2. All horizontal piping lines shall be run at the highest possible elevation and not less than 6" above finished floor, through equipment where possible.
3. No exposed piping in or around fixtures or in other conspicuous places shall show tool marks of more than one thread at the fitting.
4. All steam operating valves on or in fabricated and purchased foodservice equipment shall be provided with composition hand wheels, which shall remain reasonably cool in service.
5. Provide suitable pressure regulating valves for all equipment with such components that might reasonably be expected to be affected over a period of time by adverse pressure conditions.

I. Faucets, Valves and Fittings:

1. All sinks shall be fitted with chromium plated, swing spout faucets of same manufacturer throughout as follows, or otherwise specified in Item Specifications.

a. Prep and Utility Sinks:

1) Splash-Mounted:

a.) T&S Brass and Bronze Works, Inc., Model B-231.
b.) Fisher Manufacturing Company, Model 3253.

2) Deck-Mounted:

a.) T&S Brass and Bronze Works, Inc., Model B-221.
b.) Fisher Manufacturing Company, Model 3313.

b. Pot Sinks:

1) Splash-Mounted:

a.) T&S Brass and Bronze Works, Inc., Model B-290.
b.) Fisher Manufacturing Company, Model 5214.

DRAFT

2. Pre-Rinse Assemblies:
   a. Splash-Mounted:
      1) T&S Brass and Bronze Works, Inc., Model B-133 with B-109 wall bracket.
      2) Fisher Manufacturing Company, Model 2210 with 2902-12 wall bracket.
   b. Deck-Mounted:
      1) T&S Brass and Bronze Works, Inc., Model B-143 with B-510 mixing valve and B-109 wall bracket.
      2) Fisher Manufacturing Company, Model 2810 with 2805-CV mixing valve and 2902-12 wall bracket.
3. Vacuum Breakers:
   a. General Use:
      1) Fisher Manufacturing Company, Model 3990-8000.
   b. Disposers:
      1) Splash-Mounted:
         a.) T&S Brass and Bronze Works, Inc., Model B-455.
         b.) Fisher Manufacturing Company, Model 3990.
      2.) Deck-Mounted:
         a.) T&S Brass and Bronze Works, Inc., Model B-456.
         b.) Fisher Manufacturing Company, Model 3991.
4. Trough Inlets:
   a. Fisher Manufacturing Company, Model No. 2905.
5. Other specialty faucets, pre-rinse assemblies, vacuum breakers, and trough inlets, as specified under Item Specifications.
6. All sink compartments shall be fitted with 2" NPT male, chrome-plated, brass rotary waste valves complete with overflow assemblies and stainless steel strainers.
   a. Prep and General Utility Sinks:
      1) Fisher Manufacturing Company, Model No. 6100.
   b. Pot Sinks:
      1) Fisher Manufacturing Company, Model No. 6102.
7. Refer to Division 22 for all other fittings.

J. Metals Alloys:
1. Stainless steel sheets shall conform to ASTM 240, Type 302, Condition A, 18-8, of U.S. Standard Gauges as previously indicated under paragraph 2.1.E.
   a. All exposed surfaces shall have a No. 4 finish. A No. 2B finish shall be acceptable on surfaces of equipment not exposed to view.
   b. All sheets shall be uniform throughout in color, finish, and appearance.
   c. Rolled shapes shall be of cold rolled type conforming to ASTM A36.

DRAFT

2. Stainless steel tubing and pipe shall be Type 304, 18-8, having a No. 4 finish, and shall conform to either ASTM A213 if seamless or ASTM A249 if welded.
3. Where galvanized metal is specified, it shall be copper-bearing galvanized iron, cold-rolled, stretcher leveled, bonderized, re-rolled to insure a smooth surface, and used in the largest possible sizes with as few joints as necessary.
4. Galvanizing shall be applied to rolled shapes in conformance with ASTM A123, and to sheets in conformance with ASTM A526, coating designation G-90.

K. Castings:

1. Castings shall consist of corrosion resisting metal (white metal) containing not less than 30% nickel. All castings shall be rough ground, polished, and buffed to bright lustre and free from pit marks, runs, checks, burrs, and other imperfections. In lieu of corrosion resisting metal castings, die-stamped or cast 18-8 stainless steel will be acceptable.

L. Hardware and Casters:

1. All hardware shall be of heavy-duty type, satin finished chromium plated brass, cast or forged or highlighted stainless steel of uniform design. All hardware shall be a well-known brand, and shall be identified by the manufacturer's name and model number for easy replacement of broken or worn parts.
2. Casters on custom-built equipment shall be heavy-duty type, ball bearing, solid or disc wheel, with grease-proof rubber, neoprene, or polyurethane tire. Wheel shall be 5" diameter, minimum width of tread 1-3/16", minimum capacity per caster 250 pounds, unless otherwise noted.
    a. Solid material are to be provided with stainless steel rotating wheel guard.
    b. All casters shall have sealed wheel and swivel bearings, polished plated finish and be N.S.F. approved.
    c. All equipment specified with casters shall have a minimum of two (2) with brakes installed on opposite corners, unless otherwise noted.

M. Locks:

1. When specified, doors and drawers of all custom fabricated or manufactured equipment shall be provided with cylinder locks, disc tumbler type with stainless steel faceplate as manufactured by Standard-Keil Mfg. Co., or approved equal.
    a. Provide two (2) sets of keys for each lock.
    b. All locks shall be keyed alike, except at cashiers stations or unless otherwise specified.

N. Thermometers:

1. All fabricated refrigerated compartments shall be fitted with exterior mounted, adjustable, dial or digital thermometers with flush bezels, and shall be calibrated after installation.

O. Sealants:

DRAFT

1. Sealant, wherever required, shall conform to ASTM C 920; Type S Grade NS, Class 25, Use Nt, with characteristics that when fully cured and washed meets requirements of Food and Drug Administration Regulation 21 CFR 177.2600 and N.S.F. RTV-732 for use in areas where it comes in contact with food.
2. Dow-Corning #780 or General Electric "Silastic", or approved equal, in either clear or approved color to match surrounding surfaces and applied in accordance with sealant manufacturers recommendations for a smooth, sealed finish.

P. Plastic Laminate:

1. Plastic laminate surfaces shall be laminated with thermosetting decorative sheets of the color, pattern, and style as selected by the Architect.

a. Horizontal surfaces shall be laminated with sheets conforming to Federal Specification L-P-508F, Style D, Type I (general purpose), Grade HP, Class 1, 1/16" thick, satin finish, with rough sanded backs.
b. Vertical surfaces shall be laminated with sheets conforming to Federal Specification L-P-598F, Style D, Type II, (vertical Surface), Grade HP, Class 1, non-forming, satin finish, 1/32" thick or heavier.
c. Curved surfaces shall be laminated from sheets conforming to Federal Specification L-P-508F, Style D, Type III (post-forming), Grade HP, Class 1, satin finish.
d. Balance sheets for backs in concealed locations shall be either reject material of the same type and thickness as the general purpose grade facing or may be .020" thick laminate backing sheets conforming to Federal Specification L-P-00508E, Style ND, Type V (backing sheet), Grade HP.

2. Adhesives:

a. For application of plastic laminate to wood substrates of horizontal surfaces shall be a phenolic, resorcinol, or melamine adhesive conforming to Federal Specification MMM-A-181C, producing a waterproof bond.
b. For applying plastic laminate to vertical surfaces shall be either a waterproof type or a water-resistant type such as a modified urea-formaldehyde resin liquid glue conforming to Federal Specification MMM-A-188C.
c. Contact adhesive will not be acceptable.

2.3 FABRICATION AND MANUFACTURE

A. Materials and Workmanship:

1. Unless otherwise specified or shown on drawings, all materials shall be new, of best quality, perfect, and without flaws. Material shall be delivered and maintained on the job in an undamaged condition.
2. Fabrication shall be equal to the standards of manufacture used by all first class equipment manufacturers, performed by qualified, efficient, and skilled mechanics of the trades involved.
3. All items of standard equipment shall be the latest model at time of delivery.
4. All fabricated work shall be the product of one manufacturer of uniform design and finish.

DRAFT

5. Each fabricated item of equipment shall include all necessary reinforcing, bracing, and welding with the proper number and spacing of uprights and cross members for strength.
6. Wherever standard sheet sizes will permit, the tops of all tables, shelves, exterior panels of cabinet type fixtures, and all doors and drainboards shall be constructed of a single sheet of metal.
7. Except where required to be removable, all flat surfaces shall be secured to vertical and horizontal bracing members by welding or other approved means to eliminate all buckle, warp, rattle, and wobble. All equipment not braced in a rigid manner and which is subject to rattle and wobble shall be unacceptable, and the K.E.C. shall add additional bracing in an approved manner to achieve acceptance.

B. Sanitary Construction:

1. All fabricated equipment shall be constructed in strict compliance with the standards of the National Sanitation Foundation as outlined in their Bulletin on Food Service Equipment entitled "Standard No. 2" dated October 1952, and in compliance with the local and State Public Health Regulations in which the installation will occur.
2. All fabricated equipment shall bear the N.S.F. "Seal of Approval".

C. Construction Methods:

1. Welding:

a. All welding shall be the heliarc method with welding rod of the same composition as the sheets or parts welded. Welds shall be complete, strong, and ductile with excess metal ground off and joints finished smooth to match adjoining surfaces; free of mechanical imperfections such as gas holes, pits, cracks, etc., and shall be continuously welded so that the fixtures shall appear as one-piece construction. Butt welds made by spot solder and finished by grinding shall not be acceptable.
b. Spot welds shall have a maximum spacing of 3". Tack welds shall be of at least 1/4" length, and spaced no greater than 4" from center to center. Weld spacing at the ends of the channel battens shall not exceed 2" centers.
c. In no case shall soldering be considered as a replacement for welding, nor shall any soldering operation be done where dependence is placed on stability and strength of the joint.
d. Fixtures shall be shop fabricated of one piece and shipped to the job completely assembled wherever possible. Equipment too large to transport or enter the building in one piece shall be constructed so that the field joints can be welded at the job site.
e. All exposed joints shall be ground flush with adjoining material and finished to harmonize therewith. Whenever material has been sunk or depressed by welding operation, depression shall be suitably hammered and peened flush with the adjoining surface and ground to eliminate low spots. In all cases the grain of rough grinding shall be removed by successive fine polishing operations.
f. All unexposed welded joints on undershelves of tables or counters of stainless steel shall be suitably coated at the factory with an approved metallic-based paint.

DRAFT

g. After galvanized steel members have been welded, all welds and areas where galvanizing has been damaged shall have a zinc dust coating applied in conformance with Military Specification Number MIL-P-26915.

2. Joints:

a. Butt joints and contact joints, wherever they occur, shall be close fitting and shall not require a filler. Wherever break bends occur, they shall be free of undue extrudence and shall not be flaky, scaly, or cracked in appearance; where such breaks do mar the uniform surface appearance of the material, all such marks shall be removed by suitable grinding, polishing, and finishing. Wherever sheared edges occur, they shall be free of burrs, fins, and irregular projections and shall be finished to obviate all danger of laceration when the hand is drawn over them. In no case shall overlapping materials be acceptable where miters or bullnosed edges occur.

b. Field welded joints shall be ground smooth without dips and irregularities and finished to match original finish.

3. Bolt, Screw and Rivet Construction:

a. All exposed surfaces shall be free from bolt and screw heads. When bolts are required, they shall be of the concealed type and be of similar composition as the metal to which they are applied.

b. Where bolt or screw threads on the interior of fixtures are visible or may come into contact with hands or wiping cloths, they shall be capped with a stainless steel or chrome acorn nut and stainless steel lock washer.

c. If rivets are used to fasten rear paneling to the body of the fixture, such rivets shall be stainless steel. In no case shall iron rivets be used.

4. Sound Deadening:

a. Schnee Butyl-Sealant 1/2" wide rope continuously between all frame members and underside of stainless steel table tops, overshelves and undershelves.

Tighten stud bolts for maximum compression of sealant.

5. Hi-Liting:

a. All horizontal edges of stainless steel tops, splashes, tops of raised rolled rims, and edges of all exposed doors, handles and shelf edges shall be hi-lited, in uniform design by grinding with abrasive not coarser than #240 grit, then polishing with compound to a uniform mirror finish.

6. Polishing:

a. The grain of polishing shall run in the same direction on all horizontal and on all vertical surfaces of each item of fabricated equipment except in the case where the finish of the horizontal sections of each shall terminate in a mitered edge.

b. Where sinks and adjacent drainboards are equipped with backsplash, the grain of the polishing shall be consistent in direction throughout the length of the backsplash and sink compartment

7. Finishes:

DRAFT

a. Paint and coatings shall be of an N.S.F. approved type suitable for use in conjunction with foodservice equipment. Such paint or coating shall be durable, non-toxic, non-dusting, non-flaking and mildew resistant, shall comply with all governing regulations, and shall be applied in accordance with the manufacturers recommendations.
b. All exterior, galvanized parts, exposed members of framework, and wrought steel pipe where specified to be painted shall be cleaned, primed with rust inhibiting primer, de-greased, and finished with two (2) coats of glossy enamel grey hammertone paint, unless otherwise noted.
c. Where baked enamel finishes are specified, they shall be oven baked on the fixtures for a minimum of 1-1/2 hours at a minimum temperature of 300º Fahrenheit.
d. Fabricated equipment shall be spray coated with plastic suitable for protecting the equipment during transport and installation. The coating shall be easily removable after the equipment installation is complete at the job site, and final clean-up has begun.

D. Construction:

1. Legs:

a. All tubular stands for open base tables, sinks, or dishtables shall have legs constructed of 1-5/8" O.D. stainless steel tubing, with 1-1/4" O.D., #16 gauge stainless steel crossbracing running between legs at a point 10" above finished floor.
b. All joints between legs and crossbracing shall be welded and ground smooth, full 360°F.
c. The top end of legs shall be closely fitted into fully-enclosed stainless steel conical gussets no less than 3" high, similar to Klein #481-58 or #483-58, or approved equal.
d. Gussets shall be fully welded to framing reinforcing members, so that, set screw is not visible from front.
e. Legs without crossrails will not be accepted.
f. Legs shall be spaced at not more than 5'-6" on centers, unless otherwise specified.

2. Feet:

a. All tubular legs will be swedged for appearance and close fit to United Show Case #BF-158, or approved equal, fully enclosed, stainless steel bullet-shaped foot.

1) The foot shall be threaded into a collar and completely welded inside the tubular leg to permit a maximum adjustment of 2" without any thread exposure.
2) Threads shall be National Course Series Class 2 fit or better, machined to prevent end play when foot is at maximum adjustment.
3) The bullet-shaped foot shall have slightly rounded bottom to protect the floor, and a minimum bearing surface of 3/4" diameter of stainless steel-to-floor contact.
4) Bottom of tubular leg shall be finished off smoothly to provide a sanitary fitting and prevent the accumulation of grease or other debris.

DRAFT

b. Cabinet type fixtures shall be mounted on 8" high die-stamped, sanitary, two-piece stainless steel legs no less than 2-3/4" in diameter at the top, Component Hardware #A72-0811, or approved equal.

1) The bottom fully enclosed, stainless steel, bullet-shaped foot threads up into the inside of the upper member, with a male threaded 5/8" bushing to permit maximum adjustment of 2" without thread exposure.
2) The upper section shall be stamped in a neat design with a flared inverted shoulder and fully welded to a base plate designed for anchoring to the channel underbracing.

3. Table Tops:

a. Tables shall be constructed of stainless steel, and of a thickness not less than #14 gauge with 1-3/4" by 120º rolled edges, or as otherwise specified and detailed.
b. All corners shall be bull-nosed and of the same radius as rolled edges.
c. Joints where required shall be butt-welded and ground smooth to present a uniform one-piece appearance.
d. All tops shall be reinforced on the underside with a fully welded framework of 1-1/2"x1-1/2"x1/8" galvanized steel angles with the framing extending around the top perimeter and crossbraced on 24" maximum centers.
e. 1"x4"x1" galvanized or stainless steel, fully welded, cross channel, closed end members placed at each pair of legs with one (1) channel running lengthwise will also be acceptable.
f. All tops shall be reinforced so that there will be no noticeable deflection.
g. Metal tops where adjacent to walls or other items of equipment, shall be constructed with integral, coved, back and/or endsplashes as required and specified in accordance with the standard details contained herein. Close all ends of splashes.

4. Enclosed Bases:

a. All enclosed bases or cabinet bodies shall be of seamless #18 gauge stainless steel construction, enclosed on the ends and sides as required and called for under each item.
b. Ends of body shall terminate at front or operator's side in a 2" wide mullion, vertical, and completely enclosed. All intermediate mullions shall be completely enclosed.
c. The bases shall be reinforced at the top with a framework of 1-1/2"x1-1/2"x1/8" galvanized angles, with all corners mitered and welded solid.
d. Underside of top shall be reinforced with channels and gussets where necessary. Additional angles and cross members shall be provided to reinforce shelves and support tops under heavy tabletop equipment.
e. Where sinks or other drop-in equipment occur, provide additional reinforcing extending crosswise, both sides of opening.
f. In the case of fixtures fitting against or between walls, the bodies shall be set in 1" or 2" from the wall line, with the tops continuing to the wall line with integral, coved splashes as specified. Extend vertical face of body to the wall line only. This will permit adjustment to wall irregularities. Vertical trim strips will not be accepted.

DRAFT

g. Bodies shall be fitted with counter style stainless steel legs as hereinbefore specified.

5. Drawers:

a. Drawers, where specified, shall have removable pan inserts of #18 gauge stainless steel, and shall be approximately 20"x20"x5" deep unless otherwise specified.

1) Perimeter top edge shall be flanged out 1/2".
2) All interior horizontal corners shall be rounded on a 1" radius, and all interior vertical corners shall be rounded on a 2" radius.

b. Fronts shall be double pan #16 gauge stainless steel construction, 1" thick, insulated with a semi-rigid, fiberglass board, unfaced, having a three-pound density.

1) The top of the drawer face shall be formed as an integral pull by breaking the front pan back on a 45° angle 1", then straight up 1", back to front 1", and then down at the front 3/4".
2) Drawer front shall have all edges and corners ground smooth with a radius edge pull.
3) Provide hard rubber button bumpers attached to rear of drawer face at each corner.

c. The drawer shall have an all welded frame of 1"x1", #16 gauge stainless steel angles sized to fit the removable pan insert.
d. Drawers shall operate on #14 gauge full-extension slides with stainless steel roller bearings with hardened and ground raceways, Component Hardware, S52 Series, or approved equal. Slides shall be pitched approximately 3/8" per foot to permit self closing action.
e. Drawers shall be adequately and neatly fitted to the guides to permit easy operation without rattle or binding.
f. Slides and frame shall be reinforced to support a dead weight of 150 pounds when drawer is fully extended.
g. Adjustable stops shall be provided for each drawer at the fully-opened position, and be readily liftable by hand for easy removal of drawer.
h. All drawers not mounted inside a cabinet body shall be completely enclosed in an #18 gauge stainless steel box-type enclosure and suspended from angle framing under the fixture top. The housing bottom shall be flanged and welded to an #18 gauge stainless steel reinforcing channel extending across the open end.

6. Sliding Doors:

a. Sliding doors shall be of the double pan type, with the exterior pan constructed of #18 gauge stainless steel with all four sides channeled and corners welded. The interior pan shall be similarly constructed of #20 gauge stainless steel, set into the exterior pan, and welded in place.
b. All doors shall be insulated with semi-rigid fiberglass board, un-faced, having a three-pound density. Styrofoam shall not be acceptable.
c. Doors 18" wide or greater, shall have internally welded 4" wide reinforcing channels to prevent warpage.
d. Each door shall be fitted with a positive flush-type stainless steel pull, Standard-Kiel #1262-1014-1283 recessed handle, or approved equal.

DRAFT

e. In the back of each door install a 1"x1", #16 gauge stainless steel angle stop welded in a suitable location to prevent the doors from overpassing the flush pulls.
f. Doors in the closed position shall overlap each other by no more than 2".
g. Each door shall be fitted with two (2), 1-3/8" ball bearing sheaves fastened to 1"x1/8" stainless steel bar stock welded to the top corners of each door for suspending on an overhead #16 gauge stainless steel channel track. The hangers shall be tapped for 1/4"-20 thumb screw vertical locks which prevent the doors from jumping the track in operation while permitting easy removal for cleaning without tools.
h. Insure that the bottom of the doors are positively and continuously guided to assure proper alignment and passing regardless of the position of each door.
i. Provide hard rubber bumpers for doors to close against to insure quiet operation.

7. Hinged Doors:

a. Hinged doors shall be of the same materials and construction as sliding doors previously specified.
b. Hinges shall be heavy duty, stainless steel, removable type, and fastened by tapping into 1/4"x3/4" stainless steel bar stock inside the door pan and behind the door jamb.
c. The door face shall be flush with the cabinet body when fully closed.
d. Size widths of doors equally when installed in pairs, or in series with other pairs, with no door being greater than 36" in width.
e. Doors shall be held closed by permanent magnetic closure devices of an approved type and of sufficient strength to hold the doors shut. Install two (2) per door (minimum), mounted to the door jamb, top and bottom, with opposing chrome-plated steel plates securely fastened to the inner panel of the doors.

8. Undershelves:

a. All open base tables shall be provided with full-length undershelves of #16 gauge stainless steel fully welded to legs with all joints ground smooth and polished.
b. Front edge shall turn down 1-1/2" and under 1/2".
c. Turn up rear and ends 2", with integral coved radius, when specified.
d. If required by width, provide 1-1/2"x1-1/2"x1/8" galvanized angle bracing mounted to underside, full length.

9. Interior Shelves:

a. All interior shelves within cabinet bodies, enclosed bases and overhead cabinets, shall be of #16 gauge stainless steel.
b. Removable shelves shall be constructed in equal sections, and rest in 1-1/2"x1-1/2"x1/8" stainless steel angle frame. Cove all horizontal corners in accordance with N.S.F. requirements.
c. Stationary shelves shall have 2" turn-up on back and ends, and continuously welded to cabinet body, polished and ground smooth to form a one-piece interior free of any crevices.

DRAFT

d. Front edge shall turn down 1-1/2" and under 1/2", and finished with "z" bar forming completely enclosed edge for maximum strength and sanitation.
e. Provide 1-1/2"x1-1/2"x1/8" angle bracing mounted to underside, full length.

10. Elevated Shelves:

a. Shelves over equipment not adjacent to a wall shall be mounted on 1" diameter #16 gauge stainless steel tubular standards neatly fitted with stainless steel base flanges, unless otherwise specified.
b. The top of the tubular standards shall be completely welded to #14 gauge stainless steel support channels, full width of overshelf.
c. Inside the tubular standard, and welded to same, provide 1/2" diameter steel tension rod extended through countertop and securely anchored to lower framework reinforcing with nuts and lock washers in such a manner as to assure a stable, sway-free structure.
d. If required by width, provide 1-1/2"x1-1/2"x1/8" stainless steel angle bracing mounted to underside, full length.
e. Cantilevered shelves, when called for, shall be #16 gauge stainless steel supported on #14 gauge stainless steel brackets welded to 1-5/8" O.D. stainless steel tubular standards extending through the backsplash, and fully welded to the table framework. Provide Klein #481-SH welded sleeves where standards penetrate backsplash.

11. Wall Shelves:

a. Open wall shelves shall be constructed of #16 gauge stainless steel with back and ends turned up 2", positioned 2" out from face of wall, with all corners welded, and supported on #14 gauge stainless steel brackets.
b. Brackets shall be flanged inward beneath the shelf and at the wall 1-1/2" with intersecting flanges completely welded, and attached to shelf with studs welded to the underside and bolted with stainless steel lock washers and chrome-plated cap nuts.
c. Each bracket shall be fastened to the wall with a minimum of two (2) 1/4"-20 stainless steel bolts anchored securely by means of toggles or expansion shields.

12. Sinks:

a. All sinks shall be the size and shape as shown on drawings, and constructed of #14 gauge stainless steel with backs, bottoms and fronts formed of one continuous sheet and the ends welded in place.
b. Sinks shall have all corners, both vertical and horizontal, coved on a 3/4" radius electrically welded, ground smooth and polished. Solder in filleted corners will not be acceptable.
c. Multiple compartment sinks shall be divided with double wall, #14 gauge stainless steel partitions with a 1/2" radius on top and all corners rounded as other corners, continuously welded, ground smooth and polished.
d. The bottom of each compartment shall be creased to a die stamped recess, tapered and shaped to receive a lever type waste without the use of solder, rivets, or welding.

DRAFT

e. Provide #14 gauge stainless steel waste lever angle bracket mounted to underside of compartment at front.
f. The front and exposed ends of sinks shall be fabricated with a 1-1/2", 180 degree rolled edge. The back and ends adjacent to walls or other fixtures shall be turned up with integral coved edge 12" high and returned 2-1/2" at the top on a 45º angle. Cap ends of all exposed splashes.
g. Unless otherwise specified, two (2) faucet holes on 8" centers shall be provided, located over the centerline of partitions between compartments, 2-1/2" down from splash break.
h. Gussets for legs shall be fully welded all around to #12 gauge stainless steel triangular plates fully welded to underside of sink.
i. Sinks fabricated into working surfaces shall be constructed of the same material and in like manner to sinks specified above, except rolled edge and backsplash shall be omitted and the bowl shall be completely welded integral and flush with the working surface. Where basket type wastes are called for, they shall be fitted with removable seats.
j. Where sink bowls are exposed, the exterior shall also be polished to a #4 finish.

13. Sink Drainboards:

a. Drainboards shall be constructed of the same material as the sinks and shall be welded integral to same.
b. The front portion of drainboards shall continue the 1-1/2", 180º rolled edge of sink bowls on a continuous and level horizontal plane.
c. The surface of the drainboard shall pitch from 2-1/2" at the end furthest from the sink, to 3" at the bowl; or 1/8" per foot. In addition, the bottom surface shall be dished toward the center for complete drainage.
d. The backsplash of the drainboard shall match the rear of the sink contour and shall be welded integral thereto, running parallel to the floor.
e. Drainboards shall be reinforced on the underside with a framework of 1"x4"x1" stainless steel channel underbracing placed at each pair of legs, with exposed ends capped, and one (1) channel running lengthwise.
f. Where disposer cones are fabricated into drainboards, additional 1"x4"x1" stainless steel channels shall be welded into the top framing, spanning the drainboard from front-to-back on both sides of the cone and located not more than 3" to either side.
g. Disposer control panels or switches shall be supported beneath drainboards, when specified, by means of a #12 gauge stainless steel mounting bracket.

14. Dishtable Tops:

a. Dishtables shall be constructed of #14 gauge stainless steel with all corners, both vertical and horizontal, coved on a 3/4" radius electrically welded, ground smooth and polished. Solder in filleted corners will not be acceptable.
b. Fronts and exposed ends shall be fabricated with a 3" high, 1-1/2", 180° rolled edge with rounded corners. The back and ends adjacent to walls or other fixtures shall be turned up with integral coved edge 12" high and returned 2-1/2" at the top on a 45º angle. Cap ends of all exposed splashes.

DRAFT

c. All tops shall slope 1/8" per foot (minimum).
d. Dishtables shall be reinforced on the underside with a framework of 1"x4"x1" stainless steel channel underbracing placed at each pair of legs, with exposed ends capped, and one (1) channel running lengthwise fully welded between front-to-back channels.
e. Where tops fit into dishmachines, they shall turn down and into, forming a sealed watertight fit, and attached according to dishmachine manufacturers instructions.
f. On each side of dishmachine, tables shall be provided with integral splash shields as part of the backsplash.
g. Silicon filling of gaps caused by poor fit will not be acceptable.
h. On corner-type door machines, provide #14 gauge stainless steel wall-mounted, splash panel to protect adjacent wall, full width of door opening.

15. Cafeteria Style Counters:

a. All counters shall be constructed as previously specified under Enclosed Bases.
b. Provide top and bottom framing for each counter food pan, cold pan, coffee urn, ice cream unit, ice bin, dish dispenser, etc., whether a drop-in unit or a cutout for a portable unit.
c. Where plate shelves occur, frame horizontally 8-1/2" back from counter edge or as design dictates, and at bottom of shelf at counteredge.
d. The countertop shall be constructed of #14 gauge stainless steel, as previously specified, with all joints welded, ground and polished.
e. Fronts and exposed ends shall be stainless steel, plastic laminate or other material as noted in the Item Specifications.
f. All display glass shelving shall be 1/4" polished plate glass and fully trimmed with #18 gauge stainless steel formed channels. Top shelves shall be the same width as the shelf below. Shelves shall be supported on 5/8" square, #16 gauge stainless steel perimeter tubing fully welded to 1-1/4" square, #16 gauge stainless steel tubing uprights.
g. Provide appropriate adjustable glass sneeze or breath guards trimmed in stainless steel along front, entire length, mounted in Klein 4465-A brackets.
h. Protector shelf over hot food wells shall be #16 gauge stainless steel supported on 1-1/4" square, #16 gauge stainless steel tubing uprights, with 1/4" polished plate glass front and end panels trimmed in #18 gauge stainless steel channels. When specified for self-service, mount bottom edge of front panel 8" above countertop.
i. All display and protector shelves shall be furnished with full-length LED lights wired to on/off switch in counter apron, with lamps and protective shields. Conceal all wiring in tubular uprights.
j. Refer to Item Specification for changes, as required.
k. Counter shall be internally wired complete by the K.E.C., and in such a way as to meet the requirements of the Electrical Code of the job location.

DRAFT

2.4 EQUIPMENT

A. All items listed on the Contract Documents under the heading "Equipment Schedule" shall be furnished in strict accordance with the foregoing specifications and with the following detailed Itemized Specifications.
B. Manufacturer's names and model numbers are shown establishing quality, size, and finish required, representing the Owner's and Consultant's requirements and basis for bid. Equipment is listed hereinafter with same item numbers as shown on Contract Documents.

PART 3 - EXECUTION

3.1 INSPECTION

A. Before beginning the installation of foodservice equipment, the spaces and existing conditions shall be examined by the K.E.C. and any deficiencies, discrepancies, or unsatisfactory conditions for proper installation of foodservice equipment shall be reported to the Architect in writing.
    1. Do not proceed with installation until unsatisfactory conditions have been corrected in a manner satisfactory to the installer.
    2. Beginning installation shall constitute acceptance of the area.
B. Prior to concrete pouring, the K.E.C. shall notify the Architect once drainage, water inlets and electrical conduits are laid in ground for the Consultant to schedule and conduct underslab inspection.
C. Pre-installation meetings must take place prior to any kitchen equipment installation.
D. Once all walk-in box compartments are constructed and all ventilators have been installed, notify the Architect for the Consultant to conduct an inspection.
E. K.E.C. to notify the Architect upon completion of equipment installation, for the kitchen to be inspected by the Consultant prior to the Health Department’s inspection. A follow-up inspection shall be conducted after all items have been addressed from the initial punch report.
F. Consultant to submit all inspection reports to the Architect and Owner.
G. All loose parts or attic stock items must be labeled and turned over to the Owner during final inspection.
H. One (1) year warranty kitchen equipment inspection will be conducted by the Consultant to assess the performance of the equipment. Warranty items will be submitted to the K.E.C. for necessary repairs during the warranty period.

3.2 PREPARATION

A. Foodservice equipment drawings are diagrammatic and intended to show layout, arrangement, mechanical and electrical requirements.
B. Field verify all measurements at the building prior to fabrication of custom equipment. Coordinate measurements and dimensions with rough-in and space requirements.

3.3 INSTALLATION

A. The K.E.C. shall coordinate his delivery schedule with the Contractor to ensure adequate openings in the building to receive the equipment.
B. Equipment shall be un-crated, fully assembled and set level in position for final connections. Parts shipped loose but required for connection shall be properly tagged and shall be accompanied by the necessary installation instructions.

DRAFT

C. Provide a competent, experienced foreman to supervise installation and final connections with other trades.

D. Remote Refrigeration Systems:

1. All refrigeration work where applicable to this contract shall be accomplished in an approved manner, using finest quality fittings, controls, valves, etc.
2. Refrigeration items shall be started up, tested, adjusted, and turned over to the Owner in first class condition and left running in accordance with the manufacturer's instructions.
3. Refrigeration lines and hook-ups shall be completed by the K.E.C. with the exception of electric, water, and drain line final connections unless otherwise specified.
4. All copper tubing shall be refrigerant grade A.C.R. or type "L".
5. Silver solder and/or Sil-Fos shall be used for all refrigerant piping. Soft solder is not acceptable.
6. All refrigerant lines in pipe sleeves or conduit shall be effectively caulked at ends to prevent entrance of water or vermin and at penetrations through walls or floors.
7. All tubing shall be securely anchored with clamps, and suspended lines shall be supported with adjustable hangers at 6'-0" o.c. maximum.
8. Wrap drain line in freezer compartment(s) with approved heat-tape for final connection by Electrical Contractor.

E. Sealing and Caulking:

1. Prior to the application of sealant, all surfaces shall be thoroughly cleaned and de-greased.
2. Apply around each unit of permanent installation at all intersections with walls, floors, curbs or other permanent items of equipment.
3. Joints shall be air-tight, water-tight, vermin-proof, and sanitary for cleaning purposes.
4. In general, joints shall be not less than 1/8" wide, with backer rod to shape sealant bead properly at 1/4" depth. Shape exposed surfaces of sealant slightly concave, with edges flush with faces of materials at joint.
5. At internal corner joints, apply sealant or gaskets to form a sanitary cove, of not less than 3/8" radius.
6. Provide sealant-filled joints up to 3/4" in joint width. Trim strips for wider joints shall be set in a bed of sealant and attached with stainless steel fasteners, 48" o.c., or less, to insure suitable fastening and prevent buckling of the metals fastened.

F. Cutting:

1. All cutting, fitting, or patching required during installation shall be accomplished by the K.E.C., at his own expense, so as to make the work conform to the plans and specifications.
2. The K.E.C. shall not cut or otherwise alter, except with the consent of the Owner, the work of any other Contractor.
3. Provide cut-outs in foodservice equipment where required to run plumbing, electric, or steam lines through equipment items for final connections.

3.4 FIELD QUALITY CONTROL

A. Inspection:

DRAFT

1. Provide access to shop fabrication areas during normal working hours to facilitate inspection of the equipment, during construction, by the Architect or his authorized representative.
2. Errors found during these inspections shall be corrected to the extent required within the scope of the plans, specifications, and approved drawings.

B. Start-Up and Testing:

1. Delay start-up of foodservice equipment until service lines have been tested, balanced, and adjusted for pressure, voltage, and similar considerations; and until water and steam lines have been cleaned and treated for sanitation.
2. Before testing, lubricate each equipment item in accordance with manufacturer's recommendations.
3. Supply a trained person or persons who shall start up all equipment, test and make adjustments as necessary, resulting in each item of equipment, including controls and safety devices, performing in accordance with the manufacturer's specifications.
4. All gas-fired equipment shall be checked by the local gas company as to calibration, air adjustments, etc., and adjustments made as required.
5. Repair or replace any equipment found to be defective in its operation, including items which are below capacity or operating with excessive noise or vibration.
6. Furnish start up reports for the walk-in cooler/freezer, refrigeration system, cooking equipment, utility raceway and ventilator in accordance with Article 1.5 Submittals, Paragraph F.

C. Demonstration:

1. Provide an operating demonstration of all equipment at a time of Owner's convenience, to be held in the presence of authorized representatives of the Architect and Owner. K.E.C. to coordinate scheduling with manufacturer’s representatives.
2. At the time of demonstration, furnish complete, bound, operation/maintenance manuals and certificates of warranty for all items of equipment provided, in accordance with Article 1.5 Submittals, Paragraph F, at this demonstration time. All manuals are to be provided in digital format All manuals are to be provided in digital format to DFNSOffice@mcpsmd.org AND (insert email address for Facilities, Construction, & Maintenance).
3. Provide a digital and physical checklist of every piece of equipment, including the warranty expiration date, and maintenance routines.
4. Provide a follow-up kitchen demonstration three (3) months after the initial demonstration or kitchen opening, or at the Owners requested timeline. K.E.C. to coordinate scheduling with all manufacturer’s representatives.
5. Provide training or demonstration for all equipment to ensure new staff are properly trained on equipment.
6. Demonstration shall be performed by manufacturer's representative knowledgeable in all aspects of his equipment.
7. During the demonstration, instruct the Owner's operating personnel in the proper operation and maintenance of the equipment.
8. Equipment manufacturer to provide factory-approved instructional videos.

DRAFT

3.5 ADJUST AND CLEAN

A. Upon completion of installation and tests, clean and sanitize foodservice equipment, and leave in condition ready for use in food service.
B. Remove all protective coverings, and thoroughly clean equipment both internally and externally with stainless steel cleaner.
C. Make and check final adjustments required for proper operation of the equipment.
D. Restore finishes marred during installation to remove abrasions, dents, and other damages. Polish stainless steel surfaces, and touch-up painted surfaces with original paint.
E. Clean up all refuse, rubbish, scrap materials, and debris caused by the work of this Section, and put the site in a neat, orderly, and broom-clean condition.

3.6 ITEMIZED EQUIPMENT

ITEM #1: UTILITY CART, MOBILE

QUANTITY: Three
MANUFACTURER: InterMetro Industries Corporation
MODEL NO.: MetroMax (N058)
PERTINENT DATA: 24" x 36" Shelf Size, 600-lb. Capacity, Polymer
UTILITIES REQ'D: ----
ALTERNATE MFRS.: None

Furnish and set-in-place per Equipment Plan, Sheet K-101; Manufacturer's Instructions and the following:

1. Three (3) #MXUC2436G-25 two-shelf units.

2. Reduce unit height to 34" A.F.F.

ITEM #2: DUNNAGE RACK, MOBILE

QUANTITY: Three (3)
MANUFACTURER: InterMetro Industries Corporation
MODEL NO.: Super Erecta (N058)
PERTINENT DATA: Open-Grid Shelf Mat, Heavy-Duty, Metroseal 3
UTILITIES REQ'D: ----
ALTERNATE MFRS.: None

Furnish and set-in-place per Equipment Plan, Sheet K-101; Manufacturer's Instructions and the following:

Cooler:

1. One (1) #MHP55K3 unit; 24" W x 48" L.

Freezer:

1. One (1) #MHP55K3 unit; 24" W x 48" L.

Dry Storage:

DRAFT

1. One (1) #MHP55K3 unit; 24" W x 48" L.

ITEM #3: SHELVING, MOBILE

QUANTITY: Eight (8)
MANUFACTURER: InterMetro Industries Corporation
MODEL NO.: MetroMax Q Series (N058)
PERTINENT DATA: Open-Grid Shelf Mat, Polymer, Epoxy-Coated Posts
UTILITIES REQ'D: ----
ALTERNATE MFRS.: None

Furnish and set-in-place per Equipment Plan, Sheet K-101, Manufacturer's Instructions and the following:

Dry Storage:

1. Four (4) #MQ2436G sections; 24" W x 36" L x 5-tier high.
2. Four (4) #MQ2448G sections; 24" W x 48" L x 5-tier high.
3. Thirty-two (32) #MQ74UPE epoxy-coated posts for stem casters, 73-3/16" high.
4. Sixteen (16) #5MPX polyurethane swivel casters with bumpers.
5. Sixteen (16) #5MPBX polyurethane swivel casters with brakes and bumpers.
6. Plastic wedge lock connectors, quantity as required.
7. Locate bottom shelf @ 12" A.F.F., space remaining shelves equally.

DRAFT

ITEM #4: SOAP STORAGE CABINET, MOBILE

QUANTITY: One (1)
MANUFACTURER: Custom Fabricated
MODEL NO.: #14 GA Stainless Steel
PERTINENT DATA: 36" Wide x 24" Deep x 78" High, All Stainless Steel
UTILITIES REQ'D: ----
ALTERNATE MFRS.: None

Fabricate and set-in-place per Equipment Plan, Sheet K-101, and the following:

1. Constructed per Detail 6.1 & 6.1.1.

ITEM #5: WALK-IN COOLER/FREEZER

QUANTITY: One (1)
MANUFACTURER: Thermo-Kool
MODEL NO.: Indoor Installation (N058)
PERTINENT DATA: 4" Foamed-In-Place Urethane Panels, Class I, NSF Construction

UTILITIES REQ'D: 1500W, 120V, 1PH; (2) 3/4" IW
ALTERNATE MFRS.: Kolpak;Norbec; American Panel

ITEM #5: (Continued)

Furnish and install per Equipment Plan, Sheet K-101; Building Conditions Plan, Sheet K-102; Manufacturer's Shop Drawing and the following:

1. Two Section Unit, -40% Cooler and 60% Freezer of the total square footage.

2. Exterior Finish:
   -- 26 GA stucco embossed galvanized where unexposed.
   -- 22 GA stucco embossed stainless steel where exposed.

3. Interior Finish:
   -- White acrylic enamel baked-on .040 stucco embossed aluminum walls.
   -- White acrylic enamel baked-on 26 GA smooth galvanized steel ceiling.

4. Interior Floor:
   -- 4" prefabricated. heavy-duty structural floor panels installed over hot asphalt paper or 10 MIL polyethylene sheets on building floor slab.
   -- 2" setting bed with two (2) layers of wire reinforcing mesh fabric and quarry tile floor material with 6" high integral coved base, interior and exterior of box, installed over prefabricated floor panel by Flooring Contractor.
   -- Provide venting floor system under walk-in cooler/freezer over 400 square feet per manufacturer recommendation.

5. Entrance Doors:
   -- Two (2) flush-mounted, self-closing doors with 34" x 84" net opening, hinged per Equipment Plan.
   -- Polished chrome camlift hinges with lift-off capability. Provide one (1) extra hinge per door, three (3) total.
   -- Kason #0027C safeguard deadbolt locking latch with quarter turn inside release and strike.
   -- -- Hydraulic door closer.
   -- Standard 2" diameter dial indicating thermometer factory mounted in door frame. Probe wires to be secured in wall with cable holders and stainless steel fasteners at 18" on center.
   -- Foot treadle door opener.
   -- 36" high aluminum diamond tread kickplates, interior and exterior of door, jamb, and frame.
   -- 14" x 24" heated observation window, each compartment.
   -- Kason #1806 LED light fixture with high-impact plastic cover centered over door opening to avoid conflict with shelving, each compartment. Extend wiring in conduit, foamed within door panel header, to junction box mounted on top of walk-in ceiling, each compartment.
   -- Undercut doors for quarry tile floor.
   -- Kason #907 interior door handle, factory mounted, with concealed metal backing plate.
   -- 12-gauge heavy-duty stainless steel heated threshold, each compartment.
   -- Engraved phenolic plastic compartment sign - 12" long x 2" high; white in color with 1" high blue CAPITAL letters mounted on each door above observation window; (1) - COOLER, (1) - FREEZER.
   -- Reinforced freezer and cooler door panels for Air Screen Door.

DRAFT

6. One (1) heated pressure relief port in freezer.

7. Two (2) Kason #1810L21248LB 48" long LED light fixtures with shatter-proof high impact plastic covers centrally-mounted to walk-in ceiling, one (1) for the cooler, one (1) for the freezer. Fixtures to be shipped loose and mounted by K.E.C. Final connection by Electrical Contractor. K.E.C. to seal and insulate with silicone sealant all knock-outs in fixture casing to prevent moisture infiltration.

ITEM #5: (Continued)

8. One (1) #TK4700 walk-in monitor system with #TK4 light control and panic button factory mounted in each door panel and inter-wired with building monitoring system, as required by Electrical Contractor. Provide engraved identification label mounted above each alarm.

9. Provide and install trim strips of matching exterior finish between ends of walk-in panels and building walls from floor to finished ceiling. K.E.C. to verify ceiling height.

10. Provide and install closure panels of matching exterior finish between top of walk-in and finished ceiling. K.E.C. to verify ceiling height.

11. All electrical conduit shall be run concealed above walk-in ceiling per Detail, Sheet K-104.

12. Evaporator coil drain lines shall be run to floor drain with "P" trap on exterior of box by K.E.C.

13. Black flexible "Armaflex" insulation applied to exposed drain lines and fittings within interior of box by K.E.C.

14. Spiral heat tape applied to drain line within interior of freezer compartment prior to application of insulation by K.E.C. Drain line heating cable shall be installed for continuous 24-hour operation.

15. Coordinate location of sprinkler head drops and provide penetrations, where necessary.

16. Seal and insulate all openings to prevent infiltration of warm air into cooler/freezer compartments.

17. Accessories:
    -- One (1) Kolpak #HAL-C2-N1 or #HAR-C2-N1 air shield mounted vertically on the hinge side of doorjamb inside cooler and/or freezer compartment. Electrical Contractor to provide power receptacle and final connection.
    -- #16 ga. stainless steel hat-channel bumper rail with closed ends installed to front face of walk-in, full-length, mounted @ 36" A.F.F. Provide 1/8" diamond tread kickplates from top of finish floor coved base to bottom of bumper rail. Align bumper rail with 36" high aluminum kickplate on doors.
    -- 6" high aluminum cove baseboard, to be installed where exposed surfaces at kitchen side, fastened with countersink screws and seal with gray-color silicone sealant to finish floor and walk-in panels.

ITEM #6: COOLER REFRIGERATION SYSTEM

QUANTITY: One (1)
MANUFACTURER: Bohn Refrigeration Products
MODEL NO.: BCH0010MCACZC0897 (N058)

DRAFT

PERTINENT DATA: Air-Cooled, Outdoor Installation, Remote, With IntelliGen System Controls
UTILITIES REQ'D: 15.0A, 208V, 3PH
ALTERNATE MFRS.: None

Furnish and install per Equipment Plan, Sheet K-101; Manufacturer's Shop Drawing and the following:

1. Condensing Unit: Factory pre-assembled, scroll, medium-temperature, R448A

ITEM #6: (Continued)

2. Mounted on building roof above walk-in on roof curb per Detail Sheet K-102. Refer to roof plan for exact location.

3. Complete winterization package and condensing unit weatherproof cover.

4. Factory installed air defrost timer with contactors and relays.

5. Overall size: 25⅛" L x 28½" W x 19¾" H.

6. Weight: 179 lbs.

7. Evaporator Coil with High-Efficiency ECM Motors: Low-Profile, End-Mount Type, Model BEL0095AS6AMAB0200; 1.8A, 120V, 1PH.
   -- System to operate at +35º F.
   -- Furnished complete with solid state temperature sensors, electric expansion valve, transformer, coil compressor contactor, low-pressure time-delay switch, and pressure transducer ready for final connection by Refrigeration Contractor.

8. Factory installed main-fused disconnect switch.

9. Factory certified installers to provide complete refrigeration system warrantee: five (5) years for the compressor, two (2) years for the condensing unit, and two (2) years for all parts of the evaporator coil.

DRAFT

ITEM #7: FREEZER REFRIGERATION SYSTEM

QUANTITY: One (1)
MANUFACTURER: Bohn Refrigeration Products
MODEL NO.: BCH0035LCBCZ0897 (N058)
PERTINENT DATA: Air-Cooled, Outdoor Installation, Remote, With IntelliGen System Controls
UTILITIES REQ'D: 20.0A, 208V, 3PH
ALTERNATE MFRS.: None

Furnish and install per Equipment Plan, Sheet K-101; Manufacturer's Shop Drawing and the following:

1. Condensing Unit: Factory pre-assembled, scroll compressor, low-temperature, R448A.

2. Mounted on building roof above walk-in on roof curb per Detail Sheet K-102. Refer to roof plan for exact location.

3. Complete winterization package and condensing unit weatherproof cover.

4. Factory installed electric defrost timer with contactors and relays.

5. Overall size: 39⅛" L x 28 5/16" W x 19¾" H.

6. Weight: 232 lbs.

7. Evaporator Coil with High-Efficiency ECM Motors: Low-Profile, End-Mount Type, Model BEL0100BS6EMAB0200, 1.0A, 208V, 1PH (Fan); 9.1A, 208V, 1PH (Defrost Heater)

ITEM #7: (Continued)

-- System to operate at -10º F.
-- Furnished complete with solid state temperature sensors, electric expansion valve, transformer, coil compressor contactor, low-pressure time-delay switch and pressure transducer ready for final connection including low voltage wiring to compressor by Refrigeration Contractor.

8. Factory installed main-fused disconnect switch.

9. Furnish one (1) IntelliGen Refrigeration Controller mounted to front face of Item #5: Walk-In Cooler/Freezer @ 66" A.F.F. centered between entrance doors. Controller shall be capable of monitoring characteristics of both cooler and freezer systems. Refrigeration Controller low voltage wiring and final connection by Refrigeration Contractor.

10. Factory certified installers to provide complete refrigeration system warrantee: five (5) years for the compressor, two (2) years for the condensing unit, and two (2) years for all parts of the evaporator.

ITEM #8: SHELVING, MOBILE

QUANTITY: Ten (10)
MANUFACTURER: InterMetro Industries Corporation
MODEL NO.: MetroMax i (N058)
PERTINENT DATA: Four-Tier, Open-Grid Shelf Mat, Polymer
UTILITIES REQ'D: ----
ALTERNATE MFRS.: None

Furnish and set-in-place per Equipment Plan, Sheet K-101; Manufacturer's Instructions and the following:

Cooler:

1. Four (4) #MX1836G sections; 18" W x 36" L x 4-tier high.

2. One (1) #MX1848G section; 18" W x 48" L x 4-tier high.

3. Twenty (20) #MX63UP polymer posts for stem casters, 61-3/16" high.

4. Ten (10) #5MPX polyurethane swivel casters with bumpers.

DRAFT

5. Ten (10) #5MPBX polyurethane swivel casters with brakes and bumpers.

6. Plastic wedge lock connectors, quantity as required.

7. Locate bottom shelf @ 12" A.F.F.; space remaining shelves equally.

Freezer:

1. Four (4) #MX1836G sections; 18" W x 36" L x 4-tier high.

2. One (1) #MX1848G section; 18" W x 48" L x 4-tier high.

3. Twenty (20) #MX63UP polymer posts for stem casters, 61-3/16" high.

ITEM #8: (Continued)

4. Ten (10) #5MPX polyurethane swivel casters with bumpers.

5. Ten (10) #5MPBX polyurethane swivel casters with brakes and bumpers.

6. Plastic wedge lock connectors, quantity as required.

7. Locate bottom shelf @ 12" A.F.F.; space remaining shelves equally.

ITEM #9: WIRE BASKET DOLLY, MOBILE

QUANTITY: Twenty (20)
MANUFACTURER: Arlington Wire & Metal Products, Inc.
MODEL NO.: ARL#45 (N058)
PERTINENT DATA: Angular Aluminum Frame, 27-1/2"W x 26-1/2"L
UTILITIES REQ'D: ----
ALTERNATE MFRS.: None

Furnish and set-in-place per Equipment Plan, Sheet K-101 and Manufacturer's Instructions.

1. Accessories:
   -- Five hundred (500) Arlington ARL#47SS stainless steel wire baskets. Baskets to be delivered to MCPS Central Commissary at 8401 Turkey Thicket Drive, Gaithersburg, MD 20879.

ITEM #10: HAND SINK

QUANTITY: Two (2)
MANUFACTURER: Eagle Foodservice Equipment Company
MODEL NO.: HSA-10-FA-1P (N058)
PERTINENT DATA: Pedestal Mount, Single Foot Pedal With Mixing Valve
UTILITIES REQ'D: 1/2" HW, 1/2" CW, 1-1/2" W
ALTERNATE MFRS.: Advance/Tabco; John Boos

Furnish and set-in-place per Equipment Plan, Sheet K-101; Manufacturer's Instructions and the following:

DRAFT

1. Gooseneck faucet, stopper, pedestal, "P" trap, tailpiece, and pedal valve.

2. All plumbing lines and components chrome-plated or stainless steel.

3. Accessories:
   -- Left and right integral stainless steel splash shields.

ITEM #11: SOAP & TOWEL DISPENSER -- (N.I.K.E.C. – SPECIFIED BY ARCHITECT)

QUANTITY: Two (2)

ITEM #13: MICROWAVE OVEN

QUANTITY: One (1)
MANUFACTURER: Amana, Inc.
MODEL NO.: RCS10TS (N058)
PERTINENT DATA: 1.2 Cu. Ft. Capacity, Stainless Interior & Exterior
UTILITIES REQ'D: 1.55 KW, 120 V, 1PH
ALTERNATE MFRS.: Sharp; Panasonic

Furnish and set-in-place per Equipment Plan, Sheet K-101; Manufacturer's Instructions and the following:

1. Cord and plug set.

ITEM #14: ROLL-IN TRANSPORT DOLLY, MOBILE

QUANTITY: Two (2)
MANUFACTURER: Blodgett Oven Company, Inc.
MODEL NO.: CTRG (N058)
PERTINENT DATA: For Single Electric Ovens
UTILITIES REQ'D: ----
ALTERNATE MFRS.: None

Furnish and set-in-place per Equipment Plan, Sheet K-101; Manufacturer's Instructions and the following:

1. Accessories:
   -- Two (2) Model #DBRI-L roll-in basket dollies.

ITEM #15: REACH-IN REFRIGERATOR, MOBILE

QUANTITY: One (1)
MANUFACTURER: Traulsen & Company, Inc.
MODEL NO.: RHT132-NUT-HHS (N058)

DRAFT

PERTINENT DATA: One-Section, Self-Contained, Stainless Steel Exterior/Interior
UTILITIES REQ'D: 6.7A, 120V, 1PH
ALTERNATE MFRS.: Continental, Victory

ITEM #15: (Continued)

Furnish and set-in-place per Equipment Plan, Sheet K-101; Manufacturer's Instructions and the following:

1. Standard six (6) year parts and labor warranty; seven (7) year compressor.

2. Half-height solid doors hinged per Equipment Plan.

3. Cylinder door locks keyed-alike.

4. Stainless steel shelves in lieu of standard epoxy coated. Furnish three (3) shelves per compartment, six (6) total.

5. Exterior mounted digital thermometer.

6. Set of four (4) heavy-duty, 5" diameter polyurethane swivel-type locking casters with brakes.

7. Cord and plug set.

ITEM #16: EXHAUST CANOPY

QUANTITY: One (1)
MANUFACTURER: Captive-Aire Systems, Inc.
MODEL NO.: 6030VHB G-ND (N058)
PERTINENT DATA: Stainless Steel, Type II Non-Grease Hood, Heat/Vapor Removal Only
UTILITIES REQ'D: 750 CFM Exhaust; 350W, 120V, 1PH (Lights)
ALTERNATE MFRS.: Avtec; Gaylord; Accurex

Furnish and install per Equipment Plan, Sheet K-101; Exhaust Canopy Details, Sheet K-502; Manufacturer's Shop Drawing and the following:

1. 5'-0" long x 5'-0" wide x 2'-6" high, with bottom edge mounted at 6'-8" A.F.F. Length comprised of one (1) 5'-0" long section. Entire unit constructed of 18 GA stainless steel type 304 with liquid tight all welded external continuous seams and joints per N.F.P.A. 96, U.L. and State of Maryland Codes.

2. Three (3) U.L. Listed, NSF-Approved, recessed round LED light fixtures, equally spaced.

3. Mount on/off light and fan switches to front face of hood.

4. Matching stainless steel perimeter closure panels to finished ceiling by K.E.C.; verify ceiling height.

5. Hanger rods and support system from structure above by other contract. K.E.C. to coordinate method and location with other trades.

6. Integral stainless steel hanger brackets.

DRAFT

7. 1" wide full-perimeter integral gutter with 1" turn-up and 3/4" stainless steel drain connection.

8. Accessories:
   -- #18GA stainless steel wall flashing from bottom edge of hood to top of finish floor base. Extend full-length of hood body. Attach to wall with non-exposed fasteners.

ITEM #16: (Continued)

-- Field wrapper.
-- Structural front panel.

ITEM #17: CONVECTION OVEN

QUANTITY:	One (1)
MANUFACTURER:	Blodgett Oven Company, Inc.
MODEL NO.:	Zephaire-200-E/200-ERI (N058)
PERTINENT DATA:	Double Deck, Full Size, Bakery Depth, Solid State Infinite Control
UTILITIES REQ'D:	(2) 11.0 KW, 208V, 3PH
ALTERNATE MFRS.:	None

Furnish and set-in-place per Equipment Plan, Sheet K-101, Manufacturer's Instructions and the following:

Upper Section:

1. Shall be fitted for standard baking and roasting use with chrome plated steel wire supports and racks.

2. Standard compliment of wire racks, five (5) total.

3. Stainless steel top, front, sides, and solid back panel.

4. Both doors with dual pane insulated glass windows and interior light package.

Lower Section:

1. Fitted for roll-in use with Item #14: Transport Dolly complete with stainless steel track assembly mounted on liner bottom.

2. Docking and locking assembly.

3. Stainless steel front, sides, solid back panel, and 6" high legs with adjustable bullet feet.

4. Both doors with dual pane insulated glass windows and interior light package.

ITEM #18: PREP SINK

QUANTITY:	One (1)
MANUFACTURER:	Custom Fabricated
MODEL NO.:	#14 GA Stainless Steel
PERTINENT DATA:	8'-0" Long x 2'-6" Wide x 2'-10" High

DRAFT

UTILITIES REQ'D: 1/2" HW, 1/2" CW, 1-1/2" IW
ALTERNATE MFRS.: None

Fabricate and set-in-place per Equipment Plan, Sheet K-101; Fabrication Detail, Sheet K-501; Manufacturer's Shop Drawing and the following:

ITEM #18: (Continued)

1. Front and end edge rolls per Detail 1.02M.

2. 13" high back splash per Detail 1.04A with finished back.

3. Framework per Detail 1.05.

4. Legs per Detail 1.07. Flanged feet on each corner leg.

5. Stainless steel undershelf per Detail 1.11.

6. 30" x 24" x 14" deep utility sink per Detail 3.04 with stainless steel waste lever angle bracket fully welded to underside of sink.

7. Sound-deaden underside of tabletop and sink with NSF-approved sound dampening material.

8. Accessories:
   -- One (1) T&S #B-5115-12-CRB8P pre-rinse spray faucet with 12" swing-spout add-on faucet, 6" wall bracket and backflow preventer. Provide 2"x4" stainless steel column for pre-rinse unit bracket.
   -- One (1) T&S #B-3950-01 twist handle drain with rear-connected over-flows, handle bracket and basket strainer.
   -- One (1) 20"x20" one-piece removable #22 gauge perforated stainless steel scrap basket.

ITEM #26: (Continued)

Furnish and set-in-place per Equipment Plan, Sheet K-101; Manufacturer's Instructions and the following:

1. Accessories:
   -- #E1-BS6OE-RP full size drop-in silverware basket with (6) RP-25 cylinders. Color: Black
   -- #E1-XHP-1VH full size food pan insert
   -- Three (3) 1/3-size 4" deep black plastic hotel pans.

2. Reduce unit height to 30" A.F.F.

ITEM #27: MILK MERCHANDISER, MOBILE

QUANTITY: One (1)
MANUFACTURER: Federal Industries
MODEL NO.: LMDM4878SC (N058)
PERTINENT DATA: Free-Standing, Self-Contained, (2) Shelves
UTILITIES REQ'D: 20.0A, 208V, 1PH
ALTERNATE MFRS.: None

Furnish and set-in-place per Equipment Plan, Sheet K-101, Manufacturer's Instructions and the following:

1. Accessories:
   -- Laminate finish to match serving counter color.
   -- Roll-down security cover.
   -- Sliding rear access doors.
   -- Rear door locks.
   -- Additional adjustable shelf.

ITEM #28: SERVING COUNTER

QUANTITY: One (1)
MANUFACTURER: Shelleysteel by The Delfield Company
MODEL NO.: Modular Stainless Steel Interlocking Sections
PERTINENT DATA: Straight Line Configuration, #14 Ga S/S Tops
UTILITIES REQ'D: ----
ALTERNATE MFRS.: SpecLine by Low Temp Industries, Inc.

DRAFT

Refer to individual counter components listed under alpha headings for specification.

ITEM #28A: HOT FOOD COUNTER

QUANTITY:	One (1)
MANUFACTURER:	Shelleysteel by The Delfield Company
MODEL NO.:	KC-74-NU-MOD (N058)
PERTINENT DATA:	Electrically Heated, Lowerator Base, Two Compartment
UTILITIES REQ'D:	12.7A, 120/208V, 1PH
ALTERNATE MFRS.:	SpecLine by Low Temp Industries, Inc.

Furnish and set-in-place per Equipment Plan, Sheet K-101; Manufacturer's Shop Drawing and the following:

1. (B) - 10" wide full-length solid stainless steel tray slide mounted on rigid brackets @28" A.F.F.

2. (F) - Line-up interlocks for countertop and tray slide.

3. (V) - 6" high stainless steel legs with adjustable bullet feet.

4. Modified counter height of 33" A.F.F.

6. Two (2) self-leveling heated compartments with removable covers and locking handle assemblies. Provide hinged stainless steel access doors to heated base cabinet.

7. Cord and plug set. Double cord hooks on bottom of unit.

8. Exterior body color: Black.

9. Recess temperature controls in counter apron, server's side.

ITEM #28C: REFRIGERATED COLD PAN COUNTER

QUANTITY:	One (1)
MANUFACTURER:	Shelleysteel by The Delfield Company
MODEL NO.:	SC-60-NU-MOD (N058)
PERTINENT DATA:	Mechanically Cooled, Open Base, With Slanted Top Cold Pan
UTILITIES REQ'D:	7.0A, 120V, 1PH; 1" IW
ALTERNATE MFRS.:	SpecLine by Low Temp Industries, Inc.

Furnish and set-in-place per Equipment Plan, Sheet K-101; Manufacturer's Shop Drawing and the following:

1. (B) - 10" wide full-length solid stainless steel tray slide mounted on rigid brackets @ 28" A.F.F.

2. FlexiShield® #DCFSKS single-tier display full-length food shields with stainless steel finish uprights

and LED light.

3. (F) - Line up interlocks for countertop and tray slide.

4. Stainless steel adapter bars.

5. Cord and plug set. Double cord hooks on bottom of unit.

6. (SS) - 6" high stainless steel legs with adjustable bullet feet.

ITEM #28B: (Continued)

7. Modified counter height of 30 A.F.F.

8. Provide drain line less shut-off valve. Plumber to extend piping to nearest floor sink.

9. Provide cut-out in top for drop-in cold pan.

11. Exterior body color: Black.

12. Accessories:
    -- One (1) Delfield #N8156BP-MOD drop-in sloped mechanically cooled cold pan.
    -- Two (2) Cambro #12CW110 Camwear® full-size 2½" deep black polycarbonate food pans.
    -- Four (4) Cambro #22LPCW110 Camwear® half-size long 2½" deep black polycarbonate food pans.
    -- Eight (8) Cambro #32CW110 Camwear® one-third size 2½" deep black polycarbonate food pans.
    -- Eight (8) Cambro #62CW110 Camwear® one-sixth size 2½" deep black polycarbonate food pans.
    -- Two (2) Cambro #26CF110 ColdFest® half-size 6" deep black food pans with covers.
    -- Two (2) Cambro #36CF110 ColdFest® one-third-size 6" deep black food pans with covers.
    -- Two (2) Cambro #66CF110 ColdFest® one-sixth size 6" deep black food pans with covers.

Furnish and install per Equipment Plan, Sheet K-101; Equipment Schedule, Sheet K-102; Manufacturer's Instructions and the following:

1. Electrical Contractor to furnish and install GFCI type breaker at kitchen electrical panel board.

2. Set bottom of receptacle at 60” A.F.F.

(END OF FOODSERVICE ITEMIZED SPECIFICATIONS)

END OF SECTION 114000

DRAFT

SECTION 114000
FOODSERVICE EQUIPMENT – MIDDLE AND HIGH SCHOOLS

PART 1 GENERAL

1.1 DESCRIPTION

A. Scope: Furnish all labor, materials, services, equipment and appliances required to provide and deliver all foodservice equipment hereinafter specified into the building, uncrate, assemble, hang, set-in-place, level, and completely install, exclusive of final utility connections. Demonstration and training shall be performed by manufacturer's representative knowledgeable in all aspects of this equipment.

B. Related Work Specified Elsewhere:

1. All plumbing, electrical and ventilating work required in conjunction with commercial foodservice equipment including rough-in to points indicated on mechanical drawings, and final connections from rough-in points, electrical service to points of connection and final connections shall be by Divisions 22, 23 and 26.
2. Refrigeration work will be done by the Kitchen Equipment Contractor except for electrical and plumbing connections to and between compressors, blower coils, controls, etc. These final connections shall be by Divisions 22, 23 and 26.
3. All traps, steam traps, grease traps, line strainers, tail pieces, valves, stops, shut-offs, and fittings necessary for equipment specified will be furnished and installed under mechanical contract by Division 22 unless specifically called for otherwise under each item.
4. All line and disconnect switches, safety cut-offs and fittings, convenience boxes or other electrical controls, fittings and connections will be furnished and installed under electrical contract by Division 26, unless specifically indicated otherwise in the item specifications. Starting switches for certain specified pieces of foodservice equipment are to be provided by Kitchen Equipment Contractor. Those starting switches, if furnished loose as standard by Foodservice Manufacturers (other than fabricated items), shall be mounted and wired complete under Division 26.
5. Any sleeves or conduit required for refrigeration, syrup tubing, or carbonation tubing will be furnished and installed under Division 22.
6. Unless specifically called for in the Item Specifications, ventilating fans and all duct work between same and ceiling rough-in openings, and from same to discharge opening in building will be furnished and installed by Division 22.

1.2 DEFINITIONS

A. All references to the terms "Contractor", "Kitchen Equipment Contractor", or "K.E.C." in the specifications and/or on the drawings shall be defined to mean the Kitchen Equipment Contractor.

B. All references to the term "Owner" in the specifications and/or on the drawings shall be defined to mean the Owner or Owner's designated representative and the Foodservice

DRAFT

Equipment Consultant.

C. All references to the term "Consultant" or "Foodservice Equipment Consultant" in the specifications and/or on the drawings shall be defined to mean **NYIKOS GARCIA FOODSERVICE DESIGN, INC.** its employees, and authorized representatives and is referred to throughout the contract documents as if singular in number and masculine in gender.

D. The phrase "The K.E.C. shall" or "by the K.E.C.", as applicable, is understood to be included as a part of each sentence, paragraph or article of these specifications unless otherwise indicated or specified.

1.3 QUALITY ASSURANCE

A. Qualification of Suppliers:

1. Commercial foodservice equipment suppliers shall submit satisfactory evidence of compliance with the following qualifications and conditions to be approved.

    a. Successful completion of jobs of comparable scope.
    b. Have manufacturer's authorization to distribute and install specified factory items of equipment.
    c. Maintain a permanent staff experienced in the installation of foodservice equipment and preparation of professional style rough-in drawings and brochures.
    d. Maintain or have access to fabrication shop meeting N.S.F. requirements. If other than foodservice equipment suppliers own fabrication shop, obtain Consultant approval of fabrication shop desired to be used.
    e. Maintain or have access to a readily available stock of repair and replacement parts, together with authorized service personnel.

B. Qualification of Fabricators:

1. Fabricators shall be an N.S.F. approved organization with trained personnel and facilities to properly design, detail and fabricate equipment in accordance with the specifications and standard details contained herein.
2. Custom fabricated equipment shall bear the National Sanitation Foundation seal of approval and listed as such under N.S.F. Standards No. 2 and No. 33.
3. Only one (1) fabricator shall be used for this project, and all equipment will be fabricated at the same shop. Where units cannot be fully shop-fabricated, complete fabrication at project site.
4. Acceptable fabricators are:

    a. Pro Stainless, Inc.; Keyser, WV
    b. Commercial Stainless, Inc.; Bloomsburg, PA
    c. Keystone Custom Fabricators, Inc.; Elizabeth, PA
    d. Aero Manufacturing; Clifton, NJ
    e. Titan Stainless; Pageland, SC
    f. Other fabricators, as approved by Consultant.

DRAFT

C. Qualification of Manufacturers:

1. Manufacturers shall be regularly engaged in the production of items furnished and shall have demonstrated the capability to furnish similar equipment that performs the functions specified or indicated herein.

D. Standard Products:

1. Materials, products, and equipment furnished under this contract shall be the standard items of manufacturers regularly engaged in the production of such materials, products, and equipment and shall be of the manufacturer's latest design that complies with the specifications which have been produced and used successfully on other projects and in similar applications.
2. Discrepancies within contract documents should immediately be brought to the attention of the Consultant in writing for clarification prior to fabrication or ordering of standard items.

1.4 PLANS & SPECIFICATIONS

A. Specifications and drawings have been prepared to form the basis for procurement, erection, start-up and adjustment of all equipment in this contract. Plans and specifications shall be considered as mutually explanatory and work required by one, but not the other, shall be performed as though required by both. Items required by one, but not by the other shall be provided as though required by both. Work shall be accomplished as called for in specifications and shown on drawings, so that all items of equipment shall be completely functional for purpose for which they were designed. When there is any discrepancy between drawings and specifications, drawings shall govern. Bidders should seek clarification of any discrepancies from the Consultant prior to bidding.

DRAFT

1.5 SUBMITTALS

A. General Requirements:

1. Assemble and submit all shop drawings, rough-in drawings, brochures, color samples, etc. as a complete package. There will be no review of partial submittals.
2. Any and all costs, to all trades and parties involved, arising from delay of project due to non-submittal of the complete package by the K.E.C. within a reasonable time period shall be borne solely by the K.E.C.
3. Identify each submittal by project name, date, contractor, submittal name, and any other necessary information to distinguish it from other submittals.

B. Shop Drawings:

1. Submit electronic copy of shop drawings on sheets equal in size to Contract Documents of equipment specified for custom fabrication including all accessories attached to each item.
2. Drawings shall be detailed and fully dimensioned to a minimum scale of 3/4"=1'-0" for plan and elevation views, and 1-1/2"=1'-0" for sections, based on

the floor plan(s) and following item specifications. Drawings will be checked for thoroughness, accuracy, completeness, neatness, and returned for corrections, if necessary.

C. Rough-in Drawings:

1. Submit electronic copy of rough-in drawings on sheets equal in size to Contract Documents of detailed arrangement plans professionally prepared from architects dimensioned plans (not traced from Contract Documents) at a minimum scale of 1/4"=1'-0".
2. Equipment Layout Plan showing arrangement of all items specified and identified on schedule of equipment listing item number, description, quantity, manufacturer, model number, and remarks.
3. Ventilation Plan showing dimensioned locations of all duct openings for ventilators and dishmachines identifying size, c.f.m. required (exhaust and supply), static pressures, and connection heights.
4. Plumbing/Electrical Plans showing dimensioned locations, sizes, elevations and capacities of all utility services required for each item of equipment in relation to finished walls, columns, and heights above finished floor.
5. Special Conditions Plan showing exact dimensions and details of all masonry bases, floor depressions, critical partition locations/heights, wall openings, reinforcing for wall and/or ceiling mounted equipment, and conduit locations for soda and compressed gas lines.

D. Equipment Brochures:

1. Submit electronic copy of manufacturer's illustrations and technical data for approval prior to procurement. All items of Standard Manufacture shall be submitted, including items purchased to be built into fabricated equipment. Each illustration shall be marked to accurately describe the item to be furnished as specified. Include all deviations from standard information (i.e., voltage, phase, load, etc.).
2. Include a separate information sheet ahead of each illustration sheet showing all service connection sizes, electrical requirements, loads, consumptions, and all accessories specified.
3. Manufacturer's suggested schematic drawings for connection of mechanical and electrical services for such items as booster heaters, disposers, or any other item of equipment that may require the same.

E. Miscellaneous Shop Drawings:

1. Submit electronic copy of manufactured equipment specified requiring clarification and approval such as, walk-in cooler/freezer drawings, ventilator drawings, utility raceway drawings, and refrigeration system drawings.

F. Operation and Maintenance Manuals:

1. Submit electronic copy for all mechanically operated equipment of standard manufacture. Include operating and cleaning/maintenance instructions, parts listing, recommended parts inventory listing and purchase source, copy of

DRAFT

warranties, and similar applicable information.
2. Brochure covers shall bear the job name, date, and name of contractor.
3. Submit start-up report for food service equipment such as walk-in cooler/ freezer, refrigeration system, utility raceway, ventilator and cooking equipment.

G. Manufacturer's List:

1. The K.E.C. shall submit in writing a list of all manufacturer's representatives of the food service equipment such as convection ovens, ranges, etc., and their authorized service agencies' addresses and telephone numbers; to be presented after submission of manufacture data.

H. Samples:

1. Samples of materials, products, and fabrication methods shall be submitted for approval upon request at no additional cost, before proceeding with work.

I. Re-submission Requirements:

1. Shop Drawings:

a. Revise initial drawings as required and resubmit in accordance with submittal procedures.
b. Indicate on drawings all changes which have been made in addition to those requested by Consultant.

2. Product Data and Samples:

g. Submit new data and samples as required for initial submittal.
h. Make all re-submittals within fourteen (14) working days from date of Consultants previous action.

J. Approvals:

1. After approval of the submittals listed above, furnish as many prints and copies as are required for the various trades, the Owner, the Architect, and the Consultant.
2. The approval of the shop drawings will be general and shall not relieve the K.E.C. of responsibility for proper fitting, finishing, quantities, and erection of work in strict accordance with the contract requirements, nor does it relieve him of the responsibility of furnishing material and workmanship not indicated on approved shop drawings but required for the completion of his work.
3. Approval by the Consultant and/or Owner of the manufacturer's data submitted by the K.E.C. does not waive the responsibility of K.E.C. to furnish each item of equipment in complete compliance with the specifications and drawings. Discrepancies between Contract Documents and furnished equipment shall be corrected even after approval and installation of this equipment at no additional cost to the Owner.

K. Green Globes Submittals: Comply with Section 018113.

DRAFT

1. Food service equipment, if available: Product data demonstrating ENERGY STAR or FEMP.
2. Combination oven: Product data stating water usage in gallons per hour.
3. Pre-rinse valves: Product data stating water usage in gallons per minute (GPM).
4. Interior field-applied adhesives and sealants: Product data demonstrating low-emitting requirements.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Delivery:

1. Equipment shall be delivered to the job site only after the building is weather-safe and vandal-safe.

B. Storage:

1. Store equipment in an area convenient to the point of installation in such a way that it is protected from the weather and job hazards.

C. Protection:

1. Wrapping and protective coatings shall remain on all items until ready for use and in the case of stainless steel items, until installation is complete, and the job is ready for cleaning.

D. Damage:

1. All responsibility shall rest with the K.E.C. for any damage or loss incurred prior to final acceptance. Such items as may be lost or damaged shall immediately be replaced or repaired to a new condition to the complete satisfaction of and at no additional cost to the Owner.

DRAFT

1.7 JURISDICTION TRADE AGREEMENTS AND RESTRICTIONS

A. Include the work specified, shown or reasonably infer able as part of foodservice equipment. Portions of this work may be subcontracted to those qualified to do such work, as may be necessary because of jurisdictional trade agreements and restrictions.

1.8 REGULATIONS AND CODES

A. Except as otherwise indicated, each item of equipment shall comply with the latest current edition of the following standards as applicable to the manufacture, fabrication, and installation of the work in this section.

1. N.S.F. Standards: Comply with National Sanitation Foundation Standards and criteria and provide N.S.F. "Seal of Approval" on each manufactured item and major items of custom-fabricated work.
2. U.L. Standards: For electrical components and assemblies, provide either U.L.

labeled products or, where no labeling service is available, provide a complete index of the components used as selected from the U.L. "Recognized Component Index".

3. A.N.S.I. Standards: For gas-burning equipment, comply with A.N.S.I. Z21-Series standards. Comply with A.N.S.I. B57.1 for compressed gas cylinder connections and with applicable standards of the Compressed Gas Association for water connection air gaps and vacuum breakers.
4. A.G.A.: All gas-fired equipment shall be A.G.A. Approved, equipped to operate on the type of gas available at the job site and shall contain 100% automatic safety shut-off devices.
5. N.F.P.A. Standards: Comply with N.F.P.A. Bulletin 96 for exhaust systems and with N.F.P.A. Bulletins 17 & 96, and U.L. 300 for fire extinguishing systems.
6. A.S.M.E. Code: Comply with A.S.M.E. boiler code requirements for steam generating and steam heated equipment. Provide A.S.M.E. inspection, stamps, and certification of registration with National Board.
7. National Electric Code: Comply with N.E.C. Volume 5 for electrical wiring and devices included with foodservice equipment.
8. Code of Maryland Regulation, COMAR 10.15.03 for Food Service Facilities.
9. All authorities having jurisdiction over this type of equipment and/or installation.
10. Where specifications and/or drawings require mechanical, electrical or refrigeration work to be performed, such work shall be done in strict conformance to other portions of the Base Building Specification which sets forth standards for this type of work.
11. Where there exists two standards or codes for one type of work, the stricter method shall govern.

1.9 WARRANTIES

A. Warrantee in writing all equipment and fabrication against defects and workmanship for a period of two (2) years from date of acceptance.

1. Each piece of mechanical equipment shall be listed, together with the authorized service and repair agency whom the Owner will call should malfunctions occur within the two-year (2) guarantee period.

B. Refrigeration system compressors shall be warranted for five (5) years by the manufacturer. Free refrigeration preventive maintenance service, including parts and labor, shall be furnished for two (2) years from date of acceptance, unless otherwise specified.

1.10 JOB CONDITIONS

A. Visit the job site to field check actual wall dimensions and roughing-in and shall be responsible for fabricating and installing the equipment in accordance with the available space and utility services as they exist on the job site.

B. Check all door openings, passageways, elevators, etc., to be sure that the equipment can be conveyed to its proper location within the building and if necessary, check the possibility of holding wall erection, placement of doorjambs, windows, etc. for the purpose of moving the equipment to its proper location with the Contractor. Any removal

DRAFT

and rebuilding of walls, partitions, doorjambs, etc. necessary to place the equipment, or if caused by incorrect information on the Contractor's drawings, shall be done at the expense of the K.E.C., at no additional cost to the Owner.

C. Notify the Consultant and Owner before fabrication of equipment of any discrepancies between plans and specifications and actual conditions on the job.

D. Before finished floors, walls, and/or ceilings are in place, physically check the location of all "rough-ins" at the job site. Report discrepancies in writing.

E. Any changes required after fabrication has been started to ensure equipment accurately fitting the space as it exists and conforming to actual field dimensions on the job shall be made at no additional cost to the Owner.

F. If special hoisting equipment and operators are required, include such cost as part of the bid for this work.

1.11 CHANGES IN THE WORK

A. The Owner reserves the right to require reasonable modification to be made in the routing of work and relocation of equipment. This specifically refers to conditions where interference occurs or where more desirable accessibility can be obtained or whose materials cannot be installed because of structural or mechanical conditions encountered. Such changes shall be made at no additional cost to the Owner.

1.12 PATENTS

A. Hold harmless and save the Owner and its officers, consultants, servants and employees from liability of any nature or kind, including costs and expenses for or on account of any copyrighted, patented, or un-patented invention, process, trademark, design, device, material, article, or appliance manufactured or used in the performance of the contract, including its use by the Owner, unless otherwise specifically stipulated in the Contract Documents.

B. If the Contractor has information that the process or article specified is an infringement of a patent, he shall be responsible for such loss unless he promptly gives such information to the Owner in writing. The contract price shall include all royalties or costs arising from the use of any or all of the above which are, in any way, involved in the contract.

1.13 CONTRACTOR'S WARRANTY

A. The Contractor represents and warrants:

1. That he is financially solvent and that he is experienced in and competent to perform the types of work or to furnish the plans, materials, supplies or equipment, to be so performed or furnished by him.
2. That he is familiar with all Federal, State, municipal, and department laws, ordinances, orders, and regulations, which may, in any way, affect the work of those employed therein, including, but not limited to, any special acts relating to the work or to the project of which it is a part.

DRAFT

3. That such temporary and permanent work required by the contract as is to be done by him can be satisfactorily constructed and used for the purpose for which it is intended and that such construction will not injure any person or damage any property.
4. That he has carefully examined the plans, specifications, addenda, if any, and the site of the work and that, from his own investigations, he has satisfied himself as to the nature and location of the work, the character, quality, and quantity of materials likely to be encountered, the character of equipment and other facilities needed for the performance of the work, the general and local conditions, and all other materials which may, in any way, affect the work or its performance.
5. That he has satisfied himself as to the existing openings and accesses to the foodservice area through which his equipment shall be required to pass and that he is responsible for his equipment being delivered in as many sections as necessary to conform to the available space dictated by these existing limitations.

1.14 SUBSTITUTIONS

A. Bids submitted shall be for the specific manufacturer and model, size, capacity, and accessories, as specified or shown on the drawings.

B. The K.E.C. may quote upon brands and models of equipment other than those specified as a substitute, but he must also bid the primary item. In the event that it is desired to request approval of substitute material, product, article, process, or item of equipment in lieu of that which is specified, submit a written request at the time of submitting bid on a separate sheet attached to, but not part of, the base bid, setting forth the proposed substitution in detail, including an itemized analysis of the addition or deduction in the amount of the contract, if any, which will result if the substitution is approved. Each such request shall include a complete description of the proposed substitute, the name of the proposed substitute, the name of the material or equipment for which it is to be substituted, drawings, cuts, performance and test data and any other data or information necessary for a complete evaluation. If approved, bidders will be notified in the form of addendum.

C. The Contractor shall be held responsible for additional costs to himself or any other prime contractor for changes required to install materials, devices, equipment, etc., which the Contractor has substituted for that specified.

D. The Owner reserves the right to award a contract or contracts based upon the inclusion or exclusion of one or more of the alternate estimates. The description of all workmanship and materials under the various headings of the specifications shall have the same meaning and force when applied to similar workmanship and materials in the alternate. If the descriptions are not specific, the workmanship shall be the best quality and the materials the best commercial grade.

E. Whenever any product is specified in the Contract Documents by reference to the name, trade name, make, or catalog number of any manufacturer or supplier, the intent is not to limit competition but to establish a standard of quality which is necessary for the project. Products of other manufacturers meeting the established criteria will be

DRAFT

considered. However, please take note that the plumbing, electrical, steam, heating, ventilating, and air-conditioning drawings prepared by the consulting engineers, have been engineered based on the first product named under each item number designation. Therefore, any other product which is submitted for approval in lieu of the primary item specified, shall conform to the rough-in requirements established for the first product named, as well as physical size and building construction requirements.

F. Any equipment listed, which is not in accordance with the provisions of these specifications, will be rejected. If the Contractor fails to submit for approval within the specified time the list of equipment as required herein, the Consultant shall then have the right to make the final equipment selection. The selection made by the Consultant shall strictly conform to these specifications and will be final and binding, and the items shall be furnished and installed by the Contractor without change in the contract price at the time of completion.

G. It shall be the responsibility of the K.E.C. to prove that substitutions are equal to specified items. **NYIKOS GARCIA FOODSERVICE DESIGN, INC.** as the Owner's representative, shall be the determining authority as to the acceptability or equality of the substitutions. No substitutions shall be approved after bids are received.

1.15 DESIGN/MODEL CHANGE, DISCONTINUED ITEMS

A. All equipment specified shall be of latest design. Any improvements made in design and construction of prefabricated items before equipment is actually delivered to the project site, shall be incorporated in equipment, at no additional cost, provided such incorporation does not delay delivery date of equipment.

B. In the event of an item being discontinued after specified and prior to delivery to project site, the K.E.C. shall be responsible for notifying the Consultant in writing of the discontinued item and request an alternate of equal performance, including all accessories, at no additional cost to the Owner.

PART 2 PRODUCTS

2.1 GENERAL

A. The equipment and its component parts shall be new and unused. All items of standard manufactured equipment shall be current models at the time of delivery. All parts subject to wear, breakage, or distortion shall be accessible for adjustment, replacement, and repair.

B. Means shall be provided to ensure adequate lubrication for all moving parts. All oil holes, grease fittings, and filler caps shall be accessible without the use of tools.

C. The design of the equipment shall be such as to provide for safe and convenient operation. Covers or other safety devices shall be provided for all items of equipment presenting safety hazards. Such guards or safety devices shall not present substantial interference to the operation of the equipment. All guards shall provide easy access to the guarded parts.

DRAFT

D. Trim shall not be an acceptable substitute for accuracy and neatness. When trim is required and accepted by the Consultant and the Owner in lieu of rejection of items of equipment, it shall be the K.E.C.'s responsibility to provide same at no additional cost.

E. Unless otherwise specified herein, no material lighter than #20 gauge shall be incorporated into the work. All gauges for sheet iron and sheet steel shall be U.S. Standard Gauges and finished equipment gauge thickness shall not vary more than 5% plus or minus from the thickness indicated below.

GAUGE	THICKNESS	GAUGE	THICKNESS
#10	0.1406	#16	0.0625
#12	0.1094	#18	0.0500
#14	0.0781	#20	0.0375

F. Materials or work described in words which have a well-known and acceptable trade meaning shall be held to refer to such accepted meanings.

2.2 MATERIALS

A. Refrigeration Systems:

1. Self-contained:

   a. Whether the units be top-mounted or cabinet-mounted, they shall be started by the K.E.C. and shall be tested for maintenance of temperature.
   b. All units shall be furnished with condensate evaporators.

2. Remote: Provide and install complete refrigeration system(s), charged, started, and operating properly, according to the Item Specifications and the following.

   a. Single stage compressors with air-cooled condensers operating within the recommended range of suction discharge pressure of economical operation and within the required capacity.
   b. All units shall be new and factory assembled, to operate with the refrigerant specified. Refrigerant R-404A shall be used for all medium and low temperature applications. Due to the unsettled nature of refrigerants, no refrigerant shall be used with a phase-out date of less than ten (10) years from the date of installation.
   c. Compressors shall be accessible scroll type, Copeland or approved equal, and shall be equipped with high-low pressure control, liquid line drier, sight glass, suction and discharge vibration eliminator, and head pressure control.
   d. The system shall have a factory mounted and pre-wired control panel complete with main fused disconnect, compressor circuit breakers, contactors, and time clocks wired for single point power connection.
   e. The supporting frame shall be constructed of structural steel, fully welded, and protected against rust and corrosion with one (1) coat primer, and two (2) coats paint, unless otherwise specified.
   f. Systems specified for outdoor installation shall be fully protected in a weather-proofed housing with louvered front panel and hinged top,

DRAFT

constructed to resist rust and corrosion, and furnished with low ambient controls. Crankcase heater shall be provided with every compressor.

3. Where specifications call for pre-piped lines (i.e., from a fixture to a valve compartment, etc.), provide such work in strict conformance with other sections of the specifications which set forth standards for this type of work or in conformity with the requirements of the Board of Fire Underwriters or ASHRAE Standards, whichever is greater.
4. Each refrigeration item specification is written to provide minimum specifications and scope of work. All refrigeration equipment shall be designed and installed to maintain the following general temperatures unless otherwise specified.

TYPE	REFRIGERATORS	FREEZERS
a. Walk-In	+35º F./1.7º C.	-10º F./-23.3º C.
b. Reach-In	+35º F./1.7º C.	-10º F./-23.3º C.
c. Undercounter	+35º F./1.7º C.	-10º F./-23.3º C.
d. Fabricated	+35º F./1.7º C.	-10º F./-23.3º C.
e. Cold Pans	+0º F./-17.8º C.	
f. Work Rooms	+50º F./10º C.	

5. Provide (including payment if subcontracted) all electrical and refrigeration components needed by the completed system and complete (or have completed by the respective trades) all connections of and to said components.
6. An evaporator coil defrost system shall be provided and installed by the K.E.C. on all refrigeration systems designed to operate at an evaporator coil temperature of less than +35º F. Evaporator coil units provided without electric defrost feature shall be installed with a solenoid valve in the liquid line, controlled by the time clock so as to shut off the flow of refrigerant and allow the compressor to pump down and shut off by activation of the pressure control switch.
7. Verify the requirements of and provide any or all additional refrigeration specialty(s) or component(s) required or recommended by the manufacturer for proper operation under the specific operating conditions and location of each system specified.
8. Verify and provide manufacturer's certification that the equipment selection hereinafter specified for each refrigeration system is properly sized and shall meet the operating requirements set forth for each system regarding maintaining specified operating temperature, hours of compressor running time, and system pressures and velocities as recommended by the equipment manufacturer(s).
9. All refrigeration systems shall be installed and wired in strict conformance with the manufacturer's instructions and recommendations.

B. Motors and Heating Elements:

1. Motors up to and including 1/2 HP shall be wired for 120 volt, single phase

DRAFT

service. Motors larger than 1/2 HP shall be wired for 208 volt, single or three phase service as indicated. Motors shall be of the drip-proof, splash-proof, or totally enclosed type, having a continuous duty cycle and ball bearings, except small timing motors which may have sleeve bearings. All motors shall have windings impregnated to resist moisture. Motors located where subject to deposits of dust, lint, or other similar matter shall be of the totally enclosed type. Motors shall have ample power to operate the machines for which designated under full load operating conditions without exceeding their nameplate ratings. Insulation shall be N.E.M.A. Class B or better.

2. Heating elements having a connected load up to and including 1,000 watts shall be wired for 120 or 208 volt, single phase service, or as indicated on the drawings.
   a. Any heating element larger than 1,000 watts or any combination of elements in one fixture totaling more than 1,000 watts shall be wired for 208 volt single or three phase service, as indicated on the drawings.
   b. Fixtures having multiple heating elements may be wired for three phase service with the load balanced as equally as possible within the fixture.

C. Switches and Controls:

1. Provide recognized commercial grade signals, "on-off" pushbuttons or switches, and other speed and temperature controls as required for operation of each item, complete with pilot lights and permanent graphics, conspicuously labeled, to assist the user of each item.
2. Mount switches and controls directly adjacent the piece of equipment for which it involves, on operator's side of counter body apron, out of view to the public.
3. Provide on or for each motor-driven appliance or electrical heating or control unit, a suitable control switch or starter of the proper type and rating and in accordance with Underwriter's Code wherever such equipment is not built in. All other line switches, safety cut-outs, control panels, fuse boxes, other control fittings and connections, when not an integral part of the unit or furnished loose by the manufacturer will be furnished and installed by the Electrical Contractor, unless otherwise specified. All electrical controls, switches, or devices provided loose for field installation as a part of the item specified shall be installed in the field by the Contractor unless otherwise specified.
4. Appliances shall be furnished complete with motors, driving mechanisms, starters, and controllers, including master switches, timers, cut-outs, reversing mechanisms, and other electrical equipment if and as applicable.

D. Cover Plates:

1. All controls mounted on vertical surfaces of fixtures shall be set into recessed die stamped stainless steel cups or mounted onto removable cover plates in such a fashion as to not protrude or interfere with the operation of each item.
2. Cover plates shall be furnished and installed for all electrical outlets, receptacles, switches and controls furnished by the K.E.C., and shall match the material and finish of the equipment to which they will be fastened.

E. Wiring and Conduit:

DRAFT

1. Wiring shall be properly protected in N.E.M.A. and U.L. approved metal enclosures. Only rigid steel conduit shall be used, zinc coated where unexposed and chrome plated where exposed. All wiring shall be run concealed wherever possible.
2. All equipment furnished under this contract shall be so wired, wound, or constructed so as to conform with the electrical characteristics at the job site.
3. Wiring and connection diagrams shall be furnished with electrically operated machines and for all electrically wired fabricated equipment.
4. Furnish all foodservice equipment completely wired internally using wire and conduit suitable for a wet location. Where an Electrician's services are required, the work shall be done in the K.E.C.'s factory or at his expense at the job site at no additional cost to the Owner. Provide all electrical outlets and receptacles required to be mounted on or in fabricated equipment and interconnect to a master circuit breaker panel with all wires neatly tagged showing item number, voltage characteristics, and load information. Final connection shall be made by the Electrical Contractor.

F. Cords, Plugs, and Receptacles:

1. The Electrical Contractor shall provide three- or four-wire, grounding-type receptacles for all wall and floor mounted outlets to be used for plug-in equipment with characteristics as noted on the drawings. Provide "Hubbell" three-wire or four-wire grounding-type connectors and neoprene cords installed on each item of plug-in equipment, as indicated on drawings and item specifications.
2. K.E.C. shall coordinate with the Electrical Contractor so that the receptacles provided will match the specific plugs provided as part of the plug-in equipment. Any changes in cords and plugs required in the field due to lack of coordination between the Electrical Contractor and the K.E.C. shall be the latter's responsibility.
3. Reduce the length of all cords furnished with the specified equipment to a suitable or appropriate length so they do not interfere with other equipment or operations.
4. Pedestal receptacles that are part of fabricated equipment exposed to view, shall be similar to T&S Model No. B-1508DD single face, single gang or Model No. B-1528DD single face, double gang.

G. Water Inlets:

1. Water inlets shall be located above the positive water level wherever possible to prevent siphoning of liquids into the water supply system. Wherever conditions shall require a submerged inlet, a suitable type of check valve (except in jurisdictions where check valves are prohibited) and vacuum breaker shall be placed on the fixture to form a part of same to prevent siphoning. Where exposed to view, piping and fittings shall be chrome-plated.

H. Drain Lines:

1. Plumbing Contractor shall provide and install indirect waste lines from

DRAFT

equipment which will discharge into floor drains or safe wastes in accordance with Plumbing Rough-In Plans, chrome-plated where exposed. Extend to a point at least 1" (or as required by local codes) above the rim of the floor drain, cut bottom on 45° angle and secure in position.

2. All horizontal piping lines shall be run at the highest possible elevation and not less than 6" above finished floor, through equipment where possible.
3. No exposed piping in or around fixtures or in other conspicuous places shall show tool marks of more than one thread at the fitting.
4. All steam operating valves on or in fabricated and purchased foodservice equipment shall be provided with composition hand wheels, which shall remain reasonably cool in service.
5. Provide suitable pressure regulating valves for all equipment with such components that might reasonably be expected to be affected over a period of time by adverse pressure conditions.

I. Faucets, Valves and Fittings:

1. All sinks shall be fitted with chromium plated, swing spout faucets of same manufacturer throughout as follows, or otherwise specified in Item Specifications.

    a. Prep and Utility Sinks:
        1) Splash-Mounted:
            a) T&S Brass and Bronze Works, Inc., Model B-231.
            b) Fisher Manufacturing Company, Model 3253.
        2) Deck-Mounted:
            a) T&S Brass and Bronze Works, Inc., Model B-221.
            b) Fisher Manufacturing Company, Model 3313.
    b. Pot Sinks:
        1) Splash-Mounted:
            a) T&S Brass and Bronze Works, Inc., Model B-290.
            b) Fisher Manufacturing Company, Model 5214.

2. Pre-Rinse Assemblies:

    a. Splash-Mounted:
        1) T&S Brass and Bronze Works, Inc., Model B-133 with B-109 wall bracket.
        2) Fisher Manufacturing Company, Model 2210 with 2902-12 wall bracket.
    b. Deck-Mounted:
        1) T&S Brass and Bronze Works, Inc., Model B-143 with B-510 mixing valve and B-109 wall bracket.
        2) Fisher Manufacturing Company, Model 2810 with 2805-CV mixing valve and 2902-12 wall bracket.

3. Vacuum Breakers:

    a. General Use:
        1) Fisher Manufacturing Company, Model 3990-8000.
    b. Disposers:

DRAFT

1) Splash-Mounted:
   a) T&S Brass and Bronze Works, Inc., Model B-455.
   b) Fisher Manufacturing Company, Model 3990.
2) Deck-Mounted:
   a) T&S Brass and Bronze Works, Inc., Model B-456.
   b) Fisher Manufacturing Company, Model 3991.

4. Trough Inlets:
   a. Fisher Manufacturing Company, Model No. 2905.

5. Other specialty faucets, pre-rinse assemblies, vacuum breakers, and trough inlets, as specified under Item Specifications.
6. All sink compartments shall be fitted with 2" NPT male, chrome-plated, brass rotary waste valves complete with overflow assemblies and stainless steel strainers.

   a. Prep and General Utility Sinks:
      1) Fisher Manufacturing Company, Model No. 6100.
   b. Pot Sinks:
      1) Fisher Manufacturing Company, Model No. 6102.

7. Refer to Division 22 for all other fittings.

J. Metals and Alloys:

1. Stainless steel sheets shall conform to ASTM 240, Type 302, Condition A, 18-8, of U.S. Standard Gauges as previously indicated under paragraph 2.1.E.

   a. All exposed surfaces shall have a No. 4 finish. A No. 2B finish shall be acceptable on surfaces of equipment not exposed to view.
   b. All sheets shall be uniform throughout in color, finish, and appearance.
   c. Rolled shapes shall be of cold rolled type conforming to ASTM A36.

2. Stainless steel tubing and pipe shall be Type 304, 18-8, having a No. 4 finish, and shall conform to either ASTM A213 if seamless or ASTM A249 if welded.
3. Where galvanized metal is specified, it shall be copper-bearing galvanized iron, cold-rolled, stretcher leveled, bonderized, re-rolled to insure a smooth surface, and used in the largest possible sizes with as few joints as necessary.
4. Galvanizing shall be applied to rolled shapes in conformance with ASTM A123, and to sheets in conformance with ASTM A526, coating designation G-90.

K. Castings:

1. Castings shall consist of corrosion resisting metal (white metal) containing not less than 30% nickel. All castings shall be rough ground, polished, and buffed to bright lustre and free from pit marks, runs, checks, burrs, and other imperfections. In lieu of corrosion resisting metal castings, die-stamped or cast 18-8 stainless steel will be acceptable.

L. Hardware and Casters:

DRAFT

1. All hardware shall be of heavy-duty type, satin finished chromium plated brass, cast or forged or highlighted stainless steel of uniform design. All hardware shall be a well-known brand and shall be identified by the manufacturer's name and model number for easy replacement of broken or worn parts.
2. Casters on custom-built equipment shall be heavy-duty type, ball bearing, solid or disc wheel, with grease-proof rubber, neoprene, or polyurethane tire. Wheel shall be 5" diameter, minimum width of tread 1-3/16", minimum capacity per caster 250 pounds, unless otherwise noted.

    a. Solid material wheels are to be provided with stainless steel rotating wheel guard.
    b. All casters shall have sealed wheel and swivel bearings, polished plated finish and be N.S.F. approved.
    c. All equipment specified with casters shall have a minimum of two (2) with brakes installed on opposite corners, unless otherwise noted.

M. Locks:

1. When specified, doors and drawers of all custom fabricated or manufactured equipment shall be provided with cylinder locks, disc tumbler type with stainless steel faceplate as manufactured by Standard-Keil Mfg. Co. or approved equal.

    a. Provide two (2) sets of keys for each lock.
    b. All locks shall be keyed alike, except at cashiers' stations or unless otherwise specified.

N. Thermometers:

1. All fabricated refrigerated compartments shall be fitted with exterior mounted, adjustable, dial or digital thermometers with flush bezels, and shall be calibrated after installation.

O. Sealants:

1. Sealant, wherever required, shall conform to ASTM C 920; Type S Grade NS, Class 25, Use Nt, with characteristics that when fully cured and washed meets requirements of Food and Drug Administration Regulation 21 CFR 177.2600 and N.S.F. RTV-732 for use in areas where it comes in contact with food.
2. Dow-Corning #780 or General Electric "Silastic", or approved equal, in either clear or approved color to match surrounding surfaces and applied in accordance with sealant manufacturers recommendations for a smooth, sealed finish.

P. Millwork:

1. All millwork materials shall be free from defects impairing strength, durability, or appearance; straight and free from warpage; and of the best grade for their particular function. All wood shall be well seasoned, kiln dried, and shall have

DRAFT

an average moisture content of 8%, a max. of 10% and a min. of 5%.

2. Plywood and other woodwork of treatable species, where so required by code, shall be fire-retardant treated to result in a flame spread rating of 25 or less with no evidence of significant progressive combustion when tested for 30 minutes duration under ASTM E84 and shall bear the testing laboratory mark on the surface to be concealed.
3. Concealed softwood or hardwood lumber shall be of poplar, douglas fir, basswood, red oak, birch, maple, beech or other stable wood and shall be select or better grade, unselected for color and grain, surfaced four sides, square-edged, and straight. Basswood may be used where fire-retardant materials are required.
4. Plywood for transparent finish shall conform to U.S. Product Standard PS-51-71, Type I (fully waterproofed bond), with architectural grade face veneers of species as specified, free of all pin knots, patches, color streaks and spots, sapwood, and other defects. Plywood designated to have plywood cores shall be of either 5 or 7 ply construction. Plywood so designated on the drawings and plywood not otherwise shown shall have a particle board core, cross banding of veneers, and face and back veneers. Particle board cores shall have a 45 pound density, except where the fire retardant treatment requires cores of lesser density.
5. Face veneers shall be matched for color and grain to produce balance and continuity of character. Mineral streaks and other discolorations, worm holes, ruptured grain, loose texture, doze, or shake will not be permitted. Face veneer leaves on each surface shall be full-length, book-matched, center-matched, and sequence-matched. Surfaces shall be sequence and blueprint matched. Veneers not otherwise indicated shall be plain sliced. Backing veneers for concealed surfaces shall be of a species and thickness to balance the pull of the face veneers.
6. Hardwood plywood for painted surfaces shall conform to U.S. Product Standard PS-51-71, Type I, and shall have sound birch, maple or other approved close grain hardwood faces suitable for a paint finish.
7. Perforated hardboard shall be a tempered hardboard, 1/4" thick, conforming to Federal Specification LLL-B-810B, Type I, SIS, Finish B (primed), Design B (perforated), with 1/4" diameter holes spaced on 1" centers both ways.
8. Plywood for laminate assemblies shown or specified with plywood core shall be of the 5 or 7 ply construction with sanded close-grain hardwood face and back veneers, laminated with waterproof glue, in thickness shown, conforming to U.S. Product Standard PS-51-71.
9. Particle board for plastic laminate assemblies shown or specified with particle board wood core shall conform to U.S. Product Standard CS-236-66, Type 1, or 2, Grade B (45 pound density), class 2: except where fire-retardant treatment is required the density shall conform to the treatment requirements.

Q. Plastic Laminate:

1. Plastic laminate surfaces shall be laminated with thermosetting decorative sheets of the color, pattern, and style as selected by the Architect.

DRAFT

a. Horizontal surfaces shall be laminated with sheets conforming to Federal Specification L-P-508F, Style D, Type I (general purpose), Grade HP, Class 1, 1/16" thick, satin finish, with rough sanded backs.
b. Vertical surfaces shall be laminated with sheets conforming to Federal Specification L-P-598F, Style D, Type II, (vertical Surface), Grade HP, Class 1, non-forming, satin finish, 1/32" thick or heavier.
c. Curved surfaces shall be laminated from sheets conforming to Federal Specification L-P-508F, Style D, Type III (post-forming), Grade HP, Class 1, satin finish.
d. Balance sheets for backs in concealed locations shall be either reject material of the same type and thickness as the general purpose grade facing or may be .020" thick laminate backing sheets conforming to Federal Specification L-P-00508E, Style ND, Type V (backing sheet), Grade HP.

2. Adhesives:

a. For application of plastic laminate to wood substrates of horizontal surfaces shall be a phenolic, resorcinol, or melamine adhesive conforming to Federal Specification MMM-A-181C, producing a waterproof bond.
b. For applying plastic laminate to vertical surfaces shall be either a waterproof type or a water-resistant type such as a modified urea-formaldehyde resin liquid glue conforming to Federal Specification MMM-A-188C.
c. Contact adhesive will not be acceptable.

2.3 FABRICATION AND MANUFACTURE

A. Materials and Workmanship:

1. Unless otherwise specified or shown on drawings, all materials shall be new, of best quality, perfect, and without flaws. Material shall be delivered and maintained on the job in an undamaged condition.
2. Fabrication shall be equal to the standards of manufacture used by all first class equipment manufacturers, performed by qualified, efficient, and skilled mechanics of the trades involved.
3. All items of standard equipment shall be the latest model at time of delivery.
4. All fabricated work shall be the product of one manufacturer of uniform design and finish.
5. Each fabricated item of equipment shall include all necessary reinforcing, bracing, and welding with the proper number and spacing of uprights and cross members for strength.
6. Wherever standard sheet sizes will permit, the tops of all tables, shelves, exterior panels of cabinet type fixtures, and all doors and drainboards shall be constructed of a single sheet of metal.
7. Except where required to be removable, all flat surfaces shall be secured to vertical and horizontal bracing members by welding or other approved means to eliminate all buckle, warp, rattle, and wobble. All equipment not braced in a rigid manner, and which is subject to rattle and wobble shall be unacceptable, and the K.E.C. shall add additional bracing in an approved manner to achieve acceptance.

DRAFT

B. Sanitary Construction:

1. All fabricated equipment shall be constructed in strict compliance with the standards of the National Sanitation Foundation as outlined in their Bulletin on Food Service Equipment entitled "Standard No. 2" dated October 1952, and in compliance with the local and State Public Health Regulations in which the installation will occur.
2. All fabricated equipment shall bear the N.S.F. "Seal of Approval".

C. Construction Methods:

1. Welding:

a. All welding shall be the heliarc method with welding rod of the same composition as the sheets or parts welded. Welds shall be complete, strong, and ductile with excess metal ground off and joints finished smooth to match adjoining surfaces; free of mechanical imperfections such as gas holes, pits, cracks, etc., and shall be continuously welded so that the fixtures shall appear as one-piece construction. Butt welds made by spot solder and finished by grinding shall not be acceptable.
b. Spot welds shall have a maximum spacing of 3". Tack welds shall be of at least 1/4" length and spaced no greater than 4" from center to center. Weld spacing at the ends of the channel battens shall not exceed 2" centers.
c. In no case shall soldering be considered as a replacement for welding, nor shall any soldering operation be done where dependence is placed on stability and strength of the joint.
d. Fixtures shall be shop fabricated of one piece and shipped to the job completely assembled wherever possible. Equipment too large to transport or enter the building in one piece shall be constructed so that the field joints can be welded at the job site.
e. All exposed joints shall be ground flush with adjoining material and finished to harmonize therewith. Whenever material has been sunk or depressed by welding operation, depression shall be suitably hammered and peened flush with the adjoining surface and ground to eliminate low spots. In all cases the grain of rough grinding shall be removed by successive fine polishing operations.
f. All unexposed welded joints on undershelves of tables or counters of stainless steel shall be suitably coated at the factory with an approved metallic-based paint.
g. After galvanized steel members have been welded, all welds and areas where galvanizing has been damaged shall have a zinc dust coating applied in conformance with Military Specification Number MIL-P-26915.

2. Joints:

a. Butt joints and contact joints, wherever they occur, shall be close fitting and shall not require a filler. Wherever break bends occur, they shall be free of undue extrudence and shall not be flaky, scaly, or cracked in appearance; where such breaks do mar the uniform surface appearance of the material, all such marks shall be removed by suitable grinding, polishing, and

DRAFT

finishing. Wherever sheared edges occur, they shall be free of burrs, fins, and irregular projections and shall be finished to obviate all danger of laceration when the hand is drawn over them. In no case shall overlapping materials be acceptable where miters or bullnosed edges occur.

b. Field welded joints shall be ground smooth without dips and irregularities and finished to match original finish.

3. Bolt, Screw and Rivet Construction:

a. All exposed surfaces shall be free from bolt and screw heads. When bolts are required, they shall be of the concealed type and be of similar composition as the metal to which they are applied.
b. Where bolt or screw threads on the interior of fixtures are visible or may come into contact with hands or wiping cloths, they shall be capped with a stainless steel or chrome acorn nut and stainless steel lock washer.
c. If rivets are used to fasten rear paneling to the body of the fixture, such rivets shall be stainless steel. In no case shall iron rivets be used.

4. Sound Deadening:
a. Schnee Butyl-Sealant 1/2" wide rope continuously between all frame members and underside of stainless steel table tops, overshelves and undershelves.
b. Tighten stud bolts for maximum compression of sealant.

5. Hi-Liting:

a. All horizontal edges of stainless steel tops, splashes, tops of raised rolled rims, and edges of all exposed doors, handles and shelf edges shall be hi-lited, in uniform design by grinding with abrasive not coarser than #240 grit, then polishing with compound to a uniform mirror finish.

6. Polishing:

a. The grain of polishing shall run in the same direction on all horizontal and on all vertical surfaces of each item of fabricated equipment except in the case where the finish of the horizontal sections of each shall terminate in a mitered edge.
b. Where sinks and adjacent drainboards are equipped with backsplash, the grain of the polishing shall be consistent in direction throughout the length of the backsplash and sink compartment.

7. Finishes:

a. Paint and coatings shall be of an N.S.F. approved type suitable for use in conjunction with foodservice equipment. Such paint or coating shall be durable, non-toxic, non-dusting, non-flaking and mildew resistant, shall comply with all governing regulations, and shall be applied in accordance with the manufacturer’s recommendations.
b. All exterior, galvanized parts, exposed members of framework, and wrought steel pipe where specified to be painted shall be cleaned, primed with rust

DRAFT

inhibiting primer, de-greased, and finished with two (2) coats of glossy enamel grey hammertone paint, unless otherwise noted.

c. Where baked enamel finishes are specified, they shall be oven baked on the fixtures for a minimum of 1-1/2 hours at a minimum temperature of 300º Fahrenheit.
d. Fabricated equipment shall be spray coated with plastic suitable for protecting the equipment during transport and installation. The coating shall be easily removable after the equipment installation is complete at the job site, and final clean-up has begun.

D. Construction:

1. Legs:

a. All tubular stands for open base tables, sinks, or dishtables shall have legs constructed of 1-5/8" O.D. stainless steel tubing, with 1-1/4" O.D., #16 gauge stainless steel crossbracing running between legs at a point 10" above finished floor.
b. All joints between legs and crossbracing shall be welded and ground smooth, full 360E.
c. The top end of legs shall be closely fitted into fully-enclosed stainless steel conical gussets no less than 3" high, similar to Klein #481-58 or #483-58 or approved equal.
d. Gussets shall be fully welded to framing reinforcing members, so that, set screw is not visible from front.
e. Legs without crossrails will not be accepted.
f. Legs shall be spaced at not more than 5'-6" on centers, unless otherwise specified.

2. Feet:

a. All tubular legs will be swedged for appearance and close fit to United Show Case #BF-158, or approved equal, fully enclosed, stainless steel bullet-shaped foot.
    1) The foot shall be threaded into a collar and completely welded inside the tubular leg to permit a maximum adjustment of 2" without any thread exposure.
    2) Threads shall be National Course Series Class 2 fit or better, machined to prevent end play when foot is at maximum adjustment.
    3) The bullet-shaped foot shall have slightly rounded bottom to protect the floor, and a minimum bearing surface of 3/4" diameter of stainless steel-to-floor contact.
    4) Bottom of tubular leg shall be finished off smoothly to provide a sanitary fitting and prevent the accumulation of grease or other debris.
b. Cabinet type fixtures shall be mounted on 8" high die-stamped, sanitary, two-piece stainless steel legs no less than 2-3/4" in diameter at the top, Component Hardware #A72-0811, or approved equal.
    1) The bottom fully enclosed, stainless steel, bullet-shaped foot threads up into the inside of the upper member, with a male threaded 5/8" bushing to permit maximum adjustment of 2" without thread exposure.

DRAFT

2) The upper section shall be stamped in a neat design with a flared inverted shoulder and fully welded to a base plate designed for anchoring to the channel underbracing.

3. Table Tops:

a. Tables shall be constructed of stainless steel, and of a thickness not less than #14 gauge with 1-3/4" by 120º rolled edges, or as otherwise specified and detailed.
b. All corners shall be bull-nosed and of the same radius as rolled edges.
c. Joints where required shall be butt-welded and ground smooth to present a uniform one-piece appearance.
d. All tops shall be reinforced on the underside with a fully welded framework of 1-1/2"x1-1/2"x1/8" galvanized steel angles with the framing extending around the top perimeter and crossbraced on 24" maximum centers.
e. 1"x4"x1" galvanized or stainless steel, fully welded, cross channel, closed end members placed at each pair of legs with one (1) channel running lengthwise will also be acceptable.
f. All tops shall be reinforced so that there will be no noticeable deflection.
g. Metal tops where adjacent to walls or other items of equipment, shall be constructed with integral, coved, back and/or endsplashes as required and specified in accordance with the standard details contained herein. Close all ends of splashes.

4. Enclosed Bases:

a. All enclosed bases or cabinet bodies shall be of seamless #18 gauge stainless steel construction, enclosed on the ends and sides as required and called for under each item.
b. Ends of body shall terminate at front or operator's side in a 2" wide mullion, vertical, and completely enclosed. All intermediate mullions shall be completely enclosed.
c. The bases shall be reinforced at the top with a framework of 1-1/2"x1-1/2"x1/8" galvanized angles, with all corners mitered and welded solid.
d. Underside of top shall be reinforced with channels and gussets where necessary. Additional angles and cross members shall be provided to reinforce shelves and support tops under heavy tabletop equipment.
e. Where sinks or other drop-in equipment occur, provide additional reinforcing extending crosswise, both sides of opening.
f. In the case of fixtures fitting against or between walls, the bodies shall be set in 1" or 2" from the wall line, with the tops continuing to the wall line with integral, coved splashes as specified. Extend vertical face of body to the wall line only. This will permit adjustment to wall irregularities. Vertical trim strips will not be accepted.
g. Bodies shall be fitted with counter style stainless steel legs as hereinbefore specified.

5. Drawers:

DRAFT

a. Drawers, where specified, shall have removable pan inserts of #18 gauge stainless steel, and shall be approximately 20"x20"x5" deep unless otherwise specified.
   1) Perimeter top edge shall be flanged out 1/2".
   2) All interior horizontal corners shall be rounded on a 1" radius, and all interior vertical corners shall be rounded on a 2" radius.
b. Fronts shall be double pan #16 gauge stainless steel construction, 1" thick, insulated with a semi-rigid, fiberglass board, unfaced, having a three-pound density.
   1) The top of the drawer face shall be formed as an integral pull by breaking the front pan back on a 45º angle 1", then straight up 1", back to front 1", and then down at the front 3/4".
   2) Drawer front shall have all edges and corners ground smooth with a radius edge pull.
   3.) Provide hard rubber button bumpers attached to rear of drawer face at each corner.
c. The drawer shall have an all welded frame of 1"x1", #16 gauge stainless steel angles sized to fit the removable pan insert.
d. Drawers shall operate on #14 gauge full-extension slides with stainless steel roller bearings with hardened and ground raceways, Component Hardware, S52 Series, or approved equal. Slides shall be pitched approximately 3/8" per foot to permit self-closing action.
e. Drawers shall be adequately and neatly fitted to the guides to permit easy operation without rattle or binding.
f. Slides and frame shall be reinforced to support a dead weight of 150 pounds when drawer is fully extended.
g. Adjustable stops shall be provided for each drawer at the fully-opened position and be readily liftable by hand for easy removal of drawer.
h. All drawers not mounted inside a cabinet body shall be completely enclosed in an #18 gauge stainless steel box-type enclosure and suspended from angle framing under the fixture top. The housing bottom shall be flanged and welded to an #18 gauge stainless steel reinforcing channel extending across the open end.

6. Sliding Doors:

a. Sliding doors shall be of the double pan type, with the exterior pan constructed of #18 gauge stainless steel with all four sides channeled and corners welded. The interior pan shall be similarly constructed of #20 gauge stainless steel, set into the exterior pan, and welded in place.
b. All doors shall be insulated with semi-rigid fiberglass board, un-faced, having a three-pound density. Styrofoam shall not be acceptable.
c. Doors 18" wide or greater, shall have internally welded 4" wide reinforcing channels to prevent warpage.
d. Each door shall be fitted with a positive flush-type stainless steel pull, Standard-Kiel #1262-1014-1283 recessed handle or approved equal.
e. In the back of each door install a 1"x1", #16 gauge stainless steel angle stop welded in a suitable location to prevent the doors from overpassing the flush pulls.
f. Doors in the closed position shall overlap each other by no more than 2".

DRAFT

g. Each door shall be fitted with two (2), 1-3/8" ball bearing sheaves fastened to 1"x1/8" stainless steel bar stock welded to the top corners of each door for suspending on an overhead #16 gauge stainless steel channel track. The hangers shall be tapped for 1/4"-20 thumb screw vertical locks which prevent the doors from jumping the track in operation while permitting easy removal for cleaning without tools.
h. Insure that the bottom of the doors are positively and continuously guided to assure proper alignment and passing regardless of the position of each door.
i. Provide hard rubber bumpers for doors to close against to insure quiet operation.

7. Hinged Doors:

a. Hinged doors shall be of the same materials and construction as sliding doors previously specified.
b. Hinges shall be heavy duty, stainless steel, removable type, and fastened by tapping into 1/4"x3/4" stainless steel bar stock inside the door pan and behind the door jamb.
c. The door face shall be flush with the cabinet body when fully closed.
d. Size widths of doors equally when installed in pairs, or in series with other pairs, with no door being greater than 36" in width.
e. Doors shall be held closed by permanent magnetic closure devices of an approved type and of sufficient strength to hold the doors shut. Install two (2) per door (minimum), mounted to the door jamb, top and bottom, with opposing chrome-plated steel plates securely fastened to the inner panel of the doors.

8. Undershelves:

a. All open base tables shall be provided with full-length undershelves of #16 gauge stainless steel fully welded to legs with all joints ground smooth and polished.
b. Front edge shall turn down 1-1/2" and under 1/2".
c. Turn up rear and ends 2", with integral coved radius, when specified.
d. If required by width, provide 1-1/2"x1-1/2"x1/8" galvanized angle bracing mounted to underside, full length.

9. Interior Shelves:

a. All interior shelves within cabinet bodies, enclosed bases and overhead cabinets, shall be of #16 gauge stainless steel.
b. Removable shelves shall be constructed in equal sections, and rest in 1-1/2"x1-1/2"x1/8" stainless steel angle frame. Cove all horizontal corners in accordance with N.S.F. requirements.
c. Stationary shelves shall have 2" turn-up on back and ends, and continuously welded to cabinet body, polished and ground smooth to form a one-piece interior free of any crevices.
d. Front edge shall turn down 1-1/2" and under 1/2” and finished with "z" bar forming completely enclosed edge for maximum strength and sanitation.

DRAFT

e. Provide 1-1/2"x1-1/2"x1/8" angle bracing mounted to underside, full length.

10. Elevated Shelves:

a. Shelves over equipment not adjacent to a wall shall be mounted on 1" diameter #16 gauge stainless steel tubular standards neatly fitted with stainless steel base flanges, unless otherwise specified.
b. The top of the tubular standards shall be completely welded to #14 gauge stainless steel support channels, full width of overshelf.
c. Inside the tubular standard, and welded to same, provide 1/2" diameter steel tension rod extended through countertop and securely anchored to lower framework reinforcing with nuts and lock washers in such a manner as to assure a stable, sway-free structure.
d. If required by width, provide 1-1/2"x1-1/2"x1/8" stainless steel angle bracing mounted to underside, full length.
e. Cantilevered shelves, when called for, shall be #16 gauge stainless steel supported on #14 gauge stainless steel brackets welded to 1-5/8" O.D. stainless steel tubular standards extending through the backsplash, and fully welded to the table framework. Provide Klein #481-SH welded sleeves where standards penetrate backsplash.

11. Wall Shelves:

a. Open wall shelves shall be constructed of #16 gauge stainless steel with back and ends turned up 2", positioned 2" out from face of wall, with all corners welded, and supported on #14 gauge stainless steel brackets.
b. Brackets shall be flanged inward beneath the shelf and at the wall 1-1/2" with intersecting flanges completely welded, and attached to shelf with studs welded to the underside and bolted with stainless steel lock washers and chrome-plated cap nuts.
c. Each bracket shall be fastened to the wall with a minimum of two (2) 1/4"-20 stainless steel bolts anchored securely by means of toggles or expansion shields.

12. Sinks:

a. All sinks shall be the size and shape as shown on drawings, and constructed of #14 gauge stainless steel with backs, bottoms and fronts formed of one continuous sheet and the ends welded in place.
b. Sinks shall have all corners, both vertical and horizontal, coved on a 3/4" radius electrically welded, ground smooth and polished. Solder in filleted corners will not be acceptable.
c. Multiple compartment sinks shall be divided with double wall, #14 gauge stainless steel partitions with a 1/2" radius on top and all corners rounded as other corners, continuously welded, ground smooth and polished.
d. The bottom of each compartment shall be creased to a die stamped recess, tapered and shaped to receive a lever type waste without the use of solder, rivets, or welding.
e. Provide #14 gauge stainless steel waste lever angle bracket mounted to underside of compartment at front.

DRAFT

f. The front and exposed ends of sinks shall be fabricated with a 1-1/2", 180 degree rolled edge. The back and ends adjacent to walls or other fixtures shall be turned up with integral coved edge 12" high and returned 2-1/2" at the top on a 45º angle. Cap ends of all exposed splashes.
g. Unless otherwise specified, two (2) faucet holes on 8" centers shall be provided, located over the centerline of partitions between compartments, 2-1/2" down from splash break.
h. Gussets for legs shall be fully welded all around to #12 gauge stainless steel triangular plates fully welded to underside of sink.
i. Sinks fabricated into working surfaces shall be constructed of the same material and in like manner to sinks specified above, except rolled edge and backsplash shall be omitted and the bowl shall be completely welded integral and flush with the working surface. Where basket type wastes are called for, they shall be fitted with removable seats.
j. Where sink bowls are exposed, the exterior shall also be polished to a #4 finish.

13. Sink Drainboards:

a. Drainboards shall be constructed of the same material as the sinks and shall be welded integral to same.
b. The front portion of drainboards shall continue the 1-1/2", 180º rolled edge of sink bowls on a continuous and level horizontal plane.
c. The surface of the drainboard shall pitch from 2-1/2" at the end furthest from the sink, to 3" at the bowl; or 1/8" per foot. In addition, the bottom surface shall be dished toward the center for complete drainage.
d. The backsplash of the drainboard shall match the rear of the sink contour and shall be welded integral thereto, running parallel to the floor.
e. Drainboards shall be reinforced on the underside with a framework of 1"x4"x1" stainless steel channel underbracing placed at each pair of legs, with exposed ends capped, and one (1) channel running lengthwise.
f. Where disposer cones are fabricated into drainboards, additional 1"x4"x1" stainless steel channels shall be welded into the top framing, spanning the drainboard from front-to-back on both sides of the cone and located not more than 3" to either side.
g. Disposer control panels or switches shall be supported beneath drainboards, when specified, by means of a #12 gauge stainless steel mounting bracket.

14. Dishtable Tops:

a. Dishtables shall be constructed of #14 gauge stainless steel with all corners, both vertical and horizontal, coved on a 3/4" radius electrically welded, ground smooth and polished. Solder in filleted corners will not be acceptable.
b. Fronts and exposed ends shall be fabricated with a 3" high, 1-1/2", 180E rolled edge with rounded corners. The back and ends adjacent to walls or other fixtures shall be turned up with integral coved edge 12" high and returned 2-1/2" at the top on a 45º angle. Cap ends of all exposed splashes.
c. All tops shall slope 1/8" per foot (minimum).

DRAFT

d. Dishtables shall be reinforced on the underside with a framework of 1"x4"x1" stainless steel channel underbracing placed at each pair of legs, with exposed ends capped, and one (1) channel running lengthwise fully welded between front-to-back channels.
e. Where tops fit into dishmachines, they shall turn down and into, forming a sealed watertight fit, and attached according to dishmachine manufacturer's instructions.
f. On each side of dishmachine, tables shall be provided with integral splash shields as part of the backsplash.
g. Silicon filling of gaps caused by poor fit will not be acceptable.
h. On corner-type door machines, provide #14 gauge stainless steel wall-mounted, splash panel to protect adjacent wall, full width of door opening.

