch side, with a clear space of 18 inches by 18 inches beyond the door swing arc, centered on the tactile characters. At double doors, mount to the right of right-hand leaf or on nearest adjacent wall. Mount at height that is compliant with ADA Standards.

D. Mounting, Dimensional Letters:
   1. Projected Wall Mounted: Cast studs into the back of each letter for wall mounting at location indicated. Studs shall be sized to extend through cladding and fasten to structural substrate. Provide for a 1/2-inch gap between back of letter and face of cladding. Do not mount directly flush to wall surface.

DRAFT

2. Flush Wall Mounted: Cast studs into back of each letter for mounting to wall. Mount flush to wall surface with no gap behind letters.
3. Bottom Stud Mount: Provide characters with studs cast into bottom and with flattened base, and fasten directly to structural substrate below.
4. Bottom Rail Mount: Provide characters with flattened base, and fasten to an aluminum C-channel rail with stainless steel screws. Rail shall have black enamel finish. Provide vertical post supports extending to structural substrate and fasten securely and seal penetrations watertight.

E. Mounting, Plaques:
1. Mount plaques with manufacturer's standard concealed stud method; with anchors recommended specifically for wall/partition substrate structure indicated. Mount plaques flush to wall surface with no gap behind plaques.

F. Protect from damage until Date of Substantial Completion; repair or replace damaged items.

END OF SECTION 101400

DRAFT

SECTION 102113.19
PLASTIC TOILET COMPARTMENTS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ADA Standards - 2010 ADA Standards for Accessible Design.

B. ASTM A240/A240M - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.

C. ASTM A666/A666M - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.

D. ASTM A743/A743M - Standard Specification for Castings, Iron-Chromium, Iron-Chromium-Nickel, Corrosion Resistant, for General Application.

E. ASTM B26/B26M - Standard Specification for Aluminum-Alloy Sand Castings.

F. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

G. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric).

H. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

I. ICC (IBC) - International Building Code.

J. ICC A117.1 - Accessible and Usable Buildings and Facilities.

K. NFPA 286 - Standard Methods of Fire Tests for Evaluating Contribution of Wall and Ceiling Interior Finish to Room Fire Growth.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate the work with placement of support framing and anchors in walls and ceilings where required.

1.03 SUBMITTALS

A. Product Data: Provide data on panel construction, hardware, and accessories.
   1. Provide data for wall anchors for attachment of wall brackets.
   2. Provide data substantiating that door latch product complies with accessibility standards.
   3. Provide data indicating NFPA 286 testing and compliance.

B. Shop Drawings: Indicate partition plan, elevation views, dimensions, details of **<< wall; floor; and ceiling>>** supports, door swings.
   1. Include locations of plumbing fixtures and floor drains.
   2. Include accessible and ambulatory stalls, including stall and door clearances.

C. Selection Samples: Submit color charts indicating manufacturer's full range of colors. **<< Color charts shall indicate which colors are NFPA 286 compliant.; or None - N/A>>**

D. Verification Samples: Submit manufacturer's physical samples of each selected color.

E. Samples: **<< Two; or _____>>** sample blocks, **<< 6 by 6 inches; or _____ by _____ inches>>** in size, illustrating partition panel finish, color, and sheen.

F. Sustainable Design Documentation: Indicate postconsumer and preconsumer recycled content and cost for recycled content.

DRAFT

G. Maintenance Data: Include recommended cleaning methods, cleaning materials, and stain removal methods. Describe cleaning materials detrimental to finish surfaces and hardware finish.

H. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.04 DELIVERY, STORAGE, AND HANDLING

A. See Section **<< 017419 - Construction Waste Management and Disposal>>** for packaging waste requirements.

B. Deliver, store, and handle materials and products in accordance with manufacturer's instructions and recommendations and industry standards.

C. Store products indoors in manufacturer's or fabricator's original containers and packaging, with labels clearly identifying product name and manufacturer. Protect products from damage.

D. Lay cartons flat; support to ensure flatness and prevent damage to prefinished surfaces.

1.05 FIELD CONDITIONS

A. Ambient Conditions: Maintain environmental conditions, such as temperature, humidity, and ventilation, within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.06 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Manufacturer Warranty: Provide **<< 10-year; 15-year; or _____>>** manufacturer warranty for material against breakage, corrosion, and delamination. Complete forms in **<<Owner>>**'s name and register with manufacturer.

1.07 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Provide **<< two; five; ten; or 15>>** year manufacturer warranty against defects in material and workmanship, excluding abuse.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Solid Plastic Toilet Compartments:
   1. ASI Accurate Partitions.
   2. ASI Global Partitions.
   3. Hadrian.
   4. General Partitions Mfg. Corp.
   5. Scranton Products.
   6. Substitutions: **<< Section 016000 - Product Requirements; or Not permitted>>**.

2.02 PERFORMANCE REQUIREMENTS

A. Accessibility: Comply with **<<ICC A117.1>>** and **<<ADA Standards>>**.

B. Fire-Test-Response Characteristics: Provide HDPE panels tested per **<<NFPA 286>>** and shown to meet the following criteria:

DRAFT

1. During the 40 kW exposure, flames shall not spread to the ceiling.
2. During the 160 kW exposure:
   a. Flame shall not spread to the outer extremity of the sample on any wall or ceiling.
   b. Flashover, as defined in **<<NFPA 286>>**, shall not occur.
3. The peak rate of heat release throughout the **<<NFPA 286>>** test shall not exceed 800 kW.
4. The total smoke released throughout the **<<NFPA 286>>** test shall not exceed 1,000 m^2.

2.03 PLASTIC TOILET COMPARTMENTS

A. Solid Plastic Toilet Compartments: Factory fabricated doors, pilasters, and divider panels made of solid molded 100 percent post-consumer recycled content high density polyethylene (HDPE), tested in accordance with NFPA 286; floor-mounted headrail-braced.
   1. Color(s): As selected by Architect from manufacturer's full range of NFPA 286 compliant colors. ******Not all HDPE colors are Class A fire-rated, and it is not consistent across manufacturers. Confirm fire-rating when selecting colors.******
   2. Doors: All door widths shall be clear widths with door open at 90 degrees.
      a. Thickness: 1 inch.
      b. Door Width (Standard Stalls): 24 inch, in-swinging.
      c. Door Width (Ambulatory Stalls): 32 inch, out-swinging.
      d. Door Width (Accessible Stalls): 36 inch, out-swinging.
      e. Height: 55 inch.
   3. Panels:
      a. Thickness: 1 inch.
      b. Height: 55 inch.
   4. Pilasters:
      a. Thickness: 1 inch.
      b. Width: As required to fit space; minimum 3 inches.
   5. Urinal Partitions: Provide wall mounted type (no post/pilaster).
      a. Thickness: 1 inch.
      b. Height: 55 inches.
      c. Depth: 1'-10" minimum. Verify with depth of submitted urinal product; front of urinal partition shall extend a minimum of 6 inches beyond the outermost front lip of the urinal.

B. Fabrication
   1. Fabricate toilet compartment components to sizes indicated in shop drawings.
   2. Coordinate requirements and provide cutouts for through-partition toilet accessories.
   3. Provide high shoes and caps at pilasters and posts to conceal anchorage, supports, and leveling mechanisms.
   4. Provide manufacturer's standard corrosion-resistant supports, leveling mechanisms, anchors, and anchoring assemblies for pilasters and posts.
   5. Floor-Anchored, Overhead-Braced Units: Provide supports, leveling mechanisms, and anchors at pilasters to suit floor conditions.
   6. Urinal and Entrance Screen Posts: Provide anchoring assemblies with leveling adjustment at **<< tops; bottoms; and _____>>** of posts.

C. Materials
   1. Aluminum Castings: **<<ASTM B26/B26M>>**.

DRAFT

2. Aluminum Extrusions: **<<ASTM B221>>** (**<<ASTM B221M>>**).
3. High-Density Polyethylene (HDPE):
   a. Composition: Formed from waterproof, nonabsorbent, HDPE resins.
   b. Properties: Mark-resistant, self-lubricating surface.
   c. Material Fire Ratings: **<<ICC (IBC)>>**, Class B.
4. Stainless Steel Sheet, Plate, and Bar: **<<ASTM A240/A240M>>** or **<<ASTM A666/A666M>>**, Type 304, stretcher-leveled standard of flatness.
5. Stainless Steel Castings: **<<ASTM A743/A743M>>**.

2.04 ACCESSORIES

A. Material for Hardware and Accessories: Provide stainless steel or anodized aluminum as indicated, with satin finish. Where not indicated, Contractor may provide either material at its option. Zamac is not acceptable.
   1. All hardware at out-swinging doors shall comply with accessibility regulations.

B. Heat-Sink Strip: Manfuacturer's standard aluminum strip applied to bottom edge of doors and panels.

C. Pilaster Shoes: **<< Stainless steel, satin finish; Plastic, to match compartments; Solid surface, to match compartments; or _____>>**, 4 inches high; concealing **<< floor; ceiling; wall; and _____>>** fastenings.
   1. Provide adjustment for floor variations with screw jack through steel saddles integral with pilaster.

D. Headrails: **<< Extruded aluminum; Steel clad with solid surface material; or _____>>**,**<< anti-grip profile; _____; or None - N/A>>**.
   1. Size: **<< Manufacturer's standard size; 1 by 1-1/2 inches; _____ by _____ inches; or _____>>**.

E. **<< Wall; Pilaster; and _____>>** Brackets: Natural anodized aluminum with minimum 0.125 inch wall thickness; continuous type.

F. Attachments, Screws, and Bolts: Stainless steel**<< , tamper proof type; or None - N/A>>**.
   1. For attaching panels and pilasters to brackets: Through-bolts and nuts**<< ; tamper proof; or None - N/A>>**.
   2. Wood Blocking and Supports: Refer to Division 06 section.

G. Hinges: Coordinate hinges with latch and keeper to provide emergency access.
   1. Continuous (Piano) Hinges (Heavy-Duty): 3-inch-wide, continuous, 0.062-inch (16 gauge) thick stainless steel piano hinge with 1/8-inch stainless steel pivot pin. Provide spring-loaded self-closing type with five (5) adjustable internal springs at accessible, barrier-free, and outswing doors, and provide gravity type with cam knuckles that can be adjusted to hold doors open at inswinging doors. Hinge length shall be a maximum of 1 inch less than door height. Provide pre-drilled hinge leaves for mounting and stainless steel through-bolts; holes at 12 inches o.c.

H. Door Hardware: Coordinate latch and keeper with hinges to provide emergency access.
   1. Door Latch (Heavy-Duty): **<< Slide type; Thumbturn type; or _____>><< with exterior emergency access feature; with _____; or None - N/A>>**, cast stainless steel with minimum 0.150-inch thickness slide bar, latch knob welded to slide bar.
   2. Door Strike and Keeper with Rubber Bumper (Heavy-Duty): Cast stainless steel, minimum 2.5-inch high with minimum 0.125-inch wall thickness, with integral rubber bumper. Mount on pilaster in alignment with door latch.

DRAFT

3. Provide a door pull on both sides of door for accessible and ambulatory compartments, in compliance with the ADA Standards for Accessible Design.

I. Coat Hook with Rubber Bumper: One per compartment, mounted centered on inside face of door.

J. Rubber Door Bumper: Mount in upper corner on latch side of outswinging doors where door will impact wall in the open position.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify dimensions, tolerances, and interfaces with other work.

B. Verify spacing of and between plumbing fixtures.

C. Verify location of built-in framing, anchorage, and bracing.

3.02 INSTALLATION

A. Install partitions secure, rigid, plumb, and level in accordance with manufacturer's written instructions.

B. Install toilet partitions with minimum 12 inch toe space clearance from bottom of partition to top of finished floor surface. Do not exceed 12-1/2 inch clearance above finished floor.

C. Install urinal partitions with bottom of partition at a height not greater than 12 inches above finished floor surface, but not lower than 11-1/2 inches above finished floor.

D. Maintain 3/8-to-1/2-inch space between wall and panels and between wall and end pilasters.

E. Attach panel brackets securely to walls using anchor devices.

F. Attach panels and pilasters to brackets. Locate headrail joints at pilaster center lines.

3.03 TOLERANCES

A. Maximum Variation from True Position: 1/4 inch.

B. Maximum Variation from Plumb: 1/8 inch.

3.04 ADJUSTING

A. Adjust and align hardware to uniform clearance at vertical edge of doors, not exceeding **<< 3/16 inch>>**.

B. Adjust hinges to position doors in partially open position when unlatched. Return outswinging doors to closed position.

C. Adjust adjacent components for consistency of line or plane.

END OF SECTION 102113.19

DRAFT

SECTION 102123
CUBICLE CURTAINS AND TRACK

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. NFPA 701 - Standard Methods of Fire Tests for Flame Propagation of Textiles and Films.

1.02 SUBMITTALS

A. Product Data: Provide data for curtain fabric characteristics**<< and for curtain track; or None - N/A>>**.
   1. Fire Test Data: Provide data indicating fabric is identical to that which has passed**<<NFPA 701>>** and is inherently and permanently flame resistant.

B. Shop Drawings: Indicate a reflected ceiling plan view of curtain track, hangers and suspension points, attachment details, schedule of curtain sizes. Include above ceiling blocking.

C. Selection Samples: Manufacturer's pattern and color charts for curtain and mesh fabrics.

D. Verification Samples: Submit 12 by 12 inch sample patches of curtain and mesh cloth with representative top, bottom, and edge hem stitch detail, heading with reinforcement and carrier attachment to curtain header.

E. Maintenance Data: Include recommended cleaning methods and materials and stain removal methods.

F. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.
   1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
   2. Extra Curtains: Two of each type and size.
   3. Extra Carriers: Ten.

PART 2 PRODUCTS

2.01 TRACKS AND TRACK COMPONENTS

A. Tracks: Extruded aluminum sections; minimum 0.050-inch aluminum thickness; fabricated in one piece per track run, to greatest extent possible.
   1. Profile: Channel, nominal 1-1/4 inches wide by 3/4 inch high.
   2. Mounting: Surface.
   3. Structural Performance: Capable of supporting vertical test load of 50 lbs without visible deflection of track or damage to supports, safely supporting moving loads, and sufficiently rigid to resist visible deflection and without permanent set.
   4. Track **<< End Stop; Tees; Y's; Switches; and _____>>**: To fit track section.
   5. Track Bends: Minimum 12 inch radius; fabricated without deformation of track section or impeding movement of carriers.
   6. Finish on Exposed Surfaces: **<< Clear anodized; White enamel; or _____>>**.
   7. Products:
      a. Construction Specialties; Traditional 6062 Track + 1062N carrier with ball chain/hook.
      b. Inpro; Clickeze CE5000 track + CE5038 carrier with ball chain/hook.
      c. Imperial Fastener Co.; IFC-98 track + IFC-100 carrier with ball chain/hook.
      d. Salsbury Industries; 19100 series track + 19103 carrier with ball chain/hook.

DRAFT

e. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Curtain Carriers: Nylon **<< rollers; slider; or _____>>** and 6 inch long beaded chain with aluminum hooks, size and type compatible with track; designed to eliminate bind when curtain is pulled; fitted to curtain to prevent accidental curtain removal.

C. Installation Accessories: Types required for specified mounting method and substrate conditions.

1. Provide stainless steel fasteners for exposed locations, and hot-dip galvanized fasteners for concealed locations.

2.02 CURTAINS

A. Cubicle Curtains:

1. Inherently flame resistant or flameproofed; capable of passing **<< NFPA 701; or _____>>** test.
   a. Fabric shall include identification markings from testing agency.
2. Material: Close weave polyester\ **<< polyester; cotton; nylon; recycled content and eco-polyester material; or _____>>**; anti-bacterial, stain resistant, self deodorizing, sanitized, and preshrunk.
3. Open Mesh Cloth: Open weave to permit air circulation; flameproof material, to be selected by Architect from manufacturer's full range.
4. Attachment of Curtain Fabric to Open Mesh Cloth: Manufacturer's standard sewn seam.
5. Products:
   a. INVISTA; Avora FR.
   b. Trevira; Trevira CS.
   c. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
6. Color/Pattern: To be selected by Architect from manufacturer's **<< full; or standard>>** range.

B. Curtain Fabrication:

1. Width of curtain to be **<< 10; 15; or ____>>** percent wider than track length.
2. Length of curtain to end **<< 10 inches; 12 inches; 15 inches; or ____ inches>>** above finished floor.
3. Pattern match fabric with vertical seams.
4. Include open mesh cloth at top 20 inches of curtain for room air circulation, attached to curtain as specified above.
5. Curtain Heading: Web reinforced band of open mesh cloth with metal grommet holes for carriers spaced 6 inches on center.
6. Seams and Hems: Manufacturer's standard fabrication method for securely sewn and finished seams and hems.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that surfaces and supports above ceiling are ready to receive work of this Section.

B. Verify that field measurements are as indicated .

DRAFT

3.02 INSTALLATION

A. Install curtain track to be secure, rigid, and true to ceiling line, per manufacturer's installation instructions.

B. Secure track to ceiling system.

1. Secure with mechanical fasteners to ceiling grids, not to exceed manufacturer's recommended spacing.

C. Install end caps and stop devices, and provide splices and connector accessories as required for layout indicated.

D. Install curtains on carriers ensuring smooth operation.

END OF SECTION 102123

DRAFT

SECTION 102239
FOLDING PANEL PARTITIONS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM C1396/C1396M - Standard Specification for Gypsum Board.

B. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

C. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.

D. ASTM E413 - Classification for Rating Sound Insulation.

E. ASTM E557 - Standard Guide for Architectural Design and Installation Practices for Sound Isolation Between Spaces Separated by Operable Partitions.

F. ASTM F793/F793M - Standard Classification of Wall Coverings and Ceiling Coverings by Use Characteristics.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene at project site seven calendar days prior to scheduled beginning of construction activities of this section to review section requirements.

1. Require attendance by representatives of installer and other entities directly affect, or affected by, construction activities of this section.

1.03 SUBMITTALS

A. Product Data: Provide data on **<< partition materials; operation; hardware and accessories; electric operating components; track switching components; colors and finishes available; and _____>>**.

B. Design Data: Design calculations, bearing seal and signature of structural engineer licensed to practice in the State of Maryland, showing loads at points of attachment to the building structure.

C. Shop Drawings: Indicate **<< opening sizes; track layout; details of track and required supports; static and dynamic loads; location and details of pass door and frame; adjacent construction and finish trim; stacking depth; and _____>>**.

D. Samples for Selection: Submit manufacturer's color charts for selection of colors.

E. Samples for Verification: Submit physical samples of surface finish, manufacturer's standard size, illustrating **<< quality; colors selected; texture; weight; and _____>>**.

F. Certificates: Certify that partition system meets or exceeds specified **<< acoustic requirements; and _____>>**.

G. Designer's qualification statement.

H. Installer's qualification statement.

I. Maintenance Data: Include recommended cleaning methods, cleaning materials, and stain removal methods. Describe cleaning materials detrimental to finish surfaces and hardware finish.

J. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

DRAFT

1.04 QUALITY ASSURANCE

A. Designer Qualifications: Perform design under direct supervision of Professional Engineer experienced in design of this type of work and licensed in the State of Maryland.

B. Installer Qualifications: Company specializing in performing work of the type specified, with personnel trained and approved by manufacturer for installation of specified products.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until installation.

1.06 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Provide **<< two; five; ten; or ____>>** year manufacturer warranty against defects in material and workmanship, excluding abuse.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Folding Panel Partitions - Horizontal Opening:

1. Kwik-Wall Company**<< ; 2000 Series Operable Walls; ; 3000 Series Operable Walls; ; 3030 - Paired Panels; or None - N/A>>**.
2. Moderco, Inc**<< ; 800 Series Model 841; ; 800 Series Model 842; ; Signature 8800; ; 700 series Model 741; ; 700 series Model 742; ; 700 series Model 743E; ; ____; or None - N/A>>**.
3. Modernfold, a DORMA Group Company**<< ; Acousti-Seal 942; or None - N/A>>**.

2.02 FOLDING PANEL PARTITIONS - HORIZONTAL OPENING

A. Folding Panel Partitions: **<< Center; Side; or _____>>** opening; **<< paired; individual; or continuous hinged>>** panels; **<< side; center; or _____>>** stacking; **<< manually operated; or motor operated>>**.

B. Panel Construction:

1. Frame: **<< 14 gauge, 0.0747 inch; 16 gauge, 0.0598 inch; 18 gauge, 0.0478 inch; ____ gauge, ___ inch; or Manufacturer's standard>>** thick formed sheet steel frame top, bottom, jambs, and intermediates; with corner support and cross-bracing reinforcement; welded construction with acoustical insulation fill.
2. Substrate: **<< Gypsum board; Plywood; Particle board; Medium-density fiberboard; or _____>>**.
3. Panel Substrate Facing: **<< Steel; or Aluminum>>** sheet, **<< 14 gauge, 0.0747 inch; 16 gauge, 0.0598 inch; 18 gauge, 0.0478 inch; 20 gauge, 0.0359 inch; 22 gauge, 0.0299 inch; ____ gauge, ___ inch; or manufacturer's standard>>** thickness for performance requirements indicated.
   a. Provide all-welded, all-steel construction of panel, with facing sheet welded to specified framing. Riveted connections will not be accepted. Horizontal or vertical spliced frame members or facings will not be accepted.
4. Hinges: Manufacturer's standard full leaf butt hinges; with steel mounting bracket welded to frame.
5. Panel Properties:
   a. Thickness with Finish: **<< 3 inches; 4 inches; or ____ inches>>**.

DRAFT

b. Width: Manufacturer's standard panel widths.
c. Weight: **<< 8 lb/sq ft; 10 lb/sq ft; 12 lb/sq ft; or 9.5 lb/sq ft>>**, maximum.

C. Panel Finishes:
1. Facing: **<< Vinyl coated fabric; Non-woven PVC-free coated fabric; Acoustical carpet; Plastic laminate; Wood veneer; Markerboard; Tackboard; Paint; or _____>>**.
2. Trim/Edges: Provide manufacturer's trimless vertical edges/astragals, with a minimal grooved appearance between panel joints.

D. Panel Seals:
1. Panel to Panel Seals: Grooved and gasketed astragals, with continuous flexible ribbed vinyl seal fitted to panel edge construction; color to match panel finish.
2. Acoustic Seals: Flexible acoustic seals at jambs, meeting mullions, ceilings, retractable floor seals, and above track to structure acoustic seal.
a. Top Seal: Continuous contact fixed resilient seal or sweeps.
b. Bottom Seal: Automatically retracts and extends due to movement of partition. Retraction operating range of 1-1/2 or 2 inches.

E. Suspension System:
1. Track: **<< Formed steel; Extruded aluminum; or _____>>**; **<< 1-1/4 by 1-1/4 inch; 1-5/8 by 1-5/8 inch; or ____ by ____ inch>>** size, thickness and profile designed to support loads, steel sub-channel and track connectors.
2. Carriers: Steel, b**<< Nylon; Steel, ball bearing; or _____>>** wheels on trolley carrier at top of every panel, sized to carry imposed loads, with threaded pendant bolt for vertical adjustment.

F. Performance:
1. Acoustic Performance:
a. Sound Transmission Class (STC): **<< 38 to 42; 43 to 47; 48 to 52; 53 to 57; or 52, minimum>>**; calculated in accordance with **<<ASTM E413>>**, based on tests conducted in accordance with **<<ASTM E90>>**, on panel size of 100 sq ft.
2. Surface Burning Characteristics of Panel Finish: Flame spread/smoke developed index of 25/50, maximum, when tested in accordance with **<<ASTM E84>>**.
3. Installed partition system track capable of supporting imposed loads, with maximum deflection of 1/360 of span.

G. Operation:
1. Electric Operator: 12 inches per second traveling speed; adjustable friction clutch brake actuated by solenoid controlled motor starter; enclosed limit switch; enclosed magnetic reversing starter.
2. Control Station: **<< One; Two; or _____>>** standard keyed, three button **<< OPEN-STOP-CLOSE; constant pressure; momentary contact; or _____>>** type; 24 volt circuit; **<< surface; recess; or _____>>** mounted.
a. Key switch prepared for mortise lock cylinder.
b. Key switches alike.
3. Safety Features:
a. Limit Switches: Automatic type, at both extremes of travel, to prevent over-travel.
b. Emergency Release: Mechanism to disengage motor drive system and permit manual operation.

DRAFT

c. Pocket Door Interlock: Mechanism to prevent operation of panels unless storage pocket doors are fully open.

4. Electrical Requirements:

H. Accessories:

1. Pocket Enclosures: Door, frame, and trim to match adjacent **<< walls; panels; or _____>>**; non-acoustical.
2. Acoustic Sealant: As recommended by partition manufacturer.

2.03 MATERIALS

A. Standard Gypsum Board: **<<ASTM C1396/C1396M>>**,, maximum permissible length; ends square cut, **<< square; beveled; or ____>>** edges.

B. Vinyl Coated Fabric: **<< ASTM F793 Category IV; ASTM F793 Category V; ASTM F793 Category VI; or _____>><< , polyvinyl fluoride (PVC) finish for washability and improved flame retardance; , _____; or None - N/A>><< ; _____ color; or ; color as selected by Architect from manufacturer's standard range>>**.

C. Acoustic Insulation: Manufacturer's standard type and thickness as required for acoustic performance indicated.

1. Type: **<< Manufacturers standard; As required for acoustic performance indicated; ASTM C665 preformed mineral fiber, friction fit; or _____>>**.
2. Thickness: **<< As required for acoustic performance indicated; 2-1/2 inch; 3-1/2 inch; or ___ inch>>**.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that overhead support beam and supporting structure is properly sized and installed in accordance with manufacturer's requirements.

C. Verify track supports are laterally braced and will permit track to be level within 1/4 inch of required position and parallel to the floor surface.

D. Verify floor flatness of 1/8 inch in 10 feet, non-cumulative.

E. Verify wall plumbness of 1/8 inch in 10 feet, non-cumulative.

3.02 INSTALLATION

A. Install partition in accordance with manufacturer's instructions and ASTM E557.

B. Install electric operator, wiring, and controls. Locate control station(s) as indicated.

C. Fit and align partition assembly and pocket doors level and plumb.

D. Lubricate moving components.

E. Install acoustic sealant to achieve required acoustic performance.

3.03 ADJUSTING

A. Adjust partition assembly to provide smooth operation from stacked to full open position. Do not over-compress acoustic seals.

B. Visually inspect partition in full extended position for light leaks to identify a potential acoustical leak.

DRAFT

C. Adjust partition assembly to achieve lightproof seal.

3.04 CLEANING

A. Clean finish surfaces and partition accessories.

B. Condition markerboard surfaces in accordance with manufacturer's instructions.

3.05 CLOSEOUT ACTIVITIES

A. Demonstrate operation and maintenance of partition to Owner's personnel and identify potential operational problems.

END OF SECTION 102239

DRAFT

SECTION 102600
WALL AND DOOR PROTECTION

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ADA Standards - 2010 ADA Standards for Accessible Design.

B. ASTM D256 - Standard Test Methods for Determining the Izod Pendulum Impact Resistance of Plastics.

C. ASTM D3273 - Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber.

D. ASTM D5319 - Standard Specification for Glass-Fiber Reinforced Polyester Wall and Ceiling Panels.

E. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

F. ASTM F476 - Standard Test Methods for Security of Swinging Door Assemblies.

G. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers Version 1.2.

H. FDA Food Code - Chapter 6 - Physical Facilities.

I. ICC A117.1 - Accessible and Usable Buildings and Facilities.

J. ISO 846 - Plastics - Evaluation of the Action of Microorganisms.

K. ISO 2812-1 - Paints and Varnishes -- Determination of Resistance to Liquids -- Part 1: Immersion in Liquids Other than Water.

L. SCAQMD 1168 - Adhesive and Sealant Applications.

1.02 SUBMITTALS

A. Product Data: Indicate **<< physical dimensions; features; wall mounting brackets with mounted measurements; anchorage details; rough-in measurements; and _____>>**.

B. Shop Drawings: Include plans, elevation, sections, and attachment details.**<< Show design and spacing of supports for protective corridor handrails, required to withstand structural loads.; or None - N/A>>**

C. Selection Samples: Provide manufacturer's color charts for each product and material requiring color selection.

D. Verification Samples: Submit physical samples, manufacturer's standard size, for each selected color.

E. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in **<<Owner>>**'s name and registered with manufacturer.

F. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project:

1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
2. Extra Stock Materials: One package minimum 96 inches long unit of each kind of covers for protective handrails.
3. Extra Stock Materials: Five sheets minimum of each type of protective wall covering.

DRAFT

1.03 DELIVERY, STORAGE, AND HANDLING

A. Deliver wall and door protection items in original, undamaged protective packaging. Label items to designate installation locations.

B. Protect work from moisture damage.

C. Protect work from UV light damage.

D. Do not deliver products to project site until areas for storage and installation are fully enclosed, and interior temperature and humidity are in compliance with manufacturer's recommendations for each type of item.

E. Store products in either horizontal or vertical position, in compliance with manufacturer's instructions.

1.04 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Manufacturer Warranty: Provide 5-year manufacturer warranty for metal crash rails. Complete forms in **<<Owner>>**'s name and register with manufacturer.

1. Failures include, but are not limited to, the following:
    a. Structural failures or internal connection failures.
    b. Deterioration of materials beyond that expected of normal use, as intended by manufacturer.

PART 2 PRODUCTS

2.01 PERFORMANCE CRITERIA

A. Impact Strength: Unless otherwise noted, provide protection products and assemblies that have been successfully tested for compliance with applicable provisions of **<<ASTM D256>>** and/or **<<ASTM F476>>**.

B. Adhesives and Sealants: Adhesives and sealants field-applied inside the weatherproofing system shall be tested and determined compliant in accordance with **<<CAL (CDPH SM)>>** AND shall meet the chemical content requirements of **<<SCAQMD 1168>>**.

2.02 PRODUCT TYPES

A. Protective Corridor Handrails: Factory- or shop-fabricated, with preformed end caps and internal and external corners:

1. See Section **<< 055213 - Pipe and Tube Railings>>** for metal railings not intended to protect walls.
2. Comply with accessibility requirements of **<<ICC A117.1>>** and **<<ADA Standards>>**.
3. Products (flat bar):
    a. Construction Specialties; HRB-4C.
    b. InPro; G2-800 Series.
    c. Pawling Corp; BR-530P.
4. Products (flat bar with round grip):
    a. Construction Specialties; HRB-10C.
    b. InPro; 1200 Ser
    c. Pawling Corp; BR-400PS.
5. Performance of Installed Assembly:

DRAFT

a. Support vertical live load of **<< 100 lb/lineal ft; or ____ lb/lineal ft>>** with deflection not to exceed **<< 1/50; or ____>>** of span between supports.
b. Resist lateral force of **<< 250 lbs; 75 lbs; or ____ lbs>>** at any point without damage or permanent set.
c. Ligature-resistant.

6. Material: Polyethylene terephthalate (PET or PETG); PVC-free, color **<< as selected from manufacturer's full range of colors; as indicated on drawings; as scheduled; or ____>>**.
7. Surface Burning Characteristics: Provide assemblies with flame spread index of **<< 25 or less; or _____>>** and smoke developed index of **<< 450 or less; or _____>>**, when tested in accordance with **<<ASTM E84>>**.
8. Mounting: Surface.
9. Projection From Wall to Outside of Rail: As indicated on Drawings.
10. Clear Space From Wall: As indicated on Drawings.
11. Length: Factory fabricated into longest possible lenghts; flush splicing.

B. Rigid Sheet Wall Protection: ******If using rigid sheet wall protection, indicate 4 foot high waincscot terminating in a handrail or chairrail on drawings. Indicate 6 inch squares for room signs. Refer to Division 10, "Signage."******

1. Products:
   a. Construction Specialties; Acrovyn Rigid Sheet.
   b. InPro; Palladium G2 Rigid Sheet.
   c. Pawling Corp; Pro-Tek NXT Wall Covering.
2. Material: Polyethylene terephthalate (PET or PETG); PVC and PBTs-free.
3. Thickness: **<< 0.028 inch; 0.040 inch; 0.060 inch; 0.075 inch; 0.080 inch; or _____ inch>>**.
4. Surface Burning Characteristics: Provide assemblies with flame spread index of **<< 25 or less; or _____>>** and smoke developed index of **<< 450 or less; or _____>>**, when tested in accordance with **<<ASTM E84>>**.
5. Color: To be selected by Architect from manufacturer's **<< full; or standard>>** range.
6. Texture: **<< Suede; or _____>>**.
7. Accessories: Provide manufacturer's standard **<< color-matched; contrasting; or _____>>** trim and moldings.
   a. Inside Corner Trim: **<< Standard angle; adjustable angle; and _____>>**
   b. Outside Corner Trim: **<< Standard angle; adjustable angle; and _____>>**.
8. Adhesive: Type recommended by panel manufacturer; low-VOC compliant.

C. ~~Impact Resistant Wall Covering with Custom Digital Image:~~

1. ~~Basis-of-Design: Construction Specialties; Acrovyn High Impact Wall Covering.~~
2. ~~Material: Polyethylene terephthalate (PET or PETG); PVC and PBTs-free.~~
3. ~~Thickness: **<< 0.028 inch; 0.040 inch; 0.060 inch; 0.075 inch; 0.080 inch; or _____ inch>>**.~~
4. ~~Surface Burning Characteristics: Provide assemblies with flame spread index of **<< 25 or less; or _____>>** and smoke developed index of **<< 450 or less; or _____>>**, when tested in accordance with **<<ASTM E84>>**.~~
5. Pattern: **<< None; Simulated wood; Simulated metal; Decorative pattern; or Custom digital graphic>>**.

DRAFT

a. Include $500 **<< allowance; or lump sum>>** for digital image copyright acquisition and formatting unless digital image is already property of the **<< Owner>>** or wallcovering manufacturer.
b. Digital image licenser shall provide a digital file formatted in accordance with wall protection manufacturer's digital requirements.
c. Coordinate image selection and orientation with **<< Architect>>** after bidding.