15. Cafeteria Style Counters:

a. All counters shall be constructed as previously specified under Enclosed Bases.
b. Provide top and bottom framing for each counter food pan, cold pan, coffee urn, ice cream unit, ice bin, dish dispenser, etc., whether a drop-in unit or a cutout for a portable unit.
c. Where plate shelves occur, frame horizontally 8-1/2" back from counter edge or as design dictates, and at bottom of shelf at counteredge.
d. The countertop shall be constructed of #14 gauge stainless steel, as previously specified, with all joints welded, ground and polished.
e. Fronts and exposed ends shall be stainless steel, plastic laminate or other material as noted in the Item Specifications.
f. All display glass shelving shall be 1/4" polished plate glass and fully trimmed with #18 gauge stainless steel formed channels. Top shelves shall be the same width as the shelf below. Shelves shall be supported on 5/8" square, #16 gauge stainless steel perimeter tubing fully welded to 1-1/4" square, #16 gauge stainless steel tubing uprights.
g. Provide appropriate adjustable glass sneeze or breath guards trimmed in stainless steel along front, entire length, mounted in Klein 4465-A brackets.
h. Protector shelf over hot food wells shall be #16 gauge stainless steel supported on 1-1/4" square, #16 gauge stainless steel tubing uprights, with 1/4" polished plate glass front and end panels trimmed in #18 gauge stainless steel channels. When specified for self-service, mount bottom edge of front panel 8" above countertop.
i. All display and protector shelves shall be furnished with full-length LED lights wired to on/off switch in counter apron, with lamps and protective shields. Conceal all wiring in tubular uprights.
j. Refer to Item Specification for changes, as required.
k. Counter shall be internally wired complete by the K.E.C., and in such a way as to meet the requirements of the Electrical Code of the job location.
l. Refer to manufacturer's serving counter details shown on the Contract Documents.

2.4 EQUIPMENT

A. All items listed on the Contract Documents under the heading "Equipment Schedule"

DRAFT

shall be furnished in strict accordance with the foregoing specifications and with the following detailed Itemized Specifications.

B. Manufacturer's names and model numbers are shown establishing quality, size, and finish required, representing the Owner's and Consultant's requirements and basis for bid. Equipment is listed hereinafter with same item numbers as shown on Contract Documents.

PART 3 EXECUTION

3.1 INSPECTION

A. Before beginning the installation of foodservice equipment, the spaces and existing conditions shall be examined by the K.E.C. and any deficiencies, discrepancies, or unsatisfactory conditions for proper installation of foodservice equipment shall be reported to the Architect in writing.

1. Do not proceed with installation until unsatisfactory conditions have been corrected in a manner satisfactory to the installer.
2. Beginning installation shall constitute acceptance of the area.

B. Prior to concrete pouring, the K.E.C. shall notify the Architect once drainage, water inlets and electrical conduits are laid in ground for the Consultant to schedule and conduct underslab inspection.

C. Pre-installation meetings must take place prior to any kitchen equipment installations.

D. Once all walk-in box compartments are constructed and all ventilators have been installed, notify the Architect for the Consultant to conduct an inspection.

E. K.E.C. to notify the Architect upon completion of equipment installation, for the kitchen to be inspected by the Consultant prior to the Health Department’s inspection. A follow-up inspection shall be conducted after all items have been addressed from the initial punch report.

F. Consultant to submit all inspection reports to the Architect and Owner.

G. All loose parts or attic stock items must be labeled and turned over to the Owner during final inspection.

H. One (1) year warranty kitchen equipment inspection will be conducted by the Consultant to assess the performance of the equipment. Warranty items will be submitted to the K.E.C. for necessary repairs during the warranty period.

3.2 PREPARATION

A. Foodservice equipment drawings are diagrammatic and intended to show layout, arrangement, mechanical and electrical requirements.

B. Field verify all measurements at the building prior to fabrication of custom equipment.

DRAFT

Coordinate measurements and dimensions with rough-in and space requirements.

3.3 INSTALLATION

A. The K.E.C. shall coordinate his delivery schedule with the Contractor to ensure adequate openings in the building to receive the equipment.

B. Equipment shall be un-crated, fully assembled and set level in position for final connections. Parts shipped loose but required for connection shall be properly tagged and shall be accompanied by the necessary installation instructions.

C. Provide a competent, experienced foreman to supervise installation and final connections with other trades.

D. Remote Refrigeration Systems:

1. All refrigeration work where applicable to this contract shall be accomplished in an approved manner, using finest quality fittings, controls, valves, etc.
2. Refrigeration items shall be started up, tested, adjusted, and turned over to the Owner in first class condition and left running in accordance with the manufacturer's instructions.
3. Refrigeration lines and hook-ups shall be completed by the K.E.C. with the exception of electric, water, and drain line final connections unless otherwise specified.
4. All copper tubing shall be refrigerant grade A.C.R. or type "L".
5. Silver solder and/or Sil-Fos shall be used for all refrigerant piping. Soft solder is not acceptable.
6. All refrigerant lines in pipe sleeves or conduit shall be effectively caulked at ends to prevent entrance of water or vermin and at penetrations through walls or floors.
7. All tubing shall be securely anchored with clamps, and suspended lines shall be supported with adjustable hangers at 6'-0" o.c. maximum.
8. Wrap drain line in freezer compartment(s) with approved heat-tape for final connection by Electrical Contractor.

E. Sealing and Caulking:

1. Prior to the application of sealant, all surfaces shall be thoroughly cleaned and de-greased.
2. Apply around each unit of permanent installation at all intersections with walls, floors, curbs or other permanent items of equipment.
3. Joints shall be air-tight, water-tight, vermin-proof, and sanitary for cleaning purposes.
4. In general, joints shall be not less than 1/8" wide, with backer rod to shape sealant bead properly at 1/4" depth. Shape exposed surfaces of sealant slightly concave, with edges flush with faces of materials at joint.
5. At internal corner joints, apply sealant or gaskets to form a sanitary cove, of not less than 3/8" radius.
6. Provide sealant-filled joints up to 3/4" in joint width. Trim strips for wider joints shall be set in a bed of sealant and attached with stainless steel fasteners, 48"

DRAFT

o.c., or less, to insure suitable fastening and prevent buckling of the metals fastened.

F. Cutting:

1. All cutting, fitting, or patching required during installation shall be accomplished by the K.E.C., at his own expense, so as to make the work conform to the plans and specifications.
2. The K.E.C. shall not cut or otherwise alter, except with the consent of the Owner, the work of any other Contractor.
3. Provide cut-outs in foodservice equipment where required to run plumbing, electric, or steam lines through equipment items for final connections.

3.4 FIELD QUALITY CONTROL

A. Inspection:

1. Provide access to shop fabrication areas during normal working hours to facilitate inspection of the equipment, during construction, by the Architect or his authorized representative.
2. Errors found during these inspections shall be corrected to the extent required within the scope of the plans, specifications, and approved drawings.

B. Start-Up and Testing:

1. Delay start-up of foodservice equipment until service lines have been tested, balanced, and adjusted for pressure, voltage, and similar considerations; and until water and steam lines have been cleaned and treated for sanitation.
2. Before testing, lubricate each equipment item in accordance with manufacturer's recommendations.
3. Supply a trained person or persons who shall start up all equipment, test and make adjustments as necessary, resulting in each item of equipment, including controls and safety devices, performing in accordance with the manufacturer's specifications.
4. All gas-fired equipment shall be checked by the local gas company as to calibration, air adjustments, etc., and adjustments made as required.
5. Repair or replace any equipment found to be defective in its operation, including items which are below capacity or operating with excessive noise or vibration.
6. Furnish start up reports for the walk-in cooler/freezer, refrigeration system, cooking equipment, utility raceway and ventilator in accordance with Article 1.5 Submittals, Paragraph F.

C. Demonstration:

1. Provide an operating demonstration of all equipment at a time of Owner's convenience, to be held in the presence of authorized representatives of the Architect and Owner. K.E.C. to coordinate scheduling with manufacturer’s representatives.
2. At the time of demonstration, furnish complete, bound, operation/maintenance

DRAFT

manuals and certificates of warranty for all items of equipment provided, in accordance with Article 1.5 Submittals, Paragraph F, at this demonstration time. All manuals are to be provided in digital format to DFNSOffice@mcpsmd.org AND (insert email address for Facilities, Construction, & Maintenance).

3. . Provide a digital and physical checklist of every piece of equipment, including the warranty expiration date, and maintenance routines.
4. Provide a follow-up kitchen demonstration three (3) months after the initial demonstration or kitchen opening or at the Owners requested timeline. K.E.C. to coordinate scheduling with all manufacturer's representatives.
5. Provide training or demonstration for all equipment to ensure new staff are properly trained on equipment.
6. Demonstration shall be performed by manufacturer's representative knowledgeable in all aspects of his equipment.
7. During the demonstration, instruct the Owner's operating personnel in the proper operation and maintenance of the equipment.
8. Equipment manufacturer to provide factory-approved instructional videos.

3.5 ADJUST AND CLEAN

A. Upon completion of installation and tests, clean and sanitize foodservice equipment, and leave in condition ready for use in food service.

B. Remove all protective coverings, and thoroughly clean equipment both internally and externally with stainless steel cleaner.

C. Make and check final adjustments required for proper operation of the equipment.

D. Restore finishes marred during installation to remove abrasions, dents, and other damages. Polish stainless steel surfaces, and touch-up painted surfaces with original paint.

E. Clean up all refuse, rubbish, scrap materials, and debris caused by the work of this Section, and put the site in a neat, orderly, and broom-clean condition.

3.6 ITEMIZED EQUIPMENT

ITEM #1: UTILITY CART, MOBILE

QUANTITY: Six (6)
MANUFACTURER: InterMetro Industries Corporation
MODEL NO.: MetroMax (N058)
PERTINENT DATA: 24" x 36" Shelf Size, Open Grid Mat, Polymer
UTILITIES REQ'D: ----
ALTERNATE MFRS.: None

Furnish and set-in-place per Equipment Plan, Sheet K-101, Manufacturer's Instructions and the following:

DRAFT

1. Three (3) #MXUC2436G-25 two-shelf units; three (3) #MXUC2436G-35, three-shelf units.

ITEM #2: WALK-IN COOLER/FREEZER

QUANTITY:	One (1)
MANUFACTURER:	Thermo-Kool
MODEL NO.:	Indoor Installation (N058)
PERTINENT DATA:	4" Foamed-In-Place Durathane Panels, Class I, NSF Construction
UTILITIES REQ'D:	1500W, 120V, 1PH; (2) 3/4" IW
ALTERNATE MFRS.:	Norbec; Kolpak; American Panel

Furnish and install per Equipment Plan, Sheet K-101; Building Conditions Plan, Sheet K-102; Manufacturer's Shop Drawing and the following:

1. Two Section Unit, 36'-6" L x 13'-6" D x 9'-6" H. Interior width: Cooler - 14'-1" wide, Freezer - 21'-5" wide.

2. Exterior Finish:
   -- 26 GA stucco embossed galvanized where unexposed.
   -- 22 GA stucco embossed stainless steel where exposed.

3. Interior Finish:
   -- White acrylic enamel baked-on .040 stucco embossed aluminum walls.
   -- White acrylic enamel baked-on 26 GA smooth galvanized steel ceiling.

ITEM #1: (Continued)

4. Interior Floor:
   -- 4" prefabricated floor panels installed in 6" deep floor recess over hot asphalt paper or 10 MIL polyethylene sheets on building floor slab.
   -- 2" setting bed with two (2) layers of wire reinforcing mesh fabric and quarry tile floor material with 6" high integral coved base by others, interior and exterior of box, installed over prefabricated floor panel by Flooring Contractor.
   -- Provide venting floor system under walk-in cooler/freezer larger than 400 square feet per manufacturer’s recommendations.

5. Entrance Doors:
   -- Two (2) flush-mounted, self-closing, doors with 34" x 80" net opening, hinged per Equipment Plan.
   -- Brushed chrome camlift hinges with lift-off capability. Provide one (1) extra hinge per door, three (3) total.
   -- Kason #0027C safeguard deadbolt locking latch with quarter turn inside release and strike.
   -- Hydraulic door closer.
   -- Standard 2" diameter dial indicating thermometer factory mounted in door frame, each compartment.
   -- Foot treadle door opener.
   -- 36" high aluminum diamond tread kickplates, interior and exterior of door, jamb, and frame.

DRAFT

-- 14" x 24" heated observation window, each compartment.
-- Undercut doors for quarry tile floor.
-- Kason #1806 LED light fixture with high-impact plastic cover centered over door opening to avoid conflict with shelving, each compartment. Extend wiring in conduit, foamed within door panel header, to junction box mounted on top of walk-in ceiling, each compartment.
-- Kason #907 interior door handle, factory mounted, with concealed metal backing plate.
-- 12-gauge heavy-duty flat stainless steel heated threshold, both doors.
-- Engraved phenolic plastic compartment sign - 12" long x 2" high; white in color with 1" high blue CAPITAL letters mounted on each door above observation window; (1) - COOLER, (1) - FREEZER.
-- Round vinyl door bumper mounted to front exterior face to protect handle from puncturing wall when door in fully open position.

6. One (1) heated pressure relief port in freezer.

7. Five (5) Kason #1810L21248LB 48" long LED light fixtures with shatter-proof high impact plastic covers centrally-mounted to walk-in ceiling per Detail, Sheet K-104; three (3) for the freezer, two (2) for the cooler. Extend conduit connection up thru top. Fixtures shipped loose and mounted by K.E.C., final connection by Electrical Contractor. K.E.C. to seal and insulate with silicone sealant all knock-outs in fixture casing to prevent moisture infiltration.

8. One (1) #TK4700 walk-in monitor system with #TK4 light control and panic button factory mounted in each door panel and inter-wired with building monitoring system, as required by Electrical Contractor.

ITEM #2: (Continued)

9. Provide and install trim strips of matching exterior finish between ends of walk-in panels and building walls from floor to 6” above finished ceiling. K.E.C. to verify ceiling height.

10. Provide and install closure panels of matching exterior finish between top of walk-in and finished ceiling. K.E.C. to verify ceiling height.

11. All electrical conduit shall be run concealed above walk-in ceiling per Detail, Sheet K-104.

12. Evaporator coil drain lines shall be run to approved drain with P-trap on exterior of box by K.E.C.

13. Black flexible "Armaflex" insulation applied to exposed drain lines and fittings within interior of box by K.E.C., both compartments.

14. Spiral heat tape applied to drain line within interior of freezer compartment prior to application of insulation by K.E.C. Drain line heating cable shall be installed for continuous 24-hour operation. Final connection by Electrical Contractor.

15. Coordinate location of sprinkler head drops and provide penetrations, where necessary.

16. K.E.C. to seal and insulate all openings to prevent infiltration of warm air into cooler/freezer compartments.

DRAFT

17. Accessories:
    -- One (1) Kolpak #HAL-C2-N1 or #HAR-C2-N1 air shield with magnetic activation switch, factory-mounted vertically, adjacent to the hinge side of cooler and/or freezer door on the interior wall surface. Electrical Contractor to provide power and final connection.
    -- #16 ga. stainless steel hat-channel bumper rail with closed ends installed to exposed front face and ends of walk-in unit, mounted @ 36" A.F.F. Provide 1/8" diamond tread kickplates from top of finish floor coved base to bottom of bumper rail. Align bumper rail with 36" high aluminum kickplate on doors.
    -- 6" high 1/8" thick aluminum cove baseboard, to be installed where panels are exposed at kitchen side, fastened with countersink screws and seal with gray-color silicone sealant to finish floor and walk-in panels.

ITEM #3: COOLER REFRIGERATION SYSTEM

QUANTITY:	One (1)
MANUFACTURER:	Bohn Refrigeration Products
MODEL NO.:	BCH0015MCACZ(N058)
PERTINENT DATA:	Air-Cooled, Outdoor Installation, Remote, With IntelliGen/Beacon II Smart Controls
UTILITIES REQ'D:	15.0A, 208V, 3PH
ALTERNATE MFRS.:	None

Furnish and install per Equipment Plan, Sheet K-101, Manufacturer's Shop Drawing and the following:

ITEM #3: (Continued)

1. Condensing Unit: Factory pre-assembled, scroll, medium-temperature, R-448A

2. Mounted on building roof above walk-in on roof curb per Detail Sheet K-102. See Mechanical Roof Plan, Sheet M1-135 for exact location.

3. Complete winterization package and condensing unit weatherproof cover.

4. Factory installed air defrost timer with contactors and relays.

5. Overall size: 39-1/8" L x 28-5/16" W x 19-3/4" H.

6. Weight: 221 lbs.

7. Evaporator Coil with High-Efficiency EC Motors: Low-Profile, End-Mount Type, Model BEL0115AS6AMA; 1.8A, 120V, 1PH.
    -- System to operate at +35º F.
    -- Furnished complete with solid state temperature sensors, electric expansion valve, transformer, coil compressor contactor, low-pressure time-delay switch and pressure transducer ready for final connection by Refrigeration Contractor.

8. Factory installed main-fused disconnect switch.

DRAFT

9. Factory certified installers to provide complete refrigeration system warrantee: five (5) years for the compressor, two (2) years for the condensing unit, and two (2) years for all parts of the evaporator coil.

ITEM #4: FREEZER REFRIGERATION SYSTEM

QUANTITY:	One (1)
MANUFACTURER:	Bohn Refrigeration Products
MODEL NO.:	BCH0060LCACZ (N058)
PERTINENT DATA:	Air-Cooled, Outdoor Installation, Remote, With IntelliGen/Beacon II Smart Controls
UTILITIES REQ'D:	30.3A, 208V, 3PH
ALTERNATE MFRS.:	None

Furnish and install per Equipment Plan, Sheet K-101, Manufacturer's Shop Drawing and the following:

1. Condensing Unit: Factory pre-assembled, scroll compressor, low-temperature, R-448A.

2. Mounted on building roof above walk-in on roof curb per Detail Sheet K-102. See Mechanical Roof Plan, Sheet M1-135 for exact location.

3. Complete winterization package and condensing unit weatherproof cover.

4. Factory installed electric defrost timer with contactors and relays.

ITEM #4: (Continued)

5. Overall size: 43-7/8" L x 30-1/2" W x 29-1/4" H.

6. Weight: 327 lbs.

7. Evaporator Coil with High-Efficiency EC Motors: Low-Profile, End-Mount Type, Model BEL0220BS4EMA, 2.5A, 208V, 1PH (Fan); 22.8A, 208V, 1PH (Defrost Heater)
   -- System to operate at -10º F.
   -- Furnished complete with solid state temperature sensors, electric expansion valve, transformer, coil compressor contactor, low-pressure time-delay switch and pressure transducer ready for final connection including low voltage wiring to compressor by Refrigeration Contractor.

8. Factory installed main-fused disconnect switch.

9. Furnish one (1) IntelliGen/Beacon II Smart Controller mounted to front face of Item #2: Walk-In Cooler/Freezer @ 66" A.F.F. centered between entrance doors. Controller shall be capable of monitoring characteristics of both cooler and freezer systems. Smart Controller low voltage wiring and final connection by Refrigeration Contractor.

10. Factory certified installers to provide complete refrigeration system warrantee: five (5) years for the compressor, two (2) years for the condensing unit, and two (2) years for all parts of the evaporator coil.

DRAFT

ITEM #5: DUNNAGE RACK, MOBILE

QUANTITY: Two (2)
MANUFACTURER: InterMetro Industries Corporation
MODEL NO.: MetroMax i (N058)
PERTINENT DATA: Open-Grid Mat, Polymer
UTILITIES REQ'D: ----
ALTERNATE MFRS.: None

Furnish and set-in-place per Equipment Plan, Sheet K-101, Manufacturer's Instructions and the following:

Cooler:

1. One (1) #MHP2448G shelf unit; 24"W x 48"L.
2. One (1) #M3TF2448E three-sided frame.
3. Four (4) #MX9UP polymer posts for stem casters, 9-3/16" high.
4. Two (2) #5MPX polyurethane swivel casters with bumpers.
5. Two (2) #5MPBX polyurethane swivel casters with brakes and bumpers.

ITEM #5: (Continued)

Freezer:

1. One (1) #MHP2448G shelf unit; 24"W x 48"L.
2. One (1) #M3TF2448E three-sided frame.
3. Four (4) #MX9UP polymer posts for stem casters, 9-3/16" high.
4. Two (2) #5MPX polyurethane swivel casters with bumpers.
5. Two (2) #5MPBX polyurethane swivel casters with brakes and bumpers.

ITEM #6: SHELVING, MOBILE

QUANTITY: Ten (10)
MANUFACTURER: InterMetro Industries Corporation
MODEL NO.: MetroMax i® (N058)
PERTINENT DATA: Open-Grid Shelf Mat, Polymer
UTILITIES REQ'D: ----
ALTERNATE MFRS.: None

DRAFT

Furnish and set-in-place per Equipment Plan, Sheet K-101, Manufacturer's Instructions and the following:

Cooler:

1. One (1) #MX2436G section; 24" W x 36" L x 4-tier high.
2. Three (3) #MX2448G sections; 24" W x 48" L x 4-tier high.
3. Sixteen (16) #MX63UP polymer posts for stem casters, 61-3/16" high.
4. Eight (8) #5MPX polyurethane swivel casters with bumpers.
5. Eight (8) #5MPBX polyurethane swivel casters with brakes and bumpers.
6. Plastic wedge lock connectors, quantity as required.
7. Locate bottom shelf @ 10" A.F.F., space remaining shelves equally.

Freezer:

1. Six (6) #MX2448G sections; 24" W x 48" L x 4-tier high.
2. Twenty-four (24) #MX63UP polymer posts for stem casters, 61-3/16" high.
3. Twelve (12) #5MPX polyurethane swivel casters with bumpers.

ITEM #6: (Continued)

4. Twelve (12) #5MPBX polyurethane swivel casters with brakes and bumpers.
5. Plastic wedge lock connectors, quantity as required.
6. Locate bottom shelf @ 10" A.F.F., space remaining shelves equally.

ITEM #8: PAN RACK CART, MOBILE

QUANTITY:	Six (6)
MANUFACTURER:	New Age Industrial Corp., Inc.
MODEL NO.:	1331-PBE (N058)
PERTINENT DATA:	Fixed Angles, (20) 18"x26" Pan Capacity, All-Welded Aluminum Construction
UTILITIES REQ'D:	----
ALTERNATE MFRS.:	None

Furnish and set-in-place per Equipment Plan, Sheet K-101, Manufacturer's Instructions and the following:

1. #PB full-perimeter wrap-around non-marking vinyl bumper.

2. Solid base panel.

ITEM #9: DUNNAGE RACK, MOBILE

QUANTITY: One (1)
MANUFACTURER: InterMetro Industries Corporation
MODEL NO.: MetroMax i (N058)
PERTINENT DATA: Open-Grid Mat, Polymer
UTILITIES REQ'D: ----
ALTERNATE MFRS.: None

Furnish and set-in-place per Equipment Plan, Sheet K-101, Manufacturer's Instructions and the following:

Dry Storage:

1. One (1) #MHP2448G shelf unit; 24"W x 48"L.

2. One (1) #M3TF2448E three-sided frame.

3. Four (4) #MX9UP polymer posts for stem casters, 9-3/16" high.

4. Two (2) #5MPX polyurethane swivel casters with bumpers.

5. Two (2) #5MPBX polyurethane swivel casters with brakes and bumpers.

ITEM #12: WORKTABLE

QUANTITY:	One (1)
MANUFACTURER:	Custom Fabricated
MODEL NO.:	#14 GA Stainless Steel
PERTINENT DATA:	10'-0" Long x 2'-6" Wide x 3'-0" High
UTILITIES REQ'D:	----
ALTERNATE MFRS.:	None

Fabricate and set-in-place per Equipment Plan, Sheet K-101; Fabrication Detail, Sheet K-501; and the following:

1. Front and end edge rolls per Detail 1.02.1M.

2. 6" high back splash per Detail 1.04A.

3. Framework per Detail 1.05.

4. Legs per Detail 1.07.

5. Stainless steel undershelf per Detail 1.11.

6. Two (2) stainless steel drawer assemblies per Detail 1.14, Type I with locks.

7. Worktable per Detail 2.01.

8. Sound-deaden underside of tabletop with NSF-approved sound dampening material.

9. Accessories:
   -- One (1) duplex receptacle with stainless steel faceplate mounted on each end, pre-wired to common junction box below undershelf per Detail, Sheet K-104. Conceal wiring within tubular leg.

-- One (1) Hamilton Beach #GCO500 manual can opener mounted on right-end as shown on Equipment Plan, Sheet K-101.

ITEM #13: SPARE NUMBER

ITEM #15: HAND SINK

QUANTITY: Six (6)
MANUFACTURER: Eagle Foodservice Equipment Company
MODEL NO.: HSA-10-FA-1P (N058)
PERTINENT DATA: Pedestal Mount, With Mixing Valve
UTILITIES REQ'D: 1/2" HW, 1/2" CW, 1-1/2" W
ALTERNATE MFRS.: Advance/Tabco; John Boos

Furnish and set-in-place per Equipment Plan, Sheet K-101, Manufacturer's Instructions and the following:

1. Gooseneck faucet, stopper, pedestal, P-trap, tailpiece and pedal valve.

2. All plumbing lines and components chrome-plated or stainless steel.

3. Accessories: (each unit)
   -- Left and right integral splash shields.
   -- #326015 temperature adjustment valves.
   -- #379294 0.5 GPM low-flow aerator.

ITEM #16: SOAP & TOWEL DISPENSER - (N.I.K.E.C - REFER TO ARCHT'L. DRAWING)

QUANTITY: Six (6)

ITEM #17: ELECTRIC WEIGHING SCALE

QUANTITY: One (1)
MANUFACTURER: Edlund Company, Inc.
MODEL NO.: EDL-10 OP (N058)
PERTINENT DATA: Countertop, Stainless Steel Construction, With Rechargeable Battery Pack
UTILITIES REQ'D: ----
ALTERNATE MFRS.: None

Furnish and set-in-place per Equipment Plan, Sheet K-101 and Manufacturer's Instructions.

ITEM #18: ELECTRIC CAN OPENER

QUANTITY: Two (2)
MANUFACTURER: Edlund Company, Inc.
MODEL NO.: 270 (N058)
PERTINENT DATA: Countertop, Dual-Speed
UTILITIES REQ'D: 1.5A, 120V, 1PH
ALTERNATE MFRS.: None

Furnish and set-in-place per Equipment Plan, Sheet K-101, Manufacturer's Instructions and the following:

1. Cord and plug set.

ITEM #19: BLENDER

QUANTITY: One (1)
MANUFACTURER: Vitamix
MODEL NO.: 036019 (N058)
PERTINENT DATA: Countertop, With 48-Ounce Clear Container, Blade Assembly, Lid and Twist Lock Cover
UTILITIES REQ'D: 15.0A, 120V, 1PH
ALTERNATE MFR.: None

Furnish and set-in-place per Equipment Plan, Sheet K-101, Manufacturer's Instructions and the following:

1. Cord and plug set.

ITEM #19.1: BLENDER

QUANTITY: Two (2)
MANUFACTURER: Vitamix
MODEL NO.: 5201 (N058)
PERTINENT DATA: Countertop, With 1.5-Gallon and 64-Ounce Clear Containers, Blade Assembly and Lid
UTILITIES REQ'D: 15.0A, 120V, 1PH
ALTERNATE MFR.: None

Furnish and set-in-place per Equipment Plan, Sheet K-101, Manufacturer's Instructions and the following:

1. Cord and plug set.

ITEM #20: WORKTABLE

QUANTITY: One (1)
MANUFACTURER: Custom Fabricated
MODEL NO.: #14 GA Stainless Steel

DRAFT

PERTINENT DATA: 8'-0" Long x 2'-6" Wide x 3'-0" High
UTILITIES REQ'D: ----
ALTERNATE MFRS.: None

Fabricate and set-in-place per Equipment Plan, Sheet K-101; Fabrication Detail, Sheet K-501; and the following:

1. Front and end edge rolls per Detail 1.02.1M.

2. 6" high back and partial left end splash per Detail 1.04A.

3. Framework per Detail 1.05.

4. Legs per Detail 1.07.

ITEM #20: (Continued)

5. Stainless steel undershelf per Detail 1.11.

6. Two (2) stainless steel drawer assemblies per Detail 1.14, Type I with locks.

7. Worktable per Detail 2.01.

8. Sound-deaden underside of tabletop with NSF-approved sound dampening material.

ITEM #21: PREP SINK

QUANTITY: One (1)
MANUFACTURER: Custom Fabricated
MODEL NO.: #14 GA Stainless Steel
PERTINENT DATA: 9'-0" Long x 2'-6" Wide x 2'-10" High
UTILITIES REQ'D: 1/2" HW, 1/2" CW, (2)1-1/2" IW
ALTERNATE MFRS.: None

Fabricate and set-in-place per Equipment Plan, Sheet K-101; Fabrication Detail, Sheet K-501; and the following:

1. Front and end edge rolls per Detail 1.02B.

2. 13" high backsplash per Detail 1.04A.

3. Framework per Detail 1.05.

4. Legs per Detail 1.07.

5. Stainless steel undershelf on both ends per Detail 1.11.

6. Full-length stainless steel overshelf per Detail 1.12.

DRAFT

7. Sound deaden underside of sinks and drainboards with NSF-approved sound dampening material.

8. Accessories:
   -- One (1) T&S #B-0133-ADF-12-BJ backsplash mounted pre-rinse spray faucet with swing spout add-on faucet with 12" nozzle, 6" wall bracket and #B-199-1 non-splash aerator.
   -- Two (2) T&S #B-3950-01 twist handle drains with rear-connected over-flows, handle bracket and basket strainer.
   -- One (1) 20"x20" one-piece removable #22 gauge perforated stainless steel scrap basket.

9. Item will remain shrink-wrapped until ready for final connection by Plumbing Contractor. Immediately following completion of final connections, K.E.C. shall re-shrink-wrap tubs or provide removable panel to avoid use by construction trades.

DRAFT

ITEM #22: ICE MACHINE/BIN

QUANTITY:	One (1)
MANUFACTURER:	Manitowoc
MODEL NO.:	IYT0500A/D570 (N058)
PERTINENT DATA:	Air-Cooled, 520-LB. Maker, 532-LB. Bin, Half Dice Cube, LEED Compliant
UTILITIES REQ'D:	11.5A, 120V, 1PH; 0.38A, 120V, 1PH (Ice & Water Sanitizing System); 3/8" CW, 1/2" IW (Maker Drain), 3/4" IW (Bin Drain)
ALTERNATE MFRS.:	Scotsman; Hoshizaki

Furnish and set-in-place per Equipment Plan, Sheet K-101, Manufacturer's Instructions and the following:

1. Stainless steel exterior finish, ice machine and bin.

2. Accessories:
   -- One (1) Everpure #EV9324-21 InsurIce i2000² Single water filter system with primary and coarse filter mounted on manufacturer's common wall bracket.
   -- One (1) Everpure #CD385 ozone delivery ice and water sanitizing system. K.E.C. to install.
   -- 6" high stainless steel leg set with adjustable bullet feet.
   -- One (1) #K00463 ice scoop with #K00461 external scoop holder mounted to left side of bin.

3. Backflow preventor installed on incoming water line by Plumbing Contractor.

ITEM #23: CONVECTION OVEN, MOBILE

QUANTITY:	Three (3)
MANUFACTURER:	Vulcan
MODEL NO.:	VC44ED (N058)
PERTINENT DATA:	Double Deck, Standard Depth, Solid State Controls, With Removable Doors

UTILITIES REQ'D: (2)12.5KW, 480V, 3PH
ALTERNATE MFRS: None

Furnish and set-in-place per Equipment Plan, Sheet K101, Manufacturer's Instructions and the following:

1. Accessories: (for each unit)
   -- 480-volt, three-phase operation.
   -- Five (5) additional stainless steel wire racks.
   -- Cord set.
   -- Stainless steel rear enclosure.
   -- 5" diameter heavy-duty swivel casters, front two (2) with brakes.

ITEM #24: CONVECTION STEAMER

QUANTITY: Two (2)
MANUFACTURER: Cleveland
MODEL NO.: (2) 22CET66.1 (N058)
PERTINENT DATA: (2) Double Stacked, Stand-Mounted 6-Pan, Connected Boilerless
UTILITIES REQ'D: (2) 14.4A, 480V, 3PH; (2) 3/4" CW, (2) 3/4" IW
ALTERNATE MFRS.: None

Furnish and set-in-place per Equipment Plan, Sheet K101, Manufacturer's Instructions and the following:

1. Accessories: (each unit)
   -- Two (2) Everpure #EV9797-22 KleenSteam II Twin System Water Filters mounted to wall behind the convection steamer.
   -- Two (2) Cool Drain Flow #DTV15 drain tempering kits. Plumber to install.
   -- Two (2) Dormont #W75B2Q 3/4" diameter x 24" long flexible water connectors with quick disconnect, shut off valve and restraining cable.

DRAFT

ITEM #25: VENTILATOR

QUANTITY: One (1)
MANUFACTURER: Streivor Air Systems
MODEL NO.: SAWCBD 725724 (N058)
PERTINENT DATA: Wall Mounted, ExtractAire FLSS Baffle Filters, With Fire Protection System and SmartAire Segmented Air Stream Technology
UTILITIES REQ'D: 1,080 CFM Exhaust/864 CFM Supply; 350W, 120V, 1PH (Lights); 20.0A (Cir), 120V, 1PH, 24-Hour Dedicated Service (Fire Protection System)
ALTERNATE MFRS.: None

Furnish and install per Equipment Plan, Sheet K-101; Ventilator Detail Drawing, Sheet K-502; Manufacturer's Instructions and the following:

1. 4'-9" Wide x 6'-0" Long x 2'-6" High, with bottom edge mounted at 6'-8" A.F.F. Entire unit constructed of 18 GA - 304 stainless steel #4 mill finish with liquid tight all welded external continuous seams and joints per N.F.P.A. 96, U.L. and State of Maryland Codes.

2. Two (2) U.L. Listed, NSF-Approved, surface-mounted natural LED light fixtures, equally spaced.

3. Matching stainless steel perimeter closure panels to finished ceiling by K.E.C. Verify ceiling height.

4. Surface fire protection system nozzles and piping to be installed at manufacturer's factory at time of fabrication. All exposed pipe and fittings shall be chrome-plate or stainless steel.

5. Hanger rods and support system from structure above by General Contractor. K.E.C. to coordinate method and location with other trades.

6. Stainless steel hanger brackets.

7. 3” integral stand-off at rear for semi-combustible compliance.

8. U.L. Classified stainless steel baffle filters.

9. Internal hood fan, 90CFM.

10. Semi-concealed stainless steel grease trough sloped to removable grease cups.

11. Factory supervision of installation and start-up.

12. Accessories:
    -- 12" wide utility cabinet mounted on right end with factory pre-piped PyroChem fire suppression system and DemandAire Control Panel.
    -- Six-month and twelve-month inspections, servicing, and replacement of components of fire protection system as per NFPA-96 Latest Edition.
    -- One (1) PyroChem K Class wall mounted 6 liter wet chemical fire extinguisher.
    -- Field wrapper.

DRAFT

ITEM #25: (Continued)

-- End panels.
-- #18 gauge stainless steel wall flashing full length of hood to extend from top of finish floor coved base up to bottom edge of hood body. Attach to wall with non-exposed fasteners and seal with clear silicone sealant.

ITEM #27: WORKTABLE WITH SINK

QUANTITY: One (1)
MANUFACTURER: Custom Fabricated

MODEL NO.: #14 GA Stainless Steel
PERTINENT DATA: 7'-4" Long x 2'-6" Wide x 3'-0" High
UTILITIES REQ'D: 1/2" HW, 1/2" CW, 1-1/2" IW
ALTERNATE MFRS.: None

Fabricate and set-in-place per Equipment Plan, Sheet K-101; Fabrication Detail, Sheet K-501; Manufacturer's Shop Drawing and the following:

1. Perimeter edge rolls per Detail 1.02.1M.

2. Framework per Detail 1.05.

3. Legs per Detail 1.07, with flanged feet on each corner leg.

4. Crossbracing per Detail 1.10.

5. Stainless steel undershelf per Detail 1.11.

ITEM #27: (Continued)

6. One (1) stainless steel drawer assembly per Detail 1.14, Type I, with lock.

7. Worktable per Detail 2.01.

8. 12" x 16 " x 8" deep utility sink per Detail 3.04 with stainless steel waste lever angle bracket fully welded to underside of sink and stainless steel apron to conceal plumbing piping.

9. Sound-deaden underside of tabletop and sink with NSF-approved sound dampening material.

10. Accessories:
    -- One (1) T&S #B-325 deck-mounted swing-spout gooseneck faucet with #B-199-2 aerator.
    -- One (1) duplex receptacle with stainless steel faceplate mounted on each end, pre-wired to common junction box below undershelf per Detail, Sheet K-104. Conceal wiring within tubular leg.

DRAFT

ITEM #28: WORKCOUNTER

QUANTITY: Two (2)
MANUFACTURER: Custom Fabricated
MODEL NO.: #14 GA Stainless Steel
PERTINENT DATA: 7'-0" Long x 2'-5" Wide x 3'-0" High
UTILITIES REQ'D: ----
ALTERNATE MFRS.: None

Fabricate and set-in-place per Equipment Plan, Sheet K-101; Fabrication Detail, Sheet K-501; and the following:

1. Perimeter edge rolls per Detail 1.02.1M.

2. Framework per Detail 1.06.

3. Legs per Detail 1.08. Flanged feet on each corner leg.

5. One (1) three-tier high stainless steel drawer assembly per Detail 1.14, Type I, with locks.

4. Workcounter per Detail 4.01.

5. Stainless steel sliding doors per Detail 4.28, with locks.

6. Sound-deaden underside of countertop with NSF-approved sound dampening material.

7. Accessories:
   -- One (1) duplex receptacle with stainless steel faceplate mounted as shown on Electrical Rough-In Plan, Sheet K-104.

ITEM #29: PASS-THRU HEATED CABINET, MOBILE

QUANTITY: Four (4)
MANUFACTURER: Traulsen & Company, Inc.
MODEL NO.: RHF 232WP-HHS/FHG (N058)
PERTINENT DATA: Two-Section, Self-Contained, Stainless Steel Interior/Exterior
UTILITIES REQ'D: 15.5A, 120/208V, 1PH
ALTERNATE MFRS.: True; Continental; Victory; Delfield

Furnish and set-in-place per Equipment Plan, Sheet K-101, Manufacturer's Instructions and the following:

1. Half-height solid doors on serving side, full-height glass doors on kitchen side, hinged per Equipment Plan.

2. Cylinder door locks, keyed-alike.

3. #16 gauge stainless steel, universal angle type, bottom support tray slides in lieu of wire shelves installed on 5" centers, five (5) pair per compartment, twenty (20) total, each unit.

4. Exterior mounted digital thermometer installed on kitchen side.

5. Set of four (4), 5" diameter heavy-duty swivel-type locking casters, all (4) with brakes.

6. Plastic laminate finish with stainless steel edge trim factory applied to exterior door fronts on serving side only; color as selected by MCPS Foodservices.

7. Cord and plug set with matching receptacle furnished and installed by Electrical Contractor.

ITEM #30: PASS-THRU REFRIGERATOR, MOBILE

QUANTITY: Four (4)
MANUFACTURER: Traulsen & Company, Inc.

SECTION 115213
PROJECTION SCREENS

PART 1 GENERAL

1.01 SUBMITTALS

A. Product Data: Manufacturer's catalog cuts and descriptive information on each product to be used, including:
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Installation methods.

B. Shop Drawings: Indicate project-specific dimensions, verified field measurements, mounting details, and interface with adjacent construction.
   1. Include wiring diagrams for motor operators and actuators, wiring connections, and controls and switches.
   2. Provide details, including viewing surface sizes, masking borders, trim accessories, screen seam locations, and extra drop length.

C. Operation and Maintenance Data: Provide manufacturer's operation and maintenance instructions.

1.02 DELIVERY, STORAGE, AND HANDLING

A. Deliver projection screens to project site in manufacturer's original unopened packaging, and inspect for damage and proper size before accepting delivery.

B. Store in a protected, clean, dry area with temperature maintained above **<< 50 degrees F; or __ degrees F>>**, and stack in accordance with manufacturer's recommendations.

C. Acclimate screens to building temperatures for **<< 24; or __>>** hours prior to installation**<< , in accordance with manufacturer's recommendations; , _____; or None - N/A>>**.

PART 2 PRODUCTS

2.01 FRONT PROJECTION SCREENS

A. Manufacturers:
   1. Bretford
   2. Bloch Enterprises, Inc. (BEI)
   3. Da-Lite Screen Company
   4. Draper, Inc
   5. Stewart Filmscreen Corporation

B. Front Projection Screens: Factory assembled unless otherwise indicated.
   1. Located in **<< All Purpose Room; or _____>>**: **<< Motorized; Manual; Fixed; or _____>><< , matte light diffusing fabric; , light refracting glass beaded; , reflective fabric; or , _____>>** screen**<< , wall mounted; , ceiling mounted; , ceiling recessed; or , _____>>**.
      a. Screen Dimensions: Manufacturer's standard, approximately 81 inches high by 144 inches wide (16:9 aspect ratio), with extra black drop at top of screen. ******MCPS standards indicate preferred width of 12 feet and aspect ratio of 16:9******

DRAFT

2. Located in **<< Auditorium; Cafeteria; and _____>>**: **<< Motorized; Manual; Fixed; or _____>><< , matte light diffusing fabric; , light refracting glass beaded; , reflective fabric; or , _____>>** screen**<< , wall mounted; , ceiling mounted; , ceiling recessed; or , _____>>**.
   a. Screen Dimensions: Manufacturer's standard, approximately 81 inches high by 144 inches wide(16:9 aspect ratio), with extra black drop at top of screen. ******MCPS standards indicate preferred width of 12 feet and aspect ratio of 16:9******

C. Matte Light Diffusing Fabric: Light diffusing screen fabric; washable, flame retardant per NFPA 701 and mildew resistant per ASTM G 21.
   1. Material: Matte white vinyl **<< on fiberglass backing; without backing; or _____>>**, with nominal gain of 1.0 over viewing angle not less than 70 degrees from axis, horizontally and vertically.

D. Masking Borders: Black, on four sides.

E. Exposed Screen Cases: Steel, with integral roller brackets.
   1. Finish: **<< Baked enamel; Powder coat; Laminate; Primer; or _____>>**.
   2. Color: **<< White; Black; Grey; or _____>>**.
   3. End Caps: Steel; finished to match case.
   4. Mounting: **<< Wall; Ceiling; Wall and ceiling, as indicated on drawings; or _____>>**.

F. Concealed-in-Ceiling Screen Cases: Aluminum, with integral roller brackets.
   1. Door Slat: Self trim; self-closing and -opening.
   2. Case Finish: **<< Baked enamel; Powder coat; Laminate; Primer; or _____>>**.
   3. Case Color: **<< White; Black; Grey; or _____>>**.
   4. End Caps: Aluminum; finished to match case.
   5. Electrically-Operated Screens: 1-1/2 inch aluminum door roller.

G. Manually-Operated Screens:
   1. Roller: **<< 1-3/4 inch; 2 inch; 3 inch; or __ inch>><< aluminum; steel; or _____>>**; **<< spring loaded; crank type; rope and pulley; or _____>>** with locking device.
   2. Screen Pull: Ring on bottom bar.
   3. Vertical Tensioning: Screen fabric weighted at bottom with **<< steel; aluminum; or _____>>** bar and **<< plastic; vinyl; or ____>>** end caps.

H. Electrically-Operated Screens:
   1. Roller: **<< Aluminum; Steel; or _____>>**, **<< 2 inch; 3 inch; 5-3/4 inch; 7 inch; or __ inch>>** in diameter, with locking device.
   2. Vertical Tensioning: Screen fabric weighted at bottom with **<< steel; aluminum; or _____>>** bar and **<< plastic; vinyl; or ____>>** end caps.
   3. Horizontal Tensioning: **<< Tab-guided cable system; Not required; or _____>>**.

I. Provide mounting hardware, brackets, supports, fasteners, and other mounting accessories required for a complete installation, in accordance with manufacturer's recommendations for specified substrates and mountings.

2.02 ELECTRICAL COMPONENTS

A. Electrical Components: NFPA 70 compliant, listed and classified by UL or other acceptable testing agency as suitable for the purpose specified and indicated.

B. Motors: Direct drive, **<< 110; 110/120; 220; 220/240; or _____>>** V, **<< 60; 50; or ___>>** Hz.

DRAFT

1. Screen Motor: Mounted **<< inside; at end of; or _____>>** roller; **<< three wire with ground; five wire with ground; pre-wired; or _____>>**; **<< quick reverse type; lifetime lubricated; and _____>>**; equipped with **<< thermal overload cut-off; internal junction box; electric brake; pre-set accessible limit switches; and _____>>**.
   a. Electrical Characteristics: **<< 1.2; 1.4; 2.4; 2.6; or ___>>** amps.
   b. Motor mounted on **<< sound absorber; vibration dampener; or _____>>**.
2. **<< Door; Adjustable Masking; and _____>>** Motor: Mounted **<< inside; at end of; or _____>>** roller; **<< three wire with ground; pre-wired; or _____>>**; **<< quick reverse type; lifetime lubricated; and _____>>**; equipped with **<< thermal overload cut-off; internal junction box; electric brake; pre-set accessible limit switches; and _____>>**.
   a. Electrical Characteristics: 1.2**<< 1.2; or __>>** amps.

C. Controls: Three (3) position control switch with plate.
   1. Provide cover plates that match the finish of other electrical cover plates at each location. Coordinate with Division 26 electrical subcontractor.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that substrate is finished and ready to accept screen installation.

B. If substrate preparation is the responsibility of another installer, notify **<<Architect>>** of unsatisfactory preparation before proceeding.

C. Verify that openings for recessed screens are correctly sized.

D. Verify type and location of electrical connections.

E. Do not install projection screens until climate control systems are in place and interior painting and other finishes are completed.

3.02 PREPARATION

A. Coordinate screen installation with installation of projection systems.

B. Coordinate installation with adjacent construction and fixtures, including ceilings, walls, lighting, speakers, fire suppression, display units (marker/tackboards), registers and grilles, and other indicated wall/ceiling mounted construction.

3.03 INSTALLATION

A. Install in accordance with manufacturer's instructions, using manufacturer's recommended hardware for relevant substrates.

B. Do not field cut screens.

C. Install screens in mountings as specified and as indicated on drawings.

D. Install plumb and level.

E. Install electrically operated screens ready for connection to power and control systems by others.

F. Adjust projection screens and related hardware in accordance with manufacturer's instructions for proper placement and operation.

G. Test electrical screens for proper working condition. Adjust as needed.

DRAFT

3.04 PROTECTION

A. Protect installed products until completion of project.

B. Touch up, repair, or replace damaged products before Date of Substantial Completion.

END OF SECTION 115213

DRAFT

SECTION 115223
TELEVISION BRACKETS

PART 1 GENERAL

1.01 SUBMITTALS

A. Product Data: For each type of product indicated. Provide data on mounting accessories for all applications.
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Installation methods.

B. Shop Drawings: Indicate project-specific dimensions, verified field measurements, mounting details, and interface with adjacent construction.
   1. Include wiring diagrams for wiring connections.

C. Sustainability Submittals: Refer to Division 1 Section "Sustainable Design Requirements."

D. Operation and Maintenance Data: Provide manufacturer's operation and maintenance instructions.

1.02 COORDINATION

A. Coordinate installation of anchorages for television brackets. Verify wall construction is suitable for wall-mounted bracket structural loading. Verify roof or floor construction is suitable for overhead-mounted bracket structural loading.

B. Electrical System Roughing-in: Coordinate layout and installation of television units and accessories with connections to electrical service and CCTV cable connection, if any.

1.03 DELIVERY, STORAGE, AND HANDLING

A. Deliver television brackets to project site in manufacturer's original unopened packaging, and inspect for damage and proper size before accepting delivery.

B. Store in a protected, clean, dry area and stack in accordance with manufacturer's recommendations.

1.04 WARRANTY

A. Provide 5 year manufacturer warranty for television bracket assembly.

PART 2 PRODUCTS

2.01 WALL MOUNTED TELEVISION BRACKETS

A. Fixed Wall Mounted Television Brackets: Wall-mounted steel or aluminum frame assembly capable of holding **<< <u>one screen</u>; or multiple screens in a video wall.>>**, with integral cable management.
   1. Screen Size: Capable of supporting screens from 40 inches to 75 inches.
   2. Maximum Screen Weight Supported: 110 pounds.
   3. Anchorage: Mount bracket to **<< <u>masonry</u>; <u>wood blocking</u>; or steel framing>>**.
   4. Products:
      a. ATDEC; AD-WF-5040.
      b. Chief, a brand of Legrand; RMF3.

DRAFT

d. Peerless-AV; SF650P.
e. Sanus, a brand of Legrand; LL11.

B. Articulating Wall Mounted Television Brackets: Wall-mounted, extendable, steel or aluminum frame assembly capable of holding one screen, vertical tilt, and lateral shift, with integral cable management.
1. Screen Size: Cable of supporting screens from 42 inches to 70 inches.
2. Maximum Screen Weight Supported: 100 pounds.
3. Anchorage: Mount bracket to **<< masonry; wood blocking; or steel framing>>**.
4. Products:
a. ATDEC; AD-WM-5060.
b. Chief, a brand of Legrand; ODMLA25.
c. Eaton; DWM3770X.
d. Peerless-AV; PA750.
e. Sanus, a brand of Legrand; VLF728.

2.02 CEILING MOUNTED TELEVISION BRACKETS

A. Ceiling Mounted Television Brackets for Single Screens: Ceiling-mounted steel or aluminum frame assembly capable of holding one screen with vertical tilt and integral cable management.
1. Screen Size: Capable of supporting screens from 42 inches to 75 inches.
2. Maximum Screen Weight Supported: 125 pounds
3. Anchorage: Mount bracket to **<< concrete; wood blocking; or steel framing>>**.
4. Products:
a. ATDEC; TH-3070-CTL.
b. Chief, a brand of Legrand; RLC1.
c. Peerless-AV; MOD-FPSKIT100-B.
d. Sanus; a brand of Legrand; LC1A.

B. Ceiling Mounted Television Brackets for Back to Back Screens: Ceiling-mounted steel or aluminum frame assembly capable of holding two screens back to back with vertical tilt and integral cable management.
1. Screen Size: Capable of supporting screens from 40 inches to 65 inches.
2. Maximum Screen Weight Supported: 220 pounds total (two screens weighing 110 pounds each).
3. Anchorage: Mount bracket to **<< concrete; wood blocking; or steel framing>>**.
4. Products:
a. ATDEC; ASBS-B2B-4TC.
b. Chief, a brand of Legrand; MCB1U.
c. Peerless-AV; DST965.
d. Sanus, a brand of Legrand; LC2A.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that substrate is finished and ready to accept television bracket installation.

DRAFT

B. If substrate preparation is the responsibility of another installer, notify **<<Architect>>** of unsatisfactory preparation before proceeding.

C. Verify type and location of electrical connections.

D. Do not install television brackets until climate control systems are in place and interior painting and other finishes are complete.

3.02 PREPARATION

A. Coordinate installation with adjacent construction and fixtures, including ceilings, walls, lighting, speakers, fire suppression, display units (marker/tackboards), registers and grilles, and other indicated wall/ceiling mounted construction.

3.03 INSTALLATION

A. Install in accordance with manufacturer's instructions, using manufacturer's recommended hardware for relevant substrates.

B. Install television brackets in mountings as specified and as indicated on drawings.

C. Install video walls in accordance with drawings and manufacturer's instructions. Verify that television screens are aligned horizontally and vertically, and that spacing between screens is uniform and of minimum size.

D. Install plumb and level.

3.04 ADJUSTING AND CLEANING

A. Adjust television screens and accessories in accordance with manufacturer's instructions for proper placement and operation.

B. Test television screens for proper working condition. Adjust as needed.

C. Lubricate hardware and other moving parts.

3.05 PROTECTION

A. Protect installed products until completion of project.

B. Touch up, repair, or replace damaged products before Date of Substantial Completion.

END OF SECTION 115223

DRAFT

SECTION 115313
LABORATORY FUME HOODS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASHRAE Std 110 - Methods of Testing Performance of Laboratory Fume Hoods.

B. ASTM A240/A240M - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.

C. ASTM A666/A666M - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.

D. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Required Hardness, Solution Hardened, and Bake Hardenable.

E. ASTM C1172 - Standard Specification for Laminated Architectural Flat Glass.

F. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

G. SEFA 1 - Laboratory Fume Hoods.

H. SEFA 2 - Installations.

I. UL 1805 - Standard for Safety Laboratory Fume Hoods and Cabinets.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate installation of fume hoods with **<< laboratory casework; other laboratory equipment; and _____>>**.

B. Preinstallation Meeting: Conduct preinstallation meeting**<< one week; at least one week; _____; or None - N/A>>** prior to the start of the work of this section; require attendance by all affected installers.

C. Sequencing: Ensure that utility connections are achieved in an orderly and expeditious manner.

1.03 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>**, for submittal procedures.

B. Product Data: Provide fume hood exterior and interior dimensions and construction, utility and service requirements and locations.

C. Shop Drawings: Indicate locations, large scale plans, elevations, cross sections, rough-in and anchor placement dimensions and tolerances, clearances required, locations and types of service fittings.

D. Manufacturer's Certificate: Certify that **<< products; or _____>>** meet or exceed **<< specified requirements; or _____>>**. Provide documentation of successful Factory Acceptance Testing.

E. Operation Data: Include description of equipment operation and required adjusting and testing.

F. Maintenance Data: Identify system maintenance requirements, servicing cycles, lubrication types required and**<< local; or None - N/A>>** spare part sources.

G. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in **<<Owner>>**'s name and registered with manufacturer.

DRAFT

H. Project Record Documents: Record actual locations of concealed utility connections**<< and _____; or None - N/A>>**.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing work of the type specified and with minimum **<< three; or _____>>** years of**<< documented; or None - N/A>>** experience**<< and approved by manufacturer; or None - N/A>>**.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Protect finished surfaces during handling and installation with protective covering of polyethylene film or another suitable material.

1.06 FIELD CONDITIONS

A. Ambient Conditions: Maintain temperature and relative humidity at occupancy levels during and after installation of fume hoods.

1.07 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Correct defective Work within a **<< five; or ____>>** year period after Date of Substantial Completion.

C. Provide **<< one; two; five; or ____>>** year manufacturer warranty for manufacturer's standard items (listed by part number in manufacturer's official publication).

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Metal Laboratory Fume Hoods:
   1. Kewaunee Scientific Corp.
   2. Mott Manufacturing Ltd.
   3. Multilab.
   4. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Provide laboratory fume hoods from single manufacturer.

C. Provide laboratory fume hoods from same manufacturer as laboratory casework.

2.02 VARIABLE AIR VOLUME (VAV) FUME HOODS

A. Restricted-Bypass Fume Hoods:
   1. Provide a compensating bypass arrangement above the sash to open after sash is closed to less than **<< 20; or 40>>** percent open. Bypass to maintain exhaust capacity of at least **<< 25 CFM per square foot>>** of work surface regardless of sash position.
   2. Provide an electronic control unit designed to use input from a sensor that monitors face velocity or sash position to modulate a dedicated exhaust damper in order to maintain a near-constant fume hood face velocity.
      a. Provide control unit with a manual-override switch that allows the operator to fully open the exhaust damper.
      b. Provide control unit with outputs for interfacing with **<< building's HVAC control system; or laboratory fume hood control system>>**.

DRAFT

2.03 PERFORMANCE REQUIREMENTS

A. Fume hoods complying with the following when tested in accordance with **<<ASHRAE Std 110>>**:

1. As-Manufactured (AM) Rating: **<< AM 0.05 (0.05 ppm); AM 0.02 (0.02 ppm); AM 0.01 (0.01 ppm); As indicated in the Fume Hood Schedule; or _____>>**.
2. As-Installed (AI) Rating: **<< AI 0.10 (0.10 ppm); AI 0.05 (0.05 ppm); As indicated in the Fume Hood Schedule; or _____>>**.
3. Average Face Velocity: 100 FPM (0.51 m/s) plus or minus 10 percent with sashes fully open.
4. Face-Velocity Variation: Not more than **<< 10; 15; 20; or _____>>** percent of average face velocity across the face opening with sash(es) fully open.
5. Release Rate: **<< 4.0 L/min.; or 6.0 L/min.>>**
6. Static-Pressure Loss: Not more than 1/2-inch w.g. (124 Pa) at 100 FPM (0.51 m/s) face velocity with sash fully open when measured at four locations 90 degrees apart around the exhaust duct and at least three duct diameters downstream from duct collar.

2.04 FUME HOODS

A. General Requirements:

1. Comply with **<<SEFA 1>>**.
   a. Provide fume hoods UL listed and labeled for compliance with **<<UL 1805>>**. Include labeling on the face of the fume hood.
2. Pre-pipe fume hoods for service fittings.
3. Pre-wire fume hoods for **<< light fixtures; receptacles; other electrical devices; fan switches; and _____>>**.
   a. Terminate all wiring in a junction box on top of hood.
4. Coordinate with Division 22, 23, and 26 contractors to ensure utility services are properly sized and located.

B. Fume Hood:

1. Ventilation: **<< Constant Air Volume (CAV); Variable Air Volume (VAV); Ductless/Filtered; or _____>>**.
2. Configuration: **<< Standing-height; bench mounted; Sitting-height; bench mounted; Low-height; bench mounted; Stand mounted; Floor mounted; ADA-compliant; or Double-sided>>**. ******MCPS prefers double-sided fume hoods for space efficiency.******
3. Height to Work Surface: 36 inches.
4. Sash Type: **<< Vertical rising; Horizontal sliding; Vertical/horizontal combination; Vertical rising, double, postless; or _____>>**.
   a. Leak-free enclosure box, manufacturer's standard construction, for vertical rising sash.
   b. Glazing: **<< Laminated safety glass; Polycarbonate; or _____>>**.
   c. Sash Guides: Corrosion-resistant polyvinyl chloride (PVC) track.
   d. Vertical Sash mechanism: Designed to allow operation at a maximum 7 pounds of force over complete travel height. Counter-balance system shall be capable of holding sash open at any position without creep.
      1) **<< Cable: Minimum 3/32 inch (2 mm) thick stainless steel of construction standard with the manufacturer; or Chain: Hardened chain, standard with the manufacturer>>**.

DRAFT

e. Vertical Sash Pull: **<< Type 316 stainless steel, with No.4 finish; or Type 316 stainless steel, with PTFE corrosion-resistant coating>>**.

5. Top Front Panel: **<< Standard integral grille stamped into panel of same materials as fume hood exterior.; Chevron integral grille, sight-tight, and shaped to create a barrier against flying debris from inside the hood.; Integral vision panel allowing viewing into top portion of fume hood.; _____ .; or None - N/A>>**
6. Exterior: **<< Sheet steel; Stainless steel; Fiberglass; or Polypropylene>>**.
7. Interior Lining: **<< Polypropylene; Type 316 stainless steel, 18 gauge thick, with No.4 finish; 1/4" thick PVC; 3/16" thick glass fiber reinforced polyester; Epoxy resin; Phenolic composite; or _____>>**.
8. Service Fittings and Fixtures:
   a. Cup Sink: Drop-in **<< Epoxy; Polyolefin; Polyethylene; Stainless Steel; or _____>>**, complete with removable stainer and waste fitting.
      1) Shape: **<< Oval; or Round>>**.
      2) Size: **<< 3 inches by 6 inches (75 by 150 mm); 3 inches by 9 inches (75 by 228 mm); or 5 inch (127mm) diameter>>**.
   b. Gooseneck faucet.
   c. Gas turret with ball valve.
   d. Recessed duplex outlet on hood face.
9. Access Panels: Provide removable panels on both sides hood exterior and interior lining panels.
10. Work Surface:
    a. Work Top for Fume Hoods Other Than Floor-mounted Type: **<< Epoxy resin; Phenolic resin; Stainless steel; or _____>>**.
       1) Edge: Raised rim with **<< rounded; beveled; or square>>** edges and corners**<< , and coved for stainless steel; or None - N/A>>**.
       2) Full width drain trough**<< at rear; at front; _____; or None - N/A>>**.

MCPS prefers double-sided hoods, but we can configure the paragraph below for a single-sided bench height hood against the wall in case it's needed.

C. Fume Hood Base Cabinets:
   1. Exterior construction: **<< Metal cabinets; and Wood Cabinets - Refer to Division 12, "Wood Laboratory Casework.">>**.
      a. Acid storage cabinets.
      b. Solvent (flammable and combustible liquids) storage cabinets.
   2. Material: **<< Sheet steel; Stainless steel; Fiberglass; Polypropylene; or Wood>>**; corrosion-resistant.
   3. Color/Finish: Matching fume hood finish.

D. Light Fixtures: UL labeled, vaporproof, **<< one-tube; two-tube; or _____>>**, **<< T-5; T-8; or _____>>** fluorescent light fixtures. Number and length of fixtures as necessary for fume hood width. Mounted above sealed safety glass panel. White baked-enamel finish on fixture interior.
   1. Average Interior Illumination Level: 80 footcandles.
   2. Coordinate access to light fixture with ceiling extension configuration and construction.

2.05 FABRICATION

A. General: Assemble fume hoods in factory to greatest extent possible. Disassemble fume hoods only as necessary for shipping and handling limitations, or as necessary to permit movement through a **<< 35 inches by 79 inches>>** clear door opening.

DRAFT

B. Steel Exterior: Fabricated from steel sheet, **<< 0.048 inch>>** thick, with component parts screwed together to allow removal of end panels, front fascia, and airfoil and to allow access to plumbing lines and service fittings. Chemical-resistant finish applied to interior and exterior surfaces of component parts before assembly.

C. Ends: Fabricated with double-wall end panels. Close area between double walls at front of fume hood and as needed to house sash counterbalance weights, utility lines, and remote-control valves.

D. Lining Assembly: Unless otherwise indicated, assembled with stainless-steel fasteners or epoxy adhesive, concealed where possible. Joints sealed by filling with chemical-resistant sealant during assembly.

1. Punched fume hood lining side panels for service fittings and remote controls. Removable plug buttons for holes not used for indicated fittings.

E. Molded Glass-Fiber-Reinforced Polyester Lining: Molded unit consisting of end panels, back panel, preset rear baffle, and top bonded together into a single piece; reinforced to form a rigid assembly to which exterior is attached.

1. Punched fume hood lining side panels for service fittings and remote controls. Removable plug buttons for holes not used for indicated fittings.

F. Stainless-Steel Lining Assembly: Fully-welded unit consisting of end, back, and top panels, and work top with spill-containing raised edges; reinforced to form a rigid assembly.

G. Rear Baffle: Same material as fume hood lining, unless otherwisse indicated, at rear of hood with openings at top and bottom, with corrosion-resistant fasteners. Fabricated for removal to facilitate cleaning behind baffle.

H. Exhaust Plenum: Full width of fume hood, sized and configured to provide uniform airflow, of same material as hood lining, and with duct stub for exhaust connection.

1. Duct-Stub Material: **<< Epoxy-coated steel; stainless steel; glass-fiber-reinforced polyester; or _____>>**, unless otherwise indicated.

I. Airfoil: At bottom of fume hood face opening, with 1 inch gap between bottom of airfoil and work top. Sash to close on top of airfoil. Designed to direct airflow across work.

1. Fabricated from **<< 14 gauge, 0.0781 inch; 16 gauge, 0.0625 inch; or _____>>** stainless steel with **<< No.4; PTFE; or PVDF>>** finish.

J. Filler Strips: As needed to close spaces between fume hoods and/or fume hood base cabinets and adjacent building construction. Fabricated from same material and with same finish as fume hoods or fume hood base cabinets, as applicable. Flange, notch, and reinforce filler strips. Fabricate to form well-fitting closures, free from oil-canning.

K. Ceiling Extensions: Filler panels matching fume hood exterior to enclose space above fume hoods at front and sides of fume hoods**<< to ceiling; to approximately 4 inches (102 mm) above ceiling; _____; or None - N/A>>**. Flange, notch, and reinforce ceiling extensions as required for rigidity. Fabricate to form well-fitting closures, free from oil-canning.

1. Provide bottom-hinged access panels within the front ceiling extension filler panel to facilitate access to light fixture and other fume hood components at top of hood not readily accessible by other means.

L. Finished Back Panels: Where rear surfaces of fume hoods are exposed to view, provide finished back panels matching rest of fume hood enclosure.

M. Demonstration (teaching) Fume Hoods: **<< Single; or Double>>** chamber fume hood, with independently-operable sashes on opposite faces of fume hood. Construction similar to standard models.

DRAFT

1. Optional glazed viewing window on **<< left side; or right side>>** of fume hood.

N. Comply with requirements of other sections for factory installation of water and laboratory gas service fittings, piping, electrical devices, and wiring. Securely anchor fittings, piping, and conduit to fume hoods, unless otherwise indicated.

2.06 MATERIALS

A. Steel Sheet: Cold-rolled, commercial steel (CS) sheet, complying with **<<ASTM A1008/A1008M>>**; matte finish; suitable for exposed applications.

B. Stainless-Steel Sheet: **<<ASTM A240/A240M>>** or **<<ASTM A666/A666M>>**, Type 304, stretcher-leveled standard of flatness.

C. Glass-Fiber-Reinforced Polyester: Polyester laminate with a chemical-resistant gel coat on exposed faces, and having a flame-spread index of 25 or less according to **<<ASTM E84>>**.

D. Epoxy: Factory molded, modified epoxy-resin formulation with smooth, nonspecular finish.

1. Physical Properties:
   a. Flexural Strength: Not less than 10,000 pou **<< 10,000 pounds per square inch; or _____ pounds per square inch>>**.
   b. Modulus of Elasticity: Not less than 2,000,000 pounds per square inch.
   c. Hardness (Rockwell M): Not less than 100.
   d. Water Absorption (24 Hours): Not more than 0.02 percent.
   e. Heat Distortion Point: Not less than 260 degrees.
   f. Flame-Spread Index: 25 or less according to **<<ASTM E84>>**.
2. Chemical Resistance: As follows when tested with indicated reagents according to **<<NEMA LD 3>>**, Test Procedure 3.4.5:
3. Color: **<< Black; Gray; Beige; White; As selected by Architect from manufacturer's standards; and _____>>**.

E. Laminated Safety Glass: **<<ASTM C1172>>**.

F. Electrical Components, Devices, and Accessories: Listed and labeled as defined in **<<NFPA 70>>**, by a qualified testing agency, and marked for intended location and application.

G. Fasteners: Stainless-steel, where exposed to fumes.

2.07 ACCESSORIES

A. Airflow Monitors/Indicators and Alarms: Provide each fume hood with a airflow monitor/indicator complete with an audible and visual alarm that activates when airflow sensor reading is outside of preset range.

1. Source: **<< Fume hood manufacturer; Laboratory ventilation controls manufacturer; or _____>>**.
2. Airflow Monitor/Indicator Functionality:
   a. Type: A sensor module that monitors fume hood face velocity, and a display module that presents data as digital readout.
      1) Input power: 9 to 30 V AC/DC. Include power supply module or functionality.
      2) Mounting: **<< Flush; Semi-recessed; Surface-mounted; or _____>>**.
      3) Readings: Remote sensor inserted in airflow stream.
      4) Visual Status Display: Green, yellow, and red LEDs.
      5) Airflow Display: Digital display of face velocity reading.
      6) Operating temperature: **<< 55 to 86 degrees F; 32 to 120 degrees F; or _____ degrees F>>** .

DRAFT

3. Airflow Alarm functionality: Audible (85 dB @ 4 inch distance), and visual alarm that activates when airflow sensor reading is outside of preset range.
    a. Reset and test mode.
    b. **<< Programmable ; or None - N/A>>**Switch: Designed to silence audible alarm and automatically reset when airflow returns to within preset range. Warning light to stay on when alarm is silenced.
    c. Capability for integration with building's HVAC system.
    d. Alarm included as an integral feature of the airflow monitor/indicator.

B. Fume Hood Controller: Airflow Indicator/monitor with built-in electronics to control a dedicated exhaust fan and/or exhaust valve.
    1. Fume hood manufacturer's standard controller.

C. Sash Stops: Spring-loaded stops to limit hood opening to **<< 50 percent of sash; _____ percent of sash; 18 inches; or _____ inch>>** height. Manually releasable to open sash fully, and to reset automatically when sash is lowered below set level.

2.08 SOURCE QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Factory **<< testing; analysis; analysis and testing; and _____>>** of each type of fume hood.

C. Non-Complying Work: See Section **<< 014000>>**.

PART 3 EXECUTION

3.01 EXAMINATION

A. Locate concealed framing, blocking, and reinforcements that support fume hoods by field measurements before being enclosed, and indicate measurements on Shop Drawings.

B. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of fume hoods.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. General: Install fume hoods according to manufacturer's written instructions. Install level, plumb, and true; shim as required, using concealed shims, and securely anchor to **<< building; and adjacent laboratory casework>>**. Securely attach access panels but provide for easy removal and secure reattachment. Where fume hoods abut other finished work, apply filler strips and scribe for accurate fit, with fasteners concealed where practical.

B. Large Components: Ensure that large components can be moved into final position without damage to other construction.

C. Comply with indicated requirements for installing water and laboratory gas service fittings, and electrical and telecommunications devices.
    1. Install fittings in accordance with shop drawings, installation requirements in **<<SEFA 2>>**, and manufacturer's written instructions. Set bases and flanges of sink and work top-mounted fittings in sealant recommended by manufacturer of sink or work-top material. Securely anchor fittings to fume hoods.

DRAFT

3.03 FIELD QUALITY CONTROL

A. Field test installed fume hoods in accordance with requirements of Section **<< 230593 - Testing, Adjusting, and Balancing for HVAC>>**.

3.04 ADJUSTING

A. Adjust moving parts for smooth, near silent, accurate sash operation with one hand only. Adjust sashes for uniform contact of rubber bumpers. Verify that counterbalances operate without interference.

3.05 CLEANING

A. Clean finished surfaces, including both sides of glass; touch up as required; and remove or refinish damaged or soiled areas to match original factory finish, as approved by **<<Architect>>**.

3.06 DEMONSTRATION

A. Demonstrate proper operation of fume hoods and their accessories to **<<Owner>>**'s designated representative.

END OF SECTION 115313

DRAFT

SECTION 116123.16
ORCHESTRA PIT FILLERS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.

B. ASTM A283/A283M - Standard Specification for Low and Intermediate Tensile Strength Carbon Steel Plates.

C. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.

D. ASTM B210/B210M - Standard Specification for Aluminum and Aluminum-Alloy Drawn Seamless Tubes.

E. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

F. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric).

G. ASTM E648 - Standard Test Method for Critical Radiant Flux of Floor-Covering Systems Using a Radiant Heat Energy Source.

H. EPA (TSCA); Title VI - Toxic Substances Control Act, Title VI: Formaldehyde Standards for Composite Wood Products.

I. NFPA 253 - Standard Method of Test for Critical Radiant Flux of Floor Covering Systems Using a Radiant Heat Energy Source.

J. PS 1 - Structural Plywood.

1.02 SUBMITTALS

A. Product Data: Manufacturer's data sheets on each product to be used, including finishes.
   1. Include test reports or manufacturer's certificate indicating compliance with structural loading requirement and fire testing (critical radiant flux).

B. Shop Drawings: Provide complete layout, customized to this project, that shows platform layout, locations of support column assemblies, and accessories.

C. Delegated Design Documents: Provide structural engineering drawings and calculations, sealed by Designer.

D. Sustainable Design Submittals: Refer to Division 1 Section "Sustainable Design Requirements."

E. Designer's qualification statement.

1.03 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: Include operation data on fold-up and fold-down of choral risers, and transportation and storage. Provide maintenance data including recommended cleaning and lubrication of operating parts.

B. Warranty: Submit manufacturer warranty and ensure that forms have been completed in **<<Owner>>**'s name and registered with manufacturer.

DRAFT

1.04 QUALITY ASSURANCE

A. Designer Qualifications: Perform design under direct supervision of Structural Engineer experienced in design of this type of work and licensed in the State of Maryland.

1.05 WARRANTY

A. Manufacturer Warranty: Provide 10-year manufacturer warranty from date of Substantial Completion. Complete forms in Owner's's name and register with manufacturer.
   1. Warranty shall cover failures in material or workmanship, including but not limited to the following:
      a. Components that break due to normal wear and tear (vandalism is excluded).
      b. Delamination of adhesives or bonding.
      c. Warping, bowing, or other deformation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Folding and Portable Standing Choral Risers:
   1. Basis-of-Design Product: Wenger Corporation; Strata Orchestra Pit Filler.
   2. Other Acceptable Manufacturers:
      a. StageRight, Inc.
      b. Staging Concepts, Inc.

B. Source Limitations: Furnish products produced by single manufacturer and obtained from single supplier.

2.02 ORCHESTRA PIT FILLERS

A. Structural Performance Requirements: As measured on a 4 foot by 6 foot rectangular deck:
   1. Standard Uniform Live Load: 150 pounds per square foot.
   2. Maximum Deflection: L/360 for a 72-inch span.
   3. Minimum Dynamic Impact Loading: 10,000 cycles of 400 lb-force at 6 locations.
   4. Point Load Rating: 1000 pounds on a 2-inch diameter.
   5. Lateral Live Side Load: 12 lbf/sq ft based on deck top surface area, meets IBC code.

B. Platform Deck Fabrication:
   1. Provide decks constructed from 1/2-inch plyron on both sides of a 2-5/8-inch thick phenolic impregnated paper honeycomb core.
   2. Deck Fabrication Components:
      a. Glass-filled nylon corners; color black.
      b. Extruded PVC edges; color black.
      c. Deck attachment consisting of spring-loaded screw assemblies.
   3. Deck Finish:
      a. 1/4-inch stage flooring; black finish.
      b. Refer to Division 9 Section "Stage Flooring Assembly."

C. Framing Components:
   1. Support Beams:
      a. Provide support beams from 6063-T6 extruded aluminum.

DRAFT

b. Provide beams which incorporate dual fastener tracks to accommodate spring-loaded screw connections to platforms.
c. Provide cross beams with pin and socket connection to main support beams.

2. Column Assembly:
a. Provide column assembly legs from 6063-T6 extruded aluminum in the size and quantity required to support the specified load.
b. Provide assemblies that attach with pin connectors.
c. Provide each assembly with the ability to adjust height a minimum total of 4 inches plus or minus.

2.03 MATERIALS

A. Steel: Finish all steel components with manufacturer's standard black powder coat.
1. Steel Sections: **<<ASTM A36/A36M>>**.
2. Steel Tubing: **<<ASTM A500/A500M>>** Grade A cold-formed structural tubing.
3. Plates: **<<ASTM A283/A283M>>**.

B. Aluminum: Provide manufacturer's standard finish on all components that will be concealed.
1. Extruded Aluminum: **<<ASTM B221>>** (**<<ASTM B221M>>**), 6063 alloy, T6 temper.
2. Aluminum-Alloy Drawn Seamless Tubes: **<<ASTM B210/B210M>>**, 6063 alloy, T6 temper.

C. Plywood: **<<PS 1>>**, 5-ply southern pine or douglas fir, Grade A-C; 1/2 inch minimum thickness.
1. Composite Wood: Any composite wood materials installed inside the weatherproofing system shall meet either **<<EPA (TSCA), Title VI>>** for ultra-low-emitting formaldehyde or no added formaldehyde (ULEF / NAUF).

2.04 ACCESSORIES

A. Storage Carts:
1. Deck and Support Storage Carts:
a. Provide manufacturer's standard steel tube-framed transport carts with heavy-duty casters and clamping safety strap.
b. Provide number of carts required for layout indicated, specifically designed to efficiently store platform deck and support assembly components.
c. Provide black powder coat finish for all storage carts.

B. Anchoring and Fasteners: Provide manufacturer's approved removable fastening system to secure pit filler to stage front edge.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of Conditions: Verify installation location with Owner. Prior to beginning equipment assembly, verify that all construction activity is complete that may soil or damage equipment (including but not limited to painting, staining, sealing, sanding).

3.02 INSTALLATION

A. Choral Riser Installation: Assemble in accordance with manufacturer's written instructions. Verify that equipment assemblies are complete and fully functional.

DRAFT

B. Demonstration and Training: Provide Owner's personnel with training in proper methods for set up and break down, handling, transportation, storage, and maintenance.

C. Choral Riser Storage: Clean risers immediately prior to storage. Fold down risers in accordance with manufacturer's instructions and store in location designated by Owner.

END OF SECTION 116123.16

DRAFT

SECTION 116143
STAGE CURTAINS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.

B. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.

C. ASTM A391/A391M - Standard Specification for Grade 80 Alloy Steel Chain.

D. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

E. FM (AG) - FM Approval Guide.

F. ITS (DIR) - Directory of Listed Products.

G. NEMA MG 00001 - Motors and Generators.

H. NFPA 70 - National Electrical Code.

I. NFPA 701 - Standard Methods of Fire Tests for Flame Propagation of Textiles and Films.

J. UL (DIR) - Online Certifications Directory.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Conduct a preinstallation meeting at least two weeks prior to the start of the work of this section; require attendance by all affected installers.

1.03 SUBMITTALS

A. Product Data: Provide for each type of product as follows:
   1. Stage Curtains: Provide information on type of curtain, weight, location for use on project, and type of flame retardancy.
   2. Operators: Provide rated capacities, and operating and electrical characteristics.
   3. Tracks: Provide capacity of each curtain track to support curtain weight and control curtain operation.
   4. Pipe Grid and Rigging: Provide product data for each component of pipe grid assembly, including load capacity of pipe grid components and rigging chain and cable.

B. Shop Drawings: Indicate installation information for components not dimensioned or detailed in product data.
   1. Submit floor plans, elevations, sections, attachment details of curtains and operating clearances.
      a. Submit layout of pipe grid and battens, including attachment locations to structure.
   2. Submit documentation indicating load capacity of each batten, track, attachment, and rigging components.
   3. Submit attachment locations for each type of curtain, and corresponding loads imposed on structure.
   4. Submit locations of equipment components, switches, and controls; identify between manufacturer installed and field installed wiring.
   5. Submit wiring diagrams for power, signal, and control wiring.

DRAFT

C. Selection Samples: Submit color chart for each type of stage curtain indicated that includes full range of colors, textures, and patterns available, along with **<< 12-inch; or ___-inch>>** square fabric sample, in any color, of each fabric type and seam.

D. Verification Samples: Submit fabric full width by at least **<< 12-inch; 36-inch; or ___-inch>>** long section of each selected fabric**<< from dye lot to be used for this work; or None - N/A>>**, with specified treatments applied and showing repeat of patterns; mark top and face of fabric.

E. Certificate: Certify that **<< products of this section; or _____>>** meet or exceed **<< specified requirements; or _____>>**.

F. Delegated Design Data: Indicate stage curtain system structural attachments, including analysis data signed and sealed by qualified designer responsible for their preparation.

G. Designer's Qualification Statement.

H. Installer's Qualification Statement.

I. Operation and Maintenance Data: For stage curtains and rigging operations.

J. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in **<<Owner>>**'s name and registered with manufacturer.

1.04 QUALITY ASSURANCE

A. Designer Qualifications: Perform design of **<< track support system; and pipe grid>>** under direct supervision of a Professional Engineer experienced in design of this type of work and licensed in the State of Maryland.

B. Installer Qualifications: Company specializing in performing work of the type specified; certified installation representative of curtain fabricator/manufacturer.

1.05 FIELD CONDITIONS

A. Ambient Conditions: Do not install stage curtains until spaces are fully enclosed and watertight, and the following:

1. Wet work in adjacent areas is complete and surfaces are dry.
2. Work at and above ceiling level has been completed.
3. Ambient temperatures and humidity of adjacent areas are maintained at levels when occupied for intended use.

B. Field Measurements: Confirm supporting structural element locations and adjacent construction for stage curtains and rigging, and complete field measurements prior to fabrication**<< and include these dimensions on shop drawings; _____; or None - N/A>>**.

1.06 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Correct defective Work within a two year period after Date of Substantial Completion.

1. Defective Work includes, but is not limited to, stage curtain support and rigging that is not operating properly.

PART 2 PRODUCTS

2.01 FABRICATORS

A. Stage Curtain and Track/Rigging Assembly Fabricators:

DRAFT

1. Beck Studios Inc.; Milford, OH; https://www.beckstudios.net/
2. Georgia Stage; Duluth, GA; https://www.gastage.com/
3. IWeiss; Fairview, NJ; https://iweiss.com/
4. LuXout Stage Curtains; Richmond, VA; https://www.luxout.com/
5. Janson Industries; Canton, OH; http://www.jansonindustries.com/
6. J.R. Clancy, Inc; Syracuse, NY; https://www.jrclancy.com/
7. Texas Scenic Company, Inc; San Antonio, TX; https://www.texasscenic.com/

2.02 PERFORMANCE REQUIREMENTS

A. Stage Curtain Systems Design: Engage qualified designer to develop design of stage curtain system, including comprehensive project specific analysis of necessary structural system attachments in compliance with performance requirements.

B. Structural Performance: Ensure attachment of stage curtain system to structure withstands material weight and operational loads applicable for this project and in compliance with local building codes and authorities having jurisdiction.
   1. Design Loads: Weight of stage curtains and track system.

C. Fire-Test Characteristics: Stage curtain fabrics in compliance with **<<NFPA 701>>** flame propagation fire test requirements conducted by authorized testing agency, listed by **<<UL (DIR)>>**, **<<ITS (DIR)>>**, or **<<FM (AG)>>** and acceptable to authorities having jurisdiction.
   1. Permanently attach label to fabric of each curtain assembly indicating fabric treatment as follows:
      a. Inherently Flame Retardant (IFR), fibers/yarns that are non-combustible for life of fabric.

D. Electrical Components: Devices that are listed and labeled in compliance with **<<NFPA 70>>**, by a qualified testing agency, and marked for designated application.

2.03 STAGE CURTAIN FABRICS

A. Provide curtains of matching fabric and color from single dye lot, and when size and quantity of curtains exceeds maximum dye lot size, provide curtain or adjacent pair of curtains from only one dye lot, and arrange curtain dye lots to minimize exposure of any differences.

B. Polyester Velour: Weighing at least 22 oz/linear yd, napped fabric of 100 percent polyester with minimum pile height of 75 mil, 0.075 inch and minimum width of 54 inches.
   1. Application: **<< Main Traveler; Main Valance; Olio Traveler; Olio Legs; Olio Valance; Cyclorama Traveler; Cyclorama Legs; Cyclorama Border; and _____>>** curtains.
   2. Color: To be selected by Architect from manufacturer's full range.
   3. Texture: To be selected by Architect from manufacturer's full range.
   4. Pattern: To be selected by Architect from manufacturer's full range.
   5. Products:
      a. Dazian LLC; Angelo.
      b. Fred Krieger & Company; IFR Prism Velour 22 oz.
      c. JB Martin; Inferno.
      d. KM Fabrics, Inc; Prestige.
      e. LuXout; Prologue 22 oz.
      f. Rose Brand; Encore.

DRAFT

C. Polyester Velour: Weighing at least 13 oz/linear yd, napped fabric of 100 percent polyester with minimum pile height of 75 mil, 0.075 inch and minimum width of 54 inches.
   1. Application: Legs, intermediate and rear valances, and backdrop/cyclorama curtains.
   2. Color: To be selected by Architect from manufacturer's full range.
   3. Texture: To be selected by Architect from manufacturer's full range.
   4. Pattern: To be selected by Architect from manufacturer's full range.
   5. Products:
      a. Dazian LLC; Carbonite Plus.
      b. Fred Krieger & Company; IFR Prism Velour 14 oz.
      c. JB Martin; Volcano.
      d. KM Fabrics, Inc; IFR Plateau Velvet/Velour 13 oz.
      e. LuXout; Epilogue 14 oz.
      f. Rose Brand; Apollo.

2.04 CURTAIN TRACK

A. Steel Track: Commercial quality, roll-formed, galvanized steel sheet, **<<ASTM A653/A653M>>**, with G60 coating designation; with continuous bottom slot and each half of track in single continuous piece; black finish; including support and operation accessories.
   1. Thickness: ******Verify medium- or heavy-duty with track length. General rule of thumb is use heavy-duty if over 40 feet in length. First option in each manufacturer below corresponds to medium-duty, and second option corresponds to heavy-duty******
      a. Medium-Duty: 16-gauge, 0.0598-inch minimum thickness.
      b. Heavy-Duty: 14-gauge, 0.0747-inch minimum thickness.
   2. Products:
      a. Automatic Devices Company; **<< Besteel 170 series; or Silent Steel 280 series>>**.
      b. H & H Specialties, Inc.; **<< 200 series; or 400 series>>**.
      c. iWeiss; **<< IWLC Light Channel Track series; or IWC Channel Track series>>**.

B. Curved Track: Shop fabricate curved portions of curtain track.
   1. Curved Track Cable Guides: Provide **<< outside idlers; mule pulleys; spindles; guides; and _____>>** as required for curve configuration and track length.

C. Curtain Rails: Provide **<< single; double; or _____>>** curtain capacity as indicated on drawings, and end stops.

D. Curved-Suspended-Track Stiffener: Steel pipe, **<< 1-1/4-inch; 1-1/2-inch; or ___-inch>>** nominal diameter, Grade A, Schedule 40 in accordance with **<<ASTM A53/A53M>>**; support both sections of curved suspended tracks, with curve to match track.

E. Clamp and Bracket Hangers: Steel clamps and brackets of required strength to support loads for attaching track to overhead support.

F. Track-Lap Clamp: Clamp that matches track channel finish as necessary for attaching two tracks at center overlap.

G. Operation: ******Verify operation type on case-by-case basis with MCPS******
   1. Manual Walk-Along Operation: Curtain track without a cord, cable, pulleys, or floor pulley; must walk with curtain to open and close.
   2. Manual Cord Operation: Curtain track with cord, pulleys, and floor pulley; must manually open and close the curtain.

DRAFT

a. Operating Line: 3/8-inch diameter, stretch-resistant operating cord with braided synthetic-fiber cover over solid, synthetic-fiber, linear filaments.

b. End Pulleys: One single dead-end and one double live-end pulley, with sheaves having shielded ball bearings housed in plated-steel covers that match track finish, and provide with bracket for securing off-stage end of curtain.

c. Floor Pulleys: Sheave, **<< adjustable type with 3-inch (76 mm) diameter wheels; adjustable type with 5-inch (127 mm) diameter wheels; spring-tensioned type; or _____>>**, and having shielded ball bearings housed in plated-steel covers**<< , painted black; , _____; or None - N/A>>**.

3. Motorized Operation: Curtain track with cord and pulleys.

a. Operating Line: **<< 3/16-inch; 1/4-inch; or ___-inch>>** diameter, stretch-resistant operating cord with braided synthetic-fiber cover over galvanized wire cable.

b. End Pulleys: One single dead-end and one double live-end pulley, with sheaves having shielded ball bearings housed in plated-steel covers that match track finish, and with bracket for securing off-stage end of curtain.

H. Track System Components: Provide curtain track with components as recommended by manufacturer for loads and operation, including track end stops.

1. Carriers: Standard **<< plated-steel; molded nylon; or _____>>** carriers with a pair of **<< nylon; neoprene; or polyethylene>><< tired ball-bearing; _____; or None - N/A>>** wheels riveted parallel to body, and equip carriers with**<< rubber or neoprene bumpers to reduce noise; _____; or None - N/A>>** and plated-steel swivel eye**<< and trim chain; _____; or None - N/A>>** for attaching curtain snap or S-hook, and required number of curtain carriers for track length and curtain fabrication.

a. Master Curtain Carriers: One plated-steel master carrier for each leading curtain edge, with two pairs of **<< nylon; neoprene; or _____>><< tired ball-bearing; _____; or None - N/A>>** wheels and with two line **<< guides; clamps; or _____>>** per carrier.

b. End Stops: Provide manufacturer's recommended end stops, compatible with and sized for track system indicated, at all track terminations, to prevent carriers from exiting the track.

2. Pulleys: One dead-end, single-wheel pulley; one live-end, double-wheel pulley; and one adjustable pulley to maintain proper tension on operating line; each with**<< guarded; _____; or None - N/A>><< gas-filled-nylon-tired; molded-nylon-tired; _____; or None - N/A>>** ball-bearing sheaves enclosed in steel housings; pulleys with steel housing finished to match track and with bracket for securing off-stage end of curtain.

2.05 CURTAIN TRACK OPERATORS

A. General: Provide operating machine as recommended by track manufacturer of size and capacity for each motorized curtain as indicated on drawings, with electric motor and factory wired motor controls, starter, gear-reduction unit, brake, and control station.

B. Type of Operator:

1. For hoizontal curtain operation, provide manufacturer's recommended traction drive device sized for curtain sizes indicated.

2. For vertical raising and lowering of pipe grids, curtains, scenery, and set pieces, provide cable drum with grooved drum and cable tension device that automatically takes up cable slack to retain cable in grooves.

C. Motor: In compliance with **<<NEMA MG 00001>>** requirements, and sized to start, accelerate, and operate curtain in either direction and from any position on track at rated speeds and service factor.

DRAFT

1. Electrical Characteristics: 120 VAC, 3-hase, 60 Hz; continous duty type.
2. Coordinate wiring requirements and electrical characteristics of motors and other electrical devices with electrical system available for each location.

D. Controllers, Disconnect Switches, Wiring and Wiring Devices: Manufacturer's standard, unless otherwise indicated.

E. Control Station: Momentary contact, three-button control station with push-button controls labeled - Open, Close, and Stop.
1. Enclosures: Key-accessed and keyed alike, with one key for each enclosure and one extra key.
2. Switches: Key-operated and keyed alike, with one key for each switch and one extra key.

F. Limit Switches: Fully closed and fully opened preset stops.

2.06 FABRICATION - CURTAINS

A. General: Provide vertical seams unless otherwise indicated, locate vertical seams so they do not fall on faces of pleats, and only use fabric that is cut greater than half the width of fabric.

B. Vertical and Top Hems: Machine sew hems as follows, unless otherwise indicated:
1. Vertical Hems: Fabricate at least **<< 2 inches>>** wide, and at least **<< 4 inches>>** wide at **<< borders; valances; teasers; tormentors, and _____>>** with at least **<< 1-inch>>** tuck and without visible selvedge material from front of curtain; sew open ends of hems closed.
2. Turnbacks: Fabricate **<< leading edge; trailing edge; and _____>>** turnbacks for **<< traveler; or _____>>** curtains by folding back at least **<< 12 inches; one-half width; or _____>>** of face fabric, with at least **<< 1-inch>>** tuck, and vertically secured by sewing.
3. Top Hems: Fabricate by double-stitching **<< 3-1/2-inch>>** wide heavy **<< jute; laminated synthetic; or _____>>** webbing to top edge at back side of curtain, and with at least **<< 2 inches>>** of face fabric turned under.

C. Fullness:
1. 50 Percent Fullness: Provide this fullness, exclusive of turnbacks and hems, and spaced at 12 inches on center along top hem reinforcement as follows:
a. Sewing additional material into 3-inch double-stitched, flat, box pleats.

D. Grommets:
1. Black Colored Curtains: **<< No. 3 brass; No, 4 brass; aluminum; or _____>>** grommets with black finish.
2. Pleated Curtains: Provide **<< grommets centered on each box pleat; double grommets for each round pleat; or _____>>** and placed **<< 1 inch>>** from corner of curtain; for snap hooks or S-hooks.

E. Bottom Hems: Machine sew hems as follows, unless otherwise indicated:
1. For Curtains With Fullness:
a. Curtains That Don't Hang to Floor: Hems at least **<< 3 inches>>** deep**<< , with weight tape; , _____; or None - N/A>><< , 3/4 inch; , ___ inch; or None - N/A>>**, and open ends of hems sewn closed.
b. Floor Length Curtains: Provide hems at least **<< 6 inches>>** deep, with individual weights in individual closed pockets sewn above finished bottom edge of curtain, and open ends of hems sewn closed.

DRAFT

2.07 PIPE GRID

A. General: Fabricate pipe grid in configuration indicated on Drawings from steel pipe battens, trim and support cable and chain, clamps, and anchors, as specified in Accessories article below.
   1. Where not indicated on Drawings, provide pipe grid in 4 foot by 4 foot square grid configuration.
   2. Clamps: At pipe grid, provide a cross grid connection clamp at each intersection of battens.
   3. Suspend stage curtain track from pipe grid batten with manufacturer's recommended clamp and hanger assembly.

2.08 ACCESSORIES

A. S-Hooks: Manufacturer's standard heavy-duty plated wire hooks, at least **<< 2 inches; or ___ inches>>** long.

B. Tie Lines: **<< No. 4; No. 4-1/2; or No. ___>>** cord or braided soft cotton tape, colored **<< to best match curtain; black; white; or _____>>**; at least 5/8-inch wide by 36 inches long and **<< threaded through grommets; sewn into top hem of curtain; or _____>>**.

C. Battens: Fabricate using steel pipe and minimize the number of joints; connect pipe at joints using 18-inch long internal splice sleeve secured with **<< four flush rivets; plug welds; threaded couplings; _____; or equally strong method>>**.
   1. Steel Pipe: 1-1/4 inch nominal diameter, Grade A, Schedule 40 in accordance with **<<ASTM A53/A53M>>**.
   2. Finish: Matte black with 1-inch wide yellow-colored stripe along center of each batten.

D. Support, Clamps, and Anchors: Galvanized after fabrication sheet steel, Class B in accordance with **<<ASTM A153/A153M>>**; manufacturer's standard thickness.

E. Trim and Support Cable: 1/4-inch diameter, 7x19 galvanized steel cable with minimum breaking load (MBL) of 7,000 lb.
   1. Provide fittings in accordance with cable manufacturer's written instructions for size, number, and method of installation, including a drop-forged galvanized turnbuckle to allow for leveling.

F. Trim and Support Chain: Hardened alloy steel chain rated for overhead lifting, Grade 80 in accordance with **<<ASTM A391/A391M>>**.

G. Inserts, Bolts, Rivets, and Fasteners: Manufacturer's standard and corrosion-resistant.

H. Individual Curtain Bottom Weights: Curtain manufacturer's standard segmented weights in compliance with requirements for curtain type and location.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions, with installer present for compliance with requirements for supporting structural members, blocking, clearances, installation tolerances, and other conditions that may impact performance of stage curtain assembly.

B. Examine placement and condition of inserts, clips, blocking, or other supports installed by others and for use in supporting track and battens of stage curtain assembly.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

DRAFT

3.02 INSTALLATION, GENERAL

A. Install stage curtain assembly in accordance with curtain and track manufacturers written instructions.

3.03 INSTALLATION - CURTAIN

A. Track Hung: Secure curtains to track carriers using S-hooks and trim chains.

3.04 INSTALLATION - BATTENS (PIPE GRID)

A. Install battens by suspending at heights as indicated with trim and supports spaced as required to support loads; do not exceed 8 feet between supports.
   1. Cable Trim and Support:
      a. Fasten cables securely to either structure or to inserts, eye screws, or other applicable devices that are appropriate for substrate and not subject to deterioration or failure with time or elevated temperatures.
      b. Attach other end of cable to pipe clamps with turnbuckles, housed or fixed securely after adjustment to prevent loosening.
   2. Chain Support: Secure chain as required for application with load-rated terminations.

3.05 INSTALLATION - TRACK

A. Mounting of Track Assembly:
   1. Ceiling Mounted: Provide ceiling supports for mounting track direct to ceiling structure and within intervals indicated in manufacturer's written instructions for on center spacing. ******RARE - for very lightweight assemblies; more similar to cubicle curtain installation******
   2. Beam Mounted: Install track by suspending from beam clamps securely mounted to structural I-beam and within intervals indicated in manufacturer's written instructions for on center spacing. ******Can be a standard install method for smaller installs like elementary schools, if pipe grid is not needed******
   3. Wall Mounted: Install track by suspending from brackets securely mounted to wall construction and within intervals indicated in manufacturer's written instructions for on center spacing. ******Rare - may be used for specialty installs such as TV studios, or for a fixed rear curtain******
   4. Batten Mounted: Install track by suspending from pipe batten with manufacturer's acceptable track clamp hangers securely attached to batten pipe clamps and within intervals indicated in manufacturer's written instructions for on center spacing. ******Standard install method for larger stages - pipe grid battens hold stage track assemblies and lighting******

B. Track Support Spacing: Comply with manufacturer's recommendations for applied loads, and not to exceed the following dimensions between track supports:
   1. Heavy-Duty Track: 6 feet**<< 6 feet; or ___ feet>>**, maximum.
   2. Medium-Duty Track: 4 feet, maximum.
   3. Curved Walk-Along Track: 4 feet, maximum, with additional supports at curves and splices.

C. Install track for center-parting curtains with at least 24-inch overlap of track sections at center-line, and supported with track lap clamps.

3.06 CLOSEOUT ACTIVITIES

A. Demonstration: Demonstrate operation of system to Owner's personnel.

DRAFT

1. Use operation and maintenance data as reference during demonstration.
2. Briefly describe function, operation, and maintenance of each component.

B. Training: Train Owner's personnel on operation and maintenance of system.
1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
2. Provide minimum of **<< two hours; one day; or _____>>** of training.
3. Instructor: Manufacturer's training personnel.
4. Location: At project site.

3.07 PROTECTION

A. Protect installed stage curtain assembly from subsequent construction operations until Date of Substantial Completion.

END OF SECTION 116143

DRAFT

SECTION 116613
BALLET BARRES

PART 1 GENERAL

1.01 SUBMITTALS

A. Product Data: For each type of ballet barre product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, features, and finishes. Include details of anchors, hardware, and fastenings. If applicable, include assembly, disassembly, and storage instructions.

B. Sustainable Design Submittals: Refer to Division 1 Section “Sustainable Design Requirements.”

C. Shop Drawings: Show location and extent of fully assembled ballet barres. Show location and extent of disassembled equipment and components and transport and storage accessories. Include elevations, sections, and details not shown in Product Data. Show method of field assembly, connections, installation details, mountings, attachments to other Work, and relationship to adjoining work.

D. Samples for Verification: Not required.

1.02 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of ballet barre equipment through one source from a single manufacturer.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Basis of Design Product: Gerstung USA; Designer Pro Barre Brackets.

B. Acceptable Manufacturers:
   1. American Harlequin Corp.
   2. The Cartwheel Factory.
   3. Custom Barres.
   4. Gibson Athletic.
   5. MatsMatsMats.

2.02 MATERIALS, GENERAL

A. Steel Brackets: Steel fabrication as follows:
   1. Fixed Wall Type: Bar bracket or extension stud welded to predrilled mounting plate.
   2. Adjustable Wall Type: Extension stud with wing nut, washer and nut to lock to slotted wall-mounted channel.

B. Wood Barres: Red oak or hard maple, nominal 1-5/8 to 1-3/4-inch diameter. Sanded, unfinished.

C. Anchors, Fasteners, Fittings and Hardware: Manufacturer's standard corrosion-resistant or non-corrodible units to match bracket; to suit barre and supporting construction.

D. Mounting Boards: Wood, sanded and unfinished, 1 inch thick and 2 inches wider than bracket mounting plate.

DRAFT

2.03 WALL-MOUNTED BARRES

A. General: Provide wall-mounted barres with accessories and anchorage devices.

B. Fixed Ballet Barre: Wall mounted **<< single barre; or double barres>>**.

1. Fixed height (top of barre): 42 inches. Confirm with Owner. ******Use this option for a single barre.******
2. Fixed height (top of barre): 42-inches top barre, 32-inches bottom barre. Confirm with Owner. ******Use this option for double barres.******

C. Support Brackets: Steel brackets at 64-inch maximum span. Provide maximum of three brackets per barre length.

D. Wall Clearance: 7 inches from wall to inside.

E. Metal Finish: **<< Chrome-plated; or Powder-coated, color as selected from manufacturer's standards>>**.

F. Wood Finish: Sanded natural finish, with eased edges at ends. Do not apply stains or varnishes.

PART 3 EXECUTION

3.01 EXAMINATION OF STUD WALL SUBSTRATES

A. Examine wall assemblies, where reinforced to receive anchors and fasteners, to verify that locations of concealed reinforcements have been clearly marked for installers. Locate reinforcements and mark locations if not already done.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION, GENERAL

A. General: Comply with manufacturer's written installation instructions. Complete equipment field assembly, where required.

B. Coordinate installation of wall-mounted ballet barres with wall-mounted mirrors specified in Section **<< 088300 - Mirrors>>**.

C. Unless otherwise indicated, install ballet barres after other finishing operations, including painting, have been completed.

D. Permanently Placed Ballet Barres: Rigid, level, plumb, square, and true; anchored securely to supporting structure; positioned at locations and elevations indicated on Shop Drawings.

E. Anchoring to In-Place Construction: Use anchors and fasteners necessary for securing ballet barres to structural support and for properly transferring load to in-place construction.

3.03 CLEANING AND PROTECTION

A. After completing ballet barre installation, inspect components. Remove spots, dirt, and debris and touch up damaged shop-applied finishes according to manufacturer's written instructions.

B. Provide final protection and maintain conditions acceptable to manufacturer and Installer that ensure ballet barres are without damage or deterioration at time of Substantial Completion.

C. Replace ballet barres and finishes that cannot be cleaned and repaired, in a manner approved by Architect, before time of Substantial Completion.

END OF SECTION 116613

DRAFT

SECTION 116623
GYMNASIUM EQUIPMENT

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials.

B. ANSI Z97.1 - American National Standard for Safety Glazing Materials Used in Buildings - Safety Performance Specifications and Methods of Test.

C. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

D. ASTM F355 - Standard Test Method for Impact Attenuation of Playing Surface Systems, Other Protective Sport Systems, and Materials Used for Athletics, Recreation and Play.

E. ASTM F1081 - Standard Specification for Competition Wrestling Mats.

F. ASTM F2440 - Standard Specification for Indoor Wall/Feature Padding.

G. AWS D1.1/D1.1M - Structural Welding Code - Steel.

H. NFPA 70 - National Electrical Code.

I. NFPA 286 - Standard Methods of Fire Tests for Evaluating Contribution of Wall and Ceiling Interior Finish to Room Fire Growth.

J. NFPA 701 - Standard Methods of Fire Tests for Flame Propagation of Textiles and Films.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Large Components: Ensure that large components can be moved into final position without damage to other construction.

B. Electrically Operated Equipment: Coordinate location and electrical characteristics of service connection.

1. Coordinate requirements for electrical raceways, junction boxes, wiring, disconnects, connections with the electrical contractor.

1.03 SUBMITTALS

A. Product Data: Provide manufacturer's data showing configuration, sizes, materials, finishes, hardware, and accessories; include:

1. Electrical characteristics and connection and wiring locations.
2. Fire rating certifications.
3. Manufacturer's installation instructions.

B. Shop Drawings: For custom fabricated equipment indicate, in large scale detail, construction methods; method of attachment or installation; type and gauge of metal, hardware, and fittings; plan front elevation; elevations and dimensions; minimum one cross section; utility requirements as to types, sizes, and locations.

C. Design Data: For backboard assemblies, provide structural analysis data; include load calculations at points of attachment to building structure. Structural data shall be signed and sealed by the Professional Structural Engineer responsible for their preparation.

D. Samples: Submit samples of **<< wall pad coverings; and divider curtain fabric>>**, in manufacturer's available range of **<< colors; textures; graphics; and _____>>**.

DRAFT

1.04 CLOSEOUT SUBMITTALS

A. Operating and maintenance data for each operating equipment item.

B. Warranty: Submit manufacturer warranties and ensure that forms have been completed in Owner's name and registered with manufacturer.

1.05 QUALITY ASSURANCE

A. Source Limitations: Provide each type of gymnasium equipment from a single manufacturer; furnished through a single supplier.

B. Installer Qualifications: Company specializing in performing work of the type specified with approval by manufacturer for installation of specified equipment.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to project site in manufacturer's original packaging with factory original labels attached.

B. Do not deliver until installation space is enclosed and conditioned.

C. Store products indoors and elevated above floor; prevent warping, twisting, or sagging.

D. Store products in accordance with manufacturer's instructions; protect from extremes of weather, temperature, moisture, and other damage.

1.07 WARRANTY

A. Divider Curtains: Provide five year manufacturer warranty for divider curtains, from date of Substantial Completion. Warranty shall cover deterioration or damage to divider curtain materials and defective operation.

B. Interior Basketball Backstops: Provide 5 year manufacturer warranty for interior basketball backstops, from date of Substantial Completion.

C. Basketball Backboards (Glass): Provide lifetime manufacturer warranty.

D. Manual Goal Height Adjuster: Provide 5 year manufacturer warranty, from date of Substantial Completion.

E. Basketball Goals: Provide 5 year manufacturer warranty, from date of Substantial Completion.

F. Backboard Safety Pads: Provide 5 year manufacturer warranty, from date of Substantial Completion.

G. Volleyball Standards and Hardware: Provide 5 year manufacturer warranty on standards and 3 year manufacturer warranty on other hardware, from date of Substantial Completion.

H. Interior Scoreboards: Provide 5 year manufacturer warranty for scoreboards and accessories, from date of Substantial Completion.

1. Wireless Controls: Provide 2 year manufacturer warranty, from date of Substantial Completion.

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS

A. See drawings for sizes and locations, unless noted otherwise.

B. Where mounting dimensions or sizes are not indicated, comply with applicable requirements of the National Federation of State High School Associations (NFHS) sports rules.

DRAFT

C. Provide mounting plates, brackets, and anchors of sufficient size and strength to securely attach equipment to building structure; comply with requirements of Contract Documents.

D. Hardware: Heavy duty steel hardware, as recommended by manufacturer.

E. Electrical Wiring and Components: Comply with **<<NFPA 70>>**; provide UL-listed equipment.

F. Structural Steel Fabrications: Welded in accordance with **<<AWS D1.1/D1.1M>>**, using certified welders.

2.02 GYMNASIUM DIVIDER CURTAINS

A. Gymnasium Divider Curtains; Fold-Up Type:

1. Curtain Material: Class A rated, self-extinguishing vinyl coated polyester complying with **<<NFPA 701>>**.
2. Hems & Seams: Double-thickness/double-turned mesh/fabric material, welded.
3. Upper Section: Not less than 7 oz/sq yd vinyl mesh fabric white color.
4. Lower Section: Not less than 18 oz/sq yd solid vinyl coated polyester.
   a. Color: To be selected by Architect from manufacturer's full range.
   b. Height Above Floor: 8 feet.
5. Overall Curtain Height: Floor to ceiling; so that bottom of curtain is 2 inches above floor in fully extended position.
6. Provide all structural steel overhead framing members, anchorage, fasteners, and hardware, and other components as required by manufacturer for a complete assembly and for secure mounting to overhead structure.
7. Operation: Vertical lift fold-up.
8. Folding Control System: Electric hoist with 115 volt actuator, manufacturer's standard motor of horsepower required for curtain size indicated**<< , integral limit switches that provide automatic shut-off in both positions; , _____; or None - N/A>>**, and safety catch with automatic reset.
9. Controls: Three-position surface mounted wall switch; key operated. Provide two keys per switch.
10. Width: As indicated on Drawings.
11. Manufacturers:
    a. Draper, Inc.
    b. Performance Sports Systems; a Gared Holdings company.
    c. Spalding.

2.03 BASKETBALL

A. Ceiling-Suspended Backstop Assemblies: Capable of mounting both rectangular and fan-shaped backboards.

1. Framing: Center mast, 6-5/8 inch diameter structural steel tube; with sway bracing to each side; provide folding direction and bracing location as indicated per product listings below.
   a. Fittings: Attached to 6-5/8 inch diameter center mast by heavy 1/4 inch thick precision saddle die-cut formed steel fittings, secured in place by 5/8 inch diameter U-bolt hardware. Strap type half clamps are not acceptable.
   b. Provide all structural steel overhead framing members, anchorage, fasteners, and hardware, and other components as required by manufacturer for a complete assembly and for secure mounting to overhead structure.

DRAFT

2. Folding Control System: Electric hoist that folds backstop with 120 V, 3/4 HP motor, integral limit switches that provide automatic shut-off in both positions, and safety catch with automatic reset.
    a. Safety Catch: Provide safety device on all folding backstops. Safety device shall consist of nylon belt in an aluminum housing that limits free fall to no more than 3 inches in the event of mechanical failure of backstop components. Safety device shall be tested to catch a minimum 1750 lb free falling load, with minimum tensile strength of 6000 lbs.
        1) Strap Retractor: Provide accessory retractor device to hold safety cables/straps away from the field of play when backstop is in the lowered position.
3. Height Adjuster: Raises or lowers assembly by 2 feet to adjust goal height.
    a. Height Control System: Manual winch.
4. Framing Color: Manufacturer's standard.
5. Manufacturers (Forward-Fold; Rear-Braced): Provide at main courts in main gymnasium.
    a. Draper, Inc. Model TF-20J.
    b. Porter Athletic; Model 90917.
    c. Progressive Sports Construction Group; Model 817-FFRB.
    d. Performance Sports Systems; Model 3102/3103.
6. Manufacturers (Side-Fold; Side-Braced): Provide at side courts in main gymnasium, and all courts in auxiliary/second gymnasium, as applicable.
    a. Draper, Inc. Model TBS-26-B.
    b. Porter Athletic; Model 90955.
    c. Progressive Sports Construction Group; Model 855-SFB.
    d. Performance Sports Systems; Model 3108/3109.

B. Backboards: Tempered glass, rectangular shaped; 72 inch wide by 42 inch high.
1. Frame: Brushed aluminum edge, steel mounting.
2. Tempered Safety Glass: 1/2 inch thick; meeting the impact requirements of **<<16 CFR 1201>>** Category II or **<<ANSI Z97.1>>** Class A.
3. Markings: Painted or integrally manufactured, as standard with manufacturer.
4. Provide safety padding for bottom edge, corners, and lower portion of left and right edges of backboard.
5. Provide mounting kit for attachment to center strut type backstop.
6. Color: Manufacturer's standard.

C. Goals: Steel rim, mounted to backboard, with attached white nylon net; complete with mounting hardware.
1. Competition Net: White nylon anti-whip cord; 12-loop; between 15 and 18 inches long and sized for rim diameter; not less than 120- or more than 144-gm thread.
2. Net Attachment Device: Tube-tie.
3. Breakaway mechanism, adjustable (180 lb or 230 lb). Rebound characteristics shall be identical to those of a fixed goal per NCAA regulation.
4. Finish: Powder coated orange.

D. Electrical Controls and Accessories:
1. Equipment Mounting Board: Provide plywood mounting board with clear coat finish for each electric motor/operator. Size as required for equipment size.
2. Controls: Key-operated wall switch. Provide two keys per switch.

DRAFT

a. Unless otherwise indicated, group controls for all folding backstops in a single location.
b. Coordinate switchplate covers with Division 26 electrical cover plates to match other cover plates in the space.

2.04 FLOOR-MOUNTED EQUIPMENT

A. Volleyball Systems: Provide complete system of adjustable posts, net, floor sleeves, and tensioning winch meeting requirements for FIVB, USA Volleyball, NCAA and NFHS competition requirements. ******Provide volleyball system at middle schools and high schools******
1. Quantity: **<< _____>>**.
2. Posts: 3-inch minimum OD schedule 80 aluminum tube with height adjustments between 42 and 96 inches at maximum 1 inch intervals.
3. Net: 4-inch square #36 nylon cord with vinyl coated polyester or canvas hem, double stitched around the perimeter.
   a. Top Hem Reinforcing: 2000 pound minimum break strength galvanized steel aircraft cable in nylon coating.
   b. Bottom Hem Reinforcing: 1/4-inch diameter braided nylon rope with spring loaded, pressure type rope tensioner.
   c. Size: NFHS regulation size; 32'-0" long by 3'-0" high, with 2-inch white top hem..
4. Tensioning Winch: **<< Manual crank; Power; or ___>>** heavy duty, self-locking worm gear mechanism.
5. Provide net antenna and boundary markers.
6. Protective Pads: Polyethylene foam covered with polyester reinforced vinyl fabric.
7. Manufacturers:
   a. Performance Sports Systems; Rallyline Scholastic Telescopic One-Court System.
   b. Porter Athletic; Powr Line Competition Package.
   c. Schelde Sports; A3 Plus Volleyball System.
   d. Senoh; Indoor Volleyball System (with D1300 aluminum posts).

B. Volleyball Referee Stand: Provide one referee stand. Referee stand shall be fabricated of heavy gauge steel, freestanding, with locking wheels / casters, and shall be foldable for compact storage. Stand shall have support railing on three sides. Provide with manufacturer's accessory padding to cover vertical posts; color to be selected from manufacturer's standard range.

C. Badminton Systems: Provide complete system of adjustable posts, net, and floor sleeves. ******Provide badminton systems at middle schools and high schools******
1. Quantity: **<< _____>>**.
2. Posts: 1-1/2-inch minimum OD powdercoated steel uprights.
3. Net: Nominal 3/4- to 1-inch square nylon, cotton, or polyethylene mesh with black finish, with manufacturer's standard vinyl coated polyester top, side, and bottom hems, double stitched around the perimeter.
   a. Top Hem Reinforcing: 1/4-inch diameter braided polyethylene rope.
   b. Size: 20'-0" or 21'-0" wide as standard with manufacturer; by 2'-6" high.
4. Manufacturers:
   a. Performance Sports Systems; Heavy Duty Sleeved Badminton System.
   b. Porter Athletic; 764100 Badminton Standards with 2236110 Badminton Net.
   c. Senoh; DG012100 Badminton Net Posts with DG801000 Badminton Net.

DRAFT

D. Floor Sleeves for Posts: Metal sleeve, with latch cover, cast into concrete subfloor to hold poles for nets and goals; installed flush with finish floor surface. Sleeve diameter shall be sized for submitted volleyball or badminton systems.
   1. Latch Cover: Chrome- or brass-plated, round; tamper resistant lock with key.
   2. Sleeve: Steel.
   3. Depth of Sleeve: Manufacturer's standard from floor surface to bottom, including latch cover. Coordinate with depth of gym flooring assembly, and coordinate with concrete subcontractor to ensure proper sleeve locations and for required depth and sizing of slab at sleeve locations.
   4. Elevated Floor Slabs: Provide sleeve retainer to be bolted to the underside of the floor slab.

E. Floor Anchors for Portable Gymnastics Equipment: Steel plate cast into concrete, with center screw-down button for securing tensioned elements; installed flush with finish floor surface. ******Provide for High Schools only******
   1. Quantity of Anchors: Provide four anchors for high bar and four anchors for uneven parallel bars, unless otherwise indicated on Drawings. Verify final locations and dimensions with Owner prior to installation.
   2. Screw Size: 1/2-inch diameter, with 13 threads per inch.

2.05 MAT MOVERS

A. Stationary Mat Movers: Provide motorized hoist and sling assemblies for mat storage. Provide ceiling mounted mat hoist, for hoisting three minimum 14'-0" by 42'-0" mat sections. ******Existing schools with older mats require larger movers. Confirm sizes of mats with MCPS during design.******
   1. Provide all structural steel overhead framing members, anchorage, fasteners, and hardware, and other components as required by manufacturer for a complete assembly and for secure mounting to overhead structure.
   2. Winch/Operator: Electric hoist that raises or lowers mat mover with 208 V, 3 Phase, 60 Hz reduction drive motor with secondary chain and sprocket drive. Provide integral limit switches that provide automatic shut-off in both positions, and safety catch with emergency lowering manual override. Provide motor horsepower as required by manufacturer for mat mover size indicated.
      a. If manufacturer's standard hoist system requires two motors, include a monitoring controller to ensure the motors remain synchronized throughout the up/down cycle.
      b. Provide key switch control station, adjacent to other switches in the gymnasium. Coordinate switchplate covers with Division 26 electrical cover plates to match other cover plates in the space.
   3. Manufacturers:
      a. Draper, Inc; Sectional Mat Lifter - 502069.
      b. NGE Mat Hoist; Mat Hoist Model Maxi Mini.
      c. Porter Athletic; Stationary Mini Mat Mover; Model 91105100N.

2.06 EXERCISE EQUIPMENT

A. Ceiling Mounted Rings: Two rings on free hanging cables, mounted on ceiling beam with safety str; comply with International Gymnastics Federation (FIG) rules. ******High Schools only.******
   1. Rings: Wood.
   2. Cables: Plastic-coated steel cables, attached to nylon webbing for rings.

DRAFT

3. Ring Height From Floor: Adjustable height; 48 inches to 102 inches.
4. Mounting: Building structure.
5. Manufacturers:
   a. Gibson Athletic; Model #RN85400. ******Basis of Design.******
   b. Gerstung International.
   c. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Climbing Ropes: Heavy duty rope, hung vertically from pipe beam secured to ceiling structure, unsecured at bottom. ******Elementary Schools only******
   1. Construction: Manufacturer's standard material; with top end securely clamped in a fitting specifically designed for attaching to supporting pipe beam structure.
      a. Provide four total ropes; two with knots distributed along rope as climbing aids, and two without knots.
   2. Diameter: 1-1/2 inches, nominal.
   3. Length: From ceiling attachment point to floor with extra 42 inches length to lie on floor.
   4. End: Provide knotted end on all ropes.
   5. Safety Cable Attachment: Provide attachment accessory fabricated of 3/16-inch chain or 1/8-inch diameter cable, with clamp and fittings, designed as backup attachment to pipe beam.
   6. Pipe Beam: Not less than 3-1/2-inch OD steel pipe or tubing beam, with not less than 2-3/8-inch OD drop pipes, and all bracing, connectors, and fasteners; designed to transfer loads and securely attach to overhead supporting structural elements.
   7. Rope Hoist: Manual hoist system to raise climbing ropes out of the way of other activities. Rope hoist shall be wall attached; consisting of #10 bell cord or 1/4-inch diameter synthetic polyfiber rope with snap swivel fittings, rope adjuster, rope weight, weight bag, pulley and rope cleat; and with clear-finished wood wall attachment pads for pulley and cleat attachment; provide with clamps and fasteners.
      a. Provide one rope hoist system per two climbing ropes.
      b. Include warning signage mounted adjacent to rope hoist that climbing equipment should only be used with proper supervision and with safety mats.

2.07 BATTING CAGES AND NETTING ******PROVIDE FOR HIGH SCHOOLS ONLY******

A. Basis-of-Design Product: Provide Porter #90900-00 or a comparable product by one of the following:
   1. AALCO Manufacturing.
   2. IPI by Bison.
   3. Performance Sports Systems.
   4. Progressive Sports Construction Group.

B. Indoor Retractable Batting Cage: Provide custom size netting, nominal size as indicated on Drawings.
   1. Provide integrally colored 2.5 mm braided polyester fiber netting with knotted construction. Twisted polyester fiber or nylon fiber netting is not acceptable.
   2. Provide welded framework of 1.75-inch by 14 gage square steel tube finished with black powder coat, and eyebolts for netting attachment.
   3. Provide retractable 3/4 HP, 115 V batting cage winch, cable and mounting accessories required for installation.
   4. Controls: Three-position wall switch; key operated. Provide two keys per switch.

DRAFT

a. Coordinate switchplate cover with Division 26 electrical cover plates to match other cover plates in the space.

2.08 ARCHERY NETS ***PROVIDE FOR MIDDLE SCHOOLS AND HIGH SCHOOLS***

A. General: Provide heavy-duty closed nylon mesh, fold-up archery nets; size 42 feet long by 10 feet high; with bound edges, reinforced seams, and brass grommets at top.
   1. Color shall be selected from manufacturer's standard options.
   2. Provide retractable 3/4 HP, 115 V winch, including all cable and mounting accessories required for installation.
   3. Controls: Three-position wall switch; key operated. Provide two keys per switch.
      a. Coordinate switchplate cover with Division 26 electrical cover plates to match other cover plates in the space.

2.09 WALL PADDING

A. Wall Padding: **<<ASTM F2440>>** and **<<NFPA 286>>** compliant; fire-retardant foam filling bonded to backing board, wrapped in covering; each panel fabricated in one piece.
   1. Surface Burning Characteristics: Flame spread index (FSI) of 25 or less, smoke developed index (SDI) of 450 or less, Class A, when tested in accordance with **<<ASTM E84>>** as a complete panel.
   2. Flammability: Entire assembly shall be tested to **<<NFPA 286>>** and shall meet the following criteria:
      a. During the 40 kW exposure, flames shall not spread to the ceiling.
      b. During the 160 kW exposure:
         1) Flame shall not spread to the outer extremity of the sample on any wall or ceiling.
         2) Flashover, as defined in NFPA 286, shall not occur.
      c. The peak rate of heat release throughout the NFPA 286 test shall not exceed 800 kW.
      d. The total smoke released throughout the NFPA 286 test shall not exceed 1,000 m^2.
   3. Impact Resistance: Entire assembly shall be tested to and meet the impact resistance criteria of **<<ASTM F2440>>**.
   4. Covering: Vinyl-coated polyester fabric, mildew and rot resistant.
      a. Fire Resistance: Covering shall pass **<<NFPA 701>>**.
      b. Fabric Weight: 14 oz/sq yd, minimum.
      c. Color: To be selected by Architect from manufacturer's full range.
   5. Foam, Fire-Rated: Open cell polychloroprene (Neoprene), with 5.5 pcf nominal density.
   6. Foam Thickness: Not less than 2 inches.
   7. Backing Board: Plywood.
      a. Thickness: 3/8-inch, minimum.
   8. Mounting: Minimum three rows of Z-clips fixed to wall and to padding. Nailer strips are not acceptable.
   9. Manufacturers:
      a. IPI by Bison, Inc; Firewall Wall Padding.
      b. Performance Sports Systems, Inc; Model 4130 Fire Retardant Wall Padding.
      c. Porter Athletic, Inc; 575 FireSafe Wall Pad.

DRAFT

B. Specially Shaped Padding: Same construction as standard padding; custom fabricate padding to fit irregularly shaped members, areas, and protrusions in gymnasium as indicated; provide padding for:
   1. I-beams.
   2. Wall corners.

C. Pad Cutout Accessories: Provide manufacturer's fire-retardant treated, molded rubber inserts as trim around field cutouts at outlets, switches, and other wall mounted elements. Secure molded inserts to back of wall pads.

2.10 SCOREBOARDS

A. Main Gymnasium: Provide the following interior scoreboards and accessories for main court only. All displays shall be LED. ******Provide this set of scoreboards for High School Main Gym only******
   1. (2) Interior Scoreboards: Approximately 8'-0" wide by 6'-0" high by 6 inches deep, with "double-bonus" foul indicator and "time-outs left" accessory features, and with 13 inch high digits. **<< Provide with customizable electronic team name message centers in lieu of "home" and "guest" captions. ; or None - N/A>>**Scoreboard shall also provide scoring for volleyball and wrestling. Provide 120 V (200W, 60 Hz, 1.7A) electrical configuration. Scoreboard color shall be selected by Architect from manufacturer's standard range.
      a. Manufacturers:
         1) Daktronics; Model # BB-2103-13. (10'-0"W x 6'-0"H x 6"D)
         2) Fair-Play; Model # BB-3660-4. (9'-0"W x 5'-6"H x 4"D)
         3) Nevco; Model # 2770. (8'-0"W x 6'-0"H x 8"D)
   2. (2) Stats Display Panels (Shall be provided at one main gym scoreboard only - mount to each side of scoreboard): Approximately 3'-0" wide; height and depth shall match scoreboard; with six (6) individual player numbers, points scored, and fouls committed. **<< Provide reversible / interchangeable plates to show "digs", "aces", and "kills" for volleyball scoring. ; or None - N/A>>**Provide 120 V (200W, 60 Hz, 1.6A) electrical configuration. Match color of primary scoreboard.
      a. Manufacturers:
         1) Daktronics; Model # SD-2102. (3'-6"W x 6'-0"H x 6"D)
         2) Fair-Play; Model # SP-3606-4. (3'-0"W x 5'-6"H x 4"D)
         3) Nevco; Model # SD7-5. (3'-0"W x 6'-0"H x 8"D)
   3. (2) Shot Clocks: Approximately 1'-10" wide by 1'-7" high by 6 inches deep, single-sided shot clock with 13 inch high digits. Provide unit compatible for mounting to top of basketball backstops; provide accessory mounting kit if required. Include built-in horn. Provide 120 V (40W, 60 Hz, 0.7A) electrical configuration. Manufacturer's standard black finish case. Include hand held shot clock controllers that are compatible with main wireless controller.
      a. Manufacturers:
         1) Daktronics; Model # BB-2114-13.
         2) Fair-Play; Model # ST-1405-4. (1'-8"W x 1'-5"H by 4"D)
         3) Nevco; Model # SCD-5 with SBSK-1 mounting kit. (1'-10"W x 1'-8.5"H by 7"D)
   4. (1) Controller: Manufacturer's standard multiple sport wireless controller with protective case. Provide 120 V (6W, 60 Hz) electrical configuration. Provide with minimum 25 foot power cord.
      a. Manufacturers:

DRAFT

1) Daktronics; All Sport 5000.
2) Fair-Play; MP-80.
3) Nevco; MPCW-7.