6. ~~Texture: **<< Suede; or _____>>**.~~
7. ~~Accessories: Provide manufacturer's standard **<< color-matched; contrasting; or _____>>** trim and moldings.~~
   a. ~~Inside Corner Trim: **<< Standard angle; adjustable angle; and _____>>**~~
   b. ~~Outside Corner Trim: **<< Standard angle; adjustable angle; and _____>>**.~~
8. ~~Adhesive: Type recommended by panel manufacturer; low-VOC compliant.~~

D. Fiberglass Reinforced Panels (FRP): ******MCPS prefers FRP or wall tile at janitor sinks. Extend 24 to 30 inches above sink top.******
   1. Products:
      a. Crane Composites, Inc; Glasbord.
      b. Marlite, Inc; Standard FRP.
      c. Nudo Products, Inc; FiberLite FRP - Wall Panels.
      d. Panolam Surface Systems; FRP.
      e. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
   2. Wall Panels**<< at _____; _____; or None - N/A>>**:
      a. Panel Size: 4 by 10 feet, nominal.
      b. Panel Thickness: 0.09 inch, minimum.
      c. Surface Design: **<< Pebble; Smooth; or _____>>**.
      d. Color: **<< White; As selected by Architect from manufacturer's full range of colors; or _____>>**.
      e. Attachment Method: **<< Adhesive only, sealant joints, no trim; Adhesive only, with trim and sealant in joints; Mechanical fasteners concealed by trim, with sealant in joints; or _____>>**.
   3. Material: Fiberglass reinforced plastic (FRP), complying with **<<ASTM D5319>>**.
      a. Surface Burning Characteristics: Maximum flame spread index of 25 and smoke developed index of 450; when system tested in accordance with **<<ASTM E84>>**.
      b. Mold Resistance: Score of 10, when tested in accordance with **<<ASTM D3273>>**.
      c. Impact Strength: Greater than **<< 6 ft lb force per inch; or ___ ft lb force per inch>>**, when tested in accordance with **<<ASTM D256>>**.
      d. Surface Characteristics and Cleanability: Provide products that are smooth, durable, and easily cleanable, in compliance with **<<FDA Food Code>>**, Chapter 6 - Physical Facilities.
      e. Chemical Cleanability: Excellent chemical resistance to common cleaners and detergents when tested in accordance with **<<ISO 2812-1>>**.
      f. Biological Resistance: Rating of 0, when tested in accordance with **<<ISO 846>>**.
   4. Accessories: Provide manufacturer's standard **<< vinyl; or aluminum>>** trim.
   5. Adhesive: Type recommended by panel manufacturer; low-VOC compliant.
   6. Sealant: Mildew-resistant silicone; refer to Division 7 Section "Joint Sealants"; color coordinated with panel color.

DRAFT

E. Fiber Reinforced Laminate:
   1. Products:
      a. Formica; HardStop.
      b. Panolam Surface Systems; FRL Wall Protection Panels
   2. Material: Fiber Reinforced Laminate (FRL): Thermofused melamine overlay, decorative paper and fire-rated phenolic paper with fiber reinforcing inner layers.
   3. Thickness: **<< 0.075 inch; or _____ inch>>**.
   4. Panel Size: **<< 3 feet by 8 feet; 3 feet by 10 feet; 4 feet by 8 feet; 4 feet by 10 feet; 5 feet by 8 feet; 5 feet by 10 feet; or _____ feet by _____ feet>>**.
   5. Surface Burning Characteristics: Provide assemblies with flame spread index of **<< 25 or less; or _____>>** and smoke developed index of **<< 55 or less; or _____>>**, when tested in accordance with **<<ASTM E84>>**.
   6. Color and Pattern: To be selected by Architect from manufactuter's **<< full; or standard>>** range.
   7. Texture: **<< As selected from manufacturer's standard textures; As indicated on drawings; As scheduled; or ____>>**.
   8. Accessories: Provide manufacturer's standard **<< PVC; aluminum; or _____>> << color-matched; contrasting; or _____>>** trim and moldings.
      a. Outside Corner Trim: **<< Flat; Round; or _____>>**.
      b. Division Bar: **<< Flat; Round; or _____>>**.
   9. Mounting: Adhesive.

F. Adhesives and Primers: As recommended by manufacturer.

G. Mounting Brackets and Attachment Hardware: Appropriate to component and substrate.

2.03 FABRICATION

A. Fabricate components with tight joints, corners and seams.

2.04 SOURCE QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Provide wall ~~and door~~ protection systems of each type from a single source and manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that rough openings, concealed blocking, and anchors are correctly sized and located.

B. Verify that field measurements are as **<< indicated on drawings; instructed by the manufacturer; or _____>>**.

C. Verify that substrate surfaces for adhered items are clean and smooth.
   1. Test painted or wall covering surfaces for adhesion in inconspicuous area, as recommended by manufacturer. Follow adhesive manufacturer's recommendations for remedial measures at locations and/or application conditions where adhesion test's results are unsatisfactory.

D. Start of installation constitutes acceptance of project conditions.

DRAFT

3.02 INSTALLATION

A. Install components in accordance with manufacturer's instructions, level and plumb, secured rigidly in position to supporting construction.

B. Position top of corridor hand rail **<< 36 inches; or _____ inches>>** from finished floor.

C. Terminate rails **<< 1 inch; or _____ inch>>** short of **<< door openings; intersecting walls; and _____>>**.

D. Rigid Sheet Wall Protection:

1. Cut and drill panels with carbide tipped saw blades, drill bits, or snips.
2. Establish a fixed level line slightly above finished floor, but not exceeding 1 inch, to allow for floor slab variations.
3. Full-Height Installation: Establish a plumb line located at edge of starting point of first sheet to ensure following sheets will be installed plumb.
4. Wainscot Installation: Establish a level line at the specified height for entire length of run. Install by aligning top of edge of covering with this line.
5. Adhesive Installation: Apply adhesive using trowel to an area of wall surface that can be completed within cure time of the adhesive. Use a roller to ensure maximum contact with adhesive.
6. Install trim pieces as required for a complete installation. Allow tolerance for thermal movement. Place trim on panel before fastening edges, as required by manufacturer's installation instructions.
7. At joints indicated to be caulked, allow for a minimum **<< 1/16 inch>>** wide gap between edges of sheets. Gaps are required to be of consistent width throughout the project. Remove excess sealant after paneling is installed and prior to curing.
8. At inside and outside corners cut covering sheets to facilitate installation of trim pieces or corner guards.

3.03 TOLERANCES

A. Maximum Variation From Required Height: **<< 1/4 inch; or ____ inch>>**.

B. Maximum Variation From Level or Plane For Visible Length: **<< 1/4 inch; or ____ inch>>**.

3.04 CLEANING

A. See Section **<< 017419 - Construction Waste Management and Disposal>>**, for additional requirements.

B. Clean wall and door protection items of excess adhesive, dust, dirt, and other contaminants.

END OF SECTION 102600

DRAFT

SECTION 102800
TOILET AND BATH ACCESSORIES

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ADA Standards - 2010 ADA Standards for Accessible Design.

B. ASTM A269/A269M - Standard Specification for Seamless and Welded Austenitic Stainless Steel Tubing for General Service.

C. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

D. ASTM A666/A666M - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.

E. ASTM C1036 - Standard Specification for Flat Glass.

F. ASTM C1048 - Standard Specification for Heat-Strengthened and Fully Tempered Flat Glass.

G. ASTM C1503 - Standard Specification for Silvered Flat Glass Mirror.

H. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

I. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Coordinate the work with the placement of **<< internal wall reinforcement; concealed ceiling supports; reinforcement of toilet partitions; and ____>>** to receive anchor attachments.

1.03 SUBMITTALS

A. Product Data: Submit data on accessories describing size, finish, details of function, and attachment methods.

B. Setting Drawings: For cutouts required in other work; include templates, substrate preparation instructions, and directions for preparing cutouts and installing anchoring devices.

C. Maintenance Data: For each type of accessory, to include in maintenance manual per Section **<< 017800 - Closeout Submittals>>**. Include list of replacement parts and service recommendations.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Commercial Toilet, Shower, and Bath Accessories:
   1. American Specialties, Inc.
   2. Bobrick Washroom Equipment.
   3. Bradley Corporation.

B. Under-Lavatory Pipe Supply Covers:
   1. Plumberex Specialty Products, Inc.
   2. Truebro; IPS Corporation.

C. Electric Hand/Hair Dryers:

DRAFT

1. Dyson.
2. Excel Dryer.
3. World Dryer Corporation.

D. Provide products of each category type by single manufacturer.

2.02 MATERIALS

A. Accessories - General: Shop assembled, free of dents and scratches and packaged complete with anchors and fittings, steel anchor plates, adapters, and anchor components for installation.

B. Keys: Provide **<< 6 master/universal>>** keys, minimum, to **<<Owner>><< ; master key lockable accessories; ; _____ lockable accessories; ; _____; or None - N/A>>**.

C. Stainless Steel Sheet: **<<ASTM A666/A666M>><< , Type 304; , Type ____; None - N/A; or ____>>**.

D. Stainless Steel Tubing: **<<ASTM A269/A269M>>**, Grade TP304 or TP316.

E. Galvanized Sheet Steel: Hot-dipped galvanized steel sheet, **<<ASTM A653/A653M>>**, with **<< G60/Z180; G90/Z275; or _____>>** coating.

F. Mirror Glass: Annealed float glass, **<<ASTM C1036>>** Type I, Class 1, Quality Q2, with silvering, protective and physical characteristics complying with **<<ASTM C1503>>**.

G. Fasteners, Screws, and Bolts: Hot dip galvanized**<< ; tamper-proof; ; ____; or None - N/A>><< ; security type; ; ____; or None - N/A>>**.

1. Provide mechanical attachment of all accessories. Use of adhesive or double-side tape is not acceptable.

2.03 FINISHES

A. Stainless Steel: **<< Satin; Bright polished; or _____>>** finish**<< , unless otherwise noted; , ____; or None - N/A>>**.

B. Baked Enamel: Pretreat to clean condition, apply one coat primer and minimum two coats **<< epoxy; electrostatic; or ____>>** baked enamel.

2.04 TOILET ACCESSORIES SCHEDULE, GENERAL

A. General: The following products make reference to the designations indicated on the Toilet Accessories Schedule, Toilet Assemblies, and toilet room plans on the drawings; herein designated as "TA-x".

2.05 COMMERCIAL TOILET<< AND BATH; OR NONE - N/A>> ACCESSORIES

A. Grab Bars [*designation?*]: Stainless steel, peened surface.

1. Standard Duty Grab Bars:
   a. Push/Pull Point Load: 250 pound-force, minimum.
   b. Dimensions: 1-1/2 inch outside diameter, minimum 0.05 inch wall thickness, concealed flange mounting, 1-1/2 inch clearance between wall and inside of grab bar.
   c. Finish: Satin.
   d. Length and Configuration: As indicated on drawings.
   e. Products:
      1) American Specialties, Inc.; 3800 Series.
      2) Bobrick Washroom Equipment, Inc.; B-6806 Series.
      3) Bradley Corporation; 812 Series.

DRAFT

B. Toilet Paper Dispenser [*designation?*]: Roll-in-reserve type, designed to allow automatic activation of reserve roll when needed, or manual activation by pressing release bar, surface-mounted, stainless steel unit with pivot hinge, and tumbler lock. ******MCPS prefers 2 rolls covered.******
   1. Products:
      a. American Specialties, Inc.; Model 0030.
      b. Bobrick Washroom Equipment, Inc.; Model B-2888.
      c. Bradley Corporation; Model 5402.

C. Sanitary Napkin Disposal Unit [*designation?*]: Stainless steel, surface-mounted, self-closing door, with full-length stainless steel piano-type hinge, removable receptacle.
   1. Products:
      a. American Specialties, Inc; Model 0852.
      b. Bobrick Washroom Equipment, Inc.; Model B-254.
      c. Bradley Corporation; Model 4722-15.

D. Soap Dispenser [*designation?*]: Owner furnished for installation by Contractor.

E. Mirrors [*designation?*]: Stainless steel framed, 1/4 inch thick **<< annealed float glass; ASTM C1036; tempered safety glass; ASTM C1048; acrylic plastic sheet; polycarbonate plastic sheet; abrasion-resistant coated acrylic plastic sheet; abrasion-resistant coated polycarbonate plastic sheet; or ____>>** with galvanized steel back.
   1. Annealed Float Glass: Silvering, protective and physical characteristics in compliance with **<<ASTM C1503>>**.
   2. Size: As indicated on Drawings. ******MCPS prefers 18x24 mirrors in Pre-K and K restrooms. MCPS prefers 18x36 in single use restrooms. MCPS prefers 24x72 mirrors in group and Pre-K restrooms.******
   3. Frame: 0.05 inch channel shapes, with mitered and welded and ground corners, and tamperproof hanging system, bright-polished finish.
   4. Products:
      a. American Specialties, Inc; 0620-L Series.
      b. Bobrick Washroom Equipment, Inc.; Model B-165 Series.
      c. Bradley Corporation; Model 720.

F. Corner Grab Bar Assembly [*designation?*]: Stainless steel, surface.
   1. Stainless-Steel Nominal Thickness: 0.05 inch.
   2. Finish: Satin.
   3. Mounting: Concealed with manufacturer's standard flanges and anchors.
   4. Outside Diameter: 1-1/2 inches unless otherwise indicated.
   5. Configuration: Single "L" shaped shower grab bar.
      a. Length (Control Wall): 32 to 34 inches from wall to centerline of return.
      b. Length (Back Wall): Nominal 24 inches from wall to centerline of return. Limit leg length so as not to interfere with folding shower seat.
   6. Products:
      a. American Specialties, Inc.; Model 3274P.
      b. Bobrick Washroom Equipment, Inc.; *Model B-68616.99*.
      c. Bradley Corporation; 8122-0591833.

DRAFT

G. Folding Shower Seat [*designation?*]: Wall-mounted surface; welded tubular seat frame, structural support members, hinges, and mechanical fasteners of Type 304 stainless steel, **<< L-shaped; and rectangular>>** seat.
   1. Seat: Phenolic or polymeric composite one-piece seat or seat slats, of manufacturer's standard color.
   2. Size: ADA Standards compliant.
   3. Products (L-Shaped - 33" to 34.5" wide, reversible):
      a. American Specialties, Inc.; Model 8206.
      b. Bobrick Washroom Equipment, Inc.; Model B-5181.
      c. Bradley Corporation; Model 9565.

H. Shower Rod & Curtain [*designation?*]: Stainless steel tube, 1 inch outside diameter, 0.04 inch wall thickness, satin-finished, with 1-3/8 inch outside diameter, minimum 0.04 inch thick satin-finished *bright-polished chrome-plated plastic* flanges, for concealed mounting.
   1. Products:
      a. American Specialties, Inc; Model 1214.
      b. Bobrick Washroom Equipment, Inc.; Model B-207.
      c. Bradley Corporation; Model 9538.

I. Shower Curtain [*designation?*]: Provide shower curtain with each shower curtain rod.
   1. Material: Opaque vinyl, 0.008 inch thick, matte finish, with antibacterial treatment, flameproof and stain-resistant.
   2. Size: Provide curtain width 6 inches wider than shower opening dimension for 36 inch showers, and 12 inches wider than shower opening dimension for 48 inch and larger showers. Provide curtain height sized to 2 inches less than curtain rod mounting height.
   3. Grommets: Stainless steel; pierced through top hem on 6 inch centers.
   4. Color: White.
   5. Products:
      a. American Specialties, Inc; Model 1200-V.
      b. Bobrick Washroom Equipment, Inc; Model 204-2.
      c. Bradley Corporation; Model 9535.

J. Shower Curtain Hooks [*designation?*]: Chrome-plated or stainless steel spring wire designed for snap closure.
   1. Products:
      a. American Specialties, Inc; Model 1200-SHU.
      b. Bobrick Washroom Equipment, Inc; Model 201-1.
      c. Bradley Corporation; Model 9536.

K. Paper Towel Dispenser [*designation?*]: Folded paper type, stainless steel, surface-mounted, with viewing slots on sides as refill indicator and tumbler lock. ******MCPS prefers paper towel dispensers at classroom sinks and single use restrooms.******
   1. Capacity: 400 C-fold or 525 multifold, minimum.
   2. Products (Surface-Mounted):
      a. American Specialties, Inc; Model 210.
      b. Bobrick Washroom Equipment, Inc.; Model B-262.
      c. Bradley Corporation; Model 250-15.

L. Waste Receptacle [*designation?*]: **<< Wall-mounted; Recessed; or ____>>**, **<< stainless steel; or _____>>**, seamless lower door for access to container, **<< with tumbler lock,;**

DRAFT

None - N/A; or ____>> reinforced panel full height of door,**<< push-in self-closing top door,; ____; or None - N/A>>** continuously welded bottom pan and seamless exposed flanges.

1. Liner: **<< Removable; Reusable; or ____>>**, heavy-duty vinyl liner, attached at a minimum of **<< four; three; or ___>>** points with stainless steel grommets and hooks.
2. Minimum capacity: **<< 4 gallons; 12 gallons; or ____ gallons>>**.
3. Products:
   a. American Specialties, Inc; Model 0826.
   b. Bobrick Washroom Equipment, Inc; Model B-277.
   c. Bradley Corporation; Model 3565.

M. Combination Towel Dispenser/Waste Receptacle [*designation?*]: Recessed **<< flush with wall; with projecting waste receptacle; or ____>>**, **<< stainless steel; or _____>>**; seamless wall flanges, continuous piano hinges**<< , tumbler locks on upper and lower doors; None - N/A; or , ____>>**.

1. Waste receptacle liner: Provide with manufacturer's reusable, molded plastic liner accessory with stainless steel support strap. Bobrick "LinerMate" or equivalent.
2. Towel dispenser capacity: **<< 400 C-fold; 700 multifold; or 800 multi-fold; 600 C-fold>>**.
3. Waste receptacle capacity: **<< 4 gallons; 12 gallons; or ___ gallons>>**.
4. Products:
   a. American Specialties, Inc; Model 0469.
   b. Bobrick Washroom Equipment, Inc; Model B-3944.
   c. Bradley Corporation; Model 234.