B. Auxiliary Gym: Provide the following interior scoreboards and accessories in the auxiliary gym. All displays shall be LED. ******Provide this set of scoreboards for High School Aux gym only******

1. (1) Interior Scoreboard: Approximately 8'-0" wide by 6'-0" high by 6 inches deep, with "double-bonus" foul indicator and "time-outs left" accessory features, and with 13 inch high digits. **<< Provide with customizable electronic team name message centers in lieu of "home" and "guest" captions. ; or None - N/A>>**Scoreboard shall also provide scoring for volleyball and wrestling. Provide 120 V (200W, 60 Hz, 1.7A) electrical configuration. Scoreboard color shall be selected by Architect from manufacturer's standard range.
   a. Manufacturers:
      1) Daktronics; Model # BB-2103-13. (Basis-of-Design)
      2) Fair-Play; Model # BB-3660-4. (9'-0"W x 5'-6"H x 4"D)
      3) Nevco; Model # 2770-D. (8'-0"W x 6'-0"H x 8"D)
2. (1 Pair) Shot Clocks: Approximately 1'-10" wide by 1'-7" high by 6 inches deep, single-sided shot clock with 13 inch high digits. Provide unit compatible for mounting to top of basketball backstops; provide accessory mounting kit if required. Include built-in horn. Provide 120 V (40W, 60 Hz, 0.7A) electrical configuration. Manufacturer's standard black finish case. Include hand held shot clock controllers that are compatible with main wireless controller.
   a. Manufacturers:
      1) Daktronics; Model # BB-2114-13.
      2) Fair-Play; Model # ST-1405-4. (1'-8"W x 1'-5"H by 4"D)
      3) Nevco; Model # SCD-5 with SBSK-1 mounting kit. (1'-10"W x 1'-8.5"H by 7"D)
3. (1) Controller: Manufacturer's standard multiple sport wireless controller with protective case. Provide 120 V (6W, 60 Hz) electrical configuration. Provide with minimum 25 foot power cord.
   a. Manufacturers:
      1) Daktronics; All Sport 5000.
      2) Fair-Play; MP-80.
      3) Nevco; MPCW-5.

C. Main Gymnasium: Provide the following interior scoreboards and accessories for main court only. All displays shall be LED. ******Provide this scoreboard for Middle Schools only******

1. (1) Interior Scoreboard: Approximately 8'-0" wide by 6'-0" high by 6 inches deep, with "double-bonus" foul indicator and "time-outs left" accessory features, and with 13 inch high digits. **<< Provide with customizable electronic team name message centers in lieu of "home" and "guest" captions. ; or None - N/A>>**Scoreboard shall also provide scoring for volleyball and wrestling. Provide 120 V (200W, 60 Hz, 1.7A) electrical configuration. Scoreboard color shall be selected by Architect from manufacturer's standard range.
   a. Manufacturers:
      1) Daktronics; Model # BB-2103-13. (10'-0"W x 6'-0"H x 6"D)
      2) Fair-Play; Model # BB-3660-4. (9'-0"W x 5'-6"H x 4"D)
      3) Nevco; Model # 2770. (8'-0"W x 6'-0"H x 8"D)

DRAFT

2. (1) Controller: Manufacturer's standard multiple sport wireless controller with protective case. Provide 120 V (6W, 60 Hz) electrical configuration. Provide with minimum 25 foot power cord.
    a. Manufacturers:
        1) Daktronics; All Sport 5000.
        2) Fair-Play; MP-80.
        3) Nevco; MPCW-7.

PART 3 EXECUTION

3.01 EXAMINATION

A. Take field measurements to ensure proper fitting of work. If taking field measurements before fabrication will delay work, allow for adjustments within recommended tolerances.

B. Inspect areas and conditions before installation, and notify Architect in writing of unsatisfactory or detrimental conditions.

C. Do not proceed with this work until conditions have been corrected; commencing installation constitutes acceptance of work site conditions.

D. Verify that electrical services are correctly located and have proper characteristics.

3.02 INSTALLATION

A. Install in accordance with Contract Documents and manufacturer's instructions.

B. Coordinate installation of inserts and anchors that must be built in to flooring or subflooring.

C. Install equipment rigid, straight, plumb, and level.

D. Secure equipment with manufacturer's recommended anchoring devices.

E. Install wall padding securely, with edges tight to wall and without wrinkles in fabric covering. Mount wall padding with bottom of pad assembly directly above top of resilient base product, not higher than 6 inches above finished floor level.

F. Separate dissimilar metals to prevent electrolytic corrosion.

3.03 ADJUSTING

A. Verify proper placement of equipment.

B. Verify proper placement of equipment anchors and sleeves, and use actual movable equipment to be anchored if available.

C. Adjust operating equipment for proper operation; remove and replace equipment causing noise or vibration; lubricate equipment as recommended by manufacturer.

3.04 CLEANING

A. Remove masking or protective covering from finished surfaces.

B. Clean equipment in accordance with manufacturer's recommendations.

3.05 PROTECTION

A. Protect installed products until Date of Substantial Completion.

B. Replace damaged products before Date of Substantial Completion.

END OF SECTION 116623

DRAFT

SECTION 116843
EXTERIOR SCOREBOARDS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.

B. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

C. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.

D. ASTM C150/C150M - Standard Specification for Portland Cement.

E. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

F. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification.

G. AWS D1.1/D1.1M - Structural Welding Code - Steel.

H. NFPA 70 - National Electrical Code.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Large Components: Ensure that large components can be moved into final position without damage to other construction.

B. Electrically Operated Equipment: Coordinate location and electrical characteristics of service connection.

1. Coordinate requirements for electrical raceways, junction boxes, wiring, disconnects, connections with the electrical contractor.

1.03 SUBMITTALS

A. Product Data: Provide manufacturer's data showing configuration, sizes, materials, finishes, hardware, and accessories; include:

1. Electrical characteristics and connection and wiring locations.
2. Manufacturer's installation instructions.

B. Shop Drawings: Indicate locations, sizes and dimensions, face layouts, construction methods; method of attachment or installation; type and gauge of metal, hardware, and fittings; plan front elevation; elevations and dimensions; minimum one cross section.

1. Indicate utility requirements including electrical wiring diagrams.

C. Design Data: Provide structural and physical characteristics and engineering calculations for support structure framing and foundations/footings; identify dimensional limitations; include load calculations at points of attachment to building structure.

D. Samples: Provide color charts or chips indicating full range of manufacturer's available colors.

E. Erection Drawings: Detailed dimensional requirements for proper location of support structure and scoreboards.

F. Designer's Qualification Statement.

G. Operating and maintenance data for each operating equipment item.

H. Welders' Qualification Statement: Welders' certificates in accordance with **<<AWS B2.1/B2.1M>>** and dated no more than 12 months before start of scheduled welding work.

DRAFT

I. Warranty: Submit manufacturer warranties and ensure that forms have been completed in **<<Owner>>**'s name and registered with manufacturer.

1.04 QUALITY ASSURANCE

A. Designer Qualifications: Design steel support structures and concrete foundations under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in **<<the State in which the Project is located>>**.

B. Welder Qualifications: Welding processes and welding operators qualified in accordance with **<<AWS D1.1/D1.1M>>** and no more than 12 months before start of scheduled welding work.

C. Source Limitations: Provide all scoreboards, controllers, and accessories by a single manufacturer.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to project site in manufacturer's original packaging with factory original labels attached.

B. Do not deliver until installation space is enclosed and conditioned.

C. Store products indoors and elevated above floor; prevent warping, twisting, or sagging.

D. Store products in accordance with manufacturer's instructions; protect from extremes of weather, temperature, moisture, and other damage.

1.06 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Exterior Scoreboards: Provide 5 year manufacturer warranty for scoreboards and accessories, from date of Substantial Completion.

1. Wireless Controls: Provide 2 year manufacturer warranty, from date of Substantial Completion.

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS & MATERIALS

A. Refer to drawings for sizes and locations, unless noted otherwise.

B. Provide mounting plates, brackets, and anchors of sufficient size and strength to securely attach scoreboards to support structure; comply with requirements of Contract Documents.

1. Mounting Brackets: Provide S and J brackets, fabricated of minimum 5/16-inch thickness steel plate; size and spacing recommended by manufacturer for secure attachment of scoreboards to support structure.
2. Provide bolts, anchors, and fasteners of non-corroding, tamper- and vandal-resistant materials; provide concealed anchorage to greatest extent possible.

C. Hardware: Heavy duty steel hardware, as recommended by manufacturer.

D. Electrical Wiring and Components: Comply with **<<NFPA 70>>**; provide UL-listed equipment.

1. Provide each scoreboard with all required control cable of length required, junction boxes, and other accessories for complete, functional installation. Coordinate with Division 26 electrical subcontractor for supply junction box location at base of each scoreboard.

E. Steel Support Structure and Foundations: Coordinate with Structural and Civil Drawings and as follows:

1. Concrete: **<<ASTM C150/C150M>>**; minimum 3,000 psi concrete.

DRAFT

2. Structural Steel: **<<ASTM A36/A36M>>** steel sections or **<<ASTM A500/A500M>>** steel tubing, welded in accordance with **<<AWS D1.1/D1.1M>>**, using certified welders. Galvanize after fabrication to **<<ASTM A123/A123M>>**.

2.02 MULTI-SPORT SCOREBOARD

A. Football/Field Hockey/Lacrosse/Soccer Scoreboard: Provide the following multi-sport exterior scoreboard and accessories. All displays shall be LED.

1. (1) Exterior Scoreboard: Approximately 25'-0" wide by 10'-0" high by 8 inches deep, with integral horn and clock timer display to 1/100 second for track and when under one minute to play. Electrical: 120 V (60 Hz, 15A) electrical configuration.
    a. Provide with customizable LED electronic team name message centers in lieu of "home" and "guest" captions.
    b. Provide with LED electronic captions for all features; accessory features shall be changeable by sport from the control console. Captions shall allow for white or colored display.
        1) Electronic captions shall be included for at minimum the following accessory features: "Qtr", "Down", "To Go", "T.O.L.", "Ball On", and Possession Indicator (football), "Player", "Penalty", "Period", and Possession Indicator (lacrosse/field hockey), and "Saves", "S.O.G.", and "Half" (soccer).
    c. Digit Sizes: 24 inches (clock digits and team scores); 18 inches (accessory features).
    d. Scoreboard color shall be selected by Architect from manufacturer's standard range.
    e. Products:
        1) Daktronics; Model # MS-2009. (Basis-of-Design)
        2) Nevco; Model # 5685 (24'-0"W by 10'-0"H by 8"D).
2. (2) Delay-of-Game/Field Timers: Approximately 40 inch wide by 28 inch high by 8 inch deep, single-sided timer with 24 inch high digits. Include built-in horn. Provide 120 V (40W, 60 Hz, 0.7A) electrical configuration. Manufacturer's standard black finish case. Play clocks shall be controllable from main wireless controller. Install one at each end of field; verify final locations with Owner.
    a. Manufacturers:
        1) Daktronics; Model # TI-2015.
        2) Nevco; Model # FT-. (48"W x 48"H by 8"D)

2.03 BASEBALL/SOFTBALL SCOREBOARDS

A. Baseball/Softball Scoreboards: Provide the following exterior scoreboards and accessories. All displays shall be LED.

1. (1) Exterior Scoreboard (Baseball): Approximately 14'-0" wide by 5'-0" high by 8" deep. Electrical: 120 V (60 Hz, 8A) electrical configuration.
    a. Provide with permanent customized vinyl caption for home mascot (verify with Owner), and with manufacturer's standard "guest" caption.
    b. Provide with "H/E", "Ball", "Strike", and "Out", and ball possession indicator accessory features.
    c. Digit Sizes: 18 inches (Home and Guest scores and Inning). Ball, Strike, Out, and H/E indicators shall be 2-inch diameter circular indicators.
    d. Scoreboard color shall be selected by Architect from manufacturer's standard range.
    e. Products:
        1) Daktronics; Model # BA-618. (Basis-of-Design)
        2) Fair-Play; Model # BA-7100-2 (14'-0"W by 5'-0"H by 10"D).

DRAFT

3) Nevco; Model # 1600 (16'-0"W by 5'-0"H by 8"D).

2. (1) Exterior Scoreboard (Softball): Approximately 9'-0" wide by 4'-0" high by 8" deep. Electrical: 120 V (60 Hz, 8A) electrical configuration.
   a. Provide with permanent customized vinyl caption for home mascot (verify with Owner), and with manufacturer's standard "guest" caption.
   b. Provide with "Inning", "Ball", "Strike", and "Out" indicator accessory features.
   c. Digit Sizes: 18 inches (Home and Guest scores and Inning). Ball, Strike, and Out indicators shall be 2-inch diameter circular indicators.
   d. Scoreboard color shall be selected by Architect from manufacturer's standard range.
   e. Products:
      1) Daktronics; Model # BA-2518. (Basis-of-Design)
      2) Fair-Play; Model # BA-7109-2 (9'-0"W by 4'-0"H by 10"D).
      3) Nevco; Model # 1610 (10'-0"W by 4'-0"H by 8"D).

2.04 CONTROL CENTERS

A. Controllers (provide one for each scoreboard): Manufacturer's standard multi-sport wireless controller with protective case. Provide 120 V (6W, 60 Hz) electrical configuration. Provide with minimum 25 foot power cord.
   1. Unit shall comply with FCC rules regarding interference.
   2. Receiver: Provide manufacturer's standard; approximately 6-inch by 4-inch nominal receiver box mounted at scoreboard.
   3. Range: Minimum 1,000 feet from control center to receiver.
   4. Adapter: Provide with adapter for each receiver for 120V input and 9V output.
   5. Products:
      a. Daktronics; All Sport 5000.
      b. Fair-Play; MP-80.
      c. Nevco; MPCW-7.

PART 3 EXECUTION

3.01 EXAMINATION

A. Take field measurements to ensure proper fitting of work. If taking field measurements before fabrication will delay work, allow for adjustments within recommended tolerances.

B. Inspect areas and conditions before installation, and notify **<<Architect>>** in writing of unsatisfactory or detrimental conditions.

C. Do not proceed with this work until conditions have been corrected; commencing installation constitutes acceptance of work site conditions.

D. Verify that electrical services are correctly located and have proper characteristics.

3.02 INSTALLATION

A. Install in accordance with Contract Documents and manufacturer's instructions.

B. Coordinate installation of inserts and anchors that must be built in to flooring or subflooring.

C. Install equipment rigid, straight, plumb, and level.

D. Clearances:

DRAFT

1. Install scoreboards at height required to clear fence height or as indicated on Drawings, but with not less than 10 feet between grade level and bottom of scoreboard.
2. Provide a minimum of 36 inches clearance behind scoreboard to allow access to panel doors.

E. Secure equipment with manufacturer's recommended anchoring devices.

F. Separate dissimilar metals to prevent electrolytic corrosion.

3.03 ADJUSTING

A. Verify proper placement of equipment.

B. Verify proper placement of equipment anchors and sleeves, and use actual movable equipment to be anchored if available.

C. Adjust operating equipment for proper operation; remove and replace equipment causing noise or vibration; lubricate equipment as recommended by manufacturer.

D. Field Quality Control: Field test each scoreboard with manufacturer's representative; ensure that all scoreboard functions operate correctly. Provide adjustments as required.

3.04 DEMONSTRATION AND TRAINING

A. Demonstration and Training: Demonstrate and provide training on operation and maintenance of each type of scoreboard to **<<Owner>>**'s personnel.

1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
2. Provide minimum of two hours training by manufacturer's authorized personnel at Project site using installed scoreboards.

3.05 CLEANING

A. Remove masking or protective covering from finished surfaces.

B. Clean equipment in accordance with manufacturer's recommendations.

3.06 PROTECTION

A. Protect installed products until Date of Substantial Completion.

B. Replace damaged products before Date of Substantial Completion.

END OF SECTION 116843

DRAFT

SECTION 117300
PATIENT CARE EQUIPMENT

PART 1 GENERAL

1.01 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene one week before starting work of this section.

1.02 SUBMITTALS

A. Product Data: Provide manufacturer's data sheets of **<< operating system components; track system components; track depth; track maneuverability systems; slings; accessories; and _____>>**. Indicate **<< dimensions; performance requirements; service requirements; materials; finishes; options; and _____>>**

B. Shop Drawings: Indicate **<< dimensions; reflected ceiling plan track layouts; above-ceiling support requirements; attachment-to-support details; point loads; power-supply connections; and _____>>**.

C. Operation Data: Include description of equipment operation and required adjusting and testing.

D. Maintenance Data: Identify system maintenance requirements, servicing cycles, lubrication types required and local **<< local; or None - N/A>>** spare part sources.

1.03 DELIVERY, STORAGE, AND HANDLING

A. Package equipment to project site in protective packaging.

B. Protect finished surfaces during handling and installation with protective covering of polyethylene film or another suitable material.

PART 2 PRODUCTS

2.01 EXAM/TREATMENT/CHANGING TABLE

A. Exam / Treatment / Changing Table Manufacturers:
   1. Basis of Design Product: Midmark; Ritter 244 Barrier-Free Exam Table.
   2. Other Acceptable Manufacturers:
      a. Armedica Manufacturing.
      b. Clinton Industries, Inc.
      c. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Description: Freestanding mobile unit with locking casters, minimum 80 inches long by 30 inches wide, height adjustable, with multi-position adjustable-angle back and seat sections.
   1. Exam table shall be bariatric-grade and shall be engineered to support a minimum of 500-lb static load when opened.
   2. Conform to ADA accessibility requirements.
   3. Operation: Foot-operated electrical (120V); operates a pneumatic or hydraulic mechanism to raise and lower the entire unit and operate the back and seat sections.
   4. Material and Finish: Manufacturer's standard vinyl upholstered finish; color selected by Architect from manufacturer's standard range.

DRAFT

2.02 SPECIAL NEEDS CHANGING TABLE

A. Special Needs Changing Table Manufacturers:
   1. Basis of Design Product: Koala Kare Products; KB3000-AHL Adult Changing Station
   2. Other Acceptable Manufacturers:
      a. Armedica Manufacturing.
      b. Clinton Industries, Inc.
      c. Midmark Corporation.
      d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Description: Wall mounted, motorized, height-adjustable changing station with safety rails and emergency stop feature.
   1. Operation: Unit shall have two sets of built-in electronic controls for height adjustment located at face of wall and on front of changing surface.
   2. Changing station shall be engineered to support a minimum of 500 pound static load.
   3. Unit shall have a protection system against electrical shock and beUL certified.
   4. Backup Battery: Unit shall have a built-in backup battery system that allows for continuous operation during power interruption
   5. Emergency Stop: Emergency stop to break power to actuator shall be wall-mounted.
   6. Safety Requirements: Unit shall withstand significant exposure to water without damage to electrical components. It shall include a grounded power cord and have a splash-proof control system. Electrical components and wiring shall not come in contact with station users or caregivers.
   7. Frame: 2 inch powder coat.
   8. Changing Surface Material: HDPE.

2.03 MOUNTING HARDWARE FOR SPECIAL NEEDS SWING

A. Lay-In Ceiling Installation Kit: Provide prefabricated hardware kit for mounting eyebolt below suspended ceiling, braced to joist structure above. Basis-of-Design Product is www.eSpecialNeeds.com; “Prefab Joist Installation Kit."
   1. Accessories: Provide eyebolt and additional accessories required for installation below lay-in ceiling at height indicated. Provide accessories compatible with both prefabricated mounting kit and safety rotational device.

B. Safety Rotational Device: Heavy-Duty, swivel device with minimum working load of 1000 lbs. Basis-of-Design Product is www.eSpecialNeeds.com; “Heavy Duty Swing Rotational Device."
   1. Accessories: Provide one compatible carabiner for each end of safety rotational device, to provide for attachment to eyebolt hardware above and for future installation of Owner’s swing below (swing is NIC). Working load of carabiner shall meet that of safety rotational device.

2.04 ACCESSORIES

A. Installation Accessories: Provide necessary accessories and closure trim as required for complete installation.

B. Fasteners: Manufacturer's standard inserts, anchors, bolts, rivets, and screws appropriate for project conditions; corrosion-resistant.

DRAFT

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of Conditions: Examine areas and conditions, with installer present, for compliance with requirements of supporting structural members, installation tolerances, and other conditions that may impact performance of equipment.
   1. Do not install equipment until finishes in the space are complete and space is conditioned at occupancy conditions.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install equipment in accordance with manufacturer's instructions and approved shop drawings.

B. Set components plumb, level, and rigid.

C. Install anchors in accordance with anchor manufacturer's installation guidelines.

D. Interface With Other Work: Use pop rivets or screws to attach L-shaped perimeter moldings of ceiling to lift equipment track.

3.03 ADJUSTING

A. Adjust operating equipment for smooth and efficient operation throughout full operating cycle.

3.04 CLOSEOUT ACTIVITIES

A. Demonstration: Demonstrate operation of equipment to **<<Owner>>**'s personnel.
   1. Use operation and maintenance data as reference during demonstration.
   2. Briefly describe function, operation, and maintenance of each component.

B. Training: Train **<<Owner>>**'s personnel on operation and maintenance of system.
   1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
   2. Provide minimum of **<< two hours; one day; or _____>>** of training.
   3. Location: At project site.

3.05 CLEANING AND PROTECTION

A. Remove labels, fingerprints; clean surfaces. Repair any marred or damaged surfaces that effect appearance in manner not acceptable to **<<Owner>>**. Replace any parts that cannot be repaired in such a manner.

B. Protect installed equipment from subsequent construction operations.

END OF SECTION 117300

DRAFT

SECTION 118129
FACILITY FALL PROTECTION

PART 1 GENERAL

1.01 DEFINITIONS

A. Anchorage: A secure connecting point or a terminating component of a fall protection system or rescue system capable of safely supporting the impact forces applied by a fall protection system or anchorage subsystem.

B. Lifeline: A component of a fall protection system consisting of a flexible line designed to hang vertically, a vertical lifeline, or connecting to anchorages or anchorage connectors at both ends to span horizontally, a horizontal lifeline.

1.02 REFERENCE STANDARDS

A. 29 CFR 1910 - Occupational Safety and Health Standards.

B. 29 CFR 1910.27 - Scaffolds and Rope Descent Systems.

C. 29 CFR 1910.66 - Powered Platforms for Building Maintenance.

D. 29 CFR 1910.140 - Personal fall protection systems.

E. 29 CFR 1926 - Safety and Health Regulations for Construction.

F. 29 CFR 1926.502 - Fall protection systems criteria and practices.

G. ACI CODE-318 - Building Code Requirements for Structural Concrete and Commentary.

H. AISC 360 - Specification for Structural Steel Buildings.

I. ANSI/ASSP Z359.7 - Qualification and Verification Testing of Fall Protection Products.

J. ANSI/ASSP Z359.12 - Connecting Components for Personal Fall Arrest Systems.

K. ANSI/ASSP Z359.15 - Safety Requirements for Single Anchor Lifelines and Fall Arresters for Personal Fall Arrest Systems.

L. ANSI/ASSP Z359.18 - Safety Requirements for Anchorage Connectors for Active Fall Protection Systems.

M. ANSI/IWCA I-14 - Window Cleaning Safety Standard.

N. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures.

O. ASTM A6/A6M - Standard Specification for General Requirements for Rolled Structural Steel Bars, Plates, Shapes, and Sheet Piling.

P. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.

Q. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

R. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.

S. ASTM A283/A283M - Standard Specification for Low and Intermediate Tensile Strength Carbon Steel Plates.

T. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.

DRAFT

U. ASTM A501/A501M - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing.

V. ASTM A666/A666M - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.

W. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.

X. ASTM A1023/A1023M - Standard Specification for Carbon Steel Wire Ropes for General Purposes.

Y. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts and Assemblies, Steel and Alloy Steel, Heat Treated, Inch Dimensions 120 ksi, 144 ksi, and 150 ksi Minimum Tensile Strength, and Metric Dimensions 830 MPa and 1040 MPa Minimum Tensile Strength.

Z. AWS D1.1/D1.1M - Structural Welding Code - Steel.

AA. ICC (IBC) - International Building Code.

BB. ISO/IEC 17025 - General Requirements for the Competence of Testing and Calibration Laboratories.

CC. SSPC-Paint 20 - Zinc-Rich Coating (Type I - Inorganic, and Type II - Organic).

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate installation of roof anchors with Division 7 roofing manufacturer to verify anchors are compatible in a warrantable roof assembly.
   2. Coordinate with Division 5 steel fabricator for installation to steel structure/roof deck.

1.04 SUBMITTALS

A. Product Data: Material, equipment, and fixture lists. Manufacturer’s catalog data indicating the sizes, descriptions, capacities, test certifications, and other descriptive data showing in sufficient detail that product complies with contract requirements.

B. Shop Drawings: Installation details: plan showing locations and types of anchorage points for personal fall protection systems and building maintenance equipment.
   1. Detail mounting, securing, and flashing of roof-mounted items to roof structure. Indicate coordinating requirements with roof membrane system.
   2. Indicate anchorage details and quantity, diameter, and depth of penetration of anchors.

C. Delegated Design Documents: Drawings and calculations sealed by Designer for fall protection system, indicating compliance with performance requirements and design criteria.

D. Test Report: Indicating completion of proof load testing on installed systems.

E. Manufacturer's Installation Instructions: Instructions indicating recommended method and sequence of installation for lifeline anchors, safety tieback anchors, energy-absorbing devices, and lifeline cable.

F. Designer's qualification statement.

G. Installer's qualification statement.

H. Testing agency's qualification statement.

I. Operation Data: Provide operating instructions and identify unit limitations.

J. Maintenance Data: Include parts list and maintenance requirements for equipment.

DRAFT

1.05 QUALITY ASSURANCE

A. Designer Qualifications: Perform design under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in **<<the State in which the Project is located>>**.

B. Installer Qualifications: Company specializing in performing work of type specified and with at least three years of documented experience.

C. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of type specified in this section.

1.06 WARRANTY

A. Extended Correction Period: Correct defective work within 2-year period commencing on Date of Substantial Completion.

PART 2 PRODUCTS

2.01 ROOF ANCHORS

A. Manufacturers - Penetrating Anchors:
   1. 3M.
   2. Guardian Fall Protection.
   3. Pro-Bel Enterprises Ltd.
   4. Summit Anchor Company.
   5. Tractel.
   6. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Manufacturers - Clamping, Non-Penetrating Anchors:
   1. 3M.
   2. Diversified Fall Protection.
   3. Kee Safety.
   4. Hy-Safe.
   5. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

C. Application:
   1. OSHA and ANSI one person PPE anchor.

D. Description:
   1. Roof anchorage points for personal fall protection systems; used exclusively for employee fall protection and independent of any anchorage used to suspend employees or platforms on which employees work.
      a. Anchor Type per **<<ANSI/ASSP Z359.18>>**: Type A.

E. Structural Performance: Provide safety tieback anchors capable of withstanding design loads as required by governing regulations and codes.

F. Design Criteria: Fall protection anchors.
   1. Comply with **<<29 CFR 1910.140>>** and **<<29 CFR 1926.502>>** for personal fall protection systems and anchorage.
   2. Comply with **<<29 CFR 1926>>**, Subpart M-Fall Protection.
   3. Comply with **<<ANSI/ASSP Z359.18>>** test requirements for static strength, dynamic strength, residual strength, serviceability, and corrosion of anchorage.

DRAFT

a. Testing Labs: Meet requirements of **<<ANSI/ASSP Z359.7>>** and **<<ISO/IEC 17025>>**.

G. Provide permanent labels with **<< manufacturer's name; serial number; manufacturing date; rated load; and _____>>** on commercial roof anchors.

H. Anchors - Membrane Roof:
1. Basis-of-Design: Guardian Fall Protection; CB-18 Anchor; 00657.
2. Type: **<< Vertical foam-filled steel pier and baseplate; Vertical steel pier; or _____>>** and baseplate with **<< cast iron loop; galvanized forged steel loop; forged stainless steel loop; threaded top for PPE bolt-attached components; galvanized 4-way HLL top anchor; galvanized pass-through top; swivel head U-bar; fixed U-bar; eyelet; or _____>>**; galvanized finish.
a. Pier:
1) Height: 18 inches.
2) Material: Hot-dip galvanized steel pipe.
3) Threaded vent hole with stainless steel plug.
b. Flat baseplate, factory-welded.
1) Size: 16 inches square.
2) Thickness: 1/2 inch.
3) Material: Hot-dip galvanized steel.

I. Anchors - Standing Seam Metal Roof:
1. Type: Non-penetrating clamp and baseplate with galvanized forged steel loop; galvanized finish.
a. Pier:
1) Height: 12 inches.
2) Material: Stainless steel.
3) Threaded vent hole with stainless steel plug.
b. Flat baseplate, factory-welded.
1) Size: 14 inches by 18 inches.
2) Thickness: 1/2 inch.
3) Material: Stainless steel.

J. Anchor Installation:
1. Type: Through-bolted for membrane roof. Non-penetrating clamp for standing seam metal roof.
2. Anchor Substrate: Metal decking for membrane roof. Standing seam metal for metal roof.
3. Roofing Assembly: As indicated on drawings.
4. Flashing Material: Premolded pipe flashing, membrane flashing, or sealant acceptable to roof manufacturer.

2.02 HORIZONTAL LIFELINE SYSTEMS

A. Manufacturers:
1. 3M Personal Safety Division.
2. Guardian Fall Protection.
3. Pro-Bel Enterprises Ltd.
4. Super Anchor Safety.
5. Tractel.

DRAFT

6. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Description: A system comprised of a flexible line such as wire rope or cable, with connectors at both ends to secure it horizontally between two anchorages or anchorage connectors.

C. Structural Performance: Provide fall-arresting lifeline systems capable of withstanding design loads as required by governing regulations and codes.

D. Design Criteria:
1. Comply with **<<ANSI/ASSP Z359.12>>**.
2. Comply with **<<ANSI/ASSP Z359.15>>**.
3. Comply with **<<29 CFR 1926.502>>**.

E. Wire Rope: **<<ASTM A1023/A1023M>>**, **<< 7x7; 7x19; or _____>> << galvanized wire; stainless steel wire; or _____>>** , **<< 5/16 inch; 3/8 inch; or _____ inch>>** diameter.
1. **<< Galvanized ; Stainless Steel; or _____>>** Rigging Components: Consisting of **<< turnbuckles; cable clamps; spring energy absorbers; absorber couplers; eye thimbles; bolts; connector O-rings; and _____>>** as required to make a complete and functional HLL system compatible with installed anchors.

2.03 MATERIALS - STEEL

A. Steel Plates, Shapes, and Bars: **<<ASTM A6/A6M>>** or **<<ASTM A283/A283M>>**.

B. Steel Pipe: **<< ASTM A53/A53M Grade B Schedule 40; ASTM A53/A53M Grade B Schedule 80; ASTM A53/A53M Grade ____ Schedule 40; ASTM A53/A53M Grade ____ Schedule ____; or _____>>**, **<< black finish; galvanized finish; or black and galvanized finish, as indicated>>**.

C. Steel Tubing: **<<ASTM A500/A500M>>** or **<<ASTM A501/A501M>>** structural tubing, round and shapes as indicated.

D. Welding Materials: **<<AWS D1.1/D1.1M>>**; type required for materials being welded.

E. Steel Bolts, Nuts, and Washers: **<<ASTM F3125/F3125M>><< , Type 1; , Type 3; , _____; or None - N/A>><< , and galvanized in accordance with ASTM A153/A153M where connecting galvanized hardware components; , plain; , _____; or None - N/A>>**.

F. Touch-Up Primer for Galvanized Surfaces: **<< SSPC-Paint 20, Type I - Inorganic; SSPC-Paint 20 Type II - Organic; or _____>>**, complying with VOC limitations of authorities having jurisdiction.

2.04 MATERIALS - STAINLESS STEEL

A. Stainless Steel, General: **<<ASTM A666/A666M>>**, **<< Type 304; Type 316; or _____>>**.

2.05 FABRICATION

A. Fabricate work true to dimension, square, plumb, level, and free from distortion or defects detrimental to appearance and performance.

B. Grind off surplus welding material and ensure exposed internal corners have smooth lines.

C. Fabricate system components of the same material unless otherwise indicated.

D. Fabricate anchoring devices as recommended by the manufacturer to provide adequate support for intended use.

E. Fabricate joints in a manner to discourage water accumulation. Provide weep holes to drain all water that could accumulate in the exposed joints.

DRAFT

2.06 FINISHES

A. Galvanizing: Hot-dip galvanize to minimum requirements of **<<ASTM A123/A123M>>**.
   1. Touch up abraded areas after fabrication using specified touch-up primer for galvanized surfaces.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine area for compliance with requirements for installation tolerances and other conditions related to this work.

B. Proceed with installation after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Coordinate location of fall protection equipment indicated to be attached to structural substrate or surface of roofing system and provide anchoring devices with templates, diagrams, and installation instructions.

3.03 INSTALLATION

A. Install anchorage and fasteners in accordance with shop drawings and manufacturer's recommendations to obtain allowable working loads published in product literature and in accordance with this specification.

B. Coat concealed metal surfaces that will be in contact with cementitious materials or dissimilar metals with bituminous coating or by other permanent separation as recommended by fall protection system manufacturer.

C. Deform threads of tail end of anchor studs after nuts have been tightened to prevent accidental removal or vandalism.

D. Do not load or stress anchors until all materials and fasteners are properly installed and ready for service.

E. Seal roof penetrations at anchors with pre-molded pipe flashing, membrane flashing, or sealant acceptable to roof manufacturer.

3.04 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>** for additional requirements.

B. Test anchorage systems using only chemical adhesive fasteners on-site using load cell test apparatus in accordance with manufacturer's recommendations.

C. Load test anchors under the direct supervision of a licensed engineer in accordance with **<< ACI CODE-318; AISC 360; ASCE 7; ICC (IBC); 29 CFR 1910.27; 29 CFR 1910.66; and _____>>** requirements.

D. Inspect each anchor for conformance to manufacturer requirements, building envelope, looseness, and signs of permanent deflection during load testing.

3.05 ADJUSTING

A. Adjust fall protection components to function smoothly and safely.

3.06 CLEANING

A. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing in accordance with **<<ASTM A780/A780M>>**.

DRAFT

B. Clean exposed surfaces in accordance with fall protection system manufacturer's written instructions.

3.07 CLOSEOUT ACTIVITIES

A. Demonstration: Demonstrate operation of system to **<<Owner>>**'s personnel.
   1. Use operation and maintenance data as reference during demonstration.
   2. Briefly describe function, operation, and maintenance of each component.

B. Training: Train **<<Owner>>**'s personnel on operation and maintenance of system.
   1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
   2. Provide minimum of **<< two hours; one day; or _____>>** of training.
   3. Instructor: Manufacturer's training personnel.
   4. Location: At project site.

3.08 MAINTENANCE

A. **<<29 CFR 1910>>** and **<<ANSI/IWCA I-14>>** require that anchors first be certified and subsequently inspected on an annual basis. Coordinate with manufacturer and local inspectors as required to maintain compliance.

B. Provide a separate maintenance contract for specified maintenance service.

END OF SECTION 118129

DRAFT

SECTION 119513
KILNS

PART 1 GENERAL

1.01 SUBMITTALS

A. Product Data: For kilns, ventilation systems, and accessories. Include product data, installation instructions, and manufacturer's recommendations.

B. Shop Drawings: Indicate space required, clearances, and relationship to adjacent construction. Provide ventilation duct layout and routing.

C. Operation and Maintenance Data: For kilns, kiln controls, and ventilation systems, to include in operation and maintenance manual.

D. Specimen warranty.

E. Software: Copy of software required in this section, associated licensing documentation, and support contact information. Indicate that licensing is in the Owner's name.

1.02 DELIVERY, STORAGE, AND HANDLING

A. Deliver kilns, ventilation systems, and accessories to project site in manufacturer's original packaging, with protective coverings intact.

B. Store under cover and elevated above grade. Do not stack items on top of kilns.

C. Protect from damage due to weather, excessive temperature, and construction operations.

1.03 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Manufacturer Warranty: Provide two-year manufacturer warranty for kiln systems, including kiln, ventilation, accessories, and workmanship.

PART 2 PRODUCTS

2.01 ELECTRIC KILNS

A. ******MCPS prefers for Elementary Schools.****** Basis of Design: Paragon Kilns; ~~TNF-82-3~~ CT81722.

B. ******MCPS prefers for Middle and High Schools.****** Basis of Design : L&L Manufacturing, Inc.; ~~JD230EZ~~ e23T-3.

C. Acceptable Manufacturers:
   1. L&L Kiln Manufacturing, Inc. ******Delete this paragraph if L&L is the Basis of Design.******
   2. Paragon Kilns. ******Delete this paragraph if Paragon is the Basis of Design.******
   3. Skutt Kilns.
   4. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
   5. Source Limitations: Furnish products produced by single manufacturer and obtained from single supplier.

D. Electric Kilns: Provide **<< 8-sided; 10-sided; or None - N/A>>** electric kilns with components, options and accessories for a complete kiln system, including the following: ******Select 8-sided if Paragron is the Basis of Design. Select 10-sided if L&L is the Basis of Design.******
   1. Kiln stand (minimum 8 inch high).

DRAFT

2. Kiln floor or slab.
3. Fire brick.
4. Kiln elements.
5. Ring latch.
6. Chest handle.
7. Lid with latch and easy-lift device for assisted lifting and closing.
8. Control box.
9. Thermocouple.
10. Controller touch pad
11. Peep plugs.

E. Factory prewire kilns for electrical switching devices and computer interface system. Factory predrill holes in the kiln lid and floor for the downdraft ventilation system.

F. Electrical Components and Devices: Shall be listed and labeled by UL or other qualified testing agency, and as required by NFPA 70.

1. Electrical Requirements: **<< 208 V, 1 Ph, 48 A ; 240 V, 1 Ph, 48 A; 208 V, 3 Ph, 32 A; or 240 V, 3 Ph, 32 A>>**. ******Use 240V; 1Ph; 32A if Paragon is Basis of Design. Use 240V; 1Ph; 48A if L&L is Basis of Design.******

2.02 DOWNDRAFT VENTILATION SYSTEM

A. Downdraft Ventilation System: Negative-pressure downdraft ventilation system; capable of removing hazardous fumes only, not heat. System shall consist of the following components:

1. Blower motor with six-foot power cord and in-line switch.
2. 8- x 12-inch mounting plate.
3. 3-inch diameter flexible aluminum duct. Provide additional lengths of duct beyond what is provided standard, as required to vent the system to exterior as indicated.
4. Spring-loaded plenum cap assembly.
5. Blower inlet and discharge tubes.
6. Plenum spring.
7. Three to four inch connector/adaptor.
8. Floor mounting plate and mou.

B. System shall fit top-loading, multi-sided electric kiln specified. Provide a dual intake kit as required for larger kiln, or if multiple kilns are indicated.

C. Electrical Switching Device: Provide electrical switching device utilizing a programmable power output in the controller to turn the downdraft ventilation system on or off.

2.03 OVERHEAD VENTILATION SYSTEM

A. Overhead Ventilation System: Negative-pressure system capable of removing heat in addition to fumes and odors. Provide properly sized system for specified kiln. System shall consist of the following components:

1. Blower motor with six-foot power cord and in-line switch.
2. Wall bracket, sized to blower motor, for motor mounting.
3. Aluminum hood, sized for kiln.
4. Overhead mounting bar of 1 inch square structural steel tube, and counter-weighted pulley lifting system, with 3/16" plastic-coated steel cable and 3" diameter steel counterweight.

DRAFT

5. Flexible aluminum duct. Provide additional lengths of duct beyond what is provided standard, as required to vent the system to exterior as indicated.

2.04 ACCESSORIES

A. Angled Touchpad Mount: Provide angled touchpad mount for easier viewing and programming of kiln controls.

B. Computer Interface System (CIS): Computer interface system including required software and hardware to connect a computer to kiln controller.

C. Furniture Kit: Provide manufacturer's accessory furniture kit, compatible with specified kiln size, including shelves and one or more posts. Kits shall be designed to fire to kiln temperature.

D. Fasteners and Anchors: Provide mechanical fasteners and anchors in type and quantity as required by manufacturer's installation instructions to provide secure attachment to in-place construction.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of Conditions: Verify that all finishes have been completed in installation locations, and verify that clearances to adjacent construction are adequate for proper and safe operation of equipment.

B. Examine roughing-in of electrical and ventilation systems to verify location of connections is acceptable prior to installation of kilns.

3.02 PREPARATION

A. Protection of In-Place Conditions: Protect adjacent finishes from damage or wear due to handling and installation of kilns and accessories.

B. Downdraft Ventilation System:

1. Ensure that kiln stand is a minimum of 8 inches high. If stand is lower than 8 inches high, either shim legs to increase distance from floor to a minimum of 8 inches, or replace kiln stand with one that is 8 inches high.
2. If kiln does not have factory drilled holes, field drill holes in number, size, and location as recommended by manufacturer for the specific kiln model provided.

3.03 INSTALLATION

A. Install kilns and accessories in accordance with manufacturer's written instructions.

B. Coordinate installation with adjacent construction to ensure proper clearances.

C. Install units in final locations after finishes have been completed in each area.

D. Install units level, plumb, properly aligned, and securely in place, with control units facing toward clear, open floor space.

E. Verify that final installation clearances are adeqate to properly and safely operate equipment.

F. Refer to Division 26 for electrical requirements.

G. Downdraft Ventilation System:

1. Assemble and install system components on kiln in accordance with manufacturer's written instructions.

DRAFT

2. Install the blower and motor assembly on the wall in a location that is close enough for the flexible aluminum duct to reach the kiln without overstretching the duct. Where wall-mounting is not possible, mount the vent motor on the floor or above the ceiling.

H. Overhead Ventilation System:
   1. Assemble and install system components centered above kiln, in accordance with manufacturer's written instructions.
   2. Secure assembled pulley and counterweight system to building structure. Do not fasten overhead mounting bar/pulley counterweight system directly to the ceiling.

3.04 STARTUP, DEMONSTRATION, AND TRAINING

A. See Section **<< 017900 - Demonstration and Training>>** for additional requirements.

B. Manufacturer Services: Provide services of manufacturer's field representative to ensure proper operation of kilns and to provide demonstration and training.

C. Demonstrate proper operation of equipment to **<<Owner>>**'s designated personnel.

D. Training: Train **<<Owner>>**'s personnel on operation and maintenance of system.
   1. Software: Coordinate with Owner's personnel to ensure that kiln control software is properly installed on Owner's computer hardware. Training shall include the use of control software.

3.05 ADJUSTING, CLEANING, AND PROTECTION

A. After startup and demonstration, verify proper operation and make any necessary adjustments.

B. Protect installed kilns from subsequent construction operations. Do not stack or place any materials on or against kilns.

C. Provide final cleaning of kiln and leave kiln ready for operation.

END OF SECTION 119513

DRAFT

SECTION 122400
WINDOW SHADES

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

B. NFPA 70 - National Electrical Code.

C. NFPA 701 - Standard Methods of Fire Tests for Flame Propagation of Textiles and Films.

D. UL 325 - Standard for Door, Drapery, Gate, Louver, and Window Operators and Systems.

E. WCMA A100.1 - Standard for Safety of Window Covering Products.

1.02 ADMINISTRATIVE REQUIREMENTS

******Specifiers: Coordinate with MCPS shade shop for standards.******

A. Coordination:

1. Where motorized shades are to be controlled by control systems provided under other sections, coordinate the work with other trades to provide compatible products.
2. Coordinate the work with other trades to provide rough-in of electrical wiring as required for installation of hardwired motorized shades.

B. Preinstallation Meeting: Convene one week**<< one week; or _____>>** prior to commencing work related to products of this section; require attendance of affected installers.

C. Sequencing:

1. Do not fabricate shades until field dimensions for each opening have been taken with field conditions in place.
2. Do not install shades until final surface finishes and painting are complete.

1.03 SUBMITTALS

A. Product Data: Provide manufacturer's standard catalog pages and data sheets, including materials, finishes, fabrication details, dimensions, profiles, mounting requirements, and accessories.

1. Motorized Shades: Include power requirements and standard wiring diagrams for specified products.

B. Shop Drawings: Include **<< shade schedule indicating size, location and keys to details; head, jamb and sill details; mounting dimension requirements for each product and condition; operation direction; and _____>>**.

1. Motorized Shades: Provide schematic system riser diagram indicating component interconnections. Include requirements for interface with other systems.

C. Certificates: Manufacturer's documentation that line voltage components are UL listed or UL recognized.

D. Source Quality Control Submittals: Provide test reports indicating compliance with specified fabric properties.

E. Selection Samples: Include fabric samples in full range of available colors and patter **<< fabric samples in full range of available colors and patterns; and _____>>**.

1. Motorized Shades: Include finish selections for controls.

DRAFT

F. Verification Samples: Minimum size 6 inches square, representing actual materials, color and pattern.

G. Project Record Documents: Record actual locations of control systems and show interconnecting wiring.

H. Operation and Maintenance Data: List of all components with part numbers, sources of supply, and operation and maintenance instructions; include copy of shop drawings.

I. Warranty: Submit sample of manufacturer's warranty and documentation of final executed warranty completed in **<<Owner>>**'s name and registered with manufacturer.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: Authorized installation representative of fabricator/manufacturer.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver shades in manufacturer's unopened packaging, labeled to identify each shade for each opening.

B. Handle and store shades in accordance with manufacturer's recommendations.

1.06 FIELD CONDITIONS

A. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.07 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Provide manufacturer's warranty from Date of Substantial Completion, covering the following minimum terms:

1. Electric Motors and Components: 5 years, minimum.
2. Manual Operating Mechanism / Clutch: 10 years, minimum (excludes bead chain).
3. Fabric: 10 years, minimum.
4. Balance of Shade Hardware and Non-Operating Materials and Components: 25 years, minimum.

DRAFT

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Interior Manually Operated Roller Shades:

1. Crown Shade Company; Manual Roller Shades.
2. Draper, Inc; Clutch Operated FlexShade N.
3. Hunter Douglas Architectural; RB500 Manual Rollder Shades.
4. Lutron Electronics Co., Inc; Contract Roller Manual Roller Shades.
5. MechoShade Systems LLC; Mecho/5 System.
6. SWFcontract, a division of Springs Window Fashions, LLC.; Pro Series Manual Solar Shade System.
7. WT Shade, an InPro Company; HeliaRise.
8. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Interior Motorized Roller Shades, Motors and Motor Controls:

1. Crown Shade Company; Motorized Skylight Roller Shades.
2. Draper, Inc; Motorized FlexShade.

3. Hunter Douglas Architectural; RB500 Motorized Roller Shades.
4. Lutron Electronics Co., Inc; Contract Roller Motorized Roller Shades.
5. MechoShade Systems LLC; Electroshade.
6. SWFcontract, a division of Springs Window Fashions, LLC.; Standard Motorized Solar Shades.
7. WT Shade, an InPro Company; MotoRise.
8. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

C. Source Limitations: Provide products produced by a single manufacturer and obtained from a single supplier.

2.02 ROLLER SHADES

******Specify roller shades only. MCPS does not want horizontal louver blinds.******

A. General:
1. Provide shade system components that are easy to remove or adjust without removal of mounted shade brackets.
2. Provide shade system that operates smoothly when shades are raised or lowered.
3. Motorized Shades: Motor system housed inside roller tube, controlling shade movement via motor controls indicated; listed or recognized to **<<UL 325>>**.
   a. Comply with **<<NFPA 70>>**.
   b. Electrical Components: Listed, classified, and labeled as suitable for the purpose intended. Where applicable, system components to be FCC compliant.
   c. Motors: Size and configuration as recommended by manufacturer for the type, size, and arrangement of shades to be operated; integrated into shade operating components and concealed from view; fully compatible with controls to be installed.

******Use this option for single manual roller shades located at: exterior windows at grade, interior side lites and door lites to corridors, windows facing courtyards, exterior windows above first floor. Refer to MCPS Design Guidelines.******

B. Roller Shades:
1. Description - Interior Roller Shades: Single roller, manually operated fabric window shade system complete with mounting brackets, roller tubes, hembars, hardware, and accessories.
   a. Drop Position: Regular roll.
   b. Roll Direction: Roll down, closed position is at window sill.
   c. Mounting: Surface mounted on steel lintel or CMU, unless otherwise indicated. ******MCPS preferred mounting methods. Coordinate with MCPS for approval of other mounting options.******
      1) Where length exceeds maximum of a single shade section and jamb mounting is not feasible, provide for mounting to overhead/lintel construction.
      2) Secure to the structural building construction at jambs or overhead as indicated (masonry, cold-formed steel framing). Shades shall not be mounted directly to window frames or mullions.
   d. Size: As indicated on drawings for rough opening sizes; field verify rough openings prior to fabrication.
2. Brackets and Mounting Hardware: As recommended by manufacturer for mounting indicated and to accommodate shade fabric roll-up size and weight.
   a. Material: Stamped steel.

DRAFT

3. Roller Tubes: As required for type of shade operation.
   a. Material: Extruded aluminum, clear anodized finish or electrogalvanized/epoxy primed steel, as standard with manufacturer.
   b. Size: As recommended by manufacturer; selected for suitability for installation conditions, span, and weight of shades.
   c. Fabric Attachment: Utilize manufacturer's standard method for attaching shade fabric material to rollers.
4. Hembars: Designed to maintain bottom of shade straight and flat.
   a. Style: Full wrap fabric covered bottom bar, flat profile with heat sealed closed.
5. Manual Operation for Interior Shades:
   a. Clutch Operator: Manufacturer's standard material and design, permanently lubricated.
   b. Drive Chain: Continuous loop beaded ball chain, 95 pounds minimum breaking strength. Provide upper and lower limit stops.
   c. Safety Device: At all chain/loop operators, provide a **<<WCMA A100.1>>** compliant chain tensioning hold-down device/retainer.
6. Accessories:
   a. Fascia: Extruded aluminum, size as required to conceal shade mounting, attachable to brackets without exposed fasteners; white powder-coated finish.
   b. End Caps: Provide manufacturer's standard end caps to cover exposed ends of brackets.
   c. Fasteners: Noncorrosive, and as recommended by shade manufacturer.

******Use this option for dual manual roller shades located at: admin offices. Refer to MCPS Design Guidelines.******

C. Roller Shades:
   1. Description - Interior Roller Shades: Double roller, manually operated fabric window shade system complete with mounting brackets, roller tubes, hembars, hardware, and accessories.
      a. Drop Position: Regular roll.
      b. Roll Direction: Roll down, closed position is at window sill.
      c. Mounting: Surface mounted on steel lintel or CMU, unless otherwise indicated. ******MCPS preferred mounting methods. Coordinate with MCPS for approval of other mounting options.******
         1) Where length exceeds maximum of a single shade section and jamb mounting is not feasible, provide for mounting to overhead/lintel construction.
         2) Secure to the structural building construction at jambs or overhead as indicated (masonry, cold-formed steel framing). Shades shall not be mounted directly to window frames or mullions.
      d. Size: As indicated on drawings for rough opening sizes; field verify rough openings prior to fabrication.
   2. Brackets and Mounting Hardware: As recommended by manufacturer for mounting indicated and to accommodate shade fabric roll-up size and weight.
      a. Material: Stamped steel.
      b. Double Roller Brackets: Configured for light-filtering and room-darkening shades in one opening.
         1) Light-Filtering Fabric: Room-side of opening.
         2) Room-Darkening Fabric: Glass-side of opening.

DRAFT

3. Roller Tubes: As required for type of shade operation.
   a. Material: Extruded aluminum, clear anodized finish or electrogalvanized/epoxy primed steel, as standard with manufacturer.
   b. Size: As recommended by manufacturer; selected for suitability for installation conditions, span, and weight of shades.
   c. Fabric Attachment: Utilize manufacturer's standard method for attaching shade fabric material to rollers.
4. Hembars: Designed to maintain bottom of shade straight and flat.
   a. Style: Full wrap fabric covered bottom bar, flat profile with heat sealed closed.
5. Manual Operation for Interior Shades:
   a. Clutch Operator: Manufacturer's standard material and design, permanently lubricated.
   b. Drive Chain: Continuous loop beaded ball chain, 95 pounds minimum breaking strength. Provide upper and lower limit stops.
   c. Safety Device: At all chain/loop operators, provide a **<<WCMA A100.1>>** compliant chain tensioning hold-down device/retainer.
6. Accessories:
   a. Fascia: Extruded aluminum, size as required to conceal shade mounting, attachable to brackets without exposed fasteners; white powder-coated finish.
   b. End Caps: Provide manufacturer's standard end caps to cover exposed ends of brackets.
   c. Fasteners: Noncorrosive, and as recommended by shade manufacturer.

******Use this option for dual motorized roller shades located at: exterior high-volume glazing and celerestory windows. Refer to MCPS Design Guidelines.******

D. Roller Shades:
   1. Description - Interior Roller Shades: Double roller, motor operated fabric window shade system complete with mounting brackets, roller tubes, hembars, hardware, and accessories.
      a. Drop Position: Regular roll.
      b. Roll Direction: Roll down, closed position is at window sill.
      c. Mounting: Surface mounted on steel lintel or CMU, unless otherwise indicated. ******MCPS preferred mounting methods. Coordinate with MCPS for approval of other mounting options.******
         1) Where length exceeds maximum of a single shade section and jamb mounting is not feasible, provide for mounting to overhead/lintel construction.
         2) Secure to the structural building construction at jambs or overhead as indicated (masonry, cold-formed steel framing). Shades shall not be mounted directly to window frames or mullions.
      d. Size: As indicated on drawings for rough opening sizes; field verify rough openings prior to fabrication.
   2. Brackets and Mounting Hardware: As recommended by manufacturer for mounting indicated and to accommodate shade fabric roll-up size and weight.
      a. Material: Stamped steel.
      b. Double Roller Brackets: Configured for light-filtering and room-darkening shades in one opening.
         1) Light-Filtering Fabric: Room-side of opening.
         2) Room-Darkening Fabric: Glass-side of opening.

DRAFT

3. Roller Tubes: As required for type of shade operation.
   a. Material: Extruded aluminum, clear anodized finish or electrogalvanized/epoxy primed steel, as standard with manufacturer.
   b. Size: As recommended by manufacturer; selected for suitability for installation conditions, span, and weight of shades.
   c. Fabric Attachment: Utilize manufacturer's standard method for attaching shade fabric material to rollers.
4. Hembars: Designed to maintain bottom of shade straight and flat.
   a. Style: Full wrap fabric covered bottom bar, flat profile with heat sealed closed.
5. Manual Operation for Interior Shades:
   a. Clutch Operator: Manufacturer's standard material and design, permanently lubricated.
   b. Drive Chain: Continuous loop beaded ball chain, **<< 95 pounds; or _____ pounds>>** minimum breaking strength. Provide upper and lower limit stops.
   c. Safety Device: At all chain/loop operators, provide a **<<WCMA A100.1>>** compliant chain tensioning hold-down device/retainer.
6. Accessories:
   a. Fascia: Extruded aluminum, size as required to conceal shade mounting, attachable to brackets without exposed fasteners; white powder-coated finish.
   b. End Caps: Provide manufacturer's standard end caps to cover exposed ends of brackets.
   c. Fasteners: Noncorrosive, and as recommended by shade manufacturer.

2.03 SHADE FABRIC

A. Fabric: Nonflammable, color-fast, impervious to heat and moisture, and able to retain its shape under normal operation.
   1. Products (Light-filtering - 5%): Vinyl coated fiberglass. ****** Use light-filtering fabrics for windows exterior windows above first floor, windows facing courtyards that are corridors, admin offices, exterior high volume glazing, clerestory windows.******
      a. Lutron Electronics Co., Inc; Basketweave 27 - 5%.
      b. Mermet Corporation; E-Screen - 5%.
      c. Phifer, Inc; SheerWeave 2390 - 5%.
      d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
   2. Products (Blackout): 100% polyester with acyrlic flocked backing (PVC free). ******Use blackout fabrics for exterior windows at grade, interior side lites and door lites to corridors, windows facing courtyards that are not corridors, admin offices, exterior high volume glazing, and celerestory windows.******
      a. Lutron Electronics Co., Inc; Value Premiere Blackout.
      b. Mermet Corporation; Sparta Twilight.
      c. Phifer, Inc; Style 7000 Blackout.
      d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
   3. Performance Requirements:
      a. Flammability: Pass **<<NFPA 701>>** large and small tests.
      b. Fungal Resistance: No growth when tested according to **<<ASTM G21>>**.

DRAFT

4. Color: To be selected by **<<Architect>>** from manufacturer's **<< full; or standard>>** range.
5. Fabrication:
   a. Fabric Orientation: Railroaded, fabric is turned 90 degrees off the roll.
   b. If height of opening requires multiple panels of railroaded fabric, use **<< battens at seams; manufacturer's standard sewn seams; or _____>>**.

2.04 MOTOR CONTROLS

A. Provide all required equipment, conduit, boxes, wiring, connectors, hardware, supports, accessories, software, system programming, etc. as necessary for a complete operating system that provides the control intent indicated. ******MCPS prefers a singular key switch for the same area.******

B. Provide all components and connections necessary to interface with other systems as indicated.

2.05 ROLLER SHADE FABRICATION

A. Field measure finished openings prior to ordering or fabrication.

B. Dimensional Tolerances: Fabricate shades to fit openings within specified tolerances.
   1. Vertical Dimensions: Fill openings from head to sill with **<< 1/2 inch; or 1/4 inch>>** maximum space between bottom bar and **<< window sill; finished floor; window stool; or _____>>**.
   2. Horizontal Dimensions - Inside Mounting: Fill openings from jamb to jamb, with maximum 1/4 inch gap at each edge of jamb.

C. At openings requiring continuous multiple shade units with separate rollers, locate roller joints at window mullion centers; butt rollers end-to-end.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine finished openings for deficiencies that may preclude satisfactory installation.

B. Start of installation shall be considered acceptance of substrates.

3.02 PREPARATION

A. Prepare surfaces using methods recommended by manufacturer for achieving best result for substrate under the project conditions.

B. Coordinate with window installation and placement of concealed blocking to support shades.

3.03 INSTALLATION

A. Install in accordance with manufacturer's instructions and approved shop drawings, using mounting devices as indicated.

B. Adjust level, projection, and shade centering from mounting bracket. Verify there is no telescoping of shade fabric. Ensure smooth shade operation.

C. Jamb mount shades at each end within the rough opening unless otherwise indicated. At large openings where multiple shades are required and jamb mount is not feasible, overhead mount shade to overhead/lintel construction. Do not mount to window framing.

DRAFT

3.04 SYSTEM STARTUP

A. Motorized Shade System: Provide services of a manufacturer's authorized representative to perform system startup.

3.05 CLEANING

A. Clean soiled shades and exposed components as recommended by manufacturer.

B. Replace shades that cannot be cleaned to "like new" condition.

C. See Section **<< 017419 - Construction Waste Management and Disposal>>** for additional requirements.

3.06 CLOSEOUT ACTIVITIES

A. Demonstration: Demonstrate operation and maintenance of window shade system to **<<Owner>>**'s personnel.

3.07 PROTECTION

A. Protect installed products from subsequent construction operations.

B. Touch-up, repair, or replace damaged products before Substantial Completion.

END OF SECTION 122400

DRAFT

SECTION 123553.19
WOOD LABORATORY CASEWORK

PART 1 GENERAL

1.01 DEFINITIONS

A. Exposed: Portions of casework visible when drawers and cabinet doors are closed, including end panels, bottoms of cases more than **<< 42 inches>>** above finished floor, tops of cases less than **<< 72 inches>>** above finished floor and all members visible in open cases or behind glass doors.

B. Semi-Exposed: Portions of casework and surfaces behind solid doors, tops of cases more than **<< 72 inches>>** above finished floor and bottoms of cabinets more than **<< 30 inches>>** but less than **<< 42 inches>>** above finished floor.

C. Concealed: Sleepers, web frames, dust panels and other surfaces not generally visible after installation and cabinets less than **<< 30 inches>>** above finished floor.

1.02 REFERENCE STANDARDS

A. ANSI Z97.1 - American National Standard for Safety Glazing Materials Used in Buildings - Safety Performance Specifications and Methods of Test.

B. ASHRAE Std 110 - Methods of Testing Performance of Laboratory Fume Hoods.

C. ASTM C1036 - Standard Specification for Flat Glass.

D. ASTM C1048 - Standard Specification for Heat-Strengthened and Fully Tempered Flat Glass.

E. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.

F. BHMA A156.9 - Cabinet Hardware.

G. HPVA HP-1 - American National Standard for Hardwood and Decorative Plywood.

H. ICC (IFC) - International Fire Code.

I. NFPA 1 - Fire Code.

J. NFPA 30 - Flammable and Combustible Liquids Code.

K. SEFA 1 - Laboratory Fume Hoods.

L. SEFA 2 - Installations.

M. SEFA 8W - Laboratory Grade Wood Casework.

N. UL 1805 - Standard for Safety Laboratory Fume Hoods and Cabinets.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate installation of casework with related items.

1. Service Fixtures: Coordinate location and characteristics of service connections.
2. Equipment and Instruments: Coordinate installation of casework with **<< equipment; scientific instruments; fume hoods; biological safety cabinets; and _____>>**.

B. Preinstallation Meeting: Conduct a preinstallation meeting**<< one week; at least one week; _____; or None - N/A>>** prior to the start of the work of this section; require attendance by all affected installers.

C. Keying Conference: Conduct conference prior to ordering keys. Incorporate conference decisions into keying submittal.

DRAFT

1.04 SUBMITTALS

A. Product Data: Component dimensions, configurations, construction details, joint details, attachments; manufacturer's catalog literature on hardware, accessories, and service fittings, if any.

B. Shop Drawings: Indicate casework types, sizes, and locations, using large scale plans, elevations, and cross sections. Include rough-in and **<< anchors; reinforcements; blocking; and _____>>** placement dimensions and tolerances, clearances required, and utility locations, if any. **<< Include coordinated information for laboratory equipment specified in another section and/or furnished by Owner.; or None - N/A>>**

C. Sustainable Design Submittals: Refer to Division 1 Section "Sustainable Design Requirements."

D. Test Reports: From independent laboratory indicating compliance with referenced chemical-resistance standards for cabinet finish and liner materials.

E. Maintenance Data: Manufacturer's recommendations for care and cleaning.

F. Finish touch-up kit for each type and color of materials provided.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section**<< with SEFA 8W certification for wood casework; or None - N/A>>**.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Protect items provided by this section, including finished surfaces and hardware items during handling and installation. For metal surfaces, use polyethylene film or other protective material standard with the manufacturer.

B. Acceptance at Site:

1. Do not deliver or install casework until the conditions specified under Part 3, Examination Article of this section have been met. Products delivered to sites that are not enclosed and/or improperly conditioned will not be accepted if warping or damage due to unsatisfactory conditions occurs.

C. Storage:

1. Store casework in the area of installation. If necessary, prior to installation, temporarily store in another area, meeting the environmental requirements specified under Part 3, "Site Verification of Conditions" paragraph of this section.

DRAFT

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Wood Laboratory Casework:

1. Stevens Advantage. ******MCPS prefers Stevens Advantage as the Basis of Design manufacturer.******
2. CiF Lab Solutions LP.
3. Diversified Woodcrafts.
4. Institutional Casework Inc (ICI Scientific).
5. Kewaunee Scientific Corp.
6. Leonard Peterson & Co., Inc.
7. Mott Manufacturing
8. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Countertops:
   1. Durcon (Epoxy resin, Solid phenolic).
   2. Panolam Industries International, Inc.
   3. Trespa (Solid phenolic).
   4. WilsonArt (Solid phenolic).
   5. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.02 WOOD LABORATORY CASEWORK

A. Wood Laboratory Casework: Solid wood and wood panel construction; each unit self-contained and not dependent on adjacent units or building structure for rigidity; in sizes necessary to avoid field cutting except for scribes and filler panels. Include adjustable levelers for base**<< and tall; or None - N/A>>** cabinets.
   1. Style: **<< Flush overlay; Lipped overlay; or _____>>**. Ease doors and drawer fronts slightly at edges.
   2. Cabinet Nominal Dimensions: Unless otherwise indicated, provide cabinets of widths and heights indicated on drawings, and with following front-to-back dimensions:
      a. Base Cabinets: **<< 22 inches; or _____ inches>>**.
      b. Tall Cabinets: **<< 13 inches; 16 inches; 22 inches; or _____ inches>>**.
      c. Upper Cabinets: **<< 13 inches; 16 inches; or _____ inches>>**.
   3. Construction: Joints doweled, glued and screwed, except drawers may be lock-shoulder jointed; with interior of units smooth and flush; cabinet bottom flush with top of face frame; without gaps or inaccessible spaces or areas where dirt or moisture could accumulate.
   4. Fittings and Fixture Locations: Cut and drill counter tops, backs, and other components for service outlets and fixtures.
   5. Access Panels: Where indicated, for maintenance of utility service and mechanical and electrical components.
   6. **<< Fixed; Removable; or _____>>** panels at backs of open spaces between base cabinets**<< and at ends of utility spaces not otherwise enclosed; _____; or None - N/A>>**.
   7. Scribes and Fillers: Panels of matching construction and finish, for locations where cabinets do not fit tight to adjacent construction.
   8. Base: Coordinate with Division 9 Section "Resilient Base & Accessories", provide continuous resilient base around all fixed cabinet bases.
   9. Factory-finish all exposed and semi-exposed surfaces with the same finish.
      a. Finish Performance: Provide finish on all surfaces having chemical resistance of Level 0 (no change) or Level 1 (slight change of gloss or slight discoloration) according to **<<SEFA 8W>>** and no visible effect when surface is exposed to:
         1) Hot water at temperature between **<< 190 degrees F>>** and **<< 205 degrees F>>** trickled down the test surface at 45 degree angle for 5 minutes.
         2) Constant moisture in the form of **<< 2 by 3 by 1 inch>>** thick cellulose sponge kept continually saturated with water and in contact with test surface for 100 hours.
      b. Preparation: Wood sanded smooth, free from dust and mill marks.
      c. Coating: Clear, superior-quality, chemical-resistant acyclic urethane; applied in accordance with manufacturer instructions, force-dried, sanded and wiped clean.
      d. Coats: Multiple coats as required to achieve minimum **<< 1.5 mil>>** dry film thickness.
      e. Appearance: Clear satin gloss; not cloudy or muddy.

DRAFT

B. Solvent (Flammable and Combustible Liquids) Storage Cabinets: Pre-fabricated steel cabinets, complying with the following:
   1. Construct to **<<NFPA 30>>** and applicable OSHA requirements.
   2. Fire Resistance: Maximum internal temperature of **<< 325 degrees F>>** at the center, and **<< 1 inch>>** from top of the cabinet when cabinet is subjected to a ten minute fire test that simulates fire exposure of a standard time-temperature curve specified in **<<ASTM E119>>**.
   3. Shelves: Full depth, adjustable.
   4. Bottom Pan: **<< 2 inches>>** deep, corrosion-resistant, liquid-tight pan covering entire bottom of cabinet.
   5. Cabinet Hardware: UL-listed.
      a. Hinges: Full-length stainless steel continuous (piano) hinges.
      b. Self-closing Doors: Comply with requirements of **<<NFPA 1>>** and **<<ICC (IFC)>>**. Minimum 90 degree opening. Three-point latch arrangement, door(s) shutting and latching automatically when hold-open device's fusible link melts at **<< 165 degrees F>>** under fire conditions outside the cabinet. At pair of doors, synchronize latching so that both doors always fully close.
      c. Door Handles: Manufacturer's standard**<< , with slip-resistant grip; or None - N/A>>**.
         1) Provide manufacturer's standard cylinder lock and key set.
   6. Signage: Provide manufacturer's standard signage reading "FLAMMABLE - KEEP FIRE AWAY" or similar message in bright red color.

C. Tables: With standard aprons manufactured of not less than 3/4 by 3 1/2 inch solid hardwood lumber, machined to receive corner blocks, and bolted to 2 1/8 by 2 1/2 inch solid hardwood legs. 3/8 inch **<< 3/8 inch; or _____ inch>>** leveling devices, and slip-on type black PVC or rubber shoes.
   1. Provide 30 inch standard table height unless otherwise indicated.
   2. Provide manufacturer's power and data receptacles. ******MCPS preferred for demonstration table adjacent to teacher's desk.******

2.03 CABINET HARDWARE

A. Comply with **<<BHMA A156.9>>** requirements.

B. Locks: Provide locks on casework drawers and doors where indicated. **<< Lock with 5 pin cylinder and 2 keys per lock; Lock with 5 pin cylinder and ____ keys per lock; Lock with ____ pin cylinder and 2 keys per lock; Lock with ____ pin cylinder and ____ keys per lock; Lock with padlock hasps; or _____>>**.
   1. Hinged Doors: Cam type lock**<< , bright chromium plated over nickel on base material; , satin chromium plated over nickel on base material; , _____; or None - N/A>>**.
   2. Tall Hinged Doors: Three-point latching system.
   3. Keying: Key **<< locks alike within a space; key each room separately; each lock separately; or locks as directed>>**.
   4. Master Key System: All locks operable by master key.

C. Shelves in Cabinets:
   1. Shelf Standards and Rests: **<< Vertical standards with rubber button fitted rests; or _____>><< , bright chromium plated over nickel on base material; , satin chromium plated over nickel on base material; , _____; or None - N/A>>**.

DRAFT

D. Swinging Doors:
   1. Hinges: **<< Offset pin; Butt; Continuous; or _____>>**, number as required by referenced standards for width, height, and weight of door.
      a. European-Style Hinges: **<< For overlay doors, semi-concealed.; For overlay doors, concealed; or For inset door, concealed>>**. **<< Steel, nickel-plated; Stainless Steel, No.4 finish; or _____>>**, **<< 170; 155; 120; 110; 100; 95; or _____>>** degree opening angle.
   2. Catches: **<< Magnetic; Mechanical catch; or _____>>**.
   3. Pulls: **<< Chrome; Brass; or _____>><< wire pulls; or _____>>**, **<< 4 inches; or ___ inches>>** wide.

E. Drawers:
   1. Pulls: **<< Chrome; Brass; or _____>> << wire pulls; or _____>>**, **<< 4 inches; or ___ inches>>** wide.
   2. Slides: Steel, full extension arms, ball bearings; **<< self-closing; ; or None - N/A>>**capacity as recommended by manufacturer for drawer height and width.

2.04 COUNTERTOPS

A. Countertops:
   1. Epoxy Resin Countertops: Filled epoxy resin molded into homogenous, non-porous sheets; no surface coating and color and pattern consistent throughout thickness; with integral or adhesively seamed components.
      a. Flat Surface Thickness: **<< 1 inch; 3/4 inch; 5/8 inch; or ___ inch>>**, nominal.
      b. Surface Finish: Smooth, non-glare.
      c. Color: **<< Black; Gray; White; or _____>>**.
      d. Exposed Edges and Corners: Beveled or radiused approximately 3/16 inch.
      e. Drip Edge: Drip groove **<< 1/8 inch; or ___ inch>>** wide and deep, located **<< 1/2 inch; or ___ inch>>** back from edge on underside of each exposed edge.
      f. Back and End Splashes: Same material, same thickness; **<< separate for field attachment; integrally molded; or _____>>**.

2.05 MISCELLANEOUS LAB CASEWORK AND ACCESSORIES

A. Demonstration Station: Prefabricated unit with locking base cabinets and drawers, constructed of veneered plywood of species and finish matching built in wood casework; with 1 inch thick epoxy top. Provide in configuration and dimensions as indicated on Drawings, and with the following features:
   1. Mobile Unit: Provide with heavy duty, locking, 4-inch ball-bearing casters.
   2. Sink: Stainless steel sink with galley-type pump. Provide with molded plastic containers in base cabinet for both fresh water and waste water.
   3. Apparatus Rod/Greenlaw Arm Assembly: Adjustable aluminum assembly with either one or two vertical rods and corresponding sockets in epoxy top, per manufacturer's standard assembly, and with horizontal crossrod and clamping hardware.
   4. Power: 120V duplex outlet, with a minimum 9 foot long extension cord.

B. Pegboards: **<< Epoxy; Stainless steel; Polypropylene; Phenolic; Acrylic; or _____>>** pegboards with pre-drilled or punched holes in a staggered pattern, designed to accept removable **<< black ; gray; white ; or None - N/A>>**polypropylene pegs. With each pegboard include a stainless steel drip-trough with drain outlet and matching diameter **<< 36 inches; or _____ inches>>** long **<< PVC; or _____>>** drain hose.

DRAFT

1. Size: **<< 24 inches wide by 30 inches high; 30 inches wide by 30 inches high; _____ inches wide by _____ inches high; or As indicated on drawings>>**.

C. Goggle Cabinet: Wall-mounted steel reinforced cabinet designed to store and sanitize protective goggles. Unit shall have automatic timer control that operates a germicidal lamp to sanitize goggles. Unit shall be fully factory assembled and pre-wired and doors shall be equipped with locks. Unit shall measure 24-1/2 inches wide by 32 inches high by 9-1/2 inches deep and have manufacturer's standard baked enamel finish.

D. Fire Blanket and Cabinet: Pre-fabricated steel cabinet with baked enamel finish and the lettering "FIRE BLANKET". Cabinet shall contain a minimum 62-inch by 80-inch woven blanket treated with fire-resistant chemicals to conform to Federal Specification #CS-191-53. Cabinet shall be drop type with hinged bottom panel and manual release. Mount cabinet such that release mechanism is less than 48 inches above floor.

2.06 FUME HOODS

A. General Requirements: Provide manufacturer's standard complete fume hood assembly, fabricated of steel internal structure and sheet steel cladding with manufacturer's standard chemical-resistant finish.

1. Comply with **<<SEFA 1>>**; and provide fume hoods UL listed and labeled for compliance with **<<UL 1805>>**; include labeling on the face of fume hood.
2. Configuration: Bench top type, with 36 inch height to work surface. Provide integral lockable base cabinets constructed of corrosion-resistant steel for storage of flammables and acids. Provide "ceiling skirt" finished to match steel sheet cladding to close fume hood to ceiling, with hinged access panel.
3. Interior Construction: Provide epoxy resin internal countertop work surface and manufacturer's standard lining of epoxy-coated steel sheet or glass-fiber-reinforced epoxy.
4. Sash: Provide vertical operating sash fabricated of steel sheet and 1/4 inch tempered safety glass, with counter-balance system designed to allow operation at a maximum 7 pounds of force over complete travel height; counter-balance shall be capable of holding sash open at any position without creep. Provide rubber bumpers at limit of travel horizontally and vertically.
5. Fittings: Provide gooseneck faucet, epoxy resin cup sink, and gas turret with ball valve within the fume hood. Provide a recessed duplex outlet on hood face.
6. Pre-wire fume hoods for service fittings, **<< light fixtures; receptacles; other electrical devices; fan switches; and _____>>**. Coordinate with Division 22, 23, and 26 contractors to ensure utility services are properly sized and located.
    a. Terminate all wiring in a junction box on top of hood.

B. Restricted-Bypass Fume Hoods:

1. Standard Performance: Fume hood shall be tested per **<<ASHRAE Std 110>>** and shall provide an average face velocity of 100 fpm with sash fully open, with no more than 10 percent variation.
2. Bypass: Provide a compensating bypass arrangement above the sash to open after sash is closed to less than **<< 20; or 40>>** percent open. Bypass to maintain exhaust capacity of at least **<< 25 CFM per square foot>>** of work surface regardless of sash position.
3. Provide an electronic control unit designed to use input from a sensor that monitors face velocity or sash position to modulate a dedicated exhaust damper in order to maintain a near-constant fume hood face velocity.
    a. Provide with safety monitor/alarm system that monitors face velocity and provides audible and visual alarm if face velocity drops below safe levels.

DRAFT

b. Provide control unit with a manual-override switch that allows the operator to fully open the exhaust damper.

c. Provide control unit with outputs for interfacing with **<< building's HVAC control system; laboratory fume hood control system; or _____>>**.

2.07 MATERIALS

A. Wood-Based Materials:

1. Solid Wood: Air-dried to 4.5 percent moisture content, then tempered to 6 percent moisture content before use.
2. Composite Wood Panels: Containing no urea-formaldehyde resin binders.

B. Exposed Solid Wood: Clear, dry, sound, selected for compatible grain and color, no defects.

1. Wood Species: **<< White maple; Red oak; or _____>>**; **<< plain sliced; or _____>>**.

C. Exposed Hardwood Plywood: **<< Veneer; Lumber; or Particleboard>>** core; **<< HPVA HP-1 Grade A; HPVA HP-1 Grade ___; or None - N/A>>**, same species as exposed solid wood, clear, compatible grain and color, no defects; minimum 1/50 inch thick. Band exposed edges with Grade J solid wood of same species as veneer.

D. Semi-Exposed Hardwood Plywood: **<< Veneer; Lumber; or Particleboard>>** core; **<< HPVA HP-1 Grade B or C; HPVA HP-1 Grade ____; or None - N/A>>**, any species similar in color and grain to exposed portions. Band exposed edges with Grade J solid wood of same species as veneer.

E. Concealed Solid Wood or Plywood: Any species and without defects affecting strength or utility.

F. Solid Epoxy Resin: Modified epoxy resin and non-asbestos inert fillers cast into sheets.

G. Glass: Fully tempered float; **<<ASTM C1036>>**, Type 1, Quality **<< Q3; or ___>>**; **<<ASTM C1048>>**, tempered**<< using horizontal tempering; or None - N/A>><< and complying with ANSI Z97.1; or None - N/A>>**; **<< 3/16 inch; 1/4 inch; ___; or 3/16 inch>>** thick**<< minimum; or None - N/A>><< ; exposed edges ground, and cut or drilled to receive hardware; or None - N/A>>**; **<< clear; tinted; or _____>>**.

PART 3 EXECUTION

3.01 EXAMINATION

A. Site Verification of Environmental Conditions:

1. Do not deliver casework until the following conditions have been met:
   a. Building has been enclosed (windows and doors sealed and weather-tight).
   b. An operational HVAC system that maintains temperature and humidity at occupancy levels has been put in place.
   c. Ceiling, overhead ductwork, piping, and lighting have been installed.
   d. Installation areas do not require further “wet work” construction.

B. Verify adequacy of support framing and anchors.

C. Verify that service connections are correctly located and of proper characteristics.

3.02 INSTALLATION

A. Perform installation in accordance with manufacturer's instructions and with **<<SEFA 2>>**.

DRAFT

B. Use anchoring devices to suit conditions and substrate materials encountered. Use concealed fasteners to the greatest degree possible. Use exposed fasteners only where allowed by approved shop drawings, or where concealed fasteners are impracticable.

C. Set casework items plumb and square, securely anchored to building structure.
   1. Base Cabinets: Examine floor levelness and flatness of installation space. Do not proceed with installation if encountered floor conditions required more than **<< 3/4 inch>>** leveling adjustment. When installation conditions are acceptable, for each space, establish the high point of the floor. Set and make level and plumb first cabinet in relation to this high point.
   2. Wall Cabinets: Examine wall surfaces in installation space. Do not proceed with installation if the following conditions are encountered:
      a. Maximum variation from plane of masonry wall exceeds **<< 1/4 inch in 10 ft>>** and **<< 1/2 inch in 20 ft>>** or more, and/or maximum variation from plumb exceeds **<< 1/4 inch>>** per story.
      b. Maximum Variation of finished gypsum board surface from true flatness exceeds **<< 1/8 inch in 10 feet; or ____ inch in 10 feet>>** in any direction.

D. Align cabinets to adjoining components, install filler and/or scribe panels where necessary to close gaps.

E. Fasten together cabinets in continuous runs, with joints flush, uniform and tight. Misalignment of adjacent units not to exceed **<< 1/16 inch>>**. In addition, do not exceed the following tolerances:
   1. Variation of Tops of Base Cabinets from Level: **<< 1/16 inch>>** in **<< 10 feet>>**.
   2. Variation of Bottoms of Upper Cabinets from Level: **<< 1/8 inch>>** in **<< 10 feet; or 10 feet>>**.
   3. Variation of Faces of Cabinets from a True Plane: **<< 1/8 inch>>** in **<< 10 feet; 10 feet; or 10 feet>>**.
   4. Variation of Adjacent Surfaces from a True Plane (Lippage): **<< 1/32 inch>>**.
   5. Variation in Alignment of Adjacent Door and Drawer Edges: **<< 1/16 inch>>**.

F. Base Cabinets: Fasten cabinets to service space framing and/or wall substrates, with fasteners spaced not more than **<< 16 inches; or _____ inch>>** on center. Bolt adjacent cabinets together with joints flush, tight, and uniform.

G. Install hardware uniformly and precisely. Set hinges snug and flat in mortises.

H. Vented Cabinets: Install in strict compliance with manufacturer's written installation instructions.
   1. Install vent kits and connect to fume hood exhaust system.
   2. Use only rigid materials for venting. No flexible materials permitted.

I. Countertops: Install countertops in one true plane, with ends abutting at hairline joints, and no raised edges.

J. Replace units that are damaged, including those that have damaged finishes.

3.03 ADJUSTING

A. Adjust operating parts, including doors, drawers, hardware, and fixtures to function smoothly.

3.04 CLEANING

A. Clean casework and other installed surfaces thoroughly.

DRAFT

3.05 PROTECTION

A. Do not permit finished casework to be exposed to continued construction activity.

B. Protect casework and countertops from ongoing construction activities. Prevent installers from standing on or storing tools and materials on casework or countertops.

C. Repair damage that occurs prior to Date of Substantial Completion, including finishes, using methods prescribed by manufacturer; replace units that cannot be repaired to like-new condition.

END OF SECTION 123553.19

DRAFT

SECTION 123583
MUSIC EQUIPMENT STORAGE CASEWORK & ACCESSORIES

PART 1 GENERAL

1.01 DEFINITIONS

A. Exposed: Portions of casework visible when drawers and cabinet doors are closed, including end panels, bottoms of cases more than **<< 42 inches>>** above finished floor, tops of cases less than **<< 72 inches>>** above finished floor and all members visible in open cases or behind glass doors.

B. Semi-Exposed: Portions of casework and surfaces behind solid doors, tops of cases more than **<< 72 inches>>** above finished floor and bottoms of cabinets more than **<< 30 inches>>** but less than **<< 42 inches>>** above finished floor.

C. Concealed: Sleepers, web frames, dust panels and other surfaces not generally visible after installation and cabinets less than **<< 30 inches>>** above finished floor.

1.02 REFERENCE STANDARDS

A. BHMA A156.9 - Cabinet Hardware.

B. CARB (ATCM) - Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products.

C. NEMA LD 3 - High-Pressure Decorative Laminates.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Conduct a preinstallation meeting a minimum of two weeks prior to the start of the work of this section; require attendance by all affected installers.

1.04 SUBMITTALS

A. Product Data: Component dimensions, configurations, construction details, joint details, attachments.

B. Shop Drawings: Indicate casework types, sizes, and locations, using large scale plans, elevations, and cross sections. Include rough-in and **<< anchors; reinforcements; and blocking>>**, **<< placement dimensions and tolerances; clearances required; keying information; and _____>>**.

1. Include utility locations and connection requirements.

C. Samples for Finish Selection: Fully finished, for color selection. Minimum sample size: **<< 2 inches by 3 inches; 6 inches by 6 inches; or _____ inches by _____ inches>>**.

1. Wood samples for color and species selection.
2. Solid phenolic or epoxy samples, for color, texture, and finish selection.

D. Maintenance Data: Manufacturer's recommendations for care and cleaning.

E. Finish touch-up kit for each type and color of materials provided.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Protect items provided by this section, including finished surfaces and hardware items during handling and installation. For metal surfaces, use polyethylene film or other protective material standard with the manufacturer.

B. Acceptance at Site:

DRAFT

1. Do not deliver or install casework until the conditions specified under Part 3, Examination Article of this section have been met. Products delivered to sites that are not enclosed and/or improperly conditioned will not be accepted if warping or damage due to unsatisfactory conditions occurs.

C. Storage:
1. Store casework in the area of installation. If necessary, prior to installation, temporarily store in another area, meeting the environmental requirements specified under Part 3, "Site Verification of Conditions" Article of this section.

1.06 WARRANTY

A. Instrument cabinetry and shelving shall have a ten year factory warranty from Date of Substantial Completion. Cover defects in materials and workmanship. Defects include, but are not limited to:
1. Ruptured, cracked, or stained finish coating.
2. Discoloration or lack of finish integrity.
3. Cracking or peeling of finish.
4. Delamination of components.
5. Failure of adhesives.
6. Failure of hardware.

DRAFT

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Basis-of-Design Manufacturer: Wenger Corp.; **<< AcoustiCabinets; and UltraStor>>** cabinets; models as indicated on Music Casework Schedule.

B. Subject to conformance with specifications, including features not standard to the manufacturer, the following manufacturers may provide products for this project, subject to submittal and approval by Owner and Architect of samples of materials, construction features, and finishes as stipulated in the Design Requirements paragraph below.
1. Corilam.
2. Melhart Storage Solutions.
3. Stevens Industries, Inc.
4. TMI Systems Corporation.

C. Obtain casework from single source and manufacturer, unless otherwise indicated.

2.02 THERMALLY FUSED LAMINATE MUSIC CASEWORK

A. Quality Standard: **<< AWI/AWMAC/WI (AWS); AWMAC/WI (NAAWS); or _____>>**, unless noted otherwise.

B. Thermally Fused Laminate Music Casework: Custom Grade.

C. Design Requirements:
1. Provide music storage cabinets specifically designed and intended for use with musical instruments. Storage units shall be chip and abrasion resistant under heavy usage and shall protect instruments and cases from damage under normal use.
2. Construction, General: Thermally fused laminate panel construction; each unit self-contained and not dependent on adjacent units or building structure for rigidity; in sizes necessary to avoid field cutting except for scribes and filler panels. Include adjustable

levelers for base and tall cabinets. Include integral toe-kick, finished to match adjacent paneling.

a. Cabinet Nominal Dimensions: Unless otherwise indicated, provide cabinets of widths and heights indicated on Drawings and Music Casework Schedule, and per Basis-of-Design models indicated.

3. Shelving: Provide minimum 3/4-inch thick high strength instrument shelving with scuff-resistant plastic surface, with integral profiled surface for ventilation, with radiused (bullnose) front edge, designed and engineered to withstand continuous use without surface or front edge breakdown.
   a. Loading: Each shelf shall be able to independently and safely support 200 lbs minimum, uniformly distributed, with maximum deflection of L/144.
4. Paneling: Manufacture instrument cabinet with 3/4-inch composite panels finished with thermally-fused laminate (melamine) or polyester laminate, meeting performance requirements of **<<NEMA LD 3>>** for VGS grade, both faces; and edge banded with 3 mm radiused PVC. Factory jig and drill end panels to accept unit-to-unit through bolting; wood screw attachment is not acceptable.
   a. Rear Panels: Provide rear panels fabricated of minimum 1/4-inch MDF, fully captured all four sides, or 1/2-inch particleboard full overlay. For all cabinets with wire grille doors or open interior (no doors), provide acoustically absorptive material on inside face of rear panels.
   b. Panel Colors: Exterior panel colors and edge bandings shall be selected from manufacturer's full range. Interior panel shall be manufacturer's standard white melamine.
5. Wire Grille Doors: Provide inset style, **<< wire grille; and solid wood composite>>** doors as indicated; reveal or full overlay style doors are not acceptable. All hinges shall be structurally attached to vertical cabinet panels with engineered and tested through-bolt hardware, and integrally welded to wire grille doors. Screw mounted hinges are not acceptable.
   a. Loading: Wire-grille door hinge welded connections shall be tested and shall resist 400 lbf pull test without visible damage or permanent deformation.
6. Panel Doors: Provide inset style doors, fabricated of 3/4-inch composite panels, finished with thermally-fused laminate (melamine) or polyester laminate. Finish edges with 3 mm radiused PVC edge banding. Finish colors to match adjacent cabinet panels. Factory jig and drill for through bolt hinge attachment.

DRAFT

2.03 FABRICATION

A. Assembly: Shop assemble casework items for delivery to site in units easily handled and to permit passage through building openings.

B. Construction: As required for selected grade.

C. Hardware Application: Factory-machine casework members for hardware.

D. Edging: Fit shelves, doors, and exposed edges with**<< specified; or specified and detailed>>** edging. Do not use more than one piece for any single length.

E. Scribes and Fillers: Panels of matching construction and finish, for locations where cabinets do not fit tight to adjacent construction.

F. Mobile Cabinets: Same construction as fixed base cabinets, with modifications.
   1. Toe kick space eliminated.
   2. Cabinet underside reinforced as is standard with the manufacturer to provide caster mounting points.

3. Four casters, each with a load rating of 165 pounds.
4. For cabinets with drawers, include a counterweight to prevent the cabinet from tipping when one drawer is opened.
   a. Rate drawers at 50 pounds maximum.

2.04 SPECIAL PURPOSE UNITS

A. Music Library (Sheet Music) Storage: Manufacturer's standard, high-density, slide out type. Fabricate with 1-inch tube steel framing, powder-coated black color, with polyester laminate faced front and end panels, and with manufacturer's standard white melamine interior finish. Provide with manufacturer's standard casters. Provide **<< 6-shelf units, with four adjustable shelves and two fixed shelves.; or 7-shelf units, with four adjustable shelves and three fixed shelves.>>** Basis-of-Design is Wenger; Music Library System.

2.05 CABINET HARDWARE

A. Comply with **<<BHMA A156.9>>** requirements.

B. Label Holders: Manufacturer's standard, sized to hold standard label cards**<< , bright chromium plated over nickel on base material; , satin chromium plated over nickel on base material; , _____; or None - N/A>>**.

C. Swinging Doors: Hinges, latches, and joinery.
   1. Hinges: Number as required by manufacturer and by referenced standards for width, height, and weight of door.
      a. Hinges: **<<BHMA A156.9>>**, Grade 1 butt hinges; powder coated to match grille door.
         1) Hinges shall be installed with through-bolts to cabinet side panels; five-knuckle, projecting barrel, minimum 2-1/2 inches long.
         2) At wire-grille doors, weld hinges to door panels.
         3) At solid composite wood doors, through-bolt hinges to door panels.
   2. Latch and Locks: Provide manufacturer's standard slide or gravity latch, steel construction, with integral padlock eye and powder-coat finish. All doors shall latch securely without padlock; doors with padlock hasp only are not acceptable.
      a. Padlocks: NIC. Shall be provided by Owner.

2.06 MATERIALS

A. Composite Wood: Tested and certified to **<<CARB (ATCM)>>** requirements for ultra-low emitting formaldehyde (ULEF) resins.

B. Thermally Fused Laminate (TFL): Melamine or polyester resin, **<<NEMA LD 3>>**, Type VGS laminate panels.

2.07 ACCESSORIES

A. Plastic Edge Banding: Extruded 3mm PVC, **<< convex; flat; or _____>>** shaped; **<< smooth; ridged; or _____>>** finish; self locking serrated tongue; of width to match component thickness.
   1. Color: Match adjacent laminate.
   2. Use at exposed edges.

B. Bolts, Nuts, Washers, Lags, Pins, and Screws: Of size and type to suit application; galvanized or chrome-plated finish in concealed locations and stainless steel or chrome-plated finish in exposed locations.

DRAFT

C. Concealed Joint Fasteners: Corrosion-resistant, standard with manufacturer.

PART 3 EXECUTION

3.01 PREPARATION

A. Large Components: Ensure that large components can be moved into final position without damage to other construction.

3.02 EXAMINATION

A. Site Verification of Environmental Conditions:
   1. Do not deliver casework until the following conditions have been met:
      a. Building has been enclosed (windows and doors sealed and weather-tight).
      b. An operational HVAC system that maintains temperature and humidity at occupancy levels has been put in place.
      c. Ceiling, overhead ductwork, piping, and lighting have been installed.
      d. Installation areas do not require further “wet work” construction.

B. For Cabinet Installation: Examine floor levelness and flatness of installation space. Do not proceed with installation if encountered floor conditions required more than **<< 1/2 inch>>** leveling adjustment. When installation conditions are acceptable, for each space, establish the high point of the floor. Set and make level and plumb first cabinet in relation to this high point.

C. Verify adequacy of support framing and anchors.

D. Verify that service connections are correctly located and of proper characteristics.

3.03 INSTALLATION

A. Perform installation in accordance with manufacturer's instructions.

B. Use anchoring devices to suit conditions and substrate materials encountered. Use concealed fasteners to the greatest degree possible. Use exposed fasteners only where allowed by approved shop drawings, or where concealed fasteners are impracticable.

C. Set casework items plumb and square, securely anchored to building structure.

D. Align cabinets to adjoining components, install filler and/or scribe panels where necessary to close gaps.

E. Fasten together cabinets in continuous runs, with joints flush, uniform and tight. Misalignment of adjacent units not to exceed **<< 1/16 inch>>**. In addition, do not exceed the following tolerances:
   1. Variation of Tops of Cabinets from Level: **<< 1/16 inch>>** in 10 feet.
   2. Variation of Faces of Cabinets from a True Plane: **<< 1/8 inch>>** in 10 feet.
   3. Variation of Adjacent Surfaces from a True Plane (Lippage): **<< 1/32 inch>>**.
   4. Variation in Alignment of Adjacent Door and Drawer Edges: **<< 1/16 inch>>**.

F. Secure cabinets to concealed reinforcement and blocking where installed to gypsum board partition assemblies.

G. Cabinets: Fasten cabinets to service space framing and/or wall substrates, with fasteners spaced not more than 16 inches on center. Bolt adjacent cabinets together with joints flush, tight, and uniform.
   1. Where base cabinets are installed away from walls or service space framing, anchor to floor at toe space at not more than 24 inches on center, and at sides of cabinets with not less than two fasteners per side.

DRAFT

H. Install hardware uniformly and precisely.

I. Countertops: Install countertops intended and furnished for field installation in one true plane, with ends abutting at hairline joints, and no raised edges.

J. Replace units that are damaged, including those that have damaged finishes.

3.04 ADJUSTING

A. Adjust operating parts, including doors, drawers, hardware, and fixtures to function smoothly.

3.05 CLEANING

A. See Section **<< 017419 - Construction Waste Management and Disposal>>** for additional requirements.

B. Clean casework and other installed surfaces thoroughly.

3.06 PROTECTION

A. Do not permit finished casework to be exposed to continued construction activity.

B. Protect casework and countertops from ongoing construction activities. Prevent workmen from standing on, or storing tools and materials on casework or countertops.

C. Repair damage, including to finishes, that occurs prior to Date of Substantial Completion, using methods prescribed by manufacturer; replace units that cannot be repaired to like-new condition.

END OF SECTION 123583

DRAFT

SECTION 124813
ENTRANCE FLOOR MATS AND FRAMES

PART 1 GENERAL

1.01 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate with Division 03 "Cast-in-Place Concrete" to provide properly sized recess to accommodate recessed entrance mat and frame.

1.02 SUBMITTALS

A. Product Data: Provide data indicating properties of walk-off surface, **<< component dimensions; recessed frame characteristics; and _____>>**.

B. Shop Drawings: Indicate **<< dimensions; details for recessed frame; and _____>>**.

1. For recessed frames located within a dimensionally restricted area, show dimensions of space within which the frame will be installed.

C. Selection Samples: Manufacturer's color charts for mat finishes, indicating full range of available colors.

1.03 QUALITY ASSURANCE

A. Critical Radiant Flux: All carpet shall be Class I rated, with a minimum CRF of 0.45 watts/sq cm, when tested by an independent testing agency in accordance with ASTM E648 or NFPA 253.

B. Rolling Loads: Permanent deformation not to exceed 1/8-inch after 1,000 cycles, when tested with a 350 lb wheel load.

1.04 WARRANTY

A. Entrance Mat Warranty: Provide a two (2) year manufacturer warranty, covering defective material and faulty installation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Entrance Floor Grilles and Gratings:

1. Activar Construction Products Group - JL Industries
2. Babcock-Davis
3. Construction Specialties, Inc.
4. Nystrom, Inc.
5. Pawling Corporation.
6. Reese Enterprises, Inc.

B. Floor Mats:

1. Activar Construction Products Group - JL Industries.
2. American Floor Products Company, Inc.
3. Babcock-Davis.
4. Construction Specialties, Inc.
5. Nystrom, Inc
6. R.C. Musson Rubber Co.
7. Pawling Corporation.

DRAFT

8. Reese Enterprises, Inc.

2.02 ENTRANCE FLOOR GRILLES AND GRATINGS

A. Entrance Floor Grilles: Recessed extruded aluminum grille assembly with nominal 1 inch wide tread strips running perpendicular to traffic flow, slots between treads, and perimeter frame forming sides of recess; grille hinged for access to recess.

1. Recess Depth: **<< 3/4 inches; 1 inches; 1-1/4 inches; 1-1/2 inches; 1-3/4 inches; 2 inches; 2-1/2 inches; 3 inches; 4 inches; 4-1/4 inches; or ____ inches>>**.
2. Tread Surfaces: Alternating **<< serrated anodized aluminum; rigid serrated rubber; rigid serrated vinyl; polypropylene brush; nylon carpet; and _____>>**.
3. Tread Surfaces: **<< Serrated anodized aluminum; Rigid serrated rubber; Rigid serrated vinyl; Polypropylene brush; Nylon carpet; or _____>>**.
4. Colors: To be selected by **<<Architect>>** from manufacturer's full range.
5. Length in Direction of Traffic Flow: 72 inches.
6. Width Perpendicular to Traffic Flow: Full width of entrance door opening.
7. Frame: Anodized aluminum for embedding in concrete; minimal exposed trim; stud or hook concrete anchors.
8. Pan: Anodized aluminum bottom pan with drain, sealed to frame.

B. Mounting: Top of non-resilient members level with adjacent floor.

C. Structural Capacity: Capable of supporting rolling load of **<< 300 lb; 350 lb; 500 lb; 1,000 lb; or ____ lb>>** without permanent deformation or noticeable deflection.

D. Vibration Resistant Fabrication: Welded, riveted, or bolted members; no snap or friction connections.

2.03 FLOOR MATS

A. Carpet Mat: Roll-up type; cut nylon pile permanently bonded to **<< vinyl; or rubber>>** backing; **<< one inch>>** black matching **<< vinyl; or rubber>>** border on all edges.

1. Tread Size: 2 inches wide on center, by 3/8 inch thick.
   a. Tread Hinges: Aluminum.
2. Mat Size: As indicated on Drawings; if not indicated, provide width not less than the width of adjacent entrance plus an additional 12 inches on each side of entrance, and not less than 10 feet in length.
3. Colors: To be selected by **<<Architect>>** from manufacturer's **<< standard; full; custom; or _____>>** range.

B. Recessed Frame: Extruded anodized aluminum, with anchoring features for fastening to concrete slab. Provide each edge as a single piece, or where length exceeds maximum length available, provide in the least number of pieces possible, with hairline joint splices connected with straight pins.

2.04 FABRICATION

A. Construct recessed mat frames square, tight joints at corners, rigid. Coat surfaces with protective coating where in contact with cementitious materials.

B. Fabricate mats in single unit sizes; fabricate multiple mats where indicated on drawings.

DRAFT

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that floor opening for mats are ready to receive work.

3.02 PREPARATION

A. Mats: Verify size of floor recess before fabricating mats.

B. Vacuum clean floor recess.

3.03 INSTALLATION

A. Install frames to achieve flush plane with finished floor surface.

B. Install walk-off surface**<< in floor recess flush with finish floor; _____; or None - N/A>>** after cleaning of finish flooring.

3.04 TOLERANCES

A. Maximum Gap Formed at Recessed Frame From Mat Size: 1/4 inch.

END OF SECTION 124813

DRAFT

SECTION 125651
LIBRARY FURNISHINGS

PART 1 GENERAL

1.01 SUBMITTALS

A. Product Data: Manufacturer's catalog data and descriptive information for each specified product.

B. Shop Drawings: Indicate layout plans with quantities, details, including attachment/mounting details, and interface with adjacent construction.

1. Indicate electrical service connections and fittings where electrical outlets or coordination is required.

C. Selection Samples: Manufacturer's color charts, for all finishes requiring Architect's selection.

D. Verification Samples: Provide manufacturer's standard size samples, illustrating each color selected, for each product.

E. Sustainable Design Documentation: Refer to Division 1 "Sustainable Design Requirements."

1.02 QUALITY ASSURANCE

1.03 DELIVERY, STORAGE, AND HANDLING

A. Deliver furnishings to project site with manufacturer's protective covering. Do not remove protective covering until furnishings have been moved into final installation locations.

1.04 FIELD CONDITIONS

A. Ambient Conditions: Do not install library furnishings until all finishes are complete and HVAC system is fully operating at occupancy conditions.

1.05 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Manufacturer Warranty: Provide minimum **<< 2-year; or 10-year>>** manufacturer warranty, executed by Contractor, Manufacturer, and Installer, from date of Substantial Completion. Complete forms in **<<Owner>>**'s name and register with manufacturer.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Source Limitations: Provide each type of product, **<< produced by single manufacturer; produced by same manufacturer as _____; obtained from single supplier; and _____>>**.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's written instructions. Installation shall be by the manufacturer's authorized representative and shall conform to the manufacturer's standard procedure.

DRAFT

B. Install level, plumb, and true; shim as required, using concealed shims.

C. Installation shall include provision of connecting hardware, closure panels and trim required for complete and finished installation.

D. Furniture shall be securely set in place with permanent attachment where required.

E. Systems Integration: Coordinate with electrical for field installation of electrical components and for connections to building electrical supply.

F. Install hardware uniformly and precisely. Set hinges snug and flat in mortises.

G. Install accessories according to Shop Drawings and manufacturer's written instructions.

H. Install shelf standards plumb and at heights to align shelf brackets for level shelves. Install shelving level and straight, closely fitted to other work where indicated.

3.02 ADJUSTING

A. Adjust cabinets and hardware for smooth operation of doors and drawers.

B. Adjust shelving to ensure rigid attachment to supports.

3.03 CLEANING

A. Clean all exposed surfaces of installed products after completion of work in the space.

3.04 PROTECTION

A. Protect installed surfaces from subsequent construction operations with plastic film or other covering.

B. Touch up and repair surfaces that are damaged during construction to match original finish. If damage can not be repaired, replace product.

END OF SECTION 125651

DRAFT

SECTION 126100
FIXED AUDIENCE SEATING

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ADA Standards - 2010 ADA Standards for Accessible Design.

B. ASTM E1352 - Standard Test Method for Cigarette Ignition Resistance of Mock-Up Upholstered Furniture Assemblies.

C. ASTM F851 - Standard Test Method for Self-Rising Seat Mechanisms.

D. BIFMA X5.4 - Public and Lounge Seating.

E. NFPA 261 - Standard Method of Test for Determining Resistance of Mock-Up Upholstered Furniture Material Assemblies to Ignition by Smoldering Cigarettes.

1.02 SUBMITTALS

A. Product Data: Manufacturer's printed data sheets for products specified.

B. Shop Drawings: Fabrication and installation details, **<< chair layouts and dimensions; seat numbering scheme; and _____>>**.

1. Field Measurements: Verify seating layout by field measurements and record field dimensions on shop drawings.

C. Selection Samples: Manufacturer's color charts and swatches for **<< fabric upholstery; plastic laminate; baked enamel finish; hardwood and finishes; plywood and finishes; molded plastic; and _____>>**, indicating full range of materials, colors, and patterns available.

D. Verification Samples: Full-size two-seat fabricated sample of each typ of chair specified, including all accessories and one end panel, illustrating all finishes and workmanship to be expected in the finished Work; approved sample **<< may; or may not>>** be incorporated into the Work.

E. Installer's qualification statement.

F. Maintenance Materials:

1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.

2. Extra Seats: Quantity equal to 5 percent of total installed, but not less than one of each type and width of seat, furnished from same production run as that installed.

1.03 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer certified in writing by the seating manufacturer to be qualified for installation of specified seating.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Deliver seats to project site in unopened containers clearly labeled with manufacturer's name and identification of contents.

B. Store seating units in dry and clean location until needed for installation. During installation, handle in a manner that will prevent marring and soiling of finished surfaces.

1.05 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

DRAFT

B. Correct defective Work for the minimum following periods, from the Date of Substantial Completion. Replace parts that fail under normal use at no extra charge to **<<Owner>>**.
   1. Structural components, including failure of standards, beams, or pedestals: 10 years.
   2. Operating mechanisms, including faulty self-rising seat mechanism: 5 years.
   3. Faulty electrical operation: 3 years.
   4. Deterioration of fabric, plastic/polymer, metals and metal finishes, and wood components, beyond normal wear or deterioration: 3 years.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Fixed Audience Seating:
   1. Ducharme Seating International, Inc.
   2. First Class Seating.
   3. Hussey Seating Company.
   4. Irwin Seating Company.
   5. Krueger International, Inc. (KI).
   6. Navetta Design.
   7. Preferred Seating Co., Inc.
   8. SERIES Seating, LLC.
   9. Sitmatic.
   10. Theatre Solutions, Inc.

B. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

C. Provide all fixed audience seating by one manufacturer.

2.02 MATERIALS

A. Sheet Steel: **<<ASTM A879/A879M>>**, Commercial Steel (CS) or Drawing Steel (DS) electrogalvanized sheet, 04Z (12G) coating class on both surfaces; chemically treated for baked enamel finish.

B. Steel Plates, Bars, and Tubes: **<<ASTM A36/A36M>>**.

C. Exposed Hardwood: Solid lumber selected for absence of visible defects; **<< birch; northern hard maple; white oak; or species standard with manufacturer>>**.

D. Laminated Plastic: **<<NEMA LD 3>>**, Type 1, Grade GP 50, nominal thickness **<< 0.050 in; or ___ in>>**; colors and patterns **<< as selected from manufacturer's standards; as scheduled; or _____>>**.

E. Polypropylene Sheet: Molded high density plastic with minimum tensile strength of **<< 3300 psi; or ____ psi>>**, integral color pigments, and textured, scuff-resistant surface finish.

F. Polyurethane Foam: Density not less than **<< 1.8 lb/cu ft; or ___ lb/cu ft>>**, fire retardant, non-hardening and non-oxidizing, with high resistance to alkalis, oils, moisture, and mildew.

G. Upholstery Fabric: **<<ASTM D3597>>** heavy-duty plain woven nylon fabric, treated to resist cigarette ignition and staining; color and pattern **<< as indicated; as selected from manufacturer's standards; or _____>>**.
   1. Fire Retardance of Upholstered Seating: Self-extinguishing when mock-up is exposed to smoldering cigarettes in accordance with **<<ASTM E1352>>** or **<<NFPA 261>>**.

DRAFT

2.03 UPHOLSTERED SEATING

A. General: Fixed seating system designed to permit radial installation using common middle support standards in each row and aisle standards aligned as indicated on drawings. Width of seats not less than **<< 21 inches; 22 inches; or __ inches>>**, except exit seat locations may be reduced to **<< 20 inches; 19 inches; or __ inches>>** to complete specific row dimensions.

1. Accessibility:
   a. Provide wheelchair-accessible spaces consisting of removable chairs in groups of two or three; provide a minimum of 6 wheelchair-accessible spaces. Include a designated companion seat at each wheelchair-accessible space.
   b. Provide accessible aisle seats at a minimum of 5 percent of aisle seats, with a foldup arm rest and sign with symbol of accessibility.

B. Performance Criteria:

1. Fire Retardance of Upholstered Seating: Self-extinguishing when mock-up is exposed to smoldering cigarettes in accordance with **<<ASTM E1352>>** or **<<NFPA 261>>**.
2. Strength and Durability: Comply with **<<BIFMA X5.4>>** standards for **<< seats; backs; armrests; standards; and _____>>**.

C. Support Standards: **<< Tubular steel; Sheet steel with formed edges and; or _____>>** with welded mounting points for backs, seats, and arm rests, and welded **<< floor; riser; beam; or _____>>** anchor plates.

1. Finish: Manufacturer's standard baked enamel/powder coat; black finish.

D. Backs: **<< Fixed; or Rocker>>** type; two-panel construction with fabric covering over padding and protective back panel, with installed height not less than **<< 29 inches; 32 inches; 35 inches; 37 inches; 42 inches; or __ inches>>** above finished floor.

1. Padding: Polyurethane foam not less than **<< 1 in; 1-1/4 in; 2 in; 3 in; or __ in>>** thick bonded to structural support.
2. Covering: Fabric bonded to padding and fastened by upholstery technique that facilitates replacement.
3. Outer Back: One-piece injection molded high-impact plastic, with scuff-resistant textured surface.

E. Seats: **<< Hinged; or Fixed>>** type, constructed to permit reupholstering without removing seat from chair.

1. Molded Plastic Construction: Molded one-piece plastic shell; polyurethane foam padding of minimum 3-inch thickness glued to plywood support; bottom seat surface of **<< hardwood face veneer; fabric matching seat upholstery over glued polyurethane foam; plastic laminate; or _____>>**. Upholster with fabric sewn into box construction without welts and securely fastened with concealed clips to provide smooth, wrinkle-free surface.

F. Hinges: Self-lubricating, noiseless steel hinges with brass alloy bearings or nylon bushings, equipped with **<< spring mechanism; gravity counterweight system; or _____>>** passing **<<ASTM F851>>** that causes unoccupied seat to rise automatically to **<< uniform 3/4 fold, with 100 percent fold when additional pressure is applied; or vertical position>>**.

G. Arm Rests: Locate at aisles and between chairs; mount to support standard with concealed fasteners; exposed surfaces **<< of solid hardwood lumber with smoothed edges; of molded high-impact plastic; of solid lumber or hardwood plywood covered with plastic laminate; upholstered over foam padding to match seats; or _____>>**.

H. End Panels: One piece panels fastened securely to aisle standards with concealed fasteners, configured as follows:

DRAFT

1. Shape: **<< Rectangular; Rectangular with curved bottom edge; Tapered; Custom design as indicated; or As selected from manufacturer's standard options>>**.
2. Finish: **<< Solid hardwood; Plastic laminate; Upholstered over thin foam padding with fabric to match chairs; or _____>>**; color as selected from manufacturer's standard range.

2.04 ACCESSORIES

A. Folding Tablet Arms: At standard to right side of each seat, provide manufacturer's standard fold-away tablet arm assembly, with hinge and swivel mechanism securely fastened to underside of writing surface and designed to provide solid support in the open position and semi-automatic return to stowed position beneath right arm rest and parallel to right standard.
   1. Finish: **<< Plastic laminate both sides; Hardwood plywood veneer; ABS plastic; or _____>>**, with smooth, rounded edges.
   2. Size: Writing surface not less than **<< 100 sq inches; 120 sq inches; 150 sq inches; or ___ sq inches>>**.

B. Seat and Aisle Numbers: Manufacturer's standard seat numbers securely fastened to **<< front edge of folding seats; top center of chair backs; or _____>>** and row numbers securely fastened to aisle arm rests; **<< anodized aluminum; bronze; or _____>>** finish, with letters and numbers countersunk and filled with black paint; **<< recessed; surface; or _____>>** mounting.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates for conditions detrimental to installation of fixed audience seating. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Comply with manufacturer's installation instructions and approved shop drawings.

B. Anchor support standards securely to substrate with at least two anchoring devices recommended by manufacturer.
   1. Place standards in each row laterally so the standards at the aisle will be in alignment.
   2. Vary width of seats and backs as required to optimize sightlines, and comply with the **<<ADA Standards>>** for row and aisle widths.
   3. In curved rows, install standards to form smooth radius, without breaks or angled chords
   4. Attach components to standards with sufficient flexibility to compensate for convergence of seats toward the center.

3.03 ADJUSTING

A. Adjust seat mechanisms to ensure that seats in each row are aligned when unoccupied.

B. Repair minor abrasions and imperfections in painted finishes with a coating that matches factory-applied finish; replace units that cannot be repaired to unblemished appearance.

END OF SECTION 126100

DRAFT

SECTION 126600
TELESCOPING STANDS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ADA Standards - 2010 ADA Standards for Accessible Design.

B. AWS D1.1/D1.1M - Structural Welding Code - Steel.

C. AWS D1.3/D1.3M - Structural Welding Code - Sheet Steel.

D. ICC 300 - Standard for Bleachers, Folding and Telescopic Seating and Grandstands.

E. NFPA 102 - Standard for Grandstands, Folding and Telescopic Seating, Tents, and Membrane Structures.

F. PS 1 - Structural Plywood.

1.02 SUBMITTALS

A. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Preparation instructions and recommendations.
   2. Storage handling and requirements.
   3. Installation methods.

B. Shop Drawings: Complete layout with dimensions, seat heights, row spacing and rise, aisle widths and locations, points of connection to substrate, assembly dimensions, and material types and finishes.
   1. Provide drawings customized to this project.
   2. Delegated Design: Include **<< Professional Engineer certification; Professional Engineer's seal on each sheet; or _____>>** and engineering analysis data.
   3. Wiring Diagrams: Show locations of motors, electrical wiring, and rough-in connections.

C. Selection Samples: Provide manufacturer's color charts indicating full range of available colors.

D. Verification Samples: Physical samples, manufacturer's standard size, for each selected color.

E. Operation and Maintenance Data: Manufacturer's operation and maintenance instructions, including annual inspection and maintenance and bi-annual inspection by a Professional Engineer or manufacturer factory service personnel.

F. Warranty: Submit manufacturer warranty and ensure that forms have been completed in **<<Owner>>**'s name and registered with manufacturer.

1.03 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than **<< three; or _____>>** years of**<< None - N/A; or documented>>** experience.

B. Installer Qualifications: **<< Manufacturer's installation crew; Approved by manufacturer; or _____>>**.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Store, in original packaging, under cover and elevated above grade.

DRAFT

1.05 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Correct defective Work within a **<< five; or ____>>** year period after Date of Substantial Completion. Replace parts that fail under normal use at no extra charge to **<<Owner>>**.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Telescoping Bleachers:
   1. Interkal LLC.
   2. Irwin Telescopic Seating Company.
   3. Hussey Seating Company.

2.02 TELESCOPING BLEACHERS

A. Telescoping Bleachers: Factory assembled tiered benches that retract horizontally into depth approximately the same as a single row depth, with fixed seats mounted on leading edge of platforms.
   1. General: Telescoping bleachers shall be designed, fabricated, and installed in accordance with **<<ICC 300>>**.
   2. Delegated Design: Provide telescoping stands certified by a licensed Professional Engineer for the performance and design requirements indicated.
   3. Design to comply with applicable requirements of **<<NFPA 102>>** and requirements of code authorities having jurisdiction; where conflicts between requirements occur, comply with whichever is more stringent.
   4. Design with solid fascia (riser) or seat fronts that conceal interior mechanisms when fully retracted, fitting tightly enough to prevent climbing up face; at front row provide key locked, hinged fascia (skirt) to cover gap between seat riser/fascia and floor.
   5. Standard Extension: Top row fixed to floor, adjacent to wall**<< None - N/A; or under overhang>>**, forward extension (away from wall); **<< attachment to wall acceptable; or attachment to wall prohibited>>**.
   6. Configurations: As indicated on drawings.
   7. Wheelchair Spaces: Allow **<< entire first row; or portions of first row, as indicated,>>** to be manually retracted without affecting other rows; provide removable railings at row two behind wheelchair spaces in compliance with **<<ADA Standards>>**.
   8. Operation: **<< Manual; Motor operated; or Some manual and some motor operated>>**.

B. Design Loads: Design to withstand the following loading conditions:
   1. Live Load on Structural Supports: **<< 100 psf; or ___ psf>>**, minimum, of gross horizontal projection.
   2. Live Load on Seats and Walking Surfaces: **<< 120 pounds per linear foot; or ___ pounds per linear foot>>**.
   3. Lateral Sway Stress on Structural Supports: **<< 24 pounds per linear foot; or ___ pounds per linear foot>>** of seat plank.
   4. Perpendicular Sway Stress on Structural Supports: **<< 10 pounds per linear foot; or ___ pounds per linear foot>>** of seat plank.

C. Dimensions:
   1. Rows: **<< __>>**.

DRAFT

2. Rise Per Row: **<< 10 inches; 12 inches; or __ inches>>** nominal.
3. Row Depth: **<< 22 inches; 24 inches; 26 inches; or __ inches>>**.
4. Seat Height Above Tread: **<< 6 inches; 5 inches; or __ inches>>**.

D. Structural Supports: Steel or aluminum; manufacturer's standard wheeled carriages supporting each tier separately, with moving parts permanently lubricated and metal parts cushioned to prevent metal-to-metal contact during operation.
1. Design so that each row carriage so that it will individually support the design loads and is self supporting when fully assembled without dependence on platform panels or boards, seats, or fascia.
2. Welding: In accordance with **<<AWS D1.1/D1.1M>>** and **<<AWS D1.3/D1.3M>>**.
3. Bolting: Use lock-washers or locknuts.
4. Wheels: Minimum **<< 5 inch; 6 inch; or ____ inch>>** diameter by **<< 1-1/8 inch; 1 inch; 1-1/4 inch; or ___ inch>>** wide, with non-marring rubber tires; ball, roller, or oil-impregnated metal bearings; minimum of 2 wheels at each floor support.
5. Finish: Manufacturer's standard black enamel or powder coating.
6. Row Locking: Automatically mechanically lock each carriage to adjacent carriages when fully extended.
7. Unlocking**<< (Motor); or None - N/A>>**: Automatically unlock all rows before engaging retraction mechanism.

E. Motor Operation: **<< Manufacturer's standard drive mechanism; Traction wheels, with non-marring rubber covering; Chain-drive mechanism not using traction; or _____>>**, using motor adequately sized for the purpose.
1. Provide UL listed electrical components and wiring.
2. Controls: Start, Stop, Forward, and Reverse in a single control unit.
3. Control Station: Removable plug-in low-voltage pendant station, with first-row plug-in location for each motor.
4. Limit Switches: Automatically stop operation when unit has reached fully open or fully closed position.
5. Provide all wiring internal to bleacher units, to junction box located **<< where indicated; on back wall; or under first row>>**; ensure that wiring is not energized except during operation.
6. Electrical Characteristics: **<< 120V, single phase; 208/230V, 5 wire, 3-phase; or _____ >>**, **<< 60; or __>>** Hz.
7. Provide access to motor from front side of bleachers; a hinged front skirt or hinged section at least **<< 30 inches; or ____ inches>>** wide is acceptable.

2.03 SEAT AND PLATFORM COMPONENTS

A. Seat/Fascia Assembly: Continuous, molded UV-stabilized high-density polyethylene plastic, seat minimum **<< 1 inch; or __ inch>>** thick, textured finish, homogeneous color throughout, **<< color as selected from manufacturer's standard selection; or _____>>**; approximately **<< 18 inch; or ___ inch>>** long sections independently removable with tongue-and-groove or rabbeted interlock at end joints.
1. Shape: Ergonomically contoured, with internal ribs spaced for natural flexibility; rear edge cantilevered to provide toe room of not less than **<< 3 inches; or ____ inches>>**; no openings to trap debris.
2. Provide end caps of same material and finish on each exposed end.
3. Supports: Internal steel reinforcement of each seat segment bolted to platform nose member; minimum two bolts per segment.

DRAFT

B. Platform, Tread, and Step Structure: Plywood continuously supported on front and rear with side joints tongue-and-grooved.
   1. Plywood: **<<PS 1>>**, 5-ply southern pine or douglas fir, Grade **<< A-C; B-C; or ____>>**.
   2. Plywood Thickness: **<< 5/8 inch; 3/4 inch; or __ inch>>**, minimum.
   3. Front (Nose), Rear, and Intermediate Supports: Steel channel or tube, hot-dipped galvanized.
   4. Provide end caps of same material and finish on each exposed end.
   5. Finish: Polyethylene-overlay, bonded to plywood substrate with exterior glue; textured surface; color as selected from manufacturer's standard selection.
   6. At bottom of aisles provide step in front of first riser, hinged to first platform to fold for storage.

2.04 HANDRAILS AND RAILINGS

A. Provide the following railings:
   1. Aisle Handrails: **<< Single post folding; or Removable one- or two-post>>** railing segment mounted **<< in center; or at side>>** of aisle at every other row.
   2. End of Row Guardrails: **<< Self-storing; or Removable>>**, at open ends of sections beginning at row 2.
   3. Height: **<< 42 inches; or __ inches>>** above adjacent platform or tread.

B. Design handrails and railings to withstand the following loads:
   1. Concentrated Load on Handrails: **<< 200 pounds; or ___ pounds>>** in any direction.
   2. Concentrated Load on Guardrails: **<< 200 pounds; or ___ pounds>>** in any direction along top rail.
   3. Live Load on Handrails: **<< 50 pounds per linear foot; 100 pounds per linear foot; or ___ pounds per linear foot>>**, applied **<< in any direction; horizontally along top rail; or vertically along top rail>>**.
   4. Live Load on Guardrails:
      a. Horizontal: **<< 50 pounds per linear foot; or ___ pounds per linear foot>>**, applied at the guardrail height.
      b. Vertical: **<< 100 pounds per linear foot; or ___ pounds per linear foot>>**,**<< None - N/A; or simultaneously>>** applied vertically to top of guardrail.

C. Railing Construction: Round **<< steel or aluminum; steel; or aluminum>>** pipe or tube, with formed elbows at corners and caps at ends of straight runs.
   1. Aluminum: **<< 1.66 inches; or __ inches>>** minimum outside diameter; **<< natural anodized finish; textured powder coat epoxy finish; or _____>>**.
   2. Steel: **<< 1-1/2 inch; or ___ inch>>** minimum outside diameter, with **<< 11 gauge, 0.12 inch; or ___ gauge, _____ inch>>** minimum wall thickness; **<< textured powder coat epoxy finish; or _____>>**.

2.05 ACCESSORIES

A. Fillers and Closures:
   1. Top Row: Provide seat level rear filler panels to close openings between top row seat and wall; finish to match platforms.
   2. Sides of Extended Units: Vinyl curtains.
   3. Vinyl Curtains: **<< 18 ounce; or __ ounce>>** vinyl with grommets; **<< color as selected from manufacturer's standard palette; or _____>>**.

DRAFT

B. Fasteners: Provide hardware and fasteners in accordance with manufacturer's recommendations.

C. Anchorage: As indicated on drawings; provide hardware in accordance with manufacturer's recommendations.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are consistent with those on the shop drawings.

B. Verify that electrical rough-ins have been installed and are accessible.

C. Do not begin installation until substrates have been properly prepared and area has been cleared of obstructions.

D. If substrate preparation is the responsibility of another installer, notify **<<Architect>>** of unsatisfactory preparation before proceeding.

3.02 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.03 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Do not field cut or alter seats, fascia, or structural members without approval.

C. Provide manufacturer's field representative to inspect completed installation.

3.04 ADJUSTING

A. Lubricate, test, and adjust each moving assembly to ensure proper operation in compliance with manufacturer's recommendations.

3.05 CLEANING

A. Clean exposed and semi-exposed assembly surfaces.

B. Touch up finishes on damaged or soiled areas.

3.06 CLOSEOUT ACTIVITIES

A. Demonstration and Training: Provide manufacturer's field representative to demonstrate to and train **<<Owner>>**'s operating personnel in proper operation of equipment.

1. Location: On site using installed equipment.

3.07 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair, or replace damaged products before Date of Substantial Completion.

END OF SECTION 126600

DRAFT

SECTION 133416
GRANDSTANDS AND PRESS BOX

PART 1 GENERAL

1.01 DEFINITIONS

A. Grandstand: Elevated, permanent, tiered stand of benches to provide seating at a sports ground.

B. Press Box: A restricted facility located at a sporting venue to observe and announce events.

1.02 REFERENCE STANDARDS

A. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials.

B. AAMA 611 - Specification for Anodized Architectural Aluminum.

C. AAMA 2603 - Voluntary Specification, Performance Requirements and Test Procedures for Pigmented Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix).

D. ADA Standards - 2010 ADA Standards for Accessible Design.

E. AISC (MAN) - Steel Construction Manual.

F. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.

G. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

H. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength.

I. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.

J. ASTM A529/A529M - Standard Specification for High-Strength Carbon-Manganese Steel of Structural Quality.

K. ASTM A572/A572M - Standard Specification for High-Strength Low-Alloy Columbium-Vanadium Structural Steel.

L. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.

M. AWS D1.1/D1.1M - Structural Welding Code - Steel.

N. AWS D1.2/D1.2M - Structural Welding Code - Aluminum.

O. NAAMM AMP 500-06 - Metal Finishes Manual.

P. NFPA 70 - National Electrical Code.

Q. SSPC-Paint 20 - Zinc-Rich Coating (Type I - Inorganic, and Type II - Organic).

1.03 PERFORMANCE REQUIREMENTS

A. Delegated Design: Design grandstands and press boxes, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

B. Structural Performance Characteristics: Engineer, fabricate, and install grandstands and press box capable of withstanding the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:

DRAFT

1. Wind Loads: Determine loads based on the following minimum design wind pressures:
   a. Uniform pressure as required by local authorities having jurisdiction.
2. Snow Loads: As required by local authorities having jurisdiction.
3. Live Loads: 100 psf gross horizontal area.
4. Perpendicular Sway Load: 10lbs/lineal ft of seat plank.
5. Lateral Sway Load: 24lbs/lineal ft of seat plank.
6. Live Load for Seat and Tread Planks: 120lbs/lineal ft to seats and footboards.
7. Top Rails of Guardrails:
   a. Uniform load of 50lbf/ ft. applied in any direction.
   b. Concentrated load of 200lbf applied in any direction.
   c. Uniform and concentrated loads need not be assumed to act concurrently.
8. Infill of Guardrails:
   a. Concentrated load of 50lbf applied horizontally on an area of 1 sq. ft.
   b. Infill load and other loads need not be assumed to act concurrently.

C. Thermal Movements: Provide grandstands that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
   1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

D. Detailing, fabrication, and installation of grandstands shall be in accordance with **<<AISC (MAN)>>** for steel and Aluminum Association's Specifications for Aluminum Structures.

E. Shop Connections: Welded and capable of carrying stress put upon them.

F. Welding: Comply with AWS Standards.

1.04 SUBMITTALS

A. Product Data: For each grandstand and press box component. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
   1. Submit manufacturer's product specifications and installation instructions for each type of grandstand, press box and accessory indicated or required.

B. Shop Drawings: Prepared by or under the supervision of a qualified professional engineer detailing fabrication and assembly of grandstands and press box, as well as procedures and diagrams. Submit shop drawings indicating layout of grandstand seating systems coordinated with field measurements and including seat heights, row spacing and rise, aisle widths and locations, overall dimensions, connections and relationship to adjoining work, accessories, types of materials and finishes.
   1. For installed products indicated to comply with design loads, include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
   2. Surveyor, at the expense of contractor, shall verify existing conditions prior to submittal drawings. Survey shall be submitted as part of submittal process.
   3. Statement of Compliance: On every sheet of submittal drawings, the following statement shall be executed and dated by the authorized agent of the contractor responsible for such work – “This is to certify that all specification requirements have been met and all dimensions, conditions and quantities are verified as shown and / or corrected on these submittal drawings”.

DRAFT

C. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

D. Sustainable Design Submittals: Refer to Division 1 Section “Sustainable Design Requirements”.

E. Welding certificates.

F. Manufacturer Certificates: Signed by manufacturers certifying that they comply with requirements.

G. Qualification Data: For Installer.

H. Field Quality-Control Report: Indicate compliance of installed grandstand and press box and components with requirements.

1.05 CLOSEOUT SUBMITTALS

A. Maintenance Data: For each product to include in maintenance manuals.

B. Warranties: Special warranties specified in this Section.

1.06 QUALITY ASSURANCE

A. Manufacturer Qualifications: Engage a firm experienced in manufacturing grandstand structures similar in size and scope to those indicated for this Project and with an established record of successful-in-service performance.

1. Manufacturer’s responsibilities include providing professional engineering services for designing grandstands and press box to comply with performance requirements.

B. Installer Qualifications: Engage an experienced Installer to perform the work of this Section who has specialized in installing types of grandstands similar to those required for this Project and who is acceptable to, or certified by, manufacturer of grandstands.

C. Professional Engineer Qualifications: A professional engineer who is legally authorized to practice in the state where the Project is located, and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of grandstands and press boxes that are similar to that indicated for this Project in material, design, and extent.

D. Source Limitations: Obtain grandstands and press box through one source from a single manufacturer.

E. Product Options: Drawings indicate size, profiles, and dimensional requirements of grandstands and press boxes and are based on the specific system indicated. Refer to Division 1 for product requirements.

1. Do not modify intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.

F. Welding: Qualify procedures and personnel according to **<<AWS D1.1/D1.1M>>** and **<<AWS D1.2/D1.2M>>**.

G. Regulatory Requirements: In addition to local governing regulations, comply with applicable provisions in the applicable statewide building code.

1. Comply with statewide regulations pertaining to industrialized, manufactured, or modular buildings, including completion of third-party inspections at the manufacturing facility. Arrange and provide for all necessary inspections and certifications as required to obtain a state registration seal or certificate, as applicable, indicating that structure is approved for Owner occupancy.

DRAFT

H. Accessibility Requirements: In addition to local governing regulations, comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's **<<ADA Standards>>**.

I. Electrical Components, Devices, and Accessories: Listed and labeled as defined in **<<NFPA 70>>**, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

J. Safety Glass: Category II materials complying with testing requirements in **<<16 CFR 1201>>**.

K. Pre-Installation Conference: Conduct conference a minimum of 2 weeks before start of installation at Project site.

1.07 PROJECT CONDITIONS

A. Field Measurements: Control points and elevations shall be established by the project surveyor. Dimensions and measurements shall be shown on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.08 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of grandstand that fail in materials or workmanship within the specified warranty period. Failures include, but are not limited to, the following:
   1. Structural failures including, but not limited to, excessive deflection.
   2. Failure of system to meet performance requirements.
   3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
   4. Warranty Period: One year from date of Substantial Completion.

B. Warranty Period for Metal Finishes: Five years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with all requirements of the Contract Documents, provide products by one of the following:
   1. Southern Bleacher Company.
   2. Dant-Clayton Corporation.
   3. Outdoor Aluminum, Inc.
   4. Sturdisteel.

B. Submission of bid is indication that ALL parts / products of the specification shall be provided.

C. Other manufacturers seeking to be approved must submit product literature, list of similar jobs, and product samples ten days prior to bid date that matches the specified product for review and acceptance by the Architect. Architect shall provide written acceptance of additional approved manufacturers through addendum. No substitutions shall be considered after the bid.

2.02 PERMANENT GRANDSTANDS

A. Materials:
   1. Steel: **<<ASTM A36/A36M>>**.
   2. Aluminum: Extruded alloy 6063-T6.
   3. Foundation Concrete: Minimum compressive strength of 3000 psi at 28 days.
   4. Accessories:

DRAFT

a. Steel Connections: **<<ASTM A307>>**, galvanized.
b. Aluminum Components: **<<ASTM A307>>**, cadmium plated.
c. Hold-Down Clip Assembly and End Caps: Aluminum Alloy 6063-T6.

B. Steel Members:
1. Stringers: 6 feet o.c.
2. Columns: Spaced at 6 feet o.c. longitudinal.
3. Cross Braces: Steel angles or rod bracing, as standard with manufacturer.

C. Guardrail System: Provide guardrails at all sides of grandstands, entry stairs, ramps, and landings. Provide also at press box rooftop observation deck.
1. Material: Anodized aluminum pipe, with end plugs at ends of straight runs and elbows at corners. Secure to angle rail risers with galvanized fasteners.
2. Top Railing: 42 inches above walkways, entrances, and above center of any adjacent seat.
3. Chain Link Infill on Side and Back: 6 gage black vinyl coated, galvanized fabric fastened in place with galvanized fittings and aluminum ties.

D. Seating: Aluminum Seat Boards: Nominal 2 inches by 10 inches, extruded aluminum with minimum wall thickness of 0.094 inches. Matching aluminum end caps shall be furnished at aisles and ends of grandstand. All steel surfaces in contact with aluminum seats shall be treated to prevent electrolytic action. Seat boards shall be secured to their steel supports by means of extruded aluminum clips and 5/16-inch-diameter bolts. All splices shall occur at steel supports. Splices in other locations will not be permitted.

E. Aluminum Footboards: Size per component requirements, non-slip aluminum planks made of 6063-T6 aluminum alloys with minimum wall thickness of 0.094 inches. Footboards shall be secured to their steel supports by means of extruded aluminum clips and 5/16-inch-diameter bolts. All splices shall occur at steel supports. Splices in other locations will not be permitted.
1. Provide tread system comprised of aluminum extrusions which fit together length-wise in a male-female shape running length of planks. This tongue and groove mechanism shall minimize deflection and not separate due to loads being applied to individual planks. The locking mechanism by design shall allow for expansion and contraction of individual planks without effecting performance of the system.
2. The system shall cause the deck planks to react together at all treads and cross walks to live load and form the appearance of a single tread system. By design, this system forms a solid, overlapping tread and riser installation.
3. The nose extrusion shall allow for a 1 inch extruded aluminum contrasting nose piece to be flush mounted on the leading edge and shall capture the vertical riser plank in an extruded pocket. The heel extrusion shall have a .70 inch vertical lip at the rear of the plank to allow for placement of vertical riser plank.
4. These extrusions shall be such that the attachment of the seat brackets, step brackets, mid-aisle rails and all other components is accomplished without deck penetrations. Through bolting or drilling of the aluminum tread / riser system is not permitted.
5. The system shall allow for seat and aisle reconfiguration at any time without evidence of its previous configuration.
6. Entry stairs to be 2 x 12 mill finish aluminum with inset extrusion to accept contrasting nosing member.
7. Ramp planks to be interlocking to resist deflection of live loads.
8. Open ends of planks to be covered with anodized aluminum end caps, securely fastened to the plank.

DRAFT

9. Joint sleeves: Dual joint sleeves to be inserted at each butt joint of each load bearing aluminum plank, and to penetrate 6 inches into each plank at the joint. Joint sleeves are not required at secondary gutter locations.

F. Aluminum Risers: Aluminum planks made of 6063-T6 aluminum alloys with minimum wall thickness of 0.094 inches. Provide continuous aluminum riser closures between all footboards. Through bolting or drilling of the riser board is unacceptable.

G. Stairs: 2-by-12 inch aluminum treads with maximum 7-inch rise.

H. Hardware: Provide tamperproof and galvanized connections for seat boards, guardrails, and guardrail pipe. Footboard connections shall be made with galvanized fasteners.

I. Concrete Footings: Provide 3000 psi compressive strength concrete.

J. Concrete slabs for exits shall provide sufficient bearing area at bottom to support structural loads. Depth and design of slab shall be determined by manufacturer's engineer. Concrete shall attain working strength of 3,000 psi.

K. Understructure: Manufacturer's standard hot-dipped galvanized steel. Aluminum is unacceptable. Painted steel is unacceptable.

L. Finishes:
1. Steel: Hot-dipped galvanized after fabrication in accordance with **<<ASTM A123/A123M>>**.
2. Aluminum:
a. Aluminum Footboards: Mill finish.
b. Riser Boards: Dur-Kyn Kynar paint system.

M. Component Requirements:
1. Grandstands and Press Box: Provide **<< two (2) permanent grandstand seating systems, on home and away sides of football field, with one (1) press box on home side; two (2) permanent grandstand seating systems, at baseball field and softball field, with press box at each field; multiple grandstand seating systems and press boxes, at locations and configurations indicated on Drawings; or _____>>**.
******Verify layouts required with specific project requirements, or defer to Drawings as applicable******
a. Layout, Configuration, and Dimensions: Provide as indicated on Drawings.
b. Footboard Decking System: Tongue and Groove.
c. Riser Height: 13 inches. Aisle stairs shall have intermediate steps at 6.5 inches.
d. Tread Depth: 33 inches.
e. Seating: **<< Individual, molded UV-stabilized high-density polyethylene chairs with backrest, fold-down seat, and separating armrests on each side.; or Aluminum seat boards; 2 inches thick and 10 inches wide minimum.>>**
f. Guardrail System: Provide guardrail along front, back and sides of seating, around handicapped seating, and at all exits, ramps and stairs: Two aluminum rails with 6 gauge black vinyl coated chain link fence, 42 inches high (minimum).
1) Provide manufacturer's standard handrail assembly, minimum 34 inches high, centered in middle of each aisle stairway.
g. Handicapped Seating: As indicated on drawings.
h. Number of Handicapped Ramps: One at each grandstand.

2.03 PRESS BOXES

A. Product Description: Type II Construction.

DRAFT

1. Press Box Support Structure: Press box shall be anchored with structural mechanism to support all engineered loads as determined by manufacturer's engineer.
2. Press Box Dimensions: Nominal dimensions **<< 8 feet wide by 18 feet long; 8 feet wide by 30 feet long; as indicated on Drawings; or _____>>**.
3. Press Box to be constructed in accordance with approved shop drawings.

B. Materials/Finishes
1. Press Box Support Structure:
   a. Structural shapes meet one of the following ASTM specifications: **<<ASTM A36/A36M>>**, ASTM A36/A572 grade 50, **<<ASTM A572/A572M>>** grade 50, **<<ASTM A529/A529M>>** grade 50, or **<<ASTM A500/A500M>>** grade B.
   b. Shop connections are seal welds.
   c. After fabrication, all steel is hot-dipped galvanized to **<<ASTM A123/A123M>>** specifications.
2. Press Box: All materials shall be new and shall comply with ASTM specifications.
   a. Floor
      1) Main support to be a galvanized steel floor frame sized to support structure and metal belly pan for support of insulation.
      2) Floor to be interlocking Aluminum Decking System, extruded aluminum alloy 6063-T6, mill finish. Attach Decking System to steel floor frame with mechanical fasteners at plank ends and intermediate supports. (Standard extrusions that do not connect are not acceptable.)
      3) Insulation: Kraft faced fiberglass building insulation R-11, 3 1/2 inches thick. Batt or roll per manufacturer standard.
   b. Wall Structure
      1) 4 inch x 4 inch x 11 gauge square tubing with maximum span of 14 feet on front wall and maximum span of 6 feet on back wall and 4 inch x 2 1/2 inch x 14 gauge steel "cees" with maximum spacing of 5 feet for all walls with siding. Spans greater than these require engineered calculations for design.
      2) Insulation: Kraft-faced fiberglass building insulation R-11, 3 1/2 inches thick. Batt or roll per manufacturer standard.
      3) Front Wall: Sloped as shown on drawings. Wall shall be engineered to provide for minimum supports / maximum glass coverage.
      4) Side Wall: Sloped as shown on drawings. Wall shall be engineered to provide side windows for maximum glass coverage and exit door.
      5) Interior Finish
         (a) 1/2-inch vinyl coated gypsum panels.
         (b) Cove Base: Vinyl, 4 inches x .080-thickness.
      6) Exterior Finish
         (a) 6 gauge pre-finished R-Panel paneling. Color as selected by Architect from manufacturer's standard range.
         (b) Wall panels are attached with #12 TEK screws - 6" O.C. at the top and bottom of the panels.
         (c) Lap screws are placed at panel ends, at the intermediate supports, and at the mid point between supports (TEK #14).
         (d) All fasteners to be painted same color as exterior paneling.
   c. Roof Structure

DRAFT

1) 4 inch x 4 inch x 11 gauge square tubing with maximum spacing of 6 feet on center and 4 inches x 2 1/2 inches x 14 gauge steel "cees" with maximum spacing of 2 feet on center.
2) Roof: 1/8 inch four-way steel plate roof, continuous welded seams coated with acrylic metal primer and minimum 36 mils of acrylic roof coating. Plate is welded on both sides of rafters with 1-1/2 inch long 1/8-inch fillet welds on 12-inch centers.
3) Insulation: Kraft faced fiberglass building insulation, R-19 (minimum) 6 inches thick. Batt or roll per manufacturer standard.
4) Cornice: 26-gauge steel pre-finished to match metal siding.
5) Ceiling: 24 inch x 24 inch x 5/8 inch fissured-type acoustical ceiling tile with grid main tee, cross tee, wall angle, wind clips and other components as required.
6) Provide aluminum pipe and chain-link fence fabric guardrail assembly as specified at Observation Deck.

d. Exterior Doors:
1) Full flush steel construction with honeycomb core. 18 gauge skin sheets. Dimensions: 3 feet 0 inches x 6 feet 8 inches. Color: White.
2) Steel doorframe (16 gauge) complete with 1/2-inch threshold and weather-stripping.
3) Exterior Hardware: Handles shall be lever- type that allows operation without tight grasping or twisting of the wrist. Keyed alike locks.
4) Interior Hardware: Exit Device. Handle shall be panic bar that allows for opening without any grasping, twisting or turning.

e. Interior Doors:
1) Interior Birch Unit. Dimensions: 3 feet 0 inches x 6 feet 8 inches.
2) Hardware: Handles shall be lever type that allows operation without tight grasping or twisting of the wrist.

f. Interior Walls:
1) Framing to be steel galvanized studs (25 gauge) 1 1/4 inch x 3 5/8 inch at maximum 2 feet on center.
2) Finishes to be consistent with all other interior finishes.
3) Fixed glass windows (2’0” by 4’8”) shall be located at front of interior walls above counter to allow for better viewing.

g. Exterior Windows:
1) Frame: Extruded aluminum single hung, vertical sliding unit, thermally-broken.
2) Sash: Tilt toward inside for easy cleaning.
3) Glazing: Clear tempered panes.
4) Dimensions of each unit: Dependent on compartment size. At interior wall locations or structural support locations the dimension between windows shall be no greater than 6 inches.
5) Finish: Electro-statically applied acrylic enamel.

h. Work Bench:
1) 18-inch-wide workbench constructed of 4 inch x 2 1/2 inch x 14 gauge steel, and 3/4" wood. Countertop heights shall be constructed to allow wheelchair usage at all locations.
2) Plastic laminate top: Thickness: 0.50 (12 mm nominal). Color selected from manufacturer's standard range.

DRAFT

3) Glue: Manufacturer's **<< standard; or low-emitting>>** contact adhesive.

i. Painting:
   1) Surfaces: Exterior Doors, Door Frames
      (a) Primer: Applied by Door Manufacturer.
      (b) Finish: 2 coats acrylic latex semi-gloss enamel applied by press box manufacturer.
   2) Surfaces: Interior Doors
      (a) Primer: Interior Exterior Oil Primer, or equal.
      (b) Finish: 2 coats acrylic latex semi-gloss enamel.
   3) Surfaces: Exterior Siding
      (a) Primer: Applied by Siding Manufacturer.
      (b) Finish: Applied by Siding Manufacturer.
      (c) Touchup: If applicable.

j. Surfaces: Wall and Roof Structure
   1) Primer: DTM Industrial acrylic metal primer applied after welding, or equal.

k. Caulking: Exterior-grade polyurethane sealant, all temperature, UV resistant. Silicone products are not acceptable.

l. Electrical
   1) Submittal drawing shall indicate devices and circuitry.
   2) Fixtures: 2-lamp, 28-watt T5 fluorescent, recessed mount design. Locate fixtures above countertop and maximize to full length of compartment space.
   3) Wiring to be run in rigid metal conduit or equal. N.E.C. breaker box to be 100-amp flush mounted on rear wall with 1-1/4-inch rigid conduit to be stubbed out bottom of press box ready for service line to be connected. (Service line to Press Box is responsibility of Owner).
   4) Electrical outlets installed per NEC shall be standard duty. All outlets shall be flush mounted on wall.
   5) Sound, Telephone, Clock, Field Communication: Empty double outlet boxes per N.E.C. with 3/4-inch conduit stubbed out bottom of Press Box for use of Owner. Outlet boxes to be flush mounted into wall. Any wiring completed on-site shall be responsibility of such contractor for inspections. Quantity. Two shall be provided. Owner shall indicate additional boxes needed.
   6) Observation Deck: Weather-tight outlet box for cameras. Quantity: Two. Owner shall indicate additional outlets needed.
   7) Baseboard heaters: 1,500-watt heaters as shown on Drawings, including circuitry to panelboards.

2.04 FINISHES, GENERAL

A. Comply with **<<NAAMM AMP 500-06>>** for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved samples and are assembled or installed to minimize contrast.

DRAFT

2.05 ALUMINUM FINISHES

A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.

B. Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: non-specular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with **<<AAMA 611>>**.

C. Aluminum Painted Finish:

1. All painted aluminum shall have factory applied, baked-on Kynar or Hylar/acrylic resin based paint coating, Dur-Kyn, as manufactured by the Val spar Corporation. Dur-Kyn meets or exceeds the physical and performance properties of **<<AAMA 2603>>**. Powder coated finishes are not considered equal to Kynar type finishes.
2. Color: As selected by Architect from manufacturer's full range.

2.06 GALVANIZED STEEL FINISHES

A. Surface Preparation: Clean surfaces with non-petroleum solvent so surfaces are free of oil and other contaminants. After cleaning, apply a conversion coating suited to the organic coating to be applied over it. Clean welds, mechanical connections, and abraded areas, and apply galvanizing repair paint specified below to comply with **<<ASTM A780/A780M>>**.

1. Galvanizing Repair Paint: High-zinc-dust-content paint for re-galvanizing welds in steel, complying with **<<SSPC-Paint 20>>**.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for, installation tolerances, and other conditions affecting performance of work.

B. Verify with Owner's testing company that foundation bearing conditions are in accordance with assumptions made in design calculations and Shop Drawings.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 ERECTION

A. Install pre-engineered grandstands and press boxes in accordance with manufacturer's instructions and final Shop Drawings. Provide accessories indicated or required and anchors, inserts and other items required for installation of units and attachment of adjoining construction.

B. Set press box plumb and aligned. Level base plates true to plane.

C. Connect electrical power service to power distribution system according to requirements specified in Division 26.

3.03 FIELD QUALITY CONTROL

A. Arrange for grandstands and press box manufacturer's technical personnel to inspect grandstands and press box and components during installation and at final completion and to certify compliance with requirements.

1. Notify Architect 48 hours in advance of date and time of final inspection.

B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

C. Tests and Inspections:

DRAFT

1. Installation: Installation shall be inspected for compliance with approved shop drawings and for safety prior to use.

3.04 ADJUSTING AND CLEANING

A. Adjust doors, operable windows, and hardware to operate smoothly, easily, properly, and without binding. Confirm that locks engage accurately and securely without forcing or binding.

B. Lubricate hardware and other moving parts.

C. Clean installed grandstand and press box units on exposed and semi-exposed surfaces. Touch-up shop applied finishes to restore damaged or soiled areas.

END OF SECTION 133416

DRAFT

SECTION 133416.53
BLEACHERS

PART 1 GENERAL

1.01 DEFINITIONS

A. Bleacher: Non-elevated, portable, tiered stand of benches to provide seating at a sports ground.

1.02 REFERENCE STANDARDS

A. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials.

B. AAMA 611 - Specification for Anodized Architectural Aluminum.

C. AAMA 2603 - Voluntary Specification, Performance Requirements and Test Procedures for Pigmented Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix).

D. ADA Standards - 2010 ADA Standards for Accessible Design.

E. AISC (MAN) - Steel Construction Manual.

F. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.

G. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

H. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength.

I. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.

J. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

K. AWS D1.1/D1.1M - Structural Welding Code - Steel.

L. AWS D1.2/D1.2M - Structural Welding Code - Aluminum.

M. NAAMM AMP 500-06 - Metal Finishes Manual.

N. NFPA 70 - National Electrical Code.

O. SSPC-Paint 20 - Zinc-Rich Coating (Type I - Inorganic, and Type II - Organic).

DRAFT

1.03 PERFORMANCE REQUIREMENTS

A. Delegated Design: Design bleachers, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

B. Structural Performance Characteristics: Engineer, fabricate, and install bleachers capable of withstanding the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:

1. Wind Loads: Determine loads based on the following minimum design wind pressures:
   a. Uniform pressure as required by local authorities having jurisdiction and as indicated on Structural drawings.
2. Snow Loads: As required by local authorities having jurisdiction.
3. Live Loads: 100 psf gross horizontal area.
4. Perpendicular Sway Load: 10lbs/lineal ft of seat plank.
5. Lateral Sway Load: 24 lbs/lineal ft of seat plank.

6. Live Load for Seat and Tread Planks: 120lbs/lineal ft to seats and footboards.
7. Top Rails of Guardrails:
   a. Uniform load of 50lbf/ ft. applied in any direction.
   b. Concentrated load of 200lbf applied in any direction.
   c. Uniform and concentrated loads need not be assumed to act concurrently.
8. Infill of Guardrails:
   a. Concentrated load of 50lbf applied horizontally on an area of 1 sq. ft.
   b. Infill load and other loads need not be assumed to act concurrently.

C. Thermal Movements: Provide bleachers that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
   1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

D. Detailing, fabrication, and installation of bleachers shall be in accordance with **<<AISC (MAN)>>** for steel and Aluminum Association's Specifications for Aluminum Structures.

E. Shop Connections: Welded and capable of carrying stress put upon them.

F. Welding: Comply with AWS Standards.

1.04 SUBMITTALS

A. Product Data: For each bleacher component. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
   1. Submit manufacturer's product specifications and installation instructions for each type of bleacher and accessory as required.

B. Shop Drawings: Prepared by or under the supervision of a qualified professional engineer detailing fabrication and assembly of bleachers, as well as procedures and diagrams. Submit shop drawings indicating layout of bleacher seating systems coordinated with field measurements and including seat heights, row spacing and rise, aisle widths and locations, overall dimensions, connections and relationship to adjoining work, accessories, types of materials and finishes.
   1. Shop Drawings require approval of local building inspector and North Carolina Department of Public Instruction (NCDPI). Contractor shall provide shop drawings to Architect for submittal to both entities; approval from both shall be required prior to Architect's approval of Bleacher submittal.
   2. For installed products indicated to comply with design loads, include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
   3. Surveyor, at the expense of contractor, shall verify existing conditions prior to submittal drawings. Survey shall be submitted as part of submittal process.
   4. Statement of Compliance: On every sheet of submittal drawings, the following statement shall be executed and dated by the authorized agent of the contractor responsible for such work – “This is to certify that all specification requirements have been met and all dimensions, conditions and quantities are verified as shown and / or corrected on these submittal drawings”.

C. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

DRAFT

D. Welding certificates.

E. Manufacturer Certificates: Signed by manufacturers certifying that they comply with requirements.

F. Qualification Data: For Installer.

G. Field Quality-Control Report: Indicate compliance of installed bleachers and components with requirements.

H. Maintenance Data: For each product to include in maintenance manuals.

I. Warranties: Special warranties specified in this Section.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Engage a firm experienced in manufacturing bleachers similar in size and scope to those indicated for this Project and with an established record of successful-in-service performance.

1. Manufacturer's responsibilities include providing professional engineering services for designing bleachers to comply with performance requirements.

B. Installer Qualifications: Engage an experienced Installer to perform the work of this Section who has specialized in installing types of bleacher similar to those required for this Project and who is acceptable to, or certified by, manufacturer of bleachers.

C. Professional Engineer Qualifications: A professional engineer who is legally authorized to practice in the state where the Project is located, and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of bleachers that are similar to that indicated for this Project in material, design, and extent.

D. Source Limitations: Obtain bleachers through one source from a single manufacturer.

E. Welding: Qualify procedures and personnel according to **<<AWS D1.1/D1.1M>>** and **<<AWS D1.2/D1.2M>>**.

F. Regulatory Requirements: In addition to local governing regulations, comply with applicable provisions in the applicable statewide building code.

1. Comply with statewide regulations pertaining to industrialized, manufactured, or modular buildings, including completion of third-party inspections at the manufacturing facility. Arrange and provide for all necessary inspections and certifications as required to obtain a state registration seal or certificate, as applicable, indicating that structure is approved for Owner occupancy.

G. Accessibility Requirements: In addition to local governing regulations, comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's **<<ADA Standards>>**.

H. Electrical Components, Devices, and Accessories: Listed and labeled as defined in **<<NFPA 70>>**, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

I. Safety Glass: Category II materials complying with testing requirements in **<<16 CFR 1201>>**.

J. Pre-Installation Conference: Conduct conference at Project site to comply with requirements in Section **<< 013000 - Administrative Requirements; or _____>>**.

1.06 PROJECT CONDITIONS

DRAFT

A. Field Measurements: Control points and elevations shall be established by the project surveyor. Dimensions and measurements shall be shown on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.07 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of bleacher that fail in materials or workmanship within the specified warranty period. Failures include, but are not limited to, the following:
   1. Structural failures including, but not limited to, excessive deflection.
   2. Failure of system to meet performance requirements.
   3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.

B. Warranty Period: One year from date of Substantial Completion.

C. Warranty Period for Metal Finishes: Five years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with all requirements of the Contract Documents, provide products by one of the following:
   1. Southern Bleacher Company.
   2. Dant-Clayton Corporation.
   3. Outdoor Aluminum, Inc.
   4. Sturdisteel.

B. Submission of bid is indication that ALL parts / products of the specification shall be provided.

C. Other manufacturers seeking to be approved must submit product literature, list of similar jobs, and product samples ten days prior to bid date that matches the specified product for review and acceptance by the Architect. Architect shall provide written acceptance of additional approved manufacturers through addendum. No substitutions shall be considered after the bid.

DRAFT

2.02 BLEACHERS

A. Materials:
   1. Steel: **<<ASTM A36/A36M>>**.
   2. Aluminum: **<<ASTM B209/B209M>>**; 6063-T6 extruded alloy.
   3. Concrete Foundation/Pad: Minimum compressive strength of 3000 psi at 28 days. Coordinate with Civil drawings.
   4. Accessories:
      a. Steel Connections: **<<ASTM A307>>**, galvanized.
      b. Aluminum Components: **<<ASTM A307>>**, cadmium plated.
      c. Hold-Down Clip Assembly and End Caps: Aluminum Alloy 6063-T6.

B. Framing Members: Fabricate understructure framing of aluminum or galvanized steel per manufacturer's standard. Painted non-galvanized steel is not acceptable.
   1. Stringers: 6 feet o.c. maximum
   2. Columns: Spaced at 6 feet o.c. longitudinal.
   3. Cross Braces: Steel angles or rod bracing, as standard with manufacturer.

C. Guardrail System: Provide guardrails at all sides of bleacher.

1. Material: Anodized aluminum pipe, with end plugs at ends of straight runs and elbows at corners. Secure to angle rail risers with galvanized fasteners.
2. Top Railing: Minimum 42 inches above walkways, entrances, and above center of any adjacent seat.
3. Chain Link Infill on Side and Back: 6 gage black vinyl coated, galvanized fabric fastened in place with galvanized fittings and aluminum ties.
4. Handrail: Provide manufacturer's standard handrail assembly, minimum 34 inches high, centered in middle of each aisle stairway.

D. Aluminum Seat Boards: Nominal 2 inches by 10 inches, extruded aluminum with minimum wall thickness of 0.094 inches. Matching aluminum end caps shall be furnished at aisles and ends of each seat board. All steel surfaces in contact with aluminum seats shall be treated to prevent electrolytic action. Seat boards shall be secured to their steel supports by means of extruded aluminum clips and 5/16-inch-diameter bolts. All splices shall occur at steel supports. Splices in other locations will not be permitted.

E. Aluminum Footboards: Size per component requirements, non-slip aluminum planks made of 6063-T6 aluminum alloys with minimum wall thickness of 0.094 inches. Footboards shall be secured to their steel supports by means of extruded aluminum clips and 5/16-inch-diameter bolts. All splices shall occur at steel supports. Splices in other locations will not be permitted.
1. Provide tread system comprised of aluminum extrusions which fit together length-wise in a male-female shape running length of planks. This tongue and groove mechanism shall minimize deflection and not separate due to loads being applied to individual planks. The locking mechanism by design shall allow for expansion and contraction of individual planks without effecting performance of the system.
2. The system shall cause the deck planks to react together at all treads and cross walks to live load and form the appearance of a single tread system. By design, this system forms a solid, overlapping tread and riser installation.
3. The nose extrusion shall allow for a 1 inch extruded aluminum contrasting nose piece to be flush mounted on the leading edge and shall capture the vertical riser plank in an extruded pocket. The heel extrusion shall have a .70 inch vertical lip at the rear of the plank to allow for placement of vertical riser plank.
4. These extrusions shall be such that the attachment of the seat brackets, step brackets, mid-aisle rails and all other components is accomplished without deck penetrations. Through bolting or drilling of the aluminum tread / riser system is not permitted.
5. The system shall allow for seat and aisle reconfiguration at any time without evidence of its previous configuration.
6. Entry stairs to be 2 x 12 mill finish aluminum with inset extrusion to accept contrasting nosing member.
7. Ramp planks to be interlocking to resist deflection of live loads.
8. Open ends of planks to be covered with anodized aluminum end caps, securely fastened to the plank.
9. Joint sleeves: Dual joint sleeves to be inserted at each butt joint of each load bearing aluminum plank, and to penetrate 6 inches into each plank at the joint. Joint sleeves are not required at secondary gutter locations.

F. Aluminum Risers: Aluminum planks made of 6063-T6 aluminum alloys with minimum wall thickness of 0.094 inches. Provide continuous aluminum riser closures between all footboards. Through bolting or drilling of the riser board is unacceptable.

G. Stairs: 2-by-12 inch aluminum treads with maximum 7-inch rise.

DRAFT

H. Hardware: Provide tamperproof and galvanized connections for seat boards, guardrails, and guardrail pipe. Footboard connections shall be made with galvanized fasteners.

I. Concrete Pad: Provide 3000 psi compressive strength concrete.

J. Finishes:

1. Steel: Hot-dipped galvanized after fabrication in accordance with **<<ASTM A123/A123M>>**.
2. Aluminum:
   a. Aluminum Footboards: Mill finish.
   b. Riser Boards: Dur-Kyn Kynar paint system.

K. Bleacher Schedule and Requirements:

1. Football Field: Provide two (2) separate units, minimum 150 seats each for a total of 300 minimum; one bleacher unit on each side of midfield as indicated on Drawings. Each unit shall be a minimum of 5 rows and 15 feet long.
2. Softball Field: Provide two (2) separate units, minimum 50 seats each for total of 100 minimum; one bleacher unit on home side and one on visitor side as indicated on Drawings. Each unit shall be a minimum of 5 rows and 15 feet long.
3. Baseball Field: Provide two (2) separate units, minimum 50 seats each for total of 100 minimum; one bleacher unit on home side and one on visitor side as indicated on Drawings. Each unit shall be a minimum of 5 rows and 15 feet long.

2.03 FINISHES, GENERAL

A. Comply with **<<NAAMM AMP 500-06>>** for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved samples and are assembled or installed to minimize contrast.

2.04 ALUMINUM FINISHES

A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.

B. Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: non-specular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with **<<AAMA 611>>**.

C. Aluminum Painted Finish:

1. All painted aluminum shall have factory applied, baked-on Kynar or Hylar/acrylic resin based paint coating, Dur-Kyn, as manufactured by the Val spar Corporation. Dur-Kyn meets or exceeds the physical and performance properties of **<<AAMA 2603>>**. Powder coated finishes are not considered equal to Kynar type finishes.
2. Color: As selected by Architect from manufacturer's full range.

2.05 GALVANIZED STEEL FINISHES

A. Surface Preparation: Clean surfaces with non-petroleum solvent so surfaces are free of oil and other contaminants. After cleaning, apply a conversion coating suited to the organic coating to

DRAFT

be applied over it. Clean welds, mechanical connections, and abraded areas, and apply galvanizing repair paint specified below to comply with **<<ASTM A780/A780M>>**.

1. Galvanizing Repair Paint: High-zinc-dust-content paint for re-galvanizing welds in steel, complying with **<<SSPC-Paint 20>>**.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for, installation tolerances, and other conditions affecting performance of work.

B. Verify with Owner's testing company that foundation bearing conditions are in accordance with assumptions made in design calculations and Shop Drawings.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 ERECTION

A. Install pre-engineered bleachers in accordance with manufacturer's instructions and final Shop Drawings. Provide accessories indicated or required and anchors, inserts and other items required for installation of units and attachment of adjoining construction.

3.03 FIELD QUALITY CONTROL

A. Arrange for bleacher manufacturer's technical personnel to inspect bleachers and components during installation and at final completion and to certify compliance with requirements.

1. Notify Architect 48 hours in advance of date and time of final inspection.

B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

C. Tests and Inspections:

1. Installation: Installation shall be inspected for compliance with approved shop drawings and for safety prior to use.

3.04 ADJUSTING AND CLEANING

A. Lubricate hardware and other moving parts.

B. Clean installed bleachers on exposed and semi-exposed surfaces. Touch-up shop applied finishes to restore damaged or soiled areas.

END OF SECTION 133416.53

DRAFT

SECTION 142100
ELECTRIC TRACTION ELEVATORS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ADA Standards - 2010 ADA Standards for Accessible Design.

B. AISC 360 - Specification for Structural Steel Buildings.

C. ASME A17.1 - Safety Code for Elevators and Escalators Includes Requirements for Elevators, Escalators, Dumbwaiters, Moving Walks, Material Lifts, and Dumbwaiters with Automatic Transfer Devices.

D. ASME A17.2 - Guide for Inspection of Elevators, Escalators, and Moving Walks Includes Inspection Procedures for Electric Traction and Winding Drum Elevators, Hydraulic Elevators, Inclined Elevators, Limited-Use/Limited-Application Elevators, Private Residence Elevators, Escalators, Moving Walks, Dumbwaiters, and Material Lifts.

E. ASME QEI-1 - Standard for the Qualification of Elevator Inspectors.

F. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.

G. ASTM A276/A276M - Standard Specification for Stainless Steel Bars and Shapes.

H. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

I. ASTM A666/A666M - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.

J. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

K. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric).

L. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification.

M. AWS D1.1/D1.1M - Structural Welding Code - Steel.

N. EPA (TSCA); Title VI - Toxic Substances Control Act, Title VI: Formaldehyde Standards for Composite Wood Products.

O. ITS (DIR) - Directory of Listed Products.

P. NEMA LD 3 - High-Pressure Decorative Laminates.

Q. NEMA MG 00001 - Motors and Generators.

R. NFPA 70 - National Electrical Code.

S. NFPA 80 - Standard for Fire Doors and Other Opening Protectives.

T. PS 1 - Structural Plywood.

U. UL (DIR) - Online Certifications Directory.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate work with other installers for construction of hoistway to ensure hoistway is built to elevator manufacturer's requirements, including but not limited to, the following:
   a. Concrete work for elevator pit depth, hoistway size, and sump requirement.

DRAFT

b. Masonry and/or metal framing and gypsum shaft wall for hoistway size, wall depth, and fire rating.
c. Metal fabricator for sizing and location of hoist beams.

2. Coordinate work with other installers to provide necessary conduits for proper installation of wiring, including but not limited to the following:
   a. Elevator equipment devices remote from elevator hoistway**<< or machine room; or None - N/A>>**.
   b. Emergency communication service.
   c. Elevator pit for **<< lighting; sump pump; and _____>>**.
   d. Automatic transfer switches and disconnects.
   e. Fire alarm panel.
3. Coordinate work with other installers for equipment provisions necessary for proper elevator operation, including but not limited to the following:
   a. Automatic transfer switches with auxiliary contacts for emergency power transfer status indication.
   b. Shunt trip devices for automatic disconnection of elevator power prior to fire suppression system activation; include provisions for shunt trip power monitoring.
   c. Overcurrent protection devices selected to achieve required selective coordination.

B. Preinstallation Meeting: Convene meeting at least two weeks prior to start of this work.
1. Review schedule of installation, proper procedures and conditions, and coordination with related work.

C. Construction Use of Elevator: Not permitted.

1.03 SUBMITTALS

A. Product Data: Submit data on following items:
1. Signal and operating fixtures, operating panels, and indicators.
2. Car design, dimensions, layout, and components.
3. Car and hoistway door and frame details.
4. Electrical characteristics and connection requirements.

B. Shop Drawings: Include appropriate plans, elevations, sections, diagrams, and details on following items:
1. Elevator Equipment and Machines: Size and location of driving machines, power units, controllers, governors, and other components.
2. Hoistway Components: Size and location of car machine beams, guide rails, buffers, ropes, and other components.
3. Clearances and over-travel of car and counterweight.
4. Locations in hoistway and in controller closet of traveling cables and connections for car lighting, telephone, and .
5. Location and sizes of hoistway and car doors and frames.
6. Interface with building security and access control systems.
7. Electrical characteristics and connection requirements.
8. Indicate arrangement of elevator equipment and allow for clear passage of equipment through access openings.

C. Design Data: Include calculations and sizing of structural components including but not limited to the following:

DRAFT

1. Hoistway Components: Size and location of car machine beams, guide rails, suspension cables and wire ropes, buffers, and other components.
2. Rail bracket spacing; maximum loads imposed on guide rails requiring load transfer to building structural framing.
3. Individual weight of principal components; load reaction at points of support.
4. Sizes of and loads on hoisting and fall protection beams.

D. Samples: Submit samples illustrating **<< car interior finishes; car floor material; car and hoistway door and frame finishes; handrail material and finish; or _____>>** in the form of cut sheets or finish color selection brochures.

E. Designer's qualification statement.

F. Fabricator's/Installer's qualification statement.

G. Installer's qualification statement.

H. Welders' Qualification Statement: Welders' certificates in accordance with **<<AWS B2.1/B2.1M>>** and dated no more than 12 months before start of scheduled welding work.

I. Testing agency's qualification statement.

1.04 CLOSEOUT SUBMITTALS

A. Initial Maintenance Contract: Submit one year initial maintenance contract to run concurrently with General Contractor's one year guarantee and with warranty; beginning on date of Substantial Completion.

B. Continuing Maintenance Contract: Submit proposal to Owner for standard two-year continuing maintenance contract agreement in accordance with **<<ASME A17.1>>** and requirements as indicated, starting on date initial maintenance contract/warranty is scheduled to expire.

1. Indicate in proposal the services, obligations, conditions, and terms for agreement period and for renewal options.

C. Operation and Maintenance Data:

1. Parts catalog with complete list of equipment replacement parts; identify each entry with equipment description and identifying code.
2. Operation and maintenance manual.
3. Schematic drawings of equipment, and wiring diagrams of installed electrical equipment with list of corresponding symbols to identify markings in controller closet and on hoistway apparatus.

D. Executed Warranty: Submit concurrently with Initial Maintenance Contract.

1.05 QUALITY ASSURANCE

A. Designer Qualifications: Design guide rails, brackets, and suspension cables under direct supervision of a licensed Professional Structural Engineer experienced in design of this type of work and licensed in the State of Maryland.

B. Fabricator Qualifications: Company specializing in providing non-proprietary elevator systems as specified in this section with a minimum of 5 projects of comparable size and scope. Provide reference list with Owner contact info on request.

C. Installer Qualifications: Company specializing in performing the work of this section, and shall be an approved installation representative of elevator equipment manufacturer.

D. Welder Qualifications: Welding processes and welding operators qualified in accordance with **<<AWS D1.1/D1.1M>>** and no more than 12 months before start of scheduled welding work.

DRAFT

E. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of type specified in this section.

F. Products Requiring Fire Resistance Rating: Listed and classified by **<<ITS (DIR)>>**, **<<UL (DIR)>>**, or other testing agency acceptable to authorities having jurisdiction (LAHJ).

G. Products Requiring Electrical Connection: Listed and classified by **<<UL (DIR)>>** or other testing agency acceptable to authorities having jurisdiction (LAHJ)) as suitable for the purpose indicated in construction documents.

1.06 WARRANTY

A. Manufacturer Warranty: Provide 1-year manufacturer warranty for elevator operating equipment and devices meeting term of initial maintenance contract. Complete forms in Owner's name and register with manufacturer.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Source Limitations: Manufacturer shall be a single full-service elevator fabrication/installation company that shall design, engineer, furnish, and install elevator(s) for this Project based on the requirements included in the Contract Documents. Each elevator component shall be non-proprietary and shall be produced by a single manufacturer and obtained from a single supplier. Non-proprietary components from different manufacturers shall be compatible with each other for a complete operational elevator system.

B. Basis-of-Design Elevator Manufacturer: **<< _____ >>**. ******Work with selected elevator company to provide basic basis-of-design information including hoistway layout & dimensions. Then update list here******

C. Other Acceptable Manufacturers - Electric Traction Elevators (provide substitution request with full data per requirements below):
   1. Alliance Elevator Solutions.
   2. American Elevator.
   3. Eastern Elevator, an AEG Company.
   4. Kencor Elevator, an AEG Company.
   5. ~~KONE.~~
   6. ~~Otis Elevator Company.~~
   7. ~~Schindler Elevator Corporation.~~ ******Discuss Schindler with MCPS prior to using******
   8. ~~TK Elevator.~~ ******Previously ThyssenKrupp, purchased by KONE******

D. Substitutions: Refer to Division 1 for substitution and product requirements.
   1. Products other than Basis-of-Design: If submitting a substitution for a product by a manufacturer other than the Basis-of-Design, the submitting manufacturer shall provide a substitution request and provide the Contractor with changes required to indicated design and requirements, including but not limited to: hoistway dimensions, pit depth, overhead height, hoist beam size, location, and configuration, electrical characteristics, motor size, and disconnects, controller closet and control panel locations, and rated load and speed.
      a. Changes to the work due to substitution of a product other than the Basis-of-Design shall be accomodated at no additional cost to the Owner. The Contractor shall coordinate with all affected subcontractors during the bidding/pricing process to ensure accurate pricing for submitting elevator manufacturer.

DRAFT

b. The manufacturer, Contractor, and Architect shall coordinate changes prior to the start of construction on the hoistway. The Architect shall incorporate changes into the documents and re-issue for distribution to affected subcontractors.

2.02 ELECTRIC TRACTION ELEVATORS

A. Electric Traction Passenger Elevator:

1. Electric Traction Elevator Equipment:
   a. Gearless Traction Machine: **<< Single wrapped; Double wrapped; or _____>>** traction driving sheave, with **<< dual; single; or _____>>** brake.
   b. Suspension Cables: Provide cables of diameter complying with ASME A17.1, or a modification/waiver approved by the LAHJ to use an alternate size verified by engineering analysis. Cables shall be non-combustible FT-1 fire-rated steel cables. Standard steel cables are not acceptable.
2. Drive System: Synchronous alternating current (AC) motors and variable voltage variable frequency (VVVF) drive.
3. Operation Control Type: Single automatic (push button) operation control.
4. Service Control Type: Standard service control only.
5. Interior Car Height: 93 inches.
6. Electrical Power: **<< 208; or 480>>** volts; alternating current (AC); three phase; 60 Hz. ******Verify with building electrical and basis-of-design******
7. Rated Net Capacity: **<< 2100 pounds; 2500 pounds; 3000 pounds; or 3500 pounds>>**. ******Verify all following paragraphs with basis-of-design******
8. Rated Speed: **<< 100 to 150 feet per minute; 100 feet per minute; or 150 feet per minute>>**.
9. Hoistway Size: As indicated on Drawings.
10. Elevator Pit Depth: **<< 60 inch; or 48 inch>>**.
11. Overhead Clearance at Top Floor: **<< _____>>**.
12. Travel Distance and Stops: As indicated on drawings.
13. Openings: Front only.
14. Traction Machine Location: Top of hoistway shaft.

2.03 COMPONENTS

A. General: All elevator equipment and systems shall be fabricated completely of non-proprietary parts and components. Non-proprietary components shall be standard, commonly available parts for ease of repair and maintenance, and shall be as required for a complete system.

B. Elevator Equipment:

1. Motors, Controllers, Controls, Buttons, Wiring, Devices, and Indicators: Comply with **<<NFPA 70>>** requirements, and refer to Division 26 and Electrical Drawings for additional information.
2. Guide Rails, Cables, Counterweights, Sheaves, Buffers, Attachment Brackets, and Anchors: Design criteria for components includes safety factors in accordance with applicable requirements of Elevator Code, **<<ASME A17.1>>**.
3. Fire-Resistant Materials: Elevator drive belts, suspension cables/ropes, and other elevator components located within the hoistway shall be non-combustible or FT-1 fire rated.
4. Suspension Cables: Provide cables of diameter complying with ASME A17.1, or alternate size verified by engineering analysis and approved in writing as a modification/waiver by the authority having jurisdiction.

DRAFT

5. Buffers: Spring or polyurethane type; complying with ASME A17.1.

C. Electrical Equipment:
1. Motors: Compliant with **<<NEMA MG 00001>>**. Manufacturer shall size motor(s) specifically for this project to account for indicated load capacity, rated speed, and other factors as required.
a. Electrical characteristics are based on a **<< _____>>** HP motor. If a different motor size is required, coordinate any necessary revisions to electrical supply with electrical contractor at no additional cost to Owner. ******Verify with electrical engineer to ensure panelboard is sized appropriately******
2. Boxes, Conduit, Wiring, and Devices: Comply with **<<NFPA 70>>** requirements, and refer to Division 26 and Electrical Drawings for additional information.
3. Sump Pump in Pit: Refer to Division 22 and Plumbing Drawings for additional information.
4. Spare Conductors: Provide **<< ten; or _____>>** percent in extra conductors and **<< two; or ____>>** pairs of shielded audio cables in traveling cables.
5. Include wiring and connections to elevator devices remote from hoistway and to controller closet. Coordinate with Division 26 and Electrical Drawings.

2.04 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Comply with **<< ASME A17.1; applicable local codes; authorities having jurisdiction (AHJ); and _____>>**.

B. Accessibility Requirements: Comply with **<<ADA Standards>>**.

C. Perform structural steel design, fabrication, and installation in accordance with **<<AISC 360>>**.

D. Perform welding of steel in accordance with **<<AWS D1.1/D1.1M>>**.

E. Fabricate and install door and frame assemblies in accordance with **<<NFPA 80>>** and complying with requirements of authorities having jurisdiction (AHJ).

F. Perform electrical work in accordance with **<<NFPA 70>>**.

2.05 OPERATION CONTROLS

A. Elevator Controls: Provide landing operating panels and landing indicator panels.
1. Restricted Access/Card Reader Operation: Landing call buttons shall be subject to card reader access; call buttons shall be inoperable unless authorized credential is presented at the card reader. Coordinate with Division 26 Electrical and Division 28 Access Control.
2. Landing Operating Panels (Call Buttons): Metallic type, one for originating "Up" and one for originating "Down" calls, one button only at terminating landings; with illuminating indicators.
3. Landing Indicator Panels (Hall Lanterns): Illuminating, with audible signal. At manufacturer's option, audible signal may be mounted on cab.
4. Signage:
a. Provide floor designator signage mounted to each hoistway jamb.
b. Provide emergency pictograph signage adjacent to landing operating panel, with text and graphics, directing occupants to egress stairs in the event of fire.
5. Comply with **<<ADA Standards>>** for elevator controls. All controls and signage shall include braille letters and all symbols shall be tactile.

B. Interconnect elevator control system with building **<< security; fire alarm; card access; smoke alarm; building management control; and _____>>** systems.

C. Door Operation Controls:

DRAFT

1. Program door control to open doors automatically when car arrives at floor landing.
2. Render "Door Close" button inoperative when car is standing at dispatch landing with doors open.
3. Door Safety Devices: Moveable, retractable safety edges, quiet in operation; equipped with photo-electric light rays and/or proximity detector.

D. Low Energy/Standby Mode: Elevator control system shall have a standard low energy/standby mode; after 5 minutes of inactivity, elevator controller shall switch to standby and power down non-essential components until call button is pressed.

E. Emergency Monitoring and Communication: Provide two-way communication system mounted in a control panel that will connect elevator cab to outside monitoring service. Monitoring service shall be interactive and available live 24/7.
1. In accordance with Maryland state law, monitoring access is not permitted over wireless. Monitoring shall be provided over a hard-wired connection that is compliant with ASME A17.1.
a. Coordinate with Montgomery County Public Schools security staff to ensure connection does not create interference with, and is compatible with, MCPS' centralized security network.
2. Emergency system shall activate by push button and not require use of handset.
3. Emergency system shall include visual, text-based, and video-based system, and with a voice-only option, that is accessible to deaf, hard-of-hearing, or visually impaired individuals in accordance with applicable edition of the IBC.

2.06 OPERATION CONTROL TYPE

A. Single Automatic (Push Button) Operation Control: Applies to car in single elevator shaft.
1. Refer to description provided in **<<ASME A17.1>>**.
2. Set system operation so that momentary pressure of landing button dispatches car from other landing to that landing.
3. Allow call registered by momentary pressure of landing button at any time to remain registered until car stops in response to that landing call.
4. If elevator car door is not opened within predetermined period of time after car has stopped at terminal landing, allow car to respond to call registered from other landing.

2.07 EMERGENCY POWER

A. Set-up elevator operation to run with **<< building emergency power supply; or elevator emergency power supply>>** when the normal building power supply fails, and in compliance with **<<ASME A17.1>>** requirements. ******Verify if emergency power supply is provided by battery backup or by generator. Coordinate with electrical engineer******

B. Building Emergency Power Supply: Supplied by **<< backup generator>>**; provide elevator system components as required for emergency power characteristics with phase rotation the same as for normal power.
1. Provide transfer switches and auxiliary contacts.
2. Install connections to power feeders.

C. Elevator Emergency Power Supply: Supplied by **<< battery backup>>**; provide elevator system components as required for emergency power characteristics.

D. Emergency Lighting: Provide emergency elevator lighting complying with ASME A17.1.

E. Provide operational control circuitry for adapting the change from normal to emergency power.

DRAFT

1. Provide selector switch with illuminated signal indicating that building power supply has failed and elevator is on emergency power, in accordance with **<<ASME A17.1>>**.

F. Upon transfer to emergency power, advance one elevator at a time to ground floor/egress landing, stop car, open doors, disable operating circuits, and hold in standby condition.

2.08 MATERIALS

A. Rolled Steel Sections, Shapes, Rods: **<<ASTM A36/A36M>>**.

B. Sheet Steel: Hot-dipped galvanized steel sheet, **<<ASTM A653/A653M>>**, with G90 coating.

C. Stainless Steel Sheet: **<<ASTM A666/A666M>>**, Type 304; No. 4 Brushed finish.

D. Stainless Steel Bars, Shapes and Moldings: **<<ASTM A276/A276M>>**, Type 304.

E. Extruded Aluminum: **<<ASTM B221>>** (**<<ASTM B221M>>**), natural anodized finish unless otherwise indicated.

F. Plywood: **<<PS 1>>**, Structural I, Grade C-D or better, sanded.

1. Composite Wood: All composite wood materials installed inside the weatherproofing system shall meet either **<<EPA (TSCA); Title VI>>** for ultra-low-emitting formaldehyde or no added formaldehyde (ULEF / NAUF).

G. Flooring Finish: **<< Resilient tile flooring; Carpet tile flooring; Porcelain tile flooring; or _____>>**; refer to Finish Schedule and applicable Division 9 flooring section.

H. Plastic Laminate: **<<NEMA LD 3>>**, Type HGS, color as selected by Owner and Architect from manufacturer's standard line of colors.

2.09 CAR AND HOISTWAY ENTRANCES

A. Elevator Car and Hoistway Entrances:

1. Car and Hoistway Entrances:

a. Hoistway Fire Rating: **<< 1 Hour; 2 Hours; or As indicated on Drawings>>**. ******Verify with life safety drawings; 1 hour is standard for less than 4 stores, but 2 hours is also common******

b. Elevator Door Fire Rating: **<< 1 Hour; or 1-1/2 Hours>>**. ******Verify with hoistway rating******

c. Framed Opening Finish and Material: Stainless steel, brushed/satin finish.

d. Car Door Material: Stainless steel, brushed/satin finish, with rigid sandwich panel construction.

e. Hoistway Door Material: Stainless steel, brushed/satin finish, with rigid sandwich panel construction.

f. Door Operation: **<< Center opening, single speed; Side opening, two speed; or _____>>**. ******Verify with basis-of-design. May vary based on size and orientation******

g. Door Size: **<< 42 inches wide by 84 inches high>>**. ******42 x 84 is fairly standard. Verify with MCPS******

h. Sills: Extruded aluminum.

B. Sills/Thresholds: Configure to align with frame return and coordinate with floor finish.

C. Gasketing: Provide acoustic-type gasketing at hoistway doors and frames to minimize audible noise due to car activities in the hoistway and air pressure differential between hoistway and landing floors.

DRAFT

2.10 CAR EQUIPMENT AND MATERIALS

A. Elevator Car:

1. Car Operating Panel: Provide **<< main; auxiliary; and _____>>**; **<< flush-mounted applied face plate; or _____>>**, with**<< illuminated; _____; or None - N/A>>** call buttons corresponding to floors served with **<< "Door Open/Door Close" buttons; "Door Open" button; "Door Close" button; alarm button; and _____>>**.
   a. Panel Material: **<< Integral with front return; Stainless steel; Bronze face; or _____>>**; **<< one; or two>>** per car.
   b. Car Floor Position Indicator: **<< Above door; Above car operating panel; or _____>>** with illuminating position indicators.
   c. Locate alarm button where it is unlikely to be accidentally actuated; not more than **<< 54 inch; or ____ inch>>** above car finished floor.
2. Ventilation: Single-speed fan with grille in ceiling.
3. Subfloor: Provide **<<PS 1>>**, Structural I plywood subfloor, 5/8 inch thick, prepared for installation of indicated flooring material.
4. Front Return Panel: Stainless steel, brushed/satin finish to match door.
5. Door Wall: Stainless steel, brushed/satin finish to match door.
6. Side and Rear Walls: Plastic laminate on plywood.
   a. Reveals Between Wall Panels: Stainless steel, to match front return panel/door. Align reveal/joint locations with ceiling panel joints.
7. Hand Rails: Stainless steel with #4 brushed/satin finish, at three side and rear walls. Provide open clear space of 1-1/2 inch from back of rail to face of wall.
   a. Flat Bar Stock, Solid: 1/4- or 1/2-inch thick by 2 inch high, nominal.
8. Ceiling: **<< Suspended stainless steel ceiling panels with compact fluorescent or LED downlights centered in each panel; Suspended luminous ceiling - translucent panels with linear fluorescent or LED light fixtures; or _____>>**.

B. Car Accessories:

1. Certificate Frame: **<< Bronze; Stainless steel; or _____>>** frame glazed with clear **<< tempered glass; acrylic plastic; polycarbonate; or acrylic or polycarbonate>>**, and attached with**<< tamper-proof; _____; or None - N/A>>** screws.
2. Protective Pads: **<< Vinyl; Canvas; Heavy-Duty; or _____>>** cover, padded with **<< cotton wadding; impact-resistant; or _____>>** fill material, sewn with piping edges; fire resistant in compliance with **<<ASME A17.1>><< ; brass grommets for supports; ; _____; or None - N/A>>**, covering side and rear walls and front return**<< , with cut-out for control panel; , _____; or None - N/A>>**; provide **<< one set; ____ sets; or one set for each elevator>>**.
   a. Pad Supports: **<< Brass studs; Aluminum studs; Stainless steel studs; Plastic zee-hooks; Plastic clamps; As selected by Architect; or _____>>**; mounted **<< from ceiling frame; from top of wall panels; from wall mounted channel; at _____ inches above the floor; or _____>>**.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting this work.

B. Verify that **<< hoistway; pit; machine room; and _____>>** are ready for work of this section.

C. Verify hoistway shaft and openings are of correct size and within tolerance.

DRAFT

D. Verify location and size of machine foundation and position of machine foundation bolts.

E. Verify that electrical power is available and of correct characteristics.

3.02 PREPARATION

A. Arrange for temporary electrical power for installation work and testing of elevator components. Coordinate with Division 1 Section "Temporary Facilities and Controls" for additional requirements.

B. Maintain elevator pit excavation free of water.

3.03 INSTALLATION

A. Coordinate this work with installation of hoistway wall construction.

B. Install system components, and connect equipment to building utilities.

C. Provide conduit, electrical boxes, wiring, and accessories; refer to Division 26 Electrical sections.

D. Mount **<< machines; motors; and _____>>** on vibration and acoustic isolators.

1. Place on structural supports and bearing plates.
2. Securely fasten to building supports.
3. Prevent lateral displacement.

E. Install hoistway, elevator equipment, and components in accordance with approved shop drawings.

F. Install guide rails to allow for expansion and contraction movement of guide rails.

G. Accurately machine and align guide rails, forming smooth joints with machined splice plates.

H. Field Welds: Chip and clean away oxidation and residue with wire brush; spot prime with two coats of manufacturer's recommended primer.

I. Install hoistway door sills, frames, and headers in hoistway walls; grout sills in place, set hoistway floor entrances in alignment with car openings, and align plumb with hoistway.

J. Fill hoistway door frames solid with grout.

K. Structural Metal Surfaces: Clean surfaces of rust, oil, or grease; wipe clean with solvent; prime with two coats.

L. Wood Surfaces not Exposed to Public View: Finish with one coat primer; **<< one coat; two coats; or _____>>** enamel.

M. Adjust equipment for smooth and quiet operation.

3.04 TOLERANCES

A. Guide Rail Alignment: Plumb and parallel to each other in accordance with **<<ASME A17.1>>** and **<<ASME A17.2>>**.

B. Car Movement on Aligned Guide Rails: Smooth movement, without any objectionable lateral or oscillating movement or vibration.

3.05 FIELD QUALITY CONTROL

A. Provide Acceptance Testing and inspections by regulatory agencies certified in accordance with**<<ASME QEI-1>>**.

1. As a part of final acceptance of the project and in accordance with the General Conditions, a minimum of 30 days prior to completion, the Elevator Installer/General

DRAFT

Contractor shall officially request to the State of Maryland to have a third-party Qualified Elevator Inspector (QEI) conduct a full Acceptance Inspection and Test in accordance with ASME A17.1 before final acceptance by the Owner.

a. The Elevator Installer/General Contractor shall provide all data affecting the elevator installation or modification, including "as-installed" circuit and control wiring diagrams and maintenance manuals.

2. The Elevator Installer shall coordinate and participate with all tests, inspections, and approvals required by the building code, including but not limited to inspections by QEI, fire marshal and elevator inspector. The elevator installer shall attend and assist with tests, inspections, and approvals required by the building code at no additional cost to the Owner.
3. Schedule acceptance tests with agencies and notify Owner and Architect a minimum of two weeks in advance.
4. Obtain permits as required to perform tests.
5. Document regulatory agency tests and inspections in accordance with requirements.
6. Perform tests required by regulatory agencies.
7. Furnish test and approval certificates issued by authorities having jurisdiction.

3.06 ADJUSTING

A. Adjust for smooth acceleration and deceleration of car to minimize passenger discomfort.

B. Adjust with automatic floor leveling feature at each floor landing to reach 1/4-inch maximum from flush with sill.

3.07 CLEANING

A. Remove protective coverings from finished surfaces.

B. Clean surfaces and components in accordance with manufacturers written instructions.

3.08 CLOSEOUT ACTIVITIES

A. Provide demonstration and training at the Project site, using the installed elevator equipment.

B. Demonstration and training instructor shall be an experienced employee of elevator fabricator/installer, knowledgeable in all components of elevator installation, with a minimum 10 years experience.

C. Demonstration: Demonstrate operation of system to Owner's personnel.
   1. Use operation and maintenance data as reference during demonstration.
   2. Briefly describe function, operation, cleaning, and maintenance of each component.

D. Training: Train Owner's personnel on cleaning and operation and maintenance of system.
   1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
   2. Provide minimum of onr-half day (4 hours) of training.

3.09 PROTECTION

A. Do not permit construction traffic within car after cleaning.

B. Protect installed products until Date of Substantial Completion.

C. Touch up, repair, or replace damaged products and materials before Date of Substantial Completion.

DRAFT

3.10 MAINTENANCE

A. Provide Initial Maintenance Contract of elevator system and components in accordance with **<<ASME A17.1>>** and requirements as indicated for a period of one year from the Date of Substantial Completion.

B. Submit proposal for a two-year continuation of Maintenance Contract beyond the initial 12 month contract in accordance with **<<ASME A17.1>>** and requirements as indicated for installed elevator equipment; matching examination and maintenance requirements of initial maintenance contract.

C. Perform maintenance contract services using competent and qualified personnel under the supervision and direct employ of the elevator manufacturer or installer.

D. Maintenance contract services shall not be assigned or transferred to any agent or other entity without prior written consent of Owner.

E. Include systematic examination at maximum monthly intervals (12 visits total for initial contract). Examination shall include adjustment, lubrication, and other preventive maintenance, and repair or replacement of defective or worn parts or equipment. Monthly inspection shall include Phase II Fire Recall testing.

1. As part of initial maintenance contract, coordinate with the State of Maryland for annual re-inspection at the one year mark by State Inspector/QEI. Coordinate with Owner to ensure acceptable dates and times for Owner to be present, and provide a minimum of two weeks notice.

F. Ensure proper lubrication of all components; replace wire ropes/cables when necessary to maintain the required factor of safety.

G. Perform work without removing cars from use during peak traffic periods.

H. Provide emergency call back service during regular working hours throughout period of this maintenance contract.

I. Maintain an adequate stock of parts for replacement or emergency purposes, and have personnel available to ensure the fulfillment of this maintenance contract without unreasonable loss of time.

END OF SECTION 142100

DRAFT

SECTION 144200
WHEELCHAIR LIFTS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ADA Standards - 2010 ADA Standards for Accessible Design.

B. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures.

C. ASME A17.1 - Safety Code for Elevators and Escalators Includes Requirements for Elevators, Escalators, Dumbwaiters, Moving Walks, Material Lifts, and Dumbwaiters with Automatic Transfer Devices.

D. ASME A18.1 - Safety Standard for Platform Lifts and Stairway Chairlifts.

E. ASME QEI-1 - Standard for the Qualification of Elevator Inspectors.

F. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.

G. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.

H. ASTM A572/A572M - Standard Specification for High-Strength Low-Alloy Columbium-Vanadium Structural Steel.

I. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

J. ASTM A786/A786M - Standard Specification for Hot-Rolled Carbon, Low-Alloy, High-Strength Low-Alloy, and Alloy Steel Floor Plates.

K. ASTM F1554 - Standard Specification for Anchor Bolts, Steel, 36, 55, and 105-ksi Yield Strength.

L. AWS D1.1/D1.1M - Structural Welding Code - Steel.

M. AWS D1.3/D1.3M - Structural Welding Code - Sheet Steel.

N. ICC A117.1 - Accessible and Usable Buildings and Facilities.

O. ITS (DIR) - Directory of Listed Products.

P. NFPA 70 - National Electrical Code.

Q. UL (DIR) - Online Certifications Directory.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate installation of wheelchair lift system with adjacent construction using necessary attachments; provide anchoring devices in accordance with manufacturer's installation instructions; coordinate installation of cast-in-place concrete components.

1. Electrical System: Coordinate utility and electrical system connections to ensure they are made in an orderly and expeditious manner.

B. Preinstallation Meeting: Convene meeting at least two weeks prior to start of this work.

1. Review schedule of installation, proper procedures and conditions, and coordination with related work.

1.03 SUBMITTALS

DRAFT

A. Product Data: Include data on material descriptions, construction details, component dimensions and profiles, and finishes; include data on rated capacities, electrical and operating characteristics, and necessary accessories.

B. Shop Drawings: Include plans, elevations, sections, and attachment details; include equipment assembly details with dimensions, weights, loads, required clearances, components, size and location of anchors and required field connections, and methods for field assembly; provide diagrams indicating signal, power, and control wiring.

C. Installer's qualification statement.

D. Testing agency's qualification statement.

1.04 CLOSEOUT SUBMITTALS

A. Maintenance contracts.

B. Executed warranty.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing work of type specified and a licensed installer of listed manufacturer. Installer certifies that they maintain an adequate stock of maintenance parts and have qualified maintenance staff to fulfill maintenance activities and emergency call back services.

B. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of type specified in this section.

1.06 FIELD CONDITIONS

A. Use of wheelchair lifts during construction for hoisting materials or personnel is not permitted.

1.07 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Manufacturer Warranty: Provide 2-year manufacturer warranty to repair or replace wheelchair lift system components that fail in materials or workmanship. Complete forms in Owner's name and register with manufacturer.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Comply with **<<ASME A18.1>>**, **<<ASME A17.1>>**, applicable local codes, and authorities having jurisdiction (AHJ).

B. Accessibility Requirements: Comply with **<<ADA Standards>>** and **<<ICC A117.1>>**.

C. Structural Performance: Comply with **<<ASCE 7>>** for loading of wheelchair lift components and assemblies.

D. Perform welding of steel in accordance with **<<AWS D1.1/D1.1M>>**.

E. Perform electrical work in accordance with **<<NFPA 70>>**.

2.02 VERTICAL PLATFORM WHEELCHAIR LIFTS

A. Manufacturers:

1. Basis-of-Design; Garaventa Lift;
2. Butler Mobility Products.

DRAFT

3. Savaria.

B. Vertical Platform Wheelchair Lifts: Provide manufacturer's standard type that complies with indicated requirements. Use manufacturer's standard components for vertical platform wheelchair lifts as required for complete system unless otherwise indicated.

1. Type of Vertical Platform Wheelchair Lift:
   a. Vertical platform wheelchair lift without shaftway or enclosure; platform includes sidewalls and gate creating safety barrier for passenger.
2. Configuration: ******Verify configuration below on job-to-job basis******
   a. Straight through entry/exit, with front and rear openings.
   b. 90-degree turn entry/exit, with front and side openings.
   c. Number of Stops: Two.
   d. Landing Openings, Self-Closing:
      1) Lower landing with platform-mounted gate.
      2) Upper landing with platform-mounted gate and fixed upper landing gate.
3. Lift Load Capacity: 750 lb, maximum.
4. Lifting Height from Bottom to Upper Floor Level: As indicated on Drawings.
5. Platform Width Clearance: 36 inches. ******Width and Length here are from Garaventa Opal "Mid-Size" Platform - for wheelchair user with companion******
6. Platform Length Clearance: 54-7/8 inches.
7. Platform Gate: Self-closing and flush-mounted, minimum height of 42 inches with width corresponding to width of platform.
8. Platform Side Wall Panels: Minimum height of 42 inches, with **<< galvanized steel; aluminum; or _____>>** sheet panels, and enclosed within rectangular **<< extruded aluminum; steel; or _____>>** framework.
9. Platform Floor: **<< Steel; Galvanized steel; Stainless steel; Aluminum; or _____>>** sheet with **<< matte finish; primed finish; checkered texture; non-skid painted finish; or _____>>**, having overall thickness not greater than **<< 1-1/2 inches; or ___ inches>>**.
10. Access Ramp at Bottom Landing: Fold-up/retractable ramp to transition from floor level to lift platform, with ramp finish to match lift platform. ******Common for retrofit; for new work, try to coordinate slab recess with structural engineer to not require a ramp******
    a. Size: Provide end ramps at least 32 inches wide and side ramps at least 42 inches wide; length as required for slope with 1:12 maximum slope.
11. Pit Depth: 3 inches. ******Common for new work; verify with manufacturer and coordinate with Structural Engineer for slab recess******
12. Drive System:
    a. Self-lubricating acme screw drive.
       1) Rated Speed: 10 fpm, nominal.
13. Drive System Enclosure: Provide rectangular **<< galvanized steel; extruded aluminum; or _____>>** tube frame with flush **<< steel; galvanized steel; aluminum; or _____>>** sheet panels on sides and top to enclose drive system components; securely attach enclosure to adjacent substrate.

2.03 ELECTRICAL CHARACTERISTICS AND COMPONENTS

A. Electrical Characteristics: Motor for leadscrew drive system.

1. 2.0 HP motor; 120V single phase, 60 Hz, on a dedicated 20-amp circuit.

DRAFT

2. Motor Control: **<< Inverter control; or _____>>** and other components as required by manufacturer for system indicated.
3. Disconnect Switch: Factory mount disconnect switch **<< in control panel; or _____>>**.

B. Platform Controls: 24V, continuous pressure switch, one for each direction, with keyed operation.
1. Include illuminated emergency stop switch to sh audible audio alarm when activated; with battery backup.

C. Call Stations: 24V control; keyed operation. Provide station at upper landing mounted to gate frame; provide wall-mount station at lower landing, final location as indicated on Drawings or as approved by Architect.

D. Emergency Operation: Provide battery-powered lowering, to lower lift to landing due to malfunction or loss of power.

E. Electrical Components, Boxes, Conduit, Wiring, and Devices: Comply with **<<NFPA 70>>** and **<<UL (DIR)>>** or **<<ITS (DIR)>>** listed and labeled, and marked as applicable for proposed locations.

2.04 MATERIALS

A. Rolled Steel Sections, Shapes, and Rods: Comply with **<<ASTM A36/A36M>>**.

B. Sheet Steel: Hot-dipped galvanized steel sheet, **<<ASTM A653/A653M>>**, Designation SS (structural steel), Grade **<< 33 (230); 37 (255); 55 (380); or _____>>**, with **<< G90/Z275; or ____>>** coating.

C. Rolled Steel Floor Plates: Comply with **<<ASTM A786/A786M>>**, **<< 1/8 inch; or ___ inch>>** thick, with **<< manufacturer's standard surface pattern; Pattern No.4; or Pattern No. ___>>**; rolled from steel plate complying with **<<ASTM A572/A572M>>**, Grade **<< 55 (380); or _____>>**.

D. Steel Tubing: Comply with **<<ASTM A500/A500M>>**, cold formed.

E. Anchor Bolts and Rods: Comply with **<<ASTM F1554>>**, **<< Grade 36; Grade 55; or Grade 105>>**.

F. Welding: Comply with applicable requirements of **<<AWS D1.1/D1.1M>>** and **<<AWS D1.3/D1.3M>>**.

2.05 EQUIPMENT

A. Lubrication of Equipment: Provide grease fittings for lubricating bearings requiring periodic lubrication, automatic feed type grease cups, and visible and easily accessible lubrication points.

B. Guide Rails, Ropes, Counterweights, Sheaves, Attachment Brackets, and Anchors: Sized in accordance with local building code, including safety factors.

C. Maintenance Devices: Provide as necessary within wheelchair lift system, supported on structural members within accessible locations.

2.06 FINISHES

A. Baked-On Factory Finish for Structural Metal Surfaces: Clean surfaces of rust, oil, or grease and wipe clean with solvent; apply manufacturer's standard two-coat, baked-on finish consisting of primer and thermosetting top coat.
1. Color: **<< Manufacturer's standard color; As selected by Architect from manufacturer's standard line; or _____>>**.

DRAFT

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that areas and conditions comply with installation tolerances and other conditions affecting this work.

B. Verify that locations for electrical rough-in connections to system equipment are in acceptable locations before installing equipment.

C. Verify that electrical power is available and of correct characteristics.

D. Verify that adjacent walls and floors for wheelchair lift areas are plumb and square, and slab recess (if applicable) is properly sized.

E. Do not proceed with installation until unacceptable conditions have been corrected.

3.02 PREPARATION

A. Prepare surfaces of substrates using methods in accordance with lift manufacturer's installation instructions.

B. Clean surfaces thoroughly before starting installation of lifts.

3.03 INSTALLATION

A. Install wheelchair lift system and components in accordance with manufacturer's written installation instructions.

B. Install wheelchair lift system securely to supporting structure, and flush with adjacent surfaces.

C. Install structural components using methods that comply with requirements indicated relative to layout and structural position.

3.04 ADJUSTING

A. Adjust wheelchair lift equipment to operate smoothly and safely.

B. Verify vertical travel of wheelchair lift system; adjust as necessary to maintain operating range indicated.

C. After installation, inspect exposed factory-finished wheelchair lift equipment and repair damaged finishes.

3.05 CLEANING

A. Remove protective coverings from finished surfaces.

B. Clean surfaces and components.

3.06 FIELD QUALITY CONTROL

A. Provide Acceptance Testing and inspections by regulatory agencies certified in accordance with **<<ASME A18.1>>**.

1. As a part of final acceptance of the project the Contractor shall have third-party certified testing and inspection firm conduct a full Acceptance Inspection and Test in accordance with ASME A18.1 before final acceptance by the Owner. The Contractor shall furnish to the Owner all data affecting the lift installation or modification, including "as-installed" circuit and control wiring diagrams and maintenance manuals.
2. The lift installer shall coordinate and participate with all tests, inspections, and approvals required by the building code, including but not limited to inspections by testing and inspection firm, fire marshal and LAHJ inspector. The lift installer shall attend and assist

DRAFT

with tests, inspections, and approvals required by the building code at no additional cost to the Owner.

3. Schedule tests with agencies and notify **<<Owner>>** and **<<Architect>>**.
4. Obtain permits as required to perform tests.
5. Document regulatory agency tests and inspections in accordance with requirements.
6. Perform tests required by regulatory agencies.
7. Furnish test and approval certificates issued by authorities having jurisdiction.

3.07 CLOSEOUT ACTIVITIES

A. Demonstration: Demonstrate operation of wheelchair lift system to **<<Owner>>**'s personnel.
   1. Use operation and maintenance data as a reference during the demonstration.
   2. Briefly describe function, operation, and maintenance of each component.

B. Training: Train **<<Owner>>**'s personnel on operation and maintenance of system.
   1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
   2. Provide minimum of **<< two hours; one day; or _____>>** of training.
   3. Instructor: Manufacturer's training personnel.
   4. Location: At project site, us.

3.08 MAINTENANCE

A. Provide an initial maintenance contract for service and maintenance of wheelchair lifts system and components for one year after Date of Substantial Complietion.
   1. Perform maintenance work using competent personnel under supervision and directly employed by wheelchair lift installer.
   2. Assigning or transfer of maintenance service to any agent or subcontractor is not permitted without prior consent of **<<Owner>>**.
   3. Examine at bi-monthly intervals (every two months, minimum); clean, adjust, and lubricate equipment.
   4. Repair, or replace parts when required with parts produced by original equipment manufacturer.
   5. Provide emergency call back service during working hours during maintenance period.

END OF SECTION 144200

DRAFT

SECTION 210500
COMMON WORK RESULTS FOR FIRE SUPPRESSION

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASME B16.1 - Gray Iron Pipe Flanges and Flanged Fittings: Classes 25, 125, and 250.

B. ASME B16.3 - Malleable Iron Threaded Fittings: Classes 150 and 300.

C. ASME B16.5 - Pipe Flanges and Flanged Fittings: NPS 1/2 Through NPS 24 Metric/Inch Standard.

D. ASME B16.9 - Factory-Made Wrought Buttwelding Fittings.

E. ASME B16.25 - Buttwelding Ends.

A. ASME BPVC-IX - Boiler and Pressure Vessel Code, Section IX - Qualification Standard for Welding, Brazing, and Fusing Procedures; Welders; Brazers; and Welding, Brazing, and Fusing Operators.

B. ASTM A47/A47M - Standard Specification for Ferritic Malleable Iron Castings.

C. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.

D. ASTM A135/A135M - Standard Specification for Electric-Resistance-Welded Steel Pipe.

E. ASTM A234/A234M - Standard Specification for Piping Fittings of Wrought Carbon Steel and Alloy Steel for Moderate and High Temperature Service.

F. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength.

G. ASTM A536 - Standard Specification for Ductile Iron Castings.

H. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

I. ASTM A795/A795M - Standard Specification for Black and Hot-Dipped Zinc-Coated (Galvanized) Welded and Seamless Steel Pipe for Fire Protection Use.

J. ASTM C592 - Standard Specification for Mineral Fiber Blanket Insulation and Blanket-Type Pipe Insulation (Metal-Mesh Covered) (Industrial Type).

K. ASTM C1107/C1107M - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink).

L. ASTM E814 - Standard Test Method for Fire Tests of Penetration Firestop Systems.

M. AWS D1.1/D1.1M - Structural Welding Code - Steel.

N. AWWA C105/A21.5 - Polyethylene Encasement for Ductile-Iron Pipe Systems.

O. AWWA C110/A21.10 - Ductile-Iron and Gray-Iron Fittings.

P. AWWA C111/A21.11 - Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.

Q. AWWA C151/A21.51 - Ductile-Iron Pipe, Centrifugally Cast.

R. AWWA C606 - Grooved and Shouldered Joints.

S. FM 1920 - Approval Standard for Pipe Couplings and Fittings for Aboveground Fire Protection Systems.

T. NFPA 13 - Standard for the Installation of Sprinkler Systems.

DRAFT

U. NFPA 14 - Standard for the Installation of Standpipe and Hose Systems.

V. NFPA 1963 - Standard for Fire Hose Connections.

W. UL 405 - Standard for Safety Fire Department Connection Devices.

1.02 SUBMITTALS

A. Coordinate submittals for all fire-suppression sections as a complete submission per requirements of Division 21 Section "Water-Based Fire-Suppression Systems."

1.03 QUALITY ASSURANCE

A. Equipment and appliances comprising portions of the mechanical systems regulated by the International Mechanical Code shall be listed and labeled in accordance with the applicable edition of the Maryland Building Code.

B. Equipment and appliances comprising portions of the fire suppression systems regulated by **<<NFPA 13>>** shall be installed in accordance with the listing and the manufacturer's installation instructions. Manufacturer's installation instructions shall be available on the job site for use and inspection.

C. Steel Support Welding: Comply with **<<AWS D1.1/D1.1M>>**.

D. Steel Pipe Welding: Comply with **<<ASME BPVC-IX>>**; "Welding and Brazing Qualifications."

1. Comply with applicable provisions of ASME B31 series "Code for Pressure Piping."
2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

E. Products Requiring Electrical Connection: Listed and classified as suitable for the purpose specified and indicated.

1. Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.

F. Clean equipment, pipes, valves, and fittings of grease, metal cuttings, and sludge that may have accumulated from the installation and testing of the system.

DRAFT

1.04 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store valves in shipping containers, with labeling in place.

B. Provide factory-applied temporary protective coating on cast iron and steel valves.

C. Provide factory-applied temporary end caps and closures on piping and fittings. Maintain in place until installation.

1.05 COORDINATION

A. Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction, to allow for fire-suppression installations.

1.06 INTENT OF CONTRACT DOCUMENTS

A. Fire Suppression/Protection drawings are diagrammatic, indicating general locations and arrangements of pipe, and equipment. Not necessarily indicating all offsets, conditions, and appurtenances required to provide clearances for maximum practical accessibility to perform maintenance.

B. Coordinate work to achieve proper operation and to provide maintainable installed conditions.

C. Notify representatives of Owner and Architect immediately of conditions which do not comply or will not produce this result.

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS

A. Fire-Suppression System:
   1. Design and provide complete fire-suppression system in accordance with all Division 21 sections and Fire Protection drawings.
   2. Comply with **<<NFPA 13>>**and **<<NFPA 14>>**, as applicable.

B. Provide system pipes, fittings, sleeves, escutcheons, seals, and other related components and accessories as required for a complete fire-suppression system.

2.02 DIELECTRIC FITTINGS

A. Description: Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match fire-suppression piping system materials.

B. Insulating Material: Suitable for system fluid, pressure, and temperature.

C. Dielectric Unions: Factory-fabricated, union assembly, for 250-psig minimum working pressure at 180 degrees F.

D. Dielectric-Flange Kits: Companion-flange assembly for field assembly. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
   1. Separate companion flanges and steel bolts and nuts shall have 150- or 300-psig minimum working pressure where required to suit system pressures.

E. Dielectric Couplings: Galvanized-steel coupling with inert and non-corrosive, thermoplastic lining; threaded ends; and 300-psig minimum working pressure at 225 degrees F.

F. Dielectric Nipples: Electroplated steel nipple with inert and non-corrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig minimum working pressure at 225 degrees F.

2.03 SLEEVES

A. Galvanized-Steel Sheet: **<<ASTM A653/A653M>>**; 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.

B. Steel Pipe: **<<ASTM A53/A53M>>** Schedule 40, Type E, Grade B, galvanized; with plain ends.

C. Cast Iron: Cast or fabricated "wall pipe" equivalent to **<<AWWA C151/A21.51>>** cast ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

D. Molded Polyethylene: Reusable PE, tapered-cup shape, and smooth-outer surface, with nailing flange for attaching to wooden forms.

E. Clearances:
   1. Wall, Floor, Floor, Partitions, and Beam Flanges: 1 inch greater than outside pipe diameter, unless otherwise indicated.
   2. Rated Openings: Caulked tight with a tested firestopping material complying with **<<ASTM E814>>** and in accordance with Division 7 section "Firestopping," to prevent the spread of fire, smoke, and gases.

2.04 MECHANICAL PIPE SLEEVE-SEAL SYSTEMS

A. Manufacturers:

DRAFT

1. Advance Products & Systems, Inc.
2. Calpico, Inc.
3. Metraflex Co.
4. Pipeline Seal and Insulator, Inc.

B. Modular Mechanical Seals:
1. Elastomer-based (EPDM) interlocking links to continuously fill annular space between pipe and wall-sleeve, wall or casing opening.
2. Watertight seal between pipe and wall-sleeve, wall or casing opening.
3. Size and select seal component materials in accordance with service requirements.
4. Glass-reinforced plastic pressure end plates (two per seal).
5. Fasteners: **<<ASTM A307>>** bolts, nuts, and washers; carbon steel with a corrosion-resistant coating; length as required to secure pressure end plates to sealing elements.

2.05 ESCUTCHEONS

A. Material:
1. Chrome-plated brass, unless otherwise indicated.
a. Rough brass is acceptable in unfinished service spaces/equipment rooms.
b. Galvanized cast iron is acceptable for floor-plate type in unfinished service spaces/equipment rooms.
2. Metals and Finish: Comply with **<<ASME A112.18.1>>**.

B. Construction:
1. Provide one-piece construction for mounting on chrome-plated pipe unless otherwise indicated. One piece or split-pattern acceptable for retrofit to existing piping where applicable.
2. Size to fit fire-suppression piping dimension, with outside flange diameter sized to fully cover the opening size.
3. Internal setscrews to maintain a fixed position against a surface.

2.06 PIPE HANGERS AND SUPPORTS

A. General: Comply with applicable requirements of **<<NFPA 13>>**.

B. Hangers for Pipe Sizes 1/2- to 1-1/2 inch: Malleable iron or carbon steel, adjustable swivel, split ring.

C. Hangers for Pipe Sizes 2 inches and Over: Carbon steel, adjustable, clevis.

D. Multiple or Trapeze Hangers: Steel channels with welded spacers and hanger rods.

E. Floor Support: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.

2.07 MECHANICAL COUPLINGS

A. Manufacturers:
1. Victaulic Company.

B. Rigid Mechanical Couplings for Grooved Joints:
1. Dimensions and Testing: Comply with **<<AWWA C606>>**.
2. Minimum Working Pressure: **<< 175 psig; 300 psig; or ___ psig>>**.
3. Housing Material: Fabricate of ductile iron complying with **<< ASTM A536; or _____>>**.

DRAFT

4. Housing Coating: Factory applied **<< orange enamel; or _____>>**.
5. Gasket Material: EPDM suitable for operating temperature range from **<< minus 30 degrees F; or _____ degrees F>>** to **<< 230 degrees F; or ____ degrees F>>**.
6. Bolts and Nuts: Hot-dipped-galvanized or zinc-electroplated steel.
7. Provide stops for direct stab installation without field assembly.

2.08 ACCESSORIES

A. Joining Material: Provide UL listed pipe joint compound for threaded pipe.

B. Non-Shrink Cementitious Grout: Premixed compound consisting of non-metallic aggregate, cement, water reducing and plasticizing agents.
1. Grout: Comply with **<<ASTM C1107/C1107M>>** Grade B; non-shrink and non-metallic, with minimum 5,000 psi compressive strength after 28 days cured.

2.09 PIPING SPECIALTIES

A. Wet Pipe Sprinkler Alarm Valve: Check type valve with divided seat ring, rubber-faced clapper to automatically actuate water motor alarm, pressure retard chamber and variable pressure trim with the following additional capabilities and features:
1. Activate electric alarm.
2. Test and drain valve.
3. Replaceable internal components without removing valve from installed position.
4. Manufacturers:
a. Victaulic Company.

B. Dry Pipe Sprinkler Alarm Valve: Check type valve with divided seat ring, rubber-faced clapper to automatically actuate water motor alarm, accelerator, and with the following additional capabilities and features:
1. Activate electric alarm.
2. Test and drain valve.
3. Externally resettable.
4. Replaceable internal components without removing valve from installed position.

C. Preaction Valve:
1. Operated by detection system listed for releasing service and independent of building fire alarm system with provisions for **<< indicated remote, ; _____ , ; or None - N/A>>**local, and manual releases.
2. Incorporate **<< mechanical; or _____>>** latching mechanism with valve clappers independent of system water pressure fluctuations.
3. Provide test detection device for each actuation circuit adjacent to each controlled valve in accordance with **<<NFPA 13>>**.

D. Auxiliary Drains: Condensate collection drain for each section of trapped pipe in preaction or dry fire protection system.
1. Manufacturers:
a. AGF Manufacturing.

E. Air Venting Valves:
1. Manufacturers:
a. AGF Manufacturing.

DRAFT

F. Backflow Preventer: **<< Reduced-pressure principle; Double-check; or _____>>** valve assembly backflow preventer with drain and OS & Y gate valve on each end.

G. Commercial Riser Manifold: Preassembled and tested riser manifold in accordance with **<<NFPA 13>>**.
   1. Manufacturers:
      a. AGF Manufacturing.

H. Test Connections:
   1. Combination Inspector's Test Connection and Drain Valve:
      a. Provide test connections approximately **<< 6 feet; or ____ feet>>** above floor for **<< each; portion of each; or _____>>** sprinkler system equipped with an alarm device, located at most remote part of each system.
      b. Route combination test connection and drain valve to an open-site drain location, excluding janitor sinks, accepting full flow without negative consequences.
      c. Supply discharge orifice with same size as corresponding sprinkler orifice.
      d. Limit vertical height of exterior wall penetration to **<< 2 feet; or ____ feet>>** above finished grade.
      e. Manufacturers:
         1) AGF Manufacturing**<< ; _____; or None - N/A>>**: www.agfmfg.com/#sle.
   2. Backflow Preventer Test Connection:
      a. Provide downstream of the backflow prevention assembly, listed hose valves with **<< 2.5-inch; or ____-inch>>** National Standard male hose threads with cap and chain.
      b. Provide one valve for each **<< 250 gpm; or ____ gpm>>** of system demand or fraction thereof.
      c. Provide permanent sign reading "Test Valve." See Section **<< 210553>>**.

I. Electric Alarm: Electrically operated **<< chrome-plated; red-enameled; or _____>>** gong with pressure alarm switch.

J. Water Flow Switch: Vane-type switch for mounting horizontally or vertically, with two contacts; rated **<< 10; or ____>>** A at 125 VAC and **<< 2.5; or ____>>** A at 24 VDC.

K. Fire Department Connections:
   1. Type: **<< Free standing; Flush, wall mount; Exposed, projected wall mount; or _____>>** made of corrosion-resistant metal**<< complying with UL 405; _____; or None - N/A>>**.
      a. Inlets: **<< Two; Three; Four; or _____>>**-way, **<< 2-1/2 inch>>** swivel fittings, internal threaded. Thread size and inlets according to **<<NFPA 1963>><< or authority having jurisdiction; _____; or None - N/A>>**. Brass caps with gaskets, chains, and lugs.
      b. Configuration: **<< Horizontal; Vertical; Square; or _____>>**.
      c. Outlet: **<< With pipe threads; Back with pipe threads; Bottom with pipe threads; or _____>>**, **<< 4 NPS; 5 NPS; 6 NPS; or _____ NPS>>**.
         1) Location: **<< Back; Bottom; Left; Right; or _____>>**.
      d. Rated Working Pressure: **<< 175 psi>>**.
      e. Finish: **<< Chrome; Polished chrome; Brass or bronze; Polished brass; or _____>>**.
      f. Sleeve: **<< Brass,; _____ ,; or None - N/A>><< 18-inch>>** height.

DRAFT

g. Signage: Raised or engraved lettering **<< 1 inch>>**, minimum, indicating system type.
h. Manufacturers:

PART 3 EXECUTION

3.01 INSTALLATION

A. Install sprinkler system and service main piping, hangers, and supports in accordance with **<<NFPA 13>>**.
B. Install standpipe piping, hangers, and supports in accordance with **<<NFPA 14>>**.
C. Route piping in orderly manner, plumb and parallel to building structure. Maintain gradient.
D. Install piping to conserve building space, to not interfere with use of space and other work.
E. Group piping whenever practical at common elevations.
F. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.
G. Pipe Hangers and Supports:
   1. Install hangers to provide minimum **<< 1/2 inch>>** space between finished covering and adjacent work.
   2. Place hangers within **<< 12 inches>>** of each horizontal elbow.
   3. Use hangers with **<< 1-1/2 inch>>** minimum vertical adjustment. Design hangers for pipe movement without disengagement of supported pipe.
   4. Support vertical piping at every**<< other; _____; or None - N/A>>** floor. Support riser piping independently of connected horizontal piping.
   5. Where several pipes can be installed in parallel and at same elevation, provide multiple or trapeze hangers.
   6. Prime coat exposed steel hangers and supports. Hangers and supports located in crawl spaces, pipe shafts, and suspended ceiling spaces are not considered exposed.
      a. Painting of interior fire suppression systems is specified in Section **<< 099123>>**.
H. Slope piping and arrange systems to drain at low points. Use eccentric reducers to maintain top of pipe level.
I. Prepare pipe, fittings, supports, and accessories for finish painting. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc-rich primer to welding.
   1. Painting of interior fire suppression systems is specified in Section **<< 099123>>**.
J. Structural Considerations:
   1. Do not penetrate building structural members unless indicated.
K. Provide sleeves when penetrating **<< footings; floors; walls; partitions; and _____>>**. Seal pipe including sleeve penetrations to achieve fire resistance equivalent to fire separation required.
   1. Underground Piping: Caulk pipe sleeve watertight with lead and oakum or mechanically expandable chloroprene inserts with bitumen sealed metal components.
   2. Aboveground Piping:
      a. Pack solid using mineral fiber complying with **<<ASTM C592>>**.
      b. Fill space with an elastomer caulk to a depth of **<< 0.50 inch; or _____ inch>>** where penetrations occur between conditioned and unconditioned spaces.

DRAFT

3. All Rated Openings: Caulk tight with firestopping material complying with **<<ASTM E814>>** in accordance with Section **<< 078400>>** to prevent the spread of fire, smoke, and gases.
4. Caulk exterior wall sleeves watertight with lead and oakum or mechanically expandable chloroprene inserts with mastic-sealed components.

L. Manufactured Sleeve-Seal Systems:
1. Install manufactured sleeve-seal systems in sleeves located in grade slabs and exterior concrete walls at piping entrances into building.
2. Provide sealing elements of the size, quantity, and type required for the piping and sleeve inner diameter or penetration diameter.
3. Locate piping in center of sleeve or penetration.
4. Install field assembled sleeve-seal system components in annular space between sleeve and piping.
5. Tighten bolting for a watertight seal.
6. Install in accordance with manufacturer's recommendations.

M. Escutcheons:
1. Install and firmly attach escutcheons at piping penetrations into finished spaces.
2. Provide escutcheons on both sides of partitions separating finished areas through which piping passes.
3. Use chrome plated escutcheons in occupied spaces and to conceal openings in construction.

N. When installing more than one piping system material, ensure system components are compatible and joined to ensure the integrity of the system. Provide necessary joining fittings. Ensure flanges, unions, and couplings for servicing are consistently provided.

3.02 CLEANING

A. Upon completion of work, clean all parts of the installation.

B. Clean equipment, pipes, valves, and fittings of grease, metal cuttings, and sludge that may have accumulated from the installation and testing of the system.

END OF SECTION 210500

DRAFT

SECTION 211000
WATER-BASED FIRE-SUPPRESSION SYSTEMS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASME B1.20.1 - Pipe Threads, General Purpose, Inch.

B. ASME B16.3 - Malleable Iron Threaded Fittings: Classes 150 and 300.

C. ASME B16.5 - Pipe Flanges and Flanged Fittings: NPS 1/2 Through NPS 24 Metric/Inch Standard.

D. ASME B16.9 - Factory-Made Wrought Buttwelding Fittings.

E. ASME B16.11 - Forged Fittings, Socket-Welding and Threaded.

F. ASME B16.22 - Wrought Copper and Copper Alloy Solder-Joint Pressure Fittings.

G. ASME B16.25 - Buttwelding Ends.

H. ASME B36.10M - Welded and Seamless Wrought Steel Pipe.

I. ASME B40.100 - Pressure Gauges and Gauge Attachments.

J. ASSE 1015 - Performance Requirements for Double Check Backflow Prevention Assemblies.

K. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.

L. ASTM A126 - Standard Specification for Gray Iron Castings for Valves, Flanges, and Pipe Fittings.

M. ASTM A135/A135M - Standard Specification for Electric-Resistance-Welded Steel Pipe.

N. ASTM A234/A234M - Standard Specification for Piping Fittings of Wrought Carbon Steel and Alloy Steel for Moderate and High Temperature Service.

O. ASTM A536 - Standard Specification for Ductile Iron Castings.

P. ASTM A795/A795M - Standard Specification for Black and Hot-Dipped Zinc-Coated (Galvanized) Welded and Seamless Steel Pipe for Fire Protection Use.

Q. ASTM B61 - Standard Specification for Steam or Valve Bronze Castings.

R. ASTM B62 - Standard Specification for Composition Bronze or Ounce Metal Castings.

S. ASTM B63 - Standard Test Method for Resistivity of Metallically Conducting Resistance and Contact Materials.

T. AWS D1.1/D1.1M - Structural Welding Code - Steel.

U. AWWA C104/A21.4 - Cement-Mortar Lining for Ductile-Iron Pipe and Fittings.

V. AWWA C105/A21.5 - Polyethylene Encasement for Ductile-Iron Pipe Systems.

W. AWWA C110/A21.10 - Ductile-Iron and Gray-Iron Fittings.

X. AWWA C111/A21.11 - Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.

Y. AWWA C151/A21.51 - Ductile-Iron Pipe, Centrifugally Cast.

Z. AWWA C153/A21.53 - Ductile-Iron Compact Fittings.

TT. UL 404 - Gauges, Indicating Pressure, for Compressed Gas Service.

UU. UL 405 - Standard for Safety Fire Department Connection Devices.

VV. UL 1091 - Standard for Butterfly Valves for Fire-Protection Service.

DRAFT

1.02 ADMINISTRATIVE REQUIREMENTS

A. Description of Work:

1. The work includes designing and providing an automatic fire extinguishing system of required hazard for building occupancy to afford complete fire protection coverage throughout. The design, equipment, materials, installation and workmanship shall be in strict accordance with the Owners insurance underwriters requirements, the Maryland Uniform Statewide Building Code, and the required and advisory provisions of NFPA.
2. Unless otherwise indicated piping shall not be run in spaces containing electrical equipment in the form of transformers, panel-boards, switchgear, or computer servers.
    a. Exceptions:
        1) Spaces with Personal Computers (PCs).
        2) Spaces whose name does not include the term "Electrical", "Data", or "Computer."
3. Each system shall include materials, accessories and equipment necessary to provide each system complete and ready for use.
4. The design of each system shall give full consideration to blind spaces, piping, electrical equipment, ductwork, and all other construction and equipment to afford complete coverage.

5. Devices and equipment for fire protection service shall be of an approved make and type listed by the Underwriters' Laboratories, Inc., or approved by the Factory Mutual System.
6. In the publications referred to herein, the advisory provisions shall be considered to be mandatory, as though the word "shall" had been substituted for "should" wherever it appears.
7. Reference to the "authority having jurisdiction" shall be interpreted to mean the Local Fire Marshal.
8. The work shall begin outside the building at a point five feet from the exterior surface of the wall at the location indicated on the drawings.
9. Calculations shall include delivering water from the point of the fire hydrant flow test through the site piping.
10. Consideration shall be given to all unheated areas such as attics, utility rooms, loading docks, outdoor storage spaces with canopies, etc., to provide freeze protection in accordance with NFPA 13. This shall include the installation of dry sprinklers or **<< dry-pipe>>** sprinkler systems where necessary.

1.03 COORDINATION

A. Coordinate layout and installation of sprinklers with other construction that penetrates ceilings, including light fxtures, HVAC equipment, and partition assemblies.

1.04 SUBMITTALS

A. Product Data: Provide data on piping materials, sprinklers, valves, hose connections, hose stations, fire department connections, alarm devices, and specialties, including manufacturers catalog information. Submit performance ratings, rough-in details, weights, support requirements, flow characteristics, mounting, finish, size, types, electrical data, and piping connections.

B. Shop Drawings:
   1. Prepare in compliance with NFPA 13.
   2. Submit preliminary layout of finished ceiling areas indicating only sprinkler locations coordinated with ceiling installation.
   3. Indicate hydraulic calculations, detailed pipe layout, hangers and supports, sprinklers, components, and accessories. Indicate system controls.
   4. Submit **<< shop drawings; product data; hydraulic calculations; and _____ >>** to **<< Fire Marshall; Authorities Having Jurisdiction; or _____>>** for approval. Submit proof of approval to **<<Architect>>**.
   5. Sprinklers shall be referred to on drawings, submittals, and other documentation by the sprinkler identification or Model number as specificially published in the appropriate agency listing or approval. Trade names or other abbreviated designations shall not be allowed.

C. Manufacturer's Certificate: Certify that system has been tested and meets or exceeds**<< specified requirements and; _____; or None - N/A>>** code requirements.

D. Fire hydrant flow test report.
   1. Bids shall be based on indicated fire hydrant flow and pressure.
   2. Design calculations shall be based on the results of a confirming fire hydrant flow test performed or caused to be performed by the Contractor.

E. Field Test Reports submitted to Architect and Authorities Having Jurisdiction.

F. Designer's qualification statement.

DRAFT

G. Installer's qualification statement.

H. Welder's qualification statement.

I. Operation and Maintenance Data: Include components of system, servicing requirements, record drawings, inspection data, replacement part numbers and availability, and location and numbers of service depot.

J. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.

1. See Section **<< 016000 - Product Requirements>>** for additional provisions.
2. Extra Sprinklers: Type and size matching those installed in quantity required by referenced NFPA design and installation standard.
3. Sprinkler Wrenches: For each sprinkler type.

K. Project Record Documents: Record actual locations of sprinklers and deviations of piping from drawings. Indicate drain and test locations.

1.05 QUALITY ASSURANCE

A. Maintain one copy of referenced design and installation standard on site.

B. Comply with **<< FM (AG); ITS (DIR); UL (DIR); or _____>>** requirements.

C. Designer Qualifications: Design system under direct supervision of a **<< Professional Engineer; Professional Fire Protection Engineer; or _____>>** experienced in design of this type of work and licensed in **<<the State in which the Project is located>>**.

D. Installer Qualifications: Company specializing in performing the work of this section**<< with minimum _____ years experience; _documented experience; _____; or None - N/A>><< and approved by manufacturer; _____; or None - N/A>>**.

E. Welder's Qualifications: Specializing in performing the work of this section in accordance with **<<ASME BPVC-IX>>**.

F. Equipment and Components: Provide products that bear **<< FM (AG); ITS (DIR); UL (DIR); or _____>>** label or marking.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Store products in shipping containers and maintain in place until installation. Provide temporary inlet and outlet caps. Maintain caps in place until installation.

DRAFT

PART 2 PRODUCTS

2.01 SINGLE SOURCE RESPONSIBILITY

A. Grooved couplings, fittings, valves and specialties shall be products of a single manufacturer.

B. Grooving tools shall be of the same manufacturer as the grooved components.

C. Castings used for couplings housings, fittings, or valve and specialty bodies shall be date stamped for quality assurance and traceability.

D. Couplings requiring a torque wrench in accordance with manufacturer's instructions shall have a test tag attached to each bolt showing torque used for each. Tags shall be date stamped and initialed by installer.

2.02 SPRINKLER SYSTEM

A. Fire-suppression sprinkler system shall be approved by authorities having jurisdiction.

B. Sprinkler System Rated Working Pressure: Minimum 175 psig.

C. Sprinkler System: Wet-pipe sprinkler system - automatic sprinklers attached to pipes connected to water supply with immediate water discharge when opened through fusible link or frangible device. Provide coverage for **<< entire building; building areas noted; building areas noted in Schedule; or _____>>**.

D. Occupancy: Comply with **<<NFPA 13>>**. Refer to drawings.
   1. Light Hazard: 0.10 gpm over 1500 sf area.
   2. Ordinary Hazard, Group 1 Occupancy: 0.15 gpm over 1500 sf area.
   3. Ordinary Hazard, Group 2 Occupancy: 0.20 gpm over 1500 sf area.

E. Maximum Protection Coverage per Sprinkler: Comply with **<<UL (DIR)>>** listing.
   1. Office Spaces: 225 square feet.
   2. Storage Areas: 130 square feet
   3. Mechanical Equipment Rooms: 130
   4. Electrical Equipment Rooms: 130 square feet.
   5. Other Areas: Comply with **<<NFPA 13>>**, unless indicated otherwise.

F. Water Supply: Margin of safety for available water flow and pressure:
   1. 10 percent or 10 psi, whichever is greater.
   2. Include losses through water-service piping, valves, and backflow preventers.

G. Sprinkler System Combined Hose-Stream Demand Requirement: Compy with **<<NFPA 13>>**, unless indicated otherwise.
   1. Light Hazard Occupancy: 100 gpm for 30 minutes.
   2. Ordinary Hazard Occupancy: 250 gpm for 60 to 90 minutes.

H. Interface system with **<< building control system; building fire and smoke alarm system; or _____>>**.

I. Provide fire department connections where indicated.

J. Storage Cabinet for Spare Sprinklers and Tools: Steel, **<< located adjacent to alarm valve; in location designated; or _____>>**.

K. Pipe Hanger Fasteners: Attach hangers to structure using appropriate fasteners, as follows:

L. Exposed Sprinkler Piping: Coordinate to eliminate or reduce visibility of exposed sprinkler piping as much as possible, including:
   1. For clerestories: Coordinate sprinkler piping to avoid piping installed in front of glazing assemblies. Routing shall be in between windows or in front of mullions for a neat, exposed appearance approved by Architect.
   2. For roof height elevation changes in exposed areas: Limit sprinkler piping to 1 or 2 locations within a single open space to reduce visibility of vertical piping. Sprinkler mains shall not be routed in exposed areas unless required. If required, mains locations shall be coordinated with Architect.
   3. Where vertical exposed piping occurs, the piping shall be installed along the wall and in the corner to reduce visibility.

M. Locations and Arrangements: General locations and arrangements indicated on drawings.
   1. Piping shall be exposed in spaces without ceilings only if supplying sprinklers in the same space.
   2. Only piping serving sprinklers within electrical equipment spaces shall be allowed in electrical equipment rooms.
      a. Exception: Generator or transformer rooms separated from the remainder of the building by walls and floor/ceiling or roof/ceiling assemblies having a fire-resistance

DRAFT

rating of not less than two hours shall not require sprinkler coverage provided that such rooms are protected with an approved automatic fire detection system.

3. Deviations from approved Shop Drawnigs for piping require written approval from authorities having jurisdiction. Receive written approval from Owner and Architect/Engineer before deviating from approved Shop Drawings.

2.03 WATER PIPING

A. Steel Pipe: Threaded end, **<< ASTM A53/A53M Schedule 40; ASTM A135/A135M Schedule 10; ASTM A795/A795M Standard Weight; and _____>>**, galvanized**<< , with AWWA C105/A21.5 polyethylene jacket, or double layer, half-lapped polyethylene tape; , _____; or None - N/A>>**.

1. Steel Fittings: **<< ASME B16.3, malleable iron threaded; ASME B16.4, gray iron threaded; ASTM A733, steel threaded pipe nipples made of ASTM A53/A53M or ASTM A106, Schedule 40 seamless steel pipe, include ends matching joining method; and ASTM A865, steel threaded couplings>>**.
2. Cast Iron Fittings: **<<ASME B16.1>>**, flanges and flanged fittings.
3. Joints: Welded in accordance with **<<AWS D1.1/D1.1M>>**.
4. Casing for Underground Installation: **<< Closed glass cell insulation; Polyurethane insulation with high density polyethylene jacket and heat shrink sleeves; or _____>>**.

B. Steel Pipe: Plain end, **<< ASTM A53 Schedule 40; ASTM A135/A135M; and ASTM A795>>**.

1. Steel Fittings: **<< ASME B16.9 and, ASTM A234/A234M or ASME B16.11 , steel welding fittings; and ASME B16.5 steel flanges and flanged fittings>>**.
2. Mechanical Grooved Couplings: Malleable iron housing clamps to engage and lock, "C" shaped elastomeric sealing gasket, steel bolts, nuts, and washers; galvanized for galvanized pipe.
3. Mechanical Formed Fittings: Carbon steel housing with integral pipe stop and O-ring pocked and O-ring, uniformly compressed into permanent mechanical engagement onto pipe.
4. Mechanical Press Sealed Fittings: **<<ASTM F3226/F3226M>>**; listed as complying with **<<UL 213>>** or **<<FM 1920>>**, with EPDM seals.

C. Steel Pipe: Grooved end, **<< ASTM A53 Schedule 40; ASTM A135/A135M; and ASTM A795>>**.

1. Steel Fittings: **<< ASME B16.9 and, ASTM A234/A234M or ASME B16.11 , steel welding fittings; and ASME B16.5 steel flanges and flanged fittings>>**.
2. Mechanical Grooved Couplings: Malleable iron housing clamps to engage and lock, "C" shaped elastomeric sealing gasket, steel bolts, nuts, and washers; galvanized for galvanized pipe.
3. Mechanical Formed Fittings: Carbon steel housing with integral pipe stop and O-ring pocked and O-ring, uniformly compressed into permanent mechanical engagement onto pipe.
4. Mechanical Press Sealed Fittings: **<<ASTM F3226/F3226M>>**; listed as complying with **<<UL 213>>** or **<<FM 1920>>**, with EPDM seals.

D. Steel Pipe: Grooved end, NPS (DN 125) Schedule 10 and smaller, NFPA 13 compliant wall thickness in NPS 6 to NPS 10 (DN 150 to DN250).

1. Steel Fittings: **<< ASME B16.9 and, ASTM A234/A234M or ASME B16.11 , steel welding fittings; and ASME B16.5 steel flanges and flanged fittings>>**.

DRAFT

2. Mechanical Grooved Couplings: Malleable iron housing clamps to engage and lock, "C" shaped elastomeric sealing gasket, steel bolts, nuts, and washers; galvanized for galvanized pipe.
3. Mechanical Formed Fittings: Carbon steel housing with integral pipe stop and O-ring pocked and O-ring, uniformly compressed into permanent mechanical engagement onto pipe.
4. Mechanical Press Sealed Fittings: **<<ASTM F3226/F3226M>>**; listed as complying with **<<UL 213>>** or **<<FM 1920>>**, with EPDM seals.

E. Ductile Iron Pipe: **<<AWWA C151/A21.51>>**, with mechanical joint bell end and plain end.
1. Fittings: uctile or gray iron **<<AWWA C110/A21.10>>**, standard thickness or **<<AWWA C153/A21.53>>**, compact thickness.
2. Joints: **<<AWWA C111/A21.11>>**, ductile or gray iron gland, styrene-butadiene rubber (SBR) or vulcanized SBR gasket.
3. Mechanical Couplings: Shaped composition sealing gasket, steel bolts, nuts, and washers.

F. Ductile Iron Pipe: Listed, **<<AWWA C151/A21.51>>**, with push-on joint bell and plain end.
1. Fittings: Ductile or gray iron **<<AWWA C110/A21.10>>**, standard thickness or **<<AWWA C153/A21.53>>**, compact thickness.
2. Joints: **<<AWWA C111/A21.11>>**, styrene-butadiene rubber (SBR) or vulcanized SBR rubber gasket with **<< 3/4 inch>>** diameter rods.

G. Ductile Iron Pipe: Listed, **<<AWWA C151/A21.51>>**, with factory or field formed, radius cut grooved ends in accordance with **<<AWWA C606>>**.
1. Fittings: **<<ASTM A536>>**, ductile iron casting with outside diameter matching outside diameter of ductile iron pipe.
2. End Couplings: **<<AWWA C606>>**, grooved with gasket fitting matching outside diameter of ductile iron pipe. Include ductile iron housing with keys matching ductile iron pipe and fitting grooves, prelubricated rubber gasket with center leg, and steel bolts and nuts.
3. Transition Couplings: **<<UL 213>>** and **<<AWWA C606>>**, grooved with gasket fitting and end matching outside diameter of ductile iron pipe and steel pipe. Include ductile iron housing with keys matching ductile iron pipe and steel pipe grooves, prelubricated rubber gasket listed for use with housing, and steel bolts and nuts.

H. Piping fittings for NPS 2 and smaller: Use any of the following:
1. For threaded end, black, Schedule 40 steel pipe:
   a. Cast or malleable iron thraded fittings.
   b. Threaded joints.
2. For plain end, black, Schedul 40 steel pipe:
   a. Steel welding fittings.
   b. Welded joints.
3. For grooved end, black, Schedule 40 steel pipe with square cut or roll grooved ends:
   a. Grooved end fittings.
   b. Grooved end pipe couplings.
   c. Grooved joints.

I. Piping fittings for NPS 2 1/2 and larger: Use any of the following:
1. For threaded end, black, Schedule 40 steel pipe:
   a. Cast or malleable iron threaded fittings.
   b. Threaded joints.

DRAFT

2. For plain end, black, Schedule 10 steel pipe:
   a. Steel welding fittings.
   b. Welded joints.
3. For grooved end, black, Schedule 10 steel pipe:
   a. Grooved end fittings.
   b. Grooved end pipe couplings.
   c. Roll grooved joints.

J. Specialty sprinkler fittings of size NPS 2 and smaller, including mechanical T and cross fittings, may be used downstream from sprinkler zone valves.

2.04 MECHANICAL COUPLINGS

A. Manufacturers:
   1. Tyco Fire Protection Products.
   2. Victaulic Company.

B. Rigid Mechanical Couplings for Grooved Joints:
   1. Dimensions and Testing: Comply with **<<AWWA C606>>**.
   2. Minimum Working Pressure: **<< 175 psig; 300 psig; or ___ psig>>**.
   3. Housing Material: Fabricate of ductile iron complying with **<< ASTM A536; or _____>>**.
   4. Housing Coating: Factory applied **<< orange enamel; or _____>>**.
   5. Gasket Material: EPDM suitable for operating temperature range from **<< minus 30 degrees F; or _____ degrees F>>** to **<< 230 degrees F; or ____ degrees F>>**.
   6. Bolts and Nuts: Hot-dipped-galvanized or zinc-electroplated steel.
   7. Provide stops for direct stab installation without field assembly.

2.05 FLEXIBLE CONNECTORS

A. Manufacturers:
   1. Tyco Fire Protection Products.
   2. Victaulic Company

B. Provide connectors suitable for system fluid rated for minimum 175 psig working pressure with ends as follows:
   1. NPS 2 and smaller: Grooved.
   2. NPS 2 1/2 (DN 65) and larger: Grooved or grooved for use with grooved end pipe couplings.

C. Flexible Connectors for Stainless Steel Hose or Pipe: Corrugated, stainless steel inner tubing covered with stainless steel wire braid with stainless steel nipples or

2.06 VALVES, GENERAL

A. Valve types and locations are indicated on Drawings.

B. Valve requirements for locations without specific valve types indicated:
   1. Listed Fire Protection Valves:
      a. Shutoff Duty: Use ball, butterfly, or gate valves.
   2. Non-Listed General Duty Valves:
      a. Shutoff Duty: Use ball, butterfly, or gate valves.
      b. Throttling Duty: Use ball or globe valves.

DRAFT

2.07 LISTED FIRE PROTECTION VALVES

A. General:
   1. Minimum Compliance: **<<UL (DIR)>>** listed and labeled.
   2. Minimum Rated Working Pressure: 175 psig.

B. OSY Gate:
   1. Comply with **<<UL 262>>**.
   2. Ductile iron body.
   3. Ends: Flanged x grooved or grooved x grooved ends. Flanged x flanged is not permitted.

C. Ball Valves:
   1. Comply with **<<UL 1091>>** for ball, not disc.
   2. NPS 1 1/2 and smaller: Bronze body with grooved ends.
   3. NPS 2 and NPS 2 1/2: Ductile iron body with grooved ends.
   4. NPS 3: Ductile iron body with grooved ends.

D. Butterfly Valves:
   1. Comply with **<<UL 1091>>**.
   2. NPS 2 and smaller: Bronze body with grooved ends.
   3. NPS 2 1/2 and larger: Bronze, cast iron, or ductile iron body, wafer type or with flanged or grooved ends. Pressure responsive valve seat and offset stem to provide 360 degree seating.

E. Check Valves - NPS 2 or larger:
   1. Comply with **<<UL 312>>**.
   2. Spring-assisted swing type for vertical or horizontal installation.
   3. Cast or ductile iron body.
   4. Ends: Flanged or grooved.

F. Indicating Valves:
   1. Comply with **<<UL 1091>>**.
   2. Integral indicating device with ends matching connecting piping.
   3. Indicator: Weatherproof actuator housing.
   4. Switches: Prewired, single pole, single throw, supervisory.
   5. Electrical Requirements: 15 A; 125 V; 60 HZ.
   6. NPS 2 and smaller: Ball or butterfly valve with bronze body and grooved ends.
   7. NPS 2 1/2 and larger: Butterfly valve with cast or ductile iron body, wafer type or with flanged or grooved ends.

G. Sprinkler System Contol Valves - Riser Check Valve:
   1. Comply with UL 193.
   2. Installation: Vertical or horizontal.
   3. Description:
      a. Bronze grooved seat with O-ring seals.
      b. Single hinge pin.
      c. Latch design.
      d. Trim sets for drain and pressure gauges.

H. Sprinkler System Control Valves - Automatic Drain Valve:
   1. Comply with UL 1726, N

DRAFT

2. Size: NPS 3/4.
3. Description: ball check device.
4. Ends: Threaded or grooved.

2.08 NON-LISTED GENERAL DUTY VALVES

A. Ball Valves - NPS 2 and smaller:
   1. **<<MSS SP-110>>**.
   2. Body: 2 piece copper alloy with chrome plated brass ball.
   3. CWP Rating: 600 psig minimum.
   4. Ends: Threaded with blowout-resistent stem.

B. Check Valves - NPS 2 and smaller:
   1. **<<MSS SP-80>>**, Type 4, Class 125 minimum.
   2. Body: Brass, swing type with non-metallic disc.
   3. Ends: Threaded.

C. Globe Valves - NPS 2 and smaller:
   1. **<<MSS SP-80>>**, Type 2, Class 125 minimum.
   2. Body: Brass with non-metallic disc.
   3. Ends: Threaded.

2.09 SPRINKLERS

A. Refer to drawings for sprinkler type locations. For locations not indicated on drawings, use the following:
   1. Rooms without Ceilings: Upright sprinklers.
   2. Rooms with Suspended Ceilings: Recessed pendant sprinklers unless otherwise indicated then concealed sprinklers as indicated.
   3. Wall Mounting: Recessed sidewall sprinklers.
   4. Spaces Subject to Freezing: Upright, dry pendant, dry sidewall sprinklers as indicated.
   5. Special Applications: Extended coverage, flow control, and quick response sprinklers where indicated or required.

B. Suspended Ceiling Type: **<< Semi-recessed; Recessed; Concealed; or _____>> << pendant; upright; or _____>>** type with matching **<< push on; clamp on; screw on; or _____>> << escutcheon; cover; or _____>>** plate.
   1. Response Type: **<< Quick; Standard; or _____>>**.
   2. Coverage Type: **<< Standard; Extended; or _____>>**.
   3. Finish:
      a. Exposed to view: Chrome plated.
      b. Not visible: Rough bronze.
      c. Exposed to acids, chemicals, and corrosive fumes: Wax coated.
   4. Fusible Link: **<< Fusible solder link type; Glass bulb type; or _____>>** temperature rated for specific area hazard.

C. Exposed Area Type: **<< Pendant; Standard; Upright; or _____>>** type**<< with guard; _____; or None - N/A>>**.
   1. Response Type: **<< Quick; Standard; or _____>>**.
   2. Coverage Type: **<< Standard; Extended; or _____>>**.
   3. Finish: Chrome plated.

DRAFT

4. Fusible Link: **<< Fusible solder link type; Glass bulb type; or _____>>** temperature rated for specific area hazard.

D. Sidewall Type: **<< Semi-recessed; Recessed; or _____>>** horizontal sidewall type with matching **<< push on; clamp on; screw on; or _____>>** escutcheon plate.
1. Response Type: **<< Quick; Standard; or _____>>**.
2. Coverage Type: **<< Standard; Extended; or _____>>**.
3. Finish:
a. Exposed to view: Chrome plated.
b. Not visible: Rough bronze.
c. Exposed to acids, chemicals, and corrosive fumes: Wax coated.
4. Fusible Link: **<< Fusible solder link type; Glass bulb type; or _____>>** temperature rated for specific area hazard.

E. Dry Sprinklers: **<< Concealed; Exposed; Plain barrel; Recessed; or _____>>** pendant type with matching push on **<< escutcheon plate; cover plate; or _____>>**.
1. Response Type: **<< Quick; Standard; or _____>>**.
2. Coverage Type: **<< Standard; Extended; or _____>>**.
3. Finish: Rough
4. Fusible Link: **<< Fusible solder link type; Glass bulb type; or _____>>** temperature rated for specific area hazard.

F. Storage Sprinklers: **<< Pendant; Standard; Upright; or _____>>** type**<< with guard; _____; or None - N/A>>**.
1. Response Type: **<< Standard; or _____>>**.
2. Coverage Type: **<< Standard; Extended; or _____>>**.
3. Finish:
a. Exposed to view: Chrome plated.
b. Not visible: Rough bronze.
c. Exposed to acids, chemicals, and corrosive fumes: Wax coated.
4. Fusible Link: **<< Fusible solder link type; Glass bulb type; or _____>>** temperature rated for specific area hazard.

G. Guards: Wire cage with fastening device to attach to sprinkler, finish to match sprinkler finish.

H. Spray Nozzles: Brass with solid cone discharge, **<< 30; 60; 90; 120; 140; or _____>>** degrees of arc**<< with blow-off dust cap; _____; or None - N/A>>**.
1. Finish: **<< Brass.; Nickel.; Enamel, color as selected.; or _____ .>>**

I. Wrenches: Provided by sprinkler manufacturer, directly engages with integral hex-shaped wrench boss in sprinkler body.