N. Coat Hook [*designation?*]: Heavy-duty stainless steel, double-prong, rectangular-shaped, vertical bracket and backplate for concealed attachment, bright polished finish. Provide one centered on interior face of door of all single-user toilet rooms and one adjacent to each shower, unless otherwise indicated on Drawings; verify final mounting locations with Architect in field. ******MCPS prefers in single use restrooms, kitchen, principal, and gym restrooms.******

1. Products:
   a. American Specialties, Inc.; Model 7832.
   b. Bobrick Washroom Equipment, Inc.; Model B-682.
   c. Bradley Corporation; Model 9134.

2.06 UNDER-LAVATORY PIPE AND SUPPLY COVERS

A. Under-Lavatory Pipe and Supply Covers:

1. Insulate exposed drainage piping, including hot, cold, and tempered water supplies under lavatories or sinks to comply with **<<ADA Standards>>**.
2. Exterior Surfaces: Smooth non-absorbent, non-abrasive surfaces.
3. Construction: **<< 1/8 inch>>** flexible PVC.
   a. Surface Burning Characteristics: Flame spread index of 25 or less and smoke developed index of 450 or less, when tested in accordance with **<<ASTM E84>>**.
   b. Microbial and Fungal Resistance: Comply with **<<ASTM G21>>**.
4. Color: **<< White; Gray; or _____>>**.
5. Fasteners: Reusable, snap-locking fasteners with no sharp or abrasive external surfaces.
6. Products:
   a. Plumberex Specialty Products, Inc; Plumberex Trap Gear.

DRAFT

b. Truebro; IPS Corporation; Lav Guard 2.

2.07 ELECTRIC HAND DRYERS

A. Electric Hand Dryers [*designation?*]: Traditional fan-in-case type, with downward fixed nozzle.
   1. Operation: Automatic, sensor-operated on and off.
   2. Mounting: Surface-mounted.
   3. Cover: **<< Plastic; Stainless steel with brushed finish; Epoxy painted steel or die-cast zinc alloy; Chrome plated steel or die-cast zinc alloy; Aluminum with natural anodized satin finish; Cast iron with white porcelain enamel finish; or _____>>**.
      a. Color: White.
      b. Tamper-resistant screw attachment of cover to mounting plate.
      c. Screen or shield to prevent access to motor/heater.
   4. Air Velocity: 13,000 linear feet per minute, minimum, at full power.
   5. Heater: 500 W, minimum, at full power.
   6. Fan/Heater Control: Nichrome wire heating element with automatic resetting thermal cutoff.
   7. Total Wattage: 950 W, maximum.
   8. Runtime: Field adjustable or automatic, up to 60 seconds with vandal lockout feature.
   9. Air sanitizing and deodorizing without use of chemicals.
   10. Supply Voltage: **<< As indicated on drawings; 120 V, single phase, 60 Hz, nominal; 240 V, single phase, 60 Hz, nominal; or _____>>**.
   11. Warranty: 3 years.
   12. Electric Hand Dryer Products:
      a. Bradley Corporation; Aerix +.
      b. Excel Dryer Inc; ThinAir Hand Dryer.
      c. World Dryer Corporation; SLIMdri.

2.08 UTILITY ROOM ACCESSORIES

A. Combination Utility Shelf/Mop and Broom Holder [*designation?*]: 0.05 inch thick stainless steel, Type 304, with 1/2 inch returned edges, 0.06 inch steel wall brackets.
   1. Drying rod: Stainless steel, **<< 1/4 inch>>**1/4 inch diameter.
   2. Hooks: **<< Two; Three; Five; or ____>>**, 0.06 inch stainless steel rag hooks at shelf front.
   3. Mop/broom holders: **<< Three; Four; or ___>>** spring-loaded rubber cam holders at shelf front.
   4. Length: 36 inches.
   5. Products:
      a. American Specialties, Inc; Model 1315-3.
      b. Bobrick Washroom Equipment, Inc.; Model B-224 x 36.
      c. Bradley Corporation; Model 9983.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify exact location of accessories for installation.

DRAFT

C. For electrically-operated accessories, verify that electrical power connections are ready and in the correct locations.

D. Refer to Divisoin 6 Section "Rough Carpentry" and Division 9 Section "Cold-Formed Steel Framing - Non-Structural" for installation of **<< blocking; reinforcing plates; concealed anchors; and _____>>** in **<< walls; ceilings; and _____>>**.

3.02 INSTALLATION

A. Install accessories in accordance with manufacturers' instructions in locations indicated on drawings.

B. Install plumb and level, securely and rigidly anchored to substrate.

C. Mounting Heights: As required by accessibility regulations, unless otherwise indicated on Drawings.

3.03 PROTECTION

A. Protect installed accessories from damage due to subsequent construction operations.

END OF SECTION 102800

DRAFT

SECTION 104400
FIRE PROTECTION SPECIALTIES

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM E814 - Standard Test Method for Fire Tests of Penetration Firestop Systems.

1.02 SUBMITTALS

A. Product Data: Provide **<< extinguisher operational features; extinguisher ratings and classifications; color and finish; anchorage details; installation instructions; and trim and door panel styles>>**.

B. Shop Drawings: Indicate **<< locations of cabinets; cabinet physical dimensions; rough-in measurements for recessed cabinets; locations of individual fire extinquishers; mounting measurements for wall bracket; installation procedures; accessories required for complete installation; and _____>>**.

C. Maintenance Data: Include test, refill or recharge schedules and re-certification requirements.

1.03 FIELD CONDITIONS

A. Do not install extinguishers when ambient temperature may cause freezing of extinguisher ingredients.

B. Coordinate rough opening sizes to ensure cabinet locations meet ADA mounting requirements.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Fire Extinguishers and Cabinets:
1. Activar Construction Products Group, Inc. - JL Industries.
2. Amerex Corporation.
3. Ansul, a Tyco Business.
4. Babcock-Davis.
5. Badger Fire Protection.
6. Buckeye Fire Equipment Company.
7. Fire-End & Croker Corporation.
8. Kidde, a unit of United Technologies Corp.
9. Modern Metal Products; Div of Technico.
10. Larsen's Manufacturing Co.
11. MOON American.
12. Nystrom, Inc.
13. Oval Brand Fire Products.
14. Potter-Roemer.
15. Pyro-Chem, a Tyco Business.
16. Strike First Corporation of America.

DRAFT

2.02 FIRE EXTINGUISHERS

A. Fire Extinguishers: Furnished by Owner after Date of Substantial Completion. ******MCPS coordinates fire extinguishers with the Fire Marshal's office. Specifiers must refer to current Memorandum of Understanding, provided by MCPS, to coordinate. Fire extinguishers are provided by MCPS after construction.******

2.03 FIRE EXTINGUISHER CABINETS

A. Cabinet Construction, General: ******MCPS prefers fire extinguisher cabinets furnished and installed by Contractor.******
   1. Formed **<< cold-rolled; or ASTM A240 or ASTM A666, Type 304 stainless>>** steel sheet; minimum 0.036 inch thick base metal.
   2. Size to accommodate extinguisher(s) and accessories indicated.
   3. Provide cabinet enclosures with right angle inside corners and seams, and with formed perimeter trim and door stiles.

B. Fire Rated Cabinet Construction: Provide manufacturer's fire rated model of style/finish below. Match style and finish of non-rated cabinets.
   1. Fire Rating: Listed and labeled in accordance with **<<ASTM E814>>** requirements to match fire resistance rating of walls where being installed.
   2. Steel; double wall or outer and inner boxes with manufacturer's standard fire barrier material.

C. Cabinet Configuration: Recessed type. ******MCPS preferred.******
   1. Trim Type: Flat square edge trim; 3/8-inch or 1/2-inch nominal return to wall surface.
   2. Available Products: One of the following, or comparable product by manufacturer from list above:
      a. J.L. Industries/Activar; Ambassador 1015.
      b. Larsen's Manufacturing Co.; Model 2409-R2.
      c. Potter-Roemer; Model 1704.

D. Cabinet Configuration: Semi-recessed type.
   1. Trim Type: One piece trim and door frame, returned to wall surface. Rolled edge trim; 2-1/2- to 3-inch depth as standard with manufacturer.
   2. Available Products (Non-Rated): One of the following, or comparable product by manufacturer from list above:
      a. J.L. Industries/Activar; Ambassador C1017.
      b. Larsen's Manufacturing Co.; Model 2409-6R.
      c. Potter-Roemer; Alta Model 7023.
   3. Available Products (Fire-Rated): One of the following, or comparable product by manufacturer from list above:
      a. J.L. Industries/Activar; Ambassador Fire-FX2 C1017.
      b. Larsen's Manufacturing Co.; Model FS 2409-6R.
      c. Potter-Roemer; Alta Model FRC7023.

E. Cabinet Configuration: Surface-mounted type.
   1. Trim Type: Manufacturer's standard rolled edge.
   2. Available Products: One of the following, or comparable product by manufacturer from list above:
      a. J.L. Industries/Activar; Ambassador 1013.
      b. Larsen's Manufacturing Co.; Model 2409-SM.

DRAFT

c. Potter-Roemer; Model 1754.

F. Doors: Minimum 0.036 inch metal thickness, reinforced for flatness and rigidity **<< with nylon catch; with roller type catch; with lock and breakable window access; or _____>>**. Hinge doors for 180 degree opening with continuous piano hinge.

1. Door Glazing Style: **<< Full glazed panel; or Vertical duo>>**, configuration as standard with manufacturer.
2. Door Glazing: Tempered glass, clear, 1/8 inch thick, and set in resilient channel glazing gasket.
   a. For fire extinguishers in gymnasium, provide 1/8-inch thick impact resistant clear acrylic plastic, set in resilient channel glazing gasket.

G. Cabinet Mounting Hardware: Appropriate to cabinet, with pre-drilled holes for placement of anchors.

H. Operating Hardware: Manufacturer's standard for cabinet type; continuous door hinge allowing 180 degree opening, with ADA-compliant door latch either surface mounted or flush inset into door panel, with cam or friction latch operation.

1. Provide cylinder door locks, with all fire extinguisher cabinets keyed alike.

I. Fabrication: Weld, fill, and grind components smooth.

J. Finish of Cabinet Exterior Trim and Door: **<< Primed for field paint finish; Polished chrome; Satin chrome; No.4 - Brushed stainless steel; Red enamel; Red baked enamel; Baked enamel, _____ color; Baked enamel, color as selected; Anodized to _____ color; Anodized to color as selected; or _____>>**.

K. Finish of Cabinet Interior: White colored enamel.

2.04 ACCESSORIES

A. Extinguisher Brackets: Formed steel, **<< chrome-plated; galvanized and enamel finished; or _____>>** or baked-enamel finish.

B. Extinguisher Theft Alarm: Battery operated alarm, 10 second delay for disarming, activated by opening cabinet door.

C. Lettering: “FIRE EXTINGUISHER” decal, or vinyl self-adhering, pre-spaced lettering in accordance with authorities having jurisdiction (AHJ).

1. Apply vertically to door of fire extinguisher cabinets, and apply to wall surface at bracket mounted extinguishers.

2.05 EMERGENCY KEY ACCESS BOX

A. Commercial Door Key Access Box: Provide fire department emergency key access box manufactured by The Knox Company; as required by local Fire Marshal. Provide Knox Box recessed mount 4400 Series, nominal 7 inches by 7 inches by 5 inches deep, with tamper switch and recessed mounting kit. Provide manufacturer's standard polyester powder coat finish in black color. No substitutions will be considered. Coordinate recessed installation with substrate construction, electrical connections as required for proper operation, and with requirements of local Fire Marshal. Contact Knox Company: www.knoxbox.com

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify rough openings for cabinet are correctly sized and located.

DRAFT

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install cabinets plumb and level in wall openings, no greater than 48 inches from finished floor to top of handle.

C. Install mounting brackets at 44 inches above finish floor.

D. Secure rigidly in place.

E. Place extinguishers and accessories in cabinets and on wall brackets as applicable.

F. Install cabinet and extinguisher signage.

G. Adjust cabinet doors after installation to ensure smooth operation.

3.03 PROTECTION AND CLEANING

A. Protect fire extinguishers, fire extinguisher cabinets, and accessories from damage until Substantial Completion.

B. Provide touchup to damaged finishes; replace items that cannot be satisfactorily repaired or refinished.

END OF SECTION 104400

DRAFT

SECTION 105113
METAL LOCKERS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ADA Standards - 2010 ADA Standards for Accessible Design.

B. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

C. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Required Hardness, Solution Hardened, and Bake Hardenable.

D. ICC A117.1 - Accessible and Usable Buildings and Facilities.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Where indicated, coordinate with Section **<< 033000 - Cast-in-Place Concrete; or _____>>** to provide 4-inch high concrete bases with embedded anchors or grounds as required for locker attachment.

1.03 SUBMITTALS

A. Product Data: Manufacturer's published data on locker construction, sizes, and accessories.

B. Shop Drawings: Indicate locker plan layout, **<< numbering plan; combination lock code; key codes; and _____>>**.

C. Samples: Submit manufacturer's color charts illustrating full range of available colors.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Protect locker finish and adjacent surfaces from damage.

1.05 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Manufacturer Warranty: Provide **<< five-year; or 2 year>>** manufacturer warranty for materials and workmanship. Complete forms in **<<Owner>>**'s name and register with manufacturer.

1. Warranty shall cover failures including material and finish failure and faulty operation of latches, hinges, or other hardware.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Metal Lockers:

1. Art Metal Products**<< ; Standard KD; or None - N/A>>**.
2. List Industries, Inc**<< ; Classic Line of Superior KD; or None - N/A>>**.
3. Lockers MFG**<< ; KnockDown Lockers; ; KnockDown Heavy Duty Lockers; ; Open Front Lockers; ; All Welded Lockers; ; ____; or None - N/A>>**.
4. Lyon Workspace Products**<< ; Standard Lockers; or None - N/A>>**.
5. Penco Products, Inc**<< ; Vanguard; or None - N/A>>**.

DRAFT

6. Republic Storage Systems Co**<< ; Standard; or None - N/A>>**.
7. Tennsco Storage**<< ; Steel Lockers; ; _____; or None - N/A>>**.

2.02 LOCKER APPLICATIONS

A. **<< Student Lockers; Wardrobe Lockers; or _____>>**: Metal lockers, **<< recessed mounted; wall mounted with matching closed base; wall mounted for base indicated on drawings; free-standing with matching closed base; free-standing for base indicated on drawings; or mounted to wall and concrete base>>**.

1. Width: 15 inches.
2. Depth: 15 inches..
3. Height: 60 inches.
4. Configuration: **<< Single tier; Two tier; Three tier; Four tier; Five tier; Six tier; Z-tier (2 lockers each with a short and long compartment); or _____>>**.
5. Fittings (Single Tier): Provide shelf, double-prong ceiling hook mounted to underside of shelf, and two single-prong wall hooks, one on each side wall. ******MCPS prefers single tier for HS, MS, and staff lockers.******
6. Fittings (Two-Tier): Provide one double-prong ceiling hook and two single-prong wall hooks, one on each side wall. ******MCPS prefers two-tier for ES student lockers.******
7. Ventilation: None. ~~Louvers at top and bottom of door panel~~. ******MCPS prefers no ventilation in student and staff lockers.******
8. Locking: **<< Padlock hasps, for padlocks provided by Owner; Built-in key locks with spring bolt action; Built-in combination locks; Built-in digital keypad locks; or _____>>**. ******MCPS prefers "padlock hasps, for padlocks provided by Owner" for staff lockers. MCPS prefers "built-in combination locks" for HS and MS student lockers. No locks for ES student lockers.******
9. Provide sloped top.

B. **<< Athletic Lockers; Open-Front Athletic Lockers; or _____>>**: Metal lockers, **<< recessed mounted; wall mounted with matching closed base; wall mounted for base indicated on drawings; free-standing with matching closed base; free-standing for base indicated on drawings; or _____>>**.

1. Width: **<< 18 inches; 21 inches; 24 inches; 27 inches; 30 inches; 33 inches; 36 inches; or _____ inch>>**.
2. Depth: **<< 18 inches; 21 inches; 24 inches; or ____ inches>>**.
3. Height: 72 inches.
4. Configuration: **<< Single tier; Two tier; or _____>>**. ******MCPS prefers two-tier for HS athletic lockers. MCPS prefers 3-tier for MS athletic lockers.******
5. Fittings: Size and configuration as indicated on drawings.
6. Ventilation: Perforated side panels**<< and doors; or None - N/A>>**. ******MCPS prefers ventilation in athletic lockers.******
7. Locking: **<< Padlock hasps, for padlocks provided by Owner; Built-in key locks with spring bolt action; Built-in combination locks; Built-in digital keypad locks; Radio-frequency identification (RFID) locks; or _____>>**. ******MCPS prefers built-in combination locks in athletic lockers.******
8. Provide sloped top.

2.03 METAL LOCKERS

A. Accessibility: Design units as 'accessible' to comply with **<<ICC A117.1>>** and **<<ADA Standards>>**.

DRAFT

1. Quantity: Provide not less than one ADA-compliant locker for every 20 total; for each locker type (single-tier and two-tier). Locate ADA lockers at end of locker run with clear access space.
2. Locate bottom shelf no lower than 15 inches above floor.
3. Locate hooks, coat rods, and shelves no higher than 48 inches above floor.
4. Provide ADA-compliant recessed handle and latch, no higher than 48 inches above floor.
5. Provide 3" x 3" aluminum plate logo with the international symbol of accessibility on each ADA-compliant locker.

B. Locker Case Construction:
1. Standard-Duty, Knockdown Construction: Made of formed sheet steel; metal edges finished smooth without burrs; **<< baked enamel; powder coat; or _____>>** finished inside and out.
a. Locker Body Components: Formed and flanged from steel sheet of the following type and minimum thicknesses:
1) **<< Unperforated; Perforated; or _____>>** Steel Sheet: Commercial Steel (CS), Type B, supplied for exposed applications and complying with **<<ASTM A1008/A1008M>>** and the following:
(a) Provide uncoated (cold-rolled) steel sheet, except provide zinc-coated steel sheet for locker bottoms.
b. Frames: Formed channel shape, welded and ground flush, welded to body, resilient gaskets and latching for quiet operation.
1) Door Frame: 16 gauge, 0.0598 inch, minimum.
c. Where ends or sides are exposed, provide flush panel closures.
d. Provide filler strips where indicated, securely attached to lockers.

C. Lockers: Factory assembled, made of formed sheet steel, **<< ASTM A653/A653M SS Grade 33/230, with G60/Z180 coating; ASTM A653/A653M SS Grade 50/340, with G90/Z275 coating; ASTM A653/A653M SS Grade ___ , with ___ coating; Cold-rolled mild steel, uncoated; or _____ >>**, stretcher leveled; metal edges finished smooth without burrs; baked enamel finished inside and out.
1. Where ends or sides are exposed, provide flush panel closures.
2. Provide filler strips where indicated, securely attached to lockers.
3. Color: To be selected by **<<Architect>>**. Manufacturer's standard neutral color is acceptable for locker interiors.

D. Locker Body: Formed and flanged; with steel stiffener ribs; electric spot welded.
1. Tops, Sides, and Shelves: **<< 24 gauge, 0.0239 inch; ____ gauge, ___ inch; or 16 gauge, 0.0598 inch>>** minimum.
2. Backs: 18 gauge, 0.0478 inch minimum.
3. Reinforced Bottoms: 16 gauge, 0.0598 inch minimum with channel edge; welded to frame panels, with manufacturer's standard stiffeners.

E. Doors: Channel edge; welded construction, manufacturer's standard stiffeners, grind and finish edges smooth.
1. Door Thickness: **<< 16 gauge, 0.0598 inch; 14 gauge, 0.0747 inch; or ____ gauge, ___ inch>>**, minimum.
2. Form recess for operating handle and locking device.

F. Latches and Door Handles:**<< Manufacturer's standard; _____; or None - N/A>>**.
1. Latching: Manufacturer's standard for locking arrangement selected.

DRAFT

a. Multi-Point Lift Handle Gravity Latch: Pocket-mounted, provide three-point latching for locker doors.******MCPS prefers three-point latch, no locks for ES lockers.******

1) Handle Pocket, Recess: Stainless steel flush-mounted cup recessed into face of door.

2) Handle: Steel finger lift mechanism with exposed portion encased in molded plastic trigger.

(a) Padlock Eye: Integral with lift trigger, sized for use with **<< 9/32 inch; or _____ inch>>** diameter padlock shackles.

3) Latching Mechanism: Spring activated nylon slide latch enclosed in steel latch channel allows closing of door while padlock or built-in lock is in position.

4) Provide resilient silencers secured to door stops for silent operation.

b. Single-Point Latch: ******MCPS prefers single-point latch for HS, MS, and staff lockers.******

1) Stationary latch welded securely to locker frame.

2) Latch extends no more than **<< 1-1/4 inch; or _____ inch>>** into locker opening, penetrating through cup.

3) Flush-mounted, recessed stainless steel cup in a formed door with **<< 18 gauge, 0.0478 inch; or ____ gauge, ___ inch>>** vertical back panel stiffener.

4) Handle: Steel finger lift mechanism with exposed portion encased in molded plastic trigger.

(a) Padlock Eye: Integral with lift trigger, sized for use with **<< 9/32 inch; or _____ inch>>** diameter padlock shackles.

5) Lock Hole Filler Plate: Manufacturer's standard. Provide for lockers intended to be unsecured or secured with padlocks.

G. Hinges: Heavy duty, **<< 7-knuckle; 5-knuckle; or 5- or 7-knuckle>>** type; two for doors under **<< 42 inches>>** high; three for doors over **<< 42 inches>>** high.

H. Sloped Top: **<< 20 gauge, 0.0359 inch; ____ gauge, ___ inch; or 18 gauge, 0.0478 inch>>** minimum, with closed ends.

I. Filler Panels, End Closures and Trim: **<< 20 gauge, 0.0359 inch; ____ gauge, ___ inch; or 18 gauge, 0.0478 inch>>**, minimum.

J. Number Plates: Provide **<< oval; rectangular; or _____>>** shaped **<< aluminum; plastic; or _____>>** plates. Form **<< numbers; or _____>>** of **<< block; or _____>>** font style**<< with ADA designation; _____; or None - N/A>>**, in contrasting color.

K. Built-In Combination Locks:

1. Single-Dial Numerical Combination Lock: Three-number dialing lock, key-controlled, capable of minimum five combination changes with key.
2. Latch: **<< Deadbolt; Spring latch; Cam latch; or _____>>**.
3. Lock Finish: **<< Manufacturer's standard finish; Satin nickel; Matte black; Matte white; Satin gold; Brass; Chrome; or _____>>**.

L. Built-In Lock Boxes: Same material as locker, manufacturer's standard size, with **<< padlock hasps, for padlocks provided by Owner; built-in key locks with spring bolt action; built-in combination locks; built-in digital keypad locks; or _____>>**.

2.04 LOCKER BENCHES

DRAFT

A. Locker Benches: Stationary type; bench top of **<< laminated birch; laminated maple; laminated _____; or _____>>**; **<< painted steel; satin stainless steel; or _____>>** pedestals.
   1. Standard Benchtop Dimensions: 9-1/2 inches deep by 1-1/4 inches thick; lengths indicated on Drawings. Where not indicated, provide 8 foot long benches.
   2. Height: 17-1/2 inches to top of bench; at all benches.
   3. Accessibility: Where accessible benches are indicated, comply with **<<ICC A117.1>>** and **<<ADA Standards>>**.
      a. Accessible Bench Dimensions: 42 inches wide by 20 inches deep, minimum.
      b. Where accessible bench is not indicated to be installed against a wall, provide unit with a backrest extending at minimum 18 inches above the bench top. Each backrest shall be mounted to bench with at least two mounting brackets.
   4. Pedestals: Tubular steel, with mounting flanges welded to each end; fixed to floor.
      a. Pedestal Finish: Powder coat; match locker exterior finish color.
      b. Fasteners: Provide with manufacturer's standard concealed fasteners for securing benchtop to pedestals, and provide concrete expansion/wedge anchors for anchorage to floor slab. Provide all anchors with heads color-matched to pedestals.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that prepared bases are in correct position and configuration.

B. Verify bases and grounds are properly sized and located.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Place and secure on prepared base.

C. Install lockers plumb and square.

D. Secure lockers with anchor devices to suit substrate materials. Minimum Pullout Force: 100 pounds.

E. Bolt or rivet adjoining locker units together to provide rigid installation.

F. Install **<< end panels; filler panels; sloped tops; miscellaneous panels; and _____>>**.

G. Install fittings if not factory installed.

H. Replace components that do not operate smoothly.

3.03 CLEANING

A. Clean locker interiors and exterior surfaces.

END OF SECTION 105113

DRAFT

SECTION 107300
PROTECTIVE COVERS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. AAMA 611 - Specification for Anodized Architectural Aluminum.

B. AAMA 2604 - Voluntary Specification, Performance Requirements and Test Procedures for High Performance Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix).

C. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures.

D. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

E. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric).

F. ASTM C1107/C1107M - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink).

G. AWS D1.2/D1.2M - Structural Welding Code - Aluminum.

1.02 SUBMITTALS

A. Metal Product Data: Product data sheets, including material descriptions and finishes, and preparation instructions and recommendations.

B. Shop Drawings: Indicate profiles, sizes, connection attachments, footings, anchorage, size and type of fasteners, **<< graphic images; patterns; accessories; locations; and _____>>**.

1. Shop drawings shall be project specific; manufacturer's standard details are not acceptable.
2. For protective covers indicated to attach to the building, include detail showing project-specific wall attachment detail that will transfer structural loads to the primary structural element of the exterior wall.

C. Selection Samples: Manufacturer's color charts for metal components.

D. Verification Samples: Manufacturer's standard size physical samples, representing actual material and finish of exposed metal, for each color selected by Architect.

E. Design Data: Submit comprehensive structural analysis of design for the specified loads. Stamp and sign calculations by professional engineer.

F. Designer's qualification statement.

G. Specimen warranty.

1.03 QUALITY ASSURANCE

A. Designer Qualifications: Perform design under direct supervision of **<< Professional Engineer; Professional Structural Engineer; Professional Civil Engineer; or _____>>** experienced in design of this type of work and licensed in **<<the State in which the Project is located>>**.

1.04 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

DRAFT

B. Manufacturer's Warranty: Provide standard 1-year warranty covering all material deterioration, structural failure, and installation defect.

C. Finish Warranty: Provide **<< 5; 10; 20; or _____>>**-year manufacturer warranty against excessive degradation of factory-applied finishes. Include provision for replacement of units with excessive fading, chalking, or flaking.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Basis-of-Design (Building Mounted): Mapes Architectural Products; Super Lumideck - Hanger Rod**<< Flat Soffit; or None - N/A>>**.

B. Basis-of-Design (Column Supported): Mapes Architectural Products; Post Supported Walkway Canopy.

C. Acceptable Comparable Manufacturers:
1. Architectural Fabrication, Inc.
2. Dittmer Architectural Aluminum.
3. Mitchell Metals.
4. Perfection Architectural Systems, Inc.
5. Superior Mason Products, LLC.
6. Tennessee Valley Metals.
7. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.02 PROTECTIVE COVERS - GENERAL

A. Design Criteria: Design and fabricate to resist gravity, wind, snow, ponding water, weather exposure, seismic, and other structural loads without failure, damage, or permanent deflection in accordance with **<<ASCE 7>>**, applicable building code, and as indicated on Drawings.
1. Structural Design:
   a. Post-Supported: Coordinate foundations and footing design with Division 3 Section "Cast-in-Place Concrete" and with Structural Drawings.
   b. Building-Mounted: Provide engineered wall anchorage system capable of transferring structural loads to the structural CMU wythe or structural cold-formed steel framing (CFSF-S) of the exterior wall assembly. Do not support protective covers directly from brick veneer or other non-structural exterior claddings.
2. Thermal Movement: Design protective covers to accommodate thermal movement caused by ambient temperature range of 120 degrees F and surface temperature range of 180 degrees F **<< 180 degrees F; or ____ degrees F>>** without buckling, failure of joint seals, undue stress on fasteners or other detrimental effects on assembly components.

B. Configuration: Column layout, dimensions, clearances**<< , fascia profile; or None - N/A>>**, and design as indicated on drawings.
1. Drainage Concept (Post Supported): Water collected in decking conducted into perimeter **<< gutters; drain beams; or _____>>** and discharged through **<< columns; downspouts; or _____>>**. Design drainage system to **<< discharge water at grade level with internal diverter plates and cutouts in column sidewalls; or connect to underground subdrainage system. Coordinate with subdrainage installer for connection sizing and outlet elevation/invert>>** Discharge water either at grade level with diverter plates and column cutouts, or coordinate with subdrainage installer for connection into underground subdrainage system, as indicated on Drawings.

DRAFT

2. Drainage Concept (Building-Mounted): Water collected in decking shall run to rear of protective cover into aluminum fascia/channel. Provide 2-inch diameter drain hole at one end of protective cover, with 3-inch by 3-inch downspout fabricated of smooth extruded aluminum. Downspout shall be fastened to wall with straps at minimum 60 inch on center. Downspouts shall drain on grade with splash block or into underground drainage, as indicated. Downspout and wall straps shall be finished to match protective cover.

C. Provide a complete system ready for erection at project site.

D. Shop fabricate to the greatest extent possible; disassemble if necessary for shipping.

2.03 PROTECTIVE COVERS - ASSEMBLY

A. Description: **<< Flat top; Sloped top; Gabled top; Arched top; or _____>>** metal framework with metal covering supported by **<< metal columns; or hanger-rod assembly>>**, as indicated.

B. Column Anchorage: Column embedded in concrete footing. Provide column sleeves or Styrofoam blockouts for presetting into concrete formwork.

C. Framework: **<< Aluminum; Steel; or _____>>**.

D. Covering Materials:

1. Manufacturer's standard interlocking **<< extruded; roll-formed; or _____>>** aluminum decking modules.

2.04 COMPONENTS

A. Components for Post-Supported Protective Covers:

1. Columns: **<< Extruded; Roll-Formed; or _____>>** aluminum; minimum wall thickness of 0.125 inch.
   a. Type: **<< Fluted; Cloverleaf; Box tube; or _____>>** column.
   b. Cross-Section: **<< 3 inches by 3 inches; 4 inches by 4 inches; 6 inches by 6 inches; _____ inches by _____ inches; or As indicated on drawings>>** (per basis-of-design), unless otherwise indicated, or unless larger column size is required due to structural engineering analysis.
   c. Grout Key: Provide two 1-1/2 inch diameter holes on opposite sides in column base.
2. Beams: **<< Extruded; Roll-Formed; or _____>>** aluminum; minimum wall thickness 0.125-inch.
   a. Style: **<< U-shaped drain beams; C-shaped beams; I-shaped beams; Closed; or _____>>**.
   b. Beam Depth: **<< 6 inches; 7 inches; 10 inches; _____ inches; or As indicaed on drawings>>** (per basis-of-design), unless otherwise indicated, or unless larger size is required due to structural engineering analysis.
   c. Beam Width: Match nominal dimension of column width as required to allow for manufacturer's standard attachment method.
3. **<< Extruded; Roll-Formed; or _____>>** Aluminum Decking: Self-flashing, interlocking sections; minimum 0.078-inch thick.
   a. Deck Profile: Manufacturer's standard deck section for **<< corrugated; or flat>>** soffit profile; size deck depth for structural spacing indicated.
4. Fascia: **<< Extruded; Roll-Formed; or _____>>** aluminum; height per manufacturer's standard profile; minimum 0.070-inch thickness.
5. Wall Attachment for Cantilever Type Post-Supported Canopies: Provide threaded rod anchors, extending fully through exterior wall. Provide integral eyebolt, "U" bracket, or

DRAFT

manufacturer's standard clevis assembly at rod attachment anchors for hanger rod attachment. At all through anchors, provide galvanized steel compression sleeves, sized to wall cavity and cladding depth, and additional construction as needed to prevent transferring structural loads onto veneer/cladding. All loads shall transfer to structural "backup" wall.

a. The structural system above is per the Basis-of-Design product indicated. Manufacturer may submit an alternate pre-engineered structural system, provided the system complies with other requirements of this section and is capable of supporting loads from the primary wall structure.

B. Components for Building-Mounted Protective Covers:

1. Beams: **<< Extruded; Roll-Formed; or _____>>** aluminum.
   a. Style: **<< U-shaped drain beams; C-shaped beams; I-shaped beams; Closed; or _____>>**; 3-1/4" x 3-1/4" x 1/4" nominal.
2. **<< Extruded; Roll-Formed; or _____>>** Decking: Self-flashing, interlocking sections, minimum 0.078-inch thick.
   a. Deck Profile: Manufacturer's standard deck section for **<< corrugated; or flat>>** soffit profile; size deck depth for depth of protective cover as indicated.
3. Fascia: **<< Extruded; Roll-Formed; or _____>>** aluminum; height per manufacturer's standard profile; minimum 0.125-inch thickness.
4. Hanger Rod Assembly: Manufacturer's standard 1-inch diameter hanger rod assembly, fabricated of schedule 40 galvanized steel. Provide aluminum clip angle bolted to aluminum I-beams for attachment of hanger rod assembly to canopy, with neoprene washers or other material standard to manufacturer for separation of dissimilar metals.
   a. Wall Attachment: Provide threaded rod anchors, extending fully through exterior wall. Provide integral eyebolt, "U" bracket, or manufacturer's standard clevis assembly at rod attachment anchors for hanger rod attachment. At all through anchors, provide galvanized steel compression sleeves, sized to wall cavity and cladding depth, and additional construction as needed to prevent transferring structural loads onto veneer/cladding. All loads shall transfer to structural "backup" wall.
      1) The structural system above is per the Basis-of-Design product indicated. Manufacturer may submit an alternate pre-engineered structural system, provided the system complies with other requirements of this section and is capable of supporting loads from the primary wall structure.

C. Exposed Framing Fasteners: Flush countersunk **<< galvanized; plated; stainless; or _____>>** steel screws or bolts; consistent with design of system and acceptable to manufacturer.

1. Decking Fasteners: Stainless steel with neoprene washers.
2. Finish exposed fasteners to match metal framing.

D. Flashings: Metal and finish matching system framing components, with thickness as recommended by manufacturer for conditions encountered.

E. Reinforcement Materials and Bracing: Where **<< light fixtures; dimensional letter signage; or other items>>** are indicated to be mounted to the protective cover, provide additional reinforcing or bracing elements to ensure a secure attachment to the protective cover without failure of decking or structural elements. Coordinate with submitted manufacturer(s) of items to be mounted to protective cover for loading requirements and attachment methods.

2.05 MATERIALS

A. Aluminum:

DRAFT

1. Aluminum Extrusions: Alloy and temper 6063-T5, 6063-T6, or 6061-T6 members complying with **<<ASTM B221>>** (**<<ASTM B221M>>**), with minimum thickness 1/8 inch for structural members and 1/16 inch for nonstructural members.