J. Flexible Drop System: Stainless steel, multiple use, open gate type.
1. Application: Use to properly locate sprinkler heads.
2. Include all supports and bracing.
3. Provide **<< braided; unbraided; or _____>>** type tube as required for the application.
4. Manufacturers:
a. Victaulic Company**<< ; Vic-Flex; ; _____; or None - N/A>>**: www.victaulic.com/#sle.

2.10 ALARM DEVICES

A. General: Match piping and equipment connections.

DRAFT

B. Wet Pipe Sprinkler Alarm Valve: UL 346, paddle operated waterflow detector with 250 psig pressure rating for mounting horizontal or vertical with the following additional capabilities and features:
   1. Activate electric alarm.
   2. Test and drain valve.
   3. Replaceable internal components without removing valve from installed position.

C. Dry Pipe Sprinkler Alarm Valve: Check type valve with divided seat ring, rubber faced clapper to automatically actuate water motor alarm, accelerator, and with the following additional capabilities and features:
   1. Activate electric alarm.
   2. Test and drain valve.
   3. Externally resettable.
   4. Replaceable internal components without removing valve from installed position.

D. Flooding Deluge Valve: Gate type valve with rubber faced disc actuated **<< manually; pneumatically; electrically; hydraulically; or _____>>** with water motor alarm**<< and electric alarm; _____; or None - N/A>>**, with alarm testing trim.

E. Water Flow Switch: Vane type switch for mounting horizontal or vertical, with two contacts; rated **<< 10; or 7>>** amp at 125 volt AC and **<< 2.5; or ____>>** amp at 24 volt DC. Provide with factory set, field adjustable retard element for preventing false signals and tamperproof cover that sends signal when removed.

F. Supervisory Switches: UL 753.
   1. Electrical, single pole, double throw switches with normally closed contacts.
   2. Signals when controlled valve is not in fully open position.
   3. Manufacturers:
      a. McWane, Inc.; Kennedy Valve Division.
      b. Potter Electric Signal Company, LLC.
      c. System Sensor.

G. Electric Alarm: UL 753, electrically operated **<< chrome plated; red enameled; or _____>>** gong with pressure alarm switch in weatherproof backbox.
   1. Manufacturers:
      a. Notifier.
      b. Potter Electric Company.
      c. System Sensor

H. Sprinkler Drain and Alarm Test Fittings: Cast or ductile iron body, threaded or locking-lug inlet and outlet, test valve, and orifice and sight glass.

2.11 PIPING SPECIALTIES

A. Provide UL listed or FMG approved sprinkler and piping specialty fittings materials compatible with adjacent materials and rated for a minimum 175 psig working pressure.

B. Backflow Preventer: **<< Reduced pressure principle; Double check; or _____>>** valve assembly backflow preventer complying with **<<ASSE 1015>>** with drain and OS & Y gate valve on each end.
   1. Manufacturers:
      a. Ames Co.
      b. Conbraco Industries.

DRAFT

c. Febco.
d. Apollo Valves, part of Conbraco Industries.
e. Watts Industries, Inc.
f. Zurn Plumbing Products Group.

2. Pressure Loss: 8 psig maximum, through middle
3. Size: 3/4 inch to 10 inch, matching connected piping.
4. Body: Brass or bronze for
   a. NPS 2 and smaller: Brass or bronze with ball type valve on inlet and outlet.
   b. NPS 2 1/2 or larger: Cast iron or steel with interior lining complying with **<<AWWA C550>>** with outside screw and yoke-gate type valve with flanged ends on inlet and outlet.

C. Test Connections:
1. Test Header - Manufacturers:
   a. Elkhart Brass Manufacturing Company, Inc.
   b. Fire End and Croker Corporation.
   c. Guardian Fire Equipment Incorporated.
   d. Potter-Roemer Fire Protection.
2. Inspector's Test Connection for Preaction Systems:
   a. Provide test connections approximately **<< 6 ft; or ____ ft>>** above floor for **<< each; portion of each; or _____>>** sprinkler system equipped with an alarm device, located at the most remote part of each system.
   b. Route test connection to an open-site drain location, excluding janitor sinks, accepting full flow without negative consequences.
   c. Supply discharge orifice with same size as corresponding sprinkler orifice.
   d. Limit vertical height of exterior wall penetration to **<< 2 ft; or ____ ft>>** above finished grade.
3. Backflow Preventer Test Connection:
   a. Provide downstream of the backflow prevention assembly, listed hose valves with **<< 2.5 inch; or ____ inch>>** National Standard male hose threads with cap and chain.
   b. Furnish one valve for each **<< 250 gpm; or ____ gpm>>** of system demand or fraction thereof.
4. Hose Valve Manifold Assembly:
   a. Header Pipe: Schedule 40, steel or ductile iron.
   b. Header Pipe Fittings: Galvanized cast-iron threaded fittings.
   c. Automatic Drain Valve: UL 1726.
   d. Hose Valves: UL 668, straightway pattern, chrome plated with cap and chain. Include NFPA 1963 hose thread complying with local fire codes. Match finish of test header manifold escutcheon plate.
   e. Nipples: Schedule 40 galvanized steel pipe with threaded ends.
   f. Caps with Chain: Chrom plated with threaded outlet.
5. Escutcheon Plate: Chrome plated, rectangular.
   a. Finish - exposed parts: Chrome plated.
   b. Escuthcheon Plate Marking: "BKFL TEST CONN."

DRAFT

2.12 FIRE DEPARTMENT CONNECTIONS:

A. Type: **<< Free standing; Flush, wall mount; Exposed, projected wall mount; or _____>>** made of corrosion resistant metal**<< complying with UL 405; _____; or None - N/A>>**.

1. Inlets: **<< Two; Three; Four; or _____>>** way, **<< 2-1/2 inch>>** swivel fittings, internal threaded. Thread size and inlets according to **<<NFPA 1963>><< or Authority Having Jurisdiction; _____; or None - N/A>>**. Brass caps with gaskets, chains, and lugs.
2. Configuration: **<< Horizontal; Vertical; Square; or _____>>**.
3. Outlet: **<< With pipe threads; Back with pipe threads; Bottom with pipe threads; or _____>>**, **<< 4 NPS; 5 NPS; 6 NPS; or _____ NPS>>**.
   a. Location: **<< Back; Bottom; Left; Right; or _____>>**.
4. Rated Working Pressure: **<< 175 psi>>**.
5. Finish: **<< Chrome; Polished chrome; Brass or bronze; Polished brass; or _____>>**.
6. Signage: Raised or engraved lettering **<< 1 inch>>** minimum indicating system type with marking similar to "AUTO SPKR & STANDPIPE."
7. Manufacturers:
   a. Central Sprinkler Corp.
   b. Elkhart Brass Manufacturing Company, Inc.
   c. Fire End & Croker Corporation.
   d. Guardian Fire Equipment Incorporated.
   e. Potter-Roemer Fire Protection.

2.13 HOSE REELS AND HOSES

A. Manufacturers:
1. American Fire Hose & Cabinet.
2. Elkhart Brass Manufacturing Company, Inc.
3. Guardian Fire Equipment Inc.
4. National Fire Products.
5. Potter Roemer Fire Protection.

B. Construction:
1. Semiautomatic hose station complying with UL 47.
2. **<< Red enameled; or _____>>** hose reels, frames, and accessories suitable for hose length and diameter.
3. Reels fitted with swivel and piping to allow continuous flow through hoses.
4. Friction breaks to prevent hoses from accidental unwinding.

C. Hoses:
1. Construction: Complies with NFPA 1961 and UL 219. **<< Flexible 3-braid, single-jacket, hard rubber or heavy duty synthetic red cover, non-collapsible, non-kinking, and fitted with couplings; or _____>>**.
2. Outside Diameter: **<< 1 1/2 inch>>**.
3. Length: 75 feet

D. Couplings: Provide **<< hole type; or _____>>** couplings, **<< one female and one male; or _____>>**, both with chemical hose thread.

DRAFT

E. Control Valve: **<< 175 psi; or ___ psi>>** rated, quarter turn, **<< ball; butterfly; or _____>>** for quick-opening operation.

F. Hose Nozzle: **<< 1-1/2 inch NPS; or _____ inch NPS>>** chemical hose thread, polished brass, adjustable fog, off-and-on solid-stream type. Complies with UL 401.

2.14 PRESSURE GAUGES

A. Manufacturers:
1. AGF Manufacturing.
2. AMETEK, Inc.
3. Brecco Corporation.
4. Dresser Equipment Group.
5. Marsh Bellofram.
6. WIKA Instrument Corporation.

B. Pressure Gauges: **<<ASME B40.100>>**, **<< UL 393; UL 404; or _____>>** drawn steel case, phosphor bronze bourdon tube, rotary brass movement, brass socket, with front recalibration adjustment, black scale on white background.
1. Case: **<< Steel with brass bourdon tube; Cast aluminum with phosphor bronze bourdon tube; or _____>>**.
2. Diameter: **<< 2 inch; 2-1/2 inch; 3-1/2 inch; 4-1/2 inch; 6 inch; 8-1/2 inch; or ___ inch>>**.
3. Mid-Scale Accuracy: **<< One; Two; One-half; or ____>>** percent.
4. Scale: Display in **<< psi; kPa; and _____>>**.
5. Water System Piping: Include caption "WATER" or "AIR/WATER" on dial face.
6. Air System Piping: Include caption "AIR" or "AIR/WATER" on dial face.

2.15 JOINT FABRICATION

A. Coordinate with Division 21, "Common Work Results for Fire Suppression" for basic piping joint construction.

B. Threaded Joints: Comply with NFPA 13 for pipe thickness and threads. Threading pipe with wall thickness less than Schedule 40 and smaller than NPS 8 (DN 200) must be checked by a ring gauge and comply with **<<ASME B1.20.1>>**, and shall be approved by authorities having jurisdiction.

C. Form twist-locked joints using plain-end piping with locking-lug fitting. Rotate retainer lug one-quarter turn.

D. Form pressure sealed joints using UL-listed tool and procedure.

E. Grooved Joints: Assemble joints with listing coupling and gasket, lubricant, and bolts, and as follows:
1. Ductile Iron Pipe: Radius cut groove ends of piping and use groove-end fittings and pipe couplings.
2. Steel Pipe: Square cut or roll groove piping as indicated and use groove end fittings and rigid, groove end pipe couplings.
3. Dry Pipe Systems: Use fittings and gaskets listed for dry pipe service.

F. Dissimilar Metal Piping Joints: Construct joints using dielectric fittings compatible with adjacent pipe materials and as follows:
1. NPS 2 and smaller: Use dielectric unions, couplings, or nipples
2. NPS 2 1/2 to NPS 4: Use dielectric flanges.

DRAFT

3. NPS 5 and larger: Use dielectric flange insulation kits.

PART 3 EXECUTION

3.01 PREPARATION

A. Conduct fire hydrant flow test in accordance with **<<NFPA 13>>**, **<<NFPA 14>>**, and NFPA 291 and report written results promptly.

B. Coordinate with Division 31 sections for earth moving, excavating, trenching, and backfilling.

3.02 EXAMINATION

A. Verify locations of piping connections with roughing-in for hose connections and stations prior to installation.

B. Verify thicknesses of walls and partitions at locations of fire and smoke rated construction, framing for hose stations, and other locations of hose connections and stations.

C. Proceeding with installation indicates acceptance of conditions.

3.03 INSTALLATION, GENERAL

A. Shop weld

B. Do not weld joints

C. For above ground applications: Couplings, fittings, and transitions with the same finish and pressure ratings as the system or higher may be used.

D. Piping between Fire Department Connections and Check Valves: Provide the following:
   1. Galvanized, standard-weight steel pipe with threaded ends.
   2. Cast or malleable iron threaded fittings.
   3. Threaded joints or grooved ends.
   4. Grooved end fittings.
   5. Groove end pipe couplings.
   6. Grooved joints.

E. Underground Service Entrance Piping: Provide ductile iron, mechanical joint pipe and fittings and restrained joints with encasement for corrision protection.

3.04 INSTALLATION - PIPING

A. Coordinate with Division 21, "Common Work Results for Fire Suppression" for basic piping installation.

B. Install in accordance with referenced NFPA design and installation standard.

C. Install equipment in accordance with manufacturer's instructions.

D. Install piping as indicated on drawings as far as practical.

E. Install underground piping in accordance with NFPA 13 and NFPA 24, using restrained joints and corrosion protective encasement.

F. Use approved fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.

G. Install unions adjacent to each valve in pipes NPS 2 and smaller. Unions are not required on flanged devices or in piping installations using grooved joints.

DRAFT

H. Install flanges or flange adapters on valves, apparatus, and equipment having NPS 2 1/2 and larger connections.

I. Install sprinkler piping with drains for complete system drainage.

J.

K. Install buried shut-off valves in valve box. Provide post indicator.

L. Install Inspector's Test Connections in sprinkler system piping. Provide approved shutoff valve, sized and located in accordance with NFPA 13. Test connections that discharge to exterior shall discharge 1 foot above concrete splash block. Provide splash block under this section of the specifications.

M. Install spinkler zone valves, test assemblies, and drain risers adjacent to standpipes when sprikler piping is connected to standpipes.

N. Install drain valves on standpipes.

O. Install ball drip valves to drain piping between fire department connections and check valves. Drain to floor drain or outside building.

P. Locate fire department connection with sufficient clearance from walls, obstructions, or adjacent siamese connectors to allow full swing of fire department wrench handle.

Q. Install alarm devices in piping systems.

R. Locate outside alarm gong on building wall **<< as indicated; or _____>>**.

S. Place pipe runs to minimize obstruction to other work.

T. Place piping in concealed spaces above finished ceilings.

U. Comply with NFPA 13 for hangers and supports.

V. Install pressure gauges on riser or feed main and sprinkler test connection. Use minimum NPS 1/4 removable pressure gauges for reinstallation outside of freeze/thaw zones.

3.05 INSTALLATION - VALVES

A. Install valves in accordance with NFPA 13 and authorities having jurisdiction.

B. General:
   1. Set valves on solid bearing.
   2. Center and plumb valve box over valve.
   3. Set box cover flush with finished grade.

C. Install listed fire protection shutoff valves supervised-open with permanent identification signs indicating portion of system controlled by each valve in locations for controlling water supplies, except fire department connections.

D. Install non-rising stem gate valve in water supply pipe in wall type fire hydrants.

E. Install backflow preventer in potable water suppy sources.

F. Provide approved shutoff valve, backflow preventer, pressure gauge, and drain assemblies at sprinkler system water source connection and service entrance piping. Coordinate with Division 22 sections for backflow preventers.

G. Specialty Valves:
   1. Install alarm check valves, bypass check valve and retarding chamber drain-line connection in vertical position.
   2. Install dry pipe valves with trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gauges, priming chamber attachment, and fill line attachmnet.

DRAFT

a. Air Pressure Maintenance Devices for Dry Pipe Systems: Install shutoff valves, bypass valves, pressure regulator, and strainer rated with maximum inlet pressure of 175 psig.
b. Install air compressor and compressed air supply piping.

3. Deluge Valves: Install in vertical position in deluge system main supply.

3.06 INSTALLATION - SPRINKLER

A. Center sprinklers in **<< two directions in ceiling tile and provide piping offsets as required; one direction only in ceiling tile with location in other direction variable, dependent upon spacing and coordination with ceiling elements; or _____>>**.

B. Do not install wet type sprinklers in freeze/thaw zones. Use dry pipe sprinklers with water supply from heated space, antifreeze sprinkler systems, or dry pipe systems.

C. Flush entire piping system of foreign matter.

D. Hydrostatically test entire system.

E. Require test be witnessed by Authority Having Jurisdiction.

3.07 INSTALLATION - HOSE CONNECTION AND STATION

A. Install hose connections adjacent to standpipes, unless otherwise indicated.

B. Install freestanding hose connections for access and minimum passage restriction.

C. Install NPS 2 1/2 hose-connection valves with flow-restricting device and quick disconnect NPS 2 1/2 by 2 1/2 reducer adapter, unless otherwise indicated.

D. Install hose reel hose stations on wall with bracket attached to substrate.

E. Install free standing hose stations for access and minimum passage restriction.

F. Install free standing hose stations with support or bracket attached to standpipe or substrate.

G. Install wall mounting type hose connections in cabinets with pipe eschutcheons matching finish of valves. Install valves as required for connection of fire hose. Refer to Division 10, "Fire Protection Specialties" for cabinets.

3.08 INSTALLATION - FIRE DEPARTMENT CONNECTION INSTALLATION

A. Install wall type fire department connections in vertical wall.

B. Install free standing type fire department connections in level surface with protective pipe bollards on **<< two; or three>>** sides of each fire deparment connection. Refer to Division 05, "Metal Fabrications" for pipe bollards.

C. Install ball drip valve at each check valve for fire department connection.

3.09 CONNECTIONS

A. Refer to drawings for general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to equipment to allow service and maintenance.

C. Connect water supply piping to fire suppression piping. Include backflow preventer between potable water piping and fire suppression piping. Refer to Division 22, "Domestic Water Piping Specialties" for backflow preventers.

D. Install ball drip valves at each check valve for fire department connection. Drain to floor drain or outside building.

DRAFT

E. Connect piping specialty valves, hose valves, specialties, fire department connections, and accessories.

F. Connect excess pressure pumps to the following piping and wiring:
   1. Sprinkler system, hydraulically.
   2. Pressure gauges and controls, hydraulically.
   3. Electrical power system.
   4. Alarm device accessories for pump.
   5. Fire alarm.

G. Connect compressed air supply to dry pipe sprinkler piping.

H. Connect air compressor to the following piping and wiring:
   1. Pressure gauges and controls.
   2. Electrical power system.
   3. Fire alarm devices, including low pressure alarm.

I. Electrical connections: Coordinate with Division 26 for power wiring.

J. Coordinate connection of fire alarm devices to fire alarm.

K. Ground equipment according to Division 26, "Grounding and Bonding for Electrical Systems."

L. Coordinate connection of wiring according to Division 26, "Low-Voltage Electrical Power Conductors and Cables."

M. Tighten electrical connectors and terminals in accordance with manufacturer's written torque-tightening values or UL 486A and UL 486B.

3.10 LABELING AND IDENTIFICATION

A. Install labeling and pipe markers in accordance with NFPA 13.

B. Install nameplates with corrosive-resistant mechanical fasteners, or adhesive. Apply with sufficient adhesive to ensure permanent adhesion and seal with clear lacquer.

C. Install tags with corrosion resistant chain.

D. Apply stencil painting in accordance with Division 09, "Painting."

E. Install plastic pipe markers in accordance with manufacturer's instructions.

F. Install plastic tape pipe markers complete around pipe in accordance with manufacturer's instructions.

G. Install underground plastic pipe markers **<< 6 to 8 inches>>** below finished grade, directly above buried pipe.

H. Use tags on piping **<< 3/4 inch>>** diameter and smaller.
   1. Identify service, flow direction, and pressure.
   2. Install in clear view and align with axis of piping.
   3. Locate identification not to exceed **<< 20 feet>>** on straight runs including risers and drops, adjacent to each valve and Tee, at each side of penetration of structure or enclosure, and at each obstruction.

3.11 FIELD QUALITY CONTROL

A. Field Tests and Inspections:
   1. See Section **<< 014000 - Quality Requirements>>** for additional requirements.
   2. Conduct piping tests before joints are covered.

DRAFT

3. Prior to hydrostatic testing, obtain approval from the architect/ engineer for proposed method for disposal of wastewater from hydrostatic testing.
4. Fill pipeline and notify owner 24 hours prior to testing and apply test pressure to stabilize system, using only potable water.
5. Perform the following field tests and inspections:
   a. Leak Test: Charge system and test for leaks.
   b. Test and adjust controls and safeties.
   c. Energize circuits to electrical equipment and devices.
   d. Confirm equipment hose threads match local fire department equipment.
6. Test water piping in accordance with **<<NFPA 13>>**, where the additional water added to the system must not exceed the limits given in **<<NFPA 13>>**.
7. If tests indicate Work does not meet specified requirements, remove Work, replace and retest at no cost to **<<Owner>>**.
8. Prepare reports of testing activities.

3.12 DEMONSTRATION AND TRAINING

A. Demonstration: Manufacturer's authorized representative shall demonstrate operation of system to **<<Owner>>**'s personnel.

B. Training: Manufacturer's authorized representative shall train **<<Owner>>**'s personnel on operation and maintenance of system.
   1. Provide minimum of **<< two hours; one day; or _____>>** of training.
   2. Location: At project site.

3.13 CLEANING AND PROTECTION

A. Clean dirt and debris from sprinklers.

B. Remove and replace sprinklers with paint other than factory finish.

C. Protect sprinklers from damage until Date of Substantial Completion.

D. Protect exterior of building when operating drains and test connections discharging to exterior.

E. Remove dirt and stains resulting from work of this section.

END OF SECTION 211000

DRAFT

SECTION 220500
COMMON WORK RESULTS FOR PLUMBING

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Provisions of the Contract and of the Contract Documents apply to this Section.

B. Single phase electric motors.

C. Electronically Commutated Motors (ECM).

1.02 DEFINITIONS

A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.

B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.

C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

D. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in chases.

E. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

F. The following are industry abbreviations for plastic materials:
   1. ABS: Acrylonitrile-butadiene-styrene plastic.
   2. CPVC: Chlorinated polyvinyl chloride plastic.
   3. PE: Polyethylene plastic.
   4. PVC: Polyvinyl chloride plastic.

G. The following are industry abbreviations for rubber materials:
   1. EPDM: Ethylene-propylene-diene terpolymer rubber.
   2. NBR: Acrylonitrile-butadiene rubber.

DRAFT

1.03 SUBMITTALS

A. Product Data: For the following:
   1. Transition fittings.
   2. Dielectric fittings.
   3. Mechanical sleeve seals.
   4. Escutcheons.

1.04 QUALITY ASSURANCE ***REFER TO CURRENT MCPS MECH-PLUMB DESIGN CHECKLIST***

A. **Comply with the requirements of the current MCPS Mechanical and Plumbing Design Checklist. Refer to the latest edition for applicable design, coordination, and documentation standards.**

B. WSSC Code of Regulations: All applicable and current WSSC codes, regulations, and requirements.

C. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."

D. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
   1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
   2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

E. Electrical Characteristics for Plumbing Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.

F. All plumbing-related work shall be conducted with a licensed journeyman plumbing present on-site at all times to supervise and ensure compliance with applicable codes and standards.

G. Comply with all applicable ASME/ANSI/ASTM/NSF standards and codes, latest adopted editions.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.

B. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

1.06 COORDINATION

A. Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction, to allow for plumbing installations.

B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.

C. Coordinate requirements for access panels and doors for plumbing items requiring access that are concealed behind finished surfaces. Access panels and doors are specified in Division 08 Section "Access Doors and Panels."

1.07 INTENT OF CONTRACT DOCUMENTS

A. Plumbing drawings are diagrammatic, indicating general locations and arrangements of pipe, and equipment. Not necessarily indicating all offsets, conditions, and appurtenances required to provide clearances for maximum practical accessibility to perform maintenance.

B. Coordinate work in order to achieve proper operation and to provide a maintainable installed condition.

C. Notify the Architect’s representative immediately of conditions which do not comply or will not produce this result.

D. Indicated configurations were used to size pipes, pumps, expansion tanks and other devices. Install piping and equipment generally as indicated. Minor deviations are permitted in the course of necessary coordination. Major changes shall be submitted for approval by the Architect’s representative. Additional fittings and offsets not shown on the drawings are expected, anticipated by the design, and shall be provided. If more than 5% of the indicated

DRAFT

number of fittings are required or if one change in direction is within six inches of another change in direction and this “Z” shape is not indicated notify the Architect’s representative immediately. Provide necessary additional fittings and offsets. Changes in pipe size shall be made only with written approval from the Architect’s representative.

PART 2 PRODUCTS

2.01 PIPE, TUBE, AND FITTINGS

A. Refer to other Division 22 piping sections for pipe, tube, and fitting materials and joining methods.

B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

C. Copper Press Fittings: ASME B16.51 and listed to NSF/ANSI 61.

D. Carbon Steel Press Fittings: ASME B16.5 or ASME B16.3.

2.02 JOINING MATERIALS

A. Refer to individual Division 22 piping sections for joining materials not listed below.

B. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions inside & outside pipe and:

1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness unless thickness or specific material is otherwise indicated.
    a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
    b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
2. AWWA C110, rubber, flat face, 1/8-inch-thick, unless otherwise indicated, and full-face or ring type, unless otherwise indicated.

C. Solder Filler Metals: ASTM B 32, lead-free (95% Tin, 5% Antimony) alloy. Include water-flushable flux according to ASTM B 813.

D. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated; and AWS A5.8, BAg1, silver alloy for refrigerant piping, unless otherwise indicated.

E. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

F. Solvent Cements for Joining Plastic Piping: (Primer for all solvent-cements will be purple in color for visible verification)

1. ABS Piping: ASTM D 2235.
2. CPVC Piping: ASTM F 493.
3. PVC Piping: ASTM D 2564. Include primer according to ASTM F 656.
4. PVC to ABS Piping Transition: ASTM D 3138.

2.03 DIELECTRIC FITTINGS

A. Where piping of dissimilar metals is joined together use only yellow brass fittings.

2.04 SLEEVES

A. Galvanized-Steel Sheet: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.

B. Steel Pipe: ASTM A 53, Type E, Grade B, Schedule 40, galvanized, plain ends.

DRAFT

C. Cast Iron: Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

D. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.
   1. Underdeck Clamp: Clamping ring with set screws.

2.05 ESCUTCHEONS

A. Description: Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening.

B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with polished chrome-plated finish.

C. One-Piece, Cast-Brass Type: With set screw.
   1. Finish: Polished chrome-plated.

D. Split-Casting, Cast-Brass Type: With concealed hinge and set screw.
   1. Finish: Polished chrome-plated.

E. One-Piece, Floor-Plate Type: Cast-iron floor plate.

F. Split-Casting, Floor-Plate Type: Cast brass with concealed hinge and set screw.

2.06 GROUT

A. Description: ASTM C 1107, Grade B, non-shrink and nonmetallic, dry hydraulic-cement grout.
   1. Characteristics: Post-hardening, volume-adjusting, non-staining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
   2. Design Mix: 5000-psi, 28-day compressive strength.
   3. Packaging: Premixed and factory packaged.

PART 3 EXECUTION

3.01 PIPING SYSTEMS - COMMON REQUIREMENTS

A. Install piping according to the following and Division 22 Sections specifying piping systems.

B. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.

C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

E. Install piping to permit valve servicing.

F. Install piping at the minimum slopes required by authorities having jurisdiction unless otherwise indicated.

G. Install piping free of sags and bends.

H. Install fittings for changes in direction and branch connections.

I. Install piping to allow application of insulation.

J. Select system components with pressure rating equal to or greater than system operating pressure.

DRAFT

K. Install escutcheons for penetrations of walls, ceilings, and floors according to the following:
   1. Exposed, Interior Installations/Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
   2. Exposed, Interior Installations/Chrome-Plated Piping: One-piece, cast-brass type with polished chrome-plated finish and set-screw.
   3. Exposed, Interior Installations/Insulated Piping: One-piece, cast-brass type with polished chrome-plated finish.
   4. Exposed, Interior Installations/Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass type with finish to match surrounding surfaces.
   5. Exposed, Interior Installations/Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece or split-casting, cast-brass type with finish to match surrounding surfaces.
   6. Exposed, Interior Installations/Piping in Unfinished Service Spaces: None, provide sealant.
   7. Exposed, Interior Installations/Piping in Equipment Rooms: None, provide sealant.
   8. Exposed, Interior Installations/Piping at Floor Penetrations in Equipment Rooms, Fan Rooms, or similar wet spaces: None - provide sealant and sleeve extending 2” above floor to prevent liquid leaking to floor below

L. Sleeves are not required for core-drilled holes.
   1. Exception: Exposed, Interior Installations at Floor Penetrations in Equipment Rooms, Fan Rooms, or similar wet spaces.

M. Permanent sleeves are not required for holes formed by removable PE sleeves.
   1. Exception: Exposed, Interior Installations at Floor Penetrations in Equipment Rooms, Fan Rooms, or similar wet spaces.

N. Install sleeves for pipes passing through walls, floors, or roofs.
   1. Cut sleeves to length for mounting flush with both surfaces.
      a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring.
   2. Install sleeves as walls and slabs are constructed.
      a. PVC Pipe Sleeves: Permitted for pipes smaller than NPS 6 except aboveground, exterior-walls.
      b. Steel Sheet Sleeves: Permitted for pipes NPS 6 and larger, penetrating gypsum-board partitions except aboveground, exterior-walls.
      c. Stack Sleeve Fittings: For pipes penetrating floors. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches above finished floor. Seal space outside sleeve fittings with grout.
   3. Except for penetrations where mechanical sleeve seals are used, seal annular space between sleeve and pipe or pipe insulation, using joint sealants appropriate for size, depth, and location of joint. Refer to Division 7 Section "Joint Sealants".

O. Aboveground Exterior Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for annular clear space required by the mechanical sleeve seal manufacturer between pipe and sleeve for installing mechanical sleeve seals.
   1. Install steel pipe for sleeves smaller than 6 inches in diameter.
   2. Install cast-iron "wall pipes" for sleeves 6 inches and larger in diameter.
   3. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble

DRAFT

mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

4. Sleeves from an approved sleeve seal manufacturer shall be acceptable.

P. Underground Exterior Penetrations: Install cast-iron "wall pipes" for sleeves. Seal pipe penetrations using mechanical sleeve seals. Select sleeve size to allow for annular clear space required by the mechanical sleeve seal manufacturer between pipe and sleeve for installing mechanical sleeve seals.

Q. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

R. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Refer to Section "Penetration Firestopping" for materials.

S. Verify final equipment locations for roughing-in.

T. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.

U. Install all mechanical and plumbing piping as high as possible in mechanical rooms.

V. Seal all penetrations around piping through walls and floors.

W. Extend all floor sleeves 2" above finished floor; caulk full depth and provide floor plates.

X. Provide yellow brass fittings only (NO dielectric fittings).

Y. All valves shall be full-port ball valves unless otherwise approved.

Z. Provide isolation valves throughout piping systems.

AA. Provide shutoff valves at all equipment.

BB. Balancing valves shall not serve as shutoff valves.

CC. Provide valve extensions on insulated piping.

DD. Mark ceilings with permanent tags identifying valves and equipment above ceiling.

EE. Do not route piping through electrical, server, telecommunications, or similar sensitive spaces unless such piping directly serves the equipment or systems within those spaces.

DRAFT

3.02 PIPING JOINT CONSTRUCTION

A. Join pipe and fittings according to the following requirements and Division 22 Sections specifying piping systems.

B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.

E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.

F. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
   2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

G. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.

H. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

I. Plastic Piping Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
   1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
   2. ABS Piping: Join according to ASTM D 2235 and ASTM D 2661 Appendixes.
   3. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.
   4. PVC Pressure Piping: Join schedule number ASTM D 1785, PVC pipe and PVC socket fittings according to ASTM D 2672. Join other-than-schedule-number PVC pipe and socket fittings according to ASTM D 2855.
   5. PVC Non-pressure Piping: Join according to ASTM D 2855.
   6. PVC to ABS Non-pressure Transition Fittings: Join according to ASTM D 3138 Appendix.

J. Plastic Pressure Piping Gasketed Joints: Join according to ASTM D 3139.

K. Plastic Non-pressure Piping Gasketed Joints: Join according to ASTM D 3212.

L. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D 2657.
   1. Plain-End Pipe and Fittings: Use butt fusion.
   2. Plain-End Pipe and Socket Fittings: Use socket fusion.

M. Fiberglass Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.

N. Mechanical Joints: Prepare pipe ends and fittings, apply coupling, and join according to joint manufacturer's written instructions.

3.03 PIPING CONNECTIONS

A. Make connections according to the following, unless otherwise indicated:
   1. Install unions, in piping, one adjacent to each valve, and at final connections to each piece of equipment.
   2. Install yellow brassfor connections of dissimilar metals.

B. Install nipples, unions, special fittings, and valves with pressure ratings the same as or higher than the system pressure rating used in applications below unless otherwise indicated.

3.04 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

A. Install equipment to allow maximum possible headroom unless specific mounting heights are indicated.

B. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.

DRAFT

C. Install plumbing equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.

D. Install equipment to allow right of way for piping installed at required slope.

3.05 PAINTING

A. Damage and Touchup: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

3.06 HOUSEKEEPING PADS AND EQUIPMENT PADS

A. Housekeeping pads and equipment pads: Anchor equipment to concrete according to equipment manufacturer's written instructions and according to seismic codes at project location.

1. Construct concrete pads in accordance with drawing details.
2. Details may be found on structural drawings. If details are not provided comply with the following:
    a. Housekeeping pads inside the building shall be 4” thick and 6” larger all around than supported equipment. Provide a 1” chamfer on all edges.
    b. If details are not provided, equipment pads outside the building shall be 8” thick with a 24” deep 12” wide turndown (footing) all around the outside edge of the pad. Provide welded wire mesh reinforcement. Pad shall be 12” larger all around than supported equipment.
    c. Install dowel rods to connect housekeeping pad to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the pad. Provide a 1” chamfer on all edges.
    d. Install epoxy-coated anchor bolts. For equipment on housekeeping pads bolts shall extend through housekeeping pad, and anchor into structural concrete floor.
    e. Place and secure anchor bolts using supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions for placement.
    f. Install anchor bolts to elevations required for proper attachment to supported equipment.
    g. Install anchor bolts according to anchor bolt manufacturer's written instructions.
    h. Use 3000-psi, 28-day compressive-strength concrete and reinforcement as specified in Section "Cast-in-Place Concrete”.

3.07 ERECTION OF METAL SUPPORTS AND ANCHORAGES

A. Refer to Section "Metal Fabrications" for structural steel.

B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor plumbing materials and equipment.

C. Field Welding: Comply with AWS D1.1.

3.08 GROUTING

A. Mix and install grout for plumbing equipment base bearing surfaces, pump and other equipment base plates, and anchors.

B. Clean surfaces that will come into contact with grout.

C. Provide forms as required for placement of grout.

D. Avoid air entrapment during placement of grout.

DRAFT

E. Place grout, completely filling equipment bases.

F. Place grout on concrete bases and provide smooth bearing surface for equipment.

G. Place grout around anchors.

H. Cure placed grout.

3.09 EXCAVATION AND BACKFILL

A. Excavation and backfill shall be as indicated in Division 1 specifications and on the drawings. If excavation and backfill is not otherwise indicated the following shall apply:

1. Excavate trenches to indicated gradients, lines, depths, and elevations.
    a. Beyond the building perimeter, excavate trenches to allow installation of top of pipe below frost line.
2. Excavate trenches to uniform widths to provide twelve inches clear on each side of pipe. Excavate trench walls vertically from trench bottom.
3. Trench Bottoms: Excavate trench bottoms to provide flat surface. Place and compact six inches of sand. Excavate and shape sand to provide uniform bearing and support of pipes. Shape sand to provide continuous support for bells, joints, fittings, and barrels of pipes. Sand shall be free of projecting stones and sharp objects.
4. Backfill and hand tamp to 95% proctor to six inches above the top of the pipe.
5. Backfill and machine tamp the remainder of the trench to 95% proctor in twelve inch lifts.

END OF SECTION 220500

DRAFT

SECTION 220513
COMMON MOTOR REQUIREMENTS FOR PLUMBING EQUIPMENT

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Provisions of the Contract and of the Contract Documents apply to this Section.

1.02 SUBMITTALS

A. Manufacturer's catalog and efficiency data.

B. Product Data: Provide wiring diagrams with electrical characteristics and connection requirements.

C. Manufacturer's Installation Instructions: Indicate setting, mechanical connections, lubrication, and wiring instructions.

D. Operation Data: Include instructions for safe operating procedures.

E. Maintenance Data: Include assembly drawings, bearing data including replacement sizes, and lubrication instructions.

1.03 QUALITY ASSURANCE ***REFER TO CURRENT MCPS MECH-PLUMB DESIGN CHECKLIST***

A. **Comply with the requirements of the current MCPS Mechanical and Plumbing Design Checklist. Refer to the latest edition for applicable design, coordination, and documentation standards.**

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Comply with NFPA 70.

D. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc. as suitable for the purpose specified and indicated.

1.04 COORDINATION

A. Equip all motors with overload protection.
   1. Locate overload protection near the motor.
   2. Overload protection:
      a. Locate between the circuit breaker/fuse provided under Division 26 and the motor windings.
      b. Comply with one of the following:
         1) Locate in motor by motor manufacturer. (Design Standard)
         2) Locate separate overload device near motor.
         3) Locate in, or with, disconnect switch by equipment manufacturer. Provision of such switch shall not modify, change, or eliminate Division 26 requirements. Provide indicated disconnecting means.

B. Coordinate features of motors, installed units, and accessory devices. Provide motors that are:

C. Compatible with controller.

D. Matched to torque and horsepower requirements of the load.

DRAFT

E. Matched to ratings and characteristics of supply circuit and required control sequence.

F. Coordinate motor support with requirements for driven load; access for maintenance and motor replacement; installation of accessories, belts, belt guards; and adjustment of sliding rails for belt tensioning.

G. Belt tension must be wrench and socket adjustable.

H. Belt tensioning device must accommodate adjustable sheaves.

PART 2 PRODUCTS

2.01 MOTOR REQUIREMENTS

A. Motor requirements apply except as follows:

1. Ratings, performance, or characteristics for a motor are specified in another Section or are scheduled on the drawings.
2. Motor manufacturer requires ratings, performance, or characteristics, other than those specified to meet indicated performance.

2.02 MOTOR CHARACTERISTICS

A. Frequency Rating: 60 Hz.

B. Voltage Rating: NEMA standard voltage selected to operate on nominal circuit voltage to which motor is connected.

C. Duty: Continuous at 105 deg F and 3300 feet above sea level.

D. Capacity and Torque sufficient to:

1. Start, accelerate, and operate connected load.
2. Maintain designated speeds.
3. Operate at installed altitude and environment.
4. Operate with indicated operating sequence.

E. Operate without exceeding nameplate ratings.

1. Operate without utilizing service factor.

F. Enclosure: Open drip-proof unless otherwise indicated.

G. Minimum Service Factor: 1.15 unless otherwise indicated.

2.03 POLYPHASE MOTORS

A. Description: NEMA MG 1, Design B, medium induction motor.

B. Premium efficiency motors shall meet the following full load efficiency:

HP	ODP			TEFC		
	6 POLE	4 POLE	2 POLE	6 POLE	4 POLE	2 POLE
1	82.5	85.5	77.0	82.5	85.5	77.0

150	95.4	95.8	94.1	95.8	95.8	95.0

C. Efficiency: Premium

D. Stator: Copper windings, unless otherwise indicated.

E. Rotor: Squirrel cage, unless otherwise indicated.

F. Bearings: Double-shielded, prelubricated ball bearings suitable for radial and thrust loading.

G. Temperature Rise: Match insulation rating, unless otherwise indicated.

H. Insulation: Class F, unless otherwise indicated.

I. Code Letter Designation: NEMA starting Code F or G.

J. Enclosure: Cast iron.

K. Finish: Gray enamel.

L. Motors Used with Reduced-Inrush Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.

M. Source Quality Control: Perform the following tests on each motor according to NEMA MG 1:

N. Measure winding resistance.

O. Read no-load current and speed at rated voltage and frequency.

P. Measure locked rotor current at rated frequency.

Q. Perform high-potential test.

DRAFT

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install securely on firm foundation when required or recommended by manufacturer.

C. Check line voltage and phase and ensure agreement with nameplate.

3.02 FIELD QUALITY CONTROL

A. Perform the following:

1. Run each motor with its controller at load.
2. Demonstrate correct rotation, alignment, and speed.
3. Test interlocks and control features for proper operation.
4. Verify that current in each phase is within nameplate rating.

5. Verify RPM is in accordance with nameplate.
6. Where a generator is provided, run each motor on the generator with its controller and load. Demonstrate correct rotation, alignment, and speed.

3.03 ADJUSTING

A. Align motors, bases, and shafts.

3.04 CLEANING

A. After completing equipment installation, inspect unit components. Remove paint splatters and other spots, dirt, and debris. Repair damaged finish to match original finish.

END OF SECTION 220513

DRAFT

SECTION 220516
EXPANSION FITTINGS AND LOOPS FOR PLUMBING PIPING

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Provisions of the Contract and of the Contract Documents apply to this Section.

1.02 PERFORMANCE REQUIREMENTS

A. Compatibility: Products shall be suitable for piping service fluids, materials, working pressures, and temperatures.

B. Capability: Products to absorb 200 percent of maximum axial movement between anchors.

1.03 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Design Data: Indicate selection calculations.

C. Manufacturer's Instructions: Indicate manufacturer's installation instructions, special procedures, and external controls.

D. Maintenance Data: For expansion joints to include in maintenance manuals. Include adjustment instructions.

E. Project Record Documents: Record installed locations of flexible pipe connectors, expansion joints, anchors, and guides.

1.04 QUALITY ASSURANCE ***REFER TO CURRENT MCPS MECH-PLUMB DESIGN CHECKLIST***

A. **Comply with the requirements of the current MCPS Mechanical and Plumbing Design Checklist. Refer to the latest edition for applicable design, coordination, and documentation standards.**

B. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."

DRAFT

PART 2 PRODUCTS

2.01 PACKLESS EXPANSION JOINTS

A. Flexible Packless Expansion Joints

1. Manufacturers:
   a. Flex-Hose Co., Inc.
   b. Flexicraft Industries.
   c. Flex Pression Ltd.
   d. Metraflex, Inc.
   e. Unisource Manufacturing, Inc.
2. Description: Manufactured assembly with inlet and outlet elbow fittings and two flexible-metal-hose legs joined by long-radius, 180-degree return bend or center section of flexible hose.
3. Flexible Hose: Corrugated-metal inner hoses and braided outer sheaths.

4. Expansion Joints for Copper Tubing NPS 2 and Smaller: Copper-alloy fittings with solder-joint end connections.
    a. Retain one or both of first two subparagraphs below to suit pressure and temperature requirements of systems in which these devices are installed. If retaining both, indicate location of each on Drawings.
    b. Bronze hoses and double-braid bronze sheaths with 700 psig at 70 deg F and 500 psig at 450 deg F ratings.
5. Expansion Joints for Copper Tubing 2-1/2" to 4": Copper-alloy fittings with threaded end connections.
    a. Retain one or both of first two subparagraphs below to suit pressure and temperature requirements of systems in which these devices are installed. If retaining both, indicate location of each on Drawings.
    b. Stainless-steel hoses and double-braid, stainless-steel sheaths with 420 psig at 70 deg F and 315 psig at 450 deg F ratings.

2.02 ALIGNMENT GUIDES AND ANCHORS

A. Alignment Guides:
1. Available Manufacturers:
    a. Adsco Manufacturing LLC.
    b. Advanced Thermal Systems, Inc.
    c. Flex-Hose Co., Inc.
    d. Flexicraft Industries.
    e. Flex-Weld, Inc.
    f. Hyspan Precision Products, Inc.
    g. Metraflex, Inc.
    h. Unisource Manufacturing, Inc.
2. Description: Steel, factory-fabricated alignment guide, with bolted two-section outer cylinder and base for attaching to structure; with two-section guiding spider for bolting to pipe.

B. Anchor Materials:
1. Steel Shapes and Plates: ASTM A 36/A 36M.
2. Bolts and Nuts: ASME B18.10 or ASTM A 183, steel hex head.
3. Washers: ASTM F 844, steel, plain, flat washers.
4. Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened portland cement concrete, with tension and shear capacities appropriate for application.
    a. Stud: Threaded, zinc-coated carbon steel.
    b. Expansion Plug: Zinc-coated steel.
    c. Washer and Nut: Zinc-coated steel.
5. Chemical Fasteners: Insert-type-stud, bonding-system anchor for use with hardened portland cement concrete, with tension and shear capacities appropriate for application.
    a. Bonding Material: ASTM C 881/C 881M, Type IV, Grade 3, two-component epoxy resin suitable for surface temperature of hardened concrete where fastener is to be installed.
    b. Stud: ASTM A 307, zinc-coated carbon steel with continuous thread on stud unless otherwise indicated.
    c. Washer and Nut: Zinc-coated steel.

DRAFT

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B.

C. Install in accordance with EJMA (Expansion Joint Manufacturers Association) Standards.

D. Install rubber, packless, expansion joints according to FSA-NMEJ-702.

E. Install flexible pipe connectors on pipes connected to vibration isolated equipment. Provide line size flexible connectors.

F. Install flexible connectors at right angles to displacement. Install one end immediately adjacent to isolated equipment and anchor other end. Install in horizontal plane unless indicated otherwise.

G. Anchor pipe to building structure where indicated. Provide pipe guides so movement is directed along axis of pipe only. Erect piping such that strain and weight is not on cast connections or apparatus.

H. Provide support and equipment required to control expansion and contraction of piping. Provide loops, pipe offsets, and swing joints, or expansion joints where required.

3.02 PIPE LOOP AND SWING CONNECTION INSTALLATION

A. Connect risers and branch connections to mains with a minimum of 5 (five) pipe fittings including tee in main.

B. Connect risers and branch connections to terminal units with a minimum of 4 (four) pipe fittings including tee in riser.

C. Connect mains and branch connections to terminal units with a minimum of 4 (four) pipe fittings including tee in main.

3.03 ALIGNMENT-GUIDE AND ANCHOR INSTALLATION

A. Install alignment guides to guide expansion and to avoid end-loading and torsional stress.

B. Install two guide(s) on each side of pipe expansion fittings and loops. Install guides nearest to expansion joint not more than four Insert number pipe diameters from expansion joint.

C. Attach guides to pipe and secure guides to building structure.

D. Install anchors at locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.

E. Anchor Attachments:

1. Anchor Attachment to Steel Pipe: Attach by welding. Comply with ASME B31.9 and ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
2. Anchor Attachment to Copper Tubing: Attach with pipe hangers. Use MSS SP-69, Type 24, U-bolts bolted to anchor.

F. Fabricate and install steel anchors by welding steel shapes, plates, and bars. Comply with ASME B31.9 and AWS D1.1/D1.1M.

1. Anchor Attachment to Steel Structural Members: Attach by welding.
2. Anchor Attachment to Concrete Structural Members: Attach by fasteners. Follow fastener manufacturer's written instructions.

DRAFT

G. Use grout to form flat bearing surfaces for guides and anchors attached to concrete.

END OF SECTION 220516

DRAFT

SECTION 220517
SLEEVES AND SLEEVE SEALS FOR PLUMBING PIPING

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Provisions of the Contract and of the Contract Documents apply to this Section.

1.02 SUBMITTALS

A. Product Data: For each type of product indicated.

1.03 QUALITY ASSURANCE ***REFER TO CURRENT MCPS MECH-PLUMB DESIGN CHECKLIST***

A. **Comply with the requirements of the current MCPS Mechanical and Plumbing Design Checklist. Refer to the latest edition for applicable design, coordination, and documentation standards.**

B. Clean equipment, pipes, valves, and fittings of grease, metal cuttings, and sludge that may have accumulated from the installation and testing of the system.

PART 2 PRODUCTS

2.01 SLEEVES

A. Cast-Iron Wall Pipes: Cast or fabricated of cast or ductile iron and equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.

B. Galvanized-Steel Wall Pipes: ASTM A 53/A 53M, Schedule 40, with plain ends and welded steel collar; zinc coated.

C. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, with plain ends.

D. Galvanized-Steel-Sheet Sleeves: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.

2.02 STACK-SLEEVE FITTINGS

A. Available Manufacturers:
   1. Smith, Jay R. Mfg. Co.
   2. Wade
   3. Zurn Specification Drainage Operation; Zurn Plumbing Products Group.

B. Description: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring, bolts, and nuts for membrane flashing.
   1. Underdeck Clamp: Clamping ring with setscrews.

2.03 MECHANICAL SLEEVE SEALS

A. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.
   1. Available Manufacturers:
      a. Advance Products & Systems, Inc.
      b. Calpico, Inc.

DRAFT

c. GPT, EnPro Industries
d. Metraflex Co.
e. Pipeline Seal and Insulator, Inc.

B. Sealing Elements: EPDM interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.

C. Pressure Plates: Plastic. Include two for each sealing element.

D. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements.

PART 3 EXECUTION

3.01 SLEEVE INSTALLATION

A. Route piping in orderly manner, plumb and parallel to building structure. Maintain gradient.

B. Install piping to conserve building space, to not interfere with use of space and other work.

C. Install piping and pipe sleeves to allow for expansion and contraction without stressing pipe, joints, or connected equipment.

D. Install sleeves for piping passing through penetrations in footings, floors, walls, roofs, and partitions. Seal pipe including sleeve penetrations to achieve fire resistance equivalent to fire separation required.

E. Manufactured Sleeve-Seal Systems:
1. Install manufactured sleeve-seal systems in sleeves located in grade slabs and exterior concrete walls at piping entrances into building.
2. Provide sealing elements of the size, quantity, and type required for the piping and sleeve inner diameter or penetration diameter.
3. Locate piping in center of sleeve or penetration.
4. Install field assembled sleeve-seal system components in annular space between sleeve and piping.
5. Tighten bolting for a water-tight seal.
6. Install in accordance with manufacturer's recommendations.

F. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1-inch annular clear space between piping and concrete slabs and walls.
1. Sleeves are not required where piping penetrations are core-drilled through poured-in-place or precast concrete and where conditions permit clean, structurally sound holes with sufficient annular space for joint sealing or firestopping. Sleeves are required for all penetrations through CMU (concrete masonry unit) walls, regardless of method, due to the need to contain voids and ensure a smooth, sealable annular space.

G. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.
1. Permanent sleeves are not required for holes in slabs formed by molded-PE or -PP sleeves.
2. Cut sleeves to length for mounting flush with both surfaces.
a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level.
3. Using grout, seal the space outside of sleeves in slabs and walls without sleeve-seal system.

DRAFT

H. Install sleeves for pipes passing through interior partitions.
   1. Cut sleeves to length for mounting flush with both surfaces.
   2. Install sleeves that are large enough to provide ¼" clear space between sleeve and pipe or pipe insulation.
   3. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint. Comply with requirements for sealants.

I. Fire Ratings: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials.

3.02 STACK-SLEEVE-FITTING INSTALLATION

A. Install stack-sleeve fittings in new slabs as slabs are constructed.
   1. Install fittings that are large enough to provide ¼" clear space between sleeve and pipe or pipe insulation.
   2. Secure flashing between clamping flanges for pipes penetrating floors with membrane waterproofing. Comply with requirements for flashing specified in Division 07 Section "Sheet Metal Flashing and Trim."
   3. Install section of cast-iron soil pipe to extend sleeve to 2 inches above finished floor level.
   4. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
   5. Using grout, seal the space around outside of stack-sleeve fittings.

B. Fire Rating: Maintain indicated fire rating at pipe penetrations. Seal pipe penetrations with firestop materials.

3.03 SLEEVE-SEAL SYSTEM INSTALLATION

A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building unless otherwise indicated.

B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

3.04 SLEEVE AND SLEEVE-SEAL SCHEDULE

A. Use sleeves and sleeve seals for the following piping-penetration applications:
   1. Exterior Concrete Walls above Grade, below Grade, Concrete Slabs-on-Grade, and Concrete Slabs above Grade:
      a. Piping Smaller Than 6": Cast-iron wall sleeves with sleeve-seal system.
         1) Select sleeve size to allow for one inch (1") annular clear space between piping and sleeve for installing sleeve-seal system.
      b. Piping 6" and Larger: Galvanized-steel-pipe sleeves with sleeve-seal system.

3.05 CLEANING

A. Upon completion of work, clean all parts of the installation.

B. Clean equipment, pipes, valves, and fittings of grease, metal cuttings, and sludge that may have accumulated from the installation and testing of the system.

END OF SECTION 220517

DRAFT

SECTION 220519
METERS AND GAUGES FOR PLUMBING PIPING

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Provisions of the Contract and of the Contract Documents apply to this Section.

1.02 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Wiring Diagrams: For power, signal, and control wiring.

C. Operation and Maintenance Data: For meters and gauges to include in operation and maintenance manuals.

1.03 ABBREVIATIONS

A. AFF Above finished floor

B. F Fahrenheit

C. SS Stainless Steel

1.04 QUALITY ASSURANCE ***REFER TO CURRENT MCPS MECH-PLUMB DESIGN CHECKLIST***

A. **Comply with the requirements of the current MCPS Mechanical and Plumbing Design Checklist. Refer to the latest edition for applicable design, coordination, and documentation standards.**

PART 2 PRODUCTS

2.01 FLOWMETERS

A. Turbine Flowmeters:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. ABB; Instrumentation and Analytical.
   b. Data Industrial Corp.
   c. EMCO Flow Systems; a division of Spirax Sarco, Inc.
   d. ERDCO Engineering Corp.
   e. Hoffer Flow Controls, Inc.
   f. Liquid Controls; a unit of IDEX Corporation.
   g. McCrometer, Inc.
   h. Midwest Instruments & Controls Corp.
   i. ONICON Incorporated.
   j. SeaMetrics, Inc.
   k. Sponsler, Inc.; a unit of IDEX Corporation.
2. Description: Flowmeter with sensor and indicator.
3. Flow Range: Sensor and indicator shall cover operating range of equipment or system served.

DRAFT

4. Sensor: Impeller turbine; for inserting into pipe fitting or for installing in piping and measuring flow directly in gallons per minute.
    a. Design: Device or pipe fitting with inline turbine and integral direct-reading scale for water.
    b. Construction: Bronze or stainless-steel body, with plastic turbine or impeller.
    c. Minimum Pressure Rating: 150 psig.
    d. Minimum Temperature Rating: 180 deg F.
5. Indicator: Hand-held meter; either an integral part of sensor or a separate meter.
6. Accuracy: Plus or minus 1-1/2 percent.
7. Display: Shows rate of flow.
8. Operating Instructions: Include complete instructions with each flowmeter.

2.02 PRESSURE GAUGES

A. Direct-Mounted, Metal-Case, Dial-Type Pressure Gauges:
1. Available Manufacturers:
    a. AMETEK, Inc.; U.S. Gauge.
    b. Ashcroft Inc.
    c. Ernst Flow Industries.
    d. Flo Fab Inc.
    e. Marsh Bellofram.
    f. Miljoco Corporation.
    g. Noshok.
    h. Palmer Wahl Instrumentation Group.
    i. REOTEMP Instrument Corporation.
    j. Tel-Tru Manufacturing Company.
    k. Trerice, H. O. Co.
    l. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
    m. Weiss Instruments, Inc.
    n. WIKA Instrument Corporation - USA.
    o. Winters Instruments - U.S.
2. Standard: ASME B40.100.
3. Case: Solid-front, lead-free, pressure relief type; stainless steel; 4-1/2-inch nominal diameter.
4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
5. Pressure Connection: Brass, with NPS 1/4, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
6. Movement: Phosphor bronze.
7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi.
8. Pointer: Dark-colored metal.
9. Window: Glass.
10. Ring: Brass.
11. Accuracy: + or – 1.0 percent of full scale.

DRAFT

2.03 GAUGE ATTACHMENTS

A. Snubbers: ASME B40.100, brass; with NPS 1/4, ASME B1.20.1 pipe threads and porous-metal-type surge-dampening device. Include extension for use on insulated piping.

B. Siphons: Loop-shaped section of brass pipe with NPS 1/4 pipe threads.

C. Valves: Brass or stainless-steel needle, with NPS 1/4, ASME B1.20.1 pipe threads.

2.04 LIQUID-IN-GLASS THERMOMETERS

A. Metal-Case, Industrial-Style, Liquid-in-Glass Thermometers:
   1. Available Manufacturers:
      a. Flo Fab Inc.
      b. Miljoco Corporation.
      c. Palmer Wahl Instrumentation Group.
      d. Tel-Tru Manufacturing Company.
      e. Trerice, H. O. Co.
      f. Weiss Instruments, Inc.
      g. Winters Instruments - U.S.
   2. Standard: ASME B40.200.
   3. Case: Cast aluminum; 9-inch nominal size unless otherwise indicated.
   4. Case Form: Adjustable angle unless otherwise indicated.
   5. Tube: Glass with magnifying lens and blue or red organic liquid.
   6. Tube Background: Non-reflective aluminum with permanently etched scale markings graduated in degrees F.
   7. Window: Glass
   8. Stem: Aluminum length = 1/2 pipe diameter, 1/2 duct width or 12” whichever is less.
      a. Air-Duct Installation: Provide ventilated shroud.
      b. Thermowell Installation: Provide Bare stem.
   9. Connector: 1-1/4 inches, with ASME B1.1 screw threads.
   10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

2.05 THERMOWELLS

A. Thermowells:
   1. Standard: ASME B40.200.
   2. Description: Pressure-tight, socket-type fitting made for insertion into threaded fitting.
   3. Material: Brass.
   4. Type: Stepped shank unless straight or tapered shank is indicated.
   5. External Threads: NPS 1/2, NPS 3/4, or NPS 1, ASME B1.20.1 pipe threads.
   6. Internal Threads: 1/2, 3/4, and 1 inch, with ASME B1.1 screw threads.
   7. Bore: Diameter required to match thermometer bulb or stem.
   8. Insertion Length: Length required to match thermometer bulb or stem.
   9. Lagging Extension: Include on thermowells for insulated piping and tubing.
   10. Bushings: For converting size of thermowell's internal screw thread to size of thermometer connection.

DRAFT

2.06 TEST PLUGS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Flow Design, Inc.
   2. Miljoco Corporation.
   3. National Meter, Inc.
   4. Peterson Equipment Co., Inc.
   5. Sisco Manufacturing Company, Inc.
   6. Trerice, H. O. Co.
   7. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
   8. Weiss Instruments, Inc.

B. Description: Test-station fitting made for insertion into piping tee fitting.

C. Body: Brass or stainless steel with core inserts and gasketed and threaded cap. Include extended stem on units to be installed in insulated piping.

D. Thread Size: NPS 1/2, ASME B1.20.1 pipe thread.

E. Minimum Pressure and Temperature Rating: 500 psig at 200 deg F.

F. Core Inserts: Chlorosulfonated polyethylene synthetic and EPDM self-sealing rubber.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install metering products in accordance with manufacturer's instructions for intended fluid type and service.

B. Install thermowells with socket extending to center of pipe in piping tees.

C. Install thermowells of sizes required to match thermometer connectors. Include bushings to match sizes.

D. Install thermowells with extensions on insulated piping.

E. Install direct-mounted thermometers in thermowells and adjust positions.

F. Install pressure gauges in piping tees located between 36” and 60” above finished floor unless otherwise indicated.

G. Install valve and snubber for each pressure gauge.

H. Install test plugs in piping tees at locations indicated.

I. Assemble and install connections, tubing, and accessories between flow-measuring elements and flowmeters according to manufacturer's written instructions.

J. Install flowmeter elements in accessible positions in piping systems.

K. Install permanent indicators on walls or brackets at 50” above finished floor unless otherwise indicated.

L. Install connection fittings in accessible locations for attachment to portable indicators.

M. Install thermometers in the following locations:
   1. Inlet and outlet of each water heater.

N. Install pressure gauges in the following locations:
   1. Inlet and outlet of each water heater.

DRAFT

2. Suction and discharge of each pump.

O. Install a test plug at each thermometer and pressure gauge.

3.02 THERMOMETER SCALE-RANGE SCHEDULE

A. Scale Range for Domestic Cold-Water Piping: 0 to 100 F with 2-degree scale divisions.

B. Scale Range for Domestic Hot-Water and Hot-Water Recirculation Piping 30 to 240 F with 2-degree scale divisions.

3.03 PRESSURE-GAUGE SCALE-RANGE SCHEDULE

A. Scale Range for Domestic Water Piping: 0 psi to 100 psi.

1. Provide pressure scale range so that normal operating high and low pressures are within 25%-75% of the full-scale range.

3.04 FLOWMETER SCHEDULE

A. Flowmeters for Domestic Water Piping: Turbine type

END OF SECTION 220519

DRAFT

SECTION 220523
GENERAL-DUTY VALVES FOR PLUMBING PIPING

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Provisions of the Contract and of the Contract Documents apply to this Section.

1.02 DEFINITIONS

A. The following are standard abbreviations for valves:
   1. CWP: Cold working pressure.
   2. EPDM: Ethylene-propylene-diene terpolymer rubber.
   3. MPTFE: Modified polytetrafluoroethylene plastic.
   4. NBR: Acrylonitrile-butadiene rubber.
   5. PTFE: Polytetrafluoroethylene plastic.
   6. RPTFE: Reinforced polytetrafluoroethylene plastic.
   7. SWP: Steam working pressure.
   8. TFE: Tetrafluoroethylene plastic.
   9. WOG: Water Oil Gas.

1.03 SUBMITTALS

A. Product Data: For each type of valve proposed. Include body, seating, and trim materials; valve design; pressure and temperature classifications; end connections; arrangement; dimensions; and required clearances. Include proposed specialties and accessories.

1.04 QUALITY ASSURANCE ***REFER TO CURRENT MCPS MECH-PLUMB DESIGN CHECKLIST***

A. **Comply with the requirements of the current MCPS Mechanical and Plumbing Design Checklist. Refer to the latest edition for applicable design, coordination, and documentation standards.**

B. ASME Compliance: ASME B31.1 for power piping valves and ASME B31.9 for building services piping valves.
   1. Exceptions: Domestic hot- and cold-water valves unless referenced.

C. ASME Compliance for Ferrous Valves: ASME B16.10 and ASME B16.34 for dimension and design criteria.

D. NSF Compliance:
   1. NSF 61 for valve materials for potable-water service.
   2. NSF 372 for Lead content requirements in drinking water system components.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Prepare valves for shipping as follows:
   1. Protect internal parts against rust and corrosion.
   2. Protect threads, flange faces, grooves, and weld ends.
   3. Set ball valves open to minimize exposure of functional surfaces.
   4. Block check valves in either closed or open position.

B. Use the following precautions during storage:

DRAFT

1. Maintain valve end protection.
2. Store valves indoors and maintain at higher than ambient dew-point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.

C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS

A. Valve Pressure and Temperature Ratings: No less than rating indicated; as required for system pressures and temperatures.

B. Valve Sizes: Match upstream piping unless otherwise indicated.

C. Refer to Part 3 "Valve Applications" Article for applications of valves.

D. Bronze & Brass: Shall be dezincification resistant. (Zinc content shall be less than 15%)

E. Bronze Valves: 2” and smaller with threaded or soldered ends, unless otherwise indicated.

F. Ferrous Valves: 2-1/2” and larger with flanged ends, unless otherwise indicated.

G. Valve Pressure and Temperature Ratings: Not less than indicated for system pressure and temperature.

H. Valve Sizes: Same as the larger of the upstream or downstream pipe, unless otherwise indicated.

I. Valve Actuators:
   1. As indicated in other Part 2 articles.
   2. Where indicated, provide a chain actuator.
   3. Chain Actuator: For attachment to valves of size and mounting height indicated.
   4. Wrench: For plug valves with square heads. Furnish Owner with 1 wrench for every 10 plug valves, for each size square plug head.

J. Extended Valve Stems: Provide on insulated valves.

K. Valve Flanges: Provide ASME B16.1 for cast-iron valves, ASME B16.5 for steel, and ASME B16.24 for bronze.

L. Valve Grooved Ends: AWWA C606.

M. Threaded: With threads according to ASME B1.20.1.

N. Valve Bypass and Drain Connections: MSS SP-45.

2.02 COPPER-ALLOY BALL VALVES

A. Two-Piece, Copper-Alloy Ball Valves (Full Port) (Up to 2-1/2”):
   1. Conbraco Industries-Apollo 77CLF series with stainless steel ball & stem (Un-insulated piping)
   2. Conbraco Industries-Apollo 77CLF series with stainless steel ball & stem. Provide 2-1/4” stem extension (Insulated piping)
   3. Other Manufacturers:
      a. Milwaukee
      b. Watts
      c. Nibco

DRAFT

4. Handle Nut: Zinc plated steel or 300 series stainless steel.
5. Handle: Zinc plated steel, clear chromate plastic, or vinyl coated.
6. Threaded Pack Gland: Brass ASTM B-16
7. Packing: MPTFE or TFE
8. Stem (Blowout Proof): ASTM A-276 type 316 stainless steel. Provide 2-1/4" stem extension for Insulated piping.
9. Thrust Washer: MPTFE or RPTFE
10. Ball: Full-port, ASTM A-276 Type 316 stainless steel.
11. Seats: MPTFE or Reinforced TFE (RPTFE)
12. Body: Bronze ASTM B-584 for solder or threaded connection.
13. Body End Piece: Bronze ASTM B-584 for solder or threaded connection.
14. Rating: 150 psig saturated steam, 600 psig non-shock cold water, oil, and gas.
15. Conform To: MSS SP-110

B. Two-Piece, Bronze Ball Valves UL listed for shut-off gas service (Up to 2-1/2"):
1. Conbraco Industries-Apollo 80-100 series (Un-insulated piping).
2. Conbraco Industries-Apollo 80-100 series with stainless steel ball & stem. Provide 2-1/4" stem extension (Insulated piping)
3. Other Manufacturers:
   a. Milwaukee
   b. Watts
   c. Nibco
4. Handle Nut: Zinc plated steel or 300 series stainless steel.
5. Handle: Zinc plated steel, clear chromate plastic, or vinyl coated.
6. Threaded Pack Gland: Brass ASTM B-16
7. Packing: MPTFE or TFE
8. Stem (Blowout Proof): ASTM A-276 type 316 stainless steel. Provide 2-1/4" stem extension for Insulated piping.
9. Thrust Washer: MPTFE or RPTFE
10. Ball: Brass ASTM B-16, chrome plated.
11. Seats: MPTFE or Reinforced TFE (RPTFE)
12. Body: Bronze ASTM B-584 for threaded connection.
13. Body End Piece: Bronze ASTM B-584 for threaded connection.
14. Rating: 150 psig saturated steam, 250 psi gas, vacuum service to 29".
15. Conform To: MSS SP-110

C. Two-Piece, Copper-Alloy Ball Valves (Full Port) (2-1/2" to 4"):
1. Conbraco Industries - Apollo 94ALF-A series with stainless steel ball & stem (Un-insulated piping)
2. Conbraco Industries - Apollo 94ALF-A series with stainless steel ball & stem. Provide 2-1/4" stem extension (Insulated piping)
3. Other Manufacturers:
   a. Milwaukee
   b. Watts
   c. Nibco.
4. Handle Nut: Zinc plated steel or 300 series stainless steel.

DRAFT

5. Handle: Zinc plated steel, clear chromate plastic, or vinyl coated.
6. Threaded Pack Gland: Brass ASTM B-16 Alloy 360
7. Packing: RPTFE or TFE
8. Stem (Blowout Proof): ASTM A-276 type 316 stainless steel. Provide 2 ¼" stem extension for Insulated piping.
9. Thrust Washer: MPTFE or Reinforced TFE
10. Ball: Full-port, ASTM A-276 Type 316 stainless steel.
11. Seats: MPTFE or Reinforced TFE
12. Body: Bronze ASTM B-584 for solder or threaded connection.
13. Body End Piece: Bronze ASTM B-584 for solder or threaded connection.
14. Rating: 150 psig saturated steam, 600 psig non-shock cold water, oil, and gas.
15. Conform To: MSS SP-110

2.03 LARGE GAS BALL VALVES (3" TO 10")

A. Carbon Steel ANSI class 150, flanged, standard port ball valve with stainless steel ball and stem.
   1. Conbraco Industries-Apollo 88A-140 series
   2. Other Manufacturers:
   3. Milwaukee
      a. Watts
      b. Nibco
   4. Provide gear operator with oversized hand wheel.
   5. Packing Gland: ASTM A108 Type 1215
   6. Packing: RPTFE or TFE
   7. Stem (Blowout Proof): ASTM A108 Type 1215
   8. Ball: Standard-port, ASTM A-276 Type 316 stainless steel solid ball.
   9. Seats: RPTFE
   10. Thrust Washer: RPTFE.
   11. Body: Carbon steel ASTM A216 WCB.
   12. Body Nut: ASTM A194, grade 2H.
   13. UL (YRPV): Listed for gas shut-off service.
   14. Rating: 150 psig saturated steam

2.04 BRONZE CHECK VALVES

A. Bronze, Horizontal Swing Check Valves:
   1. Conbraco Industries-Apollo 161S/T
   2. Other Manufacturers:
      a. Milwaukee
      b. Stockham
      c. Nibco
   3. Bonnet: ASTM B-62 bronze.
   4. Body: ASTM B-62 bronze.
   5. Hinge Pin: ASTM B-140 alloy C31400 bronze, or B-134 alloy C23000 bronze.
   6. Disc Hanger:
      a. Sizes ¼" thru ¾": Type 304 stainless steel.

DRAFT

b. Sizes 1” and larger: ASTM B-62 bronze.
7. Hanger Nut: ASTM B-16 bronze.
8. Disc Holder: ASTM B-62 bronze.
9. Seat Disc:
   a. Water and Other Heat Transfer Fluids: ASTM B-62 bronze.
   b. Steam: TFE
10. Seat Disc Nut: ASTM B-16 or B-62 bronze.
11. Hinge Pin Plug: ASTM B-140 alloy C31600 bronze.
12. Seat Disc Washer (When Provided): ASTM B-98 alloy C65500 or B-103 bronze.
13. Rating: 125 psig SWP and 200 psig CWP.
14. Conform To: MSS SP-80

B. Bronze, Inline Spring Loaded Check Valves:
1. Conbraco Industries-Apollo 61-100 series
2. Other Manufacturers:
   a. Milwaukee
   b. Stockham
   c. Nibco
3. Body: ASTM B-584 alloy C84400 bronze.
4. Retainer/Stem: ASTM B16 brass or ASTM A-582 alloy C30300 stainless steel.
5. Ball Check: RPTFE
6. Disc Holder 316 Stainless steel
   a. Disc:
      1) Water, Oil, Gas: Buna-N
      2) Steam: TFE
   b. Seat Screw: ASTM A-276 alloy S43000 stainless steel.
   c. Body End: ASTM B-584 alloy C84400 bronze.
   d. Rating: 125 psig SWP and 250 psig CWP.
7. Guide: ASTM B16 Brass
8. Spring: Type 316 stainless steel.
9. Rating: 125 psig SWP and 400 psig WOG.

C. IRON BODY CHECK VALVES

D. Iron Body, Horizontal Swing Check Valves:
1. Conbraco Industries-Apollo 910F
2. Other Manufacturers:
   a. Milwaukee
   b. Stockham
   c. Nibco
3. Body Bolt: ASTM A-307 steel.
4. Bonnet: ASTM A-126 class B cast iron.
5. Body Gasket: Synthetic Fibers.
6. Body Nut: ASTM A-307 steel
7. Side Plug: ASTM B-16 alloy C36000 Brass.
8. Hanger Pin: ASTM B-16 alloy C36000 Brass.

DRAFT

9. Hanger: ASTM B-584 alloy C84400 cast bronze.
10. Disc: ASTM B-584 alloy C84400 cast bronze or ASTM A-536 ductile iron w/bronze face ring.
11. Seat Ring: ASTM B-584 alloy C84400 cast bronze.
12. Disc Nut: ASTM B-16 alloy C36000.
13. Body: ASTM A-126 class B cast iron.
14. Disc Bolt: ASTM B-16 alloy C36000 Brass.
15. Disc Plate: ASTM A-126 class B cast iron.
16. Disc Cage: ASTM A-126 class B cast iron.
17. Rating: 125 psig SWP and 200 psig CWP.
18. Conform To: MSS SP-71 Type 1.

E. Spring Actuated Silent Check Valves:
1. NIBCO Model F-910
2. Other Manufacturers:
a. Milwaukee
b. Stockham
3. Body: ASTM A48 class 35 cast iron.
4. Seat: ASTM B-584 alloy C83600 (B) bronze.
5. Disc: ASTM B-584 alloy C83600 bronze.
6. Spring: Type 302 ASTM A313 stainless steel.

F. Bushing:
a. 6” and Smaller: ASTM B-16 brass
b. 8” and Larger: ASTM B-584 alloy C83600 bronze.
2. Set Screws: Type 304 ASTM A-276 stainless steel.
3. Rating: 200 psig CWP.
4. Conform To: MIL-V-18436F

DRAFT

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.

B. Operate valves in positions from fully-open to fully-closed. Examine guides and seats made accessible by such operations.

C. Examine threads on valve and mating pipe for form and cleanliness.

D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.

E. Do not attempt to repair defective valves; replace with new valves.

3.02 VALVE INSTALLATION

A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.

B. Provide separate valve support as required and locate valve with stem at or above center of piping, maintaining unimpeded stem movement.

C. Locate valves for easy access.

D. Install valves in horizontal piping with stem at or above center of pipe.

E. Install valves in position to allow full stem movement.

F. Install chainwheels on operators for ball valves 4” and larger and more than 96 inches above finished floor. Extend chains to 60 inches above finished floor.

G. Install check valves for proper direction of flow and as follows:
   1. Swing Check Valves: In horizontal position with hinge pin level.
   2. Center-Guided and Plate-Type Check Valves: In horizontal or vertical position, between flanges.
   3. Lift Check Valves: With stem upright and plumb.

H. Shutoff valves shall be provided and located on each floor, on takeoffs from all vertical risers, branch lines from the mains, and at the branch connections to each fixture.

3.03 ADJUSTING

A. Adjust valve packing after piping systems have been tested and put into service but before final testing and balancing. Replace valves if persistent leaking occurs.

3.04 VALVE APPLICATIONS

A. Refer to piping Sections for specific valve applications. If valve applications are not indicated, use the following:
   1. Shutoff Service: Ball valves.
   2. Throttling Service: Ball or Balancing valves.
   3. Pump Discharge: Spring-loaded, lift-disc, check valves and ball valves.

B. If valves with specified SWP classes or CWP ratings are not available, the same types of valves with higher SWP class or CWP ratings may be substituted.

C. Domestic Water Piping: Use the following types of valves:
   1. Valves, NPS 2” and Smaller: Two-Piece, Copper-Alloy Ball Valves (Full Port).
   2. Valves, NPS 2-1/2” and 3”: Two-piece or three-piece, Copper-Alloy Ball Valves (Full Port).
   3. Valves, NPS 4” and Larger: Two-piece or three-piece, Copper-Alloy Ball Valves (Full Port).
   4. Pump Discharge Check Valves (Horizontal or Vertical), NPS 2” and Smaller: Bronze, Inline Lift Check Valves.
   5. Horizontal Check Valves, NPS 2” and Smaller: Bronze, Horizontal Swing Check Valves.
   6. Vertical Check Valves, NPS 2” and Smaller: Bronze, Inline Lift Check Valves.
   7. Pump Discharge Check Valves (Horizontal or Vertical), NPS 2-1/2” and Larger: Grooved-End, Ductile-Iron Spring Assisted Check Valves or Spring Actuated Silent Check Valves.
   8. Horizontal Check Valves, NPS 2-1/2” and Larger: Bronze, Horizontal Swing Check Valves.
   9. Vertical Check Valves, NPS 2-1/2” and Larger: Grooved-End, Ductile-Iron Spring Assisted Check Valves or Spring Actuated Silent Check Valves.

D. Gas Piping: Use the following types of valves:
   1. Valves, NPS 2” and Smaller: Two-Piece, Copper-Alloy Ball Valves (Full Port).
   2. Valves, NPS 2-1/2” and 3”: Two-piece or three-piece, Copper-Alloy Ball Valves (Full Port).

DRAFT

3. Valves, NPS 4” and Larger: Two-piece or three-piece, Copper-Alloy Ball Valves (Full Port).
4. Pump Discharge Check Valves (Horizontal or Vertical), NPS 2” and Smaller: Bronze, Inline Lift Check Valves.
5. Horizontal Check Valves, NPS 2” and Smaller: Bronze, Horizontal Swing Check Valves.
6. Vertical Check Valves, NPS 2” and Smaller: Bronze, Inline Lift Check Valves.
7. Pump Discharge Check Valves (Horizontal or Vertical), NPS 2-1/2” and Larger: Grooved-End, Ductile-Iron Spring Assisted Check Valves or Spring Actuated Silent Check Valves.
8. Horizontal Check Valves, NPS 2-1/2” and Larger: Bronze, Horizontal Swing Check Valves.
9. Vertical Check Valves, NPS 2-1/2” and Larger: Grooved-End, Ductile-Iron Spring Assisted Check Valves or Spring Actuated Silent Check Valves.

END OF SECTION 220523

DRAFT

SECTION 220529
HANGERS AND SUPPORTS FOR PLUMBING PIPING AND EQUIPMENT

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Provisions of the Contract and of the Contract Documents apply to this Section.

1.02 DEFINITIONS

A. MSS: Manufacturers Standardization Society of the Valve and Fittings Industry Inc.

B. Terminology: As defined in MSS SP-90, "Guidelines on Terminology for Pipe Hangers and Supports."

1.03 PERFORMANCE REQUIREMENTS

A. Design Requirement: Design trapeze pipe hangers and equipment supports, including comprehensive engineering analysis by a qualified professional engineer where using methods other than indicated.

B. Structural Performance: Hangers and supports for Plumbing piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.

1. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test medium.
2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.

1.04 SUBMITTALS

A. Product Data: Provide manufacturer's standard catalog pages and data sheets for metal channel (strut) framing systems, nonpenetrating rooftop supports, post-installed concrete and masonry anchors, and thermal insulated pipe supports.

B. Manufacturer's Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

1.05 QUALITY ASSURANCE ***REFER TO CURRENT MCPS MECH-PLUMB DESIGN CHECKLIST***

A. **Comply with the requirements of the current MCPS Mechanical and Plumbing Design Checklist. Refer to the latest edition for applicable design, coordination, and documentation standards.**

B. Structural Steel Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

C. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS

A. Provide required hardware to hang or support piping, equipment, or fixtures with related accessories as necessary to complete installation of plumbing work.

DRAFT

B. Provide hardware products listed, classified, and labeled as suitable for intended purpose.

C. Where support and attachment component types and sizes are not indicated, select in accordance with manufacturer's application criteria as required for the load to be supported with a minimum safety factor of 20%. Include consideration for vibration, equipment operation, and shock loads where applicable.

D. Corrosion Resistance: Use corrosion-resistant metal-based materials fully compatible with exposed piping materials and suitable for the environment where installed.

2.02 METAL PIPE HANGERS AND SUPPORTS

A. Carbon-Steel Pipe Hangers and Supports:
   1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
   2. Galvanized Metallic Coatings: Pregalvanized or hot dipped.
   3. Nonmetallic Coatings: Plastic coating, jacket, or liner.
   4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
   5. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel.

B. Copper Pipe Hangers:
   1. Description: MSS SP-58, Types 1 through 58, copper-coated-steel, factory-fabricated components.
   2. Hanger Rods: Continuous-thread rod, nuts, and washer made of copper-coated steel.

2.03 TRAPEZE HANGERS

A. Description: MSS SP-69, Type 59, shop- or field-fabricated pipe-support assembly made from structural carbon-steel shapes with MSS SP-58 carbon-steel hanger rods, nuts, saddles, and U-bolts.

B. Trapeze Pipe Hanger Installation: Arrange for grouping of parallel runs of piping and support together on field-assembled channel systems.
   1. Assemble and provide according to manufacturer's written instructions. Center piping on channel to evenly distribute load.
   2. Pipe sizes and numbers shall be in accordance with the following:

TRAPEZE PIPE HANGER TABLE

PIPE SIZE	4"	3"	2-1/2"	2"	1-1/2"	1-1/4"	1"	TOTAL # OF PIPES
	2	0	0	0	0	0	0	2
	0	2	2	0	0	0	0	4
	0	2	0	4	0	0	0	6
	0	2	0	0	6	0	0	8
	0	0	4	2	0	0	0	6
	0	0	4	0	2	2	0	8
	0	0	4	0	0	8	0	12
	0	0	0	6	2	2	2	12
	0	0	0	8	0	2	0	10
	0	0	0	0	14	0	0	14
	0	0	0	0	0	16	0	16

DRAFT

Notes:
1. Piping larger than 4" in diameter is not permitted in a channel support system.
2. Channel support systems shall be limited to eight (8) pipes per channel and two (2) channels (levels) per support system.
3. Smaller pipes can be substituted for larger pipes. For example two ¾" pipes may be installed in lieu of two 1" pipes, or 2" in lieu of 3", etc.
4. Spacing shall be in accordance with requirements for the smallest supported pipe. Refer to other specification sections for spacing requirements. If spacing requirements are not indicated comply with MSS SP-69.

C. Metal Framing Systems:
   1. Available Manufacturers:
      a. Anvil International; a subsidiary of Mueller Water Products Inc.
      b. Empire Industries, Inc.
      c. ERICO International Corporation.
      d. Haydon Corporation; H-Strut Division.
      e. NIBCO INC.
      f. PHD Manufacturing, Inc.
      g. PHS Industries, Inc.
   2. Description: Shop- or field-fabricated pipe-support assembly made of steel channels, accessories, fittings, and other components for supporting multiple parallel pipes.
   3. Standard: Comply with MFMA-4.
   4. Channels: Continuous slotted steel channel with in-turned lips.
   5. Channel Nuts: Formed or stamped steel nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.
   6. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel.
   7. Coating: Zinc.

DRAFT

2.04 THERMAL-HANGER SHIELD INSERTS

A. Available Manufacturers:
   1. Carpenter & Paterson, Inc.
   2. Clement Support Services.
   3. ERICO International Corporation.
   4. National Pipe Hanger Corporation.
   5. PHS Industries, Inc.
   6. Pipe Shields, Inc.; a subsidiary of Piping Technology & Products, Inc.
   7. Piping Technology & Products, Inc.
   8. Rilco Manufacturing Co., Inc.
   9. Value Engineered Products, Inc.

B. Insulation-Insert Material for Cold Piping: ASTM C 552, Type II cellular glass with 100-psig or ASTM C 591, Type VI, Grade 1 polyisocyanurate with 125-psig minimum compressive strength and vapor barrier.

C. Insulation-Insert Material for Hot Piping: Water-repellent treated, ASTM C 533, Type I calcium silicate with 100-psig, ASTM C 552, Type II cellular glass with 100-psig, or ASTM C 591, Type VI, Grade 1 polyisocyanurate with 125-psig minimum compressive strength.

D. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.

E. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.

F. Insert Length: Extend 2” beyond sheet metal shield for piping operating below ambient air temperature.

2.05 PIPE STANDS

A. General Requirements for Pipe Stands: Shop- or field-fabricated assemblies made of manufactured corrosion-resistant components to support roof-mounted piping.
   1. Available Manufacturers:
      a. Cooper B-Line – Dura-Blok
      b. MAPA Products
      c. Mifab, Inc. – C-Port
      d. Miro Industries, Inc.
      e. OMG, Inc.
      f. PHP Systems/Design
      g. Pipe Prop
      h. Roof Top Blox
   2. Provide pipe supports for supporting gas, condensate, refrigeration lines, or hydronic piping on flat roof surfaces. Support shall rest on roof surface without penetrating the roof surface. Supports for condensate piping shall be adjustable vertically to ensure pipe slopes as required.

B. Compact Pipe Stand: One-piece plastic unit with integral-rod roller, pipe clamps, or V-shaped cradle to support pipe, for roof installation without membrane penetration.

C. Curb Mounted Pipe Stands: Shop- or field-fabricated pipe supports made from structural-steel shapes, continuous-thread rods, and rollers, for mounting on permanent stationary roof curb.

2.06 EQUIPMENT SUPPORTS

A. Description: Welded, shop or field fabricated equipment support made from structural carbon-steel shapes unless indicated otherwise.

2.07 MISCELLANEOUS MATERIALS

A. Structural Steel: ASTM A 36/A 36M, carbon-steel plates, shapes, and bars; black and galvanized.

B. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, non-shrink and nonmetallic grout; suitable for interior and exterior applications.
   1. Properties: Non-staining, noncorrosive, and nongaseous.
   2. Design Mix: 5000-psi, 28-day compressive strength.

PART 3 EXECUTION

3.01 HANGER AND SUPPORT INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install anchors and fasteners in accordance with ICC Evaluation Services, LLC (ICC-ES) evaluation report conditions of use where applicable.

C. Provide independent support from building structure. Do not provide support from piping, ductwork, conduit, or other systems.

DRAFT

D. Do not penetrate or otherwise notch or cut structural members without approval of Structural Engineer.

E. Secure fasteners according to manufacturer's recommended torque settings.

F. Metal Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Provide hangers, supports, clamps, and attachments as required to properly support piping from the building structure.

G. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-69, MSS SP-89, and Table above. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.

H. Metal Framing System Installation: Arrange for grouping of parallel runs of piping, and support together on field-assembled metal framing systems.

I. Thermal-Hanger Shield Installation: Provide in pipe hanger or shield for insulated piping.

J. Pipe Stand Installation: Assemble components and mount on smooth roof surface. Do not penetrate roof membrane.

K. Provide hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.

L. Equipment Support Installation: Fabricate from welded-structural-steel shapes.

M. Provide hangers and supports to allow controlled thermal movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.

N. Provide lateral bracing with pipe hangers and supports to prevent swaying.

O. Provide building attachments within concrete slabs or attach to structural steel. Building attachments may not used on steel joists unless otherwise indicated. Provide additional attachments at concentrated loads, including valves, flanges, and strainers, 2-1/2” and larger and at changes in direction of piping. Provide concrete inserts before concrete is placed; fasten inserts to forms and provide reinforcing bars through openings at top of inserts.

P. Load Distribution: Provide hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.

Q. Pipe Slopes: Provide hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.

R. Insulated Piping:
   1. Attach clamps and spacers to piping.
      a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
      b. Piping Operating below Ambient Air Temperature: Provide thermal-hanger shield insert with clamp sized to match OD of insert.
      c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.
   2. Provide MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
   3. Provide MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.
   4. Shield Dimensions for Pipe: Not less than the following:
      a. Pipe ¼” to 3-½”: 12 inches long and 0.048 inch thick.
      b. Pipe 4”: 12 inches long and 0.06 inch thick.
      c. Pipe 5” and 6”: 18 inches long and 0.06 inch thick.

DRAFT

d. Pipe 8” to 14”: 24 inches long and 0.075 inch thick.

5. Pipes 8” and Larger: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.
6. Thermal-Hanger Shields: Provide with insulation same thickness as piping insulation.

S. Provide hangers and supports per specifications.

T. Supports shall be coordinated with and mechanically fastened to structure.

U. Install pipe hanger under all roof drains.

3.02 EQUIPMENT SUPPORTS

A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.

B. Grouting: Place grout under supports for equipment and make bearing surface smooth.

C. Provide lateral bracing, to prevent swaying, for equipment supports.

3.03 METAL FABRICATIONS

A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.

B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.

C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:

1. Provide materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. Finish welds at exposed connections so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.

3.04 ADJUSTING

A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.

B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches.

3.05 PAINTING

A. Touchup: Unless otherwise indicated clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Provide same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.

1. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils.

B. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and immediately apply galvanizing-repair paint. Paint shall comply with ASTM A 780.

3.06 HANGER AND SUPPORT SCHEDULE

A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.

DRAFT

B. Comply with MSS SP-69 for pipe-hanger selections and applications that are not specified in piping system Sections.

C. Provide hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finish.

D. Provide nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.

E. Provide copper-plated pipe hangers and copper attachments for copper piping and tubing.

F. Provide padded hangers for piping that is subject to scratching.

G. Provide thermal-hanger shield inserts for insulated piping and tubing.

H. Horizontal-Piping Hangers and Supports: Unless otherwise indicated provide the following:
   1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of stationary pipes ½" to 30".
   2. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of up to 1050 deg F pipes 4" to 14", requiring up to 4" of insulation.
   3. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes ¾" to 14", requiring clamp flexibility and up to 4 inches of insulation.
   4. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes ½" to 14" if little or no insulation is required.
   5. Pipe Hangers (MSS Type 5): For suspension of pipes ½" to 4", to allow off-center closure for hanger installation before pipe erection.
   6. Adjustable, Swivel Split- or Solid-Ring Hangers (MSS Type 6): For suspension of noninsulated, stationary pipes ¾" to 8".
   7. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of noninsulated, stationary pipes ½" to 8".
   8. Adjustable Band Hangers (MSS Type 9): For suspension of noninsulated, stationary pipes ½" to 8".
   9. Adjustable, Swivel-Ring Band Hangers (MSS Type 10): For suspension of noninsulated, stationary pipes ½" to 8".
   10. Split Pipe Ring with or without Turnbuckle Hangers (MSS Type 11): For suspension of noninsulated, stationary pipes ½" to 8".
   11. Extension Hinged or Two-Bolt Split Pipe Clamps (MSS Type 12): For suspension of noninsulated, stationary pipes NPS ½" to 3".
   12. U-Bolts (MSS Type 24): For support of heavy pipes ½" to 14".
   13. Clips (MSS Type 26): For support of insulated pipes not subject to expansion or contraction.
   14. Pipe Saddle Supports (MSS Type 36): For support of pipes 4" to 14", with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate.
   15. Pipe Stanchion Saddles (MSS Type 37): For support of pipes 4" to 14", with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate, and with U-bolt to retain pipe.
   16. Adjustable Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes 2-½" to 14" if vertical adjustment is required, with steel-pipe base stanchion support and cast-iron floor flange.
   17. Single-Pipe Rolls (MSS Type 41): For suspension of pipes 1" to 14", from two rods if longitudinal movement caused by expansion and contraction might occur.
   18. Adjustable Roller Hangers (MSS Type 43): For suspension of pipes 2-½" to 14", from single rod if horizontal movement caused by expansion and contraction might occur.

DRAFT

19. Complete Pipe Rolls (MSS Type 44): For support of pipes 2” to 14” if longitudinal movement caused by expansion and contraction might occur but vertical adjustment is not necessary.
20. Pipe Roll and Plate Units (MSS Type 45): For support of pipes 2” to 14” if small horizontal movement caused by expansion and contraction might occur and vertical adjustment is not necessary.
21. Adjustable Pipe Roll and Base Units (MSS Type 46): For support of pipes 2” to 14”if vertical and lateral adjustment during installation might be required in addition to expansion and contraction.

I. Vertical-Piping Clamps: Unless otherwise indicated provide the following:
1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers ¾” to 14”.
2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers ¾” to 14” if longer ends are required for riser clamps.

J. Hanger-Rod Attachments: Unless otherwise indicated provide the following:
1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches for heavy loads.
2. Steel Clevises (MSS Type 14): For 120 to 450 deg F piping installations.
3. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11, split pipe rings.
4. Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.
5. Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450 deg F piping installations.
6. Flat Plate, Double Nut, and Washer as Detailed on Structural Drawings: For attaching to bar joists. Method of attachment to bar joists must be approved by the structural engineer and joist manufacturer.

K. Building Attachments: Unless otherwise indicated provide the following:
1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
2. Flat Plate, Double Nuts, and Washer as Detailed on Structural Drawings: For use under roof installations with bar-joist construction to attach to bottom chord of joist.
3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
6. C-Clamps (MSS Type 23): For structural shapes.
7. Top-Beam Clamps (MSS Type 25): For top of beams if hanger rod is required tangent to flange edge.
8. Side-Beam Clamps (MSS Type 27): For bottom of steel I-beams.
9. Steel-Beam Clamps with Eye Nuts (MSS Type 28): For attaching to bottom of steel I-beams for heavy loads.
10. Linked-Steel Clamps with Eye Nuts (MSS Type 29): For attaching to bottom of steel I-beams for heavy loads, with link extensions.
11. Malleable-Beam Clamps with Extension Pieces (MSS Type 30): For attaching to structural steel.
12. Welded-Steel Brackets: For support of pipes from below or for suspending from above by using clip and rod. Provide one of the following for indicated loads:
    a.
    b. Medium (MSS Type 32): 1500 lb.

DRAFT

c. Heavy (MSS Type 33): 3000 lb.

13. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
14. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
15. Horizontal Travelers (MSS Type 58): For supporting piping systems subject to linear horizontal movement where headroom is limited.

L. Saddles and Shields: Unless otherwise indicated provide the followings:

1. Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
3. Thermal-Hanger Shield Inserts: For supporting insulated pipe.

M. Spring Hangers and Supports: Unless otherwise indicated provide the following:

1. Restraint-Control Devices (MSS Type 47): To control pipe movement.
2. Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches.
3. Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41, roll hanger with springs.
4. Spring Sway Braces (MSS Type 50): To retard sway, shock, vibration, or thermal expansion in piping systems.
5. Variable-Spring Hangers (MSS Type 51): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from hanger.
6. Variable-Spring Base Supports (MSS Type 52): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from base support.
7. Variable-Spring Trapeze Hangers (MSS Type 53): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from trapeze support.
8. Constant Supports: For critical piping stress and if necessary to avoid transfer of stress from one support to another support, critical terminal, or connected equipment. Include auxiliary stops for erection, hydrostatic test, and load-adjustment capability. These supports include the following types:
   a. Horizontal (MSS Type 54): Mounted horizontally.
   b. Vertical (MSS Type 55): Mounted vertically.
   c. Trapeze (MSS Type 56): Two vertical-type supports and one trapeze member.

N. Comply with MSS SP-69 for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.

O. Comply with MFMA-103 for metal framing system selections and applications that are not specified in piping system Sections.

P. Provide powder-actuated fasteners or mechanical-expansion anchors instead of building attachments where indicated in concrete construction.

3.07 FIELD QUALITY CONTROL

A. Inspect support and attachment components for damage and defects.

B. Repair cuts and abrasions in galvanized finishes using zinc-rich paint recommended by manufacturer. Replace components that exhibit signs of corrosion.

DRAFT

C. Correct deficiencies and replace damaged or defective support and attachment components.

END OF SECTION 220529

DRAFT

SECTION 220533
HEAT TRACING FOR PLUMBING PIPING

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Provisions of the Contract and of the Contract Documents apply to this Section.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Sequencing: Ensure that utility connections are achieved in an orderly and expeditious manner.

B. Coordinate the work with other trades to provide ground fault protection for electric heat tracing circuits as required by NFPA 70.

C. Coordinate the work with other trades to provide circuit breaker ratings suitable for installed circuit lengths.

1.03 SUBMITTALS

A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each type of product indicated.

1. Schedule heating capacity, length of cable, spacing, and electrical power requirement for each electric heating cable required.

B. Shop Drawings: For electric heating cable. Include plans, sections, details, and attachments to other work.

1. Wiring Diagrams: Power, signal, and control wiring.

C. Operation and Maintenance Data: For electric heating cable controls to include in operation and maintenance manuals.

D. Warranty: Special warranty specified in this Section.

1.04 QUALITY ASSURANCE ***REFER TO CURRENT MCPS MECH-PLUMB DESIGN CHECKLIST***

A. **Comply with the requirements of the current MCPS Mechanical and Plumbing Design Checklist. Refer to the latest edition for applicable design, coordination, and documentation standards.**

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.05 ABBREVIATIONS

A. BAS: Building Automation System.

B. F: Fahrenheit

C. HZ: Hertz

D. IEEE: Institute of Electrical and Electronics Engineers

E. IP: Ingress Protection

F. NEMA: National Electrical Manufacturers Association

G. NFPA: National Fire Protection Association

DRAFT

H. OD: Outside Diameter

I. PH: Phase

J. UV: Ultraviolet

K. V: Voltage

1.06 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace electric heating cable that fails in materials or workmanship within specified warranty period.

1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 SELF-REGULATING PARALLEL RESISTANCE ELECTRIC HEATING CABLE

A. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:

1. Chromalox, Inc.; Wiegard Industrial Division; Emerson Electric Company.
2. Delta-Therm Corp.
3. Raychem; a division of Tyco Thermal Controls.
4. Thermon Manufacturing Co.

B. Heating Element:

1. Provide pair of parallel No. 16 nickel-coated stranded copper bus wires embedded in cross-linked conductive polymer core with varying heat output in response to temperature along its length.
2. Terminations: Waterproof, factory-assembled, non-heating leads with connector at one end and water-tight seal at opposite end.
3. Capable of crossing over itself without overheating.

C. Insulated Jacket: Flame-retardant polyolefin.

D. Cable Cover: Provide metallic braid and polyolefin outer jacket with UV inhibitor.

E. Maximum Power-On Operating Temperature: As scheduled. If not scheduled, 150 degrees F.

F. Maximum Power-Off Exposure Temperature: As scheduled. If not scheduled, 185 degrees F.

G. Capacities and Characteristics: As scheduled. If not scheduled 3 watts per linear foot at 115V, 1PH, 60HZ, to maintain 120 degrees F.

2.02 CABLE OUTER JACKET MARKINGS

A. Name of manufacturer, trademark, and/or other recognized symbol of identification.

B. Catalog number, reference number and/or model number.

C. Month and year of manufacture, date coding, applicable serial number, or equivalent.

D. Agency listing or approval.

E. Applicable environmental or are use requirements, such as NEMA 4, Type 4, IP ratings, and hazardous (classified) locations markings including temperature rating.

F. Any applicable warning/caution statements such as “WARNING: De-energize circuit before removing cover.”

DRAFT

2.03 CONNECTION KITS

A. Provide power connection, splice/tee, and end seal kits compatible with the heating cable and without requiring cutting of the cable core to expose bus wires.

B. Provide with NEMA 4X rating for prevention of corrosion and water ingress.

C. Provide UV stabilized components.

2.04 ACCESSORIES

A. Provide accessories as indicated or as required for complete installation, including but not limited to:

1. High temperature, glass filament tape for attachment of heating cable to metal piping.
2. Aluminum self-adhesive tape for attachment of heating cable to plastic piping.
3. Heat-conductive putty.
4. Cable ties.
5. Silicone end seals and splice kits.
6. Installation clips.
7. Warning labels for attachment to exterior of piping insulation.
8. Warning labels for attachment to exterior of piping insulation. Continuously printed "Electrical Heat Tracing"; vinyl, at least 3 mils thick, and with pressure-sensitive, permanent, waterproof, self-adhesive back.
    a. Width for Markers on Pipes with OD, Including Insulation, Less Than 6 Inches: 3/4 inch minimum.
    b. Width for Markers on Pipes with OD, Including Insulation, 6 Inches or Larger: 1-1/2 inches minimum.

2.05 CONTROLS

A. Pipe-Mounted Thermostats for Freeze Protection:

1. Remote bulb unit with adjustable temperature range from 30 to 50 deg F.
2. Snap action; open-on-rise, single-pole switch with minimum current rating adequate for connected cable.
3. Remote bulb on capillary, resistance temperature device, or thermistor for directly sensing pipe-wall temperature.
4. Corrosion-resistant, waterproof control enclosure.

B. Precipitation and Temperature Sensor for Snow Melting on Roofs and in Gutters:

1. Automatic control with manual on, automatic, and standby/reset switch.
2. Precipitation and temperature sensors shall sense the surface conditions of roof and gutters and shall be programmed to energize the cable as follows:
    a. Temperature Span: 34 to 44 deg F.
    b. Adjustable Delay Off Span: 2 minutes.
    c. Energize Cables: Following two-minute delay if ambient temperature is below set point and precipitation is detected.
    d. De-Energize Cables: On detection of a dry surface plus time delay.
3. Corrosion-proof and waterproof enclosure suitable for outdoor mounting, for controls and precipitation and temperature sensors.
4. Minimum 30-A contactor to energize cable or close other contactors.
5. Provide relay with contacts to indicate operational status, on or off, for interface with BAS.

DRAFT

C. Interface with BASInterface with BAS for Domestic Hot-Water Temperature Maintenance:
   1. Relays with contacts to permit On/Off setting and to indicate operational status, (On or Off).

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine surfaces and substrates to receive electric heating cables for compliance with requirements for installation tolerances and other conditions affecting performance.
   1. Ensure surfaces and pipes in contact with electric heating cables are free of burrs and sharp protrusions.
   2. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install in accordance with manufacturer's written installation instructions.

B. Comply with applicable local building codes and requirements of authorities having jurisdiction.

C. Install electric heating cable across expansion, construction, and control joints according to manufacturer's written recommendations using cable protection conduit and slack cable to allow movement without damage to cable.

D. Electric Heating Cable Installation for Freeze Protection for Piping:
   1. Install electric heating cables after piping has been tested and before insulation is installed.
   2. Install electric heating cables according to IEEE 515.1.
   3. Install insulation over piping with electric cables according to Division 22 Section "Plumbing Insulation."
   4. Install warning tape on piping insulation where piping is equipped with electric heating cables.

E. Electric Heating Cable Installation for Snow and Ice Melting on Roofs and in Gutters and Downspouts: Install on roof and in gutters and downspouts with clips furnished by manufacturer that are compatible with roof, gutters, and downspouts.

F. Electric Heating Cable Installation for Temperature Maintenance for Domestic Hot-Water:
   1. Install electric heating cables after piping has been tested and before insulation is installed.
   2. Install insulation over piping with electric heating cables according to Division 22 Section "Plumbing Insulation."
   3. Install warning tape on piping insulation where piping is equipped with electric heating cables.

G. Set field-adjustable switches and circuit-breaker trip ranges.

H. Protect installed heating cables, including non-heating leads, from damage.

3.03 CONNECTIONS

A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

DRAFT

3.04 FIELD QUALITY CONTROL

A. Perform start-up by factory technician or factory representative as per Owner's requirements.

B. Field Testing and Inspections: Perform tests after cable installation but before application of coverings such as insulation, wall or ceiling construction, or concrete.

1. Commission system in accordance with installation and operation manual. .
2. Inspect for sources of water entry and proper sealing.
3. Inspect weather barrier to confirm that no sharp edges are contacting the trace heating.
4. Test cables for electrical continuity and insulation integrity before energizing.
5. Test cables to verify rating and power input. Energize and measure voltage and current simultaneously. Record results.
6. Repeat tests for continuity, insulation resistance, and input power after applying thermal insulation on pipe-mounting cables. Record results.
7. Controls: Verify control parameters are set to the application requirements.

C. Remove and replace malfunctioning heat tracing and retest as specified above.

3.05 PROTECTION

A. Protect installed products from damage until Date of Substantial Completion.

END OF SECTION 220533

DRAFT

SECTION 220553
IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Provisions of the Contract and of the Contract Documents apply to this Section.

1.02 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.

C. Valve Schedules: For each piping system to include in maintenance manuals.

D. 1/16” = 1’-0” scale drawing showing all valve locations to include in maintenance manuals.

1.03 QUALITY ASSURANCE ***REFER TO CURRENT MCPS MECH-PLUMB DESIGN CHECKLIST***

A. **Comply with the requirements of the current MCPS Mechanical and Plumbing Design Checklist. Refer to the latest edition for applicable design, coordination, and documentation standards.**

B. ASME Compliance: Comply with ASME A13.1, "Scheme for the Identification of Piping Systems," for letter size, length of color field, colors, and viewing angles of identification devices for piping.

1.04 COORDINATION

A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.

B. Coordinate installation of identifying devices with locations of access panels and doors.

C. Install identifying devices before installing acoustical ceilings and similar concealment.

DRAFT

PART 2 PRODUCTS

2.01 EQUIPMENT LABELS

A. Metal Labels for Equipment:

1. Material and Thickness: Brass or Aluminum, 0.032-inch minimum thickness, and having predrilled or stamped holes for attachment hardware.
2. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
3. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
4. Fasteners: Stainless-steel rivets or self-tapping screws.
5. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

B. Plastic Labels for Equipment:

1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/16-inch-thick, and having predrilled holes for attachment hardware.
2. Letter Color: White.
3. Background Color: Black.
4. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
6. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
7. Fasteners: Stainless-steel rivets or self-tapping screws.
8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

C. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified.

D. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

2.02 WARNING SIGNS AND LABELS

A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/16-inch-thick, and having predrilled holes for attachment hardware.

B. Letter Color: White.

C. Background Color: Red.

D. Maximum Temperature: Able to withstand temperatures up to 160 deg F.

E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.

F. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.

G. Fasteners: Stainless-steel rivets or self-tapping screws.

H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

I. Label Content: Include caution and warning information, plus emergency notification instructions.

2.03 PIPE LABELS

A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.

B. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.

C. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.

DRAFT

D. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as indicated below, pipe size, and indication of flow direction.
   1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions, or as separate unit on each pipe label to indicate flow direction.
   2. Lettering Size: According to and conforming with OSHA/ANSI A13.1.

2.04 VALVE TAGS

A. Valve Tags: Brass, 1.5 inch (40mm) diameter with black-filled letters/numbers not less than 0.25 inch (6mm) high. Numbering scheme approved by MCPS. Provide 5/32-inch hole for fastener.
   1. Material: Brass.

B. Valve-Tag Fasteners: Brass attachement chains.

2.05 VALVE SCHEDULE

A. Valve Schedules: For each piping system, on standard-size bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.
   1. Valve-Schedule Frames: Glazed display frame for removable mounting on masonry walls for each page of valve schedule. Include mounting screws and hangers.
   2. Frame: Finished hardwood or extruded aluminum.
   3. Glazing: ASTM C 1036, Type I, Class 1, Glazing Quality B, 2.5-mm, single-thickness glass.

2.06 VALVE PLAN

A. Valve Plan: Prepare a scale drawing. Provide the location and identity of each valve.
   1. Valve Plan Frames: Glazed display frame for removable mounting on masonry walls for each page of valve plan. Include mounting screws and hangers.
   2. Frame: Finished hardwood or extruded aluminum.
   3. Glazing: ASTM C 1036, Type I, Class 1, Glazing Quality B, 2.5-mm, single-thickness glass.

2.07 WARNING TAGS

A. Warning Tags: Preprinted or partially preprinted, accident-prevention tags, of plasticized card stock with matte finish suitable for writing.
   1. Size: 3 inches by 5-1/4 inches minimum.
   2. Fasteners: Brass grommet and wire.
   3. Nomenclature: Large-size primary caption such as "DANGER," "CAUTION," or "DO NOT OPERATE."
   4. Color: Yellow background with black lettering.

PART 3 EXECUTION

3.01 COMMON REQUIREMENTS

A. Provide identification for plumbing piping and equipment.

B. Label valves and equipment for maintenance access.

C. Mark ceilings with permanent tags identifying valves and equipment above ceiling.

DRAFT

3.02 PREPARATION

A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.03 EQUIPMENT LABEL INSTALLATION

A. Install and permanently fasten equipment nameplates on each major item of plumbing equipment that does not have nameplate or has a nameplate that is damaged or located where not easily visible. Locate nameplates where easily visible. Include nameplates for the following general categories of equipment:
   1. Fuel-burning units.
   2. Pumps, compressors, and other motor-driven equipment.
   3. Heat exchangers and similar equipment.
   4. Water heaters and storage tanks.

B. Install equipment markers with permanent adhesive on or near each major item of mechanical equipment. Data required for markers may be included on signs, and markers may be omitted if both are indicated.
   1. Letter Size: Minimum 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
   2. Data: Distinguish among multiple units, indicate operational requirements, indicate safety and emergency precautions, warn of hazards and improper operations, and identify units.
   3. Locate markers where accessible and visible. Include markers for the following general categories of equipment:
      a. Main control and operating valves, including safety devices and hazardous units such as gas outlets.
      b. Meters, gages, and thermometers.
      c. Fuel-burning units.
      d. Pumps, compressors, and other motor-driven equipment.
      e. Heat exchangers and similar equipment.
      f. Water heaters and storage tanks.

C. Install equipment signs with screws or permanent adhesive on or near each major item of mechanical equipment. Locate signs where easily visible.
   1. Identify mechanical equipment with equipment markers in the following color codes:
      a. Green: For cooling equipment and components.
      b. Yellow: For heating equipment and components.
      c. Orange: For combination cooling and heating equipment and components.
      d. Brown: For energy-reclamation equipment and components.
      e. Blue: For equipment not listed in a through d
   2. Letter Size: Minimum 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
   3. Data: Distinguish among multiple units, indicate operational requirements, indicate safety and emergency precautions, warn of hazards and improper operations, and identify units.

DRAFT

D. Install access panel markers with screws on equipment access panels.

E. Tags installed on curved surfaces shall be brass or aluminum.

3.04 PIPE LABEL INSTALLATION

A. Piping Color-Coding: Painting of piping is specified in other sections.

B. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
   1. Near each valve and control device.
   2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
   3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
   4. At access doors, manholes, and similar access points that permit view of concealed piping.
   5. Near major equipment items and other points of origination and termination.
   6. Spaced at maximum intervals of 25 feet.
   7. On piping above removable acoustical ceilings.

C. Pipe Label Color Schedule: (All piping to be labeled. Owner to confirm color if not provided in specifications or drawings.)
   1. Domestic Cold Water Piping (Potable):
      a. System Abbreviation: POTABLE WATER
      b. Background Color: Green.
      c. Letter Color: White.
   2. Domestic Hot Water Piping (Potable):
      a. System Abbreviation: HW
      b. Background Color: Red.
      c. Letter Color: White.
   3. Domestic Hot Water Return Piping (Potable):
      a. System Abbreviation: HWR
      b. Background Color: Red.
      c. Letter Color: White.
   4. Sanitary Waste Piping:
      a. System Abbreviation: WASTE
      b. Background Color: Green.
      c. Letter Color: White.
   5. Sanitary Vent Piping:
      a. System Abbreviation: VENT
      b. Background Color: Green.
      c. Letter Color: White.
   6. Storm Drainage Piping:
      a. System Abbreviation: STORM
      b. Background Color: Green.
      c. Letter Color: White.
   7. Storm Secondary/Emergency Drainage Piping:

DRAFT

a. System Abbreviation: OVERFLOW
b. Background Color: Green
c. Letter Color: White

8. Natural Gas Piping:
   a. System Abbreviation: GAS
   b. Background Color: Yellow.
   c. Letter Color: Black.

3.05 VALVE-TAG INSTALLATION

A. Provide and install tags on all valves and control devices in piping systems, except check valves; valves within factory-fabricated equipment units; plumbing fixture supply stops; faucets; convenience and lawn-watering hose connections; and HVAC terminal devices and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule. Numbers shall correspond to those shown on the valve chart. Attach tags to valve shaft.
   1. Valve-Tag Size and Shape: 1 ½", round.
   2. Valve-Tag Color: Brass.
   3. Letter/Number Color: Black.

3.06 VALVE SCHEDULE INSTALLATION

A. Mount valve schedules on wall in accessible location in each major equipment room and where directed by owner.

3.07 VALVE PLAN INSTALLATION

A. Mount valve plans on wall in accessible location in each major equipment room and where directed by owner.

3.08 WARNING-TAG INSTALLATION

A. Write required message on, and attach warning tags to, equipment and other items where required.

3.09 ADJUSTING

A. Relocate mechanical identification materials and devices that have become visually blocked by other work.

3.10 CLEANING

A. Clean faces of mechanical identification devices and glass fronts of valve schedules and plans.

END OF SECTION 220553

DRAFT

SECTION 220700
PLUMBING INSULATION

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Provisions of the Contract and of the Contract Documents apply to this Section.

1.02 DEFINITIONS

A. Outdoor pipe: Pipe located outside the building insulation envelope.

B. Plenum: An unoccupied space or void, on the conditioned side of the building insulation and vapor barrier, being used to return conditioned air to the inlet side of a return or exhaust fan either directly or via a duct connection. An example would be a space with air handling light fixtures or openings in the ceiling used to transport air through the ceiling and then to an open duct located above the ceiling in another location.

C. Indirectly Conditioned Space: A space having no direct conditioning but, due to air movement induced by an exhaust, or return opening, is conditioned by makeup air from an adjacent space. An example would be a small toilet. Boiler rooms, fan rooms, and mechanical rooms do not qualify as indirectly conditioned spaces.

D. Inside the Building Insulation Envelope: For the purposes of this section, boiler rooms, fan rooms, and mechanical rooms are considered to be OUTSIDE the building insulation envelope.

E. Exposed: Visible from any angle without removal of building element or equipment.

F. Concealed: Enclosed in building element or above ceiling such that it is not visible from any angle without removal of building element or equipment.

1.03 SUBMITTALS

A. Product Data: Provide product description, thermal characteristics, list of materials and thickness for each service, and locations. Identify thermal conductivity, thickness, and jackets (both factory and field applied, if any), for each type of product indicated.

B. Shop Drawings: Show fabrication and installation details for the following:
   1. Detail application of removable insulation covers.
   2. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
   3. Detail attachment and covering of heat tracing inside insulation.
   4. Detail insulation application at pipe expansion joints for each type of insulation.
   5. Detail insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.
   6. Detail removable insulation at piping specialties, equipment connections, and access panels.
   7. Detail application of field-applied jackets.
   8. Detail application at linkages of control devices.
   9. Detail field application for each equipment type.
   10. Detail field application for each equipment type.

C. Stainless-Steel Jacket: Deep corrugated sheets of stainless steel complying with ASTM A 666, Type 304 or 316; 0.10 inch thick; and roll stock ready for shop or field cutting and forming to indicated sizes.

DRAFT

1. Moisture Barrier: 1-mil- thick, heat-bonded polyethylene and kraft paper.
2. Elbows: Gore type, for 45- and 90-degree elbows in same material, finish, and thickness as jacket.
3. Jacket Bands: Stainless steel, Type 304, 3/4 inch wide.

D. Heavy PVC Pipe Fitting Covers: Factory-fabricated fitting covers manufactured from 30-mil-thick, high-impact, ultraviolet-resistant PVC.
1. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories for the disabled.
2. Adhesive: As recommended by insulation material manufacturer.

E. Standard PVC Pipe Fitting Covers: Factory-fabricated fitting covers manufactured from 20-mil-thick, high-impact, ultraviolet-resistant PVC.
1. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories for the disabled.
2. Adhesive: As recommended by insulation material manufacturer.

1.04 QUALITY ASSURANCE ***REFER TO CURRENT MCPS MECH-PLUMB DESIGN CHECKLIST***

A. **Comply with the requirements of the current MCPS Mechanical and Plumbing Design Checklist. Refer to the latest edition for applicable design, coordination, and documentation standards.**

B. Fire-Test-Response Characteristics: Insulation and related materials shall have fire-test-response characteristics indicated, as determined by testing identical products per ASTM E 84, by a testing and inspecting agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing and inspecting agency.
1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Accept materials on site, labeled with manufacturer's identification, product density, and thickness.

B. Packaging: Ship insulation materials in containers marked by manufacturer with type, grade, and maximum use temperature.

C. Ship Insulated Piping System Components on pallets and wood supports. Securely fasten and protect from damage. Store off the ground and cover with opaque waterproof tarp to protect materials from sunlight and rain.

1.06 COORDINATION

A. Coordinate size and location of supports, hangers, and insulation shields specified in Section "Hangers and Supports for Plumbing Piping and Equipment."

B. Coordinate clearance requirements with piping installer for piping insulation, duct installer for duct insulation, and equipment installer for equipment insulation.

C. Maintain clearances required for maintenance.

DRAFT

D. Coordinate installation and testing of heat tracing.

1.07 FIELD CONDITIONS

A. Maintain ambient conditions required by manufacturers of each product.

B. Maintain temperature before, during, and after installation for minimum of 24 hours.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Available Manufacturers:
   1. Mineral-Fiber Insulation:
      a. CertainTeed Manson.
      b. Johns Manville
      c. Knauf FiberGlass GmbH.
      d. Owens-Corning Fiberglas Corp.
      e. Schuller International, Inc.
   2. Flexible Elastomeric Thermal Insulation:
      a. Armstrong World Industries, Inc.
      b. Rubatex Corp.
   3. Polyolefin Insulation:
      a. Armstrong World Industries, Inc.
      b. IMCOA.
   4. Closed-Cell Phenolic-Foam Insulation:
      a. Kooltherm Insulation Products, Ltd.
   5. Removable Insulation Covers:
      a. Advance Thermal Corp.

DRAFT

2.02 INSULATION MATERIALS

A. Comply with requirements in Part 3 schedule articles for where insulating materials shall be applied.

B. Products shall not contain asbestos, lead, mercury, or mercury compounds.

C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.

D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.

E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.

F. Mineral-Fiber Board: Glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type IB, with factory applied FSK Jacket. Meet the requirements of ASTM C 1290, Type III, inorganic glass fibers bonded by a thermosetting resin to maximum service temperature of 250°F. Faced insulation shall not exceed 25 Flame Spread, 50 Smoke Developed when tested in accordance with ASTM E84.

G. Semi-Rigid Mineral-Fiber Board: Glass fibers bonded with a thermosetting resin. Comply with ASTM C 1136, Type I, II, III, & IV with factory applied all-service jacket (ASJ) or Type II, IV with factory applied Foil Scrim Kraft (FSK) jacket.

H. Mineral-Fiber Blanket with Factory Applied FSK Jacket: Meet the requirements of ASTM C 1290, Type III, inorganic glass fibers bonded by a thermosetting resin with a multi-purpose foil-scrim kraft (FSK) jacket to maximum service temperature of 250°F. FSK shall meet the requirements of ASTM C 1136, Type II, when surface burning characteristics are determined in accordance with ASTM E 84 with the foil surface of the material exposed to the flame as it is in the final composite. Composite (insulation, facing and adhesive) shall not exceed 25 Flame Spread, 50 Smoke Developed when tested in accordance with ASTM E 84. Insulation properties shall be as follows:

1. Thickness: 1-1/2”
   a. Density: 0.75 pcf
   b. Minimum uncompressed R value: 5.0
   c. Minimum installed R value assuming 25% compression: 4.0
2. Thickness: 2”
   a. Density: 1.0 pcf
   b. Minimum uncompressed R value: 7.4
   c. Minimum installed R value assuming 25% compression: 6.0
3. Alternate to 2” 1.0 pcf: Thickness: 2.2”
   a. Density: 0.75 pcf
   b. Minimum uncompressed R value: 7.4
   c. Minimum installed R value assuming 25% compression: 6.0
4. Thickness: 3”
   a. Density: 0.75 pcf
   b. Minimum uncompressed R value: 10.0
   c. Minimum installed R value assuming 25% compression: 8.3

I. Medium Temperature Mineral-Fiber Blanket for Operating Temperatures from 250 to 850 deg F: Glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II, without facing and with all-service jacket manufactured from kraft paper, reinforcing scrim, aluminum foil, and vinyl film.

J. High Temperature Mineral-Fiber Blanket for Temperatures above 850 deg F: Glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type V, without facing and with all-service jacket manufactured from kraft paper, reinforcing scrim, aluminum foil, and vinyl film.

K. Mineral-Fiber Pipe Insulation: Glass fibers bonded with a thermosetting resin complying with the following:

1. Preformed Pipe Insulation: Comply with ASTM C 547, Type 1, with factory-applied, all-purpose, vapor-retarder jacket.
2. Semi-Rigid Mineral-Fiber Board: Glass fibers bonded with a thermosetting resin. Comply with ASTM C 1136, Type I, II, III, IV with factory applied all-service jacket (ASJ) or Type II, IV with factory applied Foil Scrim Kraft (FSK) jacket.
3. Blanket Insulation: Comply with ASTM C 553, Type II, without facing.
4. Mineral-Fiber Insulating Cements: Comply with ASTM C 195.
5. Expanded or Exfoliated Vermiculite Insulating Cements: Comply with ASTM C 196.
6. Mineral-Fiber, Hydraulic-Setting Insulating and Finishing Cement: Comply with ASTM C 449/C 449M.

L. Flexible Elastomeric: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials and Type II for sheet materials.

1. Adhesive: As recommended by insulation material manufacturer.

DRAFT

2. Ultraviolet-Protective Coating: As recommended by insulation manufacturer.

M. Closed-Cell Phenolic-Foam: Block insulation of rigid, expanded, closed-cell structure. Comply with ASTM C 1126, Type II, Grade 1.

N. Prefabricated Thermal Insulating Fitting Covers: Comply with ASTM C 450 for dimensions used in preforming insulation to cover valves, elbows, tees, and flanges.

2.03 FIELD-APPLIED JACKETS

A. General: ASTM C 921, Type 1, unless otherwise indicated.

B. Glass Cloth: Woven glass-fiber fabric, plain weave, minimum 8 ounces per square yard.

C. Foil and Paper Jacket: Laminated, glass-fiber-reinforced, flame-retardant kraft paper and aluminum foil.

D. PVC Jacket: High-impact, ultraviolet-resistant PVC; 20 mils thick; roll stock ready for shop or field cutting and forming.
1. Adhesive: As recommended by insulation material manufacturer.
2. PVC Duct Jacket Color: White or gray.
3. PVC Pipe Jacket Color: Color-code piping jackets based on materials contained within the piping system.

E. Aluminum Jacket: Deep corrugated sheets manufactured from aluminum alloy complying with ASTM B 209, and having an integrally bonded moisture barrier over entire surface in contact with insulation. Factory cut and rolled to indicated sizes. Comply with ASTM B 209, 3003 alloy, H-14 temper.
1. Finish and Thickness: Stucco-embossed finish, 0.016 inch thick.
2. Moisture Barrier: 1-mil- thick, heat-bonded polyethylene and kraft paper.

2.04 REMOVABLE INSULATION COVERS

A. Pre-manufactured easily removable insulation cover/blanket intended for insulation of equipment and devices requiring periodic maintenance.

2.05 ACCESSORIES AND ATTACHMENTS

A. Glass Cloth and Tape: Comply with MIL-C-20079H, Type I for cloth and Type II for tape. Woven glass-fiber fabrics, plain weave, presized a minimum of 8 oz. /sq. yd.
1. Tape Width: 4 inches.

B. Bands: 3/4 inch wide, in one of the following materials compatible with jacket:
1. Stainless Steel: ASTM A 666, Type 304; 0.020 inch thick.
2. Galvanized Steel: 0.005 inch thick.
3. Aluminum: 0.007 inch thick.
4. Brass: 0.010 inch thick.
5. Nickel-Copper Alloy: 0.005 inch thick.

C. Wire: 0.080-inch, nickel-copper alloy; 0.062-inch, soft-annealed, stainless steel; or 0.062-inch, soft-annealed, galvanized steel.

D. Weld-Attached Anchor Pins and Washers: Copper-coated steel pin for capacitor-discharge welding and galvanized speed washer. Pin length sufficient for insulation thickness indicated.
1. Welded Pin Holding Capacity: 100 lb for direct pull perpendicular to the attached surface.

DRAFT

E. Adhesive-Attached Anchor Pins and Speed Washers: Galvanized steel plate, pin, and washer manufactured for attachment to duct, pipe, plenum and breeching with adhesive. Pin length sufficient for insulation thickness indicated.
   1. Adhesive: Recommended by the anchor pin manufacturer as appropriate for surface temperatures of ducts, pipes, plenums, and breechings; and to achieve a holding capacity of 100 lb. for direct pull perpendicular to the adhered surface.

F. Self-Adhesive Anchor Pins and Speed Washers: Galvanized steel plate, pin, and washer manufactured for attachment to duct, pipe, and plenum with adhesive. Pin length sufficient for insulation thickness indicated.

2.06 VAPOR RETARDERS

A. Mastics: Materials recommended by insulation material manufacturer that are compatible with insulation materials, jackets, and substrates.

2.07 REMOVABLE INSULATION COVERS

A. Pre-manufactured easily removable insulation cover/blanket intended for insulation of equipment and devices requiring periodic maintenance.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that piping has been tested before applying insulation materials.

B. Verify that surfaces are clean and dry, with foreign material removed.

C. Examine substrates and conditions for compliance with requirements for installation and other conditions affecting performance of insulation application.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

3.03 GENERAL APPLICATION REQUIREMENTS

A. Apply insulation materials, accessories, and finishes according to the manufacturer's written instructions; with smooth, straight, and even surfaces; and free of voids throughout the length of piping, and fittings.