B. Concrete for Footings: Refer to Division 3 Section "Cast-in-Place Concrete."

C. Non-Shrink Cementitious Grout: Premixed compound consisting of non-metallic aggregate, cement, water reducing and plasticizing agents.
   1. Grout: Comply with **<<ASTM C1107/C1107M>>**.

D. Bituminous Coating: ASTM D 1187 asphaltic coating or comparable protective coating to prevent corrosion between materials. Building felt is not acceptable.

2.06 FABRICATION - METAL COMPONENTS

A. Fit and shop assemble components in largest practical sizes, for delivery to site.

B. Fabricate components with joints tightly fitted and secured.

C. Provide notches, cut outs, and internal deflectors in members as noted to act as internal water drainage system.

D. Weld aluminum members in accordance with **<<AWS D1.2/D1.2M>>**.

E. Exposed Fastenings: Unobtrusively located; consistent with design of component, except where specifically noted otherwise.

F. Supply components required for anchorage of framing. Fabricate anchors and related components of same material and finish as framing, except where specifically noted otherwise.

G. Grind exposed joints flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius.

H. Accurately form components to suit each other and to building structure.

2.07 FINISHES

A. Class I Natural Anodized Finish: **<<AAMA 611>>**AA-M12C22A41, clear anodic coating not less than 0.7 mils thick.

B. High Performance Organic Coatings: **<<AAMA 2604>>**, multiple coats, thermally cured fluoropolymer system.

C. Finish Color: To be selected by **<<Architect>>** from manufacturer's full range.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates and site area for conditions that might prevent satisfactory installation.

B. Verify that foundation, electrical utilities, and placed anchors are in correct position.

C. Verify that bearing surfaces are ready to receive this work.

D. Do not proceed with installation until conditions are satisfactory.

3.02 PREPARATION

A. Supply items required to be cast into concrete with setting templates for installation of work in other sections.

DRAFT

B. Concrete Foundations/Footings: Coordinate with and provide column sleeves or Styrofoam blockouts to the concrete installer to ensure foundations comply with manufacturer's requirements.

3.03 INSTALLATION - FRAMING

A. Install in accordance with manufacturer's instructions.

B. Install components plumb and level, accurately fitted, free from distortion or defects.

C. Post Supported Canopies: Anchor columns in concrete foundations with column sleeves or preset Styrofoam blockout locations. Insert columns into foundation space and fill remaining annular space between concrete and columns with non-shrink cementitious grout. Wipe off surplus anchoring material, provide 1/8-inch build up at column and slope smoothly away from column. Seal anchoring material when required by grout manufacturer's installation instructions.

D. Building Mounted Canopies: Provide threaded anchor assemblies required for connecting framing to structure. Anchor framing to primary structural wall elements. Where primary structure of exterior wall is cold-formed steel framing (CFSF-S metal studs), provide additional fire-retardant treated wood blocking between metal stud members to accommodate hanger rod spacing.

E. Protective Coating: Provide a protective coating to separate aluminum surfaces from masonry, concrete or cementitious materials, and dissimilar metals.

3.04 INSTALLATION - METAL COVERING

A. Install in accordance with manufacturer's instructions.

B. Fasten metal decking to metal support members, aligned level and plumb.

C. Install **<< fascia panels; trim; flashing; and _____>>**.

D. Separate dissimilar metals using concealed bituminous paint.

E. Touch-up damaged finish coating using material provided by manufacturer to match original coating.

3.05 TOLERANCES

A. Maximum Variation from Plumb, Level, or Line: **<< 1/8 inch per 10 feet; or ___ inch per 10 feet>>**, or **<< 3/8 inch; or ___ inch>>** total in overall dimension.

B. Alignment of Two Adjoining Members Abutting in Plane: Within **<< 1/16 inches; or ____ inches>>**.

3.06 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>** for additional requirements.

B. Test for watertightness, water management, and lack of ponding of completed protective covers and components, including **<< decking; gutters; drain beams; columns; and _____>>**.

3.07 CLEANING

A. See Section **<< 017000 - Execution and Closeout Requirements>>** for additional requirements.

B. Clean all exposed surfaces after installation.

DRAFT

3.08 PROTECTION

A. Touch-up, repair, or replace damaged components before Date of Substantial Completion.

B. Protect protective covers after installation to prevent damage due to other work until Date of Substantial Completion.

END OF SECTION 107300

DRAFT

SECTION 107500
FLAGPOLES

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. AASHTO M 36 - Standard Specification for Corrugated Steel Pipe, Metallic-Coated, for Sewers and Drains.

B. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

C. ASTM B241/B241M - Standard Specification for Aluminum and Aluminum-Alloy Seamless Pipe and Seamless Extruded Tube.

D. NAAMM FP 1001 - Guide Specifications for Design Loads of Metal Flagpoles.

1.02 SUBMITTALS

A. Product Data: Provide data on pole, accessories, and configurations.

B. Shop Drawings: Indicate detailed dimensions, **<< base; or attachment>>** details, anchor requirements, and imposed loads.

C. Sustainable Design Submittals: Refer to Division 01 Section "Sustainable Design Requirements."

D. Designer's Qualification Statement.

1.03 QUALITY ASSURANCE

A. Designer Qualifications: Design flagpole assemblies, including foundations, under direct supervision of a Professional Structural Engineer experienced in design of this Work and licensed in the State of Maryland.

B. Products Requiring Electrical Connection: Listed and classified by **<< Underwriters Laboratories Inc.,; or testing firm acceptable to the authority having jurisdiction>>** as suitable for the purpose specified and indicated.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Spiral wrap flagpole with protective covering and pack in protective shipping tubes or containers.

B. Protect flagpole and accessories from damage or moisture.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Flagpoles:
   1. American Flagpole & Flag Co.
   2. Baartol Co., Inc.
   3. Concord American Flagpole.
   4. Eagle Mountain Flag and Flagpole.
   5. Eder Flag Manufacturing Co., Inc.
   6. Morgan-Francis Flagpoles & Accessories.
   7. Pole-Tech Co, Inc.

DRAFT

2.02 FLAGPOLES

A. Flagpoles: Designed in accordance with NAAMM FP 1001.
   1. Material: Aluminum.
   2. Design: Cone tapered.
   3. Mounting: **<< Ground mounted type; Shoe base; Vertical wall mounted type; Wall mounted type, 30 degree inclusive angle outrigger; Wall mounted type, 45 degree inclusive angle outrigger; Wall mounted type, 60 degree inclusive angle outrigger; Roof set type, fixed type; Roof set type, tiltable type; Roof set type, counter balanced type; Roof set type, geared type; or _____>>**.
   4. Quantity and Nominal Heights: As indicated on Drawings; heights shall be measured from **<< nominal ground elevation.; top of base.; or center of wall mounting.>>**
   5. Halyard: **<< Interior; or External>>** type.
      a. Provide one halyard at each flagpole.
      b. Snap Hooks: Provide four snap hooks per halyard; fabricated of brass.

B. Performance Requirements:
   1. Wind Pressure Loading on Flagpole with Flag: Resistant without permanent deformation in accordance with **<<NAAMM FP 1001>><< ; the factor of safety used is 2.5; ; the factor of safety used is 1.95; ; the factor of safety used is _____; or None - N/A>>**.

2.03 POLE MATERIALS

A. Aluminum: **<< ASTM B241/B241M; or ASTM B221 ASTM B221M>><< , 6063 alloy; or _____>><< , T6 temper; or _____>>**; minimum wall thickness of 3/16 inch.

2.04 ACCESSORIES

A. Finial Ball: **<< Stainless steel; Aluminum; Copper; or _____>>**, 5 inch diameter.

B. Truck Assembly: Cast aluminum; revolving, stainless steel ball bearings mounted on aluminum spin, non-fouling.

C. Cleats: 9 inch size, cast aluminum with stainless steel fastenings, one per halyard.

D. Halyard: 5/16-inch diameter polypropyhlene, braided, white.

E. Connecting Sleeve For Multiple Section Poles: Same material as pole, precision fit for field assembly of pole, concealed fasteners.

2.05 MOUNTING COMPONENTS

A. Foundation Tube Sleeve: **<<AASHTO M 36>>**, corrugated 16 gauge, 0.0598 inch steel, galvanized, depth as indicated on Drawings.

B. Pole Base Attachment: Flush; steel base with spun aluminum base cover.

C. Lightning Ground Cable: Copper No. **<< 6; or ____>>** AWG, soft drawn.

2.06 FINISHING

A. Metal Surfaces in Contact With Concrete: Protect with bituminous/asphaltic coating.

B. Concealed Steel Surfaces: Galvanized to **<<ASTM A123/A123M>>** requirements.

C. Aluminum: Mechanical finish; medium satin directionally textured (AA-M32).

D. Stainless Steel: No. 4 satin finish.

E. Bronze: Dark bronze, lacquered finish.

DRAFT

F. Finial: Gold anodized finish.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that **<< concrete foundation is; wall supports are; or roof supports are>>** ready to receive work and dimensions are as **<< indicated on shop drawings.; or instructed by the manufacturer.>>**

B. Verify that electric power is available and of the correct characteristics.

3.02 PREPARATION

A. Coat metal sleeve surfaces below grade and surfaces in contact with dissimilar materials with asphaltic paint.

3.03 INSTALLATION

A. Install flagpole and fittings in accordance with manufacturer's instructions.

B. Electrically ground flagpole installation with ground spike and plate.

C. Fill base around foundation tube sleeve with concrete specified in Division 03 concrete spec.

D. Install foundation plate and centering wedges for flagpoles base set in concrete base and fasten.

E. Fill foundation tube sleeve with sand and compact.

F. Seal around top of foundation tube sleeve with two inches of elastomeric sealant.

G. Locate electric control box where indicated.

3.04 TOLERANCES

A. Maximum Variation From Plumb: 1 inch.

3.05 ADJUSTING

A. Adjust operating devices so that halyard functions smoothly.

END OF SECTION 107500

DRAFT

SECTION 111313
LOADING DOCK BUMPERS

PART 1 GENERAL

1.01 SUBMITTALS

A. Product Data: Submit data on unit dimensions, method of anchorage, and details of construction.

B. Shop Drawings: Include plans, sections and details indicating dock bumper locations, sizes, mounting heights, and anchorage methods and details.

PART 2 PRODUCTS

2.01 COMPONENTS

A. Loading Dock Bumpers (Laminated): Fabric reinforced rubber pads, ozone resistant, laminated and compressed in position using two galvanized steel rods with threaded ends, washers, and nuts between manufacturer's standard 1/4- or 3/8-inch thick galvanized steel angle end plates.
   1. Projection From Wall: **<< 4-1/2 inches; 6 inches; or ____ inches>>**, minimum.
   2. Vertical Height: 10 inches, minimum.
   3. Width: **<< 12 inches; 14 inches; 15 inches; 24 inches; or ____ inches>>**, minimum.
   4. Profile: **<< Rectangular; Semi-circular; T shape; L shape; or _____>>**, with chamfered corners.
   5. Finish steel angles and anchor components with manufacturer's standard black enamel / powder coat painted finish.
   6. Manufacturers:
      a. Blue Giant Equipment Corporation.
      b. Chalfant Dock Equipment.
      c. Durable Corp.
      d. Ideal Warehouse Innovations, Inc.
      e. Rite-Hite.
      f. Rotary Products, Inc.
      g. Vestil Manufacturing Corp.

B. Attachment Hardware: 3/4 inches diameter galvanized bolts with **<< expansion shields; "L" shaped anchor rods for casting into concrete; or _____>>**, or threaded studs welded to L-shaped anchor galvanized steel plate / angle that is cast-in to concrete wall; finish exposed anchors to match exposed steel finish of angle end plates.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that anchor placement is acceptable.

3.02 INSTALLATION

A. Install dock bumpers in accordance with manufacturer's instructions.

B. Set plumb and level.

DRAFT

C. Laminated Bumpers: Secure angled end frames to concrete loading dock wall with expansion anchors or threaded studs welded to embedded anchor plates / angles.

END OF SECTION 111313

SECTION 113013
RESIDENTIAL APPLIANCES

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ADA Standards - 2010 ADA Standards for Accessible Design.

B. ICC A117.1 - Accessible and Usable Buildings and Facilities.

C. UL (DIR) - Online Certifications Directory.

1.02 SUBMITTALS

A. Product Data: Manufacturer's data indicating dimensions, capacity, and operating features of each piece of residential equipment specified.

1.03 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with a service center within 50 miles of Project site capable of maintenance and emergency repairs.

B. Electric Appliances: Listed and labeled by **<<UL (DIR)>>** and complying with NEMA Standards (National Electrical Manufacturers Association).

C. Accessibility: Where ADA-compliant appliances are indicated, provide appliances that comply with reach ranges and operable parts requirements in compliance with **<<ICC A117.1>>** and **<<ADA Standards>>**.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers:
1. BOSCH Home Appliances.
2. Fisher and Paykel.
3. Frigidaire Home Products.
4. GE Appliances.
5. Jenn-Air.
6. Maytag.
7. Whirlpool Corp.

2.02 KITCHEN APPLIANCES

A. Refrigerator: Free-standing, **<< side-by-side; top-mounted freezer; or bottom-mounted freezer>>**, and **<< frost-free; cycle-defrost; manual defrost; or _____>>**.
1. Basis-of-Design Product: GE Appliances; Model GTE22JTNRWW. ******If the unit does not have a top-mounted freezer or frost-free defrost, indicate a new model number.******
2. Capacity: Total minimum storage of **<< 18 cubic ft; 20 cubic ft; 22 cubic ft; 24 cubic ft; 30 cubic ft; or 21 cubic ft>>**; minimum **<< 15; 20; 25; or ____>>** percent freezer capacity.
   a. Provide ADA-compliant model; at least 50 percent of freezer shall be located within 54 inches of floor.

DRAFT

3. Energy Usage: Provide ENERGY STAR qualified product.
4. Features: Include **<< glass shelves; automatic icemaker; light in freezer compartment; in-door water and ice dispenser; and ____>>**. Do not provide water dispenser. ******If using a different basis of design model number, update these features.******
5. Electrical Requirements: 120V; 60 Hz; 15 Amp.
6. Exterior Finish: White.

B. Refrigerator - Undercounter: Free-standing, **<< single-door; or double-door>>**, and **<< manual defrost; or cycle-defrost>>**.
1. Basis-of-Design Product: GE Appliances; Model GME04GLKLB. ******If the unit does not have a single-door or manual defrost, indicate a new model number.******
2. Overall Height: 33.875 inch. ******Most undercounter refrigerators are too high to fit under a 34 inch high countertop and require a 36 inch high countertop. Coordinate unit height with casework.******
3. Capacity: Total minimum storage of 4 cubic feet.
   a. Provide ADA-compliant model.
4. Energy Usage: Provide ENERGY STAR qualified product.
5. Features: Include **<< glass shelves; two front leveling legs; in-the-door can rack; light in freezer compartment; and ice tray>>**. ******If using a different basis of design model number, update these features.******
6. Electrical Requirements: 120V; 60 Hz; 15 Amp.
7. Exterior Finish: Stainless steel.

C. Range: Electric, free-standing, with glass-ceramic cooktop and integral backsplash.
1. Basis-of-Design Product: GE Appliances; Model JB480DYWW. ******If the unit does not have the features indicated, indicate a new model number.******
2. Stainless Steel Backsplash: 30 inches wide.
   a. Provide Broan-NuTone, LLC; "Model SP3004" or comparable stainless steel backsplash submitted as a properly formatted substitution request.
3. Size: 30 inches wide.
4. Oven: **<< Self-cleaning; Continuous cleaning; Manual cleaning; or _____>><< with electronic ignition; or None - N/A>>**.
   a. Oven Capacity: 5.0 cubic ft.
5. **<< Elements; Burners; or _____>>**: **<< Four (4); Six (6); or ____>>**; two 2000W 8-inch and two 1500W 6-inch.
6. Controls: **<< Solid state electronic; Push-to-turn knobs with electronic clock and timer; Push-to-turn knobs with analog clock and timer; Push-to-turn knobs with analog timer; or ____>>**.
   a. Provide ADA compliant model with controls located at the front of the unit.
   b. Range Knob Lockouts: Provide RangeSafe; Classic Range Knob Lockout or GE; OEM Range Lock-Out Knob, or comparable range lockout devices for range knobs as a properly formatted substitution request.
7. Features: Include **<< automatic meat thermometer; storage drawer; oven door window; broiler pan and grid; oven light; and ____>>**. ******If using a different basis of design model number, update these features.******
8. Electrical Requirements: 208/240V; 60 Hz; 40 Amp.
9. Exterior Finish: White.

D. Cooking Exhaust: Range hood.

DRAFT

1. Basis-of-Design Product: GE Appliances; Model JVX5305DJWW. ******If the unit does not have the features indicated, indicate a new model number.******
2. Size: 30 inches wide.
3. Fan: **<< Single-; Two-; Three-; Variable-; or ____ ->>**speed, **<< 500 cfm; 300 cfm; 250 cfm; 180 cfm; 150 cfm; or 270 cfm>>**. ******Keep fan volume under 400 cfm. Fans 400 cfm and above must have an air-handler to comply with code. Confirm with applicable d******
4. Energy Usage: Provide ENERGY STAR qualified product.
5. Exhaust: Recirculating.
6. Features: Include **<< cooktop light; night light; backdraft damper; removable grease filter; retractable visor; and removable, washable filter>>**. ******If using a different basis of design model number, update these features.******
7. ADA Controls: Provide wall mounted controls adjacent to range to comply with accessibility requirements. Coordinate with Division 26 electrical contractor to provide wiring to the control location and for cover plate with finish matching other cover plates in the space.
8. Electrical Requirements: 120V; 60 Hz; 1 Amp.
9. Exterior Finish: White, color to match range.
10. Range Fire Suppression: Provide electronically-operated, hood mounted, automatic fire suppression system. Basis-of-Design is Guardian G600B. ******Confirm with applicable code official if fire suppression is required.******

E. Microwave: Countertop.
1. Basis-of-Design Product: GE Appliances; Model PCWK22U1WWW. ******If the unit does not have the features indicated, indicate a new model number.******
2. Capacity: 2 cubic feet.
3. Power: **<< 700; 850; 1000; or ____>>** watts.
4. Features: Include **<< turntable; cooktop light; night light; 2-speed exhaust fan; built-in trim kit; undercabinet mounting kit; and _____>>**. ******This unit can be modified to mount inside a cabinet or over a range. It is specified here as a countertop microwave.******
5. Electrical Requirements: 120V; 60 Hz.
6. Exterior Finish: White.