B. Refer to schedules at the end of this Section for materials, forms, jackets, and thickness required for each system.

C. Use accessories compatible with insulation materials and suitable for the service. Use accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

D. Apply multiple layers of insulation with seams staggered.

E. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.

F. Seal joints and seams with vapor-retarder mastic on insulation indicated to receive a vapor retarder.

G. Keep insulation materials dry at all times. Insulation that becomes wet or is otherwise damaged beyond repair shall be removed immediately and replaced. Replacement material and installation shall be in accordance with these specifications.

DRAFT

H. Apply insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by the insulation material manufacturer.

I. Apply insulation with the minimum number of joints practical.

J. Apply insulation over fittings, valves, and specialties, with continuous thermal and vapor-retarder integrity, unless otherwise indicated.

K. Refer to special instructions for applying insulation over fittings, valves, and specialties.

L. Hangers and Anchors: Where vapor retarder is indicated, seal penetrations in insulation at hangers, supports, anchors, and other projections with vapor-retarder mastic.
   1. Apply insulation continuously through hangers and around anchor attachments.
   2. For insulation application where vapor retarders are indicated, extend insulation on anchor legs at least 12 inches (300 mm) from point of attachment to pipe and taper insulation ends. Seal tapered ends with a compound recommended by the insulation material manufacturer to maintain vapor retarder.
   3. Install insert materials and apply insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by the insulation material manufacturer.
   4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect the jacket from tear or puncture by the hanger, support, and shield.

M. Insulation Terminations: For insulation application where vapor retarders are indicated, seal ends with a compound recommended by the insulation material manufacturer to maintain vapor retarder.

N. Apply insulation with integral jackets as follows:
   1. Pull jacket tight and smooth.
   2. Joints and Seams: Cover with tape and vapor retarder as recommended by insulation material manufacturer to maintain vapor seal.
   3. Vapor-Retarder Mastics: Where vapor retarders are indicated, apply mastic on seams and joints and at ends adjacent to pipe joints and fittings.

O. Cut insulation according to manufacturer's written instructions to prevent compressing insulation to less than 75 percent of its nominal thickness.

P. Install vapor-retarder mastic on pipes and equipment.
   1. Pipes and equipment with vapor retarders: Overlap insulation facing at seams and seal with vapor-retarder mastic and pressure-sensitive tape having same facing as insulation. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-retarder seal.
   2. Pipes and equipment without vapor retarders: Overlap insulation facing at seams and secure with outward clinching staples and pressure-sensitive tape having same facing as insulation.

Q. Roof Penetrations: Apply insulation for interior applications to a point even with top of roof flashing.
   1. Seal penetrations with vapor-retarder mastic.
   2. Apply insulation for exterior applications tightly joined to interior insulation ends.
   3. Seal insulation to roof flashing with vapor-retarder mastic.

R. Interior Wall and Partition Penetrations: Apply insulation continuously through walls and partitions, except fire-rated walls and partitions.

DRAFT

S. Fire-Rated Wall and Partition Penetrations: Terminate insulation at fire/smoke damper sleeves for fire-rated wall and partition penetrations.

T. Floor Penetrations: Terminate insulation at underside of floor assembly and at floor support at top of floor.
   1. For insulation indicated to have vapor retarders, taper termination and seal insulation ends with vapor-retarder mastic.

U. Provide plumbing insulation per specifications.

V. Provide continuously insulated piping systems.

W. Provide PVC color jacketing in mechanical rooms where insulation is installed.

X. Paint exposed piping in mechanical rooms when not insulated.

Y. Provide structural insulation inserts (Calcium Silicate, 100 PSI minimum).

3.04 MINERAL-FIBER INSULATION APPLICATION

A. Blanket Applications for Pipes: Secure blanket insulation with adhesive, and anchor pins with speed washers.
   1. Apply adhesives according to manufacturer's recommended coverage rates per square foot, for 100 percent coverage of pipe surfaces.
   2. Apply adhesive to entire circumference of pipes and to all surfaces of fittings and transitions.
   3. Install anchor pins and speed washers on sides, top, and bottom of horizontal pipes.
   4. Impale insulation over anchors and attach speed washers.
   5. Cut excess portion of pins extending beyond speed washers. Cover exposed pins and washers with tape matching insulation facing.
   6. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from one edge and one end of insulation segment. Secure laps to adjacent insulation segment with 1/2-inch staples, 1-inch o.c., and cover with pressure-sensitive tape having same facing as insulation.
   7. Overlap unfaced blankets a minimum of 2 inches on longitudinal seams and end joints. Secure with steel band at end joints and spaced a maximum of 18 inches o.c.
   8. Apply insulation on pipe fittings and transitions with a full insulation segment for each surface. Apply insulation on pipe elbows with individually mitered gores cut to fit the elbow.
   9. Insulate pipe hangers and flanges that protrude beyond the insulation surface with 6-inch-wide strips of the same material as insulation. Secure on alternating sides of stiffener, hanger, and flange with anchor pins spaced 6 inches o.c.
   10. Apply vapor-retarder mastic to open joints, breaks, and punctures for insulation indicated to receive vapor retarder.

B. Board Applications for Equipment: Secure board insulation with adhesive and anchor pins and speed washers.
   1. Apply adhesives according to manufacturer's recommended coverage rates per square foot, for 100 percent coverage of duct, plenum, & equipment surfaces.
   2. Apply adhesive to all surfaces of fittings and equipment.
   3. Cut excess portion of pins extending beyond speed washers. Cover exposed pins and washers with tape matching insulation facing.
   4. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from one edge and one end of insulation segment. Secure laps to adjacent

DRAFT

insulation segment with 1/2-inch staples, 1-inch o.c., and cover with pressure-sensitive tape having same facing as insulation.

5. Insulate equipment stiffeners, hangers, and flanges that protrude beyond the insulation surface with 6” wide strips of the insulating material. Secure on alternating sides of stiffener, hanger, and flange with anchor pins spaced 6 inches o.c.
6. Apply vapor-retarder mastic to open joints, breaks, and punctures for insulation indicated to receive vapor retarder.

3.05 FLEXIBLE ELASTOMERIC THERMAL INSULATION APPLICATION

A. Apply insulation to ducts, plenums, and equipment as follows:
   1. Follow the manufacturer's written instructions for applying insulation.
   2. Seal longitudinal seams and end joints with manufacturer's recommended adhesive. Cement to avoid openings in insulation that will allow passage of air to the duct, plenum, and equipment surface.

3.06 CLOSED-CELL PHENOLIC-FOAM INSULATION APPLICATION

A. Apply insulation as follows:
   1. Secure each layer of insulation with stainless-steel bands at 12-inch intervals and tighten without deforming the insulation materials.

B. Apply two-layer insulation with joints tightly butted and staggered at least 3 inches. Secure inner layer with 0.062-inch, soft-annealed, stainless steel wire spaced at 12-inch intervals. Secure outer layer with stainless-steel bands at 12-inch intervals.
   1. On exposed applications, finish insulation with a skim coat of mineral-fiber, hydraulic-setting cement to surface of installed insulation. When dry, apply flood coat of lagging adhesive and press on one layer of glass cloth or tape. Overlap edges at least 1 inch. Apply finish coat of lagging adhesive over glass cloth or tape. Thin the finish coat to achieve smooth finish.

3.07 FIELD-APPLIED JACKET APPLICATION

A. Apply glass-cloth jacket, where indicated, directly over bare insulation or insulation with factory-applied jackets.
   1. Apply jacket smooth and tight to surface with 2-inch overlap at seams and joints.
   2. Embed glass cloth between two 0.062-inch- thick coats of jacket manufacturer's recommended adhesive.
   3. Completely encapsulate insulation with jacket, leaving no exposed raw insulation.

3.08 FINISHES

A. Glass-Cloth Jacketed Insulation: Paint insulation finished with glass-cloth jacket as indicated.

B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.

C. Color: Final color shall be as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.

3.09 APPLICATIONS

A. Insulation materials and thickness are specified at the end of this Section.

B. Insulate all pipe and equipment:
   1. Insulate pipe in accordance with the application schedule(s) below.

DRAFT

2. Exceptions: Unless otherwise indicated, do not apply insulation to the following systems, materials, and equipment:
   a. Vibration-control devices.
   b. Testing agency labels and stamps.
   c. Nameplates and data plates.
   d. Manholes.
   e. Handholes.
   f. Cleanouts.
   g. Plastic Condensate Drain piping.
   h. Factory-insulated equipment.
   i. Flexible connectors.

3.10 INDOOR APPLICATION SCHEDULE (ABOVE GRADE):

A. Service: Domestic cold-water, hot-water, tepid-water, and circulated water.
   1. Insulation Material: Mineral fiber preformed pipe insulation with factory-applied ASJ or FSK jacket or flexible elastomeric pipe insulation.
   2. Insulation Thickness: Apply the following insulation thicknesses:
      a. 40ºF – 60ºF Systems
         1) Less than 1" in diameter: ½"
         2) 1" through 1¼" in diameter: ½"
         3) 1½" through 3" in diameter: 1"
         4) 3" through 6" in diameter: 1"
         5) 8" in diameter: 1"
         6) Less than 1" in diameter: 1"
         7) 1" through 1¼" in diameter: 1"
         8) 1½" through 3" in diameter: 1½"
         9) 3" through 6" in diameter: 1½"
         10) 8" in diameter: 1½"
      b. 141ºF – 200ºF Systems
         1) Less than 1" in diameter: 1½"
         2) 1" through 1¼" in diameter: 1½"
         3) 1½" through 3" in diameter: 2"
         4) 3" through 6" in diameter: 2"
         5) 8" in diameter: 2"
   3. Vapor Retarder Required: Yes, for domestic cold-water systems; No, for domestic hot-water systems.
   4. Finish: Exposed = Painted; Concealed = None.

B. Service: Rainwater conductors (Including secondary roof drain conductors). Insulate first thirty linear feet of piping including vertical piping from drain body and first horizontal piping run. If a second vertical run occurs before thirty linear feet is reached, terminate insulation at end of first horizontal run.
   1. Insulation Material: Mineral fiber preformed pipe insulation or Mineral-Fiber Blanket with Factory Applied FSK Jacket.
   2. Insulation Thickness: 1"
   3. Vapor Retarder Required: Yes.

DRAFT

4. Finish: Exposed = Painted; Concealed = None.

C. Service: Roof drain and overflow drain bodies.
1. Insulation Material: Semi-Rigid Mineral-Fiber Board Thermal Insulation
2. Insulation Thickness: 1½”
3. Vapor Retarder Required: Yes.
4. Finish: Exposed = Painted; Concealed = None.

D. Service: Exposed piping:
1. Mineral fiber preformed pipe insulation with Factory Applied FSK Jacket.
2. Insulation Thickness: 1”
3. Vapor Retarder Required: Yes.
4. Finish: Exposed = Painted; Concealed = None.

E. Service: Floor Drains, Traps, and Sanitary Drain Piping within 10 Feet of Drain Receiving Drainage from any Equipment. Measurement shall be pipe length.
1. Insulation Material: Mineral fiber preformed pipe insulation with Factory Applied FSK Jacket.
2. Insulation Thickness: 1”
3. Vapor Retarder Required: Yes.
4. Finish: Exposed = Painted; Concealed = None.

F. Service: Condensate Drains, and Traps.
1. Insulation Material: Mineral fiber preformed pipe insulation with Factory Applied FSK Jacket.
2. Insulation Thickness: 1”
3. Vapor Retarder Required: Yes.
4. Finish: Exposed = Painted; Concealed = None.

G. Service: Equipment Non-Condensate Drains, & Traps.
1. Insulation Material: Mineral fiber preformed pipe insulation with Factory Applied FSK Jacket.
2. Insulation Thickness: 1”
3. Vapor Retarder Required: Yes.
4. Finish: Exposed = Painted; Concealed = None.

DRAFT

3.11 INDOOR APPLICATION SCHEDULE (BELOW GRADE):

A. None required.

END OF SECTION 220700

SECTION 221113
FACILITY NATURAL-GAS PIPING

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Provisions of the Contract and of the Contract Documents apply to this Section.

1.02 DEFINITIONS

A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.

B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.

C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

1.03 PERFORMANCE REQUIREMENTS

A. Minimum Operating-Pressure Ratings:
   1. Piping and Valves: 100 psig minimum unless otherwise indicated.
   2. Service Regulators: 65 psig minimum unless otherwise indicated.
   3. Service Meter: 65 psig minimum unless otherwise indicated.

B. Gas System Pressures: Primary pressure from the utility is more than 2.0 psig and is reduced to a secondary pressure of 2.0 psig by a pressure reducing valve installed immediately downstream of the meter and is reduced again by pressure reducing valves located at each piece of equipment.

1.04 SUBMITTALS

A. Product Data: Provide data on pipe materials, pipe fittings, valves, and accessories. Provide manufacturers catalog information. Indicate valve data and ratings. Pressure regulators, indicate pressure ratings and capacities.

B. Shop Drawings: For non-penetrating rooftop supports, submit detailed layout developed for this project, with design calculations for loadings and spacings.

C. Operation and Maintenance Data: For motorized gas valves, pressure regulators, and to include in operation and maintenance manuals.

1.05 QUALITY ASSURANCE ***REFER TO CURRENT MCPS MECH-PLUMB DESIGN CHECKLIST***

A. **Comply with the requirements of the current MCPS Mechanical and Plumbing Design Checklist. Refer to the latest edition for applicable design, coordination, and documentation standards.**

B. Electrical Components and Devices: If indicated, provide electrical components and devices that are listed and labeled as defined in NFPA 70, Article 100, by testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Applicable Codes: Perform work in accordance with applicable codes and standards. Comply with the Statewide Building Code and the International Fuel Gas Code.

D. Fuel Gas Piping: Listed and labeled as required by the International Fuel Gas Code.

DRAFT

E. UL Standard: Provide components listed in UL's "Gas and Oil Equipment Directory" where UL listing is indicated.

F. Steel Support Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

G. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Handling Flammable Liquids: Remove and dispose of liquids from natural-gas piping according to requirements of authorities having jurisdiction.

B. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.

C. Store and handle pipes and tubes having factory-applied protective coatings to avoid damaging coating, and protect from direct sunlight.

1.07 PROJECT CONDITIONS

A. Perform site survey: Contract with utility-locating service for area where Project is located and locate utilities.

B. Design values of fuel gas supplied for these systems are as follows:
   1. Nominal Heating Value: 1000 Btu/cu.ft.
   2. Nominal Specific Gravity: 0.6.

C. Interruption of Natural-Gas Service: Do not interrupt natural-gas service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide purging and startup of natural-gas supply according to requirements indicated:
   1. Notify Owner and Architect no fewer than two days in advance of proposed interruption of natural-gas service.
   2. Do not proceed with interruption of natural-gas service without Owner and Architect's written permission.

DRAFT

1.08 COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided.

B. Coordinate requirements for access panels and doors for valves installed concealed behind finished surfaces.

C. Coordinate with equipment and regulator manufacturer’s recommendations and local utility service provider for final regulator and accessory selections.

PART 2 PRODUCTS

2.01 PIPING MATERIALS

A. Refer to Part 3 "Piping Applications" Article for applications of pipe, tube, fitting, and joining materials.

2.02 PIPES, TUBES, AND FITTINGS

A. Steel Pipe: ASTM A 53/A 53M, black steel, Schedule 40, Type E or S, Grade B.
   1. Malleable-Iron Threaded Fittings: ASME B16.3, Class 150, standard pattern.

2. Wrought-Steel Welding Fittings: ASTM A 234/A 234M for butt welding and socket welding.
3. Unions: ASME B16.39, Class 150, malleable iron with brass-to-iron seat, ground joint, and threaded ends.
4. Forged-Steel Flanges and Flanged Fittings: ASME B16.5, minimum Class 150, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
   a. Material Group: 1.1.
   b. End Connections: Threaded or butt welding to match pipe.
   c. Lapped Face: Not permitted underground.
   d. Gasket Materials: ASME B16.20, metallic, flat, asbestos free, aluminum o-rings, and spiral-wound metal gaskets.
   e. Bolts and Nuts: ASME B18.2.1, carbon steel aboveground and stainless steel underground.
5. Protective Coating for Underground Piping: Factory-applied, three-layer coating of epoxy, adhesive, and PE.
   a. Joint Cover Kits: Epoxy paint, adhesive, and heat-shrink PE sleeves.
6. Metallic Press-Connect Fittings: ASTM F 3226
   a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      1) Viega, LLC. (MegaPress)
   b. NPS 2 (DN 50) and Smaller: Carbon steel press fittings conforming to ASTM F 3226 with factory-installed sealing elements (HNBR) suitable for the intended service.
   c. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Carbon steel press fittings conforming to ASTM F 3226 with factory-installed sealing elements (HNBR) suitable for the intended service.

DRAFT

2.03 PROTECTIVE COATING

A. Furnish pipe and fittings with factory-applied, corrosion-resistant polyethylene coating for use in corrosive atmosphere.

2.04 JOINING MATERIALS

A. Joint Compound and Tape: Suitable for natural gas.

B. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

2.05 VALVES

A. Refer to section “General Duty Valves for Plumbing Piping”.

B. Valves, 2” and Smaller: Ball valves with threaded ends according to ASME B1.20.1 for pipe threads.

C. Valves, 2-1/2” and Larger: Butterfly valves for use with flanged ends according to ASME B16.5 for steel flanges.

2.06 PIPING SPECIALTIES

A. Appliance Flexible Connectors:
   1. Indoor, Fixed-Appliance Flexible Connectors: Comply with ANSI Z21.24.
   2. Indoor, Movable-Appliance Flexible Connectors: Comply with ANSI Z21.69.

3. Outdoor, Appliance Flexible Connectors: Comply with ANSI Z21.75.
4. Corrugated stainless-steel tubing with polymer coating.
5. Operating-Pressure Rating: 0.5 psig
6. End Fittings: Zinc-coated steel.
7. Threaded Ends: Comply with ASME B1.20.1.
8. Maximum Length: 72”

B. Y-Pattern Strainers:
1. Body: ASTM A 126, Class B, cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for 2” and smaller; flanged ends for 2 ½” and larger.
3. Strainer Screen: 40-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
4. CWP Rating: 125 psig.

C. Basket Strainers:
1. Body: ASTM A 126, Class B, high-tensile cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for 2” and smaller; flanged ends for 2 ½” and larger.
3. Strainer Screen: 40-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
4. CWP Rating: 125 psig.

D. Weatherproof Vent Cap: Cast- or malleable-iron increaser fitting with corrosion-resistant wire screen, with free area at least equal to cross-sectional area of connecting pipe and threaded-end connection.

2.07 GAS SOLENOID VALVES (SCIENCE LAB EMERGENCY SHUT OFF):

A. Available Manufacturers:
1. ASCO General Controls.
2. Automatic Switch Co.

B. ASCO Model EF8215 ¾” or approved alternative. NEMA 7 explosion proof, UL and FM approved for use with propane and natural gas. Valve shall be normally closed and shall operate on 24 volts DC.

2.08 SPECIALTY VALVES

A. Available Manufacturers:
1. ASCO General Controls.
2. Automatic Switch Co.
3. Eaton Corp.; Controls Div.
4. Honeywell, Inc.
5. Johnson Controls, Inc.

B. Automatic Gas Valves: ANSI Z21.21, with electrical or mechanical operator for actuation by appliance automatic shutoff device.

2.09 PRESSURE REGULATORS

A. Available Manufacturers:
1. Line Pressure Regulators:
a. American Meter Co.

DRAFT

b. Donkin: Bryan Donkin RMG Canada, Ltd.
c. Eclipse Combustion, Inc.
d. Equimeter, Inc.
e. Fisher Controls International, Inc.
f. Maxitrol Co.
g. National Meter.
h. Richards Industries, Inc.; Jordan Valve Div.
i. Schlumberger Industries; Gas Div.

B. Description: Single stage and suitable for fuel gas service. Include steel jacket and corrosion-resistant components, elevation compensator, and atmospheric vent.
1. 2" and Smaller: Threaded ends according to ASME B1.20.1 for pipe threads.
2. 2 ½" and Larger: Flanged ends according to ASME B16.5 for steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.
3. Line Pressure Regulators: ANSI Z21.80 with 5-psig- minimum inlet pressure rating.
4. Appliance Pressure Regulators: ANSI Z21.18 with 2-psig minimum inlet pressure. Regulator may include vent limiting device, instead of vent connection, if approved by authorities having jurisdiction. If vents are required provided piping necessary to extend to termination location outside the building as approved by the architect.

C. Pressure Regulator Vents: Factory- or field-installed, corrosion-resistant screen in opening if not connected to vent piping. Extend to exterior of building and terminate in location approved by the architect.

D. Appliance Pressure Regulators: Comply with ANSI Z21.18.
1. Available Manufacturers:
a. Canadian Meter Company Inc.
b. Eaton Corporation; Controls Div.
c. Harper Wyman Co.
d. Maxitrol Company.
e. SCP, Inc.
2. Body and Diaphragm Case: Die-cast aluminum.
3. Springs: Zinc-plated steel; interchangeable.
4. Diaphragm Plate: Zinc-plated steel.
5. Seat Disc: Nitrile rubber.
6. Seal Plug: Ultraviolet-stabilized, mineral-filled nylon.
7. Factory-Applied Finish: Minimum three-layer polyester and polyurethane paint finish.
8. Regulator may include vent limiting device, instead of vent connection, if approved by authorities having jurisdiction.
9. Maximum Inlet Pressure: 2 psig.

2.10 CONCRETE BASES

A. Description: Reinforced concrete base formed of 3000-psi- minimum, 28-day compressive strength concrete, and measuring 6 inches thick and 6 inches larger in each dimension than equipment, unless otherwise indicated.

2.11 DIELECTRIC FITTINGS

A. Dielectric Unions:

DRAFT

1. Available Manufacturers:
   a. Capitol Manufacturing Company.
   b. Central Plastics Company.
   c. Hart Industries International, Inc.
   d. McDonald, A. Y. Mfg. Co.
   e. Watts Regulator Co.; Division of Watts Water Technologies, Inc.
   f. Wilkins; Zurn Plumbing Products Group.
   g. Conbraco Industries-Apollo
2. Minimum Operating-Pressure Rating: 150 psig.
3. Combination fitting of copper alloy and ferrous materials.
4. Insulating materials suitable for natural gas.
5. Combination fitting of copper alloy and ferrous materials with threaded, brazed-joint, plain, or welded end connections that match piping system materials.

B. Dielectric Flanges:
1. Available Manufacturers:
   a. Capitol Manufacturing Company.
   b. Central Plastics Company.
   c. Watts Regulator Co.; Division of Watts Water Technologies, Inc.
   d. Wilkins; Zurn Plumbing Products Group.
2. Minimum Operating-Pressure Rating: 150 psig.
3. Combination fitting of copper alloy and ferrous materials.
4. Insulating materials suitable for natural gas.
5. Combination fitting of copper alloy and ferrous materials with threaded, brazed-joint, plain, or welded end connections that match piping system materials.

C. Dielectric-Flange Kits:
1. Available Manufacturers:
   a. Advance Products & Systems, Inc.
   b. Calpico Inc.
   c. Central Plastics Company.
   d. Pipeline Seal and Insulator, Inc.
2. Minimum Operating-Pressure Rating: 150 psig.
3. Companion-flange assembly for field assembly.
4. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or PE bolt sleeves, phenolic washers, and steel backing washers.
5. Insulating materials suitable for natural gas.
6. Combination fitting of copper alloy and ferrous materials with threaded, brazed-joint, plain, or welded end connections that match piping system materials.

2.12 LABELING AND IDENTIFYING

A. Detectable Warning Tape: Acid- and alkali-resistant, PE film warning tape manufactured for marking and identifying underground utilities, a minimum of 6 inches wide and 4 mils thick, continuously inscribed with a description of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches deep; colored yellow.

DRAFT

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine roughing-in for natural-gas piping system to verify actual locations of piping connections before equipment installation.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Inspect natural-gas piping according to the International Fuel Gas Code to determine that natural-gas utilization devices are turned off in piping section affected.

B. Comply with the International Fuel Gas Code requirements for prevention of accidental ignition.

3.03 SERVICE ENTRANCE PIPING

A. Extend fuel gas piping and connect to fuel gas distribution piping downstream of meter.
   1. Service meter will be provided by Local Gas Utility.

B. Install yellow brass fitting downstream from and adjacent to each service meter unless meter is supported from service-meter bar with integral yellow brass fitting. Install shutoff valve downstream from and adjacent to yellow brass fitting. Refer to Division 22 Section "Common Work Results for Plumbing" for yellow brass fittings.

3.04 CONCRETE BASE INSTALLATION

A. Locate bases at building service meters and building service regulators.

B. Excavate earth and make level beds to support bases. Form and pour concrete bases level with top surface projecting approximately 3 inches above grade.

3.05 OUTDOOR PIPING INSTALLATION

A. Comply with the International Fuel Gas Code for installation and purging of natural-gas piping.

B. Install underground, natural-gas piping buried at least 36 inches below finished grade. Comply with requirements in Section "Earth Moving" for excavating, trenching, and backfilling.
   1. If natural-gas piping is installed less than 36 inches below finished grade, install it in containment conduit.

C. Install underground, PE, natural-gas piping according to ASTM D 2774.

D. Steel Piping Protective Coating:
   1. Apply joint cover kits to pipe after joining to cover, seal, and protect joints.
   2. Repair damage to PE coating on pipe as recommended in writing by protective coating manufacturer.

E. Copper Tubing Protective Coating:
   1. Apply joint cover kits over tubing to cover, seal, and protect joints.
   2. Repair damage to PE coating on pipe as recommended in writing by protective coating manufacturer.

F. Install fittings for changes in direction and branch connections.

G. Install pressure gage upstream and downstream from each service regulator. Pressure gages are specified in Section "Meters and Gages for Plumbing Piping."

3.06 INDOOR PIPING INSTALLATION

A. Comply with the International Fuel Gas Code for installation and purging of natural-gas piping.

DRAFT

B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to are accepted by architect.

C. Arrange for pipe spaces, chases, slots, sleeves, and openings in building structure during progress of construction, to allow for mechanical installations.

D. Install piping in concealed locations unless otherwise indicated and except in equipment rooms.

E. Install piping indicated to be exposed and piping in equipment rooms at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

F. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

G. Locate valves for easy access.

H. Install natural-gas piping at uniform grade toward drip and sediment traps.

I. Install piping free of sags and bends.

J. Install fittings for changes in direction and branch connections.

K. Verify final equipment locations for roughing-in.

L. Comply with requirements in Sections specifying gas-fired appliances and equipment for roughing-in requirements.

M. Drips and Sediment Traps: Install drips at points where condensate may collect, including service-meter outlets. Locate where accessible to permit cleaning and emptying. Do not install where condensate is subject to freezing.

1. Construct drips and sediment traps using tee fitting with bottom outlet plugged or capped. Use nipple a minimum length of 3 pipe diameters, but not less than 3 inches (75 mm) long and same size as connected pipe. Install with space below bottom of drip to remove plug or cap.

N. Extend relief vent connections for service regulators, line regulators, and overpressure protection devices to outdoors and terminate with weatherproof vent cap.

O. Conceal pipe installations in walls, pipe spaces, utility spaces, above ceilings, below grade or floors, and in floor channels unless indicated to be exposed to view.

P. Concealed Location Installations: Except as specified below, install concealed natural-gas piping and piping installed under the building in containment conduit constructed of steel pipe with welded joints as described in Part 2. Install a vent pipe from containment conduit to outdoors and terminate with weatherproof vent cap.

1. Above Accessible Ceilings: Natural-gas piping, fittings, valves, and regulators may be installed in accessible spaces without containment conduit.
2. In Floors: Install pre-sleeved corrugated, stainless-steel tubing systems for natural-gas. Cover with minimum of 1-1/2 inches of concrete. Jacket may not be in physical contact with metallic structures such as reinforcing rods or electrically neutral conductors. Do not embed piping in concrete slabs containing quick-set additives.
3. In Walls or Partitions: Protect tubing installed inside partitions or hollow walls from physical damage using steel striker barriers at rigid supports.
    a. Exception: Tubing passing through partitions or walls does not require striker barriers.
4. Prohibited Locations:

DRAFT

a. Do not install natural-gas piping in or through circulating air ducts, clothes or trash chutes, chimneys or gas vents (flues), ventilating ducts, or dumbwaiter or elevator shafts.
b. Do not install natural-gas piping in solid walls or partitions.

Q. Connect branch piping from top or side of horizontal piping.

R. Install unions in pipes 2” and smaller, adjacent to each valve, at final connection to each piece of equipment and where otherwise indicated. Unions are not required at flanged connections.

S. Do not use natural-gas piping as grounding electrode.

T. Install strainer on inlet of each line-pressure regulator and automatic or electrically operated valve.

U. Install pressure gage upstream and downstream from each line regulator. Pressure gages are specified in Section "Meters and Gages for Plumbing Piping."

V. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section "Sleeves and Sleeve Seals for Plumbing Piping."

W. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section "Sleeves and Sleeve Seals for HVAC Piping."

X. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 22 Section "Escutcheons for Plumbing Piping."

Y. Install containment casings for gas piping below slabs extending minimum of 2 inches beyond point where pipe emerges from the floor. Tightly seal ends around gas piping using mechanical sleeve seals.

3.07 SERVICE-METER ASSEMBLY INSTALLATION

A. Provide concrete base for service meter.

B. Install locking shutoff valves downstream from service regulator. Shutoff valves are not required at second regulator if two regulators are installed in series.

C. Install strainer on inlet of service-pressure regulator.

D. Install service pressure regulator mounted outside with vent outlet horizontal or facing down. Install screen in vent outlet if not integral with service regulator.

E. Install metal shutoff valves upstream from service meters. Install yellow brass fittings downstream from service meters.

3.08 VALVE INSTALLATION

A. Install manual gas shutoff valve for each gas appliance ahead of corrugated stainless-steel tubing, aluminum, or copper connector.

B. Install underground valves with valve boxes.

C. Install regulators and overpressure protection devices with maintenance access space adequate for servicing and testing.

3.09 PIPING JOINT CONSTRUCTION

A. Ream ends of pipes and tubes and remove burrs.

B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

DRAFT

C. Threaded Joints:
   1. Thread pipe with tapered pipe threads complying with ASME B1.20.1.
   2. Cut threads full and clean using sharp dies.
   3. Ream threaded pipe ends to remove burrs and restore full inside diameter of pipe.
   4. Apply appropriate tape or thread compound to external pipe threads unless dryseal threading is specified.
   5. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

D. Welded Joints:
   1. Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators.
   2. Bevel plain ends of steel pipe.
   3. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.

E. Flanged Joints: Install gasket material, size, type, and thickness appropriate for natural-gas service. Install gasket concentrically positioned.

F. Flared Joints: Cut tubing with roll cutting tool. Flare tube end with tool to result in flare dimensions complying with SAE J513. Tighten finger tight, then use wrench. Do not overtighten.

3.10 HANGER AND SUPPORT INSTALLATION

A. Comply with requirements for pipe hangers and supports specified in Section "Hangers and Supports for Plumbing Piping and Equipment."

B. Install hangers for horizontal steel piping with the following maximum spacing and minimum rod sizes:
   1. 1” and Smaller: Maximum span, 96”; minimum rod size, 3/8”.
   2. 1¼”: Maximum span, 108”; minimum rod size, 3/8”.
   3. 1½” and 2”: Maximum span, 108”; minimum rod size, 3/8”.
   4. 2½” to 3 ½”: Maximum span, 10’-0”; minimum rod size, ½”.
   5. 4” and Larger: Maximum span, 10’-0”; minimum rod size, 5/8”.

C. Install hangers for horizontal, corrugated stainless-steel tubing with the following maximum spacing and minimum rod sizes:
   1. 3/8”: Maximum span, 48”; minimum rod size, 3/8”.
   2. ½”: Maximum span, 72”; minimum rod size, 3/8 “.
   3. ¾” and Larger: Maximum span, 96”; minimum rod size, 3/8”.

3.11 CONNECTIONS

A. Connect to utility's gas meter according to utility's procedures and requirements.

B. Install piping adjacent to appliances to allow service and maintenance of appliances.

C. Connect piping to appliances using manual gas shutoff valves and unions. Install valve within 72” of each gas-fired appliance and equipment. Install union between valve and appliances or equipment.

D. Sediment Traps: Install tee fitting with capped nipple in bottom to form drip, as close as practical to inlet of each appliance.

DRAFT

3.12 PIPING APPLICATIONS

A. Flanges, unions, transition, and special fittings with pressure ratings same as or higher than system pressure rating may be used in applications below, unless otherwise indicated.

B. Fitting Options:
   1. Metallic Press-Connect Fittings (MegaPress): Mechanically jointed fittings with HNBR sealing element suitable for intended service.

C. Above Ground Exposed Fuel Gas Piping:
   1. Sizes up to 2”:
      a. Steel pipe, malleable-iron threaded fittings, and threaded joints.
   2. 2-1/2” to 4”:
      a. Steel pipe, malleable-iron threaded fittings, and threaded joints, or steel pipe, steel welding fittings, and welded joints.
   3. Larger than 4":
      a. Steel pipe, steel welding fittings, and welded joints.

D. Above Ground Concealed Fuel Gas Piping:
   1. Sizes up to 2”:
      a. Steel pipe, malleable-iron threaded fittings, and threaded joints.
   2. 2½” to 4”:
      a. Steel pipe, malleable-iron threaded fittings, and threaded joints, or steel pipe, steel welding fittings, and welded joints.
   3. Larger Than NPS 4:
      a. Steel pipe, steel welding fittings, and welded joints.

3.13 LABELING AND IDENTIFYING

A. Comply with requirements in Section "Identification for Plumbing Piping and Equipment" for piping and valve identification.

B. Install detectable warning tape directly above gas piping, 12” minimum below finished grade.
   1. Exception: 6 minimum below sub-grade under pavements and slabs.

3.14 PAINTING

A. Use materials and procedures in Division 9 Section "Painting," "Exterior Paint Schedule" Article, "Ferrous Metal" Paragraph, "Full-Gloss, Alkyd-Enamel Finish" Subparagraph.

B. Paint exterior service meters, pressure regulators, specialty valves, piping, and accessories.
   1. Color: Yellow

C. Paint interior exposed service meters, pressure regulators, specialty valves, piping, and accessories.
   1. Color: Yellow

3.15 FIELD QUALITY CONTROL

A. Inspect, test, and purge piping according to ANSI Z223.1, Part 4 "Inspection, Testing, and Purging," and requirements of authorities having jurisdiction and owner's representative.

B. Repair leaks and defects with new materials and retest system until satisfactory results are obtained.

C. Report test results promptly and in writing to Architect, authorities having jurisdiction, and owner's representative.

DRAFT

D. Verify capacities and pressure ratings of service meters, pressure regulators, valves, and specialties.

E. Verify correct pressure settings for pressure regulators.

F. Verify that specified piping tests are complete.

3.16 ADJUSTING

A. Adjust controls and safety devices. Replace damaged and malfunctioning controls and safety devices.

END OF SECTION 221113

DRAFT

SECTION 221116
DOMESTIC WATER PIPING

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 PERFORMANCE REQUIREMENTS

A. Provide components and installation capable of producing domestic water piping systems with the following minimum working-pressure ratings, unless otherwise indicated:
   1. Domestic Water Service Piping: 160 psig.
   2. Domestic Water Distribution Piping: 125 psig.

1.03 SUBMITTALS

A. Product Data: Provide data on pipe materials, pipe fittings, valves, and accessories. Provide manufacturers catalog information. Indicate valve data and ratings.

B. Water Samples: Specified in “Cleaning” Article.

C. Coordination Drawings: For piping in equipment rooms and other congested areas, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:
   1. Fire-suppression-water piping.
   2. Domestic water piping.
   3. Compressed air piping.
   4. HVAC hydronic piping.

D. Field quality-control reports.

1.04 QUALITY ASSURANCE ***REFER TO CURRENT MCPS MECH-PLUMB DESIGN CHECKLIST***

A. **Comply with the requirements of the current MCPS Mechanical and Plumbing Design Checklist. Refer to the latest edition for applicable design, coordination, and documentation standards.**

B. Piping materials shall bear label, stamp, or other markings of specified testing agency.

C. NSF/ANSI Compliance:
   1. NSF/ANSI 14, “Plastic Piping System Components and Related Materials”
   2. NSF/ANSI 61, "Drinking Water System Components – Health Effects”
   3. NSF/ANSI 372, “Drinking Water System Components – Lead Content”

D. ASTM Compliance:
   1. ASTM F 3226, “Standard Specification for Metallic Press-Connect Fittings for Piping and Tubing Systems

1.05 PROJECT CONDITIONS

A. Interruption of Existing Water Service: Do not interrupt water service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary water service according to requirements indicated:

DRAFT

1. Notify Architect, Construction Manager, and Owner no fewer than two days in advance of proposed interruption of water service.
2. Do not proceed with interruption of water service without Architect's, Construction Manager's, and Owner's written permission.

PART 2 PRODUCTS

2.01 PIPING MATERIALS

A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.

2.02 COPPER TUBE AND FITTINGS

A. Hard Copper Tube: ASTM B 88, Type L (ASTM B 88M, Type B) water tube, drawn temper.
   1. Cast-Copper Solder-Joint Fittings: ASME B16.18, pressure fittings.
   2. Wrought-Copper Solder-Joint Fittings: ASME B16.22, wrought-copper pressure fittings.
   3. Bronze Flanges: ASME B16.24, Class 150, with solder-joint ends.
   4. Copper Unions: MSS SP-123, cast-copper-alloy, hexagonal-stock body, with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.
   5. Metallic Press-Connect Fittings ASTM F 3226, NSF 61, and NSF 372:
      a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
         1) Conex Banninger
         2) Elkhart Products Corporation; Industrial Division.
         3) Mueller Industries
         4) NIBCO INC.
         5) Viega, LLC.
      b. NPS 2 (DN 50) and Smaller: Wrought-copper fitting with EPDM sealing element in each end.
      c. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Cast-bronze or wrought-copper fitting with EPDM sealing element in each end.
   6. Copper-Tube Extruded-Tee Connections:
      a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
         1) T-DRILL Industries Inc.
      b. Description: Tee formed in copper tube according to ASTM F 2014.

B. Soft Copper Tube: ASTM B 88, Type K (ASTM B 88M, Type A) water tube, annealed temper.
   1. Copper Solder-Joint Fittings: ASME B16.22, wrought-copper pressure fittings.
   2. Metallic Press-Connect Fittings ASTM F 3226, NSF 61, and NSF 372:
      a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
         1) Conex Banninger
         2) Elkhart Products Corporation; Industrial Division.
         3) Mueller Industries

DRAFT

4) NIBCO INC.
5) Viega, LLC.

b. NPS 2 (DN 50) and Smaller: Wrought-copper fitting with EPDM sealing element in each end.
c. NPS 3 and NPS 4 (DN 80 and DN 100): Cast-bronze or wrought-copper fitting with EPDM sealing element in each end.

2.03 PIPING JOINING MATERIALS

A. Pipe-Flange Gasket Materials: AWWA C110, rubber, flat face, 1/8 inch (3.2 mm) thick or ASME B16.21, nonmetallic and asbestos free, unless otherwise indicated; full-face or ring type unless otherwise indicated.
B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.
C. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.
D. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.

PART 3 EXECUTION

3.01 EXCAVATION

A. Refer to other sections for excavating, trenching, and backfilling.

3.02 PIPING APPLICATIONS

A. Transition and special fittings with pressure ratings at least equal to piping rating may be used in applications below, unless otherwise indicated.
B. Flanges may be used on aboveground piping, unless otherwise indicated.
C. Fitting Options:
1. Mechanically formed tee-branch outlets (T-Drill) and brazed joints may be used on aboveground copper tubing.
2. Metallic Press-Connect Fittings (ProPress): Mechanically joined fittings with elastomeric sealing element.
D. Underground Domestic Water Service Piping: Match civil materials to first flange.
E. Aboveground Domestic Water Piping: Use the following piping materials for each size range:
1. 2” and Smaller:
a. Hard copper tube, Type L copper pressure fittings; and soldered joints.
2. 2-1/2” and above”:
a. Hard copper tube, Type L copper pressure fittings; and brazed joints.
F. Underground Domestic Water Piping: Use the following piping materials for each size range:
1. 2” and Smaller:
a. Soft copper tube, Type K copper pressure fittings; and brazed joints with no joints permitted below concrete slabs.
2. 2-1/2” and above:
a. Soft copper tube, Type K copper pressure fittings; and brazed joints.

DRAFT

3.03 VALVE APPLICATIONS

A. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:
   1. Shutoff Duty: Use bronze ball valves for all sizes.
   2. Throttling Duty: Use bronze ball or balancing valves for all sizes.
   3. Hot-Water-Piping, Balancing Duty: Use thermostatic, manually adjustable, flow control, balancing valves.
   4. Drain Duty: Hose-end drain valves.

3.04 PIPING INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Extend domestic water service piping to exterior water distribution piping in sizes and locations indicated.

C. Install underground ductile-iron piping according to AWWA C600, and AWWA M41. Install buried piping inside building between wall and floor penetrations and connection to water service piping outside building with restrained joints. Anchor pipe to wall or floor. Install thrust-block supports at vertical and horizontal offsets.
   1. Encase piping with polyethylene film according to ASTM A 674 or AWWA C105.

D. Install underground copper according to CDA's "Copper Tube Handbook."

E. Install cast-iron sleeve with water stop and mechanical sleeve seal at each service pipe penetration through foundation wall. Select number of interlocking rubber links required to make installation watertight.

F. Install water-pressure regulators downstream from shutoff valves.

G. Install aboveground domestic water piping level and plumb.

H. Fill water piping. Check components to determine that they are not air bound and that piping is full of water.

I. Perform the following steps before operation:
   1. Close drain valves, hydrants, and hose bibbs.
   2. Open shutoff valves to fully open position.
   3. Open throttling valves to proper setting.
   4. Remove plugs used during testing of piping and plugs used for temporary sealing of piping during installation.
   5. Remove and clean strainer screens. Close drain valves and replace drain plugs.
   6. Remove filter cartridges from housings and verify that cartridges are as specified for application, where used and that cartridges are clean and ready for use.

J. Check plumbing equipment and verify proper settings, adjustments, and operation. Do not operate water heaters before filling with water.

K. Check plumbing specialties and verify proper settings, adjustments, and operation.
   1. Water-Pressure Regulators: Set outlet pressure at 80 psig maximum, unless otherwise indicated.

L. Energize pumps and verify proper operation.

3.05 JOINT CONSTRUCTION

A. Soldered Joints: Use ASTM B 813, water-flushable, lead-free flux; ASTM B 32, lead-free-alloy solder; and ASTM B 828 procedure, unless otherwise indicated.

DRAFT

B. Mechanically Formed Outlets: Form tee in copper tube according to equipment manufacturer's written instructions. Use tool designed for copper tube; drill pilot hole, form collar for outlet, dimple tube to form seating stop, and braze branch tube into collar.

C. Metallic Press-Connect fittings shall be installed in accordance with manufacturer's installation instructions, installer shall have attended a manufacturer's installation training, and have current training credentials.

3.06 VALVE INSTALLATION

A. Install sectional valve close to water main on each branch and riser serving plumbing fixtures or equipment. Use ball valves for piping NPS 2 and smaller. Use butterfly valves for piping NPS 2-1/2 and larger.

B. Install shutoff valve on each water supply to equipment and on each water supply to plumbing fixtures without supply stops. Use ball valves for piping NPS 2 and smaller. Use butterfly valves for piping NPS 2-1/2 and larger.

C. Install balancing valve in each hot-water circulation return branch and discharge side of each pump and circulator. Use ball valves for piping NPS 2 and smaller and butterfly valves for piping NPS 2-1/2 and larger.

3.07 HANGER AND SUPPORT INSTALLATION

A. Refer to Section 220529 "Hangers and Supports for Plumbing Piping" for pipe hanger and support devices.
   1. Install the following:
      a. Vertical Piping: MSS Type 8 or Type 42, clamps.
   2. Individual, Straight, Horizontal Piping Runs: According to the following:
      a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
      b. Longer Than 100 Feet: MSS Type 43, adjustable roller hangers.
      c. Longer Than 100 Feet, if indicated: MSS Type 49, spring cushion rolls.
   3. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
   4. Base of Vertical Piping: MSS Type 52, spring hangers.

B. Support vertical piping and tubing at base and at each floor.

C. Rod diameter may be reduced 1 size for double-rod hangers, to a minimum of 3/8 inch.

D. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
   1. NPS 3/4 and Smaller: 60 inches with 3/8-inch rod.
   2. NPS 1 and NPS 1-1/4: 72 inches with 3/8-inch rod.
   3. NPS 1-1/2 and NPS 2: 96 inches with 3/8-inch rod.
   4. NPS 2-1/2: 108 inches with 1/2-inch rod.
   5. NPS 3 to NPS 5: 10 feet with 1/2-inch rod.
   6. NPS 6: 10 feet with 5/8-inch rod.
   7. NPS 8: 10 feet with 3/4-inch rod.

E. Where hangers for piping are to be suspended from open-web steel joists, install hangers at maximum spacing that will result in hanger loads that comply with the requirements on the structural drawings.

F. Install supports for vertical copper tubing every 10 feet.

DRAFT

G. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

H. Where bends in the pipe occur, place hangers 1/3 of the maximum allowed spacing distance of the bend (i.e. is the maximum span is 12 feet, the hanger shall be 4 feet from the bend. Pipe shall be supported from both sides of the bend.

3.08 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to equipment and machines to allow service and maintenance.

C. Connect domestic water piping to exterior water service piping. Use transition fitting to join dissimilar piping materials.

3.09 FIELD QUALITY CONTROL

A. Verify and inspect systems according to requirements by the Authority Having Jurisdiction and owner's representative. In the absence of specific test and inspection procedures proceed as indicated below.

B. Test Results: Document and certify successful results, otherwise repair, document, and retest.

C. Inspect domestic water piping as follows:

1. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction and owner's representative.
2. During installation, notify authorities having jurisdiction and owner's representative at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction and owner's representative:
   a. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.
   b. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.
3. Reinspection: If authorities having jurisdiction or owner's representative find that piping will not pass test or inspection, make required corrections and arrange for reinspection.
4. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction and owner's representative.

D. Test domestic water piping as follows:

1. Step test for Press-Connect fittings following manufacturer’s recommendations prior to system pressure testing shall be performed to identify any unpressed connections.
2. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
3. Leave uncovered and unconcealed new, altered, extended, or replaced domestic water piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
4. Cap and subject piping to static water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow to stand for four hours. Leaks and loss in test pressure constitute defects that must be repaired.
5. Repair leaks and defects with new materials and retest piping or portion thereof until satisfactory results are obtained.
6. Prepare reports for tests and required corrective action.

DRAFT

3.10 ADJUSTING

A. Adjust balancing valves in hot-water-circulation return piping to provide adequate flow.
   1. Adjust balancing valves in hot-water-circulation return piping to provide adequate flow of hot water in each branch, starting at the most remote branch and working back to circulation pump. Verify and document settings and conditions at each branch and circulation pump during each round of system balancing.
   2. Repeat above balancing sequence until all balancing valve branches are maintaining desired setpoints. Verify and document final settings and conditions. Prepare and submit balancing report for each circulation system to engineer of record and owner.

3.11 CLEANING

A. Clean interior of domestic water piping system. Remove dirt and debris as work progresses.

B. Clean and disinfect potable domestic water piping as follows:
   1. Purge new piping and parts of existing domestic water piping that have been altered, extended, or repaired before using.
   2. Use purging and disinfecting procedures prescribed by authorities having jurisdiction and owner's representative or, if methods are not prescribed, procedures described in AWWA C651, AWWA C652 or as described below:
      a. Flush piping system with clean, potable water until dirty water does not appear at outlets.
      b. Fill and isolate system according to either of the following:
         1) Fill system or part thereof with water/chlorine solution with at least 50 ppm of chlorine. Isolate with valves and allow to stand for 24 hours.
         2) Fill system or part thereof with water/chlorine solution with at least 200 ppm of chlorine. Isolate and allow to stand for three hours.
      c. Flush system with clean, potable water until no chlorine is in water coming from system after the standing time.
      d. Submit water samples in sterile bottles to authorities having jurisdiction. Repeat procedures if biological examination shows contamination.

C. Prepare and submit reports of purging and disinfecting activities to engineer or record, owner, and authorities having jurisdiction.

END OF SECTION 221116

DRAFT

SECTION 221119
DOMESTIC WATER PIPING SPECIALTIES

PART 1 GENERAL

1.01 RELATED DOCUMENTS

1.02 PROVISIONS OF THE CONTRACT AND OF THE CONTRACT DOCUMENTS APPLY TO THIS SECTION.

1.03 PERFORMANCE REQUIREMENTS

A. Minimum Working Pressure for Domestic Water Piping Specialties: 125 psig, unless otherwise indicated.

1.04 SUBMITTALS

A. Product Data: Provide manufacturer's literature and data sheets for each product. Include information on materials of fabrication, assembly of components, dimensions, ratings, finishes, rough-in requirements, and installed accessories.

B. Shop Drawings: Diagram power, signal, and control wiring.

C. Operation and Maintenance Data: For domestic water piping specialties to include in emergency, operation, and maintenance manuals.

1.05 QUALITY ASSURANCE ***REFER TO CURRENT MCPS MECH-PLUMB DESIGN CHECKLIST***

A. **Comply with the requirements of the current MCPS Mechanical and Plumbing Design Checklist. Refer to the latest edition for applicable design, coordination, and documentation standards.**

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. NSF Compliance:
   1. Comply with NSF 14, “Plastic Piping System Components and Related Materials”
   2. Comply with NSF 61, “Drinking Water System Components – Health Effects”
   3. Comply with NSF 372, “Drinking Water System Components – Lead Content”

D. Water Management Installation:
   1. Installer Qualifications: An installer who is authorized by the equipment manufacturer for both installation and maintenance of submitted equipment.
   2. Provide documentation demonstrating previous experience and successfully completing projects of similar size and scope.
   3. Provide a list of installations that the Installer has specifically installed for verification by the Owner. Similar installations from other vendors and/or Installers shall be accepted. The Installer’s employees must meet these qualifications.
   4. The Installer shall demonstrate to the satisfaction of the Architect/Engineer that he has:
      a. Adequate plant and equipment to pursue the work properly and expeditiously.
      b. Adequate staff and technical experience to implement the work.
      c. Suitable financial status to meet the obligations of the work.

DRAFT

d. Technical capable and factory trained service personnel at a local service facility to provide routine and emergency service for all products used in this project.

5. A contractor intending to bid on this work, not meeting the requirements of this section, may employ the services of an “Installer” meeting the requirements of this section. A “subcontractor” so employed must be acceptable to the Architect. The “Installer” shall be identified by submittal for acceptance by the Architect.

PART 2 PRODUCTS

2.01 VACUUM BREAKERS

A. Pipe-Applied, Atmospheric-Type (Anti-siphon) Vacuum Breakers:
   1. Available Manufacturers:
      a. Ames Co.
      b. Apollo Valves - Conbraco Industries, Inc.
      c. Watts Industries, Inc.; Water Products Div.
      d. Zurn Plumbing Products Group; Wilkins Div.
   2. Standard: ASSE 1001.
   3. Sizes: ¾” thru 3” as required to match connected piping.
   4. Body: Brass or Bronze.
   5. Inlet and Outlet Connections: Threaded.
   6. Finish: Rough bronze or chrome plated.

B. Pressure Vacuum Breakers:
   1. Available Manufacturers:
      a. Ames Co.
      b. Apollo Valves - Conbraco Industries, Inc.
      c. Watts Industries, Inc.; Water Products Div.
      d. Zurn Plumbing Products Group; Wilkins Div.
   2. Standard: ASSE 1020.
   3. Operation: Continuous-pressure applications.
   4. Accessories:
      a. Valves: Ball type, on inlet and outlet.

C. Spill-Resistant Vacuum Breakers:
   1. Available Manufacturers:
      a. Apollo Valves - Conbraco Industries, Inc.
      b. Watts Industries, Inc.; Water Products Div.
   2. Standard: ASSE 1056.
   3. Operation: Continuous-pressure applications.
   4. Sizes: ¾” thru 1” as required to match connected piping.
   5. Accessories:
      a. Valves: Ball type, on inlet and outlet.

2.02 BACKFLOW PREVENTERS

A. Reduced-Pressure-Zone (RPZ) Backflow Preventers:
   1. Available Manufacturers:
      a. Ames Co.

DRAFT

b. Apollo Valves - Apollo Valves - Conbraco Industries, Inc.
c. Watts Industries, Inc.; Water Products Div.
d. Zurn Plumbing Products Group; Wilkins Div.

2. Standard: ASSE 1013.
3. Operation: Continuous-pressure applications.
4. Pressure Loss: 10 psig maximum, through middle 1/3 of flow range.
5. Sizes: ¾" thru 10"
6. Body: Brass or bronze for 2" and smaller; cast iron or steel with interior lining complying with AWWA C550 or that is FDA approved for 2 ½" and larger.
7. Configuration: Comply with drawing requirements.
8. Accessories:
   a. Valves: Ball type with threaded ends on inlet and outlet of 2" and smaller; outside screw and yoke gate-type with flanged ends on inlet and outlet of 2 ½" and larger.
   b. Air-Gap Fitting: ASME A112.1.2, matching backflow-preventer connection.

B. Double-Check Backflow Preventers:
1. Available Manufacturers:
   a. Ames Co.
   b. Apollo Valves - Apollo Valves - Conbraco Industries, Inc.
   c. Watts Industries, Inc.; Water Products Div.
   d. Zurn Plumbing Products Group; Wilkins Div.
2. Standard: ASSE 1015
3. Application: continuous-pressure, unless otherwise indicated.
4. Pressure Loss: 8 psig maximum, through middle 1/3 of flow range.
5. Size: ¾" thru 10" as required to match connected piping.
6. Body: Brass or bronze for NPS 2 and smaller; cast iron or steel with interior lining complying with AWWA C550 or that is FDA approved for NPS 2-1/2 and larger.
7. Configuration: Comply with drawing requirements.
8. Accessories:
   a. Valves: Ball type with threaded ends on inlet and outlet of 2" and smaller; outside screw and yoke gate-type with flanged ends on inlet and outlet of 2 ½" and larger.

C. Dual-Check-Valve Backflow Preventers:
1. Available Manufacturers:
   a. Apollo Valves - Apollo Valves - Conbraco Industries, Inc.
   b. Mueller Co.; Water Products Div.
   c. Watts Industries, Inc.; Water Products Div.
   d. Zurn Plumbing Products Group; Wilkins Div.
2. Standard: ASSE 1024.
3. Operation: Continuous-pressure applications.
4. Sizes: ¾" thru 1" as required to match connected piping.
5. Body: Bronze with union inlet.

2.03 WATER PRESSURE-REDUCING VALVES

A. Available Manufacturers:
1. CLA-VAL Automatic Control Valves.

DRAFT

2. Flomatic Corporation.
3. OCV Control Valves.
4. Watts Industries, Inc.; Ames Fluid Control Systems.
5. Watts Industries, Inc.; Watts ACV.
6. Zurn Plumbing Products Group; Wilkins Div.

B. Description: Pilot-operation, diaphragm-type, single-seated main water control valve.

C. Pressure Rating: Initial working pressure of 150 psig minimum with AWWA C550 or FDA-approved, interior epoxy coating. Include small pilot-control valve, restrictor device, specialty fittings, and sensor piping.

D. Main Valve Body: Cast- or ductile-iron body with AWWA C550 or FDA-approved, interior epoxy coating; or stainless-steel body.
1. Sizes: 1¼" thru 10" as required to match connected piping.
2. Pattern: Angle or Globe-valve design.
3. Trim: Stainless steel.

2.04 BALANCING VALVES

A. Available Manufacturers:
1. Armstrong Pumps, Inc.
2. Caleffi
3. Flow Design, Inc.
4. Griswold Controls
5. ITT Bell & Gossett; ITT Fluid Technology Corp.
6. Jomar Valves
7. Nexus Valve
8. NIBCO
9. NuTech Hydronic Specialty Products
10. Taco, Inc.
11. Watts

B. Manual Balancing Valves:
1. Valve: Brass, ball or globe valve design, with metering ports, position indicator, and memory stop.
2. Maximum Working Pressure: 150 psi.
3. Working Temperature Range: 33 to 200 degrees F.

C. Calibrated Balancing Valves and Circuit Setters:
1. Valve: Brass, factory preset and calibrated, ball valve design, with metering ports, position indicator, and memory stop.
2. Maximum Working Pressure: 150 psi.
3. Working Temperature Range: 33 to 200 degrees F.

D. Automatic Balancing Valves:
1. Valve: Brass, pressure independent, with removable cartridge.Provide with metering ports.
2. Maximum Working Pressure: 200 psi.
3. Working Temperature Range: 33 to 200 degrees F.

E. Thermostatic Balancing Valves:

DRAFT

1. Valve: Brass, with thermostatic element to maintain constant temperature in domestic hot water recirculating system; provide with tamper-resistant temperature adjustment knob.
2. Accessories:
   a. Check valve.
   b. External electrically actuated disinfection control valve.
   c. Internal disinfection-control cartridge.
   d. Manufacturer's insulation shell.
   e. Temperature gauge.
3. Maximum Working Pressure: 150 psi.
4. Working Temperature Range: 22 to 200 degrees F.

2.05 MIXING VALVES

A. Thermostatic Master Mixing Valves:
   1. Available Manufacturers:
      a. Lawler Manufacturing Company, Inc.
      b. Leonard Valve Company.
      c. Powers; a Watts Company.
      d. Watts Industries, Inc.
   2. Valve: Brass or bronze body; thermostatic element; corrosion- and lime-resistant internal components; integral locking temperature adjustment.
   3. Standard: ASSE 1017.
   4. Pressure Rating: 125 psig.
   5. Accessories:
      a. Strainer check stops on hot-water and cold-water supplies.
      b. Shut-off valve on lets and outlet.
      c. Thermometer on inlets and outlet.
      d. Pressure gauges on inlets and outlet.

B. Digitally Controlled Thermostatic Master Mixing Valves:
   1. Available Manufacturers:
      a. Armstrong Inc.
      b. Lawler Manufacturing Company, Inc.
      c. Leonard Valve Company.
      d. Watts Industries, Inc.
   2. Valve: Brass or bronze body; corrosion- and lime-resistant internal components; microprocessor-control unit for temperature control and monitoring.
   3. Standard: ASSE 1017.
   4. Pressure Rating: 125 psig.
   5. Microprocessor Controller:
      a. Manufacturer-provided, packaged application-specific controller with keypad or touch-screen operator interface.
      b. Integral display of temperature, pressure, and flow.
      c. Field Programmable: Settings configurable locally at controller or remotely through building automation system.
      d. Programmable high-temperature sanitization mode.
      e. Programmable high- and low-temperature alarms.

DRAFT

f. Failsafe: Upon loss of water pressure, valve ceases hot water flow.

C. Fixture Water Tempering Valves:
1. Available Manufacturers:
a. Apollo Valves - Conbraco Industries, Inc.
b. Lawler Manufacturing Company, Inc.
c. Leonard Valve Company.
d. Powers; a Watts Company.
e. Watts Industries, Inc.
f. Zurn Plumbing Products Group
2. Valve: Brass or bronze body; thermostatic element; corrosion- and lime-resistant internal components; integral locking temperature adjustment with high-temperature limit stop; integral check valves with strainer screens on inlets.
3. Standard: ASSE 1070.
4. Pressure Rating: 125 psig.
5. Accessories:
a. Mounting bracket.

2.06 STRAINERS

A. Y-Pattern
1. Pressure Rating: 125 psig minimum, unless otherwise indicated.
2. Body: Bronze for NPS 2 and smaller; cast iron or steel with interior lining complying with AWWA C550 or FDA-approved, epoxy coating and for NPS 2-1/2 and larger.
3. End Connections: Threaded for NPS 2 and smaller; flanged for NPS 2-1/2 and larger.
4. Screen: Stainless steel with round perforations, unless otherwise indicated.
5. Perforation Size:
a. Strainers NPS 2 and Smaller: 0.033 inch.
b. Strainers NPS 2-1/2 to NPS 4: 0.062 inch.
c. Strainers NPS 5 and Larger: 0.10 inch.
6. Drain: Factory-installed, hose-end drain valve.

2.07 WATER HAMMER ARRESTORS

A. Available Manufacturers:
1. AMTROL, Inc.
2. Josam Company.
3. MIFAB, Inc.
4. PPP Inc.
5. Sioux Chief Manufacturing Company, Inc.
6. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
7. Tyler Pipe; Wade Div.
8. Watts Drainage Products Inc.
9. Zurn Plumbing Products Group; Specification Drainage Operation.

B. Standard: ASSE 1010 or PDI-WH 201.

C. Type: Metal bellows or copper tube with piston.

D. Size: ASSE 1010, Sizes AA and A through F or PDI-WH 201, Sizes A through F.

DRAFT

2.08 TRAP GUARDS

A. ***Note:** **Trap guards may only be used in conjunction with piped trap primer systems and not as standalone trap primer devices.***

B. Available Manufacturers:
   1. ProSet Systems
   2. SureSeal Manufacturing

C. General: Smooth, soft, flexible, elastomeric PVC material molded into shape, open on top with curl closure at bottom. SureSeal: ABS plastic body with neoprene rubber diaphragm and sealing gasket with 80 durometer compression fit sealing gasket on gravity drain outlet connection.

D. Standard: ASSE 1072

E. Allows wastewater to open and adequately discharge floor drain through its interior.

F. Closes and returns to original molded shape after wastewater discharge is complete.

G. Size shall be as required to match drain in which it is installed.

2.09 TRAP-SEAL PRIMER VALVES

A. Supply-Type, Trap-Seal Primer Valves:
   1. Available Manufacturers:
      a. MIFAB, Inc.
      b. PPP Inc.
      c. Sioux Chief Manufacturing Company, Inc.
      d. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
      e. Watts Industries, Inc.; Water Products Div.
   2. Standard: ASSE 1018.
   3. Pressure Rating: 125 psig minimum.
   4. Body: Bronze.
   5. Inlet and Outlet Connections: NPS 1/2 threaded, union, or solder joint.
   6. Gravity Drain Outlet Connection: NPS 1/2 threaded or solder joint.
   7. Finish: Chrome plated, or rough bronze for units used with pipe or tube that is not chrome finished.

B. Drainage-Type, Trap-Seal Primer Valves:
   1. Available Manufacturers:
      a. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
   2. Standard: ASSE 1044, lavatory P-trap with NPS 3/8 minimum, trap makeup connection.
   3. Size: NPS 1-1/4 minimum.
   4. Material: Chrome-plated, cast brass.

2.10 TRAP-SEAL PRIMER SYSTEMS

A. Trap-Seal Primer Systems:
   1. Available Manufacturers:
      a. MIFAB, Inc.
      b. PPP Inc.
      c. Sioux Chief Manufacturing Company, Inc.
      d. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.

DRAFT

e. Watts Industries, Inc.; Water Products Div.

2. Standard: ASSE 1044
3. Piping: ASTM B 88, Type L; copper, water tubing.
4. Cabinet: Unless otherwise indicated, recessed or surface-mounting steel box with stainless-steel cover.
5. Electric Controls: 24-hour timer, solenoid valve, and manual switch for 120-V ac power.
6. Vacuum Breaker: ASSE 1001.
7. Number of Outlets: Refer to drawings.
8. Size of Outlets: ½”

PART 3 EXECUTION

3.01 INSTALLATION

A. Refer to Section "Common Work Results for Plumbing" for piping joining materials, joint construction, and basic installation requirements.

B. Prior to installation of domestic water piping specialties, flush domestic water piping of foreign material.

C. Install products in accordance with manufacturer's instructions.

D. Install products level and plumb.

E. Install products with clearance for access and maintenance.

F. Support products NPS 2-1/2" and larger independently of surrounding pipe.

G. Support products with flanged ends independently of surrounding pipe.

H. For products containing isolation or shutoff valves, locate valves in horizontal piping with stems at or above center of piping, maintaining unimpeded stem movement.

I. Install backflow preventers where indicated: If not indicated on each water supply to mechanical equipment and systems and to other equipment and water systems that may be sources of contamination. Comply with authorities having jurisdiction.

1. Locate backflow preventers in same room as connected equipment or system.
2. Install drain for backflow preventers with atmospheric-vent drain connection with air-gap fitting, fixed air-gap fitting, or equivalent positive pipe separation of at least two pipe diameters in drain piping and pipe to floor drain. Locate air-gap device attached to or under backflow preventer. Simple air-breaks are not acceptable for this application.
3. Do not install bypass piping around backflow preventers.

J. Install balancing valves with-in 12” of ceiling at access door or tile where they can be reached with-out obstruction.

K. Install thermostatic mixing valves with check stops or shutoff valves on inlets and with shutoff valve on outlet.

1. Install thermometers and pressure gauges.
2. Install cabinet-type units recessed in or surface mounted on wall as indicated.

L. Install strainers where indicated.

M. Install outlet boxes recessed in wall. Install 2-by-4-inch fire-retardant-treated-wood blocking wall reinforcement between studs. Fire-retardant-treated-wood blocking is specified in Section "Rough Carpentry."

N. Install water hammer arresters in water piping according to PDI-WH 201.

DRAFT

O. Install supply-type, trap-seal primer valves with outlet piping pitched down toward drain trap a minimum of 1/8” per foot, and connect to floor-drain body, trap, or inlet fitting. Adjust valve for proper flow.

P. Install drainage-type, trap-seal primer valves as lavatory trap with outlet piping pitched down toward drain trap a minimum of 1/8” per foot, and connect to floor-drain body, trap, or inlet fitting.

Q. Install trap-seal primer systems with outlet piping pitched down toward drain trap a minimum of 1/8” per foot, and connect to floor-drain body, trap, or inlet fitting. Adjust system for proper flow.

R. Install trap guards in accordance with manufacturer’s instructions.

S. Fasten wall-hanging plumbing specialties securely to supports attached to building substrate if supports are specified and to building wall construction if no support is indicated.

T. Fasten recessed-type plumbing specialties to reinforcement built into walls.

U. Install wood-blocking reinforcement for wall-mounting and recessed-type plumbing specialties.

V. Install individual shutoff valve in each water supply to plumbing specialties. Use ball valve if specific valve is not indicated. Install shutoff valves in accessible locations. Refer to Section "Valves" for general-duty ball valves.

W. Install air vents at water piping high points. Include ball valve in inlet.

X. Install traps on plumbing specialty drain outlets. Omit traps on indirect wastes unless trap is indicated.

Y. Install escutcheons at wall, floor, and ceiling penetrations in exposed finished locations and within cabinets and millwork. Use deep-pattern escutcheons if required to conceal protruding pipe fittings.

Z. Specific trap primer assembly and primer pipe routing not always indicated on plans to provide contactor field flexibility in selecting option best suitable for field conditions, where alternative options may be acceptable. Contactor shall coordinate and provide any necessary items to facilitate proper installation and operation of the preferred and approved primer system; to include, but not limited to, electrical conduit and circuitry to the panelboard for electronic systems.

DRAFT

3.02 LABELING AND IDENTIFYING

A. Indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Section "Plumbing Identification"

3.03 FIELD QUALITY CONTROL

A. Inspect each product for damage and defects.

B. Repair or replace damaged products. Replace defective products.

C. For products containing isolation or shutoff valves, exercise isolation and shutoff valves from fully closed to fully open. Confirm smooth operation.

D. Backflow Preventers:
   1. Test in accordance with manufacturer's instructions.
   2. Test in accordance with requirements of authorities having jurisdiction.
   3. Test in accordance with ASSE listing of backflow preventer.
   4. Replace backflow preventers that fail testing.
   5. Provide final test report.

E. Vacuum Breakers:
   1. Test in accordance with manufacturer's instructions.
   2. Test in accordance with requirements of authorities having jurisdiction.
   3. Test in accordance with ASSE listing of vacuum breaker.
   4. Replace vacuum breakers that fail testing.
   5. Provide final test report.

F. Water Pressure Reducing Valves: Confirm outlet pressure remains steady without fluctuation.

G. Mixing Valves: Confirm outlet temperature remains steady without fluctuation.

H. Electronic Trap Primer Systems:
   1. Clean strainer.
   2. Test system following manufacturer's instructions.
   3. Visually confirm that water has reached each drain and that traps are full of water.
   4. Operate system until each trap is full.

3.04 ADJUSTING

A. Adjust pressure reducing valves to design pressure set point.

B. Adjust mixing valves to design temperature set point.

C. Adjust balancing valves to design flow.

D. Adjust thermostatic balancing valves to design temperature setpoint.

END OF SECTION 221119

DRAFT

SECTION 221123
PACKAGED DOMESTIC WATER BOOSTER PUMPS

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Provisions of the Contract and of the Contract Documents apply to this Section.

1.02 ABBREVIATIONS

A. BAS: Building Automation System

B. ECM: Electronically Commutated Motor

C. VFD: Variable Frequency Drive

1.03 SUBMITTALS

A. Product Data: Include construction details, material descriptions, and dimensions of individual components. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Shop Drawings: Provide wiring diagrams for power, signal, and control wiring. Indicate interface with BAS.

C. Operation and Maintenance Data: For booster pumps to include in emergency, operation, and maintenance manuals.

1.04 QUALITY ASSURANCE ***REFER TO CURRENT MCPS MECH-PLUMB DESIGN CHECKLIST***

A. **Comply with the requirements of the current MCPS Mechanical and Plumbing Design Checklist. Refer to the latest edition for applicable design, coordination, and documentation standards.**

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. ASME Compliance: Comply with ASME B31.9 for piping.

D. Certifications: Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc, as suitable for purpose specified and indicated.

E. Identification: Provide pumps with manufacturer's name, model number, and rated capacity identified by permanently attached label.

F. Performance: Ensure pumps operate at specified system fluid temperatures without vapor binding and cavitation, are non-overloading in parallel or individual operation, and operate within 25 percent of midpoint of published maximum efficiency curve.

G. Booster pumps shall be listed and labeled as packaged pumping systems by testing agency acceptable to authorities having jurisdiction.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Retain or apply protective coatings and flange protective covers during storage.

B. Provide temporary inlet and outlet caps. Maintain caps in place until installation.

1.06 COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided.

DRAFT

PART 2 PRODUCTS

2.01 MULTIPLEX, VARIABLE-SPEED, PACKAGED BOOSTER PUMP SYSTEMS

A. Manufacturers:
   1. Armstrong Pumps Inc.
   2. Bell & Gossett
   3. Canariis Corporation
   4. Goulds Pumps
   5. Grundfos Pumps Corporation U.S.A.
   6. Patterson Pump Company
   7. QuantumFlo
   8. SyncroFlo, Inc.
   9. Taco, Inc.
   10. TigerFlow Systems, Inc.

B. Description: Self-contained, factory-assembled, factory-tested, pump skid for domestic water with isolation valves, strainers, gauges, pipe and Class 300 fittings, system drain valve(s), component identification, signage, electrical raceway, equipment tags, instruments, and controls fitted on fabricated structural steel frame skid base; tested, adjusted, and shipped as integral unit.

C. Skid Capacity Load Distribution: Triplex; lead/lag/lag, each at 33 percent of total load.

D. Skid Vibration Isolation: See Section 220548.

E. Seal: Mechanical.

F. Pump Motor: Inverter duty, VFD-controlled. Select motors that will not overload through full-range of pump performance curve.

G. Pipe and Fittings Material: Stainless steel, Schedule 40.

H. Low-Pressure Control: Stop pump operation if incoming water pressure drops to atmospheric.

I. Isolation and Control Valves:
   1. Shutoff Valves NPS 2 and Smaller: Two-piece, full-port ball valve, in each pump's suction and discharge piping and in inlet and outlet headers.
   2. Shutoff Valves NPS 2-1/2 and Larger: Lug-type butterfly valve, in each pump's suction and discharge piping and in inlet and outlet headers.
   3. Check Valves: Silent type in each pump's discharge piping.
   4. Thermal-Relief Valve: Temperature-and-pressure relief in pump discharge header.

J. Accessories: Include automatic air vents, drain ports, and skid inlet-outlet pressure gauges.

K. Instrumentation and Controls:
   1. Provide skid-mount instruments and control devices where required with proper raceway, cables, and wires into control panel with panel-door interlocked main disconnect switch.
   2. Instrument, Device, and Control-Enclosure Rating: Matching installed environmental conditions.
   3. Controller Type: Panel-coordinated programmable logic controller (PLC) with fuse protected controls transformer and power supplies.
   4. Operating Interface per Pump:
      a. Components: HOA selector switch, suction, and discharge side pressure gauges, resettable run-time meter per pump.

DRAFT

b. Indicators: Provide illuminated indicators of incandescent or LED-based pilot light type per pump; green for run status, yellow for safety, red for alarm, and black or blue for out-of-service.
c. Graphic Panel: Color touchscreen display, use graphics instead of listed components, and indicators except for pump override switches with respective indicators.

5. Minimum Control Components:
   a. Magnetic starter or variable frequency drive for motor control with overcurrent protection, overvoltage protection and current sensor per pump.
   b. Thermal Bleed Circuit with Solenoid Valve: Prevent overheating during low demand.
   c. Pump Alternating: Have pumps set for lead/lag operation. Alternate pumps based on run time or manually selected order. Use alternating relay for noncontroller system.
   d. Low- and High-Limit pressure cutout and temperature cut out switches.
   e. Pressure Control Signal: Include pressure-indicating transmitter for remote mounting.
   f. Time Delay Function or Relay: Prevent pumps short cycling on fluctuating demands.
6. BAS, BMS, SCADA, or Other Integrated Automation Link:
   a. On-Off status of each pump.
   b. Alarm status of entire skid.
   c. Operating setpoints.

2.02 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors.
   1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
   2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in NFPA 70.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine roughing-in for booster pumps to verify actual locations of piping connections before booster-pump installation.

3.02 INSTALLATION

A. Install products with related fittings, and accessories according to manufacturer instructions.

B. Potable and Drinking Water Service: Provide NSF 61 certified; comply with ICC (IPC).

C. Ensure that small pressure gauges are installed on both upstream and downstream ends.

D. ECM, VSD, or VFD Controlled Motors: Configure unit to operate within manufacturer-listed pump curve points unless factory set to do so. Then adjust to operate in automatic to maintain downstream pressure setpoint.

E. Ensure pumps operate at specified system fluid temperatures without vapor binding and cavitation, are non-overloading in parallel or individual operation, and operate within 25 percent of midpoint of published maximum efficiency curve.

F. Coordinate BAS, BMS, or Integrated Automation linking between unit controller and remote software app or terminal.

DRAFT

G. Equipment Mounting: Install booster pumps on concrete housekeeping pad using spring isolators.
   1. Minimum Deflection: 1 inch.
   2. Install dowel rods to connect housekeeping pad to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete housekeeping pad.
   3. Install epoxy-coated anchor bolts that extend through the housekeeping pad and anchor into structural concrete floor.

H. Support connected domestic-water piping so weight of piping is not supported by booster pumps.

3.03 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.
   1. Connect domestic-water piping to booster pump headers.
   2. Install shutoff valves on piping connections to booster-pump suction and discharge headers. Install ball, or butterfly, valves.

B. Install, flanged, or grooved-joint connections on suction and discharge headers.
   1. Install valved bypass, same size as water supply.
   2. Install flexible connectors, same size as header, on connections to booster-pump suction and discharge headers.
   3. Install piping adjacent to booster pumps to allow service and maintenance.

3.04 IDENTIFICATION

A. Identify system components. Comply with requirements for identification specified in Division 22 Section "Identification for Plumbing Piping and Equipment."

3.05 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

B. Tests and Inspections:
   1. Perform visual inspection.
   2. Leak Test: After installation, charge booster pump and check for leaks. Repair leaks and recheck until no leaks exist.
   3. Operational Test: After electrical circuitry has been energized, start booster pumps to confirm proper motor rotation and booster pump operation.
   4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
   5. Prepare inspection reports.

C. Engage a factory-authorized service representative to perform startup service.
   1. Complete installation and startup checks according to manufacturer's written instructions.

3.06 ADJUSTING

A. Adjust booster pumps to function smoothly, and lubricate as recommended by manufacturer.

B. Adjust pressure set points.

C. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting booster pump to suit actual occupied

DRAFT

conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.07 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain booster pumps.

END OF SECTION 221123

DRAFT

SECTION 221125
DOMESTIC WATER CIRCULATING PUMPS

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Provisions of the Contract and of the Contract Documents apply to this Section.

1.02 DEFINITIONS

A. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.

1.03 ABBREVIATIONS

A. BAS: Building Automation System

B. ECM: Electronically Commutated Motor

C. VFD: Variable Frequency Drive

1.04 SUBMITTALS

A. Product Data: For each type of product indicated. Include materials of construction, rated capacities, certified performance curves with operating points plotted on curves, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Operation and Maintenance Data: For domestic water pumps to include in operation and maintenance manuals.

1.05 QUALITY ASSURANCE ***REFER TO CURRENT MCPS MECH-PLUMB DESIGN CHECKLIST***

A. **Comply with the requirements of the current MCPS Mechanical and Plumbing Design Checklist. Refer to the latest edition for applicable design, coordination, and documentation standards.**

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. UL Compliance: Comply with UL 778 for motor-operated water pumps.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Retain or apply protective coatings and flange protective covers during storage.

B. Provide temporary inlet and outlet caps. Maintain caps in place until installation.

C. Comply with pump manufacturer's written instructions for handling.

PART 2 PRODUCTS

2.01 CIRCULATING PUMPS

A. Manufacturers:
   1. Armstrong Pumps Inc.
   2. Bell & Gossett
   3. Grundfos Pumps Corp.
   4. Taco, Inc.

DRAFT

B. Description: Factory-assembled and factory-tested, in-line, wet-rotor, system-lubricated, 100% lead-free, NSF/ANSI 61 certified, ECM or VFD controlled, circulator pump specifically designed for domestic hot water circulating systems. Pump shall incorporate integrated intelligent control capable of automatic performance adjustment to system demand, maintaining required flow and differential pressure while optimizing efficiency.

C. BMS or Other Integrated Automation Link: Provide auxiliary contacts for fault and run status.

D. Accessories: Include inlet-outlet temperature and pressure gauges with 2-way isolation valves.

2.02 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Division 22 Section "Common Motor Requirements for Plumbing Equipment."

1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 26 Sections.

2.03 CONTROLS

A. BAS: Electric, adjustable for control of water-supply pump.

1. Type: Start/Stop

B. Pump Operation:

1. Pump shall start and stop upon BAS command or domestic hot water system enable signal.
2. Pump shall be provided with integral ECM variable-speed control.
3. Pump shall automatically modulate speed in response to system differential pressure to maintain required circulation through domestic hot water return piping and thermostatic balancing valves.
4. Pump control shall automatically reduce flow and pump energy as system demand decreases and return branches satisfy temperature.
5. Pump shall not operate at constant speed during normal operation.
6. Control strategy shall provide automatic adjustment of pump operation to comply with applicable IECC and ASHRAE energy efficiency requirements for service hot water circulation systems.

DRAFT

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine roughing-in of domestic-water-piping system to verify actual locations of connections before pump installation.

B. Verify installation and location of automatic flow control valve(s). Record actual location(s) on as-built drawings.

3.02 INSTALLATION

A. Install products with related fittings, and accessories according to manufacturer instructions.

B. Potable and Drinking Water Service: Provide NSF 61 certified; comply with ICC (IPC).

C. Hot Water Service: Ensure that small pressure-temperature gauges are installed on both upstream and downstream ends.

D. Ensure pumps operate at specified system fluid temperatures without vapor binding and cavitation, are non-overloading in parallel or individual operation, and operate within 25 percent of midpoint of published maximum efficiency curve.

E. Coordinate BAS, BMS, or Integrated Automation linking between unit controller and remote software app or terminal.

3.03 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to pumps to allow service and maintenance.

C. Connect domestic water piping to pumps.

D. Install suction and discharge piping.

E. Install indicated valves &devices.

F. Comply with Division 26 Sections for electrical connections.

G. Connect controls.

3.04 IDENTIFICATION

A. Comply with requirements for identification specified in Division 22 Section "Identification for Plumbing Piping and Equipment" for identification of pumps.

3.05 STARTUP SERVICE

A. Perform startup service.
   1. Complete installation and startup checks according to manufacturer's written instructions.
   2. Check piping connections for tightness.
   3. Clean strainers on suction piping.
   4. Check operation of controls for automatic starting and stopping operation of pumps.
   5. Perform the following startup checks for each pump before starting:
      a. Verify that pump is free to rotate by hand and that pump for handling hot liquid is free to rotate with pump hot and cold. If pump is bound or drags, do not operate until cause of trouble is determined and corrected.
      b. Verify that pump is rotating in the correct direction.
   6. Prime pump.
   7. Close discharge valve.
   8. Start motor.
   9. Open discharge valve slowly.
   10. Adjust temperature settings on thermostatic mixing valves if included in design.
   11. Adjust balancing valves if required by thermostatic mixing valve manufacturer.
   12. Adjust system balancing valves and pump set points to meet system performance requirements.
   13. Check and record final pressure and flow conditions on inlet and outlet of pump.
   14. Submit report of all final setpoints and conditions to owner.

END OF SECTION 221125

DRAFT

SECTION 221316
SANITARY WASTE AND VENT PIPING

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Provisions of the Contract and of the Contract Documents apply to this Section.

1.02 DEFINITIONS

A. EPDM: Ethylene-propylene-diene terpolymer.

B. LEED: Leadership in Energy and Environmental Design

C. NBR: Acrylonitrile-butadiene rubber.

D. PE: Polyethylene plastic.

E. PVC: Polyvinyl chloride plastic.

F. TPE: Thermoplastic elastomer.

G. USGBC: United States Green Building Council

1.03 PERFORMANCE REQUIREMENTS

A. Provide components and installation capable of producing piping systems with the following minimum working-pressure ratings, unless otherwise indicated:

1. Soil, Waste, and Vent Piping: 10-foot head of water.

1.04 SUBMITTALS

A. Product Data: Provide data on pipe materials, pipe fittings, valves, and accessories. Provide manufacturers catalog information. Indicate valve data and ratings.

1.05 QUALITY ASSURANCE ***REFER TO CURRENT MCPS MECH-PLUMB DESIGN CHECKLIST***

A. **Comply with the requirements of the current MCPS Mechanical and Plumbing Design Checklist. Refer to the latest edition for applicable design, coordination, and documentation standards.**

B. Perform work in accordance with applicable codes.

C. Piping materials shall bear label, stamp, or other markings of testing agency.

D. Cast iron soil pipe shall be clearly marked with the manufacturer’s name, county of origin, eight-digit date code, pipe diameter and length, relevant ASTM standard and registered trademark of third part certifier.

1. Third party certifier shall be IAPMO, ICC, NSF, UL, or other organization that is accredited as an ANSI – Guide 65 organization. Reference www.ansi.org.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.

B. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.

DRAFT

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS

A. Plenum-Installed Piping: Provide piping with flame spread index of 25 or less and smoke developed index of 50 or less when tested in accordance with ASTM E84 or UL 723.

B. Refer to Part 3 "Piping Applications" Article for applications of pipe, tube, fitting, and joining materials.

C. Flexible Transition Couplings for Underground Non-Pressure Piping: ASTM C 1173 with elastomeric sleeve. Include ends of same sizes as piping to be joined and include corrosion-resistant metal band on each end.

2.02 CAST-IRON SOIL PIPING

A. Manufacturers:
   1. AB&I Foundry
   2. Charlotte Pipe & Foundry Co.
   3. Tyler Pipe & Coupling

B. Pipe and Fittings: ASTM A 888 or CISPI 301.

C. Hub-and-Spigot Gaskets: ASTM C 564, rubber.

D. Hub-less Couplings:
   1. General: CISPI 310 and ASTM C 1277 assembly of stainless-steel corrugated shield, stainless steel bands and fasteners, and ASTM C 564 rubber sleeve with integral, center pipe stop.
   2. Heavy-Duty, Type 304, Stainless-Steel Couplings: ASTM C 1540, Type 304, stainless-steel shield; stainless-steel bands; and ASTM C 564, rubber sleeve.
      a. NPS 1-1/2 to NPS 4: 3-inch- wide shield with 4 bands.
      b. NPS 5 to NPS 10: 4-inch- wide shield with 6 bands.
   3. Heavy-Duty, Cast-Iron Couplings: ASTM A 48/A 48M, 2-piece, cast-iron housing; stainless-steel bolts and nuts; and ASTM C 564, rubber sleeve.

2.03 COATED CAST-IRON SOIL PIPING

A. Manufacturers:
   1. AB&I Foundry
   2. Charlotte Pipe & Foundry Co.
   3. Tyler Pipe & Coupling

B. Pipe and Fittings: ASTM A 74, ASTM A 888, or CISPI 301.
   1. Pipe Coating: Chemically deposited zinc-phosphate pretreatment layer with second layer of electrically deposited, high-performance, cathodic epoxy coating and final coating of electrically deposited, high-performance, anodic epoxy coating.
   2. Fitting Coating: Chemically deposited zinc-phosphate pretreatment layer with second layer of electrically deposited, high-performance, cathodic epoxy coating and final coating of epoxy acrylic powder.

C. Hub-and-Spigot Gaskets: ASTM C 564, rubber.

D. Hub-less Couplings:
   1. General: CISPI 310 and ASTM C 1277 assembly of stainless-steel corrugated shield, stainless steel bands and fasteners, and ASTM C 564 rubber sleeve with integral, center pipe stop.

DRAFT

2. Heavy-Duty, Type 304, Stainless-Steel Couplings: ASTM C 1540, Type 304, stainless-steel shield; stainless-steel bands; and ASTM C 564, rubber sleeve.
   a. NPS 1-1/2 to NPS 4: 3-inch- wide shield with 4 bands.
   b. NPS 5 to NPS 10: 4-inch- wide shield with 6 bands.
3. Heavy-Duty, Cast-Iron Couplings: ASTM A 48/A 48M, 2-piece, cast-iron housing; stainless-steel bolts and nuts; and ASTM C 564, rubber sleeve.

2.04 PVC PIPE AND FITTINGS

A. Manufacturers:
   1. Charlotte Pipe & Foundry Co.
   2. IPEX
   3. Westlake

B. Solid-Wall PVC Pipe: ASTM D 2665, drain, waste, and vent.
   1. PVC Socket Fittings: ASTM D 2665, socket type, made to ASTM D 3311, drain, waste, and vent patterns.

C. Solvent Cement and Adhesive Primer:
   1. Use PVC solvent cement that has a VOC content of 510 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   2. Use adhesive primer that has a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.05 COPPER TUBE AND FITTINGS

A. Manufacturers:
   1. Mueller Streamline Co.
   2. Cerro Flow Products
   3. Weiland Copper Products

B. Copper DWV Tube: ASTM B 306, drainage tube, drawn temper.

C. Copper Drainage Fittings: ASME B16.23, cast copper or ASME B16.29, wrought copper, solder-joint fittings.

D. Solder: ASTM B 32, lead free with ASTM B 813, water-flushable flux.

DRAFT

PART 3 EXECUTION

3.01 PIPING APPLICATIONS

A. Transition fittings with pressure ratings at least equal to piping pressure ratings may be used in applications below, unless otherwise indicated.

B. Aboveground, Soil, Waste, and Vent Piping
   1. Inside Plenum:
      a. Hub-less cast-iron soil piping with heavy duty couplings.
   2. Outside Plenum:
      a. PVC pipe, PVC socket fittings, and solvent-cemented joints.

C. Underground, Soil, Waste, and Vent Piping:
   1. Kitchen Waste:
      a. Extra Heavy Hub and Spigot cast-iron soil piping.
      b. Coated Service Weight Hub and Spigot cast-iron soil pipe and fittings.

2. Other Than Kitchen Waste:
   a. PVC pipe and fittings.
   b. Service Weight Hub and Spigot cast iron soil pipe and fittings.

D. Food Service Equipment, Soil and Waste Piping
   1. Food Service Equipment Waste: Copper DWV pipe and fittings.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install vent piping penetrating roofed areas to maintain integrity of roof assembly.

C. Prepare exposed, unfinished pipe, fittings, supports, and accessories for finish painting.

D. Refer to Section "Facility Sanitary Sewers" for Project-site sanitary sewer piping.

E. Refer to Section "Common Work Results for Plumbing" for basic installation.

F. Install cleanouts at grade and extend to where building sanitary drains connect to building sanitary sewers.

G. Install cleanout fitting with closure plug inside the building in sanitary force-main piping.

H. Install cleanouts at grade and extend to where building sanitary drains connect to building sanitary sewers.

I. Install cast-iron sleeve with water stop and mechanical sleeve seal at each service pipe penetration through foundation wall. Select number of interlocking rubber links required to make installation watertight.

J. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."

K. Make changes in direction for soil and waste drainage and vent piping using appropriate branches, bends, and long-sweep bends. Sanitary tees and short-sweep 1/4 bends may be used on vertical stacks if change in direction of flow is from horizontal to vertical. Use long-turn, double Y-branch and 1/8-bend fittings if 2 fixtures are installed back to back or side by side with common drain pipe. Straight tees, elbows, and crosses may be used on vent lines. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.

L. Lay buried building drainage piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.

M. Install soil and waste drainage and vent piping at the minimum slopes required by authorities having jurisdiction.

N. Install PVC soil and waste drainage and vent piping according to ASTM D 2665.

O. Install underground PVC soil and waste drainage piping according to ASTM D 2321.

P. Install aboveground copper tubing according to CDA's "Copper Tube Handbook."

Q. Install all drainage pattern fittings and piping in accordance with all applicable federal, state, and local codes.

R. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.

DRAFT

S. Sleeves are not required for cast-iron soil piping passing through concrete slabs-on-grade if slab is without membrane waterproofing.

T. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section "Sleeves and Sleeve Seals for Plumbing Piping."

U. Install sleeve seals for piping penetrations of concrete and masonry walls and slabs. Comply with requirements for sleeve seals specified in Section "Sleeves and Sleeve Seals for Plumbing Piping."

V. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section "Escutcheons for Plumbing Piping"

W. All piping under slab shall be TV camera inspected with MCPS (Montgomery County Public Schools) representative present. Video record with mapping and verifying pipe integrity and slope maintained post-backfill shall be provided to MCPS.

3.03 JOINT CONSTRUCTION

A. Refer to section "Common Work Results for Plumbing" for basic piping joint construction.

B. Join hub-and-spigot, cast-iron soil piping with gasket joints according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.

C. Join hub-less cast-iron soil piping according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hub-less-coupling joints.

D. PVC Non-pressure Piping Joints: Join piping according to ASTM D 2665.

E. Join copper tube and fittings with soldered joints according to ASTM B 828. Use ASTM B 813, water-flushable, lead-free flux and ASTM B 32, lead-free-alloy solder.

3.04 HANGER AND SUPPORT INSTALLATION

A. Refer to Section "Hangers and Supports for Plumbing Piping and Equipment" for pipe hanger and support devices. Install the following:
   1. Vertical Piping: MSS Type 8 or Type 42, clamps.
   2. Individual, Straight, Horizontal Piping Runs: According to the following:
      a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
      b. Longer Than 100 Feet: MSS Type 43, adjustable roller hangers.
      c. Longer Than 100 Feet, if indicated: MSS Type 49, spring cushion rolls.
   3. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
   4. Base of Vertical Piping: MSS Type 52, spring hangers.

B. Install supports according to Section " Hangers and Supports for Plumbing Piping and Equipment."

C. Support vertical piping and tubing at base and at each floor.

D. Rod diameter may be reduced 1 size for double-rod hangers, with 3/8-inch minimum rods.

E. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:
   1. 1 ½" and 2": 60" with 3/8"rod.
   2. 3": 60" with ½"rod.
   3. 4" and NPS 5: 60" with 5/8" rod.
   4. 6": 60" with ¾" rod.
   5. 8" to 12": 60" with 7/8" rod.

DRAFT

6. 15”: 60” with 1” rod.

F. Install supports for vertical cast-iron soil piping every 15 feet.

G. Install hangers for PVC piping with the following maximum horizontal spacing and minimum rod diameters:
   1. 1 ½” and 2”: 48” with 3/8” rod.
   2. 3”: 48” with ½” rod.
   3. 4” and 5”: 48” with 5/8” rod.
   4. 6”: 48” with ¾” rod.
   5. 8” to 12”: 48” with 7/8” rod.

H. Install supports for vertical PVC piping every 48”.

I. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

3.05 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Provide new sanitary sewer services. Before commencing work, check invert elevations required for sewer connections, confirm inverts and ensure that these can be properly connected with slope for drainage and cover to avoid freezing.

C. Connect soil and waste piping to exterior sanitary sewerage piping. Use transition fitting to join dissimilar piping materials.

D. Connect drainage and vent piping.

3.06 FIELD QUALITY CONTROL

A. During installation, notify authorities having jurisdiction and owner's representative at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction and owner's representative.
   1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.
   2. Final Inspection: Arrange for final inspection by authorities having jurisdiction and owner's representative to observe tests specified below and to ensure compliance with requirements.

B. Re-inspection: If authorities having jurisdiction or owner's representative find that piping will not pass test or inspection, make required corrections and arrange for re-inspection.

C. Reports: Where required or indicated prepare inspection reports and have them signed by authorities having jurisdiction and owner's representative.

D. Test sanitary drainage and vent piping according to procedures of authorities having jurisdiction and owner's representative or, in absence of published procedures, as follows:
   1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
   2. Leave uncovered and unconcealed new, altered, extended, or replaced drainage and vent piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
   3. Roughing-in Plumbing Test Procedure: Test drainage and vent piping, except outside leaders, on completion of roughing-in. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water. From 15 minutes before

DRAFT

inspection starts to completion of inspection, water level must not drop. Inspect joints for leaks.

4. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
5. Prepare reports for tests and required corrective action.

3.07 CLEANING

A. Clean interior of piping. Remove dirt and debris as work progresses.

B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.

C. Place plugs in ends of uncompleted piping at end of day and when work stops.

3.08 PROTECTION

A. Protect drains, with permanent caps only, during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.

B. Exposed PVC Piping: Protect plumbing vents exposed to sunlight with two coats of water-based latex paint.

END OF SECTION 221316

DRAFT

SECTION 221319
SANITARY WASTE PIPING SPECIALTIES

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Provisions of the Contract and of the Contract Documents apply to this Section.

1.02 ABBREVIATIONS

A. RPZ: Reduced Pressure Zone

B. FOG: Fats, oils, and greases.

1.03 SUBMITTALS

A. Product Data: Provide manufacturer's literature and data sheets for each product. Include information on fabrication materials, assembly of components, dimensions, ratings, finishes, rough-in requirements, and installed accessories.

B. Shop Drawings: Provide wiring diagrams for power, signal, and control wiring.

C. Operation and Maintenance Data: To include in emergency, operation, and maintenance manuals.

1.04 QUALITY ASSURANCE ***REFER TO CURRENT MCPS MECH-PLUMB DESIGN CHECKLIST***

A. **Comply with the requirements of the current MCPS Mechanical and Plumbing Design Checklist. Refer to the latest edition for applicable design, coordination, and documentation standards.**

B. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.

C. Electrical components, devices, and accessories shall be Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

D. Comply with NSF 14, "Plastics Piping Components and Related Materials," for plastic sanitary piping specialty components.

DRAFT

1.05 COORDINATION

A. Coordinate size and location of roof penetrations.

B. Coordinate accessories, extensions, collars, flashing clamps, etc… for field conditions and installation requirements for roof assemblies and other construction assemblies to provide final and proper compliant installation.

PART 2 PRODUCTS

2.01 BACKWATER VALVES

A. Horizontal, Backwater Valves:
   1. Manufacturers:
      a. Josam Company; Josam Div.
      b. MIFAB, Inc.

c. Smith, Jay R. Mfr. Co.; Division of Smith Industries, Inc.
d. Tyler Pipe; Wade Div.
e. Watts Drainage Products Inc.
f. Zurn Plumbing Products Group; Specification Drainage Operation.

2. Standard: ASME A112.14.1.
3. Size: Same as connected piping.
4. Cover: Bolted or threaded access to check valve.
5. End Connections: Match connecting pipe.
6. Check Valve: Factory assembled to hang open for airflow unless subject to backflow condition.
7. Extension: ASTM A 74, Service class; full-size, cast-iron, soil-pipe extension to field-installed cleanout at grade; replaces backwater valve cover. Terminate in 4” thick square concrete slab 4” larger all around than cover (provide 1” chamfer on top edges)

2.02 CLEANOUTS

A. Manufacturers:
1. Josam Company; Josam Div.
2. MIFAB, Inc.
3. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
4. Tyler Pipe; Wade Div.
5. Watts Drainage Products Inc.
6. Zurn Plumbing Products Group; Specification

B. General:
1. Standard: ASME A112.36.2M.
2. Size: Same as connected drainage piping
3. Closure Material: Match pipe, brass, PVC, or ABS

C. Floor Cleanouts:
1. Housing: threaded, adjustable.
2. Type: Threaded, adjustable housing.
3. Body: Cast iron.
4. Outlet Connection: Inside calk, Spigot, or Threaded.
5. Adjustable Housing Material: Cast iron with threads.
6. Frame and Cover Material and Finish: Satin finish nikaloy.
7. Frame and Cover Shape: Round or Square (Contractors Option).
8. Top Loading Classification: Extra Heavy Duty.
9. Riser: ASTM A 74, Service weight, cast-iron drainage pipe fitting and riser to cleanout.

D. Wall Cleanouts:
1. Wall access: Yes
2. Body: Match connected piping.
3. Closure: Countersunk or raised-head, drilled-and-threaded plug.
4. Closure Plug Size: Same as cleanout size but not larger than four inches in diameter.
5. Wall Access: Round, flat, chrome-plated brass, nickel-bronze, copper-alloy, or stainless-steel cover plate with screw.

DRAFT

2.03 THROUGH-PENETRATION FIRESTOP ASSEMBLIES

A. Through-Penetration Firestop Assemblies:
   1. Manufacturers:
      a. 3M Fire Protection Products
      b. Hilti
      c. ProSet Systems Inc.
      d. RectorSeal / Metacaulk
      e. Specified Technologies Inc. (STI)
   2. Standard: UL 1479 assembly of sleeve and stack fitting with firestopping plug.
   3. Size: Same as connected soil, waste, or vent stack.
   4. Sleeve: Length to match slab thickness and with integral nailing flange on one end for installation in cast-in-place concrete slabs.

2.04 MISCELLANEOUS SANITARY DRAINAGE PIPING SPECIALTIES

A. Floor-Drain, Trap-Seal Primer Fittings:
   1. Manufacturers:
      a. PPP
      b. Josam
      c. Smith
      d. Zurn
   2. Description: Cast iron, with threaded inlet and threaded or spigot outlet, and trap-seal primer valve connection.
   3. Size: Same as floor drain inlet.

B. Air-Gap Fittings:
   1. Standard: ASME A112.1.2, for fitting designed to ensure fixed, positive air gap between installed inlet and outlet piping.
   2. Body: Bronze or cast iron.
   3. Inlet: Opening in top of body.
   4. Outlet: Larger than inlet.
   5. Size: Same as connected waste piping and with inlet large enough for associated indirect waste piping.

DRAFT

2.05 GREASE INTERCEPTORS

A. Manufacturers:
   1. Adamson Tank
   2. Clawson Tank
   3. FOG Enforcer
   4. Green Turtle
   5. Highland Tank
   6. Schier Products

B. Design: Interceptor shall be designed to remove from wastewater free oil, grease, and other floatable materials, and sediment, sand and other settleable materials.

C. Equivalent interceptors constructed of fiberglass or steel by other manufacturers will be considered. Interceptor manufacturer must document compliance with all requirements of this

specification. Capacity information must be from the manufacturer's catalog. Site constructed concrete interceptors are not acceptable.

D. Interceptor shall meet the requirements of the International Association of Plumbing and Mechanical Officials (IAPMO) Material and Property Standard for Grease Interceptors and Clarifiers ANSI/IAPMO Z1001.

E. Steel Interceptors shall be in accordance with Underwriters Laboratories Inc. Subject UL-1746 Standard for External Corrosion Protection Systems for Steel Underground Storage Tanks.

F. Interceptor shall consist of inlet and outlet connections with internal influent nozzle, non-clogging flow diffusion and energy dissipater baffle. If distributed pipe configuration is proposed pipe diameter shall be twice the diameter of the inlet pipe and shall direct flow across the entire cross-sectional area. Straight pipe is not acceptable.

G. Interceptor shall be designed to prevent large amounts of pipe-clogging fats, oil, and grease (FOG) and solid waste materials from entering the sanitary sewer system. Interceptor shall have compartments to minimize turbulence and promote separation. Interceptor shall retain wastewater long enough to allow liquefied grease to cool down, separate, and congeal.

H. Interceptor shall be suitable for underground installation and shall be installed per the manufacturer's recommendations.

I. Provide interceptor with cleanouts, sample, and ventilation ports together with extension collars, frames, and covers to allow access for removal of oil, grease and solids.

J. Accessories:
   1. Basin manways with extensions to grade and heavy duty covers.
   2. Full line-size connections.
   3. Vertical tee fitting on discharge outlet with pipe to surface with cast iron frame and cover for effluent sampling.
   4. Traffic rated components accessories and relieving slabs where installation subject to vehicular traffic.
   5. Grease level monitoring and alarm system

K. Warranty: 30 years against leakage, corrosion, and structural failure.

2.06 MOTORS

A. General requirements for motors are specified in Division 22 Section "Common Motor Requirements for Plumbing Equipment."
   1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
   2. Controllers, Electrical Devices, and Wiring: Electrical devices and connections are specified in Division 26 Sections.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Refer to Division 22 Section "Common Work Results for Plumbing" for piping joining materials, joint construction, and basic installation requirements.

C. Install all cleanouts, sampling ports, venting, and accessories required.

D. Install cleanout deck plates with top flush with finished floor.

DRAFT

E. For wall cleanouts located in concealed piping, install cleanout access covers, with cover tight to finished wall.

F. Install floor drains at low points of surface areas to be drained. Set grates of drains flush with finished floor, unless otherwise indicated.
   1. Position floor drains as indicated. If indication is not clear, position for easy access and maintenance.
   2. Set floor drains at elevations indicated.
   3. Install floor-drain flashing flange so no leakage occurs between drain and adjoining flooring. Maintain integrity of waterproof membranes where penetrated.
   4. Install individual traps for floor drains connected to sanitary building drain.

G. Install through-penetration firestop assemblies in plastic conductors and stacks at rated penetrations.

H. Install floor-drain, trap-seal primer fittings on inlet to floor drains indicated to receive trap-seal primer.

I. Install air-gap fittings on RPZ backflow preventers and where indicated.

J. Install sleeve flashing device with each riser and stack passing through floors with waterproof membrane.

K. Install grease interceptors, including trapping, venting, and flow-control fitting, according to authorities having jurisdiction, manufacturer's recommendations/instructions, and as indicated. In case of a conflict, consult architect.

3.02 CONNECTIONS

A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to equipment to allow service and maintenance.

C. Grease Interceptors: Connect inlet and outlet to unit and connect flow-control fitting and vent to unit inlet piping. Install valve on outlet of automatic drawoff-type unit.

D. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

E. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.03 LABELING AND IDENTIFYING

A. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplate or sign on or near each of the following:
   1. Grease interceptors.

B. Distinguish among multiple units, inform operator of operational requirements, and refer to Division 22 Section "Identification for Plumbing Piping and Equipment."

3.04 FIELD QUALITY CONTROL

A. Perform tests and inspections.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect grease interceptors and their installation, including piping and electrical connections, and to assist in testing.

B. Checks and Inspections:

DRAFT

1. Leak Check: After installation, charge system and check for leaks. Repair leaks and recheck until no leaks exist.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

3.05 PROTECTION

A. Protect drains, with permanent caps only, during construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.

B. Place plugs in ends of open pipes at end of each day or when work stops.

END OF SECTION 221319

DRAFT

SECTION 221413
FACILITY STORM DRAINAGE PIPING

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Provisions of the Contract and of the Contract Documents apply to this Section.

1.02 DEFINITIONS

A. ABS: Acrylonitrile-butadiene-styrene plastic.

B. LEED: Leadership in Energy and Environmental Design

C. PE: Polyethylene plastic.

D. PVC: Polyvinyl chloride plastic.

E. USGBC: United States Green Building Council

1.03 PERFORMANCE REQUIREMENTS

A. Provide components and installation capable of producing piping systems with the following minimum working-pressure ratings, unless otherwise indicated:

1. Storm Piping: 10-foot head of water.

1.04 SUBMITTALS

A. Product Data: Provide data on pipe materials, pipe fittings, valves, and accessories. Provide manufacturers catalog information. Indicate valve data and ratings.

1.05 QUALITY ASSURANCE ***REFER TO CURRENT MCPS MECH-PLUMB DESIGN CHECKLIST***

A. **Comply with the requirements of the current MCPS Mechanical and Plumbing Design Checklist. Refer to the latest edition for applicable design, coordination, and documentation standards.**

B. Perform work in accordance with applicable codes.

C. Piping materials shall bear label, stamp, or other markings of the testing agency.

D. Cast iron soil pipe shall be clearly marked with the manufacturer's name, county of origin, eight-digit date code, pipe diameter and length, relevant ASTM standard and registered trademark of third part certifier.

1. Third party certifier shall be IAPMO, ICC, NSF, UL, or other organization that is accredited as an ANSI – Guide 65 organization. Reference www.ansi.org

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS

A. Plenum-Installed Piping: Provide piping with flame spread index of 25 or less and smoke developed index of 50 or less when tested in accordance with ASTM E84 or UL 723.

B. Refer to Part 3 "Piping Applications" Article for applications of pipe, tube, fitting, and joining materials.

DRAFT

C. Flexible Transition Couplings for Underground Non-Pressure Piping: ASTM C 1173 with elastomeric sleeve. Include ends of same sizes as piping to be joined and include corrosion-resistant metal band on each end.

2.02 CAST-IRON SOIL PIPE AND FITTINGS

A. Manufacturers:
   1. AB&I Foundry
   2. Charlotte Pipe & Foundry Co.
   3. Tyler Pipe & Coupling

B. Pipe and Fittings: ASTM A 888 or CISPI 301.

C. Hub-and-Spigot Gaskets: ASTM C 564, rubber.

D. Hub-less Couplings:
   1. General: CISPI 310 and ASTM C 1277 assembly of stainless-steel corrugated shield, stainless steel bands and fasteners, and ASTM C 564 rubber sleeve with integral, center pipe stop.
   2. Heavy-Duty, Type 304, Stainless-Steel Couplings: ASTM C 1540, Type 304, stainless-steel shield; stainless-steel bands; and ASTM C 564, rubber sleeve.
      a. NPS 1-1/2 to NPS 4: 3-inch- wide shield with 4 bands.
      b. NPS 5 to NPS 10: 4-inch- wide shield with 6 bands.
   3. Heavy-Duty, Cast-Iron Couplings: ASTM A 48/A 48M, 2-piece, cast-iron housing; stainless-steel bolts and nuts; and ASTM C 564, rubber sleeve.

2.03 PVC PIPE AND FITTINGS

A. Manufacturers:
   1. Charlotte Pipe & Foundry Co.
   2. IPEX
   3. Westlake

B. Solid-Wall PVC Pipe: ASTM D 2665, drain, waste, and vent.
   1. PVC Socket Fittings: ASTM D 2665, socket type, made to ASTM D 3311, drain, waste, and vent patterns.

C. Solvent Cement and Adhesive Primer:
   1. Use PVC solvent cement that has a VOC content of 510 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   2. Use adhesive primer that has a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

PART 3 EXECUTION

3.01 PIPING APPLICATIONS

A. Transition fittings with pressure ratings at least equal to piping pressure ratings may be used in applications below, unless otherwise indicated.

B. Aboveground Storm Drainage Piping:
   1. Inside Plenum:
      a. Service class, cast-iron soil piping; gaskets; and gasketed joints.
      b. Hub-less, cast-iron soil piping; heavy-duty, Type 304, stainless steel.

DRAFT

2. Outside Plenum:
   a. Service class, cast-iron soil piping; gaskets; and gasketed joints.
   b. Hub-less, cast-iron soil piping; heavy-duty, Type 304, stainless steel.

C. Underground Storm Drainage Piping:
   1. Service class, cast-iron soil piping; gaskets; and gasketed joints.
   2. Hub-less, cast-iron soil piping; heavy-duty, Type 304, stainless steel.
   3. Schedule 40 PVC pipe, PVC socket fittings, and solvent-cemented joints

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Prepare exposed, unfinished pipe, fittings, supports, and accessories for finish painting.

C. Refer to Section "Storm Utility Drainage Piping" for Project site storm sewer and drainage piping.

D. Refer to Section "Common Work Results for Plumbing" for basic piping installation.

E. Install cleanouts at grade and extend to where building storm drains connect to building storm sewers. Cleanouts are specified in Section "Storm Drainage Piping Specialties".

F. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."
   1. Install encasement on underground piping according to ASTM A 674 or AWWA C105.

G. Make changes in direction for storm drainage piping using appropriate branches, bends, and long-sweep bends. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.

H. Lay buried building storm drainage piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.

I. Sleeves are not required for cast-iron soil piping passing through concrete slabs-on-grade if slab is without membrane waterproofing.

J. Install PVC soil and waste drainage and vent piping according to ASTM D 2665.

K. Install underground PVC soil and waste drainage piping according to ASTM D 2321.

L. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.

M. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Division 22 Section "Sleeves and Sleeve Seals for Plumbing Piping."

N. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section "Sleeves and Sleeve Seals for Plumbing Piping."

O. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section "Escutcheons for Plumbing Piping."

P. All piping under slab shall be TV camera inspected with MCPS (Montgomery County Public Schools) representative present. Video record with mapping and verifying pipe integrity and slope maintained post-backfill shall be provided to MCPS.

DRAFT

3.03 JOINT CONSTRUCTION

A. Refer to Section "Common Work Results for Plumbing" for basic piping joint construction.

B. Hub-and-Spigot, Cast-Iron Soil Piping Gasketed Joints: Join according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.

C. Hubless Cast-Iron Soil Piping Coupled Joints: Join according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-coupling joints.

D. PVC Non-pressure Piping Joints: Join piping according to ASTM D 2665.

3.04 VALVE INSTALLATION

A. Backwater Valves: Install backwater valves in piping subject to backflow.
   1. Horizontal Piping: Horizontal backwater valves.
   2. Install backwater valves in accessible locations.
   3. Refer to Section "Storm Drainage Piping Specialties" for backwater valves.

3.05 HANGER AND SUPPORT INSTALLATION

A. Refer to Section "Hangers and Supports for Plumbing Piping and Equipment" for pipe hanger and support devices. Install the following:
   1. Vertical Piping: MSS Type 8 or Type 42, clamps.
   2. Individual, Straight, Horizontal Piping Runs: According to the following:
      a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
      b. Longer Than 100 Feet: MSS Type 43, adjustable roller hangers.
      c. Longer Than 100 Feet, if Indicated: MSS Type 49, spring cushion rolls.
   3. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
   4. Base of Vertical Piping: MSS Type 52, spring hangers.

B. Install supports according to Section "Hangers and Supports for Plumbing Piping and Equipment."

C. Support vertical piping and tubing at base and at each floor.

D. Rod diameter may be reduced 1 size for double-rod hangers, with 3/8-inch minimum rods.

E. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:
   1. 1 ½” and 2”: 60” with 3/8” rod.
   2. 3”: 60” with ½” rod.
   3. 4” and 5”: 60” with 5/8” rod.
   4. 6”: 60” with ¾” rod.
   5. 8” to 12”: 60” with 7/8” rod.
   6. 15”: 60” inches with 1” rod.

F. Install supports for vertical cast-iron soil piping every 15 feet.

G. Install hangers for PVC piping with the following maximum horizontal spacing and minimum rod diameters:
   1. 1 ½” and 2”: 48” with 3/8” rod.
   2. 3”: 48” with ½” rod.
   3. 4” and 5”: 48” with 5/8” rod.
   4. 6”: 48” with ¾” rod.

DRAFT

5. 8” to 12”: 48” with 7/8” rod.

H. Install supports for vertical PVC piping every 48”.

I. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

3.06 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Provide new stormwater services. Before commencing work, check invert elevations required for stormwater connections, confirm inverts and ensure that these can be properly connected with slope for drainage and cover to avoid freezing.

C. Connect interior storm drainage piping to exterior storm drainage piping. Use transition fitting to join dissimilar piping materials.

D. Connect storm drainage piping to roof drains and storm drainage specialties.

3.07 FIELD QUALITY CONTROL

A. During installation, notify authorities having jurisdiction and owner's representative at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.

1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in.
2. Final Inspection: Arrange for final inspection by authorities having jurisdiction and owner's representative to observe tests specified below and to ensure compliance with requirements.

B. Re-inspection: If authorities having jurisdiction or owner's representative find that piping will not pass test or inspection, make required corrections and arrange for re-inspection.

C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction and owner's representative.

D. Test storm drainage piping according to procedures of authorities having jurisdiction and owner's representative or, in absence of published procedures, as follows:

1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
2. Leave uncovered and unconcealed new, altered, extended, or replaced storm drainage piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
3. Test Procedure: Test storm drainage piping, except outside leaders, on completion of roughing-in. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water. From 15 minutes before inspection starts to completion of inspection, water level must not drop. Inspect joints for leaks.
4. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
5. Prepare reports for tests and required corrective action.

3.08 CLEANING

A. Clean interior of piping. Remove dirt and debris as work progresses.

B. Place plugs in ends of uncompleted piping at end of day and when work stops.

DRAFT

3.09 PROTECTION

A. Protect drains, with permanent caps only, during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.

B. Exposed PVC Piping: Protect plumbing vents exposed to sunlight with two coats of water-based latex paint.

END OF SECTION 221413

DRAFT

SECTION 221423
STORM DRAINAGE PIPING SPECIALTIES

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Provisions of the Contract and of the Contract Documents apply to this Section.

1.02 ABBREVIATIONS

A. AFF: Above Finished Floor

B. AFG: Above Finished Grade

1.03 SUBMITTALS

A. Product Data: Provide manufacturer's literature and data sheets for each product. Include information on fabrication materials, assembly of components, dimensions, ratings, finishes, rough-in requirements, and installed accessories.

B. Shop Drawings:
   1. Provide Wiring Diagrams: Power, signal, and control wiring.

C. Operation and Maintenance Data: To include in emergency, operation, and maintenance manuals.

1.04 QUALITY ASSURANCE ***REFER TO CURRENT MCPS MECH-PLUMB DESIGN CHECKLIST***

A. **Comply with the requirements of the current MCPS Mechanical and Plumbing Design Checklist. Refer to the latest edition for applicable design, coordination, and documentation standards.**

B. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.

1.05 COORDINATION

A. Coordinate size and location of roof penetrations.

B. Coordinate accessories, extensions, collars, flashing clamps, and associated items for field conditions and installation requirements for roof assemblies and other construction assemblies to provide final and proper compliant installation.

PART 2 PRODUCTS

2.01 ROOF DRAINS

A. Manufacturers:
   1. Josam Company
   2. J.R. Smith Mfg. Co.
   3. MiFab
   4. Tyler Pipe
   5. Watts, Inc.
   6. Zurn Plumbing Products Group

B. General-Purpose Roof Drains:

DRAFT

1. Standard: ASME A112.6.4, for general-purpose roof drains.
2. Body Material: Cast iron.
3. Combination Flashing Ring and Gravel Stop: Required.
4. Underdeck Clamp: Required.
5. Sump Receiver Plate: Not required.
6. Dome Material: Aluminum or Cast Iron
7. Extension Collar: As Required.

C. General-Purpose Overflow Roof Drains:
1. Standard: ASME A112.6.4, for general-purpose roof drains.
2. Body Material: Cast iron.
3. Combination Flashing Ring and Gravel Stop: Required.
4. Underdeck Clamp: Required.
5. Sump Receiver Plate: Not required.
6. Dome Material: Aluminum or Cast Iron
7. Extension Collar: As Required.
8. Internal Water Dam: Required.

D. Canopy Drains:
1. Standard: ASME A112.6.4, for canopy roof drains.
2. Body Material: Cast Iron.
3. Combination Flashing Ring and Gravel Stop: Required.
4. Underdeck Clamp: Required.
5. Sump Receiver Plate: Not required.
6. Dome Material: Aluminum, Cast Iron, or Bronze.
7. Extension Collar: As Required.

DRAFT

2.02 MISCELLANEOUS STORM DRAINAGE PIPING SPECIALTIES

A. Manufacturers:
1. Josam Company
2. J.R. Smith Mfg. Co.
3. MiFab
4. Tyler Pipe
5. Watts, Inc.
6. Zurn Plumbing Products Group

B. Downspout Boots:
1. Description: Manufactured, ASTM A 48/A 48M, gray-iron casting or steel, integral cleanout, and strap or anchorage for attaching to building; inlet matching downspout dimensions with galvanic isolator; outlet matching that of downstream pipe size serve based on downspout loading; factory-applied coating.
2. Provide final termination height coordinated with building exterior features and requirements.
3. Size: Inlet size to match downspout, outlet matching downstream pipe connection. 24" minimum extension above finished grade.

C. Storm Drain and Storm Drain Overflow Nozzles:

1. Description: Bronze body with threaded inlet, bugscreen, and bronze wall flange with mounting holes.
2. Size: Same as connected conductor
3. Product is for use where storm drain piping or secondary storm drain piping exits the building above grade and shall be provided where indicated on the drawings.

2.03 BACKWATER VALVES

A. Manufacturers:
   1. Josam Company
   2. J.R. Smith Mfg. Co.
   3. MiFab
   4. Tyler Pipe
   5. Watts, Inc.
   6. Zurn Plumbing Products Group

B. Standard: ASME A112.14.1.

C. Size: Same as connected piping.

D. Cover: Bolted or threaded access to check valve.

E. End Connections: Match connecting pipe.

F. Check Valve: Factory assembled to hang open for airflow unless subject to backflow condition.

G. Extension: ASTM A 74, Service class; full-size, cast-iron, soil-pipe extension to field-installed cleanout at grade; replaces backwater valve cover. Terminate in 4” thick square concrete slab 4” larger all around than cover (provide 1” chamfer on top edges).

2.04 CLEANOUTS

A. Manufacturers:
   1. Josam Company
   2. J.R. Smith Mfg. Co.
   3. MiFab
   4. Tyler Pipe
   5. Watts, Inc.
   6. Zurn Plumbing Products Group

B. Standard: ASME A112.36.2M.

C. Size: Same as connected drainage piping

D. Floor Cleanouts:
   1. Housing: threaded, adjustable.
   2. Type: Threaded, adjustable housing.
   3. Body: Cast iron.
   4. Outlet Connection: Inside calk, Spigot, or Threaded.
   5. Adjustable Housing Material: Cast iron with threads.
   6. Frame and Cover Material and Finish: Satin finish nikaloy.
   7. Frame and Cover Shape: Round or Square (Contractors Option).
   8. Top Loading Classification: Extra Heavy Duty.
   9. Riser: ASTM A 74, Service weight, cast-iron drainage pipe fitting and riser to cleanout.

DRAFT

E. Wall Cleanouts:
   1. Wall access: Yes
   2. Body: Match connected piping.
   3. Closure: Countersunk or raised-head, drilled-and-threaded plug.
   4. Closure Plug Size: Same as cleanout size but not larger than four inches in diameter.
   5. Wall Access: Round, flat, chrome-plated brass, nickel-bronze, copper-alloy, or stainless-steel cover plate with screw.

2.05 THROUGH-PENETRATION FIRESTOP ASSEMBLIES

A. Through-Penetration Firestop Assemblies:
   1. Manufacturers:
      a. 3M Fire Protection Products
      b. Hilti
      c. ProSet Systems Inc.
      d. RectorSeal / Metacaulk
      e. Specified Technologies Inc. (STI)
   2. Standard: UL 1479 assembly of sleeve and stack fitting with firestopping plug.
   3. Size: Same as connected soil, waste, or vent stack.
   4. Sleeve: Length to match slab thickness and with integral nailing flange on one end for installation in cast-in-place concrete slabs.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Maintain continuity of waterproofing membranes. Secure waterproofing membranes to drain clamping collars.

C. Install roof drains where indicated. Create low points in roof areas according to roof membrane manufacturer's written installation instructions. Install flashing ring, collar, or flange to prevent leakage between drain and adjoining roofing. Maintain integrity of waterproof membranes where penetrated.

D. Install downspout boots at grade. Secure to building wall.

E. Install storm drain and storm drain overflow nozzles at exposed bottom of storm drain and storm drain overflow conductors where they spill onto grade.

F. Install cleanouts in aboveground piping and building drain piping according to the International Plumbing Code.

G. Install cleanouts for piping below floors.

H. Install cleanout deck plates with top flush with finished floor.

I. For wall cleanouts located in concealed piping, install cleanout wall access covers with cover tight to finished wall.

J. Install horizontal backwater valves where indicated.

K. Install concrete slabs at backwater valves.

L. Install cleanouts in vertical conductors at 18” AFF.

M. Install access door in wall if required to access cleanout.

DRAFT

N. Install through-penetration firestop assemblies at penetrations of rated assemblies.

3.02 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

3.03 PROTECTION

A. Protect drains, with permanent caps only, during construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.

B. Place plugs in ends of open piping at end of each day or when work stops.

END OF SECTION 221423

DRAFT

SECTION 221429
SUMP PUMPS

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Provisions of the Contract and of the Contract Documents apply to this Section.

1.02 ABBREVIATIONS

A. BAS: Building Automation System

1.03 SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles. Include rated capacities, operating characteristics, electrical characteristics, furnished specialties and accessories. Provide wiring diagrams for power, signal, and control wiring including interface with BAS.

B. Operation and Maintenance Data: For pumps and controls, to include in operation and maintenance manuals.

1. Operation and maintenance data for elevator sump pumps shall state that they shall be tested for proper operation as required by “Field Quality Control” “Checks & Inspections” below each time the elevator inspector inspects the elevator or every 6 months whichever occurs more frequently.

1.04 QUALITY ASSURANCE ***REFER TO CURRENT MCPS MECH-PLUMB DESIGN CHECKLIST***

A. **Comply with the requirements of the current MCPS Mechanical and Plumbing Design Checklist. Refer to the latest edition for applicable design, coordination, and documentation standards.**

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. UL Compliance: Comply with UL 778 for motor-operated water pumps.

D. ANSI Compliance: Comply with ANSI/HI: 1.4 for installation of centrifugal pumps.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Retain shipping flange protective covers and protective coatings during storage.

B. Protect bearings and couplings against damage.

C. Comply with pump manufacturer's written rigging instructions for handling.

PART 2 PRODUCTS

2.01 ELEVATOR SUMP PUMP

A. Submersible Elevator Sump Pumps:

1. Manufacturers:
   a. Ebara International Corporation
   b. Grundfos Pump Corporation
   c. Stancor, Inc.

DRAFT

d. Weil Pump Company, Inc.
e. Zoeller Company

2. Description: Factory-assembled and -tested sump-pump unit.
3. Pump Type: Submersible, end-suction, single-stage, close-coupled, overhung-impeller, centrifugal sump pump as defined in HI 1.1-1.2 and HI 1.3.
4. Pump Casing: Cast iron, with strainer inlet, legs that elevate pump to permit flow into impeller, and vertical discharge for piping connection.
5. Impeller: Cast iron. Must handle up to ½" diameter spherical solid.
6. Shaft: Stainless steel or steel.
7. Seal: Mechanical.
8. Motor: Hermetically sealed, capacitor-start type, with built-in overload protection.
9. Lifting eye or lug: Required
10. Power/sensor cable: Length as required to reach junction box in elevator pit. Neatly rout cables and group together using self-extinguishing black UVB resistant 0.1" wide nylon zip ties.