F. Dishwasher: Undercounter. Provide ADA compliant product, no more than 32-1/4 inch high, to fit under 34 inch counter.
1. Basis-of-Design Product: GE Appliances; Model GDT226SGLWW. ******If the unit does not have the features indicated, indicate a new model number.******
2. Width: 24 inches.
3. Controls: **<< Solid state electronic; Manual timer; or ____>>**, top mounted in door.
4. Energy Usage: Provide ENERGY STAR qualified product.
5. Wash Levels: **<< Three (3); Two (2); or ____>>**; auto, heavy, and light.
6. Features: Include rinse aid dispenser, temporary temperature boost option, child lock, delay start, and sanitize option.
7. Electrical Requirements: 120V; 60 Hz; 8.9 Amp.
8. Exterior Finish: White.

2.03 LAUNDRY APPLIANCES

A. Clothes Washer: Front-loading; ADA-compliant.

DRAFT

1. Basis-of-Design Product: GE Appliances; Model GFW550SSNWW.
2. Interior Size: 4.8 cubic ft.
3. Overall Unit Size: 28 inches wide by 32 inches deep by 40 inches high, nominal.
4. Controls: **<< Solid state electronic; Rotary; or ____>>** with rotary cycle selector; front-mounted.
5. Energy Usage: Provide ENERGY STAR qualified product.
6. Cycles: Include multiple cycles for normal, delicates, quick wash, whites. Include with at least 5 spin speed options and 5 water temperature options.
7. Additional Features: Include adaptive, automatic temperature, water level, and spin controls. Include dispensers for bleach, fabric softener, and sanitizer, self-cleaning lint filter, and delay wash option.
8. Electrical Requirements: 120V; 60 Hz; 20 Amp.
9. Exterior Finish: Painted steel, color white.

B. Clothes Dryer: Electric, stationary; ADA-compliant.
1. Basis-of-Design Product: GE Appliances; Model GFD65ESSNWW.
2. Interior Size: 7.8 cubic ft.
3. Overall Unit Size: 28 inches wide by 32 inches deep by 40 inches high, nominal.
4. Controls: **<< Solid state electronic; Rotary; or ____>>** with rotary cycle selector, with **<< electronic moisture-sensing dry control; temperature-sensing dry control; timer dry control; or ____>>**.
5. Energy Usage: Provide ENERGY STAR qualified product.
6. Cycles: Include multiple cycles for normal, delicates, quick dry, and timed dry. Include with at least 5 heat selections.
7. Additional Features: Include automatic moisture sensor to adjust control, front-mounted lint filter, and delay dry option.
8. Ventilation: Provide ductwork sized to match outlet, in length required to vertically extend through roof. Provide gooseneck exhaust vent at roof. Coordinate with Division 7 roofing contractor for roof penetration.
9. Electrical Requirements: 208/240V; 60 Hz; 24 Amp.
10. Exterior Fih: Painted steel, color white.

DRAFT

2.04 ICE MAKER

A. Ice Maker: Free-standing, air-cooled ice maker with **<< cube; nugget; dice; or _____>>**-type ice machine mounted to top of stainless steel storage bin, with adjustable leveling feet.
1. Manufacturers:
   a. Avantco.
   b. Hoshizaki.
   c. Manitowoc.
   d. Scotsman.
2. Width: **<< _____>>**.
3. Ice Maker Size: **<< _____>>**.
4. Storage Bin Size: **<< _____>>**.
5. Ice Making Capacity: **<< _____>>**.
6. Bin Storage Capacity: **<< _____>>**.
7. Electrical Requirements: 115 V; **<< _____>>**.

B. Ice Maker: Free-standing, undercounter, air-cooled ice maker with **<< cube; nugget; dice; or _____>>**-type ice machine and built-in storage bin, with **<< drain pump and; or None - N/A>>** adjustable leveling feet.
   1. Manufacturers:
      a. Avantco.
      b. Hoshizaki.
      c. Manitowoc.
      d. Scotsman.
   2. Width: **<< _____>>**.
   3. Overall Unit Dimensions: **<< 15 inches wide by 22.5 inches deep by 31.5 inches high>>**.
   4. Ice Making Capacity: **<< 50 pounds in 24 hours>>**.
   5. Storage Capacity: **<< 25 pounds>>**.
   6. Electrical Requirements: 115 V; **<< 60 Hz>>**.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify utility rough-ins are provided and correctly located.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Anchor built-in equipment in place.

3.03 ADJUSTING

A. Adjust equipment to provide efficient operation.

3.04 CLEANING

A. Remove packing materials from equipment and properly discard.

B. Wash and clean equipment.

END OF SECTION 113013

DRAFT

SECTION 114000
FOODSERVICE EQUIPMENT – ELEMENTARY SCHOOLS

PART 1 - GENERAL

1.1 DESCRIPTION

A. Scope: Furnish all labor, materials, services, equipment and appliances required to provide and deliver all foodservice equipment hereinafter specified into the building, uncrate, assemble, hang, set-in-place, level, and completely install, exclusive of final utility connections. Demonstration and training shall be performed by manufacturer's representative knowledgeable in all aspects of this equipment.

B. Related Work Specified Elsewhere:

1. All plumbing, electrical and ventilating work required in conjunction with commercial foodservice equipment including rough-in to points indicated on mechanical drawings, and final connections from rough-in points, electrical service to points of connection and final connections shall be by Divisions 22, 23 and 26.
2. Refrigeration work will be done by the Kitchen Equipment Contractor except for electrical and plumbing connections to and between compressors, blower coils, controls, etc. These final connections shall be by Divisions 22 and 26.
3. All traps, steam traps, grease traps, line strainers, tail pieces, valves, mixing valves, backflow preventors, stops, shut-offs, and fittings necessary for equipment specified will be furnished and installed under mechanical contract by Division 22 unless specifically called for otherwise under each item.
4. All line and disconnect switches, safety cut-offs and fittings, convenience boxes or other electrical controls, fittings and connections will be furnished and installed under electrical contract by Division 26, unless specifically indicated otherwise in the item specifications. Starting switches for certain specified pieces of foodservice equipment are to be provided by Kitchen Equipment Contractor. Those starting switches, if furnished loose as standard by Foodservice Manufacturers (other than fabricated items), shall be mounted and wired complete under Division 26.
5. Any sleeves or conduit required for refrigeration, syrup tubing, or carbonation tubing will be furnished and installed under Division 22.
6. Unless specifically called for in the Item Specifications, ventilating fans and all duct work between same and ceiling rough-in openings, and from same to discharge opening in building will be furnished and installed by Division 22.

1.2 DEFINITIONS

A. All references to the terms "Kitchen Equipment Contractor", or "K.E.C." in the specifications and/or on the drawings shall be defined to mean the Kitchen Equipment Contractor.

B. All references to the term "Owner" in the specifications and/or on the drawings shall be defined to mean the Owner or Owner's designated representative and the Foodservice Equipment Consultant.

C. All references to the term "Consultant" or "Foodservice Equipment Consultant" in the specifications and/or on the drawings shall be defined to mean **NYIKOS GARCIA FOODSERVICE DESIGN, INC.** its employees, and authorized representatives and is referred to throughout the contract documents as if singular in number and masculine in gender.

DRAFT

D. The phrase "The K.E.C. shall" or "by the K.E.C.", as applicable, is understood to be included as a part of each sentence, paragraph or article of these specifications unless otherwise indicated or specified.

1.3 QUALITY ASSURANCE

A. Qualification of Suppliers:

1. Commercial foodservice equipment suppliers shall submit satisfactory evidence of compliance with the following qualifications and conditions to be approved.

a. Successful completion of jobs of comparable scope.
b. Have manufacturer's authorization to distribute and install specified factory items of equipment.
c. Maintain a permanent staff experienced in the installation of foodservice equipment and preparation of professional style rough-in drawings and brochures.
d. Maintain or have access to fabrication shop meeting N.S.F. requirements. If other than foodservice equipment suppliers own fabrication shop, obtain Consultant approval of fabrication shop desired to be used.
e. Maintain or have access to a readily available stock of repair and replacement parts, together with authorized service personnel.

B. Qualification of Fabricators:

1. Fabricators shall be an N.S.F. approved organization with trained personnel and facilities to properly design, detail and fabricate equipment in accordance with the specifications and standard details contained herein.
2. Custom fabricated equipment shall bear the National Sanitation Foundation seal of approval and listed as such under N.S.F. Standards No. 2 and No. 33.
3. Only one (1) fabricator shall be used for this project, and all equipment will be fabricated at the same shop. Where units cannot be fully shop-fabricated, complete fabrication at project site.
4. Acceptable fabricators are:

a. Pro Stainless, Inc.; Keyser, WV
b. Commercial Stainless, Inc.; Bloomsburg, PA
c. Aero Manufacturing; Clifton, NJSouthern Equipment Fabricators, Inc.; Columbia, SC
d. Titan Stainless; Pageland, SC
e. Other fabricators, as approved by Consultant.

C. Qualification of Manufacturers:

1. Manufacturers shall be regularly engaged in the production of items furnished and shall have demonstrated the capability to furnish similar equipment that performs the functions specified or indicated herein.

D. Standard Products:

DRAFT

1. Materials, products, and equipment furnished under this contract shall be the standard items of manufacturers regularly engaged in the production of such materials, products, and equipment and shall be of the manufacturer's latest design that complies with the specifications which have been produced and used successfully on other projects and in similar applications.
2. Discrepancies within contract documents should immediately be brought to the attention of the Consultant in writing for clarification prior to fabrication or ordering of standard items.

1.4 PLANS & SPECIFICATIONS

A. Specifications and drawings have been prepared to form the basis for procurement, erection, start-up and adjustment of all equipment in this contract. Plans and specifications shall be considered as mutually explanatory and work required by one, but not the other, shall be performed as though required by both. Items required by one, but not by the other shall be provided as though required by both. Work shall be accomplished as called for in specifications and shown on drawings, so that all items of equipment shall be completely functional for purpose for which they were designed. When there is any discrepancy between drawings and specifications, drawings shall govern. Bidders should seek clarification of any discrepancies from the Consultant prior to bidding.

1.5 SUBMITTALS

A. General Requirements:

1. Assemble and submit all shop drawings, rough-in drawings, brochures, color samples, etc. as a complete package. There will be no review of partial submittals.
2. Any and all costs, to all trades and parties involved, arising from delay of project due to non-submittal of the complete package by the K.E.C. within a reasonable time period shall be borne solely by the K.E.C.
3. Identify each submittal by project name, date, contractor, submittal name, and any other necessary information to distinguish it from other submittals.

B. Shop Drawings:

1. Submit shop drawings electronically in PDF format, drawn on sheets equal in size to Contract Documents of equipment specified for custom fabrication including all accessories attached to each item.
2. Drawings shall be detailed and fully dimensioned to a minimum scale of 3/4"=1'-0" for plan and elevation views, and 1-1/2"=1'-0" for sections, based on the floor plan(s) and following item specifications. Drawings will be checked for thoroughness, accuracy, completeness, neatness, and returned for corrections, if necessary.

C. Rough-in Drawings:

1. Submit rough-in drawings electronically in PDF format, drawn on sheets equal in size to Contract Documents of detailed arrangement plans professionally prepared from architects dimensioned plans (not traced from Contract Documents) at a minimum scale of 1/4"=1'-0".
2. Equipment Layout Plan showing arrangement of all items specified and identified on schedule of equipment listing item number, description, quantity, manufacturer, model number, and remarks.

DRAFT

3. Ventilation Plan showing dimensioned locations of all duct openings for ventilators and dishmachines identifying size, c.f.m. required (exhaust and supply), static pressures, and connection heights.
4. Plumbing/Electrical Plans showing dimensioned locations, sizes, elevations and capacities of all utility services required for each item of equipment in relation to finished walls, columns, and heights above finished floor.
5. Special Conditions Plan showing exact dimensions and details of all masonry bases, floor depressions, critical partition locations/heights, wall openings, reinforcing for wall and/or ceiling mounted equipment, and conduit locations for soda and compressed gas lines.

D. Equipment Brochures:

1. Submit electronic files in PDF format of manufacturer's illustrations and technical data for approval prior to procurement. All items of Standard Manufacture shall be submitted, including items purchased to be built into fabricated equipment. Each illustration shall be marked to accurately describe the item to be furnished as specified. Include all deviations from standard information (i.e., voltage, phase, load, etc.).
2. Include a separate information sheet ahead of each illustration sheet showing all service connection sizes, electrical requirements, loads, consumptions, and all accessories specified.
3. Manufacturer's suggested schematic drawings for connection of mechanical and electrical services for such items as booster heaters, disposers, or any other item of equipment that may require the same.

E. Miscellaneous Shop Drawings:

1. Submit electronic files in PDF format of manufactured equipment specified requiring clarification and approval such as, walk-in cooler/freezer drawings, ventilator drawings, utility raceway drawings, and refrigeration system drawings.

F. Operation and Maintenance Manuals:

1. Submit electronic files in PDF format for all mechanically operated equipment of standard manufacture. Include operating and cleaning/maintenance instructions, parts listing, recommended parts inventory listing and purchase source, copy of warranties, and similar applicable information.
2. Brochure covers shall bear the job name, date, and name of contractor.
3. Submit start-up report for food service equipment such as walk-in cooler/freezer, refrigeration system, utility raceway, ventilator and cooking equipment.

G. Manufacturer's List:

1. The K.E.C. shall submit in writing a list of all manufacturer's representatives of the food service equipment such as convection ovens, ranges, etc., and their authorized service agencies' addresses and telephone numbers; to be presented after submission of manufacture data.

H. Samples:

1. Samples of materials, products, and fabrication methods, shall be submitted for approval upon request at no additional cost, before proceeding with work.

DRAFT

I. Re-submission Requirements:

1. Shop Drawings:

a. Revise initial drawings as required and resubmit in accordance with submittal procedures.
b. Indicate on drawings all changes which have been made in addition to those requested by Consultant.

2. Product Data and Samples:

a. Submit new data and samples as required for initial submittal.
b. Make all re-submittals within fourteen (14) working days from date of Consultants previous action.

J. Approvals:

1. After approval of the submittals listed above, furnish as many prints and copies as are required for the various trades, the Owner, the Architect, and the Consultant.
2. The approval of the shop drawings will be general and shall not relieve the K.E.C. of responsibility for proper fitting, finishing, quantities, and erection of work in strict accordance with the contract requirements, nor does it relieve him of the responsibility of furnishing material and workmanship not indicated on approved shop drawings but required for the completion of his work.
3. Approval by the Consultant and/or Owner of the manufacturer's data submitted by the K.E.C. does not waive the responsibility of K.E.C. to furnish each item of equipment in complete compliance with the specifications and drawings. Discrepancies between Contract Documents and furnished equipment shall be corrected even after approval and installation of this equipment at no additional cost to the Owner.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Delivery:

1. Equipment shall be delivered to the job site only after the building is weather-safe and vandal-safe.

B. Storage:

1. Store equipment in an area convenient to the point of installation in such a way that it is protected from the weather and job hazards.

C. Protection:

1. Wrapping and protective coatings shall remain on all items until ready for use and in the case of stainless steel items, until installation is complete and the job is ready for cleaning.

D. Damage:

1. All responsibility shall rest with the K.E.C. for any damage or loss incurred prior to final acceptance. Such items as may be lost or damaged shall immediately be replaced or repaired to a new condition to the complete satisfaction of and at no additional cost to the Owner.

DRAFT

1.7 JURISDICTION TRADE AGREEMENTS AND RESTRICTIONS

A. Include the work specified, shown or reasonably infer able as part of foodservice equipment. Portions of this work may be subcontracted to those qualified to do such work, as may be necessary because of jurisdictional trade agreements and restrictions.

1.8 REGULATIONS AND CODES

A. Except as otherwise indicated, each item of equipment shall comply with the latest current edition of the following standards as applicable to the manufacture, fabrication, and installation of the work in this section.