B. Controls:
1. Oil-sensing pump controller with audible and visual alarm.
2. Oil-sensing alarm linked to building automation system.

C. Hardware:
1. Switch Type: Float switch.
2. Oil Sensor: Required
3. Probe Material: Stainless Steel.
4. Power/sensor cable: 25 feet minimum, 25 foot increments up to 250 feet in length, waterproof. Route in conduit and make connection to control box mounted in elevator equipment room and junction box adjacent to pump.

D. Control Interface With BAS: Auxiliary contacts in pump controls for interface to BAS. Provide alarm status.

DRAFT

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine roughing-in for plumbing piping to verify actual locations of piping connections prior to sump pump installation.

3.02 INSTALLATION

A. Install products with related fittings and accessories according to manufacturer instructions.

B. Pump Installation Standards: Comply with HI 1.4 for installation of sump pumps.

C. Elevator Sump Pumps:
1. Install system in accordance with manufacturer's written instructions.
2. Provide empty conduit between elevator sump and panel under Division 26. Size shall be as required by system manufacturer to pull control cable through conduit.
3. Pipe the sump pump discharge to location indicated.

3.03 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to equipment to allow service and maintenance.

3.04 FIELD QUALITY CONTROL

A. Checks and Inspections:
   1. Perform visual inspection of each sump pump.
   2. Operational Check: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
   3. Check and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
   4. Leak check: During operational test while sump pump is running, check piping, valves and piping accessories for leaks. Repair leaks and recheck until no leaks exist.
   5. Elevator Sump Pump Additional Check:
      a. With pump active place 25 gallons of water into sump and allow pump to run until it is stopped by controls.
      b. Deactivate the pump by using the disconnect switch if installed, or turning off at the control panel.
      c. Add 25 gallons of water to the sump. This will be over and above any water remaining in the sump after the controls stopped the pump.
      d. Start the pump and ensure it stops automatically within thirty (30) seconds. Intent is to indicate the pump assembly pumps a minimum of forty (50) gallons per minute.

3.05 STARTUP SERVICE

A. Engage a factory-authorized service representative to complete installation and startup checks according to manufacturer's written instructions.

3.06 ADJUSTING

A. Adjust pumps to function smoothly, and lubricate as recommended by manufacturer.

B. Adjust control set points.

3.07 DEMONSTRATION

A. Train Owner's maintenance personnel to adjust, operate, and maintain controls and pumps.

END OF SECTION 221429

DRAFT

SECTION 223300
ELECTRIC WATER HEATERS

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Provisions of the Contract and of the Contract Documents apply to this Section.

1.02 ABBREVIATIONS

A. AFF: Above Finished Floor

B. EWH: Electric Water Heater

C. WC: Water Column

1.03 SUBMITTALS

A. Product Data: For each type and size of water heater. Include electrical data, rated capacities, operating weights, furnished specialties, and accessories.

B. Shop Drawings: Detail water heater assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1. Wiring Diagrams: Power, signal, and control wiring. Differentiate between manufacturer-installed and field-installed wiring.

C. Maintenance Data: For water heaters to include in maintenance manuals specified in Div. 1.

D. Warranties: Special warranties specified in this Section.

1.04 QUALITY ASSURANCE ***REFER TO CURRENT MCPS MECH-PLUMB DESIGN CHECKLIST***

A. **Comply with the requirements of the current MCPS Mechanical and Plumbing Design Checklist. Refer to the latest edition for applicable design, coordination, and documentation standards.**

B. Source Limitations: Obtain same type of water heaters through one source from a single manufacturer.

C. Product Options: Drawings indicate size, profiles, and dimensional requirements of water heaters.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. ASME Compliance: Fabricate and label water heater, hot-water storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, "Pressure Vessels," Division 1 unless otherwise indicated.

F. ASHRAE Compliance: Fabricate and label domestic-water heaters to comply with ASHRAE 90.1.

G. NSF Compliance: Fabricate and label equipment components that will be in contact with potable water to comply with NSF 61 Annex G, "Drinking Water System Components - Health Effects."

DRAFT

1.05 WARRANTY

A. General Warranty: Special warranty specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

B. Special Warranty: Written warranty, executed by manufacturer agreeing to repair or replace components of water heaters that fail in materials or workmanship within specified warranty period.

C. Failures include, but are not limited to, the following:
   1. Structural failures including storage tank and supports.
   2. Faulty operation of controls.
   3. Deterioration of metals, metal finishes, and other materials beyond normal use.

D. Warranty Periods: From date of Substantial Completion.
   1. Heating Elements: One year.
   2. Storage Tanks: Three years.
   3. Heat Exchangers: Three Years
   4. Controls: One year.
   5. Compression Tanks: Five years.

PART 2 PRODUCTS

2.01 TANKLESS ELECTRIC WATER HEATERS

A. Manufacturers:
   1. Bosch
   2. Chronomite Laboratories, Inc.
   3. Eemax, Inc.
   4. Hubbell
   5. PVI
   6. Stiebel Eltron

B. Description: Commercial point of use domestic water heater with little or no storage.

C. Standards:
   1. Comply with UL 499 or ETL.
   2. Listed by manufacturer for commercial applications.

D. Storage Tank Construction: N/A.
   1. Working-Pressure Rating: 150 psig.
   2. Pipe Connections: ASME B1.20.1, pipe thread.
   3. Interior Finish: Materials complying with NSF 61, barrier materials for potable-water tank linings.
   4. Jacket: Aluminum or steel, with enameled finish, or plastic.

E. Heating System: Electric-resistance type.
   1. Temperature Control: Adjustable, microprocessor based thermostat.
   2. Safety: Automatic, high-temperature-limit cutoff device or system.

F. Mounting: Bracket or device for wall mounting.

DRAFT

2.02 SMALL-CAPACITY ELECTRIC TANK-TYPE WATER HEATERS

A. Manufacturers:
   1. A.O. Smith
   2. Bradford White
   3. Eemax
   4. Hubbell
   5. Lochinvar
   6. PVI
   7. Rheem
   8. Ruud
   9. State Industries

B. Description: Small storage capacity units (approximately 2.50-50.00 Gallons) with limited heating capacity.

C. Standards:
   1. Comply with UL 174.
   2. ASHRAE 90.1
   3. Listed by manufacturer for commercial applications.

D. Storage Tank Construction: Steel or corrosion-resistant metal with 150-psig working-pressure rating.
   1. Tappings: Factory fabricated of materials compatible with tank for piping connections, relief valve, drain, anode rod, and controls. Attach tappings to tank before testing and labeling.
   2. Interior Finish: Materials and thicknesses complying with NSF 61, barrier materials for potable-water tank linings. Extend finish into and through tank fittings and outlets.
   3. Insulation: Comply with ASHRAE 90.1. Surround entire storage tank except connections and controls.
   4. Jacket: Steel, with enameled finish.

E. Pipe Thread: ASME B1.20.1

F. Heating Element: Electric, replaceable, immersion type.
   1. Temperature Control: Adjustable thermostat.

G. Anode Rod: Factory installed.

H. Drain Valve: ASSE 1005, corrosion-resistant metal, factory installed.

2.03 MEDIUM-CAPACITY ELECTRIC TANK-TYPE WATER HEATERS

A. Manufacturers:
   1. A.O. Smith
   2. Bradford White
   3. Lochinvar
   4. PVI
   5. Rheem
   6. Ruud
   7. State Industries

B. Description: Comply with UL 174 or UL 1453 and listed by manufacturer for commercial applications.

DRAFT

C. Storage Tank Construction: ASME-code steel with 150-psig working-pressure rating.
   1. Tappings: Factory fabricated of materials compatible with tank for piping connections, relief valve, pressure gage, thermometer, drain, anode rod, and controls. Attach tappings to tank before testing and labeling.
   2. Interior Finish: Materials and thicknesses complying with NSF 61, barrier materials for potable-water tank linings. Extend finish into and through tank fittings and outlets.
   3. Insulation: Comply with ASHRAE 90.1. Surround entire storage tank except connections and controls.
   4. Jacket: Steel, with enameled finish.

D. Heating Elements: Electric, replaceable, immersion type.
   1. Temperature Control: Adjustable thermostat with wiring arrangement for simultaneous operation.

E. Pipe Thread: ASME B1.20.1

F. Drain Valve: ASSE 1005, corrosion-resistant metal, factory installed.

G. Anode Rod: Factory installed.

H. Dip Tube: Factory installed.
   1. Not required if cold-water inlet is within 18” of bottom of storage tank.

2.04 LARGE-CAPACITY ELECTRIC TANK-TYPE WATER HEATERS

A. Manufacturers:
   1. A.O. Smith
   2. Bradford White
   3. Lochinvar
   4. PVI
   5. Rheem
   6. Ruud
   7. State Industries

B. Description: Comply with UL 1453 and listed by manufacturer for commercial applications.

C. Storage Tank Construction: ASME-code steel with 150-psig working-pressure rating.
   1. Tappings: Factory fabricated of materials compatible with tank for pipe, relief valve, pressure gage, thermometer, drain, anode rod, and control, connections. Attach tappings to tank shell before testing and labeling.
   2. Pipe Connections:
      a. 2” and Smaller: Threaded according to ASME B1.20.1
      b. 2 ½” and Larger: Flanged according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.
   3. Interior Finish: Materials and thicknesses complying with NSF 61, barrier materials for potable-water tank linings. Extend finish into and through tank fittings and outlets.
   4. Insulation: Comply with ASHRAE 90.1. Surround entire storage tank except connections and controls.
   5. Jacket: Steel, with enameled finish.

D. Heating Elements: Electric, screw-in or bolt-on, immersion type arranged in multiples of three.
   1. Staging: Do not exceed 18 kW per stage (step).
   2. Temperature Control: Adjustable thermostat.

DRAFT

3. Safety Controls: Automatic, high-temperature-limit and low-water cutoff devices or systems.

E. Drain Valve: ASSE 1005, corrosion-resistant metal, factory installed and piped to nearest floor drain.

F. Anode Rods: Factory installed when cement lining is provided.

G. Dip Tube: Factory installed.
1. Not required if cold-water inlet is within 24” of bottom of storage tank.

2.05 ASME COMPRESSION TANKS

A. Manufacturers:
1. Amtrol, Inc.
2. State Industries.
3. Taco, Inc.
4. Wessels Co.
5. Zurn Industries, Inc.

B. Description: ASME-code Steel, pressure-rated tank constructed with welded joints and factory-installed, butyl-rubber diaphragm.

C. Diaphragm: Butyl-rubber FDA approved for use with potable (domestic) water.

D. ASME Rated: Yes.

E. Working Pressure: 150 psig.

F. Tappings: Factory-fabricated steel, welded to tank before testing and labeling.

G. Pipe Thread: ASME B1.20.1

H. Tank Interior Finish: Materials and thicknesses complying with NSF 61, barrier materials for potable-water tank linings. Extend finish into and through tank fittings and outlets.

I. Tank Exterior Finish: Manufacturer's standard, unless indicated otherwise.

J. Air Pre-Charge Valve: Factory installed Schrader type (standard tire valve).

2.06 WATER HEATER ACCESSORIES

A. Combination Temperature and Pressure Relief Valves: ASME rated, ASME stamped, and complying with ASME PTC 25.3.
1. Exception: Omit combination temperature and pressure relief valve for tankless water heater, and furnish pressure relief valve for installation in piping
2. Minimum Relieving Capacity: Equal to heat input.
3. Minimum Pressure Setting: Equal to water heater working pressure rating.
4. Sensing Element: Extends into tank.
5. Temperature Setting: 20°F Higher than water heater set point temp

B. Vacuum Relief Valves: Comply with ASME PTC 25.3. Furnish for installation in piping.
1. Exception: Omit if water heater has integral vacuum-relieving device.

C. Water Heater Mounting Brackets: Steel bracket for wall mounting and capable of supporting water heater and water.

D. Drain Pans: Corrosion-resistant metal with raised edge. Comply with ANSI/CSA LC 3. Include dimensions not less than base of domestic-water heater plus four (4) inches, dimensions not

DRAFT

less than two to four (2-4) inches vertical, and include drain outlet not less than NPS ¾ in diameter with ASME B1.20.1 pipe threads or with ASME B1.20.7 garden-hose threads.

E. Piping-Type Heat Traps: Field-fabricated piping arrangement according to ASHRAE 90.1.

F. Manifold Piping Arrangements: For multiple, grouped, domestic-water heater installations, ensure equalized and balanced distribution to each water heater. Include ball or butterfly shutoff valves and unions to isolate each domestic-water heater. Coordinate with manufacturer's written installation instructions and recommendations.
   1. Acceptable Balancing Arrangements:
      a. Manufacturer provided factory-fabricated manifold kit.
      b. Field-fabricated, mechanically balanced, piping arrangement with calibrated balancing valves.
      c. Field-Fabricated equal-leg piping arrangement.
      d. Reverse-return manifold piping arrangement.

G. Pressure Relief Valves: ASME rated and stamped. Include pressure setting less than domestic-water heater working-pressure rating.

H. Vacuum Relief Valves: ANSI Z21.22/CSA 4.4.

I. Plug and cord:
   1. Where water heaters require 120 volt single phase power, provide a plug and cord, for connection to a standard grounded outlet.
   2. Cord length: As required to reach outlet, 6'-0" maximum.
   3. Plug and cord ampacity shall be approved by the water heater manufacturer.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install water heaters on housekeeping pads unless otherwise indicated.

C. Install water heaters, level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.

D. Install temperature and pressure relief valves in top portion of storage tanks. Extend relief valve outlet with water piping in continuous downward pitch. Discharge in the following order:
   1. Closest floor drain.
   2. Mop sink.
   3. Drain Pan.

E. Install vacuum relief valves in cold-water-inlet piping.

F. Install thermometers on inlet and outlet piping of water heaters. Comply with requirements for thermometers specified in Division 22 Section "Meters and Gages for Plumbing Piping."

G. Install pressure gauges on inlet and outlet piping of water heaters. Comply with requirements for pressure gauges specified in Division 22 Section "Meters and Gages for Plumbing Piping."

H. Provide inlet and outlet piping manifolds for multiple water heaters. Arrange manifolds for balanced water flow through each water heater. Include a union, shutoff valve, pressure gauge and thermometer in each water heater outlet, and a union, and shutoff valve on each water heater inlet. Provide an additional valve with memory stop, and test plug on inlet of valve for throttling in each water heater outlet. Refer to Division 22 Section "General-Duty Valves for

DRAFT

Plumbing Piping." for valves and Division 22 Section "Meters and Gages for Plumbing Piping." for thermometers, pressure gauges, and test plugs.

I. Install piping-type heat traps on inlet and outlet piping of water heater storage tanks.

J. Fill water heaters with water.

K. Charge compression tanks to indicated pressure.

3.02 CONNECTIONS

A. Comply with requirements for piping specified in Division 22 Section "Domestic Water Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to electric, domestic-water heaters, allow space for service and maintenance of water heaters. Arrange piping for easy removal of domestic-water heaters.

3.03 IDENTIFICATION

A. Identify system components. Comply with requirements for identification specified in Division 22 Section "Identification for Plumbing Piping and Equipment."

3.04 FIELD QUALITY CONTROL

A. Engage a factory-authorized service representative to perform startup service.

B. In addition to manufacturer's written installation and startup checks, perform the following:

1. Verify that piping system tests are complete.
2. Check for piping connection leaks.
3. Operate relief valve and confirm proper operation of relief valve, outlets, and drain piping.
4. Check operation of circulating pumps.
5. Energize electric circuits.
6. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
7. Adjust temperature settings to indicated temperature.
8. Balance water flow through manifolds of multiple water heater installations by adjusting the pressure drop across each additional full-sized valve with memory stop to be equal to barely closed full sized valve. Establish hot water flow through fixtures to establish flow necessary to make this adjustment. Circulating pump may be running or off.

3.05 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain water heaters.

1. Train Owner's maintenance personnel on procedures for starting and stopping, troubleshooting, servicing, and maintaining equipment.
2. Review data in maintenance manuals.

END OF SECTION 223300

DRAFT

SECTION 223400
FUEL-FIRED DOMESTIC WATER HEATERS

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Provisions of the Contract and of the Contract Documents apply to this Section.

1.02 ABBREVIATIONS

A. AFF: Above Finished Floor

B. GWH: Gas Water Heater

C. WC: Water Column

1.03 SUBMITTALS

A. Product Data: For each type and size of water heater. Include electrical data, rated capacities, operating weights, furnished specialties, and accessories.

B. Product Certificates: For each type of commercial, gas-fired, domestic-water heater, from manufacturer.

C. Domestic-Water Heater Labeling: Certified and labeled by testing agency acceptable to authorities having jurisdiction.

D. Shop Drawings: Detail water heater assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1. Wiring Diagrams: Power, signal, and control wiring. Differentiate between manufacturer-installed and field-installed wiring.

E. Maintenance Data: For water heaters to include in maintenance manuals specified in Div. 1.

F. Warranties: Special warranties specified in this Section.

1.04 QUALITY ASSURANCE ***REFER TO CURRENT MCPS MECH-PLUMB DESIGN CHECKLIST***

A. **Comply with the requirements of the current MCPS Mechanical and Plumbing Design Checklist. Refer to the latest edition for applicable design, coordination, and documentation standards.**

B. Source Limitations: Obtain same type of water heaters through one source from a single manufacturer.

C. Product Options: Drawings indicate size, profiles, and dimensional requirements of water heaters.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. ASME Compliance:

1. Where ASME-code construction is indicated, fabricate and label commercial, domestic-water heater storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

DRAFT

2. Where ASME-code construction is indicated, fabricate and label commercial, finned-tube, domestic-water heaters to comply with ASME Boiler and Pressure Vessel Code: Section IV.

F. ASHRAE Compliance: Fabricate and label domestic-water heaters to comply with ASHRAE 90.1.

G. NSF Compliance: Fabricate and label equipment components that will be in contact with potable water to comply with NSF 61 Annex G, "Drinking Water System Components - Health Effects."

1.05 WARRANTY

A. General Warranty: Special warranty specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

B. Special Warranty: Written warranty, executed by manufacturer agreeing to repair or replace components of water heaters that fail in materials or workmanship within specified warranty period.

C. Failures include, but are not limited to, the following:
1. Structural failures including storage tank and supports.
2. Faulty operation of controls.
3. Deterioration of metals, metal finishes, and other materials beyond normal use.

D. Warranty Periods: From date of Substantial Completion.
1. Commercial, Gas-Fired, Storage, Domestic-Water Heaters:
a. Storage Tank: Three years.
b. Controls and Other Components: One year.
2. Compression Tanks: Five years.

PART 2 PRODUCTS

2.01 DOMESTIC WATER HEATERS

A. Manufacturers:
1. A.O. Smith
2. Bradford White
3. Lochinvar
4. PVI
5. Rheem
6. Ruud
7. State Industries

B. Neutralization: Provide all condensing, gas-fired, domestic, water heaters with condensate neutralization kits from water heater manufacturer. Coordinate location and drain requirements with drains and equipment indicated on plans.

2.02 COMMERCIAL, GAS-FIRED, STORAGE, DOMESTIC-WATER HEATERS

A. Commercial, Gas-Fired, High-Efficiency, Storage, Domestic-Water Heaters:
1. Standard: ANSI Z21.10.3/CSA 4.3.

DRAFT

2. Description: Manufacturer's proprietary design to provide at least 95 percent combustion efficiency at optimum operating conditions.
3. Storage-Tank Construction: ASME-code steel with 150-psig minimum working-pressure rating.
    a. Tappings: Factory fabricated materials compatible with tank. Attach tappings to tank before testing.
        1) NPS 2 and Smaller: Threaded ends according to ASME B1.20.1.
        2) NPS 2-1/2 and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.
    b. Interior Finish: Comply with NSF 61 Annex G barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
4. Factory-Installed Storage-Tank Appurtenances:
    a. Anode Rod: Replaceable magnesium.
    b. Dip Tube: Required unless cold-water inlet is near bottom of tank.
    c. Drain Valve: Corrosion-resistant metal complying with ASSE 1005.
    d. Insulation: Comply with ASHRAE/IESNA 90.1. Surround entire storage tank except connections and controls.
    e. Jacket: Steel with enameled finish.
    f. Burner or Heat Exchanger: Comply with UL 795 or approved testing agency requirements for gas-fired, high-efficiency, domestic-water heaters and natural-gas fuel.
    g. Temperature Control: Adjustable thermostat.
    h. Safety Controls: Automatic, high-temperature-limit and low-water cutoff devices or systems.
    i. Combination Temperature-and-Pressure Relief Valves: ANSI Z21.22/CSA 4.4-M. Include one or more relief valves with total relieving capacity at least as great as heat input and include pressure setting less than domestic-water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.
5. Draft Hood: Draft diverter, complying with ANSI Z21.12.
6. Capacity and Characteristics: Refer to Plumbing drawings and schedules.
7. Minimum Vent Diameter: Refer to and coordinate with manufacturer’s written installation recommendations and Mechanical drawings and schedules.

DRAFT

2.03 ASME COMPRESSION TANKS

A. Manufacturers:
    1. Amtrol, Inc.
    2. State Industries.
    3. Taco, Inc.
    4. Wessels Co.
    5. Zurn Industries, Inc.

B. Description: ASME-code Steel, pressure-rated tank constructed with welded joints and factory-installed, butyl-rubber diaphragm.

C. Diaphragm: Butyl-rubber FDA approved for use with potable (domestic) water.

D. ASME Rated: Yes.

E. Working Pressure: 150 psig.

F. Tappings: Factory-fabricated steel, welded to tank before testing and labeling.

G. Pipe Thread: ASME B1.20.1

H. Tank Interior Finish: Materials and thicknesses complying with NSF 61, barrier materials for potable-water tank linings. Extend finish into and through tank fittings and outlets.

I. Tank Exterior Finish: Manufacturer's standard, unless indicated otherwise.

J. Air Pre-Charge Valve: Factory installed Schrader type (standard tire valve).

2.04 DOMESTIC-WATER HEATER ACCESSORIES

A. Combination Temperature and Pressure Relief Valves: ASME rated, ASME stamped, and complying with ASME PTC 25.3.
   1. Exception: Omit combination temperature and pressure relief valve for tankless water heater, and furnish pressure relief valve for installation in piping
   2. Minimum Relieving Capacity: Equal to heat input.
   3. Minimum Pressure Setting: Equal to water heater working pressure rating.
   4. Sensing Element: Extends into tank.
   5. Temperature Setting: 20°F Higher than water heater set point temp

B. Vacuum Relief Valves: Comply with ASME PTC 25.3. Furnish for installation in piping.
   1. Exception: Omit if water heater has integral vacuum-relieving device.

C. Water Heater Mounting Brackets: Steel bracket for wall mounting and capable of supporting water heater and water.

D. Drain Pans: Corrosion-resistant metal with raised edge. Comply with ANSI/CSA LC 3. Include dimensions not less than base of domestic-water heater plus four (4) inches, dimensions not less than two to four (2-4) inches vertical and include drain outlet not less than NPS ¾ in diameter with ASME B1.20.1 pipe threads or with ASME B1.20.7 garden-hose threads.

E. Piping-Type Heat Traps: Field-fabricated piping arrangement according to ASHRAE 90.1.

F. Manifold Piping Arrangements: For multiple, grouped, domestic-water heater installations, ensure equalized and balanced distribution to each water heater. Include ball or butterfly shutoff valves and unions to isolate each domestic-water heater. Coordinate with manufacturer’s written installation instructions and recommendations.
   1. Acceptable Balancing Arrangements:
      a. Manufacturer provided factory-fabricated manifold kit.
      b. Field-fabricated, mechanically balanced, piping arrangement with calibrated balancing valves.
      c. Field-Fabricated equal-leg piping arrangement.
      d. Reverse-return manifold piping arrangement.

G. Gas Shutoff Valves: ANSI Z21.15/CSA 9.1-M, manually operated. Furnish for installation in piping.

H. Gas Pressure Regulators: ANSI Z21.18/CSA 6.3, appliance type. Include pressure rating as required to match gas supply.

I. Automatic Gas Valves: ANSI Z21.21/CSA 6.5, appliance, electrically operated, on-off automatic valve.

J. Combination Temperature-and-Pressure Relief Valves: Include relieving capacity at least as great as heat input and include pressure setting less than domestic-water heater working-pressure rating. Select relief valves with sensing element that extends into storage tank.
   1. Gas-Fired, Domestic-Water Heaters: ANSI Z21.22/CSA 4.4-M.

DRAFT

K. Pressure Relief Valves: Include pressure settings less than domestic-water heater working-pressure rating.
   1. Gas-Fired, Domestic-Water Heaters: ANSI Z21.22/CSA 4.4-M.

L. Vacuum Relief Valves: ANSI Z21.22/CSA 4.4-M.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install water heaters on housekeeping pads unless otherwise indicated.

C. Install water heaters, level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.

D. Install temperature and pressure relief valves in top portion of storage tanks. Extend relief valve outlet with water piping in continuous downward pitch. Discharge in the following order:
   1. Closest floor drain.
   2. Mop sink.
   3. Drain Pan.

E. Install vacuum relief valves in cold-water-inlet piping.

F. Commercial, Domestic-Water Heater Mounting: Install commercial domestic-water heaters on concrete base. Comply with requirements for concrete base specified in Section 033000 "Cast-in-Place Concrete."
   1. Exception: Omit concrete bases for commercial domestic-water heaters if installation on stand, bracket, suspended platform, or directly on floor is indicated.
   2. Maintain manufacturer's recommended clearances.
   3. Arrange units so controls and devices that require servicing are accessible.
   4. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
   5. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
   6. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   7. Install anchor bolts to elevations required for proper attachment to supported equipment.
   8. Anchor domestic-water heaters to substrate.

G. Install shutoff valves on domestic-water-supply piping to domestic-water heaters and on domestic-hot-water outlet piping. Comply with requirements for shutoff valves specified in Section "General Duty Valves for Plumbing Piping".

H. Install gas-fired, domestic-water heaters according to NFPA 54.
   1. Install gas shutoff valves on gas supply piping to gas-fired, domestic-water heaters without shutoff valves.
   2. Install gas pressure regulators on gas supplies to gas-fired, domestic-water heaters without gas pressure regulators if gas pressure regulators are required to reduce gas pressure at burner.
   3. Install automatic gas valves on gas supplies to gas-fired, domestic-water heaters if required for operation of safety control.

DRAFT

4. Comply with requirements for gas shutoff valves, gas pressure regulators, and automatic gas valves specified in Section 221113 "Facility Natural-Gas Piping."

I. Install combination temperature-and-pressure relief valves in top portion of storage tanks. Use relief valves with sensing elements that extend into tanks. Extend commercial-water-heater relief-valve outlet, with drain piping full size and same as domestic-water piping material in continuous downward pitch, and discharge by positive air gap onto closest floor drain.

J. Install water-heater drain piping as indirect waste to spill by positive air gap into open drains or over floor drains. Install hose-end drain valves at low points in water piping for domestic-water heaters that do not have tank drains. Comply with requirements for hose-end drain valves specified in Section 221119 "Domestic Water Piping Specialties."

K. Install thermometer on outlet piping of domestic-water heaters. Comply with requirements for thermometers specified in Section 220519 "Meters and Gages for Plumbing Piping."

L. Assemble and install inlet and outlet piping manifold kits for multiple domestic-water heaters. Fabricate, modify, or arrange manifolds for balanced water flow through each domestic-water heater. Include shutoff valve and thermometer in each domestic-water heater inlet and outlet, and throttling valve in each domestic-water heater outlet. Comply with requirements for valves specified in Section 220523 "General Duty Valves for Plumbing Piping," and comply with requirements for thermometers specified in Section 220519 "Meters and Gages for Plumbing Piping."

M. Install piping-type heat traps on inlet and outlet piping of domestic-water heater storage tanks without integral or fitting-type heat traps.

N. Fill domestic-water heaters with water.

O. Charge domestic-water compression tanks with air.

3.02 CONNECTIONS

A. Comply with requirements for domestic-water piping specified in Section 221116 "Domestic Water Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Comply with requirements for gas piping specified in Section 221113 "Facility Natural-Gas Piping."

C. Where installing piping adjacent to fuel-fired, domestic-water heaters, allow space for service and maintenance of water heaters. Arrange piping for easy removal of domestic-water heaters.

3.03 IDENTIFICATION

A. Identify system components. Comply with requirements for identification specified in Section 220553 "Identification for Plumbing Piping and Equipment."

3.04 FIELD QUALITY CONTROL

A. Engage a factory-authorized service representative to perform startup service.

B. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation.

DRAFT

4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Domestic-water heaters will be considered defective if they do not pass tests and inspections. Comply with requirements in Section "Quality Requirements" for retesting and reinspection requirements and Section "Execution" for requirements for correcting the Work.

D. Prepare test and inspection reports.

3.05 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain water heaters.
   1. Train Owner's maintenance personnel on procedures for starting and stopping, troubleshooting, servicing, and maintaining equipment.
   2. Review data in maintenance manuals.

END OF SECTION 223400

DRAFT

SECTION 224000
PLUMBING FIXTURES

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Provisions of the Contract and of the Contract Documents apply to this Section.

1.02 ABBREVIATIONS

A. ABS: Acrylonitrile-Butadiene-Styrene.

B. CPVC: Chlorinated Polyvinyl Chloride.

C. FRP: Fiberglass-Reinforced.

D. PE: Polyethylene.

E. PMMA: Polymethyl Methacrylate (Acrylic).

F. PP: Polypropylene.

G. PVC: Polyvinyl chloride plastic.

H. PVDF: Polyvinylidene Fluoride.

I. SS: Stainless-Steel.

1.03 DEFINITIONS

A. Accessible Fixture: Plumbing fixture that can be approached, entered, and used by people with disabilities.

B. Cast Polymer: Cast-filled-polymer-plastic material. This material includes cultured-marble and solid-surface materials.

C. Cultured Marble: Cast-filled-polymer-plastic material with surface coating.

D. Fitting: Device that controls flow of water into or out of plumbing fixture. Fittings specified in this Section include supplies and stops, faucets and spouts, showerheads and tub spouts, drains and tailpieces, and traps and waste pipes.

E. Solid Surface: Nonporous, homogeneous, cast-polymer-plastic material with heat-, impact-, scratch-, and stain-resistance qualities.

1.04 SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, finishes, and security anchors for security plumbing fixtures.
2. Include rated capacities, operating characteristics, and furnished specialties and accessories.

B. Performance Submittals:

1. Product Data:
   a. Documentation indicating flow and water consumption requirements.

1.05 CLOSEOUT SUBMITTALS

A. Maintenance Data: For security plumbing fixtures and components to include in maintenance manuals.

DRAFT

B. Faucet Cartridges, washers, aerators, and O-Rings: Equal to five percent (5%) of amount of each type and size installed but not less than five (5) of each type and size.

C. Water-Closet Tank, Repair Kits: Equal to ten percent (10%) of quantity of each type installed, or six (6), whichever is less.

D. Flushometer Valve Repair Kits: Equal to ten percent (10%) of quantity of each type installed, or six (6), whichever is less.

E. Provide Minimum number of key operators (wrenches/tools) for loose key stops, wall hydrants, aerators, security fasteners and any fixture where a key, security fastener, or special tool is required:
   1. One (1) for ten percent (10%) of each size or ten (10), whichever is less.

1.06 QUALITY ASSURANCE ***REFER TO CURRENT MCPS MECH-PLUMB DESIGN CHECKLIST***

A. **Comply with the requirements of the current MCPS Mechanical and Plumbing Design Checklist. Refer to the latest edition for applicable design, coordination, and documentation standards.**

B. Source Limitations: Obtain plumbing fixtures, faucets, and other components of each category through one source from a single manufacturer.
   1. Exception: If fixtures, faucets, or other components are not available from a single manufacturer, obtain similar products from other manufacturers specified for that category.

C. Electrical Components, Devices, and Accessories: Electrical components, devices, and accessories shall be listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

D. Regulatory Requirements: Comply with requirements in ICC A117.1, "Accessible and Usable Buildings and Facilities"; Public Law 90-480, "Architectural Barriers Act"; and Public Law 101-336, "Americans with Disabilities Act"; for plumbing fixtures for people with disabilities. Comply with requirements in Public Law 102-486, "Energy Policy Act," regarding water flow and consumption rates for plumbing fixtures.

E. NSF Standard: Comply with NSF 61, "Drinking Water System Components--Health Effects," for fixture materials that will be in contact with potable water.

F. EPA WaterSense: Provide fixtures with WaterSense labeling for all applicable and eligible fixtures and accessories.

G. Select combinations of fixtures and trim, faucets, fittings, and other components that are compatible.

H. Comply with the following standards and other requirements where applicable:
   1. Enameled, Cast-Iron Fixtures: ASME A112.19.1M.
   2. Porcelain-Enameled, Formed-Steel Fixtures: ASME A112.19.4M.
   3. Slip-Resistant Bathing Surfaces: ASTM F 462.
   4. Solid-Surface-Material Lavatories and Sinks: ANSI/ICPA SS-1.
   5. Stainless-Steel Commercial, Handwash Sinks: NSF 2 construction.
   6. Stainless-Steel Residential Sinks: ASME A112.19.3.
   7. Vitreous-China Fixtures: ASME A112.19.2M.
   8. Water-Closet, Flush Valve, Tank Trim: ASME A112.19.5.
   9. Water-Closet, Flushometer Tank Trim: ASSE 1037.
   10. Whirlpool Bathtub Fittings: ASME A112.19.8M.
   11. Backflow Protection Devices for Faucets with Side Spray: ASME A112.18.3M.

DRAFT

12. Backflow Protection Devices for Faucets with Hose-Thread Outlet: ASME A112.18.3M.
13. Diverter Valves for Faucets with Hose Spray: ASSE 1025.
14. Faucets: ASME A112.18.1.
15. Hose-Connection Vacuum Breakers: ASSE 1011.
16. Hose-Coupling Threads: ASME B1.20.7.
17. Integral, Atmospheric Vacuum Breakers: ASSE 1001.
18. NSF Potable-Water Materials: NSF 61.
19. Pipe Threads: ASME B1.20.1.
20. Sensor-Actuated Faucets and Electrical Devices: UL 1951.
21. Supply Fittings: ASME A112.18.1.
22. Brass Waste Fittings: ASME A112.18.2.
23. Backflow Protection Devices for Hand-Held Showers: ASME A112.18.3M.
24. Combination, Pressure-Equalizing and Thermostatic-Control Antiscald Faucets: ASSE 1016.
25. Deck-Mounted Bath/Shower Transfer Valves: ASME 18.7.
26. Faucets: ASME A112.18.1.
27. Hand-Held Showers: ASSE 1014.
28. High-Temperature-Limit Controls for Thermal-Shock-Preventing Devices: ASTM F 445.
29. Hose-Coupling Threads: ASME B1.20.7.
30. Manual-Control Antiscald Faucets: ASTM F 444.
31. Pipe Threads: ASME B1.20.1.
32. Pressure-Equalizing-Control Antiscald Faucets: ASTM F 444 and ASSE 1016.
33. Sensor-Actuated Faucets and Electrical Devices: UL 1951.
34. Thermostatic-Control Antiscald Faucets: ASTM F 444 and ASSE 1016.
35. Atmospheric Vacuum Breakers: ASSE 1001.
36. Brass and Copper Supplies: ASME A112.18.1.
37. Dishwasher Air-Gap Fittings: ASSE 1021.
38. Manual-Operation Flushometers: ASSE 1037.
39. Plastic Tubular Fittings: ASTM F 409.
40. Brass Waste Fittings: ASME A112.18.2.
41. Sensor-Operation Flushometers: ASSE 1037 and UL 1951.
42. Disposers: ASSE 1008 and UL 430.
43. Dishwasher Air-Gap Fittings: ASSE 1021.
44. Flexible Water Connectors: ASME A112.18.6.
45. Floor Drains: ASME A112.6.3.
46. Grab Bars: ASTM F 446.
47. Hose-Coupling Threads: ASME B1.20.7.
48. Hot-Water Dispensers: ASSE 1023 and UL 499.
49. Off-Floor Fixture Supports: ASME A112.6.1M.
50. Pipe Threads: ASME B1.20.1.
51. Plastic Shower Receptors: ANSI Z124.2.
52. Plastic Toilet Seats: ANSI Z124.5.
53. Supply and Drain Protective Shielding Guards: ICC A117.1.
54. Whirlpool Bathtub Equipment: UL 1795.

DRAFT

1.07 COORDINATION

A. Coordinate all accessories. Ensure items fit and work together as an assembly. Provide additional accessories to accommodate final installed field conditions; to include, but not limited to, offsets and other items required for ADA compliance. Provide necessary accessories and components for complete installation.

B. Coordinate roughing-in and final plumbing fixture locations and verify that fixtures can be installed to comply with design.

C. Model numbers are intended to identify families of fixtures and may be incomplete. Refer to other contract documents for hand.

D. Where fixtures or associated components are installed in rated floors, walls, or ceilings; provide rated fixtures, accessories, and components of equal rating.

E. Where the flush valve assembly height would conflict with the rear grab bar installation (including the minimum 1-1/2" clearance to the bottom of the grab bar), the vacuum breaker flush tube shall be shortened. Shortening of the vacuum breaker flush tube shall not exceed the manufacturer's requirements for maintaining proper operation, including the CL (critical line) markings on the flush tube if provided by the manufacturer to indicate shortening limitations.

F. Coordinate final fixture mounting heights and configurations with Owner and Architect requirements and ensure all applicable codes and standards are maintained.

PART 2 PRODUCTS

2.01 (EWC-1) SINGLE-LEVEL WATER COOLER (ACCESSIBLE)

A. Fixture: Oasis PG8AC
   1. Self-contained wall hung electric refrigerated water cooler.
   2. Push bar activation on frotn, left, & right of unit.
   3. Built-in flow regulator.
   4. Connect to water supply using yellow brass fitting.
   5. Polyester elastomer flexible bubbler.
   6. Provide non-metallic strainer.
   7. Provide quick-connect fittings.
   8. Do NOT provide or install fountain with filters.
   9. Material: Stainless steel.
   10. Color: Stainless steel.
   11. Electrical: 115V, 1 PH, 60 HZ, 4.0 Full load amps, 370 Watts.
   12. Mounting Height:
      a. 34" rim for Adult height installations.
      b. 28" rim for Child height installations.

B. Supply:
   1. ½" IPS x 3/8" OD
   2. Compression-type, tamper-proof, loose-key stops.
   3. ½" x 3" chrome plated brass nipple.
   4. Heavy brass chrome plated wall flange with set-screw.
   5. Provide yellow brass connection.

C. Provide 1½" diameter plastic tailpiece extension. Electrically isolate cooler from drainage and vent system.

DRAFT

D. Trap:
   1. Size: 1-1/2” x 1-1/2”
   2. Material: Polished chrome plated cast brass.
   3. Cleanout plug: Yes
   4. Nuts: Polished chrome plated brass.
   5. Wall bend: 17-gauge seamless tubular chrome plated brass.
   6. Wall flange: Chrome plated brass with setscrew. Where drainpipe connection protrudes from wall contractor may provide deep flange.

E. Manufacturers:
   1. Drinking Fountain:
      a. Elkay
      b. Halsey Taylor
      c. Oasis
   2. Trap:
      a. Kohler
      b. Cambridge Brass

2.02 (EWC-2) BI-LEVEL WATER COOLER (ACCESSIBLE)

A. Fixture: Oasis PG8ACSL
   1. Self-contained wall hung electric refrigerated water cooler.
   2. Push bar activation on frotn, left, & right of unit.
   3. Built-in flow regulator.
   4. Connect to water supply using yellow brass fitting.
   5. Polyester elastomer flexible bubbler.
   6. Provide non-metallic strainer.
   7. Provide quick-connect fittings.
   8. Provide cane apron on upper fountain.
   9. Do NOT provide or install fountain with filters.
   10. Material: Stainless steel.
   11. Color: Stainless steel.
   12. Electrical: 115V, 1 PH, 60 HZ, 4.0 Full load amps, 370 Watts.
   13. Mounting Height:
      a. 34" rim for Adult nstallations.
      b. 28" rim for Child height installations.

B. Supply:
   1. ½” IPS x 3/8” OD
   2. Compression-type, tamper-proof, loose-key stops.
   3. ½” x 3” chrome plated brass nipple.
   4. Heavy brass chrome plated wall flange with set-screw.
   5. Provide yellow brass connection.

C. Provide 1½” diameter plastic tailpiece extension. Electrically isolate cooler from drainage and vent system.

D. Trap:
   1. Size: 1-1/2” x 1-1/2”

DRAFT

2. Material: Polished chrome plated cast brass.
3. Cleanout plug: Yes
4. Nuts: Polished chrome plated brass.
5. Wall bend: 17-gauge seamless tubular chrome plated brass.
6. Wall flange: Chrome plated brass with setscrew. Where drainpipe connection protrudes from wall contractor may provide deep flange.

E. Manufacturers:
1. Drinking Fountain:
a. Elkay
b. Halsey Taylor
c. Oasis
2. Trap:
a. Kohler
b. Cambridge Brass

2.03 (EWC-3) BI-LEVEL WATER COOLER (ACCESSIBLE) WITH BOTTLE FILLING STATION

A. Fixture: Oasis PG8FEBFSL
1. Self-contained wall hung electric refrigerated water cooler.
2. Push bar activation on front, left, & right of unit.
3. Built-in flow regulator.
4. Connect to water supply using yellow brass fitting.
5. Polyester elastomer flexible bubbler.
6. Provide non-metallic strainer.
7. Provide quick-connect fittings.
8. Provide cane apron on upper fountain.
9. Provide bottle filling station.
10. Do NOT provide or install fountain with filters.
11. Material: Stainless steel.
12. Color: Stainless steel.
13. Electrical: 115V, 1 PH, 60 HZ, 4.0 Full load amps, 370 Watts.
14. Mounting Height:
a. 34" rim for Adult height installations.
b. 28" rim for Child height installations.

B. Supply:
1. ½” IPS x 3/8” OD
2. Compression-type, tamper-proof, loose-key stops.
3. ½” x 3” chrome plated brass nipple.
4. Heavy brass chrome plated wall flange with set-screw.
5. Provide yellow brass connection.

C. Provide 1½” diameter plastic tailpiece extension. Electrically isolate cooler from drainage and vent system.

D. Trap:
1. Size: 1-1/2” x 1-1/2”
2. Material: Polished chrome plated cast brass.

DRAFT

3. Cleanout plug: Yes
4. Nuts: Polished chrome plated brass.
5. Wall bend: 17-gauge seamless tubular chrome plated brass.
6. Wall flange: Chrome plated brass with setscrew. Where drainpipe connection protrudes from wall contractor may provide deep flange.

E. Manufacturers:
1. Drinking Fountain:
a. Elkay
b. Halsey Taylor
c. Oasis
2. Trap:
a. Kohler
b. Cambridge Brass

2.04 (HB-1) HOSE BIBB

A. Fixture: Zurn Z1341XL
1. Vacuum Breaker: Yes (separate).
2. Outlet: ASME B1.20.7, garden-hose threads.
3. ¾" Inlet.
4. Ball valve ¼ turn or compression.
5. Brass Construction.
6. Aluminum, brass, stainless steel, or steel handle.

B. Manufacturers:
1. Apollo
2. Arrowhead Brass
3. Chicago
4. T&S Brass
5. Zurn

2.05 (LA-1) LAVATORY WALL-HUNG CARRIER-MOUNTED WITH METERING FAUCET (ADULT STANDARD)

A. Fixture: Kohler Kingston K-2006
1. Material: Vitreous China
2. Color: White
3. Mounting Height:
a. 31" rim for Adult standard height installations.
b. 34" rim for Adult ADA height installations.
c. 31" rim for Child (6-12) ADA height installations.
d. 24" rim for Child (Pre-K, 5 and under) height installations.

B. Metering Faucet: Chicago 404-V765E39ABCP
1. 5" Spout with angled throw.
2. 0.35 GPM maximum flow.
3. Chrome plated.
4. All brass body.

DRAFT

5. Renewable seat and washers.
6. ADA-compliant metering handles.
7. ASSE-1070 Thermostatic Mixing Valve: Watts-Powers LFG480

C. Grid Strainer & Tail Piece:
1. Material: Forged brass, chrome plated.
2. Tailpiece: 1-1/2” x 4” 20-gauge seamless brass, chrome plated.
3. Nuts: Cast brass lock, slip, and coupling, chrome plated.

D. Trap:
1. 1-1/4” x 1-1/2” cast brass polished chrome trap with cleanout plug and brass slip nuts.
2. 17-gauge seamless tubular chrome plated brass wall bend.
3. Forged brass chrome plated wall flange with setscrew.

E. Supplies:
1. ½” IPS x 3/8” OD
2.
3. ½” x 3” chrome plated brass nipple.
4. Heavy brass chrome plated wall flange with set-screw.
5. Contractor shall coordinate supply connection to faucet.

F. Insulation:
1. Color: White
2. Insulate P-trap, hot and cold angle valves, hot and cold risers.

G. Carrier:
1. Floor mounted with rectangular uprights.

H. Manufacturers:
1. Fixture:
   a. American Standard

2.17 (SK-3) SINK - SINGLE BOWL WITH SOLIDS INTERCEPTOR (ACCESSIBLE) MUSIC/ART

A. Fixture: Elkay LRAD221955
   1. Overall Length (left to right): 22"
   2. Overall Width (front to back): 19-1/2"
   3. Inside Bowl Depth: 5-1/2"
   4. Material: 18-Gauge Stainless Steel.
   5. Number of Bowls: 1
   6. Drain Location: Off-Center, Rear.
   7. Mounting: Counter-mounted, self-rimming, inside hole ratchet mounting system.
   8. Deck Hole Drilling Configuration:
      a. 3 Holes, 4" apart, centered.

B. Faucet: Chicago 201-RSGN2AE35VAB
   1. Hole Configuration: 3 Hole installation, 8" centers.
   2. Spout: 5-1/4" Gooseneck limited/restricted swing spout.
   3. Handles: Levers
   4. Aerator: Vandal-resistant, pressure compensating, 0.50 gpm.
   5. Cartridges: Ceramic or compression 1/4 turn.
   6. Meets ADA Requirements: Yes.
   7. Red and Blue Temperature Indicators: Red = Hot, Blue = Cold
   8. ASSE-1070 Thermostatic Mixing Valve: Watts-Powers LFG480

C. Trap-Type Solids Interceptor: Zurn ZA-1180-SS

DRAFT

1. Acid resistant coated interior and exterior.
2. Top access cover with gasket.
3. Trap-type interceptor.
4. 1-1/2” threaded inlet, 1-1/2” threaded side outlet.
5. Removable sediment bucket with stainless-steel screen.
6. Provide offset unit where required to maintain ADA clearance requirements.

D. Basket Strainer & Tail Piece:
1. Material: Forged brass, chrome plated.
2. Tailpiece: 1-1/2” x 4” 20-gauge seamless brass, chrome plated.
3. Nuts: Cast brass lock, slip, and coupling, chrome plated.

E. Supplies:
1. ½” IPS x 3/8” OD
2. Compression-type, tamper-proof, loose-key stops.
3. Nipple: ½” x 3” chrome plated brass.
4. Wall flange: Heavy brass chrome plated with set-screw.

F. Insulation:
1. Insulate P-trap, hot and cold angle valves, hot and cold risers.

A. Fixture: Elkay

B. Faucet: Chicago

2.20 (SK-SC) SCIENCE SINK

A. Fixture:
   1. Fixture by Division 12, provide rough-in and accessories as necessary and provide complete installation.

B. Faucet:
   1. Faucet by Division 12, provide rough-in and accessories as necessary and provide complete installation.

C. Tail Piece: Provide piping and system from sink outlet to trap-type acid neutralizer with suitable acid-resistant material. Confirm acceptance with owner prior to final approval.
   1. Material: PP, PE, PVDF, or CPVC Chem
   2. Tailpiece: 1-1/2” x 4”.
   3. Provide offset as required for ADA installation to ensure approach path is maintained.

D. Acid Neutralization Trap (Acid Neutralizer): Striem Lab Rat LB-2-ADA
   1. Top Access.
   2. Fixture trap type.
   3. 1-1/2” threaded inlet, 1-1/2” threaded side outlet.
   4. Polyethylene body.
   5. Cover with gasket.
   6. Limestone media.
   7. Integral trap.

E. Supplies:

2.21 (UR-1) URINAL WITH MANUAL FLUSH VALVE (ADULT STANDARD)

A. Fixture: Kohler Bardon K-4991-ET (0.125 GPF)
1. Material: Vitreous China
2. Color: White
3. Consumption: Suitable and matching flush rate of valve provided.
4. Mounting Height:
a. 24" rim for Adult standard height installations.
b. 16" rim for Adult ADA height installations.
c. 15" rim for Child (K-5th Grade, 6-10) ADA height installations.
d. 12" rim for Child (Pre-K, 5 and under) height installations.

B. Flush Valve: Sloan Royal 186-0.125 (0.125 GPF)
1. Supply Rough-in Elevation: 11-1/2" above spud connection
2. Accessible handle located on wide side of approach.
3. Sweat Solder Adapter and Cast Wall Flange with Set Screw.
4. Vandal Resistant Stop Cap with Set Screw.

C. Carrier: Josam Series 17560-UR.
1. Provide components for thicker walls when required.
2. Provide valve plate for attaching to upright.
3. Provide sleeved pass through where side-by-side configuration or similar is required to allow piping to pass horizontally at carrier support.

2.25 (WB-1) WASHER BOX CONNECTION

A. Fixture: GuyGray SSWB-1
1. General: Recessed-mounting, reversible, metal washing machine outlet box with ½” IPS or copper sweat supply fittings complying with ASME A112.18.1M. Include box with faceplate, services indicated for equipment connections, and reinforcement.
2. ¼” turn ball valves.
3. Long shank adapters.
4. 2” drain.
5. Integral or field-installed water hammer arrestors.

B. Manufacturers:
1. Acorn

2. Bradley
3. Guy Gray
4. Oatey

2.26 (WC-1) FLOOR-MOUNTED WATER CLOSET WITH MANUAL DUAL-FLUSH VALVE (ADULT STANDARD)

A. Fixture: Kohler Wellcomme Ultra K-96053 (Dual-Flush 1.10/1.60 GPF)
   1. Material: Vitreous China
   2. Color: White
   3. Consumption: Suitable and matching flush rate of valve provided.
   4. Mounting Height:
      a. 15” rim for Adult standard height installations.
      b. 16” rim for Adult ADA height installations.
      c. 15” rim for Child (K-5th Grade, 6-10) ADA height installations.
      d. 10.50” rim for Child (Pre-K, 5 and under) height installations.

B. Flush Valve: Sloan WES-111-1.6/1.1-CP (Dual-Flush 1.10/1.60 GPF)
   1. Supply Rough-in Elevation: 11-1/2” above spud connection
   2. Accessible handle located on wide side of approach.
   3. Sweat Solder Adapter and Cast Wall Flange with Set Screw.

C. Seat: Church-Bemis 295SSCT
   1. Color: White
   2. Elongated, open-front, extra heavy weight seat with stainless-steel, self-sustaining, check hinge.

D. Manufacturers:

2.30 (WH-1) WALL HYDRANT FREEZE-RESISTANT

A. Fixture: Zurn Z1320XL-EZ
1. General: Non-freeze wall hydrant with recessed, flush-mounted, wall box, hinged latching cover, control key, and integral vacuum breaker/backflow preventer. Pressure rating shall be 125 psig. Comply with ASME A112.21.3M, ASSE 1011, and ASSE 1019. Provide self-draining integral non-removable hose-connection, and wall clamp.
2. Inlet: 3/4” threaded or solder joint.
3. Outlet: ASME B1.20.7, garden-hose threads.
4. Operating Keys: One with each hydrant.

B. Manufacturers:
1. J.R. Smith
2. Josam
3. Woodford
4. Zurn

2.31 (WSB-1) WATER SUPPLY OUTLET BOX

A. Fixture: GuyGray MIB1AB
1. General: Recessed-mounting, powder-coated, 20-gauge steel, water outlet box and faceplate with supply fittings complying with ASME A112.18.1M. Include box with faceplate, services indicated for equipment connections, and reinforcement.
2. Inlet: (DN 20 or DN 25) 1/2” threaded or solder joint x 3/8” OD.
3. 1/4” turn, lead-free, ball valves.

B. Manufacturers:
1. Acorn
2. Bradley
3. Guy Gray
4. Oatey

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine roughing-in for water soil and for waste piping systems and supports to verify actual locations and sizes of piping connections and that locations and types of supports match those

DRAFT

indicated, before plumbing fixture installation. Manufacturer's roughing-in data overrides all other indicated data.

B. Examine walls, floors, and cabinets for suitable conditions where fixtures are to be installed.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 FIXTURE INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install components level and plumb.

C. Secure fixtures in place.

D. Install rigid or flexible supplies to fixtures. Provide supply stops, reducers, and escutcheons.

E. For wall-hanging fixtures, install off-floor supports affixed to building substrate.

F. Install back-outlet, wall hanging fixtures onto waste fitting seals and attach to supports.

G. Install floor-mounting fixtures on closet flanges or other attachments to piping or building substrate.

H. Install wall-hanging fixtures with tubular waste piping attached to supports.

I. Install floor-mounting, back-outlet water closets attached to building floor substrate and wall bracket and onto waste fitting seals.

J. Install counter-mounted fixtures in and attached to casework.

K. Install fixtures level and plumb according to manufacturers' written instructions and roughing-in drawings.

L. Install water-supply piping with stop on each supply to each fixture to be connected to water distribution piping. Attach supplies to supports or substrate within pipe spaces behind fixtures. Install stops in locations where they can be easily reached for operation.

1. Exception: Use ball valve if stops are not specified with fixture. Refer to Section "Valves".

M. Install trap and waste piping on drain outlet of each fixture to be directly connected to sanitary drainage system.

N. Install waste piping on drain outlet of each fixture to be indirectly connected to drainage system.

O. Core-drill all toilet penetrations and seal appropriately according to all specifications and owner requirements.

P. Install flushometer valves for accessible water closets and urinals with handle mounted on wide side of compartment. Install other actuators in locations that are easy for people with disabilities to reach.

Q. Install tanks for accessible, tank-type water closets with lever handle mounted on wide side of compartment.

R. Install toilet seats on water closets.

S. Install faucet-spout fittings with specified flow rates and patterns in faucet spouts if faucets are not available with required rates and patterns. Include adapters if required.

T. Install water supply, flow-control fittings with specified flow rates in fixture supplies at stop valves.

U. Install faucet, flow-control fittings with specified flow rates and patterns in faucet spouts if faucets are not available with required rates and patterns. Include adapters if required.

V. Install shower, flow-control fittings with specified maximum flow rates in shower arms.

DRAFT

W. Install traps on fixture outlets.
   1. Exception: Omit trap on fixtures with integral traps.
   2. Exception: Omit trap on indirect wastes, unless otherwise indicated.

X. Install disposer in outlet of sinks indicated to have disposer. Install switch where indicated or in wall adjacent to sink if location is not indicated.

Y. Install hot-water dispensers in back top surface of sink or in counter with spout over sink.

Z. Install escutcheons at piping wall-ceiling penetrations in exposed, finished locations and within cabinets and millwork. Use deep-pattern escutcheons if required to conceal protruding fittings. Refer to Division 22 Section “Common Work Results for Plumbing" for escutcheons.

AA. Set shower receptors and service basins in leveling bed of cement grout. Refer to Division 22 Section “Common Work Results for Plumbing" for grout.

BB. Refer to Section "Joint Sealants" for sealant and installation requirements.

CC. Provide connection to automatic lavatories & flush valves as required via low-voltage transformer(s). Mount transformer(s) above accessible ceiling. Connect to local 120V receptacle circuit with disconnect switch adjacent to transformer. All circuitry (including low voltage) shall be run concealed & in conduit. Coordinate connection requirements.

DD. Shutoff valves shall be provided and located on each floor, on takeoffs from all vertical risers, branch lines from the mains, and at the branch connections to each fixture.

3.03 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect water supplies from water distribution piping to fixtures.

C. Connect drain piping from fixtures to drainage piping.

D. Supply and Waste Connections to Plumbing Fixtures: Connect fixtures with water supplies, stops, risers, traps, and waste piping. Use sizes required to match fixtures. Connect to plumbing piping.

E. Supply and Waste Connections to Fixtures and Equipment Specified in Other Sections: Connect fixtures and equipment with water supplies, stops, risers, traps, and waste piping. Use size fittings required to match fixtures and equipment. Connect to plumbing piping.

F. Ground equipment: Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.04 FIELD QUALITY CONTROL

A. Verify that installed fixtures are categories and types specified for locations where installed.

B. Check that fixtures are complete with trim, faucets, fittings, and other specified components.

C. Inspect installed fixtures for damage. Replace damaged fixtures and components.

D. Test installed fixtures after water systems are pressurized for proper operation. Replace malfunctioning fixtures and components, then retest. Repeat procedure until units operate properly.

E. Install fresh batteries in sensor-operated mechanisms.

3.05 ADJUSTING

A. Replace washers and seals or cartridges of leaking and dripping faucets, stops, and valves.

DRAFT

3.06 CLEANING

A. Clean fixtures, faucets, and other fittings with manufacturers' recommended cleaning methods and materials. Do the following:
   1. Remove faucet spouts and strainers, remove sediment and debris, and reinstall strainers and spouts.
   2. Remove sediment and debris from drains.

3.07 PROTECTION

A. Provide protective covering for installed fixtures and fittings.

B. Do not allow use of fixtures for temporary facilities unless approved in writing by Owner.

END OF SECTION 224000

DRAFT

SECTION 230130.51
HVAC AIR-DISTRIBUTION SYSTEM CLEANING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Cleaning of HVAC duct system, equipment, and related components.

B. Testing and inspection agency employed by **<<Owner>>**.

1.02 RELATED REQUIREMENTS

A. Section **<< 014000 - Quality Requirements>>**: Additional requirements for testing and inspection agencies.

B. Section **<< 015719 - Temporary Environmental Controls>>**.

C. Section **<< 019113 - General Commissioning Requirements>>**: Commissioning requirements that apply to all types of work.

D. Section **<< 230800 - Commissioning of HVAC>>**.

1.03 DEFINITIONS

A. HVAC System: For purposes of this section, the surfaces to be cleaned include all interior surfaces of the heating, air-conditioning and ventilation system from the points where the air enters the system to the points where the air is discharged from the system, including the inside of air distribution equipment, coils, and condensate drain pans; see **<<NADCA ACR>>** for more details.

1. Above-ceiling plenum for supply air **<< is not required; is required; or _____>>** to be cleaned.
2. Above-ceiling plenum for return air **<< is not required; is required; or _____>>** to be cleaned.
3. Makeup air system **<< is not required; is required; or _____>>** to be cleaned.
4. Exhaust-only system **<< is not required; is required; or _____>>** to be cleaned.

1.04 REFERENCE STANDARDS

A. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

B. NADCA ACR - The NADCA Standard for Assessment, Cleaning, and Restoration of HVAC System.

C. UL 181 - Standard for Factory-Made Air Ducts and Air Connectors.

D. UL 181A - Closure Systems for Use with Rigid Air Ducts.

1.05 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>**, for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used.

C. Qualifications Statement: Submit qualifications of proposed cleaning contractor for approval.

D. Qualifications Statement: Submit qualifications of proposed testing and inspection agency for approval.

E. Project Cleanliness Evaluation and Cleaning Plan, as specified.

DRAFT

F. Material Safety Data Sheets (MSDS): For all chemical products proposed to be used in the cleaning process; submit directly to **<<Owner>>**.

G. Project Closeout Report: Include field quality control reports, evidence of satisfactory cleaning, and documentation of items needing further repair.

1.06 QUALITY ASSURANCE

A. Information Available to **<<Contractor>>**: Upon request, **<<Owner>>** will provide the following:
   1. One copy of **<< original construction; project record; facility manager's updated; or _____>>** drawings of HVAC system.
   2. One copy of **<< original construction; project record; facility manager's updated; or _____>>** specifications of HVAC system.
   3. **Hazardous material report performed by separate contractor.**

B. Cleaning Contractor Qualifications: Company specializing in the cleaning and restoration of HVAC systems as specified in this section.
   1. Certified by one of the following:
      a. NADCA, National Air Duct Cleaners Association: www.nadca.com.
      b. Nationally recognized certification program and organization dedicated to the cleaning of HVAC systems.
   2. Having minimum of **<< three; or _____>>** years documented experience.
   3. Employing for this project a supervisor certified by same organization that certified the cleaning contractor.

C. Testing and Inspection Agency Qualifications: Experienced in inspection and testing using methods defined in **<<NADCA ACR>>**.

PART 2 PRODUCTS<< - NOT USED; - _____; OR NONE - N/A>>

2.01 TOOLS AND EQUIPMENT

A. Vacuum Devices and Other Tools: Exceptionally clean, in good working order, and sealed when brought into the facility.

B. Vacuum Devices That Exhaust Air Inside Building, Including Hand-Held and Wet Vacuums: Equipped with HEPA filtration with 99.97 percent collection efficiency for minimum 0.3-micron size particles and DOP test number.

C. Vacuum Devices That Exhaust Air Outside Building, Including Truck- and Trailer-Mounted Types: Equipped with particulate collection including adequate filtration to contain debris removed from the HVAC system; exhausted in manner that prevents contaminant re-entry to building; compliant with applicable regulations as to outdoor environmental contamination.

2.02 REPLACEMENT PRODUCTS

A. Fibrous Glass Insulation: Provide material complying with **<<UL 181>>** equivalent to existing material in quality and thickness.

2.03 SURFACE TREATMENTS

A. Anti-Microbial Materials: EPA registered specifically for use on non-porous HVAC system surfaces and applied per manufacturer's instructions.

DRAFT

B. Surface Coating for Fibrous Glass Materials: Water-based, zero VOC; flame spread index less that 25, smoke developed index less than 450, Class A, when tested in accordance with **<<ASTM E84>>**.

PART 3 EXECUTION

3.01 PROJECT CONDITIONS

A. Comply with applicable federal, state, and local requirements.

B. Perform cleaning, inspection, and remediation in accordance with the recommendations of NADCA "Assessment, Cleaning and Restoration of HVAC Systems" (ACR) and as specified herein.

C. Where **<<NADCA ACR>>** uses the terms "recommended", "highly recommended", or "ideally" in regard to a certain procedure or activity, do that unless it is clearly inapplicable to the project.

D. Take precautions to prevent introduction of additional hazards into occupied spaces.

E. Comply with requirements of Section **<< 015719>>**.

F. Obtain **<<Owner>>**'s approval of proposed temporary locations for large equipment.

G. Designate a decontamination area and obtain **<<Owner>>**'s approval.

H. When portions of the facility are to remain occupied or in operation during cleaning activities, provide adequate controls or containment to prevent access to spaces being cleaned by unauthorized persons and provide detailed instructions to **<<Owner>>** as to these controls or containment.

I. If unforeseen mold or other biological contamination is encountered, notify **<<Architect>>** immediately, identifying areas affected and extent and type of contamination.

3.02 EXAMINATION

A. Prior to the commencement of any cleaning work, prepare and submit to **<<Architect>>** a project evaluation and plan for this project, including considerations recommended in **<<NADCA ACR>>**.

B. Coordinate cleaning plan with indoor air quality control plan specified in Section **<< 015719>>**.

C. Inspect the system as required to determine appropriate methods, tools, equipment, and protection.

D. Start of cleaning work constitutes acceptance of existing conditions.

E. When concealed spaces are later made accessible, examine and document interior conditions prior to beginning cleaning.

F. Document all instances of mold growth, rodent droppings, other biological hazards, and damaged system components.

3.03 PREPARATION

A. When cleaning work might adversely affect life safety systems, including fire and smoke detection, alarm, and control, coordinate scheduling and testing and inspection procedures with authorities having jurisdiction.

B. Ensure that electrical components that might be adversely affected by cleaning are de-energized, locked out, and protected prior to beginning work.

C. Air-Volume Control Devices: Mark the original position of dampers and other air-directional mechanical devices inside the HVAC system prior to starting cleaning.

DRAFT

D. Access to Concealed Spaces: Use existing service openings and make additional service openings as required to accomplish cleaning and inspection.
   1. Do not cut openings in non-HVAC components without obtaining the prior approval of **<<Owner>>**.
   2. Make new openings in HVAC components in accordance with NADCA Standard 05; do not compromise the structural integrity of the system.
   3. Do not cut service openings into flexible duct; disconnect at ends for cleaning and inspection.

E. Ceiling Tile: Lay-in ceiling tile may be removed to gain access to HVAC systems during the cleaning process; protect tile from damage and reinstall upon completion; replace damaged tile.

3.04 CLEANING

A. Use any cleaning method recommended by **<<NADCA ACR>>** unless otherwise specified; do not use methods prohibited by **<<NADCA ACR>>**, or that will damage HVAC components or other work, or that will significantly alter the integrity of the system.

B. Obtain **<<Owner>>**'s approval before using wet cleaning methods; ensure that drainage is adequate before beginning.

C. Ducts: Mechanically clean all portions of ducts.

D. Hoses, Cables, and Extension Rods: Clean using suitable sanitary damp wipes at the time they are being removed or withdrawn from their normal position.

E. Registers, Diffusers, and Grilles: When removing, take care to prevent containment exposure due to accumulated debris.

F. Coils: Follow **<<NADCA ACR>>** completely including measuring static pressure drop before and after cleaning; do not remove refrigeration coils from system to clean; report coils that are permanently impacted.

G. Fibrous Glass Material: Use HEPA vacuuming equipment, under constant negative pressure, do not permit to get wet, and do not damage surfaces; replace material damaged by cleaning operations.

H. Existing Damaged Fibrous Glass Material: Report to **<<Architect>>** all evidence of damage, deterioration, delaminating, friable material, mold or fungus growth, or moisture that cannot be remedied by cleaning or resurfacing with an acceptable insulation repair coating.
   1. Material with active fungal growth is considered unremediable.
   2. Remove unremediable material and clean underlying surfaces.

I. Collect debris removed during cleaning; ensure that debris is not dispersed outside the HVAC system during the cleaning process.

J. Store contaminated tools and equipment in polyethylene bags until cleaned in the designated decontamination area.

3.05 REPAIR

A. Repair openings cut in the ventilation system so that they do not significantly alter the airflow or adversely impact the facility's indoor air quality.

B. At insulated ducts and components, accomplish repairs in such a manner as to achieve the equivalent thermal value.

C. Reseal new openings in accordance with NADCA Standard 05.

D. Reseal rigid fiber glass duct systems using closure techniques that comply with **<<UL 181>>** or **<<UL 181A>>**.

DRAFT

E. When new openings are intended to be capable of being re-opened in the future, clearly mark them and report their locations to **<<Owner>>** in project report documents.

3.06 FIELD QUALITY CONTROL

A. Ensure that the following field quality control activities are completed prior to application of any treatments or coatings and prior to returning HVAC system to normal operation.

B. Visually inspect all portions of the cleaned components; if not visibly clean as defined in **<<NADCA ACR>>**, re-clean and reinspect.

C. Coils: Cleaning must restore the coil pressure drop to within 10 percent of the coil's original installed pressure drop; if original pressure drop is not known, coil will be considered clean if free of foreign matter and chemical residue based on visual inspection.

D. Notify **<<Architect>>** when cleaned components are ready for inspection.

E. Notify **<<Owner>>**'s testing and inspection agency when cleaned components are ready for inspection.

F. **<<Owner>>** reserves the right to verify cleanliness using **<<NADCA ACR>>** Surface Comparison Testing or NADCA Vacuum Test.

G. When directed, re-clean components until they pass.

H. **<<Contractor>>** shall bear the costs of retesting due to inadequate cleaning.

I. Submit evidence that all portions of the system required to be cleaned have been cleaned satisfactorily.

3.07 ANTI-MICROBIAL TREATMENT

A. When directed, apply anti-microbial treatment to internal surfaces.

B. Apply anti-microbial agent after removal of surface deposits and debris.

C. Apply anti-microbial treatments and coatings in strict accordance with the manufacturer's written recommendations and EPA registration listing.

D. Spray coatings directly onto interior ductwork surfaces; do not "fog" into air stream.

3.08 ADJUSTING

A. After satisfactory completion of field quality control activities, restore adjustable devices to original settings, including, but not limited to, dampers, air directional devices, valves, fuses, and circuit breakers.

3.09 WASTE MANAGEMENT

A. Double-bag waste and debris in **<< 6 mil, 0.006 inch>>** thick polyethylene plastic bags.

B. Dispose of debris off-site in accordance with applicable federal, state and local requirements.

END OF SECTION 230130.51

DRAFT

SECTION 230513
COMMON MOTOR REQUIREMENTS FOR HVAC EQUIPMENT

PART 1 GENERAL

1.01 SECTION INCLUDES

A. General construction and requirements.

B. Unless otherwise specified in a particular section or required for a particular application, motors shall conform to the following requirements, whether factory-installed or field-installed.

C. Single phase electric motors.

D. Three phase electric motors.

E. Electronically Commutated Motors (ECM).

1.02 REFERENCE STANDARDS

A. ABMA STD 9 - Load Ratings and Fatigue Life for Ball Bearings.

B. IEEE 112 - IEEE Standard Test Procedure for Polyphase Induction Motors and Generators.

C. NEMA MG 00001 - Motors and Generators.

D. NFPA 70 - National Electrical Code.

1.03 SUBMITTALS

A. Product Data: Provide wiring diagrams with electrical characteristics and connection requirements.

B. Test Reports: Indicate test results verifying nominal efficiency and power factor for**<< three phase; _____; or None - N/A>>** motors larger than **<< 1/2; 5; 20; or __>>** horsepower.

C. Manufacturer's Installation Instructions: Indicate setting, mechanical connections, lubrication, and wiring instructions.

D. Operation Data: Include instructions for safe operating procedures.

E. Maintenance Data: Include assembly drawings, bearing data including replacement sizes, and lubrication instructions.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacture of electric motors for **<< commercial>>** use, and their accessories, with minimum **<< three; or _____>>** years documented product development, testing, and manufacturing experience.

B. Comply with **<< applicable electrical code; NFPA 70; local energy code; or _____>>**.

C. Provide certificate of compliance from **<< Authority Having Jurisdiction; or _____>>** indicating approval of high efficiency motors.

D. Products Requiring Electrical Connection: Listed and classified by **<< Underwriters Laboratories Inc.; testing firm acceptable to the Authority Having Jurisdiction; or _____>>** as suitable for the purpose specified and indicated.

1.05 DELIVERY, STORAGE, AND HANDLING

DRAFT

A. Protect motors stored on site from weather and moisture by maintaining factory covers and suitable weather-proof covering.**<< For extended outdoor storage, remove motors from equipment and store separately.; _____ .; or None - N/A>>**

1.06 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Provide **<< five; or ____>>** year manufacturer warranty for motors larger than 1 horsepower.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. A.O. SmithBaldor Electric Company/ABB Group

B. Baldor Electric Company/ABB Group

C. Leeson Electric Corporation

D. Marathon

E. Rockwell

F. Siemens

G. Toshiba

H. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.02 GENERAL CONSTRUCTION AND REQUIREMENTS

A. Electrical Service: Refer to Section **<< 260583>>** for required electrical characteristics.

B. Nominal Efficiency: All motors shall be NEMA premium efficiency.

C. Construction:

1. Open drip-proof type except where specifically noted otherwise.
2. Design for continuous operation in **<< 104 degrees F>>** environment.
3. Design for temperature rise in accordance with **<<NEMA MG 00001>>** limits for insulation class, service factor, and motor enclosure type.
4. Motors with frame sizes **<< 254T; or _____>>** and larger: Energy efficient type.

D. Explosion-Proof Motors: UL approved and labelled for hazard classification, with over temperature protection.

E. Visible Nameplate: Indicating motor horsepower, voltage, phase, cycles, RPM, full load amps, locked rotor amps, frame size, manufacturer's name and model number, service factor, power factor**<< , efficiency; , _____; or None - N/A>>**.

F. Wiring Terminations:

1. Provide terminal lugs to match branch circuit conductor quantities, sizes, and materials indicated. Enclose terminal lugs in terminal box sized to **<<NFPA 70>>**, threaded for conduit.
2. For fractional horsepower motors where connection is made directly, provide **<< threaded; None - N/A; or _____>>** conduit connection in end frame.

2.03 APPLICATIONS

A. Single phase motors for **<< shaft mounted fans; oil burners; centrifugal pumps; and _____>>**: Split phase type.

DRAFT

B. Single phase motors for shaft mounted fans or blowers: Permanent split capacitor type.

C. Single phase motors for **<< fans; pumps; blowers; air compressors; and _____>>**: Capacitor start type.

D. Single phase motors for **<< fans; blowers; pumps; and _____>>**: Capacitor start, capacitor run type.

E. Motors located in **<< exterior locations; wet air streams downstream of sprayed coil dehumidifiers; draw through cooling towers; air cooled condensers; humidifiers; direct drive axial fans; roll filters; explosion proof environments; dust collection systems; and _____>>**: Totally enclosed type.

2.04 SINGLE PHASE POWER - SPLIT PHASE MOTORS

A. Starting Torque: Less than 150 percent of full load torque.

B. Starting Current: Up to seven times full load current.

C. Breakdown Torque: Approximately 200 percent of full load torque.

D. Drip-proof Enclosure: Class A (50 degrees C temperature rise) insulation, NEMA Service Factor, prelubricated sleeve or ball bearings.

E. Enclosed Motors: Class A (50 degrees C temperature rise) insulation, 1.0 Service Factor, prelubricated ball bearings.

2.05 SINGLE PHASE POWER - PERMANENT-SPLIT CAPACITOR MOTORS

A. Starting Torque: Exceeding one fourth of full load torque.

B. Starting Current: Up to six times full load current.

C. Multiple Speed: Through tapped windings.

D. Open Drip-proof or Enclosed Air Over Enclosure: Class A (50 degrees C temperature rise) insulation, minimum 1.0 Service Factor, prelubricated sleeve or ball bearings, automatic reset overload protector.

2.06 SINGLE PHASE POWER - CAPACITOR START MOTORS

A. Starting Torque: Three times full load torque.

B. Starting Current: Less than five times full load current.

C. Pull-up Torque: Up to 350 percent of full load torque.

D. Breakdown Torque: Approximately 250 percent of full load torque.

E. Motors: Capacitor in series with starting winding; provide capacitor-start/capacitor-run motors with two capacitors in parallel with run capacitor remaining in circuit at operating speeds.

F. Drip-proof Enclosure: Class A (50 degrees C temperature rise) insulation, NEMA Service Factor, prelubricated **<< sleeve; ball; or ____>>** bearings.

G. Enclosed Motors: Class A (50 degrees C temperature rise) insulation, 1.0 Service Factor, prelubricated ball bearings.

2.07 THREE PHASE POWER - SQUIRREL CAGE MOTORS

A. Starting Torque: Between 1 and 1-1/2 times full load torque.

B. Starting Current: Six times full load current.

C. Power Output, Locked Rotor Torque, Breakdown or Pull Out Torque: NEMA Design B characteristics.

DRAFT

D. Design, Construction, Testing, and Performance: Comply with **<<NEMA MG 00001>>** for Design B motors.

E. Insulation System: NEMA Class B or better.

F. Motor Frames: NEMA Standard T-Frames of steel, aluminum, or cast iron with end brackets of cast iron or aluminum with steel inserts.

G. Bearings: Grease lubricated anti-friction ball bearings with housings equipped with plugged provision for relubrication, rated for minimum **<<ABMA STD 9>>**, L-10 life of 20,000 hours. Calculate bearing load with NEMA minimum V-belt pulley with belt center line at end of NEMA standard shaft extension. Stamp bearing sizes on nameplate.

H. Sound Power Levels: To **<<NEMA MG 00001>>**.

I. Nominal Efficiency: As indicated at full load and rated voltage when tested in accordance with **<<IEEE 112>>**.

J. Nominal Power Factor: As indicated at full load and rated voltage when tested in accordance with **<<IEEE 112>>**.

K. Provide AEGIS shaft grounding rings on all three phase motors.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install securely on firm foundation. Mount ball bearing motors with shaft in any position.

C. Check line voltage and phase and ensure agreement with nameplate.

END OF SECTION 230513

DRAFT

SECTION 230516
EXPANSION FITTINGS AND LOOPS FOR HVAC PIPING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Flexible pipe connectors.

B. Expansion joints and compensators.

C. Pipe loops, offsets, and swing joints.

1.02 RELATED REQUIREMENTS

A. Section **<< 232113 - Hydronic Piping>>**.

B. Section **<< 232300 - Refrigerant Piping>>**.

1.03 REFERENCE STANDARDS

A. ASTM A269/A269M - Standard Specification for Seamless and Welded Austenitic Stainless Steel Tubing for General Service.

B. ASTM A536 - Standard Specification for Ductile Iron Castings.

C. FM (AG) - FM Approval Guide.

D. UL (DIR) - Online Certifications Directory.

1.04 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Product Data:

1. Flexible Pipe Connectors: Indicate maximum temperature and pressure rating, face-to-face length, live length, hose wall thickness, hose convolutions per **<< foot>>** and per assembly, fundamental frequency of assembly, braid structure, and total number of wires in braid.
2. Expansion Joints: Indicate maximum temperature and pressure rating, and maximum expansion compensation.

C. Design Data: Indicate selection calculations.

D. Manufacturer's Instructions: Indicate manufacturer's installation instructions, special procedures, and external controls.

E. Maintenance Data: Include adjustment instructions.

F. Project Record Documents: Record installed locations of flexible pipe connectors, expansion joints, anchors, and guides.

PART 2 PRODUCTS

2.01 REGULATORY REQUIREMENTS

A. Comply with **<< UL (DIR); FM (AG); ITS (DIR) or Warnock Hersey; or ___>>** requirements.

2.02 FLEXIBLE PIPE CONNECTORS - STEEL PIPING

A. Manufacturers:

1. Flex-Hose Inc.

DRAFT

2. Flex-Weld, Inc**<< ; _____; or None - N/A>>**:
3. Mercer Rubber Company**<< ; _____; or None - N/A>>**:
4. The Metraflex Company**<< ; _____; or None - N/A>>**:

B. Inner Hose: **<< Stainless Steel; Bronze; or _____>>**.

C. Exterior Sleeve: **<< Single braided; Double braided; None; or _____>>**, **<< stainless steel; or bronze>>**.

D. Pressure Rating: **<< 125 psi up to 12 inch; 200 psi up to 6 inch; 350 psi up to 3 inch; or ____ psi up to ___ inch>>**.

E. Maximum Service Temperature: **<< 450 degrees F; 250 degrees F; or ____ degrees F>>**.

F. End Connections: **<< Flanged; Threaded; Threaded with union; Welded or sweat; As specified for pipe joints; or _____>>**.

G. Maximum offset: **<< 3/4 inch; 1 inch; or _____ inch>>** on each side of installed center line.

2.03 EXPANSION JOINTS - METAL BELLOWS TYPE

A. Manufacturers:
1. Flex-Weld, Inc**<< ; _____; or None - N/A>>**:
2. **<< Metraflex Company>>**.
3. **<< US Bellows>>**.

B. Provide shroud to protect from external damage and allows for the application of external insulation.

C. Provide with tie rods to prevent over-compression or over-elongation.

D. Pressure Rating: **<< 125 psi and 400 degrees F; 200 psi and 250 degrees F; or _____ psi and _____ degrees F>>**.

E. Maximum Compression: **<< 1-3/4 inches; 3 inches; or ____ inches>>**.

F. Maximum Extension: **<< 1/4 inch>>**.

G. End Connections: **<< Flanged; Threaded; Welded; As specified for pipe joints; or _____>>**.

H. Size: Use pipe sized units.

I. Application: Steel piping **<< 2 inches>>** and larger.

2.04 EXPANSION JOINTS - STAINLESS STEEL BELLOWS TYPE

A. Manufacturers:
1. Flex-Weld, Inc**<< ; Keflex 308/311 Series; ; Keflex 3150 Series Compact Expansion Joint; ; _____; or None - N/A>>**:
2. Mercer Rubber Company**<< ; _____; or None - N/A>>**:
3. The Metraflex Company**<< ; _____; or None - N/A>>**:

B. Pressure Rating: **<< 125 psi and 400 degrees F; 200 psi and 250 degrees F; or _____ psi and _____ degrees F>>**.

C. Maximum Compression: **<< 1-3/4 inches; 3 inches; or ____ inches>>**.

D. Maximum Extension: **<< 1/4 inch>>**.

E. End Connections: **<< Externally; Internally; or _____>>** pressurized **<< as specified for pipe joints; with flanged ends; with threaded ends; with welded ends; or _____>>**.

DRAFT

F. Size: Use pipe sized units.

2.05 EXPANSION JOINTS - << SINGLE; DOUBLE; OR _____>> SPHERE, << FLEXIBLE; ELBOW; OR _____>> CONNECTOR

A. Manufacturers:
1. Flex-Hose Co. Inc**<< ; _____; or None - N/A>>**:
2. Flex-Weld, Inc**<< ; Rubber Expansion Joints; ; _____; or None - N/A>>**:
3. Mercer Rubber Company**<< ; _____; or None - N/A>>**:
4. The Metraflex Company**<< ; Cablesphere; ; _____; or None - N/A>>**:
5. Unisource Manufacturing, Inc**<< ; Series 301, Single Sphere Connectors; ; Series 302, Double Sphere Connectors; ; _____; or None - N/A>>**:

B. Body Construction: **<< EPDM; Butyl; Nitrile; Neoprene; Neoprene and nylon; Nylon-reinforced rubber tube; or _____>>**.

C. Cover and Tube Elastomer: **<< Chlorobutyl and Chlorobutyl; CSM and CSM; EPDM and EPDM; EPDM and FDA EPDM; Neoprene and Neoprene; Neoprene and Nitrile; Neoprene and FDA Nitrile; or _____>>**.

D. End Connections: **<< Tapped steel flanges; Galvanized flanges; Galvanized unions; Carbon steel flanges; or _____>>**.

E. Maximum Compression: **<< 1/2 inch; 3/4 inch; 1 inch; 1-1/8 inches; or ____ inch>>**.

F. Maximum Elongation: **<< 1/8 inch; 3/8 inch; 1/2 inch; 5/8 inch; 7/8 inch; or __ inch>>**.

G. Maximum Offset: **<< 3/8 inch; 1/2 inch; 3/4 inch; 7/8 inch; or __ inch>>**.

H. Maximum Angular Movement: **<< 15; 30; or 45>>** degrees.

I. Accessories: **<< Control rods; Control cables; or _____>>**.

J. Service Rating: Up to **<< 35 psi at 220 degrees F; 95 psi at 200 degrees F; 100 psi at 220 degrees F; 105 psi at 250 degrees F; 125 psi at 170 degrees F; 150 psi at 200 degrees F; 150 psi at 210 degrees F; 180 psi at 170 degrees F; 200 psi at 250 degrees F; 225 psi at 170 degrees F; 300 psi at 170 degrees F; or ___ psi at ___ degrees F>>**.

2.06 EXPANSION JOINTS - COMPENSATORS

A. Manufacturers:
1. Flex-Hose Co. Inc**<< ; _____; or None - N/A>>**:
2. Flex-Weld, Inc**<< ; Keflex 7Q Series - Quadra-Side; ; _____; or None - N/A>>**:
3. Mercer Rubber Company**<< ; _____; or None - N/A>>**:
4. The Metraflex Company**<< ; _____; or None - N/A>>**:
5. Unisource Manufacturing, Inc**<< ; Series 416, Expansion Compensators; ; _____; or None - N/A>>**:
6. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Type: Two-ply **<< 304 stainless steel; bronze; or _____>>** bellows with carbon steel shroud.

C. Maximum Working Pressure: **<< 75 psi; 80 psi; 200 psi; or __ psi>>**.

D. Maximum Working Temperatures: **<< 250 degrees F; 400 degrees F; 750 degrees F; or ___ degrees F>>**.

E. Maximum Compression: **<< 1/2 inch>>**.

F. Maximum Extension: **<< 5/32 inch>>**.

DRAFT

G. End Connections: **<< Threaded; Soldered; Flanged; Female copper sweat; Carbon steel male thread; or _____>>**.

H. Application: Copper piping up to **<< 3 inches>>** in size or steel piping up to **<< 4 inches>>** in size.

2.07 EXPANSION << JOINTS; LOOPS; JOINTS AND LOOPS; OR _____>> - HOSE AND BRAID

A. Manufacturers:

1. Flex-Hose Co. Inc**<< ; U-Loop; ; V-Loop; ; _____; or None - N/A>>**:
2. Flex-Weld, Inc**<< ; Keflex Ke-Loop; ; _____; or None - N/A>>**:
3. The Metraflex Company**<< ; Metraloop; ; _____; or None - N/A>>**:
4. Unisource Manufacturing, Inc**<< ; V-Loop; ; V-Loop Copper; ; _____; or None - N/A>>**:

B. Provide flexible loops with two flexible sections of hose and braid, two 90 degree elbows, and 180 degree return with support brackets**<< and air release valve; and plugged drain port for steam service; , air release valve, and plugged drain port; _____; or None - N/A>>**.

C. Maximum Allowable Motion: **<< 2 inch; 3 inch; 4 inch; or ___ inch>>** in the x, y, and z planes with no thrust loads to the building structure

D. Maximum Working Pressure: **<< 300 psi; 175 psi; 150 psi; or _____ psi>>** at **<< 120 degrees F; 800 degrees F; or ___ degrees F>>**.

E. Construction: Class **<< 125; 150; 300; or _____>>**, schedule **<< 40; 80; or _____>>**, **<< stainless steel; copper; bronze; or _____>>** hose and**<< single; double; _____; or None - N/A>>** braid assembly with **<< carbon steel; ductile iron; or _____>>** fittings, including elbows and **<< flanged; grooved; threaded; welded; female copper sweat; or _____>>** end connections sized to match pipe segment

1. Selected Product to Accommodate:
   a. **<< Compression; Expansion; Compression and Expansion; or _____>>** Axial Deflection: **<< _____ inch>>**.
   b. Angular Rotation: **<< 15; or _____>>** degrees.
   c. Force developed by **<< 1.5; or _____>>** times specified maximum allowable operating pressure.
2. Provide necessary accessories including, but not limited to, **<< swivel joints; limit stops; internal guides; anti-torque device; internal flow liners; control rods; control cables; and _____>>**.

2.08 EXPANSION JOINTS - EXTERNALLY PRESSURIZED

A. Manufacturers:

1. Flex-Hose Co. Inc**<< ; _____; or None - N/A>>**:
2. Flex-Weld, Inc**<< ; Keflex Externally-Pressurized Expansion Joints; ; _____; or None - N/A>>**:
3. The Metraflex Company**<< ; Metragator; ; _____; or None - N/A>>**:
4. Unisource Manufacturing, Inc**<< ; Series EP; ; _____; or None - N/A>>**:

B. Bellows Type: **<< Two-ply; Multi-ply; or _____>>**, **<< single; dual; or _____>>** bellows constructed of **<< 321 stainless steel; 316 stainless steel; 304 stainless steel; inconel 600; inconel 625; or _____>>**.

C. Internal Liner: Carbon steel with internal and external guides.

DRAFT

D. Specialty: Carbon steel anchor base, lifting lugs, and drain port with tapered plug.

E. End Connections: Class **<< 150; 300; or _____>>**, carbon steel, **<< welded; grooved; flanged; welded flange; or _____>>**.

F. Maximum Axial Compression: **<< 4 inch; 6 inch; 8 inch; 16 inch; or __ inch>>**.

G. Maximum Working Pressure: **<< 300 psi; 175 psi; 150 psi; or ___ psi>>** at **<< 700 degrees F; or _____ degrees F>>**.

2.09 ACCESSORIES

A. Pipe Alignment Guides:
   1. Manufacturers:
      a. Flex-Weld, Inc**<< ; _____; or None - N/A>>**:
      b. The Metraflex Company**<< ; PGQ Glide Riser Guide; ; _____; or None - N/A>>**:
   2. Two piece welded steel with enamel paint, bolted, with spider to fit standard pipe, frame with four mounting holes, clearance for minimum **<< 1 inch>>** thick insulation, minimum **<< 3 inches>>** travel.

B. Engineered Riser Anchor Clamps:
   1. Manufacturers:
      a. The Metraflex Company**<< ; Engineered Riser Anchor Clamp; ; _____; or None - N/A>>**:
   2. Applications:
      a. Provide one clamp to serve as a riser clip.
         1) Verify the total load of filled pipe to be supported will be a safety factor of **<< one; two; or _____>>** less than the maximum loading of the clamp per the manufacturer's instructions.
      b. Provide one clamp above and one clamp below the slab to anchor pipe.
         1) Coordinate with the structural engineer to determine the maximum thrust loading calculated for the slab or floor structure. Use the maximum thrust loading calculations to verify the clamps will be a safety factor of **<< one; two; or _____ >>** less than the maximum loading of clamp per the manufacturer's instructions.
   3. Provide two piece, ductile iron in compliance with **<<ASTM A536>>**. Use with metal pipes with an outer diameter of **<< 2.5 inches>>** to **<< 8 inches>>**.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with **<< manufacturer's instructions; or _____>>**.

B. Install in accordance with EJMA (Expansion Joint Manufacturers Association) Standards.

C. Install flexible pipe connectors on pipes connected to vibration isolated equipment. Provide line size flexible connectors.

D. Install flexible connectors at right angles to displacement. Install one end immediately adjacent to isolated equipment and anchor other end. Install in horizontal plane unless indicated otherwise.

E. Anchor pipe to building structure where indicated. Provide pipe guides so movement is directed along axis of pipe only. Erect piping such that strain and weight is not on cast connections or apparatus.

DRAFT

F. Provide support and equipment required to control expansion and contraction of piping. Provide loops, pipe offsets, and swing joints, or expansion joints where **<< required; indicated; or _____>>**.

G. Substitute grooved piping for vibration isolated equipment instead of flexible connectors. Grooved piping need not be anchored.

END OF SECTION 230516

DRAFT

SECTION 230517
SLEEVES AND SLEEVE SEALS FOR HVAC PIPING

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.

B. ASTM C592 - Standard Specification for Mineral Fiber Blanket Insulation and Blanket-Type Pipe Insulation (Metal-Mesh Covered) (Industrial Type).

C. ASTM C1107/C1107M - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink).

D. ASTM E814 - Standard Test Method for Fire Tests of Penetration Firestop Systems.

E. FM (AG) - FM Approval Guide.

F. UL (DIR) - Online Certifications Directory.

1.02 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Product Data: Provide manufacturer's product data for sleeves, stack sleeve fittings, sleeve seal systems, and grout.

C. Shop Drawings: Indicate pipe materials used, jointing methods, supports, floor and wall penetration seals. Indicate installation, layout, weights, mounting and support details, and piping connections.

D. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.

1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
2. Extra Valve Stem Packings: **<< One; Two; or ____>>** for each type and size of valve.

PART 2 PRODUCTS

2.01 PIPE SLEEVES

A. Vertical Piping:

1. Sleeve Length: 2 inches above finished floor.
2. Provide sealant for watertight joint.
3. Blocked Out Floor Openings: Provide 1-1/2 angle set in silicon adhesive around opening.
4. Drilled Penetrations: Provide 1-1/2 inch angle ring or square set in silicone adhesive around penetration.

B. Sheet Metal: Pipe passing through interior walls, partitions, and floors, unless steel or brass sleeves are specified below.

C. Pipe Passing Through Below Grade Exterior Walls:

1. Zinc coated or cast iron pipe.
2. Provide watertight space with link rubber or modular seal between sleeve and pipe on both pipe ends.

D. Pipe Passing Through Mechanical Floors above Basement:

1. Galvanized steel pipe or black iron pipe with asphalt coating.

DRAFT

2. Connect sleeve with floor plate except in mechanical rooms.

E. Clearances:
1. Provide allowance for insulated piping.
2. Wall, Floor, Partitions, and Beam Flanges: **<< 1 inch; or _____ inch>>** greater than external pipe diameter.
3. All Rated Openings: Caulked tight with fire stopping material in compliance with **<<ASTM E814>>** in accordance with Section **<< 078400>>** - Firestopping to prevent the spread of fire, smoke, and gases.

F. Components:
1. Cast Iron Wall Pipes: Plain ends and integral waterstop.
2. Steel Pipes: **<<ASTM A53/A53M>>**, galvanized, Schedule 40, plain ends and welded steel collar.
3. Steel Pipe Sleeves: **<<ASTM A53/A53M>>**, galvanized, Type E, Grade B, Schedule 40, plain ends.
4. Steel Sheet Sleeves: 0.0239 inch thick, round tube, welded closed.
5. Stack Sleeve Fittings: Cast iron with integral clamping flange and ring, bolts, and nuts for membrane flashing. Clamping ring with set screws for underdeck clamp.
   a. Manufacturers:
      1) Jay R. Smith Mfg. Co.
      2) Wade.
      3) Zurn Water LLC.
6. Grout: **<<ASTM C1107/C1107M>>**, Grade B, nonshrink, post hardening, volume adjusting, premixed and factory packaged, hydraulic cement grout with compressive strength of 5000 psi.

2.02 PIPE-SLEEVE SEALS

A. Manufacturers:
1. Advance Products & Systems, LLC.
2. CALPICO, Inc.
3. LINK-SEAL, by Garlock, an Enpro Company.
4. The Metraflex Company.
5. Proco Products, Inc.
6. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Modular Mechanical Sleeve-Seal:
1. Elastomer-based interlocking links continuously fill annular space between pipe and wall-sleeve, wall or casing opening.
2. Watertight seal between pipe and wall-sleeve, wall or casing opening.
3. Size and select seal component materials in accordance with service requirements.
4. Service Requirements:
   a. Corrosion resistant.
   b. Oil, fuel, gas, and solvent resistant.
   c. Underground, buried, and wet conditions.
   d. Fire Resistant: **<< 1 hour; 3 hour; or _____>>**, **<< FM (AG); UL (DIR); and _____>>** approved.
   e. High Temperature, up to **<< 400 degrees F; or _____ degrees F>>**.

DRAFT

5. Stainless steel pressure end plates.
6. Anchors: Stainless steel nuts and bolts.

C. Sealing Compounds:
1. Provide packing and sealing compound to fill pipe to sleeve thickness.
2. Combined packing and seal compound is to match partition fire-resistance hourly rating.

PART 3 EXECUTION

3.01 PREPARATION

A. Ream pipe and tube ends. Remove burrs. **<< Bevel plain end ferrous pipe.; None - N/A; or _____ .>>**

B. Remove scale and foreign material, from inside and outside, before assembly.

3.02 INSTALLATION

A. Route piping in orderly manner, plumb and parallel to building structure. Maintain gradient.

B. Install piping to conserve building space, to not interfere with use of space and other work.

C. Install piping and pipe sleeves to allow for expansion and contraction without stressing pipe, joints, or connected equipment.

D. Extend all floor sleeves through floors 2” above finished caulk sleeves full depth and provide floor plate.

E. All Rated Openings: Caulk tight with fire stopping material in compliance with **<<ASTM E814>>** in accordance with Section **<< 078400>>** Firestopping to prevent the spread of fire, smoke, and gases.

F. Inserts:
1. Provide inserts for placement in concrete formwork.
2. Provide inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.
3. Provide hooked rod to concrete reinforcement section for inserts carrying pipe over **<< 4 inches>>**.
4. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.
5. Where inserts are omitted, drill through concrete slab from below and provide through-bolt with recessed square steel plate and nut **<< above; flush with top of; recessed into and grouted flush with; or _____>>** slab.

G. Structural Considerations:
1. Do not penetrate building structural members unless indicated.

H. Provide sleeves when penetrating floors, partitions, roofs, and walls or in concrete floors, concrete roof slabs, and concrete walls as they are constructed. Seal pipe including sleeve penetrations to achieve fire resistance equivalent to fire separation required.
1. In-Slab and In-Wall Piping: Seal pipe sleeve watertight with grout.
2. Piping Passing through Penetraions:
a. Pack solid using mineral fiber in compliance with **<<ASTM C592>>**.
b. Fill space with an elastomer caulk to a depth of **<< 0.50 inch; or _____ inch>>** where penetrations occur between conditioned and unconditioned spaces.
3. Seal exterior wall sleeves watertight with grout where no sleeve seal system is indicated.

I. Stack Sleeve Fittings:

DRAFT

1. Install stack sleeve fittings in concrete slabs as they are constructed.
2. Provide 1/4 inch clear space between sleeve and pipe or pipe insulation.
3. Pipes Penetrating Floors: Secure flashing between clamping flanges with membrane waterproofing in accordance with Section **<< 076200 - Sheet Metal Flashing and Trim>>**.
4. Extend sleeve fittings below floor slab to secure clamping ring.
5. Seal space around stack sleeve fittings watertight with grout.

J. Manufactured Sleeve-Seal Systems:
1. Install manufactured sleeve-seal systems in sleeves located in grade slabs and exterior concrete walls at piping entrances into building.
2. Provide sealing elements of the size, quantity, and type required for the piping and sleeve inner diameter or penetration diameter.
3. Locate piping in center of sleeve or penetration.
4. Install field assembled sleeve-seal system components in annular space between sleeve and piping.
5. Tighten bolting for a water-tight seal.
6. Install in accordance with manufacturer's recommendations.

K. When installing more than one piping system material, ensure system components are compatible and joined to ensure the integrity of the system. Provide necessary joining fittings. Ensure flanges, union, and couplings for servicing are consistently provided.

END OF SECTION 230517

DRAFT

SECTION 230519
METERS AND GAUGES FOR HVAC PIPING

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASME B40.100 - Pressure Gauges and Gauge Attachments.

B. ASTM E1 - Standard Specification for ASTM Liquid-in-Glass Thermometers.

C. ASTM E77 - Standard Test Method for Inspection and Verification of Thermometers.

D. AWWA C700 - Cold-Water Meters -- Displacement Type, Metal Alloy Main Case.

E. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

F. UL 393 - Indicating Pressure Gauges for Fire-Protection Service.

1.02 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>**, for submittal procedures.

B. Product Data: Provide list that indicates use, operating range, total range and location for manufactured components.

C. Wiring Diagrams: Provide diagrams that indicate power, signal, and control wiring.

D. Project Record Documents: Record actual locations of components and instrumentation.

E. Operation and Maintenance Data.

F. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.

1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
2. Extra Gauge Oil for Inclined Manometers: **<< One bottle; Two bottles; or _____>>**.
3. Extra Pressure Gauges: **<< One; Two; or _____>>** of each type and size.

1.03 FIELD CONDITIONS

A. Do not install instrumentation when areas are under construction, except for required rough-in, taps, supports and test plugs.

PART 2 PRODUCTS

2.01 POSITIVE DISPLACEMENT METERS (LIQUID)

A. Manufacturers:

1. Dwyer Instruments, Inc**<< ; _____; or None - N/A>>**: ~~www.dwyer-inst.com/#sle.~~**Carrier Products.**

B. **<< AWWA C700; AWWA C701; AWWA C702; or _____>>**, positive displacement disc type suitable for fluid with**<< metal alloy; _____; or None - N/A>>** main case and cast iron**<< frost-proof, breakaway; _____; or None - N/A>>** bottom cap, hermetically sealed register**<< , remote reading; , _____; or None - N/A>>**.

2.02 ELECTROMAGNETIC FLOW METERS

A. Liquid Flow Capacity Range: **<< From ___ to ___ gpm; or As indicated on drawings>>**.

B. Construction: Sensor with integral **<<NEMA EN 10250>>** Type 4 or 4X stainless steel or aluminum enclosure to hold thermal mass sensor and circuits**<< with numeric display for**

DRAFT

consumption reading; with numeric display for demand and consumption readings; with numeric display for demand, consumption, and other parameter readings; _____; or None - N/A>>.

1. Electrode: **<< Stainless steel; Hastelloy C; or _____>>**.

C. Liquid Conductivity: 5 mS/cm, minimum.

D. Accuracy: Within **<< 0.1 percent; 0.1 percent, NIST; 0.2 percent; 0.2 percent, NIST; 1 percent; 1 percent, NIST; or _____>>** of value applied to manufacturer-specified velocity range.

E. Output: **<< Two-wire; Three-wire; Four-wire; or _____>>**, **<< 0 to 20 mA; 4 to 20 mA; 0 to 10 VDC; 2 to 10 VDC; pulse; or _____>>**, non-loop powered.

F. Service Pressure and Temperature: Up to **<< 400 psi; _____ psi; or _____>>** and **<< 15 to 250 degrees F; or _____ degrees F>>** liquid side, **<< 150 degrees F; or _____ degrees F>>** ambient.

2.03 PRESSURE GAUGES

A. Manufacturers:
1. Ernst Flow Industries.
2. Flo Fab Inc.
3. Palmer Wahl Instrumentation Group.
4. Tel Tru Manufacturing Company.
5. Watts Regulator Company.
6. Weiss Instruments.
7. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Pressure Gauges: **<<ASME B40.100>>**, **<< UL 393; UL 404; or _____>>** drawn steel case, phosphor bronze bourdon tube, rotary brass movement, brass socket, with front recalibration adjustment, black scale on white background.
1. Case: **<< Steel with brass bourdon tube; Cast aluminum with phosphor bronze bourdon tube; or _____>>**.
2. Size: 6 inch diameter.
3. Mid-Scale Accuracy: **<< One; Two; 1/2; or ____>>** percent.
4. Scale: **<< Psi; KPa; and _____>>**.

2.04 PRESSURE GAUGE TAPPINGS

A. Gauge Cock: Tee or lever handle, brass for maximum **<< 150 psi>>**.

B. Needle Valve: Brass for copper pipes, stainless steel for steel pipes, **<< 1/4 inch>>** or 1/2 inch NPT for minimum **<< 150 psi>>**.

C. Pulsation Damper: Pressure snubber, brass with **<< 1/4 inch>>**to 1/2 inch threaded connections.

D. Syphon: Looped, brass for copper pipes, stainless steel for steel pipes, **<< 1/4 inch>>**or 1/2 inch threads.

2.05 DIGITAL STEM TYPE THERMOMETERS

A. Manufacturers:
1. FNW.
2. Weiss Instruments, Inc.

DRAFT

3. Weksler Glass Thermometer Corp.
4. Winters Instruments
5. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Thermometers - Adjustable Angle: ASME B40.3; Red- or blue-appearing non-toxic liquid in glass in accordance with **<<ASTM E1>>**; lens front tube, high impace ABS case, cast aluminum adjustable joint with positive locking device; adjustable 360 degrees in horizontal plane, 180 degrees in vertical plane; solar powered.
1. Size: **<< 12 inch; 9 inch; 7 inch; or ___ inch>>** scale.
2. Sensor: Glass passivated thermistor.
3. Display: 1/2 inch LCD digits.
4. Stem: Ventilated aluminum for duct installation; brass for pipe installation.
5. Pipe Installation: 1-1/4 inch thermowell connector with threads in accordance with ASME B1.1.
6. Accuracy: 1% percent or 1 degree F, whichever is greater.
7. Calibration: **<< Degrees F; Degrees C; and _____>>**.

2.06 ANANLOG DIAL THERMOMETERS

A. Manufacturers:
1. Flo Fab Inc.
2. Miljoco Corporation.
3. Palmer Wahl Instrumentation Group.
4. Tel-Tru Manufacturing Company.
5. Trerise, H. O. Co.
6. Weiss Instruments, Inc.
7. Winters Instruments.

B. Thermometer: **<<ASTM E1>>**, cast aluminum case, adjustable angle with front recalibration, bimetallic helix actuated with silicone fluid damping in accordance with ASME B40.200, white with black markings and black pointer hermetically sealed lens, ventilated aluminum stem for duct installation and brass stem for pipe installation.
1. Size: **<< 3 inch; 5 inch; or 9 inch inch>>** diameter dial.
2. Lens: Clear **<< glass; Lexan; or _____>>**.
3. Pipe Installation: 1-1/4 inch thermowell connector with threads in accordance with ASME B1.1.
4. Accuracy: 1 percent.
5. Calibration: **<< Degrees F; Degrees C; and _____>>**.

2.07 THERMOMETER SUPPORTS

A. Flange: **<< 3 inch>>** outside diameter reversible flange with screw holes, designed to fasten to sheet metal air ducts, with brass perforated stem.

2.08 THERMOWELLS

A. Thermowell: ASME B40.200, pressure tight socket for inserting into piping tee, brass for copper pipes, Type 316 stainless steel for steel pipes, stepped or tapered shank in accordance with manufacturer's standard, bore wide enough to match thermometer stem, lagging extension for insulated piping.
1. Size: Match thermometer length and reach center of pipe.

DRAFT

2. Heat transfer medium: Manufacturer's standard.

B. Single Source Responsibility: Provide thermowell and thermometer products by the same manufacturer.

2.09 TEST PLUGS

A. Manufacturers:
1. Flow Design, Inc.
2. H.O. Trerice Company.
3. Watts Water Technologies, Inc.
4. Weiss Instruments, LLC.
5. Weksler Glass Thermometer Corp.
6. Winters Instruments.
7. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Test Plug: **<< 1/2 inch>>**brass or stainless steel fitting and cap for receiving **<< 1/8 inch>>** outside diameter pressure or temperature probe with neoprene core for temperatures up to **<< 200 degrees F>>**.

C. Test Kit: Carrying case, internally padded and fitted containing **<< one; two; or (_____)>><< 2-1/2 inch; 3-1/2 inch; or ___ inch (___ mm)>>** diameter pressure gauge, **<< one; two; or _____>>** gauge adapters with **<< 1/8 inch>>** probes, two **<< 1 inch; 1-1/2 inch; or ___ inch (___ mm)>>** dial thermometers.
1. Low Range Thermometer: Bimetallic insertion with tapered sensing element and 1 inch to 2 inch diamater dial for temperatures ranging from 25 degress F to 125 degrees F.
2. High Range Thermometer: Bimetallic insertion with tapered sensing element and 1 inch to 2 inch diamater dial for temperatures ranging from 0 degrees F to 220 degrees F.
3. Pressure Gauge: Bourdon tube insertion with 2 inch to 3 inch diameter dial for pressure ranges from 0 psi to 200 psi.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Provide one pressure gauge per pump, installing taps before strainers and on suction and discharge of pump. Pipe to gauge.

C. Install pressure gauges with pulsation dampers. Provide **<< gauge cock; needle valve; or _____>>** to isolate each gauge. **<< Provide siphon on gauges in steam systems. ; _____ . ; or None - N/A>>** Extend nipples**<< and siphons; _____; or None - N/A>>** to allow clearance from insulation.

D. Install thermometers in piping systems in sockets in short couplings. Enlarge pipes smaller than **<< 2-1/2 inch>>** for installation of thermometer sockets. Ensure sockets allow clearance from insulation.

E. Install thermometers in air duct systems on flanges.

F. Install thermometers with lagging extensions on insulated piping.

G. Locate duct mounted thermometers minimum **<< 10 feet>>** downstream of mixing dampers, coils, or other devices causing air turbulence. Attach in duct walls with screws.

H. Install gauges and thermometers in locations where they are easily read and maintained from normal operating level. Install vertical to 45 degrees off vertical.

DRAFT

I. Adjust gauges and thermometers to final angle, clean windows and lenses, and calibrate to zero.

J. Locate test plugs **<< adjacent thermometers and thermometer sockets; adjacent to pressure gauges and pressure gauge taps; adjacent to control device sockets; where indicated; or _____>>** and at BACnet IP pressure and temperature sensing devices.

3.02 SCHEDULE

A. Pressure Gauges, Location:
   1. Pumps.
   2. Expansion tanks.
   3. Pressure tanks.

B. Pressure Gauge Tappings, Location:
   1. Control valves - inlets and outlets.
   2. Major coils - inlets and outlets.
   3. Heat exchangers - inlets and outlets.
   4. Chiller - inlets and outlets.
   5. Boiler - inlets and outlets.

C. Thermometers, Location:
   1. Headers to central equipment.
   2. Coil banks - inlets and outlets.
   3. Heat exchangers - inlets and outlets.
   4. Boilers - inlets and outlets.
   5. Chiller - inlets and outlets.
   6. Water zone supply and return.
   7. After major coils.
   8. Domestic hot water supply and recirculation.
   9. Each supply, return, and outside air zone.

END OF SECTION 230519

DRAFT

SECTION 230523
GENERAL-DUTY VALVES FOR HVAC PIPING

PART 1 GENERAL

1.01 ABBREVIATIONS AND ACRONYMS

A. CWP: Cold working pressure.

B. EPDM: Ethylene propylene copolymer rubber.

C. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.

D. NRS: Nonrising stem.

E. OS&Y: Outside screw and yoke.

F. PTFE: Polytetrafluoroethylene.

G. RS: Rising stem.

H. TFE: Tetrafluoroethylene.

I. WOG: Water, oil, and gas.

J. WSP: Working steam pressure.

1.02 REFERENCE STANDARDS

A. API STD 594 - Check Valves: Flanged, Lug, Wafer, and Butt-Welding.

B. ASME B1.20.1 - Pipe Threads, General Purpose, Inch.

C. ASME B16.1 - Gray Iron Pipe Flanges and Flanged Fittings: Classes 25, 125, and 250.

D. ASME B16.5 - Pipe Flanges and Flanged Fittings: NPS 1/2 Through NPS 24 Metric/Inch Standard.

E. ASME B16.10 - Face-to-Face and End-to-End Dimensions of Valves.

F. ASME B16.34 - Valves — Flanged, Threaded, and Welding End.

G. ASME B31.9 - Building Services Piping.

H. ASME BPVC-IX - Boiler and Pressure Vessel Code, Section IX - Qualification Standard for Welding, Brazing, and Fusing Procedures; Welders; Brazers; and Welding, Brazing, and Fusing Operators.

I. ASTM A48/A48M - Standard Specification for Gray Iron Castings.

J. ASTM A126 - Standard Specification for Gray Iron Castings for Valves, Flanges, and Pipe Fittings.

K. ASTM A536 - Standard Specification for Ductile Iron Castings.

L. AWWA C606 - Grooved and Shouldered Joints.

M. MSS SP-45 - Drain and Bypass Connections.

N. MSS SP-67 - Butterfly Valves.

O. MSS SP-70 - Gray Iron Gate Valves, Flanged and Threaded Ends.

P. MSS SP-71 - Gray Iron Swing Check Valves, Flanged and Threaded Ends.

Q. MSS SP-72 - Ball Valves with Flanged or Butt-Welding Ends for General Service.

R. MSS SP-78 - Gray Iron Plug Valves, Flanged and Threaded Ends.

DRAFT

S. MSS SP-80 - Bronze Gate, Globe, Angle, and Check Valves.

T. MSS SP-85 - Gray Iron Globe and Angle Valves, Flanged and Threaded Ends.

U. MSS SP-110 - Ball Valves Threaded, Socket-Welding, Solder Joint, Grooved and Flared Ends.

V. MSS SP-125 - Check Valves: Gray Iron and Ductile Iron, In-Line, Spring-Loaded, Center-Guided.

1.03 SUBMITTALS

A. See Section **<< 013000>>** - Administrative Requirements for submittal procedures.

B. Product Data: Provide data on valves including manufacturers catalog information. Submit performance ratings, rough-in details, weights, support requirements, and piping connections.

C. Warranty: Submit manufacturer warranty and ensure that forms have been completed in **<<Owner>>**'s name and registered with manufacturer.

D. Operation and Maintenance Data: Include manufacturer's descriptive literature, operating instructions, maintenance and repair data, and parts listings.

E. Maintenance Materials: Furnish **<<Owner>>** with one wrench for every **<< five; ten; or _____>>** plug valves, in each size of square plug valve head.

1. See Section **<< 016000 - Product Requirements>>** for additional provisions.

1.04 QUALITY ASSURANCE

A. Manufacturer:

1. Obtain valves for each valve type from single manufacturer.
2. Company must specialize in manufacturing products specified in this section, with not less than **<< three; or _____>>** years of**<< documented; or None - N/A>>** experience.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Prepare valves for shipping as follows:

1. Minimize exposure of operable surfaces by setting plug and ball valves to open position.
2. Protect valve parts exposed to piped medium against rust and corrosion.
3. Protect valve piping connections such as grooves, weld ends, threads, and flange faces.
4. Adjust globe, gate, and angle valves to the closed position to avoid clattering.
5. Secure check valves in either the closed position or open position.
6. Adjust butterfly valves to closed or partially closed position.

B. Use the following precautions during storage:

1. Maintain valve end protection and protect flanges and specialties from dirt.
   a. Provide temporary inlet and outlet caps.
   b. Maintain caps in place until installation.

C. Exercise the following precautions for handling:

1. Handle large valves with sling, modified to avoid damage to exposed parts.
2. Avoid the use of operating handles or stems as rigging or lifting points.

PART 2 PRODUCTS

2.01 APPLICATIONS

A. See drawings and Division 23 sections for specific valve locations.

DRAFT

B. Listed pipe sizes shown using nominal pipe sizes (NPS) and nominal diameter (DN).

C. Provide the following valves for the applications if not indicated on drawings or in Division 23 sections:
   1. Throttling (Hydronic): **<< Butterfly; Ball; Globe; Angle; and _____>>**.
   2. Isolation (Shutoff): **<< Butterfly; Gate; Ball; Plug; and _____>>**.
   3. Swing Check (Pump Outlet):
      a. Size **<< 2 inch>>** and Smaller: Bronze with **<< bronze; nonmetallic; or _____>>** disc.
      b. Size **<< 2-1/2 inch>>** and Larger: Iron with **<< lever and weight; lever and spring; center-guided metal; center-guided with resilient seat; or _____>>**.

D. Substitutions of valves with higher CWP classes or WSP ratings for same valve types are permitted when specified CWP ratings or WSP classes are not available.

E. Chilled Water Valves:
   1. Size **<< 2 inch>>** and Smaller, **<< Brass; Bronze; and _____>>** Valves:
      a. **<< Threaded; Solder-joint; or _____>>** ends.
      b. Ball: **<< Full; Regular; Reduced; or _____>>** port, **<< one; two; three; or ____>>** piece, **<< brass; bronze; stainless steel; or _____>>** trim.
         1) Class 150 SWP, bronze, two-piece body, full port, TFE seats and seals, stainless-steel ball and stem. Extension handle for use in insulated piping. NIBCO T-585-70-66 or S-585-70-66, threaded or soldered ends.
      c. Swing Check: **<< Bronze; Nonmetallic; or _____>>** disc, Class.
         1) Class 125, bronze, PTFE seat, renewable disks, Y pattern, horizontal swing, NIBCO T-413-Y or S-413-Y, threaded or soldered ends.
   2. Size **<< 2-1/2 inch>>** and Larger, Iron Valves:
      a. **<< 2-1/2 inch>>** to **<< 4 inch>>**: **<< Threaded; Flanged; or _____>>** ends.
      b. Ball: **<< 2-1/2 NPS>>** to **<< 10 inch>>**, Class 150.
         1) Conventional port, NIBCO T-580-70-66 or S-580-70-66,threaded or soldered ends.
      c. Swing Check: **<< Metal; Nonmetallic-to-metal; or _____>>** seats, Class **<< 125; 250; or ___>>**.
         1) Class 125, IBBM, bolted bonnet, renewable seat and disk, horizontal swing NIBCO Fig. F-918-B, flanged ends.
      d. Eccentric Plug: Resilient seating, 175 CWP.

F. Condenser Water Valves:
   1. Size **<< 2 inch>>** and Smaller, **<< Brass; Bronze; and _____>>** Valves:
      a. **<< Threaded; Solder-joint; or _____>>** ends.
      b. Ball: **<< Full; Regular; Reduced; or _____>>** port, **<< one; two; three; or ____>>** piece, **<< brass; bronze; stainless steel; or _____>>** trim.
         1) Class 150 SWP, bronze, two-piece body, full port, TFE seats and seals, stainless-steel ball and stem. Extension handle for use in insulated piping. NIBCO T-585-70-66 or S-585-70-66, threaded or soldered ends.
      c. Swing Check: **<< Bronze; Nonmetallic; or _____>>** disc, Class **<< 125; 150; or ___>>**.
   2. Size **<< 2-1/2 inch>>** and Larger, Iron Valves:
      a. **<< 2-1/2 inch>>** to **<< 4 inch>>**: **<< Threaded; Flanged; or _____>>** ends.
      b. Ball: **<< 2-1/2 inch>>** to **<< 10 inch>>**, Class 150.

DRAFT

1) Conventional port, NIBCO T-580-70-66 or S-580-70-66,threaded or soldered ends.

c. Swing Check: **<< Metal; Nonmetallic-to-metal; or _____>>** seats, Class **<< 125; 250; or ___>>**.

d. Swing Check with Closure Control, **<< 2-1/2 inch>>** to **<< 12 inch>>**: Lever and **<< spring; weight; or _____>>**, Class 125.

e. Lubricated Plug: **<< Regular gland; Cylindrical; Threaded; Flanged; or _____>>**, Class **<< 125; 250; or ___>>**.

G. Heating Hot Water Valves:

1. Size **<< 2 inch>>** and Smaller, **<< Brass; Bronze; and _____>>** Valves:

a. **<< Threaded; Flanged; or _____>>** ends.

b. Angle: **<< Bronze; Nonmetallic; or _____>>** disc, Class **<< 125; 150; or ___>>**.

c. Ball: **<< Full; Regular; Reduced; or _____>>** port, **<< one; two; three; or ____>>** piece, **<< brass; bronze; stainless steel; or _____>>** trim.

d. Swing Check: **<< Bronze; Nonmetallic; or _____>>** disc, Class **<< 125; 150; or ___>>**.

2. Size **<< 2-1/2 inch>>** and Larger, Iron Valves:

a. **<< 2-1/2 inch>>** to **<< 4 inch>>**: **<< Threaded; Flanged; or _____>>** ends.

b. Ball: **<< 2-1/2 inch>>** to **<< 10 inch>>**, Class 150.

c. Swing Check: **<< Metal; Nonmetallic-to-metal; or _____>>** seats, Class **<< 125; 250; or ___>>**.

d. Swing Check: **<< 2-1/2 inch>>** to **<< 12 inch>>**, lever and **<< spring; weight; or _____>>** closure control, Class 125.

2.02 GENERAL REQUIREMENTS

A. Valve Pressure and Temperature Ratings: No less than rating indicated; as required for system pressures and temperatures.

B. Valve Sizes: Match upstream piping unless otherwise indicated.

C. Valve Actuator Types:

1. Handwheel: Valves other than quarter-turn types.
2. Hand Lever: Quarter-turn valves **<< 6 inch>>** and smaller**<< except plug valves; _____; or None - N/A>>**.
3. Wrench: Plug valves with square heads.
4. Chainwheel: Device for attachment to valve handwheel, stem, or other actuator, of size and with chain for mounting height, as indicated in the "Valve Installation" Article.

D. Valves in Insulated Piping: Provide **<< 2 inch>>** stem extensions and the following features:

1. Ball Valves: Extended operating handle of non-thermal-conductive material, and protective sleeve that allows operation of valve without breaking the vapor seal or disturbing insulation.
2. Memory Stops: Fully adjustable after insulation is installed.

E. Valve-End Connections:

1. Threaded End Valves: **<<ASME B1.20.1>>**.
2. Pipe Flanges and Flanged Fittings **<< 1/2 inch>>** through **<< 24 inch>>**: **<<ASME B16.5>>**.

F. General ASME Compliance:

DRAFT

1. Ferrous Valve Dimensions and Design Criteria: **<<ASME B16.10>>** and **<<ASME B16.34>>**.
2. Power Piping Valves: **<<ASME B31.1>>**.
3. Building Services Piping Valves: **<<ASME B31.9>>**.

G. Bronze Valves:
1. Fabricate from dezincification resistant material.
2. Copper alloys containing more than 15 percent zinc are not permitted.

H. Valve Bypass and Drain Connections: **<<MSS SP-45>>**.

2.03 BRASS, BALL VALVES

A. Three Piece, Full Port with **<< Brass; Stainless Steel; or _____>>** Trim:
1. Comply with **<<MSS SP-110>>**.
2. WSP Rating: **<< 150 psi>>**.
3. Body: Forged brass.
4. Ends: **<< Threaded; or _____>>**.
5. Seats: **<< PTFE; TFE; or ____>>**.
6. Stem: **<< Brass; Stainless steel; or _____>>**.
7. Ball: **<< Chrome-plated brass; Stainless steel; or _____>><< None - N/A; , vented; or , _____>>**.
8. Manufacturers:
   a. **<< NIBCO >>**.
   b. Watts Regulator Co.
   c. American Valve
   d. Apollo Valves
   e. Milwaukee Valve Co.
   f. Stockham Valve & Fittings
   g. Walworth Co.

2.04 BRONZE, BALL VALVES

A. General:

B. Three Piece, **<< Full Port; Regular Port; or _____>>** with **<< Bronze or Brass; Stainless Steel; or _____>>** Trim:
1. Comply with **<<MSS SP-110>>**.
2. WSP Rating: **<< 150 psi>>**.
3. End Connections: Pipe **<< press; thread; solder; or _____>>**.
4. Seats: PTFE.
5. Stem: **<< Bronze or brass; Stainless steel; or _____>>**.
6. Ball: **<< Stainless steel, vented; Chrome plated brass; or _____>>**.
7. Manufacturers:
   a. Apollo Valves**<< ; ____; or None - N/A>>**:
   b. NIBCO INC**<< ; _____; or None - N/A>>**:
   c. Watts Regulator Co.
   d. American Valve
   e. Apollo Valves

DRAFT

f. Milwaukee Valve Co.
g. Stockham Valve & Fittings
h. Walworth Co.

2.05 STAINLESS STEEL, BALL VALVES

2.06 BRONZE, SWING CHECK VALVES

A. Class 125:
1. Pressure and Temperature Rating: **<<MSS SP-80>>**, **<< Type 3; Type 4; or _____>>**.
2. Design: Y-pattern, horizontal or vertical flow.
3. WSP Rating: **<< 200 psi; or _____ psi>>**.
4. Body: Bronze, **<<ASTM B62>>**.
5. End Connections: **<< Soldered; Threaded; Threaded or soldered; or _____>>**.
6. Disc: **<< Bronze; PTFE; or _____>>**.
7. Manufacturers:
a. Apollo Valves**<< ; _____; or None - N/A>>**:
b. Kitz Corporation of America**<< ; #22; ; #22T; ; _____; or None - N/A>>**:
c. NIBCO INC**<< ; _____; or None - N/A>>**:

2.07 CHAINWHEELS

A. Description: Valve actuation assembly with sprocket rim, brackets, and chain.
1. Brackets: Type, number, size, and fasteners required to mount actuator on valve.
2. Attachment: For connection to **<< ball; butterfly; plug; and _____>>** valve stems.
3. Sprocket Rim with Chain Guides: **<< Ductile iron; Ductile or cast iron; Cast iron; Aluminum; Bronze; or _____>><< include zinc coating; _____; or None - N/A>>**.
4. Chain: **<< Hot-dip galvanized steel; Brass; Stainless steel; or _____>>**. Sized to fit sprocket rim.

B. Manufacturers:
1. **<< Roto Hammer. Model CHAW>>**.

DRAFT

PART 3 EXECUTION

3.01 EXAMINATION

A. Discard all packing materials and verify that valve interior, including threads and flanges, are completely clean without signs of damage or degradation that could result in leakage.

B. Verify valve parts to be fully operational in all positions from closed to fully open.

C. Confirm gasket material to be suitable for the service, to be of correct size, and without defects that could compromise effectiveness.