1. N.S.F. Standards: Comply with National Sanitation Foundation Standards and criteria, and provide N.S.F. "Seal of Approval" on each manufactured item and major items of custom-fabricated work.
2. U.L. Standards: For electrical components and assemblies, provide either U.L. labeled products or, where no labeling service is available, provide a complete index of the components used as selected from the U.L. "Recognized Component Index".
3. A.N.S.I. Standards: For gas-burning equipment, comply with A.N.S.I. Z21-Series standards. Comply with A.N.S.I. B57.1 for compressed gas cylinder connections and with applicable standards of the Compressed Gas Association for water connection air gaps and vacuum breakers.
4. A.G.A.: All gas-fired equipment shall be A.G.A. Approved, equipped to operate on the type gas available at the job site and shall contain 100% automatic safety shut-off devices.
5. N.F.P.A. Standards: Comply with N.F.P.A. Bulletin 96 for exhaust systems and with N.F.P.A. Bulletins 17 & 96, and U.L. 300 for fire extinguishing systems.
6. A.S.M.E. Code: Comply with A.S.M.E. boiler code requirements for steam generating and steam heated equipment. Provide A.S.M.E. inspection, stamps, and certification of registration with National Board.
7. National Electric Code: Comply with N.E.C. Volume 5 for electrical wiring and devices included with foodservice equipment.
8. Code of Maryland Regulation, COMAR 10.15.03 for Food Service Facilities.
9. All authorities having jurisdiction over this type of equipment and/or installation.
10. Where specifications and/or drawings require mechanical, electrical or refrigeration work to be performed, such work shall be done in strict conformance to other portions of the Base Building Specification which sets forth standards for this type of work.
11. Where there exists two standards or codes for one type of work, the stricter method shall govern.

1.9 WARRANTIES

A. Warrantee in writing all equipment and fabrication against defects and workmanship for a period of two (2) years from date of acceptance.

1. Each piece of mechanical equipment shall be listed, together with the authorized service and repair agency whom the Owner will call should malfunctions occur within the two-year (2) guarantee period.

B. Refrigeration system compressors shall be warranted for five (5) years by the manufacturer. Free refrigeration preventive service, including parts and labor, shall be furnished for two (2) years from date of acceptance, unless otherwise specified.

DRAFT

1.10 JOB CONDITIONS

A. Visit the site to field check actual wall dimensions and roughing-in and shall be responsible for fabricating and installing the equipment in accordance with the available space and utility services as they exist on the job site.

B. Check all door openings, passageways, elevators, etc., to be sure that the equipment can be conveyed to its proper location within the building and if necessary, check the possibility of holding wall erection, placement of doorjambs, windows, etc. for the purpose of moving the equipment to its proper location with the Contractor. Any removal and rebuilding of walls, partitions, doorjambs, etc. necessary to place the equipment, or if caused by incorrect information on the Contractor's drawings, shall be done at the expense of the K.E.C., at no additional cost to the Owner.

C. Notify the Consultant and Owner before fabrication of equipment of any discrepancies between plans and specifications and actual conditions on the job.

D. Before finished floors, walls, and/or ceilings are in place, physically check the location of all "rough-ins" at the job site. Report discrepancies in writing.

E. Any changes required after fabrication has been started to ensure equipment accurately fitting the space as it exists and conforming to actual field dimensions on the job shall be made at no additional cost to the Owner.

F. If special hoisting equipment and operators are required, include such cost as part of the bid for this work.

1.11 CHANGES IN THE WORK

A. The Owner reserves the right to require reasonable modification to be made in the routing of work and relocation of equipment. This specifically refers to conditions where interference occurs or where more desirable accessibility can be obtained or whose materials cannot be installed because of structural or mechanical conditions encountered. Such changes shall be made at no additional cost to the Owner.

1.12 PATENTS

A. Hold harmless and save the Owner and its officers, consultants, servants and employees from liability of any nature or kind, including costs and expenses for or on account of any copyrighted, patented, or un-patented invention, process, trademark, design, device, material, article, or appliance manufactured or used in the performance of the contract, including its use by the Owner, unless otherwise specifically stipulated in the Contract Documents.

B. If the Contractor has information that the process or article specified is an infringement of a patent, he shall be responsible for such loss unless he promptly gives such information to the Owner in writing. The contract price shall include all royalties or costs arising from the use of any or all of the above which are, in any way, involved in the contract.

1.13 CONTRACTOR'S WARRANTY

A. The Contractor represents and warrants:

1. That he is financially solvent and that he is experienced in and competent to perform the types of work or to furnish the plans, materials, supplies or equipment, to be so performed or furnished by him.
2. That he is familiar with all Federal, State, municipal, and department laws, ordinances, orders, and regulations, which may, in any way, affect the work of those employed therein, including, but not limited to, any special acts relating to the work or to the project of which it is a part.

DRAFT

3. That such temporary and permanent work required by the contract as is to be done by him can be satisfactorily constructed and used for the purpose for which it is intended and that such construction will not injure any person or damage any property.
4. That he has carefully examined the plans, specifications, addenda, if any, and the site of the work and that, from his own investigations, he has satisfied himself as to the nature and location of the work, the character, quality, and quantity of materials likely to be encountered, the character of equipment and other facilities needed for the performance of the work, the general and local conditions, and all other materials which may, in any way, affect the work or its performance.
5. That he has satisfied himself as to the existing openings and accesses to the foodservice area through which his equipment shall be required to pass and that he is responsible for his equipment being delivered in as many sections as necessary to conform to the available space dictated by these existing limitations.

1.14 SUBSTITUTIONS

A. Bids submitted shall be for the specific manufacturer and model, size, capacity, and accessories, as specified or shown on the drawings.
B. The K.E.C. may quote upon brands and models of equipment other than those specified as a substitute, but must also bid the primary item. In the event that it is desired to request approval of substitute material, product, article, process, or item of equipment in lieu of that which is specified, submit a written request at the time of submitting bid on separate sheet attached to, but not part of, the base bid, setting forth the proposed substitution in detail, including an itemized analysis of the addition or deduction in the amount of the contract, if any, which will result if the substitution is approved. Each such request shall include a complete description of the proposed substitute, the name of the material or equipment for which it is to be substituted, drawings, cuts, performance and test data and any other data or information necessary for a complete evaluation. If approved, bidders will be notified in the form of addendum.
C. The Contractor shall be held responsible for additional costs to himself or any other prime contractor for changes required to install materials, devices, equipment, etc., which the Contractor has substituted for that specified.
D. The Owner reserves the right to award a contract or contracts based upon the inclusion or exclusion of one or more of the alternate estimates. The description of all workmanship and materials under the various headings of the specifications shall have the same meaning and force when applied to similar workmanship and materials in the alternate. If the descriptions are not specific, the workmanship shall be the best quality and the materials the best commercial grade.
E. Whenever any product is specified in the Contract Documents by reference to the name, trade name, make, or catalog number of any manufacturer or supplier, the intent is not to limit competition but to establish a standard of quality which is necessary for the project. Products of other manufacturers meeting the established criteria will be considered. However, please take note that the plumbing, electrical, steam, heating, ventilating, and air-conditioning drawings prepared by the consulting engineers, have been engineered based on the first product named under each item number designation. Therefore, any other product which is submitted for approval in lieu of the primary item specified, shall conform to the rough-in requirements established for the first product named, as well as physical size and building construction requirements.

DRAFT

F. Any equipment listed, which is not in accordance with the provisions of these specifications, will be rejected. If the Contractor fails to submit for approval within the specified time the list of equipment as required herein, the Consultant shall then have the right to make the final equipment selection. The selection made by the Consultant shall strictly conform to these specifications and will be final and binding, and the items shall be furnished and installed by the Contractor without change in the contract price at the time of completion.

G. It shall be the responsibility of the K.E.C. to prove that substitutions are equal to specified items. **NYIKOS GARCIA FOODSERVICE DESIGN, INC.** as the Owner's representative, shall be the determining authority as to the acceptability or equality of the substitutions. No substitutions shall be approved after bids are received.

1.15 DESIGN/MODEL CHANGE, DISCONTINUED ITEMS

A. All equipment specified shall be of latest design. Any improvements made in design and construction of prefabricated items before equipment is actually delivered to the project site, shall be incorporated in equipment, at no additional cost, provided such incorporation does not delay delivery date of equipment.

B. In the event of an item being discontinued after specified and prior to delivery to project site, the K.E.C. shall responsible for notifying the Consultant in writing of the discontinued item and request an alternate of equal performance, including all accessories, at no additional cost to the Owner.

PART 2 - PRODUCTS

2.1 GENERAL

A. The equipment and its component parts shall be new and unused. All items of standard manufactured equipment shall be current models at the time of delivery. All parts subject to wear, breakage, or distortion shall be accessible for adjustment, replacement, and repair.

B. Means shall be provided to ensure adequate lubrication for all moving parts. All oil holes, grease fittings, and filler caps shall be accessible without the use of tools.

C. The design of the equipment shall be such as to provide for safe and convenient operation. Covers or other safety devices shall be provided for all items of equipment presenting safety hazards. Such guards or safety devices shall not present substantial interference to the operation of the equipment. All guards shall provide easy access to the guarded parts.

D. Trim shall not be an acceptable substitute for accuracy and neatness. When trim is required and accepted by the Consultant and the Owner in lieu of rejection of items of equipment, it shall be the K.E.C.'s responsibility to provide same at no additional cost.

E. Unless otherwise specified herein, no material lighter than #20 gauge shall be incorporated into the work. All gauges for sheet iron and sheet steel shall be U.S. Standard Gauges, and finished equipment gauge thickness shall not vary more than 5% plus or minus from the thickness indicated below.

GAUGE	THICKNESS	GAUGE	THICKNESS
#10	0.1406	#16	0.0625
#12	0.1094	#18	0.0500
#14	0.0781	#20	0.0375

F. Materials or work described in words which have a well known and acceptable trade meaning shall be held to refer to such accepted meanings.

DRAFT

2.2 MATERIALS

A. Refrigeration Systems:

1. Self-contained:

a. Whether the units be top-mounted or cabinet-mounted, they shall be started by the K.E.C. and shall be tested for maintenance of temperature.
b. All units shall be furnished with condensate evaporators.

2. Remote: Provide and install complete refrigeration system(s), charged, started, and operating properly, according to the Item Specifications and the following.

a. Single stage compressors with air-cooled condensers operating within the recommended range of suction discharge pressure of economical operation and within the required capacity.
b. All units shall be new and factory assembled, to operate with the refrigerant specified. Refrigerant R-448A shall be used for all medium and low temperature applications. Due to the unsettled nature of refrigerants, no refrigerant shall be used with a phase-out date of less than ten (10) years from the date of installation.
c. Compressors shall be accessible scroll type, Copeland or approved equal, and shall be equipped with high-low pressure control, liquid line drier, sight glass, suction and discharge vibration eliminator, and head pressure control.
d. The system shall have a factory mounted and pre-wired control panel complete with main fused disconnect, compressor circuit breakers, contactors, and time clocks wired for single point power connection.
e. The supporting frame shall be constructed of structural steel, fully welded, and protected against rust and corrosion with one (1) coat primer, and two (2) coats paint, unless otherwise specified.
f. Systems specified for outdoor installation shall be fully protected in a weather-proofed housing with louvered front panel and hinged top, constructed to resist rust and corrosion, and furnished with low ambient controls. Crankcase heater shall be provided with every compressor.

3. Where specifications call for pre-piped lines (i.e., from a fixture to a valve compartment, etc.), provide such work in strict conformance with other sections of the specifications which set forth standards for this type of work or in conformity with the requirements of the Board of Fire Underwriters or ASHRAE Standards, whichever is greater.

4. Each refrigeration item specification is written to provide minimum specifications and scope of work. All refrigeration equipment shall be designed and installed to maintain the following general temperatures unless otherwise specified.

TYPE	REFRIGERATORS	FREEZERS
a. Walk-In	+35° F./1.7° C.	-10° F./-23.3° C.
b. Reach-In	+35° F./1.7° C.	-10° F./-23.3° C.
c. Undercounter	+35° F./1.7° C.	-10° F./-23.3° C.
d. Fabricated	+35° F./1.7° C.	-10° F./-23.3° C.
e. Cold Pans	+0° F./-17.8° C.	
f. Work Rooms	+50° F./10° C.	

DRAFT

5. Provide (including payment if subcontracted) all electrical and refrigeration components needed by the completed system and complete (or have completed by the respective trades) all connections of and to said components.
6. An evaporator coil defrost system shall be provided and installed by the K.E.C. on all refrigeration systems designed to operate at an evaporator coil temperature of less than +35° F. Evaporator coil units provided without electric defrost feature shall be installed with a solenoid valve in the liquid line, controlled by the time clock so as to shut off the flow of refrigerant and allow the compressor to pump down and shut off by activation of the pressure control switch.
7. Verify the requirements of and provide any or all additional refrigeration specialty(s) or component(s) required or recommended by the manufacturer for proper operation under the specific operating conditions and location of each system specified.
8. Verify and provide manufacturer's certification that the equipment selection hereinafter specified for each refrigeration system is properly sized and shall meet the operating requirements set forth for each system regarding maintaining specified operating temperature, hours of compressor running time, and system pressures and velocities as recommended by the equipment manufacturer(s).
9. All refrigeration systems shall be installed and wired in strict conformance with the manufacturer's instructions and recommendations.

B. Motors and Heating Elements:

1. Motors up to and including 1/2 HP shall be wired for 120 volt, single phase service. Motors larger than 1/2 HP shall be wired for 208 volt, single or three phase service as indicated. Motors shall be of the drip-proof, splash-proof, or totally enclosed type, having a continuous duty cycle and ball bearings, except small timing motors which may have sleeve bearings. All motors shall have windings impregnated to resist moisture. Motors located where subject to deposits of dust, lint, or other similar matter shall be of the totally enclosed type. Motors shall have ample power to operate the machines for which designated under full load operating conditions without exceeding their nameplate ratings. Insulation shall be N.E.M.A. Class B or better.
2. Heating elements having a connected load up to and including 1,000 watts shall be wired for 120 or 208 volt, single phase service, or as indicated on the drawings.
    a. Any heating element larger than 1,000 watts or any combination of elements in one fixture totaling more than 1,000 watts shall be wired for 208 volt single or three phase service, as indicated on the drawings.
    b. Fixtures having multiple heating elements may be wired for three phase service with the load balanced as equally as possible within the fixture.

C. Switches and Controls:

1. Provide recognized commercial grade signals, "on-off" pushbuttons or switches, and other speed and temperature controls as required for operation of each item, complete with pilot lights and permanent graphics, conspicuously labeled, to assist the user of each item.
2. Mount switches and controls directly adjacent the piece of equipment for which it involves, on operator's side of counter body apron, out of view to the public.

DRAFT

3. Provide on or for each motor-driven appliance or electrical heating or control unit, a suitable control switch or starter of the proper type and rating and in accordance with Underwriter's Code wherever such equipment is not built in. All other line switches, safety cut-outs, control panels, fuse boxes, other control fittings and connections, when not an integral part of the unit or furnished loose by the manufacturer will be furnished and installed by the Electrical Contractor, unless otherwise specified. All electrical controls, switches, or devices provided loose for field installation as a part of the item specified shall be installed in the field by the Contractor unless otherwise specified.
4. Appliances shall be furnished complete with motors, driving mechanisms, starters, and controllers, including master switches, timers, cut-outs, reversing mechanisms, and other electrical equipment if and as applicable.

D. Cover Plates:

1. All controls mounted on vertical surfaces of fixtures shall be set into recessed die stamped stainless steel cups, or mounted onto removable cover plates in such a fashion as to not protrude or interfere with the operation of each item.
2. Cover plates shall be furnished and installed for all electrical outlets, receptacles, switches and controls furnished by the K.E.C., and shall match the material and finish of the equipment to which they will be fastened.

E. Wiring and Conduit:

1. Wiring shall be properly protected in N.E.M.A. and U.L. approved metal enclosures. Only rigid steel conduit shall be used, zinc coated where unexposed and chrome plated where exposed. All wiring shall be run concealed wherever possible.
2. All equipment furnished under this contract shall be so wired, wound, or constructed so as to conform with the electrical characteristics at the job site.
3. Wiring and connection diagrams shall be furnished with electrically operated machines and for all electrically wired fabricated equipment.
4. Furnish all foodservice equipment completely wired internally using wire and conduit suitable for a wet location. Where an Electrician's services are required, the work shall be done in the K.E.C.'s factory or at his expense at the job site at no additional cost to the Owner. Provide all electrical outlets and receptacles required to be mounted on or in fabricated equipment and interconnect to a master circuit breaker panel with all wires neatly tagged showing item number, voltage characteristics, and load information. Final connection shall be made by the Electrical Contractor.

F. Cords, Plugs, and Receptacles:

1. The Electrical Contractor shall provide three- or four-wire, grounding-type receptacles for all wall and floor mounted outlets to be used for plug-in equipment with characteristics as noted on the drawings. Provide "Hubbell" three-wire or four-wire grounding-type connectors and neoprene cords installed on each item of plug-in equipment, as indicated on drawings and item specifications.
2. K.E.C. shall coordinate with the Electrical Contractor so that the receptacles provided will match the specific plugs provided as part of the plug-in equipment. Any changes in cords and plugs required in the field due to lack of coordination between the Electrical Contractor and the K.E.C. shall be the latter's responsibility.

DRAFT

3. Reduce the length of all cords furnished with the specified equipment to a suitable or appropriate length so they do not interfere with other equipment or operations.
4. Pedestal receptacles that are part of fabricated equipment exposed to view, shall be similar to T&S Model No. B-1508DD single face, single gang or Model No. B-1528DD single face, double gang.

G. Water Inlets:

1. Water inlets shall be located above the positive water level wherever possible to prevent siphoning of liquids into the water supply system. Wherever conditions shall require a submerged inlet, a suitable type of check valve (except in jurisdictions where check valves are prohibited) and vacuum breaker shall be placed on the fixture to form a part of same to prevent siphoning. Where exposed to view, piping and fittings shall be chrome-plated.

H. Drain Lines:

1. Plumbing Contractor shall provide and install indirect waste lines from equipment which will discharge into floor drains or safe wastes in accordance with Plumbing Rough-In Plans. chrome-plated where exposed. Extend to a point at least 1" (or as required by local codes) above the rim of the floor drain, cut bottom on 45° angle and secure in position.