D. Should valve is determined to be defective, replace with new valve.

3.02 INSTALLATION

A. Provide unions or flanges with valves to facilitate equipment removal and maintenance while maintaining system operation and full accessibility for servicing.

B. Provide separate valve support as required and locate valve with stem at or above center of piping, maintaining unimpeded stem movement.

C. Where valve support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc-rich primer to welds.

D. Install check valves where necessary to maintain direction of flow as follows:
   1. Swing Check: Install horizontal maintaining hinge pin level.
   2. Orient **<< plate-type; center-guided; and _____>>** into horizontal or vertical position, between flanges.

E. Provide chainwheels on operators for valves **<< 4 NPS>>** and larger where located **<< 96 inches>>** or more above finished floor, terminating **<< 60 inches>>** above finished floor.

END OF SECTION 230523

DRAFT

SECTION 230529
HANGERS AND SUPPORTS FOR HVAC PIPING AND EQUIPMENT

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Support and attachment components.

1.02 RELATED REQUIREMENTS

A. Section **<< 033000 - Cast-in-Place Concrete>>**: Concrete equipment pads.

B. Section **<< 055000 - Metal Fabrications>>**: Materials and requirements for fabricated metal supports.

C. Section **<< 230548 - Vibration and Seismic Controls for HVAC>>**.

1.03 REFERENCE STANDARDS

A. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.

B. ASTM A47/A47M - Standard Specification for Ferritic Malleable Iron Castings.

A. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

B. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.

C. ASTM A181/A181M - Standard Specification for Carbon Steel Forgings, for General-Purpose Piping.

D. ASTM A283/A283M - Standard Specification for Low and Intermediate Tensile Strength Carbon Steel Plates.

E. ASTM A395/A395M - Standard Specification for Ferritic Ductile Iron Pressure-Retaining Castings for Use at Elevated Temperatures.

F. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

G. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength.

H. ASTM B633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel.

I. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

J. FM (AG) - FM Approval Guide.

K. MFMA-4 - Metal Framing Standards Publication.

L. MSS SP-58 - Pipe Hangers and Supports - Materials, Design, Manufacture, Selection, Application, and Installation.

M. UL (DIR) - Online Certifications Directory.

N. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

DRAFT

1. Coordinate sizes and arrangement of supports and bases with the actual equipment and components to be installed.
2. Coordinate the work with other trades to provide additional framing and materials required for installation.
3. Coordinate compatibility of support and attachment components with mounting surfaces at the installed locations.
4. Coordinate the arrangement of supports with ductwork, piping, equipment and other potential conflicts installed under other sections or by others.
5. Notify **<<Architect>>** of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Sequencing:
1. Do not install products on or provide attachment to concrete surfaces until concrete has fully cured in accordance with Section **<< 033000; or _____>>**.

1.05 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for **<< channel (strut) framing systems; nonpenetrating rooftop supports; post-installed concrete and masonry anchors; thermal insulated pipe supports; and _____>>**.

C. Shop Drawings: Include details for fabricated hangers and supports**<< where materials or methods other than those indicated are proposed for substitution; upon request; for _____; _____; or None - N/A>>**.
1. Application of protective inserts, saddles, and shields at pipe hangers for each type of insulation and hanger.

D. Design Data: Submit drawings and supporting calculations, signed and sealed by a qualified professional structural engineer

E. Installer's Qualifications: Include evidence of compliance with specified requirements.

F. Manufacturer's Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

G. Welding Certificates.

1.06 QUALITY ASSURANCE

A. Comply with **<< applicable building code; or _____>>**.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Designer's Qualifications for mechanical supports under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the State in which the Project is located.

D. Installer Qualifications for Powder-Actuated Fasteners (when specified): Certified by fastener system manufacturer with current operator's license.

E. Installer Qualifications for Field-Welding: As specified in Section **<< 055000; or _____>>** - Metal Fabrications.

F. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

DRAFT

1.07 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

PART 2 PRODUCTS

2.01 SUPPORT AND ATTACHMENT COMPONENTS

A. General Requirements:
   1. Provide all required hangers, supports, anchors, fasteners, fittings, accessories, and hardware as necessary for the complete installation of plumbing work.
   2. Provide products listed, classified, and labeled as suitable for the purpose intended, where applicable.
   3. Where pipe supports are directly connected to metal piping that is subject to vibration, provide anti-vibration clamps.
   4. Where support and attachment component types and sizes are not indicated, select in accordance with manufacturer's application criteria as required for the load to be supported**<< with a minimum safety factor of _____; _____; or None - N/A>>**. Include consideration for vibration, equipment operation, and shock loads where applicable.
   5. Do not use **<< wire; chain; perforated pipe strap; wood; or _____>>** for permanent supports unless specifically indicated or permitted.
   6. Steel Components: Use corrosion resistant materials suitable for the environment where installed.
      a. Indoor Dry Locations: Use **<< zinc-plated steel; approved equivalent; or _____>>** unless otherwise indicated.
      b. Outdoor and Damp or Wet Indoor Locations: Use **<< galvanized steel; stainless steel; approved equivalent; or _____>>** unless otherwise indicated.
      c. Zinc-Plated Steel: Electroplated in accordance with **<<ASTM B633>>**.
      d. Galvanized Steel: Hot-dip galvanized after fabrication in accordance with **<<ASTM A123/A123M>>** or **<<ASTM A153/A153M>>**.

B. Prefabricated Trapeze-Framed Metal Strut Systems:
   1. Manufacturers:
      a. B-Line, a brand of Eaton Corporation**<< ; _____; or None - N/A>>**:
      b. Custom Strut and Roll Forming, LLC**<< ; _____; or None - N/A>>**:
      c. Elgen Manufacturing Company, Inc**<< ; _____; or None - N/A>>**:
      d. Gripple, Inc**<< ; Fast Track - Low Profile; ; Fast Track - Side Loading; ; Fast Track - Standard; ; _____; or None - N/A>>**:
      e. Unistrut, a brand of Atkore International Inc**<< ; _____; or None - N/A>>**:
      f. Source Limitations: Furnish hardware, fittings, and accessories from single manufacturer.
   2. **<<MFMA-4>>** compliant, pre-fabricated, **<<MSS SP-58>>** type 59**<< , low profile; , _____; or None - N/A>>** continuous-slot metal strut channel with associated tracks, fittings, and related accessories.
   3. **<<MFMA-4>>** compliant, prefabricated, side-loading continuous-slot metal strut channel bracket with associated tracks, fittings, and related accessories.
   4. Strut Channel or Bracket Material:
      a. Indoor Dry Locations: Use **<< painted steel; zinc-plated steel; galvanized steel; or _____>>**.

DRAFT

b. Outdoor and Damp or Wet Indoor Locations: Use **<< galvanized steel; or _____>>**.

5. Minimum Channel Thickness: Steel sheet, **<< 12 gauge, 0.1046 inch; 14 gauge, 0.0747 inch; or ___ gauge, ___ inch>>**.
6. Minimum Channel Dimensions: **<< 1-5/8 inch; 1-1/2 inch; or _____>>** width by **<< 13/16 inch; 1-5/8 inch; or _____>>** height.
7. Accessories: Provide **<< bracket covers; cable basket clips; cable tray clips; clamps; conduit clamps; fire-retarding brackets; j-hooks; protectors; vibration dampeners; and _____>>**.

C. **<< Strut Channels; Low Profile Strut-Channel Brackets; Strut-Channel Brackets; or _____>>**:

1. Manufacturers:
   a. Anvil International.
   b. B-Line, a brand of Eaton Corporation.
   c. Empire Industries, Inc.
   d. ENRICO International Corporation.
   e. Haydon Corporation.
   f. NIBCO INC.
   g. PHD Manufacturing, Inc.
   h. PHS Industries, Inc.
   i. Unistrut, a brand of Atkore International Inc.
   j. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
   k. Source Limitations: Furnish hardware, fittings, and accessories from single manufacturer.
2. **<<ASTM A653/A653M>>** galvanized steel bracket with clamps for surface mounting of piping or plumbing equipment support.
3. Channel or Bracket Kits: Include rods, brackets, end-fixed fittings, covers, clips, and other related hardware required to complete sectional trapeze section for piping or other support.

D. Channel Nuts:

1. Provide **<< carbon steel; malleable iron; 304 stainless steel; 316 stainless steel; or _____>>** channel nut with **<< epoxy copper; epoxy plated; galvanized steel; stainless steel; zinc; or _____>>** finish and **<< long; regular; short; or _____>>** spring.

E. Hanger Rods:

1. Threaded zinc-plated steel unless otherwise indicated.
2. Minimum Size, Unless Otherwise Indicated or Required:
   a. Equipment Supports: **<< 1/2 inch; or _____ inch>>** diameter.
   b. Piping**<< up to 1 inch; _____ inch; _____; or None - N/A>>**: **<< 1/4 inch; or _____ inch>>** diameter.
   c. Piping**<< larger than 1 inch; _____ inch; _____; or None - N/A>>**: **<< 3/8 inch; or _____ inch>>** diameter.
   d. Trapeze Support for Multiple Pipes: **<< 3/8 inch; or _____ inch>>** diameter.

F. Pipe Shields for Insulated Piping:

1. Manufacturers:

DRAFT

a. Anvil International.
b. Buckaroos, Inc.
c. Carpenter and Patterson, Inc.
d. Clement Support Services.
e. Cooper Industries.
f. ERICO International Corporation.
g. National Pipe Hanger Corporation.
h. PHS Industries, Inc.
i. Pipe Shields, Inc.
j. Rilco Manufacturing Co, Inc.
k. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
l. Source Limitations: Furnish hardware, fittings, and accessories from single manufacturer.

2. General Construction and Requirements:
   a. Surface Burning Characteristics: Comply with **<< ASTM E84; UL 723; or _____>>**.
   b. Shields Material: **<< UV-resistant polypropylene with glass fill; PVC; or _____>>**.
   c. Maximum Insulated Pipe Outer Diameter: **<< 12-5/8 inch; or ____ inch>>**.
   d. Minimum Service Temperature: **<< Minus 40 degrees F; or ____ degrees F>>**.
   e. Maximum Service Temperature: **<< 178 degrees F; or ____ degrees F>>**.
   f. Pipe shields to be provided at hanger, support, and guide locations on pipe requiring insulation or additional support.

G. Pipe Supports:
   1. Material: **<<ASTM A395/A395M>>** ductile iron, **<<ASTM A36/A36M>>** carbon steel, **<<ASTM A47/A47M>>** malleable iron, **<<ASTM A181/A181M>>** forged steel, or **<<ASTM A283/A283M>>** steel.
   2. Liquid Temperatures Up To **<< 122 degrees F; or ____ degrees F>>**:
      a. Overhead Support: **<<MSS SP-58>><< Types 1, 3 through 12; Types 24 and 26; or ____>>**.
      b. Support From Below: **<<MSS SP-58>>** Types 35 through 38.

H. Nonpenetrating Pipe Supports:

I. Pipe Stanchions:
   1. Material: Malleable iron, **<<ASTM A47/A47M>>**; or carbon steel, **<<ASTM A36/A36M>>**.
   2. Provide coated or plated saddles to isolate steel hangers from dissimilar metal tube or pipe.
   3. For pipe runs, use stanchions of same type and material where vertical adjustment is required for stationary pipe.

J. Beam Clamps:
   1. **<<MSS SP-58>>** types **<< 19 through 23, 25 or 27 through 30; or ____>>** based on required load.
   2. Beam C-Clamp: **<<MSS SP-58>>** type 23, **<< malleable iron; steel; and _____>>** with **<< plain; stainless steel; zinc; and _____>>** finish.
   3. Small or Junior Beam Clamp: **<<MSS SP-58>>** type 19, malleable iron with **<< plain; zinc; or _____>>** finish. For inverted usage provide manufacturer listed size(s).

DRAFT

4. Wide Mouth Beam Clamp: **<<MSS SP-58>>** type 19, malleable iron with plain finish.
5. Centerload Beam Clamp with Extension Piece: **<<MSS SP-58>>** type 30, malleable iron with plain finish.
6. **<<FM (AG)>>** and **<<UL (DIR)>>** Approved Beam Clamp: **<<MSS SP-58>>** type 19, **<< plain finish; plated finish; or _____>>**,
7. Provide clamps with hardened steel cup-point set screws and lock-nuts for anchoring in place.
8. Material: **<<ASTM A395/A395M>>** ductile iron, **<<ASTM A36/A36M>>** carbon steel, **<<ASTM A47/A47M>>** malleable iron, **<<ASTM A181/A181M>>** forged steel, or **<<ASTM A283/A283M>>** steel.

K. Riser Clamps:
1. For insulated pipe runs, provide two bolt-type clamps designed for installation under insulation.
2. **<<MSS SP-58>>** type 1 or 8, **<< carbon steel; steel; or _____>>** with **<< epoxy plated; plain; stainless steel; zinc plated; or _____>>** finish.
3. Medium Split Horizontal Pipe Clamp: **<<MSS SP-58>>** type 4, **<< carbon steel; stainless steel; or _____>>** with **<< epoxy plated; plain; stainless steel; zinc plated; or _____>>** finish.
4. Copper Tube Pipe Clamp: **<<MSS SP-58>>** type 8, epoxy plated copper.
5. **<<UL (DIR)>>** listed: Pipe sizes **<< 1/2 to 8 inch; 3/4 to 8 inch; 1/2 to 12 inch; or _____ inch>>**.

L. U-Bolts:
1. **<<MSS SP-58>>** Type 24, **<< carbon steel; zinc-coated carbon steel; 304 stainless steel; or _____>>** u-bolt for pipe support or anchoring.

M. Pipe Hangers:
1. Split Ring Hangers:
   a. Provide **<< hinged split ring; yoke roller; and _____>>** hanger with **<< epoxy copper; plain; zinc; or _____>>** finish.
   b. Material: **<<ASTM A47/A47M>>** malleable iron or **<<ASTM A36/A36M>>** carbon steel.
   c. Provide hanger rod and nuts of the same type and material for a given pipe run.
   d. Provide coated or plated hangers to isolate steel hangers from dissimilar metal tube or pipe.
2. Swivel Ring Hangers, Adjustable:
   a. **<<MSS SP-58>>** Type 10, epoxy-painted, zinc-colored.
   b. Material: **<<ASTM A395/A395M>>** ductile iron, **<<ASTM A36/A36M>>** carbon steel, **<<ASTM A47/A47M>>** malleable iron, **<<ASTM A181/A181M>>** forged steel, or **<<ASTM A283/A283M>>** steel.
   c. **<<FM (AG)>>** and **<<UL (DIR)>>** listed for specific pipe size runs and loads.
   d. Felt-Lining: Provide for uninsulated pipe to reduce noise and prevent static issues.
3. Clevis Hangers, Adjustable:
   a. Copper Tube: **<<MSS SP-58>>** Type 1, epoxy-plated copper.
   b. Felt-Lined: **<<MSS SP-58>>** Type 1, **<< epoxy-plated, zinc; zinc-plated, silicone-free carbon steel; or _____>>**.
   c. Light-Duty: **<<MSS SP-58>>** Type 1, **<< plain finish; zinc-plated; zinc-colored, epoxy plated; or _____>>**.

DRAFT

d. Standard-Duty: **<<MSS SP-58>>** Type 1, **<< plain finish; stainless steel; zinc-plated; zinc-colored, epoxy plated; or _____>>**.

e. **<<UL (DIR)>>** listed: Pipe sizes **<< 1/2 to 4 inch; 3/4 to 4 inch; 2-1/2 to 8 inch; or _____ inch>>**.

N. Pipe Alignment Guides:

1. Pipe Sizes **<< 8 inch; or ____ inch>>** and Smaller: Spider or sleeve type.
2. Pipe Sizes **<< 10 inch; or ____ inch>>** and Larger: Roller type.

O. Dielectric Barriers: Provide between metallic supports and metallic piping and associated items of dissimilar type; acceptable dielectric barriers include rubber or plastic sheets or coatings attached securely to pipe or item.

P. Rooftop Supports for Low-Slope Roofs:

1. Products:
   a. Curb Plus, Inc; CPES-X
   b. Kees; Equipment Support Model SF.
   c. Pate Company; Equipment Support ES2.
   d. Portals Plus; ER-2A.
   e. Roof Products and Systems; Equipment Rails ER-2B.
   f. Thybar Corporation; TEMS 3.
   g. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
2. Provide carbon steel pedestals with integral base that mount to roof deck, with support fixtures as specified. Factory fabricated 18 gauge counterflashing fastened with tek-screws and neoprene washers.
3. Structure: Internal C-channel reinforcement on 12 inch centers with 6 inch spreader channels on alternating 12 inch centers.
4. Base Sizes: As required to distribute load sufficiently to prevent indentation of roofing assembly.
5. Attachment/Support Fixtures: As recommended by manufacturer, same type as indicated for equivalent indoor hangers and supports.
6. Mounting Height: Provide minimum clearance of 12 inches under supported component to top of roofing.

Q. Anchors and Fasteners:

1. Manufacturers - Mechanical Anchors:
   a. FNW**<< ; 7502; ; _____; or None - N/A>>**:
   b. Hilti, Inc**<< ; _____; or None - N/A>>**:
   c. ITW Red Head, a division of Illinois Tool Works, Inc**<< ; _____; or None - N/A>>**:
   d. MKT Fastening**<< ; _____; or None - N/A>>**:
   e. Powers Fasteners, Inc**<< ; _____; or None - N/A>>**:
   f. Simpson Strong-Tie Company Inc**<< ; _____; or None - N/A>>**:
2. Unless otherwise indicated and where not otherwise restricted, use the anchor and fastener types indicated for the specified applications.
3. Concrete: Use **<< preset concrete inserts; expansion anchors; screw anchors; or _____>>**.
4. Solid or Grout-Filled Masonry: Use **<< expansion anchors; screw anchors; or _____>>**.

DRAFT

5. Hollow Masonry: Use **<< toggle bolts; or _____>>**.
6. Hollow Stud Walls: Use **<< toggle bolts; or _____>>**.
7. Beam Ceiling Flanges: **<<ASTM A47/A47M>>** Grade 32510, **<< malleable iron; stainless steel; or _____>>** with **<< copper; plain; stainless steel; zinc; or _____>>** finish.
8. Preset Concrete Inserts: Continuous metal channel (strut) and spot inserts specifically designed to be cast in concrete ceilings, walls, and floors.
   a. Comply with **<<MFMA-4>>**.
   b. Channel Material: Use **<< galvanized steel; or _____>>**.
   c. Minimum Channel Thickness: Steel sheet, **<< 12 gauge, 0.1046 inch; or ___ gauge, ___ inch>>** minimum base metal thickness.
   d. Manufacturer: Same as manufacturer of metal channel (strut) framing system.

R. Pipe Installation Accessories:
1. Copper Pipe Supports:
   a. Manufacturers:
      1) HoldRite, a brand of Reliance Worldwide Corporation**<< ; _____; or None - N/A>>**:
      2) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
      3) Source Limitations: Furnish hardware, fittings, and accessories from single manufacturer.
2. Thermal Insulated, Surface-Mounted Pipe Supports:
   a. Manufacturers:
      1) FNW**<< ; 7701; ; 7706; ; _____; or None - N/A>>**:
      2) HoldRite, a brand of Reliance Worldwide Corporation**<< ; _____; or None - N/A>>**:
      3) Source Limitations: Furnish hardware, fittings, and accessories from single manufacturer.
   b. Material: **<< Carbon steel; Malleable iron; 304 Stainless steel; 316 Stainless steel; or _____>>** with **<< epoxy copper; epoxy plated; galvanized steel; stainless steel; zinc; or _____>>** finish.
   c. Weather and UV light resistant foam, plastic, or rubber material with built-in strut. Maximum Load: **<< 50 lb; or _____ lb>>** for single pipe or multiple landed on top strut.
3. Overhead Pipe Supports:
   a. Manufacturers:
      1) HoldRite, a brand of Reliance Worldwide Corporation**<< ; _____; or None - N/A>>**:
      2) Source Limitations: Furnish hardware, fittings, and accessories from single manufacturer.
4. Plenum Pipe Supports:
   a. Manufacturers:
      1) HoldRite, a brand of Reliance Worldwide Corporation**<< ; _____; or None - N/A>>**:
      2) Source Limitations: Furnish hardware, fittings, and accessories from single manufacturer.
5. Inserts and Clamps:

DRAFT

a. Manufacturers:
   1) HoldRite, a brand of Reliance Worldwide Corporation**<< ; _____; or None - N/A>>**:
   2) Source Limitations: Furnish hardware, fittings, and accessories from single manufacturer.

2.02 ACCESSORIES

A. Structural Steel: ASTM A36/A36M, carbon steel plates, shapes, and bars; black and galvanized.

B. Grout: ASTM C1107, factory mixed, pre-packaged, dry, hydraulic cement, non-shrink, nonmetallic, non-staining, noncorrosive, and nongaseous grout with a 5000 psi rating for interior and exterior applications.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that mounting surfaces are ready to receive support and attachment components.

C. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install anchors and fasteners in accordance with ICC Evaluation Services, LLC (ICC-ES) evaluation report conditions of use where applicable.

C. For support from floor deck under 4" piping
   1. Mechanical expansion anchors: Self-drilling type expansion shields or machine bolt drop-in anchors for drilled holes, equal to ITT Phillips Anchors “Red Head.” Fasteners to floor slabs shall be vibration and shock resistant. Load applied to fasteners shall not exceed 25 percent of manufacturer’s stated load capacity in 3500 psi (24,000 kPa) concrete. Provide zinc-coated anchors for indoor applications and stainless-steel anchors for outdoor applications

D. Provide independent support from building structure. Do not provide support from piping, ductwork, conduit, or other systems.

E. Unless specifically indicated or approved by **<<Architect>>**, do not provide support from suspended ceiling support system or ceiling grid.

F. Unless specifically indicated or approved by **<<Architect>>**, do not provide support from roof deck.

G. Do not penetrate or otherwise notch or cut structural members without approval of **<< Structural Engineer; Architect; or _____>>**.

H. Field-Welding (where approved by **<<Architect>>**): Comply with Section **<< 055000; or _____>>** - Metal Fabrications.

I. Provide thermal insulated pipe supports complete with hangers and accessories. Install thermal insulated pipe supports during the installation of the piping system.

J. Equipment Support and Attachment:
   1. Use **<< metal fabricated supports; supports assembled from metal channel (strut); or _____>>** to support equipment as required.

DRAFT

2. Use **<< metal channel (strut) secured to studs; or _____>>** to support equipment surface-mounted on hollow stud walls**<< when wall strength is not sufficient to resist pull-out; _____; or None - N/A>>**.
3. Use **<< metal channel (strut); or _____>>** to support surface-mounted equipment in wet or damp locations to provide space between equipment and mounting surface.
4. Unless otherwise indicated, mount floor-mounted equipment on properly sized **<< 3 inch; 4 inch; or _____>>** high concrete pad constructed in accordance with Section **<< 033000; or _____>>** - Cast in Place Concrete.
5. Securely fasten floor-mounted equipment. Do not install equipment such that it relies on its own weight for support.

K. Preset Concrete Inserts: Use manufacturer-provided closure strips to inhibit concrete seepage during concrete pour.

L. Secure fasteners according to manufacturer's recommended torque settings.

M. Remove temporary supports.

3.03 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>** for additional requirements.

B. Inspect support and attachment components for damage and defects.

C. Repair cuts and abrasions in galvanized finishes using zinc-rich paint recommended by manufacturer. Replace components that exhibit signs of corrosion.

D. Correct deficiencies and replace damaged or defective support and attachment components.

END OF SECTION 230529

DRAFT

SECTION 230533
HEAT TRACING FOR HVAC PIPING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Self-regulating parallel resistance electric heating cable.

B. Controls.

1.02 RELATED REQUIREMENTS

A. Section **<< 230553 - Identification for HVAC Piping and Equipment>>**.

B. Section **<< 230719 - HVAC Piping Insulation>>**.

C. Section **<< 230913 - Instrumentation and Control Devices for HVAC>>**.

D. Section **<< 230923 - Direct-Digital Control System for HVAC>>**.

E. Section **<< 230993 - Sequence of Operations for HVAC Controls>>**.

F. Section **<< 232113 - Hydronic Piping>>**.

G. Section **<< 232114 - Hydronic Specialties>>**.

H. Section **<< 260526 - Grounding and Bonding for Electrical Systems>>**.

I. Section **<< 260533 - Conduit for Electrical Systems>>**.

J. Section **<< 260534 - Boxes for Electrical Systems>>**.

K. Section **<< 260583 - Wiring Connections>>**.

1.03 REFERENCE STANDARDS

A. IEEE 515.1 - IEEE Standard for the Testing, Design, Installation, and Maintenance of Electrical Resistance Trace Heating for Commercial Applications.

B. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

C. NFPA 70 - National Electrical Code.

D. UL (DIR) - Online Certifications Directory.

E. UL 1053 - Ground-Fault Sensing and Relaying Equipment.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Conduct a preinstallation meeting **<< one week; at least one week; _____; or None - N/A>>** prior to the start of the work of this section; require attendance by all affected installers.

B. Sequencing: Ensure that utility connections are achieved in an orderly and expeditious manner.

C. Coordinate the work with other trades to provide ground fault protection for electric heat tracing circuits as required by **<<NFPA 70>>**.

D. Coordinate the work with other trades to provide circuit breaker ratings suitable for installed circuit lengths.

1.05 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>**, for submittal procedures.

DRAFT

B. Product Data: Provide data for **<< electric heat tracing; and _____>>**.

C. Shop Drawings: Indicate **<< electric heat tracing; and _____>>** layout, **<< electrical terminations; thermostats; controls; branch circuit connections; and _____>>**.

D. Manufacturer's Installation Instructions: Indicate installation instructions and recommendations.

E. Field Quality Control Submittals: Indicate **<< test reports; inspection reports; and _____>>**.

F. Manufacturer's Qualification Statement.

G. Operation and Maintenance Data: Include manufacturer's descriptive literature, operating instructions of equipment and controls, maintenance and repair data, and parts listings.

H. Warranty: Submit manufacturer warranty and ensure that forms have been completed in **<<Owner>>**'s name and registered with manufacturer.

1.06 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with at least **<< three; or _____>>** years of**<< documented; _____; or None - N/A>>** experience.

B. Installer Qualifications: Company specializing in performing work of the type specified and with at least **<< three; or _____>>** years of**<< documented; _____; or None - N/A>>** experience**<< and approved by manufacturer; _____; or None - N/A>>**.

C. Copies of Documents at Project Site: Maintain at the project site a copy of each referenced document that prescribes execution requirements.

1.07 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Provide **<< two; one; or _____>>** year manufacturer warranty for **<< cables; connection kits; accessories; controls; and _____>>**.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Chromalox, Inc**<< ; _____; or None - N/A>>**:

B. Emerson Electric Co**<< ; _____; or None - N/A>>**:

C. nVent RAYCHEM**<< ; _____; or None - N/A>>**:

D. Thermon Manufacturing Company**<< ; _____; or None - N/A>>**:

2.02 SELF-REGULATING PARALLEL RESISTANCE ELECTRIC HEATING CABLE

A. Provide products listed, classified, and labeled by **<< UL (DIR); ITS (DIR); or testing firm acceptable to authorities having jurisdiction (AHJ)>>**.

B. Factory Rating and Testing: Comply with **<<IEEE 515.1>>**.

C. Heating Element:

1. Provide pair of parallel No. 16 **<< tinned; nickel coated; or _____>>** stranded copper bus wires embedded in cross linked conductive polymer core with varying heat output in response to temperature along its length.
2. Terminations: Waterproof, factory assembled, non-heating leads with connector at one end and water-tight seal at opposite end.

DRAFT

3. Capable of crossing over itself without overheating.

D. Insulated Jacket: Flame retardant polyolefin.

E. Cable Cover: Provide **<< tinned copper; stainless steel; braid; or _____>>** and **<< polyolefin; or _____>>** outer jacket**<< with UV inhibitor; _____; or None - N/A>>**.

F. Maximum Power-On Operating Temperature: **<< 150 degrees F; or ___ degrees F>>**.

G. Maximum Power-Off Exposure Temperature: **<< 185 degrees F; or __ degrees F>>**.

H. Electrical Characteristics:

1. **<< 2 W/lineal ft>>**for pipe sizes up to NPS 3
2. 4 W/lineal ft for pipe sizesNPS 4 to NPS 8
3. 6 W/lineal ft for pipe sizesNPS 10 to NPS 14
4. 8 W/lineal ft for pipe sizesNPS 16 to NPS 20

2.03 OUTER JACKET MARKINGS

A. Name of manufacturer, trademark, or other recognized symbol of identification.

B. Catalog number, reference number, or model.

C. Month and year of manufacture, date coding, applicable serial number, or equivalent.

D. Agency listing or approval.

E. Applicable environmental or area use requirements, such as NEMA 4, Type 4, IP ratings, and hazardous (classified) location markings including temperature rating.

F. Any applicable warning/caution statements such as "WARNING: De-energize circuit before removing cover.

2.04 CONNECTION KITS

A. Provide **<< power connection; splice/tee; end seal; and _____>>** kits compatible with the heating cable and without requiring cutting of the cable core to expose bus wires.

B. Furnish with NEMA 4X rating for prevention of corrosion and water ingress.

C. Provide UV stabilized components.

2.05 ACCESSORIES

A. Provide Accessories As Indicated or As Required for Complete Installation, Including but Not Limited To:

1. High temperature, glass filament tape for attachment of heating cable to metal piping.
2. Aluminum self-adhesive tape for attachment of heating cable to plastic piping.
3. Heat-conductive putty.
4. Cable ties.
5. Silicone end seals and splice kits.
6. Installation clips.
7. Warning labels for attachment to exterior of piping insulation. Refer to Section **<< 230553>>**.

2.06 CONTROLS

A. Manufacturers:

1. Chromalox, Inc**<< ; _____; or None - N/A>>**:
2. Frio**<< ; _____; or None - N/A>>**:

DRAFT

3. nVent RAYCHEM**<< ; _____; or None - N/A>>**:
4. Thermon Manufacturing Company**<< ; _____; or None - N/A>>**:

B. Pipe Mounted Thermostats:
1. Remote bulb unit with adjustable temperature range from **<< 30 to 50 degrees F; or _____ degrees F>>**.
2. Snap-action, open-on-rise, single pole switch with minimum current rating adequate for the connected cable.
3. Remote bulb on capillary, **<< resistance temperature device (RTD); thermistor; or _____>>** for direct sensing of pipe wall temperature.
4. Control Enclosure: Corrosion resistant and waterproof.

C. System Controller:
1. **<<NEMA EN 10250>><< Type 4; Type 4X; or ____>>** enclosure.
2. Microprocessor based.
3. User interface with status indicator lights.
4. RS-485 communications port.
5. BACnet connectivity via gateway.
6. Diagnostic self-testing with field-adjustable testing interval.
7. Ground fault equipment protection (GFEP) complying with **<<UL 1053>>**.
8. Available Control Modes:
   a. ON/OFF.
   b. Proportional.
   c. Ambient proportional.
9. Manual ON/OFF override control.
10. Dry contact for alarm reporting.
11. Alarms:
    a. Ground fault.
    b. Sensor failure.
    c. Low temperature.
    d. High temperature.
    e. Low current.
    f. High current.
    g. Communications loss.
    h. Power loss.

PART 3 EXECUTION

3.01 INSTALLERS

A. Installer List:

3.02 EXAMINATION

A. Verify that **<< piping; equipment; and _____>><< is; are; or ____>>** ready to receive work.

B. Verify field measurements are as indicated on **<< shop drawings; drawings; or _____>>**.

C. Verify required power is available, in proper location, and ready for use.

DRAFT

3.03 PREPARATION

A. Clean all surfaces prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer.

3.04 INSTALLATION

A. Install in accordance with manufacturer's recommendations.

B. Comply with installation requirements of **<<IEEE 515.1>>** and **<<NFPA 70>>**, Article 427.

C. Apply heating cable linearly on pipe with fiberglass tape only after piping has successfully completed any required pressure testing.

D. Comply with all national and local code requirements.

E. Identification:

1. After thermal insulation installation, apply external pipeline decals to indicate presence of the thermal insulation cladding at intervals not to exceed **<< 20 ft; or __ ft>>** including cladding over each valve or other equipment that may require maintenance.

3.05 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Perform start-up by **<< factory technician; factory representative; or _____>>** as per **<< Owner's requirements; or _____>>**.

C. Field Testing and Inspections:

1. Commission system in accordance with **<< installation and operation manual; or _____>>**.
2. Inspect for sources of water entry and proper sealing.
3. Inspect weather barrier to confirm that no sharp edges are contacting the trace heating.
4. Minimum Acceptable Insulation Resistance: **<< 20; or _____>>** megohms or greater at a test voltage of 2500 VDC for polymer insulated trace heaters.
5. Test heating cable integrity with megohmmeter at the following intervals:
   a. Prior to initial start-up (commissioning).
6. Measure voltage and current at each unit.
7. Controls:

3.06 CLOSEOUT ACTIVITIES

A. See Section **<< 017800 - Closeout Submittals>>**.

B. Demonstrate operation of controls.

3.07 PROTECTION

A. Protect installed products from damage until Date of Substantial Completion.

END OF SECTION 230533

DRAFT

SECTION 230548
VIBRATION AND SEISMIC CONTROLS FOR HVAC

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Vibration isolation requirements.

B. Vibration-isolated equipment support bases.

C. Vibration isolators.

D. Vibration-isolated and/or seismically engineered roof curbs.

1.02 RELATED REQUIREMENTS

A. Section **<< 033000 - Cast-in-Place Concrete>>**.

B. Section **<< 055000 - Metal Fabrications>>**: Materials and requirements for fabricated metal supports.

C. Section **<< 230529 - Hangers and Supports for HVAC Piping and Equipment>>**.

1.03 DEFINITIONS

A. HVAC Component: Where referenced in this section in regards to seismic controls, applies to any portion of the HVAC system subject to seismic evaluation in accordance with applicable codes, including distributed systems (e.g., ductwork, piping).

B. Seismic Restraint: Structural members or assemblies of members or manufactured elements specifically designed and applied for transmitting seismic forces between components and the seismic force-resisting system of the structure.

1.04 REFERENCE STANDARDS

A. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures.

B. ASHRAE (HVACA) - ASHRAE Handbook - HVAC Applications.

C. ICC (IBC) - International Building Code.

D. SMACNA (SRM) - Seismic Restraint Manual Guidelines for Mechanical Systems.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate selection and arrangement of vibration isolation and/or seismic control components with the actual equipment to be installed.
2. Coordinate the work with other trades to provide additional framing and materials required for installation.
3. Coordinate compatibility of support and attachment components with mounting surfaces at the installed locations.
4. Notify **<<Architect>>** of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Sequencing:

1. Do not install products on or provide attachment to concrete surfaces until concrete has fully cured in accordance with Section **<< 033000; or _____>>**.

DRAFT

1.06 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Design Documents: Prepare and submit all information required for plan review and permitting by authorities having jurisdiction, including but not limited to floor plans, details, and calculations.

C. Product Data: Provide manufacturer's standard catalog pages and data sheets for products, including materials, fabrication details, dimensions, and finishes.

1. Vibration Isolators: Include rated load capacities and deflections; include information on color coding or other identification methods for spring element load capacities.

D. Shop Drawings - Vibration Isolation Systems:

1. Include dimensioned plan views and sections indicating proposed arrangement of vibration isolators; indicate equipment weights and static deflections.
2. Vibration-Isolated Equipment Support Bases: Include base weights, including concrete fill where applicable; indicate equipment mounting provisions.

E. Evaluation Reports: For products specified as requiring evaluation and recognition by a qualified evaluation service, provide current evaluation reports.

F. Manufacturer's Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

G. Evidence of qualifications for manufacturer.

H. Manufacturer's detailed field testing and inspection procedures.

I. Field quality control test reports.

1.07 QUALITY ASSURANCE

A. Comply with **<< applicable building code; ICC (IBC); or _____>>**.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum **<< three; or _____>>** years**<< documented; _____; or None - N/A>>** experience.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

PART 2 PRODUCTS

2.01 VIBRATION ISOLATION REQUIREMENTS

A. **<< Provide; Design and provide; or _____>>** vibration isolation systems to reduce vibration transmission to supporting structure from vibration-producing HVAC equipment and/or HVAC connections to vibration-isolated equipment.

B. Comply with applicable general recommendations of **<<ASHRAE (HVACA)>>**, where not in conflict with other specified requirements:

C. General Requirements:

1. Select vibration isolators to provide required static deflection.

DRAFT

2. Select vibration isolators for uniform deflection based on distributed operating weight of actual installed equipment.
3. Select vibration isolators for outdoor equipment to comply with wind design requirements.
4. Select vibration-isolated equipment support bases and associated vibration isolators to provide minimum **<< 2-inch; or ____-inch>>** operating clearance beneath base unless otherwise indicated.

D. Piping Isolation:
1. Provide vibration isolators for piping supports:
   a. Located in equipment rooms.
   b. Located within **<< 50 feet; _____ feet; or _____>>** of connected vibration-isolated equipment and pressure-regulating valve (PRV) stations.
   c. For piping over **<< 2 inch; or _____ inch>>** located below or within **<< 50 feet; _____ feet; or _____>>** of **<< noise-sensitive areas indicated; or _____>>**.
2. Minimum Static Deflection:
   a. First **<< Three; or _____>>** Supports Closest to Isolated Equipment: Same as static deflection of equipment; maximum of **<< 2 inch; 3 inch; _____ inch; or _____>>** deflection required.
   b. Remainder of Supports: **<< 0.75 inch; _____ inch; or _____>>** deflection unless otherwise indicated.
3. Suspended Piping, Nonseismic Applications: Use **<< resilient material isolator hangers; spring isolator hangers; combination resilient material/spring isolator hangers; or _____>>**.
4. Suspended Piping, Seismic Applications: Use **<< seismic type resilient material isolator hangers; seismic type spring isolator hangers; seismic type combination resilient material/spring isolator hangers; or _____>>**.
5. Floor-Mounted Piping, Nonseismic Applications: Use **<< open (unhoused) spring isolators; or _____>>**.
6. Floor-Mounted Piping, Seismic Applications: Use **<< seismic type restrained spring isolators; or _____>>**.
7. Use **<< modular seal; approved resilient material; or _____>>** where vibration-isolated piping penetrates building elements (e.g., walls, floors) arranged to prevent vibration transmission to structure.

E. Thrust Restraint Applications:
1. Use thrust restraints to resist horizontal motion due to thrust for fan heads, suspended fans, and base-mounted and suspended air handling equipment operating at **<< 2.0 inches wg; or ____ inches wg>>** or greater total static pressure.
2. Minimum Static Deflection: Same as static deflection of equipment.
3. Limit lateral movement to **<< 0.25 inch; or _____ inch>>** or less unless otherwise indicated.

2.02 VIBRATION-ISOLATED EQUIPMENT SUPPORT BASES

A. Manufacturers:
1. Vibration-Isolated Equipment Support Bases:
   a. Kinetics Noise Control, Inc**<< ; _____; or None - N/A>>**: www.kineticsnoise.com/#sle.
   b. Mason Industries**<< ; _____; or None - N/A>>**: www.mason-ind.com/#sle.

DRAFT

c. Vibration Eliminator Company, Inc**<< ; _____; or None - N/A>>**: www.veco-nyc.com/#sle.

d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2. Source Limitations: Furnish vibration-isolated equipment support bases and associated components and accessories produced by **<< a single manufacturer; the same manufacturer as the vibration isolators; or _____>>** and obtained from a single supplier.

B. Vibration-Isolated Structural Steel Bases:

1. Description: Engineered structural steel frames with integral mounting provisions for vibration isolators, sized and configured for mounting of equipment.
2. Centrifugal Fan Applications: Provide adjustable motor slide rails as required.

C. Vibration-Isolated Concrete Inertia Bases:

1. Description: Concrete-filled engineered steel forms with integral mounting provisions for vibration isolators, sized and configured for mounting of equipment.
2. Minimum Base Depth: **<< 6 inches; or ____ inches>>**.
3. Minimum Base Mass (Including Concrete): **<< 1.5 times; or _____>>** weight of supported equipment.
4. Concrete Reinforcement: Welded or tied reinforcing bars running both ways in a single layer.
5. Concrete: Filled on site with minimum **<< 3000 psi>>** concrete in accordance with Section **<< 033000; or _____>>**.
6. Centrifugal Fan Applications: Provide adjustable motor slide rails as required.
7. Pump Applications: Size and configure bases for piping elbow supports as required.

2.03 VIBRATION ISOLATORS

A. Manufacturers:

1. Vibration Isolators:
   a. Kinetics Noise Control, Inc**<< ; _____; or None - N/A>>**: www.kineticsnoise.com/#sle.
   b. Mason Industries**<< ; _____; or None - N/A>>**: www.mason-ind.com/#sle.
   c. Vibration Eliminator Company, Inc**<< ; _____; or None - N/A>>**: www.veco-nyc.com/#sle.
   d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
2. Source Limitations: Furnish vibration-isolators and associated accessories produced by a single manufacturer and obtained from a single supplier.

B. General Requirements:

1. Resilient Materials for Vibration Isolators: Oil, ozone, and oxidant resistant.
2. Spring Elements for Spring Isolators:
   a. Color code or otherwise identify springs to indicate load capacity.
   b. Lateral Stability: Minimum lateral stiffness to vertical stiffness ratio of 0.8.
   c. Designed to operate in the linear portion of their load versus deflection curve over deflection range of not less than 50 percent above specified deflection.
   d. Designed to provide additional travel to solid of not less than 50 percent of rated deflection at rated load.

DRAFT

e. Selected to provide designed deflection of not less than 75 percent of specified deflection.

f. Selected to function without undue stress or overloading.

C. Vibration Isolators for Nonseismic Applications:

1. **<< Type _____ - ; _____ ; or None - N/A>>**Resilient Material Isolator Pads:
   a. Description: Single or multiple layer pads utilizing **<< elastomeric (e.g., neoprene, rubber); fiberglass; or _____>>** isolator material.
   b. Pad Thickness: As required for specified minimum static deflection; minimum **<< 0.25 inch>>** thickness.
   c. Multiple Layer Pads: Provide bonded, galvanized sheet metal separation plate between each layer.
2. **<< Type _____ - ; _____ ; or None - N/A>>**Resilient Material Isolator Mounts, Nonseismic:
   a. Description: Mounting assemblies for bolting equipment to supporting structure utilizing **<< elastomeric (e.g., neoprene, rubber); fiberglass; or _____>>** isolator material**<< ; fail-safe type; ; _____; or None - N/A>>**.
3. **<< Type _____ - ; _____ ; or None - N/A>>**Open (Unhoused) Spring Isolators:
   a. Description: Isolator assembly consisting of single or multiple free-standing, laterally stable steel spring(s) without a housing.
   b. Bottom Load Plate: Nonskid, molded, elastomeric isolator material or steel with nonskid elastomeric isolator pad with provisions for bolting to supporting structure as required.
   c. Furnished with integral leveling device for positioning and securing supported equipment.
4. **<< Type _____ - ; _____ ; or None - N/A>>**Housed Spring Isolators:
   a. Description: Isolator assembly consisting of single or multiple free-standing, laterally stable steel spring(s) within a metal housing.
   b. Furnished with integral elastomeric snubbing elements, **<< nonadjustable type; adjustable type; nonadjustable or adjustable type as indicated; or _____>>**, for limiting equipment movement and preventing metal-to-metal contact between housing elements.
   c. Bottom Load Plate: Steel with nonskid, elastomeric isolator pad with provisions for bolting to supporting structure as required.
   d. Furnished with integral leveling device for positioning and securing supported equipment.
5. **<< Type _____ - ; _____ ; or None - N/A>>**Restrained Spring Isolators, Nonseismic:
   a. Description: Isolator assembly consisting of single or multiple free-standing, laterally stable steel spring(s) within a metal housing designed to prevent movement of supported equipment above an adjustable vertical limit stop.
   b. Bottom Load Plate: Steel with nonskid elastomeric isolator pad with provisions for bolting to supporting structure as required.
   c. Furnished with integral leveling device for positioning and securing supported equipment.
   d. Provides constant free and operating height.
6. **<< Type _____ - ; _____ ; or None - N/A>>**Resilient Material Isolator Hangers, Nonseismic:

DRAFT

a. Description: Isolator assembly designed for installation in hanger rod suspension system utilizing **<< elastomeric (e.g., neoprene, rubber); fiberglass; or _____>>** isolator material for the lower hanger rod connection.

7. **<< Type _____ - ; _____ ; or None - N/A>>**Spring Isolator Hangers, Nonseismic:
   a. Description: Isolator assembly designed for installation in hanger rod suspension system utilizing single or multiple free-standing, laterally stable steel spring(s) in series with an elastomeric element for the lower hanger rod connection.
   b. Designed to accommodate misalignment of bottom hanger rod up to 30 degrees (plus/minus 15 degrees) without short-circuiting of isolation.
8. **<< Type _____ - ; _____ ; or None - N/A>>**Combination Resilient Material/Spring Isolator Hangers, Nonseismic:
   a. Description: Isolator assembly designed for installation in hanger rod suspension system utilizing single or multiple free-standing, laterally stable steel spring(s) for the lower hanger rod connection and **<< elastomeric (e.g., neoprene, rubber); fiberglass; or _____>>** isolator material for the upper hanger rod connection.
   b. Designed to accommodate misalignment of bottom hanger rod up to 30 degrees (plus/minus 15 degrees) without short-circuiting of isolation.
9. **<< Type _____ - ; _____ ; or None - N/A>>**Thrust Restraints:
   a. Description: Assembly utilizing free-standing, laterally stable steel spring designed for resisting horizontal motion due to thrust (e.g., air pressure from a fan), and intended for installation in pairs.

2.04 ACOUSTICAL AND VIBRATION ISOLATORS

A. Manufacturers:
   1. Acoustical and Vibration Isolators:
      a. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
   2. Source Limitations: Furnish isolators and associated accessories produced by a single manufacturer and obtained from a single supplier.

B. General Requirements:
   1. Acoustical Isolation System: Through-stud isolators, pipe clamps, riser clamp pads, neoprene and felt lining material and associated support brackets.

2.05 VIBRATION-ISOLATED AND/OR SEISMICALLY ENGINEERED ROOF CURBS

A. Manufacturers:
   1. Vibration-Isolated and/or Seismically Engineered Roof Curbs:
      a. Kinetics Noise Control, Inc**<< ; _____; or None - N/A>>**: www.kineticsnoise.com/#sle.
      b. Mason Industries**<< ; _____; or None - N/A>>**: www.mason-ind.com/#sle.
      c. Vibration Eliminator Company, Inc**<< ; _____; or None - N/A>>**: www.veco-nyc.com/#sle.
      d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
   2. Source Limitations: Furnish vibration-isolated roof curbs and associated accessories produced by **<< a single manufacturer; the same manufacturer as the vibration isolators; or _____>>** and obtained from a single supplier.

B. Vibration Isolation Curbs:

DRAFT

1. Nonseismic Curb Rail:
   a. Location: Between existing roof curb and rooftop equipment.
   b. Construction: **<< Aluminum; Steel; or _____>>**.
   c. Integral vibration isolation to comply with requirements of this section.
   d. Weather exposed components consist of corrosion resistant materials.
2. Nonseismic Curb:
   a. Location: Between structure and rooftop equipment.
   b. Construction: **<< Aluminum; Steel; or _____>>**.
   c. Integral vibration isolation to comply with requirements of this section.
   d. Weather exposed components consist of corrosion resistant materials.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as shown on the drawings.

B. Verify that mounting surfaces are ready to receive vibration isolation and/or seismic control components and associated attachments.

C. Verify that conditions are satisfactory for installation prior to starting work.

3.02 CODE-REQUIRED SPECIAL INSPECTIONS

A. Arrange work to accommodate tests and/or inspections performed by Special Inspection Agency employed by **<<Owner>>** or **<<Architect>>** in accordance with Section **<< 014533>>** and statement of special inspections as required by applicable building code.

B. Frequency of Special Inspections: Where special inspections are designated as continuous or periodic, arrange work accordingly.
   1. Continuous Special Inspections: Special Inspection Agency to be present in the area where the work is being performed and observe the work at all times the work is in progress.
   2. Periodic Special Inspections: Special Inspection Agency to be present in the area where work is being performed and observe the work part-time or intermittently and at the completion of the work.

C. Prior to starting work, **<<Contractor>>** to submit written statement of responsibility to authorities having jurisdiction and to **<<Owner>>** acknowledging awareness of special requirements contained in the statement of special inspections.

D. Special Inspection Agency services do not relieve **<<Contractor>>** from performing inspections and testing specified elsewhere.

3.03 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install anchors and fasteners in accordance with ICC Evaluation Services, LLC (ICC-ES) evaluation report conditions of use where applicable.

C. Secure fasteners according to manufacturer's recommended torque settings.

D. Field-Welding (where approved by **<<Architect>>**): Comply with Section **<< 055000; or _____>>**.

E. Install flexible piping connections to provide sufficient slack for vibration isolation and/or seismic relative displacements as indicated or as required.

DRAFT

F. Vibration Isolation Systems:
   1. Vibration-Isolated Equipment Support Bases:
      a. Provide specified minimum clearance beneath base.
   2. Spring Isolators:
      a. Position equipment at operating height; provide temporary blocking as required.
      b. Lift equipment free of isolators prior to lateral repositioning to avoid damage to isolators.
      c. Level equipment by adjusting isolators gradually in sequence to raise equipment uniformly such that excessive weight or stress is not placed on any single isolator.
   3. Isolator Hangers:
      a. Use precompressed isolator hangers where required to facilitate installation and prevent damage to equipment utility connection provisions.
      b. Locate isolator hangers at top of hanger rods in accordance with manufacturer's instructions.
   4. Thrust Restraints:
      a. Adjust restraint movement under normal operating static pressure.
   5. Clean debris from beneath vibration-isolated equipment that could cause short-circuiting of isolation.
   6. Use elastomeric grommets for attachments where required to prevent short-circuiting of isolation.
   7. Adjust isolators to be free of isolation short circuits during normal operation.
   8. Do not overtighten fasteners such that resilient material isolator pads are compressed beyond manufacturer's maximum recommended deflection.

3.04 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Inspect vibration isolation and/or seismic control components for damage and defects.

C. Provide manufacturer representative or authorized technician services to **<< assist with inspection and testing; execute inspection and testing; or _____>>** of **<< vibration isolation systems; seismic controls; and _____>>**. Submit a detailed copy of manufacturer recommended **<< inspection; testing; field report; and _____>>** procedures.

D. Vibration Isolation Systems:
   1. Verify isolator static deflections.
   2. Verify required clearance beneath vibration-isolated equipment support bases.
   3. Verify vibration isolation performance during normal operation; investigate sources of isolation short circuits.

E. Correct deficiencies and replace damaged or defective vibration isolation and/or seismic control components.

F. Submit detailed reports indicating inspection and testing results and corrective actions taken.

3.05 ATTACHMENTS

A. Statement of special inspections.

END OF SECTION 230548

DRAFT

SECTION 230553
IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASME A13.1 - Scheme for the Identification of Piping Systems.

B. ASTM D709 - Standard Specification for Laminated Thermosetting Materials.

1.02 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. List: Submit list of wording, symbols, letter size, and color coding for mechanical identification.

C. Chart and Schedule: Submit valve chart and schedule, including valve tag number, location, function, and valve manufacturer's name and model number.

D. Product Data: Provide manufacturers catalog literature for each product required.

E. Samples: Submit **<< two; or _____>> << labels; tags; or _____>> << ____by ____ inch>>** in size.

F. Manufacturer's Installation Instructions: Indicate special procedures, and installation.

G. Project Record Documents: Record actual locations of tagged valves.

PART 2 PRODUCTS

2.01 IDENTIFICATION APPLICATIONS

A. Air Handling Units: **<< Nameplates; Stencilled painting; or _____>>**.

B. Air Terminal Units: Tags.

C. Automatic Controls: Tags. Key to control schematic.

D. Control Panels: Nameplates.

E. Dampers: Ceiling tacks, where located above lay-in ceiling.

F. Ductwork: **<< Nameplates; Stencilled painting; or _____>>**.

G. Heat Transfer Equipment: **<< Nameplates; Stencilled painting; or _____>>**.

H. Instrumentation: Tags.

I. Major Control Components: Nameplates.

J. Piping: **<< Pipe markers; Stencilled painting; Tags; or _____>>**.

K. Pumps: **<< Nameplates; Stencilled painting; or _____>>**.

L. Relays: Tags.

M. Small-sized Equipment: Tags.

N. Tanks: **<< Nameplates; Stencilled painting; or _____>>**.

O. Thermostats: Nameplates.

P. Valves:**<< Tags; or _____>><< and ceiling tacks where located above lay-in ceiling; _____; or None - N/A>>**.

Q. Water Treatment Devices: **<< Nameplates; Stencilled painting; or _____>>**.

DRAFT

R. VFD: Nameplates.

2.02 NAMEPLATES

A. Manufacturers:
1. Advanced Graphic Engraving, LLC**<< ; ____; or None - N/A>>**:
2. Brimar Industries, Inc**<< ; ____; or None - N/A>>**:
3. Craftmark Pipe Markers**<< ; ____; or None - N/A>>**:
4. Kolbi Pipe Marker Co**<< ; ____; or None - N/A>>**:
5. Seton Identification Products, a Tricor Direct Company**<< ; ____; or None - N/A>>**:

B. Letter Color: **<< White; Black; or _____>>**.

C. Letter Height: **<< 1/4 inch; 1/2 inch; or ____ inch>>**.

D. Background Color: **<< Black; Red; Green; Yellow; or _____>>**.

E. Plastic: Comply with **<<ASTM D709>>**.

2.03 TAGS

A. Manufacturers:
1. Advanced Graphic Engraving**<< ; ____; or None - N/A>>**:
2. Brady Corporation**<< ; ____; or None - N/A>>**:
3. Brimar Industries, Inc**<< ; ____; or None - N/A>>**:
4. Craftmark Pipe Markers**<< ; ____; or None - N/A>>**:
5. Kolbi Pipe Marker Co**<< ; ____; or None - N/A>>**:
6. Seton Identification Products, a Tricor Company**<< ; ____; or None - N/A>>**:
7. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Plastic Tags: Laminated three-layer plastic with engraved **<< black; or _____>>** letters on light contrasting background color. Tag size minimum **<< 1-1/2 inch>> << diameter; square; or _____>>**.

C. Metal Tags: **<< Brass; Aluminum; Stainless Steel; or _____>>** with stamped letters; tag size minimum **<< 1-1/2 inch>> << diameter; square; or _____>>** with smooth edges.

D. Valve Tag Chart: Typewritten letter size list in anodized aluminum frame.

2.04 STENCILS

A. Manufacturers:
1. Brady Corporation**<< ; ____; or None - N/A>>**:
2. Craftmark Pipe Markers**<< ; ____; or None - N/A>>**:
3. Insite Solutions, LLC**<< ; ____; or None - N/A>>**:
4. Kolbi Pipe Marker Co**<< ; ____; or None - N/A>>**:
5. Seton Identification Products, a Tricor Company**<< ; ____; or None - N/A>>**:

B. Stencils: With clean cut symbols and letters of following size:
1. **<< 3/4 to 1-1/4 inch>>** Outside Diameter of Insulation or Pipe: **<< 8 inch>>** long color field, **<< 1/2 inch>>** high letters.
2. **<< 1-1/2 to 2 inch>>** Outside Diameter of Insulation or Pipe: **<< 8 inch>>** long color field, **<< 3/4 inch>>** high letters.
3. **<< 2-1/2 to 6 inch>>** Outside Diameter of Insulation or Pipe: **<< 12 inch>>** long color field, **<< 1-1/4 inch>>** high letters.

DRAFT

4. **<< 8 to 10 inch>>** Outside Diameter of Insulation or Pipe: **<< 24 inch>>** long color field, **<< 2-1/2 inch>>** high letters.
5. Over **<< 10 inch>>** Outside Diameter of Insulation or Pipe: **<< 32 inch>>** long color field, **<< 3-1/2 inch>>** high letters.
6. Ductwork and Equipment: **<< 2 inch (minimum)>>** high letters.

2.05 PIPE MARKERS

A. Manufacturers:
1. Brady Corporation**<< ; ____; or None - N/A>>**:
2. Brimar Industries, Inc**<< ; ____; or None - N/A>>**:
3. Craftmark Pipe Markers**<< ; ____; or None - N/A>>**:
4. Kolbi Pipe Marker Co**<< ; ____; or None - N/A>>**:
5. Seton Identification Products, a Tricor Company**<< ; ____; or None - N/A>>**:
6. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Plastic Pipe Markers: Factory fabricated, flexible, semi- rigid plastic, preformed to fit around pipe or pipe covering; minimum information indicating flow direction arrow and identification of fluid being conveyed.

C. Plastic Tape Pipe Markers: Flexible, vinyl film tape with pressure-sensitive adhesive backing and printed markings.

D. Underground Plastic Pipe Markers: Bright-colored continuously printed plastic ribbon tape, minimum **<< 6 inches>>** wide by **<< 4 mil, 0.004 inch>>** thick, manufactured for direct burial service.

E. Ammonia Pipe Markers: Flexible, vinyl film tape with pressure-sensitive adhesive backing and printed markings.

F. Color code as follows:

2.06 CEILING TACKS

A. Manufacturers:
1. Craftmark Pipe Markers**<< ; ____; or None - N/A>>**:

B. Description: Steel with **<< 3/4 inch>>** diameter color coded head.

C. Color code as follows:
1. HVAC Equipment: Yellow.
2. Fire Dampers and Smoke Dampers: Red.
3. Heating/Cooling Valves: Blue.

PART 3 EXECUTION

3.01 PREPARATION

A. Degrease and clean surfaces to receive adhesive for identification materials.

B. Prepare surfaces in accordance with Section **<< 099123>>** for stencil painting.

3.02 INSTALLATION

A. Install nameplates with corrosive-resistant mechanical fasteners, or adhesive. Apply with sufficient adhesive to ensure permanent adhesion and seal with clear lacquer.

B. Install tags with corrosion resistant chain.

DRAFT

C. Apply stencil painting in accordance with Section **<< 099123>>**.

D. Install plastic pipe markers in accordance with manufacturer's instructions.

E. Install plastic tape pipe markers complete around pipe in accordance with manufacturer's instructions.

F. Install underground plastic pipe markers **<< 6 to 8 inches>>** below finished grade, directly above buried pipe.

G. Use tags on piping **<< 3/4 inch>>** diameter and smaller.
   1. Identify service, flow direction, and pressure.
   2. Install in clear view and align with axis of piping.
   3. Locate identification not to exceed **<< 20 feet>>** on straight runs including risers and drops, adjacent to each valve and Tee, at each side of penetration of structure or enclosure, and at each obstruction.

H. Install ductwork with **<< plastic nameplates; stencilled painting; or _____>>**. Identify with air handling unit identification number and area served. Locate identification at air handling unit, at each side of penetration of structure or enclosure, and at each obstruction.

I. Locate ceiling tacks to locate valves, equipment or dampers above lay-in panel ceilings. Locate in corner of panel closest to equipment.

J.

3.03 SCHEDULE

A. Service - Color - Stencil
   1. Heat pump loop supply and return - Purple - HPWS, HPWR
   2. Condenser water supply and return (from/to cooling tower) - Gray - CTS/CTR
   3. Heating water return (from condenser loop to boilers) - Orange - HWR
   4. Heating water supply (from boilers to condenser loop) Orange HWS
   5. Cold water potable - Green - POTABLE WATER
   6. Hot water potable - Red - HW
   7. Hot water return potable - Red - HWR
   8. Refrigerant piping - Black - REF
   9. Gas - Yellow - GAS
   10. Ductwork - Black - DOAS Supply, RTU Return, EF Exhaust

END OF SECTION 230553

DRAFT

SECTION 230593
TESTING, ADJUSTING, AND BALANCING FOR HVAC

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Testing, adjustment, and balancing of air systems.

B. Testing, adjustment, and balancing of **<< hydronic; steam; refrigerating; and _____>>** systems.

C. Field quality-control testing of Laboratory fume hoods.

D. Measurement of final operating condition of HVAC systems.

E. Sound measurement of equipment operating conditions.

F. Vibration measurement of equipment operating conditions.

G. Commissioning activities.

1.02 RELATED REQUIREMENTS

A. Section **<< 012100 - Allowances>>**: Inspection and testing allowances.

B. Section **<< 019113 - General Commissioning Requirements>>**: Commissioning requirements that apply to all types of work.

C. Section **<< 230800 - Commissioning of HVAC>>**.

D. Section **<< 250500 - Common Work Results for Integrated Automation>>**.

1.03 REFERENCE STANDARDS

A. AABC (NSTSB) - AABC National Standards for Total System Balance, 7th Edition.

B. ASHRAE Std 110 - Methods of Testing Performance of Laboratory Fume Hoods.

C. ASHRAE Std 111 - Measurement, Testing, Adjusting, and Balancing of Building HVAC Systems.

D. NEBB (TAB) - Procedural Standard for Testing, Adjusting and Balancing of Environmental Systems.

E. SMACNA (TAB) - HVAC Systems Testing, Adjusting and Balancing.

1.04 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>**, for submittal procedures.

B. Installer Qualifications: Submit name of adjusting and balancing agency and TAB supervisor for approval within **<< 30; or ____>>** days after award of Contract.

C. TAB Plan: Submit a written plan indicating the testing, adjusting, and balancing standard to be followed and the specific approach for each system and component.

1. Submit to **<<Architect>>**.
2. Submit **<< six weeks; or _____>>** prior to starting the testing, adjusting, and balancing work.
3. Include certification that the plan developer has reviewed Contract Documents, the equipment and systems, and the control system with the **<<Architect>>** and other installers to sufficiently understand the design intent for each system.
4. Include at least the following in the plan:

DRAFT

a. List of all air flow, water flow, sound level, system capacity and efficiency measurements to be performed and a description of specific test procedures, parameters, formulas to be used.
b. Copy of field checkout sheets and logs to be used, listing each piece of equipment to be tested, adjusted and balanced with the data cells to be gathered for each.
c. Identification and types of measurement instruments to be used and their most recent calibration date.
d. Discussion of what notations and markings will be made on the duct and piping drawings during the process.
e. Final test report forms to be used.
f. Criteria for using air flow straighteners or relocating flow stations and sensors**<< ; analogous explanations for the water side; ; _____; or None - N/A>>**.
g. Details of how TOTAL flow will be determined; for example:
   1) Air: Sum of terminal flows via control system calibrated readings or via hood readings of all terminals, supply (SA) and return air (RA) pitot traverse, SA or RA flow stations.
   2) Water: Pump curves, circuit setter, flow station, ultrasonic, etc.
h. Methods for making coil or other system plant capacity measurements, if specified.
i. Procedures for formal deficiency reports, including scope, frequency and distribution.

D. Field Quality-control Testing of Laboratory Fume Hoods:
   1. Product Data sheets for all equipment proposed for use in on-site as-installed testing.
   2. List of laboratory fume hoods to be tested. Submit a minimum of **<< one week; two weeks; or _____ weels>>** prior to commencement of testing.

E. Field Logs: Submit **<< at least twice a week; at least once a week; or _____>>** to the **<< Commissioning Provider; Construction Manager; and _____>>**.

F. Control System Coordination Reports: Communicate in writing to the controls installer all setpoint and parameter changes made or problems and discrepancies identified during TAB that affect, or could affect, the control system setup and operation.

G. Final Report: Indicate deficiencies in systems that would prevent proper testing, adjusting, and balancing of systems and equipment to achieve specified performance.
   1. Revise TAB plan to reflect actual procedures and submit as part of final report.
   2. Submit draft copies of report for review prior to final acceptance of Project. Provide final copies for **<<Architect>>** and for inclusion in operating and maintenance manuals.
   3. Provide reports in **<< soft cover, letter size, 3-ring; or _____>>** binder manuals, complete with index page and indexing tabs, with cover identification at front and side. Include set of reduced drawings with air outlets and equipment identified to correspond with data sheets, and indicating thermostat locations.
   4. Include actual instrument list, with manufacturer name, serial number, and date of calibration.
   5. Form of Test Reports: Where the TAB standard being followed recommends a report format use that; otherwise, follow **<<ASHRAE Std 111>>**.
   6. Units of Measure: Report data in **<< both I-P (inch-pound) and SI (metric) units; I-P (inch-pound) units only; SI (metric) units only; or _____>>**.
   7. Include the following on the title page of each report:
      a. Name of Testing, Adjusting, and Balancing Agency.
      b. Address of Testing, Adjusting, and Balancing Agency.
      c. Telephone number of Testing, Adjusting, and Balancing Agency.

DRAFT

d. Project name.
e. Project location.
f. Project **<<Architect>>**.
g. Project Engineer.
h. Project **<<Contractor>>**.
i. Report date.

H. Project Record Documents: Record actual locations of **<< flow measuring stations; balancing valves and rough setting; and _____>>**.

PART 2 PRODUCTS

2.01 EQUIPMENT

A. Instruments: Approved and properly calibrated.

B. temperatures where thermometer wells are not provided in the piping.

C. Pyrometer surface temperature measurements may be used for piping system water

PART 3 EXECUTION

3.01 GENERAL REQUIREMENTS

A. Perform total system balance in accordance with one of the following:
1. **<<AABC (NSTSB)>>**, AABC National Standards for Total System Balance.
2. **<<SMACNA (TAB)>>**.

B. Begin work after completion of systems to be tested, adjusted, or balanced and complete work prior to Substantial Completion of the project.

C. Where HVAC systems and/or components interface with life safety systems, including fire and smoke detection, alarm, and control, coordinate scheduling and testing and inspection procedures with the authorities having jurisdiction.

D. TAB Agency Qualifications:
1. Company specializing in the testing, adjusting, and balancing of systems specified in this section.
2. Having minimum of **<< three; or _____>>** years**<< documented; _____; or None - N/A>>** experience.
3. Certified by one of the following:
a. AABC, Associated Air Balance Council: www.aabc.com/#sle; upon completion submit AABC National Performance Guaranty.
b. NEBB, National Environmental Balancing Bureau: www.nebb.org/#sle.
c. TABB, The Testing, Adjusting, and Balancing Bureau of National Energy Management Institute: www.tabbcertified.org/#sle.

E. TAB Supervisor**<< and Technician; _____; or None - N/A>>** Qualifications: Certified by same organization as TAB agency.

3.02 EXAMINATION

A. Verify that systems are complete and operable before commencing work. Ensure the following conditions:
1. Systems are started and operating in a safe and normal condition.

DRAFT

2. Temperature control systems are installed complete and operable.
3. Proper thermal overload protection is in place for electrical equipment.
4. Final filters are clean and in place. If required, install temporary media in addition to final filters.
5. Duct systems are clean of debris.
6. Fans are rotating correctly.
7. Fire and volume dampers are in place and open.
8. Air coil fins are cleaned and combed.
9. Access doors are closed and duct end caps are in place.
10. Air outlets are installed and connected.
11. Duct system leakage is minimized.
12. Hydronic systems are flushed, filled, and vented.
13. Pumps are rotating correctly.
14. Proper strainer baskets are clean and in place.
15. Service and balance valves are open.

B. Submit field reports. Report defects and deficiencies that will or could prevent proper system balance.

C. Beginning of work means acceptance of existing conditions.

3.03 PREPARATION

A. Hold a pre-balancing meeting **<< at least one week; or _____>>** prior to starting TAB work.

B. Provide instruments required for testing, adjusting, and balancing operations. Make instruments available to **<<Architect>>** to facilitate spot checks during testing.

C. Provide additional balancing devices as required.

3.04 ADJUSTMENT TOLERANCES

A. Air Handling Systems: Adjust to within plus or minus **<< 5; or ___>>** percent of design for supply systems and plus or minus **<< 10; or ___>>** percent of design for return and exhaust systems.

B. Air Outlets and Inlets: Adjust total to within plus **<< 10; or ___>>** percent and minus **<< 5; or ___>>** percent of design to space. Adjust outlets and inlets in space to within plus or minus **<< 10; or ___>>** percent of design.

C. Hydronic Systems: Adjust to within plus or minus 10 percent of design.

3.05 RECORDING AND ADJUSTING

A. Field Logs: Maintain written logs including:
1. Running log of events and issues.
2. Discrepancies, deficient or uncompleted work by others.
3. Contract interpretation requests.
4. Lists of completed tests.

B. Ensure recorded data represents actual measured or observed conditions.

C. Permanently mark settings of valves, dampers, and other adjustment devices allowing settings to be restored. Set and lock memory stops.

D. Mark on drawings the locations where traverse and other critical measurements were taken and cross reference the location in the final report.

DRAFT

E. After adjustment, take measurements to verify balance has not been disrupted or that such disruption has been rectified.

F. Leave systems in proper working order, replacing belt guards, closing access doors, closing doors to electrical switch boxes, and restoring thermostats to specified settings.

G. At final inspection, recheck random selections of data recorded in report. Recheck points or areas as selected and witnessed by the **<<Owner>>**.

H. Check and adjust systems approximately six months after final acceptance and submit report.

3.06 FUME HOOD TESTING (ON SITE)

A. General: Test fume hoods as installed to assess **<< airflow velocity; airflow visualization; and level of containment>>**. Perform tests with **<< static mode (set sash position); and dynamic mode (sash movement effect)>>** conditions. Conduct testing as outlined below for **<< 25% of the ; 50% of the ; 100% of the ; or _____>>**hoods provided in the Project.

B. Testing to be performed by firm certified by National Environmental Balancing Bureau - NEBB (FHT).

C. Preparation: Visit the project site to confirm that construction activities related to the fume hood system(s) and equipment are complete. Review design documents and **<<Contractor>>**'s submittals. Verify that mechanical ventilation systems serving the space are functioning and operating in the normal mode. Notify **<<Owner>>** in writing, if conditions exist which preclude proper fume hood testing. Starting of testing constitutes acceptance of site conditions.

D. Testing Requirements:
   1. Perform the following tests, in order:
      a. Airflow Velocity Test.
      b. Airflow Visualization Test.
      c. Tracer Gas Containment Test.
   2. If more than one test procedure is selected, proceed to the next test only if any unsafe condition discovered during current test has been successfully rectified.
   3. Airflow Velocity Test: Comply with **<< Section 9 of NEBB (FHT) Fume Hood Testing Standard - current edition; or _____>>**.
   4. Airflow Visualization Test: Comply with **<< Section 10 of NEBB (FHT) Fume Hood Testing Standard - current edition; or _____>>**.
   5. Tracer Gas Containment Test:
      a. Comply with **<< Section 11 of NEBB Fume Hood Testing Standard - current edition; or _____>>**.
   6. Reporting Requirements:**<< Comply with Section 5 of NEBB (FHT) Fume Hood Testing Standard - current edition.; or None - N/A>>** Organize and include, at a minimum, the following information:
      a. Report Title.
      b. Report Certification.
      c. Table of Contents.
      d. Report Summary/ Remarks.
      e. Appropriate Forms.
      f. Instrument Calibration.
      g. List of Abbreviations Used.
      h. A room layout drawing for each tested item. Identify: walls; doors; fume hood(s); other present environmental enclosures (e.g. biological safety cabinet(s), laminar flow

DRAFT

hood(s), canopy hood(s), etc.); location and airflow pattern of all air supply, return, and exhaust grilles, registers and diffusers.

3.07 AIR SYSTEM PROCEDURE

A. Adjust air handling and distribution systems to provide required or design supply, return, and exhaust air quantities**<< at site altitude; _____; or None - N/A>>**.

B. Make air quantity measurements in ducts by Pitot tube traverse of entire cross sectional area of duct.

C. Measure air quantities at air inlets and outlets.

D. Adjust distribution system to obtain uniform space temperatures free from objectionable drafts and noise.

E. Use volume control devices to regulate air quantities only to extend that adjustments do not create objectionable air motion or sound levels. Effect volume control by duct internal devices such as dampers and splitters.

F. Vary total system air quantities by adjustment of fan speeds. Provide drive changes required. Vary branch air quantities by damper regulation.

G. Provide system schematic with required and actual air quantities recorded at each outlet or inlet.

H. Measure static air pressure conditions on air supply units, including filter and coil pressure drops, and total pressure across the fan. Make allowances for 50 percent loading of filters.

I. Adjust outside air automatic dampers, outside air, return air, and exhaust dampers for design conditions.

J. Measure temperature conditions across outside air, return air, and exhaust dampers to check leakage.

K. Where modulating dampers are provided, take measurements and balance at extreme conditions.**<< Balance variable volume systems at maximum air flow rate, full cooling, and at minimum air flow rate, full heating.; _____ .; or None - N/A>>**

L. Measure building static pressure and adjust supply, return, and exhaust air systems to provide required relationship between each to maintain approximately **<< 0.05 inches>>** positive static pressure **<< near the building entries; in clean rooms; and _____>>**.

M. Check multi-zone units for motorized damper leakage. Adjust air quantities with mixing dampers set first for cooling, then heating, then modulating.

N. For variable air volume system powered units set volume controller to air flow setting indicated. Confirm connections properly made and confirm proper operation for automatic variable air volume temperature control.

O. On fan powered VAV boxes, adjust air flow switches for proper operation.

3.08 WATER SYSTEM PROCEDURE

A. Adjust water systems to provide required or design quantities.

B. Use calibrated**<< Venturi tubes, orifices, or other metered; _____; or None - N/A>>** fittings and pressure gauges to determine flow rates for system balance. Where flow metering devices are not installed, base flow balance on temperature difference across various heat transfer elements in the system.

C. Adjust systems to provide specified pressure drops and flows through heat transfer elements prior to thermal testing. Perform balancing by measurement of temperature differential in conjunction with air balancing.

DRAFT

D. Effect system balance with automatic control valves fully open to heat transfer elements.

E. Effect adjustment of water distribution systems by means of balancing cocks, valves, and fittings. Do not use service or shut-off valves for balancing unless indexed for balance point.

F. Where available pump capacity is less than total flow requirements or individual system parts, full flow in one part may be simulated by temporary restriction of flow to other parts.

3.09 COMMISSIONING

A. See Sections **<< 019113 - General Commissioning Requirements>>** and **<< 230800>>** for additional requirements.

B. Perform prerequisites prior to starting commissioning activities.

C. Fill out Prefunctional Checklists for:
   1. Air side systems.
   2. Water side systems.

D. Furnish to the Commissioning Provider, upon request, any data gathered but not shown in the final TAB report.

E. Re-check**<< minimum outdoor air intake flows and maximum and intermediate total airflow rates for _____ percent of the air handlers plus; _____; or None - N/A>>** a random sample equivalent to **<< ____>>** percent of the final TAB report data as directed by Commissioning Provider.
   1. Original TAB agency shall execute the re-checks, witnessed by the Commissioning Provider.
   2. Use the same test instruments as used in the original TAB work.
   3. Failure of more than **<< 10 percent; or ____>>** of the re-checked items of a given system shall result in the rejection of the system TAB report; rebalance the system, provide a new system TAB report, and repeat random re-checks.
   4. For purposes of re-check, failure is defined as follows:
      a. Air Flow of Supply and Return: Deviation of more than 10 percent of instrument reading.
      b. Minimum Outside Air Flow: Deviation of more than 20 percent of instrument reading; for inlet vane or VFD OSA compensation system using linear proportional control, deviation of more than 30 percent at intermediate supply flow.
      c. Temperatures: Deviation of more than **<< one degree F; or ___ degree F>>**.
      d. Air and Water Pressures: Deviation of more than 10 percent of full scale of test instrument reading.
      e. Sound Pressures: Deviation of more than 3 decibels, with consideration for variations in background noise.
   5. For purposes of re-check, a whole system is defined as one in which inaccuracies will have little or no impact on connected systems; for example, the air distribution system served by one air handler or the hydronic chilled water supply system served by a chiller or the condenser water system.

F. In the presence of the Commissioning Provider, verify that:
   1. Final settings of all valves, splitters, dampers and other adjustment devices have been permanently marked.
   2. The air system is being controlled to the lowest possible static pressure while still meeting design loads, less diversity; this shall include a review of TAB methods, established control setpoints, and physical verification of at least one leg from fan to diffuser having all balancing dampers wide open and that during full cooling of all terminal units taking off

DRAFT

downstream of the static pressure sensor, the terminal unit on the critical leg has its damper 90 percent or more open.

3. The water system is being controlled to the lowest possible pressure while still meeting design loads, less diversity; this shall include a review of TAB methods, established control setpoints, and physical verification of at least one leg from the pump to the coil having all balancing valves wide open and that during full cooling the cooling coil valve of that leg is 90 percent or more open.

3.10 SCOPE

A. Test, adjust, and balance the following:
   1. Fire Pumps.
   2. Sprinkler Air Compressor.
   3. Plumbing Pumps.
   4. Steam Condensate Pumps.
   5. Boiler Feedwater Pumps.
   6. HVAC Pumps.
   7. Water Tube Boilers.
   8. Packaged Steel Water Tube Boilers.
   9. Packaged Steel Fire Tube Boilers.
   10. Forced Air Furnaces.
   11. Direct Fired Furnaces.
   12. Reciprocating Water Chillers.
   13. Air Cooled Water Chillers.
   14. Centrifugal Water Chillers.
   15. Absorption Water Chillers.
   16. Induced Draft Cooling Tower.
   17. Blow Through Cooling Tower.
   18. Packaged Roof Top Heating/Cooling Units.
   19. Packaged Terminal Air Conditioning Units.
   20. Unit Air Conditioners.
   21. Computer Room Air Conditioning Units.
   22. Air Coils.
   23. Evaporative Humidifier.
   24. Sprayed Coil Dehumidifier.
   25. Terminal Heat Transfer Units.
   26. Induction Units.
   27. Air Handling Units.
   28. Fans.
   29. Air Filters.
   30. Air Terminal Units.
   31. Air Inlets and Outlets.

3.11 MINIMUM DATA TO BE REPORTED

A. Electric Motors:
   1. Manufacturer.

DRAFT

2. Model/Frame.
3. HP/BHP.
4. Phase, voltage, amperage; nameplate, actual, no load.
5. RPM.
6. Service factor.
7. Starter size, rating, heater elements.
8. Sheave Make/Size/Bore.

B. Pumps:
1. Identification/number.
2. Manufacturer.
3. Size/model.
4. Impeller.
5. Service.
6. Design flow rate, pressure drop, BHP.
7. Actual flow rate, pressure drop, BHP.
8. Discharge pressure.
9. Suction pressure.
10. Total operating head pressure.
11. Shut off, discharge and suction pressures.
12. Shut off, total head pressure.

C. Combustion Equipment:
1. Boiler manufacturer.
2. Model number.
3. Serial number.
4. Heat input.
5. Heat output.

D. Air Cooled Condensers:
1. Identification/number.
2. Location.
3. Manufacturer.
4. Model number.
5. Serial number.
6. Number of compressors.

E. Chillers:
1. Identification/number.
2. Manufacturer.
3. Capacity.
4. Model number.
5. Serial number.
6. Evaporator entering water temperature, design and actual.
7. Evaporator leaving water temperature, design and actual.
8. Evaporator pressure drop, design and actual.
9. Evaporator water flow rate, design and actual.

DRAFT

10. Condenser entering water temperature, design and actual.
11. Condenser pressure drop, design and actual.
12. Condenser water flow rate, design and actual.

F. Cooling Tower:
1. Tower identification/number.
2. Manufacturer.
3. Model number.
4. Serial number.
5. Rated capacity.
6. Entering air WB temperature, specified and actual.
7. Leaving air WB temperature, specified and actual.
8. Ambient air DB temperature.
9. Condenser water entering temperature.
10. Condenser water leaving temperature.
11. Condenser water flow rate.
12. Fan RPM.

G. Heat Exchangers:
1. Identification/number.
2. Location.
3. Service.
4. Manufacturer.
5. Model number.
6. Serial number.
7. Primary water entering temperature, design and actual.
8. Primary water leaving temperature, design and actual.
9. Primary water flow, design and actual.
10. Primary water pressure drop, design and actual.
11. Secondary water leaving temperature, design and actual.
12. Secondary water flow, design and actual.
13. Secondary water pressure drop, design and actual.

H. Cooling Coils:
1. Identification/number.
2. Location.
3. Service.
4. Manufacturer.
5. Air flow, design and actual.
6. Entering air DB temperature, design and actual.
7. Entering air WB temperature, design and actual.
8. Leaving air DB temperature, design and actual.
9. Leaving air WB temperature, design and actual.
10. Water flow, design and actual.
11. Water pressure drop, design and actual.
12. Entering water temperature, design and actual.

DRAFT

13. Leaving water temperature, design and actual.
14. Air pressure drop, design and actual.

I. Heating Coils:
1. Identification/number.
2. Location.
3. Service.
4. Manufacturer.
5. Air flow, design and actual.
6. Water flow, design and actual.
7. Water pressure drop, design and actual.
8. Entering water temperature, design and actual.
9. Leaving water temperature, design and actual.
10. Entering air temperature, design and actual.
11. Leaving air temperature, design and actual.
12. Air pressure drop, design and actual.

J. Electric Duct Heaters:
1. Manufacturer.
2. Identification/number.
3. Location.
4. Model number.
5. Design kW.
6. Number of stages.
7. Phase, voltage, amperage.
8. Test voltage (each phase).
9. Test amperage (each phase).
10. Air flow, specified and actual.
11. Temperature rise, specified and actual.

K. Induction Units:
1. Manufacturer.
2. Identification/number.
3. Location.
4. Model number.
5. Size.
6. Design air flow.
7. Design nozzle pressure drop.
8. Final nozzle pressure drop.
9. Final air flow.

L. Air Moving Equipment:
1. Location.
2. Manufacturer.
3. Model number.
4. Serial number.
5. Arrangement/Class/Discharge.

DRAFT

6. Air flow, specified and actual.
7. Return air flow, specified and actual.
8. Outside air flow, specified and actual.
9. Total static pressure (total external), specified and actual.
10. Inlet pressure.
11. Discharge pressure.
12. Sheave Make/Size/Bore.
13. Number of Belts/Make/Size.
14. Fan RPM.

M. Return Air/Outside Air:
1. Identification/location.
2. Design air flow.
3. Actual air flow.
4. Design return air flow.
5. Actual return air flow.
6. Design outside air flow.
7. Actual outside air flow.
8. Return air temperature.
9. Outside air temperature.
10. Required mixed air temperature.
11. Actual mixed air temperature.
12. Design outside/return air ratio.
13. Actual outside/return air ratio.

N. Exhaust Fans:
1. Location.
2. Manufacturer.
3. Model number.
4. Serial number.
5. Air flow, specified and actual.
6. Total static pressure (total external), specified and actual.
7. Inlet pressure.
8. Discharge pressure.
9. Sheave Make/Size/Bore.
10. Number of Belts/Make/Size.
11. Fan RPM.

O. Duct Traverses:
1. System zone/branch.
2. Duct size.
3. Area.
4. Design velocity.
5. Design air flow.
6. Test velocity.
7. Test air flow.

DRAFT

8. Duct static pressure.
9. Air temperature.
10. Air correction factor.

P. Duct Leak Tests:
1. Description of ductwork under test.
2. Duct design operating pressure.
3. Duct design test static pressure.
4. Duct capacity, air flow.
5. Maximum allowable leakage duct capacity times leak factor.
6. Test apparatus:
    a. Blower.
    b. Orifice, tube size.
    c. Orifice size.
    d. Calibrated.
7. Test static pressure.
8. Test orifice differential pressure.
9. Leakage.

Q. Air Monitoring Stations:
1. Identification/location.
2. System.
3. Size.
4. Area.
5. Design velocity.
6. Design air flow.
7. Test velocity.
8. Test air flow.

R. Flow Measuring Stations:
1. Identification/number.
2. Location.
3. Size.
4. Manufacturer.
5. Model number.
6. Serial number.
7. Design Flow rate.
8. Design pressure drop.
9. Actual/final pressure drop.
10. Actual/final flow rate.
11. Station calibrated setting.

S. Terminal Unit Data:
1. Manufacturer.
2. Type, constant, variable, single, dual duct.
3. Identification/number.
4. Location.

DRAFT

5. Model number.
6. Size.
7. Minimum static pressure.
8. Minimum design air flow.
9. Maximum design air flow.
10. Maximum actual air flow.
11. Inlet static pressure.

T. Air Distribution Tests:
1. Air terminal number.
2. Room number/location.
3. Terminal type.
4. Terminal size.
5. Area factor.
6. Design velocity.
7. Design air flow.
8. Test (final) velocity.
9. Test (final) air flow.
10. Percent of design air flow.

END OF SECTION 230593

DRAFT

SECTION 230713
DUCT INSULATION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Duct insulation.

B. Flexible removable and reusable blanket insulation.

C. Duct liner.

D. Weather barrier coatings.

E. Jacketing and accessories.

1.02 RELATED REQUIREMENTS

A. Section **<< 099113 - Exterior Painting>>**: Painting insulation jackets.

B. Section **<< 099123 - Interior Painting>>**: Painting insulation jackets.

C. Section **<< 230553 - Identification for HVAC Piping and Equipment>>**.

1.03 REFERENCE STANDARDS

A. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

B. ASTM C518 - Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus.

C. ASTM C534/C534M - Standard Specification for Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form.

D. ASTM C553 - Standard Specification for Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications.

E. ASTM C612 - Standard Specification for Mineral Fiber Block and Board Thermal Insulation.

F. ASTM C916 - Standard Specification for Adhesives for Duct Thermal Insulation.

G. ASTM C1071 - Standard Specification for Fibrous Glass Duct Lining Insulation (Thermal and Sound Absorbing Material).

H. ASTM C1338 - Standard Test Method for Determining Fungi Resistance of Insulation Materials and Facings.

I. ASTM C1371 - Standard Test Method for Determination of Emittance of Materials Near Room Temperature Using Portable Emissometers.

J. ASTM C1423 - Standard Guide for Selecting Jacketing Materials for Thermal Insulation.

K. ASTM C1775 - Standard Specification for Laminate Protective Jacket and Tape for Use Over Thermal Insulation for Outdoor Applications.

L. ASTM D5590 - Standard Test Method for Determining the Resistance of Paint Films and Related Coatings to Fungal Defacement by Accelerated Four-Week Agar Plate Assay.

M. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

N. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials.

DRAFT

O. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

P. FM 4924 - Examination Standard for Pipe and Duct Insulation.

Q. SAE AMS3779 - Tape, Adhesive, Pressure-Sensitive Thermal Radiation Resistant, Aluminum Coated Glass Cloth.

R. SMACNA (DCS) - HVAC Duct Construction Standards Metal and Flexible.

S. UL 181A - Closure Systems for Use with Rigid Air Ducts.

T. UL 181B - Closure Systems for Use with Flexible Air Ducts and Air Connectors.

U. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials.

1.04 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Product Data: Provide product description, thermal characteristics, list of materials and thickness for each service, and locations.

C. Manufacturer's Instructions: Indicate installation procedures necessary to ensure acceptable workmanship and that installation standards will be achieved.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this section with not less than **<< three; or _____>>** years of**<< documented; _____; or None - N/A>>** experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Accept materials on site in original factory packaging, labelled with manufacturer's identification, including product density and thickness.

B. Protect insulation from weather and construction traffic, dirt, water, chemical, and mechanical damage, by storing in original wrapping.

1.07 FIELD CONDITIONS

A. Maintain ambient temperatures and conditions required by manufacturers of adhesives, mastics, and insulation cements.

B. Maintain temperature during and after installation for minimum period of **<< 24; or ____>>** hours.

PART 2 PRODUCTS

2.01 REGULATORY REQUIREMENTS

A. Surface Burning Characteristics: Flame spread index/Smoke developed index of 25/50, maximum, when tested in accordance with **<< ASTM E84; UL 723; or _____>>**.

2.02 GLASS FIBER, FLEXIBLE

A. Manufacturer:

1. CertainTeed Corporatio: www.certainteed.com/#sle.
2. Johns Manville: www.jm.com/#sle.

DRAFT

3. Knauf Insulation**<< ; Performance+ Duct Wrap; ; Performance+ KwikFlex (High-Temperature Application and Diameters Exceeding 10"); ; _____; or None - N/A>>**: www.knaufinsulation.com/#sle.
4. Manson Insulation, a company of Knauf Insulation**<< ; AK FLEX with ECOSE (High-Temperature Application and Diameters Exceeding 10"); ; Alley Wrap B; ; _____; or None - N/A>>**: www.imanson.com/#sle.
5. Owens Corning Corporation**<< ; SOFTR Duct Wrap FRK; ; _____; or None - N/A>>**: www.owenscorning.com/en-us/#sle.
6. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Insulation: **<<ASTM C553>>**and ASTM C1290; flexible, noncombustible blanket.
1. **<< K>>** value: **<< 0.36 at 75 degrees F; 0.31 at 75 degrees F; 0.26 at 75 degrees F; 0.25 at 75 degrees F; or _____ at 75 degrees F>>**, when tested in accordance with **<<ASTM C518>>**.
2. Maximum Service Temperature: **<< 250 degrees F; 450 degrees F; 850 degrees F; 1,000 degrees F; 1,200 degrees F; or ____ degrees F>>**.
3. Maximum Water Vapor Absorption: 5.0 percent by weight.
4. Multi-purpose foil-scrim kraft (FSK) jacket shall meet requirements of ASTM C 1136, Type II.
5. Products:
   a. Knauf Insulation; Performance+ Duct Wrap: www.knaufinsulation.com/#sle.
   b. Manson Insulation, a company of Knauf Insulation; Alley Wrap B: www.imanson.com/#sle.
   c. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

C. Vapor Barrier Tape:
1. Kraft paper reinforced with glass fiber yarn and bonded to aluminized film, with pressure-sensitive rubber-based adhesive.

D. Indoor Vapor Barrier Mastic:
1. Vinyl emulsion type acrylic or mastic, compatible with insulation, black color.

E. Outdoor Vapor Barrier Mastic:
1. Vinyl emulsion type acrylic or mastic, compatible with insulation, black color.

F. Tie Wire: Annealed steel, **<< 16 gauge, 0.0508 inch diameter>>**.

2.03 GLASS FIBER, RIGID

A. Manufacturer:
1. CertainTeed Corporation**<< ; _____; or None - N/A>>**: www.certainteed.com/#sle.
2. Johns Manville**<< ; _____; or None - N/A>>**: www.jm.com/#sle.
3. Knauf Insulation**<< ; Earthwool Insulation Board; ; _____; or None - N/A>>**: www.knaufinsulation.com/#sle.
4. Manson Insulation, a company of Knauf Insulation**<< ; AK Board; ; _____; or None - N/A>>**: www.imanson.com/#sle.
5. Owens Corning Corporation**<< ; 700 Series FIBERGLAS Insulation; ; _____; or None - N/A>>**: www.owenscorning.com/en-us/#sle.
6. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Insulation: **<<ASTM C612>>**; rigid, noncombustible.

DRAFT

1. **<< K>>** Value: **<< 0.24 at 75 degrees F; or ____ at 75 degrees F>>**, when tested in accordance with **<<ASTM C518>>**.
2. Maximum Service Temperature: **<< 450 degrees F; 850 degrees F; or ____ degrees F>>**.
3. Maximum Water Vapor Absorption: 5.0 percent.
4. Maximum Density: **<< 8.0 pcf; 12.0 pcf; or ____ pcf>>**.

C. Vapor Barrier Jacket:
1. **<< Kraft paper with glass fiber yarn and bonded to aluminized film; 0.0032 inch vinyl; or _____>>**.
2. Moisture Vapor Permeability: **<< 0.02 perm inch; 0.04 perm inch; 1.3 perm inch; or ____ perm inch>>**, when tested in accordance with **<<ASTM E96/E96M>>**.
3. Secure with **<< pressure-sensitive tape; two coats of vapor barrier mastic and glass tape; or _____>>**.

D. Vapor Barrier Tape:
1. Kraft paper reinforced with glass fiber yarn and bonded to aluminized film, with pressure-sensitive rubber-based adhesive.

E. Protective Coating:
1. Manufacturers:
a. Design Polymerics**<< ; DP 2510 Water Based, Low VOC, Duct Liner Protective Coating; ; DP 2540 Water Based, Low VOC, EPA Registered Anti-Microbial Protective Coating; ; _____; or None - N/A>>**: www.designpoly.com/#sle.

F. Indoor Vapor Barrier Finish:
1. Cloth: Untreated; **<< 9 oz/sq yd>>** weight, glass fabric.
2. Vinyl emulsion type acrylic, compatible with insulation, **<< black; white; or _____>>** color.

2.04 FLEXIBLE ELASTOMERIC CELLULAR INSULATION

A. Manufacturers:
1. Aeroflex USA**<< ; AEROFLEX Breathe-EZ; ; _____; or None - N/A>>**: www.aeroflexusa.com/#sle.
2. Armacell LLC**<< ; AP ArmaFlex; ; AP ArmaFlex FS; ; ArmaFlex Ultima; ; _____; or None - N/A>>**: www.armacell.us/#sle.
3. K-Flex USA LLC**<< ; Insul-Sheet; ; Duct Liner Gray; ; _____; or None - N/A>>**: www.kflexusa.com/#sle.
4. Substitutions: **<< See Section 016000 - Product Requirements; See Section _____ .; or Not permitted.>>**

B. Insulation: Preformed flexible elastomeric cellular rubber insulation complying with **<<ASTM C534/C534M>><< Grade 1; Grade 2; Grade 3; or _____>>**, in sheet form.
1. Minimum Service Temperature: **<< Minus 40 degrees F; or ____ degrees F>>**.
2. Maximum Service Temperature: **<< 180 degrees F; 220 degrees F; or ____ degrees F>>**.
3. Connection: Waterproof vapor barrier adhesive.
4. Flammability Rating: **<<FM 4924>>** approval for reduced combustibility testing.

C. Elastomeric Foam Adhesive: Air dried, contact adhesive, compatible with insulation.

D. Weather Barrier Coating: Air dried, contact adhesive, compatible with insulation and **<<ASTM E84>>** compliant.

DRAFT

1. Manufacturers:
   a. Design Polymerics**<< ; DP 5050 Water Based, High Strength, Weather Barrier Coating; ; _____; or None - N/A>>**: www.designpoly.com/#sle.
   b. Substitutions: **<< See Section 016000 - Product Requirements; See Section _____ .; or Not permitted.>>**

2.05 FLEXIBLE REMOVABLE AND REUSABLE BLANKET INSULATION

A. Manufacturers:
   1. Firwin**<< ; _____; or None - N/A>>**: www.firwin.com/#sle.
   2. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Description: Custom cut and fabricated, removable and reusable blanket insulation system, consisting of inner liner, insulation layer, outer protective jacket, and fastening system.

C. Provide insulation system based on surface temperature of piping, installed location of piping, and maximum safe-to-touch temperature of jacketing.

D. Performance Criteria:
   1. Maximum Service Temperature: Constructed for temperatures up to **<< 500 degrees F; 1200 degrees F; or _____ degrees F>>**.
   2. Safe-to-Touch Temperature of Jacketing: **<< 140 degrees F; 185 degrees F; 203 degrees F; or _____ degrees F>>**.
   3. Space Ambient Temperature, High: **<< 85 degrees F; or _____ degrees F>>**.
   4. Space Ambient Temperature, Low: **<< 40 degrees F; or _____ degrees F>>**.

E. Components:
   1. Inner Liner: Use **<< stainless steel mesh; silicone-impregnated fiberglass; or _____>>**.
   2. Insulation:
      a. Material: **<< Needled fiberglass felt mat; CMS (calcium, magnesium, silica) fiber wool; or _____>>**.
      b. Thickness: **<< 1 inch; 2 inches; or _____ inches>>**.
      c. Density: **<< 8 pcf; 10 pcf; 11 pcf; or _____ pcf>>**.
      d. Thermal Conductivity k-factor in **<< Btu inch/hr sq ft degrees F>>**: **<< 0.50 at 500 degrees F; 0.54 at 752 degrees F; or _____ at _____ degrees F>>**.
      e. Outer Jacket: **<< Silicone-impregnated fiberglass; or _____>>**.
      f. Fastening System: **<< Lacing wire; Snaps; Springs; Straps; Velcro; or _____>>**.

2.06 WEATHER BARRIER COATINGS

A. Weather-Resistive Barrier Coating: Fire-resistive, UV resistant, water-based mastic for use over closed cell polyethylene and polyurethane foam insulation; applied with glass fiber or synthetic reinforcing mesh.
   1. Manufacturers:
      a. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
   2. Surface Burning Characteristics: Flame spread index of 25 or less, smoke developed index of 450 or less, Class A, when tested in accordance with **<<ASTM E84>>**.
   3. Water Vapor Permeance: Greater than **<< 1.0 perm; or ____ perm>>** in accordance with **<<ASTM E96/E96M>>**.

DRAFT

4. Resistance to Fungal Growth: No growth when tested in accordance with **<<ASTM D5590>>**.
5. Color: **<< As selected by Architect; White; Metallic gray; Black; or _____>>**.

2.07 JACKETING AND ACCESSORIES

A. Canvas Jacket: UL listed **<< 6 oz/sq yd>>** plain weave cotton fabric treated with dilute fire-retardant lagging adhesive.
   1. Lagging Adhesive:
      a. Manufacturers:
         1) Design Polymerics**<< ; DP 3050 Water Based, Premium Quality, Lagging Adhesive, and Vapor Retarder; ; _____; or None - N/A>>**: www.designpoly.com/#sle.
         2) Substitutions: **<< See Section 016000 - Product Requirements; See Section _____ .; or Not permitted.>>**
      b. Compatible with insulation.

B. Mineral Fiber (Outdoor) Jacket: Asphalt impregnated and coated sheet, **<< 50 lb/square; 36 lb/square; or _____>>**.

C. Aluminum Jacket:
   1. Comply with **<<ASTM B209/B209M>>**, Temper H14, minimum thickness of **<< 0.016 inch>>** with factory-applied polyethylene and kraft paper moisture barrier on the inside surface.
   2. Thickness: **<< 0.016 inch; 0.020 inch; 0.025 inch; 0.032 inch; 0.040 inch; or ____ inch>>** sheet.
   3. Finish: **<< Smooth; Embossed; or _____>>**.
   4. Joining: Longitudinal slip joints and **<< 2 inch>>** laps.
   5. Fittings: **<< 0.016 inch; or ____ inch>>** thick die-shaped fitting covers with factory-attached protective liner.
   6. Metal Jacket Bands: **<< 3/8 inch>>** wide; **<< 0.015 inch; or ____ inch>>** thick aluminum.

D. Aluminum-Foil Laminate Jacket:
   1. Manufacturers:
      a. Ideal Tape Co., Inc**<< ; _____; or None - N/A>>**: www.idealtape.com/#sle.
      b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
   2. Factory-applied, pressure sensitive adhesive jacketing on paper release liner.
   3. Finish: **<< Aluminum smooth; Aluminum embossed; Gloss white; Embossed white; or _____>>**.
   4. Comply with **<<ASTM C1775>>**.

E. Aluminum-Foil Laminate Jacket:
   1. Manufacturers:
      a. H.B. Fuller Construction Products, Inc**<< ; Foster - Vapor-Fas; ; _____; or None - N/A>>**: www.fosterproducts.com/#sle.
      b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
   2. Factory-applied, pressure sensitive adhesive jacketing to comply with **<<ASTM C1775>>**.

F. Flexible Weather-Proofing Outdoor Jacket: Self-healing, field-applied outdoor cladding.

DRAFT

1. Material: **<< Aluminum foil/polymer laminate with rubberized asphalt layer and acrylic adhesive; or _____>>**.
2. Thickness: **<< 34 mil, 0.034 inch; 37 mil, 0.037 inch; or ___ mil, ___ inch>>**.
3. Finish: **<< Smooth; Embossed; or _____>>**.
4. Color: **<< Silver; White; or _____>>**.
5. Water Vapor Transmission: **<< 0.002 perm inch; or ____ perm inch>>**, maximum, when tested in accordance with **<<ASTM E96/E96M>>**.
6. Mold Resistance: Pass when tested in accordance with **<<ASTM C1338>>**.
7. Emissivity: **<< 0.30; or ___>>** when tested in accordance with **<<ASTM C1371>>**.
8. Manufacturers:
   a. Polyguard Products**<< ; Alumaguard; ; Alumaguard All-Weather; : Alumaguard Lite; ; _____; or None - N/A>>**: www.polyguardproducts.com.com/#sle.
   b. Substitutions: **<< See Section 016000 - Product Requirements; See Section _____ .; or Not permitted.>>**

G. Reinforced Tape:
1. **<< FSK; All Service Jacket; PSK; or _____>>** tape suitable for sealing seams between insulation, insulated elbows, and fittings resulting in a tight, smooth surface without wrinkles.
2. Comply with **<<UL 723>>** or **<<ASTM E84>>**.
3. Moisture Vapor Permeability: **<< 0.00 perm inch; or ____ perm inch>>**, when tested in accordance with **<<ASTM E96/E96M>>**.
4. Finish: Match insulation.

H. Plain Foil Tape:
1. Manufacturers:
   a. Ideal Tape Co., Inc**<< ; _____; or None - N/A>>**: www.idealtape.com/#sle.
   b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
2. Aluminum foil with pressure-sensitive adhesive on paper release liner.
3. Finish: Plain foil.

I. UL181 Tape for **<< Rigid; and Flexible>>** Ductwork:
1. Manufacturers:
   a. Ideal Tape Co., Inc**<< ; _____; or None - N/A>>**: www.idealtape.com/#sle.
   b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
2. Comply with **<<UL 181A>>** for rigid ductwork.
3. Comply with **<<UL 181B>>** for flexible ductwork.
4. Aluminum foil coated with pressure-sensitive adhesive on paper release liner.
5. **<< Foil; Polypropylene; or _____>>** tape suitable for sealing seams between insulation, insulated elbows, and fittings resulting in a tight, smooth surface without wrinkles.
6. Finish: **<< Printed with UL Listing for identification; Silver or black, printed with UL Listing for identification; or _____>>**.

2.08 DUCT LINER

A. Manufacturers:

DRAFT

1. Aeroflex USA**<< ; AEROFLEX Breathe-EZ; ; AEROFLEX-EP; ; _____; or None - N/A>>**: www.aeroflexusa.com/#sle.
2. Armacell LLC**<< ; ArmaFlex Ultima; ; AP ArmaFlex; ; AP ArmaFlex FS; ; _____; or None - N/A>>**: www.armacell.us/#sle.
3. CertainTeed Corporation**<< ; _____; or None - N/A>>**: www.certainteed.com/#sle.
4. Ductmate Industries, Inc, a DMI Company**<< ; _____; or None - N/A>>**: www.ductmate.com/#sle.
5. Johns Manville**<< ; _____; or None - N/A>>**: www.jm.com/#sle.
6. Knauf Insulation**<< ; Performance+ Duct Liner; ; Performance+ Rigid Plenum Liner; ; _____; or None - N/A>>**: www.knaufinsulation.com/#sle.
7. Manson Insulation, a company of Knauf Insulation**<< ; Akousti-Liner; ; Akousti-Liner R; ; _____; or None - N/A>>**: www.imanson.com/#sle.
8. Owens Corning Corporation**<< ; QuietR Rotary Duct Insulation; ; _____; or None - N/A>>**: www.owenscorning.com/en-us/#sle.
9. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Elastomeric Foam Insulation: Preformed flexible elastomeric cellular rubber insulation complying with **<<ASTM C534/C534M>><< Grade 1; Grade 2; Grade 3; or _____>>**, in sheet form.
1. Minimum Service Temperature: **<< Minus 40 degrees F; or ____ degrees F>>**.
2. Maximum Service Temperature: **<< 180 degrees F; 220 degrees F; or ____ degrees F>>**.
3. Fungal Resistance: No growth when tested according to **<<ASTM G21>>**.
4. Apparent Thermal Conductivity: Maximum of **<< 0.28 at 75 degrees F; or ____ at 75 degrees F>>**.
5. Minimum Noise Reduction Coefficients:
   a. **<< 1/2 inch>>** Thickness: **<< 0.30; or ___>>**.
   b. **<< 1 inch>>** Thickness: **<< 0.40; or ___>>**.
   c. **<< 1-1/2 inches>>** Thickness: **<< 0.50; or ___>>**.
   d. **<< 2 inch>>** Thickness: **<< 0.60; or ___>>**.
6. Erosion Resistance: Does not show evidence of breaking away, flaking off, or delamination at velocities of **<< 10,000 fpm; or ____ fpm>>** when tested in accordance with **<<ASTM C1071>>**.
7. Connection: Waterproof vapor barrier adhesive.

C. Elastomeric Foam Adhesive: Air dried, contact adhesive, compatible with insulation. Comply with **<<ASTM C916>>**.

PART 3 EXECUTION

3.01 EXAMINATION

A. Test ductwork for design pressure prior to applying insulation materials.

B. Verify that surfaces are clean, foreign material removed, and dry.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install in accordance with NAIMA National Insulation Standards.

C. Insulated Ducts Conveying Air Below Ambient Temperature:

DRAFT

1. Provide insulation with vapor barrier jackets.
2. Finish with tape and vapor barrier jacket.
3. Continue insulation through walls, sleeves, hangers, and other duct penetrations.
4. Insulate entire system, including fittings, joints, flanges, fire dampers, flexible connections, and expansion joints.

D. Insulated Ducts Conveying Air Above Ambient Temperature:
1. Provide with or without standard vapor barrier jacket.
2. Insulate fittings and joints. Where service access is required, bevel and seal ends of insulation.

E. Ducts Exposed in Mechanical Equipment Rooms or Finished Spaces**<< (below 10 feet above finished floor); _____; or None - N/A>>**: Finish with **<< canvas jacket sized for finish painting; aluminum jacket; or _____>>**.

F. Exterior Applications: Provide insulation with vapor barrier jacket. Cover with **<< outdoor jacket finished; see Section _____; caulked aluminum jacket with seams located on bottom side of horizontal duct section; or _____>>**.

G. Slope exterior ductwork to shed water.

H. External Duct Insulation Application:
1. Secure insulation with vapor barrier with wires and seal jacket joints with vapor barrier adhesive or tape to match jacket.
2. Secure insulation without vapor barrier with staples, tape, or wires.
3. Install without sag on underside of duct. Use adhesive or mechanical fasteners where necessary to prevent sagging. Lift duct off trapeze hangers and insert spacers.
4. Seal vapor barrier penetrations by mechanical fasteners with vapor barrier adhesive.
5. Stop and point insulation around access doors and damper operators to allow operation without disturbing wrapping.

I. Duct**<< and Plenum; _____; or None - N/A>>** Liner Application:
1. Adhere insulation with adhesive for **<< 90; 100; or _____>>** percent coverage.
2. Secure insulation with mechanical liner fasteners. Refer to **<<SMACNA (DCS)>>** for spacing.
3. Seal and smooth joints. Seal and coat transverse joints.
4. Seal liner surface penetrations with adhesive.
5. Duct dimensions indicated are net inside dimensions required for airflow. Increase duct size to allow for insulation thickness.

3.03 INDOOR APPLICATION SCHEDULE

A. Service: Unless otherwise indicated provide the following:
1. Concealed Ducts and Plenums:
a. Material: Mineral-Fiber Blanket.
b. Thickness: 2 inches.
c. Vapor Retarder Required: Yes.
2. Ducts and Plenums in Exposed, Finished Spaces:
a. Material: Mineral-Fiber Board.
b. Thickness: 1-1/2 inches.
c. Field-Applied Jacket: Glass cloth.
d. Vapor Retarder Required: Yes.

DRAFT

e. Paint: Color as selected by Architect. Refer to Section “Painting.”

B. Service: Round and flat oval, supply-air ducts, concealed and within the building insulation envelope.
   1. Material: Mineral-Fiber Blanket Thermal Insulation with Factory Applied FSK Jacket.
   2. Thickness: 1-1/2 inches.
   3. Vapor Retarder Required: Yes.

C. Service: Round and flat oval, outside-air ducts, concealed and within the building insulation envelope.
   1. Material: Mineral-Fiber Blanket Thermal Insulation with Factory Applied FSK Jacket.
   2. Thickness: 1-1/2 inches.
   3. Vapor Retarder Required: Yes.

D. Service: Rectangular, supply-air ducts, concealed and within the building insulation envelope.
   1. Material: Mineral-Fiber Blanket Thermal Insulation with Factory Applied FSK Jacket.
   2. Thickness: 1-1/2 inches.
   3. Vapor Retarder Required: Yes.

E. Service: Rectangular, outside-air ducts, concealed and within the building insulation envelope.
   1. Material: Mineral-Fiber Blanket Thermal Insulation with Factory Applied FSK Jacket.
   2. Thickness: 1-1/2 inches.
   3. Vapor Retarder Required: Yes.

F. Service: Round and flat oval, supply-air ducts, concealed in vented attics and in unvented attics with insulated ceilings.
   1. Material: Mineral-Fiber Blanket Thermal Insulation with Factory Applied FSK Jacket.
   2. Thickness: 2 inches.
   3. Vapor Retarder Required: Yes.

G. Service: Round and flat oval, return-air ducts, concealed in vented attics and unvented attics with insulated ceilings.
   1. Material: Mineral-Fiber Blanket Thermal Insulation with Factory Applied FSK Jacket.
   2. Thickness: 1-1/2 inches.
   3. Vapor Retarder Required: Yes.

H. Service: Rectangular, supply-air ducts, concealed in vented attics and unvented attics with insulated ceilings.
   1. Material: Mineral-Fiber Blanket Thermal Insulation with Factory Applied FSK Jacket.
   2. Thickness: 2 inches.
   3. Vapor Retarder Required: Yes.

I. Service: Rectangular, return-air ducts, concealed in vented attics and unvented attics with insulated ceilings.
   1. Material: Mineral-Fiber Blanket Thermal Insulation with Factory Applied FSK Jacket.
   2. Thickness: 1-1/2 inches.
   3. Vapor Retarder Required: Yes.

J. Service: Round and flat oval, supply-air ducts, exposed.
   1. Refer to Section “Metal Ducts.”

K. Service: Round and flat oval, outside-air ducts, exposed.
   1. Refer to Section “Metal Ducts.”

DRAFT

L. Service: Rectangular, supply-air ducts, in Exposed, Finished Spaces.
   1. Material: Mineral-Fiber Board Thermal Insulation, Unfaced
   2. Thickness: 1-1/2 inches.
   3. Field-Applied Jacket: Glass cloth.
   4. Vapor Retarder Required: Yes.
   5. Paint: Color as selected by Architect. Refer to Section “Painting.”

M. Service: Rectangular, outside-air ducts, in Exposed Finished Spaces.
   1. Material: Mineral-Fiber Board Thermal Insulation, Unfaced
   2. Thickness: 2 inches
   3. Field-Applied Jacket: Glass cloth.
   4. Vapor Retarder Required: Yes.
   5. Paint: Color as selected by Architect. Refer to Section “Painting.”

N. Service: Duct Liner
   1. Provide where indicated on drawings.
   2. Supply Air Ducts: 1-1/2" thickness.
   3. Transfer Air Ducts: 1" thickness.
   4. Return Air Ducts: 1" thickness.

O. Service: Supply Diffusers Back Pan:
   1. Where they are not factory insulated, field insulate.
   2. Material: Mineral-Fiber Blanket Thermal Insulation with Factory Applied FSK Jacket.
   3. Thickness: 1-1/2 inches.
   4. Vapor Retarder Required: Yes.

3.04 OUTDOOR APPLICATION SCHEDULE

A. Service: Round, supply-air ducts.
   1. Material: Round supply air ducts shall be factory fabricated double wall ducts as specified in Section “Metal Ducts.”

B. Service: Round, return-air ducts.
   1. Material: Round supply air ducts shall be factory fabricated double wall ducts as specified in Section “Metal Ducts.”

C. Service: Rectangular, supply-air ducts.
   1. Material: Mineral-fiber board.
   2. Total Thickness: 2 Inches (two 1” layers).
   3. Number of Layers: Two
   4. Field-Applied Jacket: Glass cloth.
   5. Vapor Retarder Required: Yes
   6. Outer Jacket: Smooth or stucco embossed aluminum.
      a. Thickness: Minimum 0.024 inches.

D. Service: Rectangular, return-air ducts.
   1. Material: Mineral-fiber board.
   2. Total Thickness: 2 Inches (two 1” layers).
   3. Number of Layers: Two
   4. Field-Applied Jacket: Glass cloth.

DRAFT

5. Vapor Retarder Required: Yes
6. Outer Jacket: Smooth or stucco embossed aluminum.
   a. Thickness: Minimum 0.024 inches.

END OF SECTION 230713

DRAFT

SECTION 230716
HVAC EQUIPMENT INSULATION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Equipment insulation.

B. Flexible removable and reusable blanket insulation.

C. Weather barrier coatings.

D. Jacketing and accessories.

1.02 REFERENCE STANDARDS

A. ASTM A666/A666M - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.

B. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

C. ASTM C177 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus.

D. ASTM C195 - Standard Specification for Mineral Fiber Thermal Insulating Cement.

E. ASTM C518 - Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus.

F. ASTM C534/C534M - Standard Specification for Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form.

G. ASTM C552 - Standard Specification for Cellular Glass Thermal Insulation.

H. ASTM C553 - Standard Specification for Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications.

I. ASTM C592 - Standard Specification for Mineral Fiber Blanket Insulation and Blanket-Type Pipe Insulation (Metal-Mesh Covered) (Industrial Type).

J. ASTM C612 - Standard Specification for Mineral Fiber Block and Board Thermal Insulation.

K. ASTM C1393 - Standard Specification for Perpendicularly Oriented Mineral Fiber Roll and Sheet Thermal Insulation for Pipes and Tanks.

L. ASTM C1423 - Standard Guide for Selecting Jacketing Materials for Thermal Insulation.

M. ASTM C1775 - Standard Specification for Laminate Protective Jacket and Tape for Use Over Thermal Insulation for Outdoor Applications.

N. ASTM D5590 - Standard Test Method for Determining the Resistance of Paint Films and Related Coatings to Fungal Defacement by Accelerated Four-Week Agar Plate Assay.

O. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

P. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials.

Q. SAE AMS3779 - Tape, Adhesive, Pressure-Sensitive Thermal Radiation Resistant, Aluminum Coated Glass Cloth.

R. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials.

DRAFT

1.03 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>**, for submittal procedures.

B. Product Data: Provide product description, thermal characteristics, list of materials and thickness for equipment scheduled.

C. Manufacturer's Instructions: Indicate installation procedures that ensure acceptable workmanship and installation standards will be achieved.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with not less than **<< three; or _____>>** years of**<< documented; _____; or None - N/A>>** experience.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Accept materials on site in original factory packaging, labeled with manufacturer's identification, including product density and thickness.

B. Protect insulation from weather and construction traffic, dirt, water, chemical, and mechanical damage, by storing in original wrapping.

1.06 FIELD CONDITIONS

A. Maintain ambient temperatures and conditions required by manufacturers of adhesives, mastics, and insulation cements.

B. Maintain temperature during and after installation for minimum period of **<< 24; or ____>>** hours.

PART 2 PRODUCTS

2.01 REGULATORY REQUIREMENTS

A. Surface Burning Characteristics: Flame spread index/Smoke developed index of 25/50, maximum, when tested in accordance with **<< ASTM E84; UL 723; or _____>>**.

2.02 GLASS FIBER, FLEXIBLE

A. Manufacturers:

1. CertainTeed Corporation**<< ; _____; or None - N/A>>**: www.certainteed.com/#sle.
2. Johns Manville Corporation**<< ; _____; or None - N/A>>**: www.jm.com/#sle.
3. Knauf Insulation**<< ; _____; or None - N/A>>**: www.knaufinsulation.com/#sle.
4. Manson Insulation, a company of Knauf Insulation**<< ; _____; or None - N/A>>**: www.imanson.com/#sle.
5. Owens Corning Corporation**<< ; SOFTR Duct Wrap FRK; ; _____; or None - N/A>>**: www.owenscorning.com/en-us/#sle.
6. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Insulation: **<<ASTM C553>>**; flexible, noncombustible.

1. **<< K>>** Value: **<< 0.36 at 75 degrees F; or ____ at 75 degrees F>>**, when tested in accordance with **<<ASTM C177>>** or **<<ASTM C518>>**.
2. Maximum Service Temperature: **<< 450 degrees F; 850 degrees F; 1,000 degrees F; 1,200 degrees F; or _____ degrees F>>**.
3. Maximum Water Vapor Absorption: 5.0 percent by weight.

DRAFT

C. Insulation: **<<ASTM C1393>>**; pipe and tank, end grain adhered to jacket.
   1. **<< K>>** Value: **<<ASTM C177>>**, **<< 0.27 at 75 degrees F; or _____ at 75 degrees F>>**.
   2. Maximum Service Temperature: **<< 850 degrees F; or _____ degrees F>>**.
   3. Maximum Moisture Absorption: 0.2 percent by volume.
   4. Products:
      a. Knauf Insulation; Performance+ Earthwool Pipe and Tank Insulation: www.knaufinsulation.com/#sle.
      b. Knauf Insulation; Performance+ KwikFlex Pipe and Tank Insulation: www.knaufinsulation.com/#sle.
      c. Manson Insulation, a company of Knauf Insulation; AK FLEX with ECOSE: www.imanson.com/#sle.
      d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

D. Vapor Barrier Jacket: **<< Kraft paper reinforced with glass fiber yarn and bonded to aluminized film; Vinyl; or _____>>**.
   1. Moisture Vapor Permeability: **<< 0.02 perm inch; 0.04 perm inch; 1.3 perm inch; or ____ perm inch>>**, when tested in accordance with **<<ASTM E96/E96M>>**.
   2. Secure with self-sealing longitudinal laps and butt strips.

E. Tie Wire: **<< 0.048 inch>>** stainless steel with twisted ends on maximum **<< 12 inch>>** centers.

F. Vapor Barrier Lap Adhesive: Compatible with insulation.

G. Insulating Cement/Mastic: **<<ASTM C195>>**, hydraulic setting on mineral wool.

2.03 FLEXIBLE REMOVABLE AND REUSABLE BLANKET INSULATION

A. Manufacturers:
   1. Firwin**<< ; _____; or None - N/A>>**: www.firwin.com/#sle.
   2. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Description: Custom cut and fabricated, removable and reusable blanket insulation system, consisting of inner liner, insulation layer, outer protective jacket, and fastening system.

C. Provide insulation system based on surface temperature of piping, installed location of piping, and maximum safe-to-touch temperature of jacketing.

D. Performance Criteria:
   1. Maximum Service Temperature: Constructed for temperatures up to **<< 500 degrees F; 1200 degrees F; or _____ degrees F>>**.
   2. Safe-to-Touch Temperature of Jacketing: **<< 140 degrees F; 185 degrees F; 203 degrees F; or _____ degrees F>>**.
   3. Space Ambient Temperature, High: **<< 85 degrees F; or _____ degrees F>>**.
   4. Space Ambient Temperature, Low: **<< 40 degrees F; or _____ degrees F>>**.

E. Components:
   1. Inner Liner: Use **<< stainless steel mesh; silicone-impregnated fiberglass; or _____>>**.
   2. Insulation:
      a. Material: **<< Needled fiberglass felt mat; CMS (calcium, magnesium, silica) fiber wool; or _____>>**.

DRAFT

b. Thickness: **<< 1 inch; 2 inches; or _____ inches>>**.
c. Density: **<< 8 pcf; 10 pcf; 11 pcf; or _____ pcf>>**.
d. Thermal Conductivity k-factor in **<< Btu inch/hr sq ft degrees F>>**: **<< 0.50 at 500 degrees F; 0.54 at 752 degrees F; or _____ at _____ degrees F>>**.
e. Outer Jacket: **<< Silicone-impregnated fiberglass; or _____>>**.
f. Fastening System: **<< Lacing wire; Snaps; Springs; Straps; Velcro; or _____>>**.

2.04 GLASS FIBER, RIGID

A. Manufacturer:
1. CertainTeed Corporation**<< ; _____; or None - N/A>>**: www.certainteed.com/#sle.
2. Johns Manville Corporation**<< ; _____; or None - N/A>>**: www.jm.com/#sle.
3. Knauf Insulation**<< ; Earthwool Insulation Board; ; _____; or None - N/A>>**: www.knaufinsulation.com/#sle.
4. Manson Insulation, a company of Knauf Insulation**<< ; AK Board; ; _____; or None - N/A>>**: www.imanson.com/#sle.
5. Owens Corning Corporation**<< ; _____; or None - N/A>>**: www.owenscorning.com/en-us/#sle.
6. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Insulation: **<<ASTM C612>><< or ASTM C592; _____; or None - N/A>>**; rigid, noncombustible.
1. **<< K>>** Value: **<< 0.25 at 75 degrees F; or ____ at 75 degrees F>>**, when tested in accordance with **<<ASTM C177>>** or **<<ASTM C518>>**.
2. Maximum Service Temperature: **<< 850 degrees F; 1,200 degrees F; or ____ degrees F>>**.
3. Maximum Water Vapor Absorption: 5.0 percent by weight.
4. Maximum Density: **<< 8.0 pcf; 12.0 pcf; or ____ pcf>>**.

C. Aluminum-Foil Laminate Jacket:
1. Manufacturers:
a. H.B. Fuller Construction Products, Inc**<< ; Foster - Vapor-Fas; ; _____; or None - N/A>>**: www.fosterproducts.com/#sle.
b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
2. Factory-applied, pressure sensitive adhesive jacketing to comply with **<<ASTM C1775>>**.

D. Vapor Barrier Jacket:
1. **<< Kraft paper reinforced with glass fiber yarn and bonded to aluminized film; Vinyl; or _____>>**.
2. Moisture Vapor Permeability: **<< 0.02 perm inch; 0.04 perm inch; 1.3 perm inch; or ____ perm inch>>**, when tested in accordance with **<<ASTM E96/E96M>>**.
3. Secure with self-sealing longitudinal laps and butt strips.
4. Secure with outward clinch expanding staples and vapor barrier mastic.

E. Facing: **<< 1 inch>><< galvanized; stainless; _____; or None - N/A>>** steel hexagonal wire mesh stitched **<< on one face of insulation; onto both faces of insulation; on one face of insulation with expanded metal lath on other; or _____>>**.

F. Vapor Barrier Lap Adhesive: Compatible with insulation.

DRAFT

G. Insulating Cement/Mastic: **<<ASTM C195>>**; hydraulic setting on mineral wool.

2.05 REMOVABLE PUMP INSULATION COV

A. General:

1. Provide suitcase style removable insulation cover with aluminum enclosure, latches, and lined with 2" of flexible elastomeric cellular insulation. Formed edges with gasketing to create air-tight enclosure around chilled water pumps.

2.06 FLEXIBLE ELASTOMERIC CELLULAR INSULATION

A. Manufacturer:

1. Aeroflex USA**<< ; AEROFLEX EPDM Sheet/Roll; ; _____; or None - N/A>>**: www.aeroflexusa.com/#sle.
2. Armacell LLC**<< ; AP ArmaFlex; ; AP ArmaFlex FS; ; ArmaFlex Ultima; ; ArmaTuff; ; _____; or None - N/A>>**: www.armacell.us/#sle.
3. K-Flex USA LLC**<< ; Insul-Sheet; ; K-FONIK GK; ; _____; or None - N/A>>**: www.kflexusa.com/#sle.
4. Substitutions: **<< See Section 016000 - Product Requirements; See Section _____ .; or Not permitted.>>**

B. Insulation: Preformed flexible elastomeric cellular rubber insulation complying with **<<ASTM C534/C534M>><< Grade 1; Grade 2; Grade 3; or _____>>**, in sheet form.

1. Minimum Service Temperature: **<< Minus 40 degrees F; or ____ degrees F>>**.
2. Maximum Service Temperature: **<< 220 degrees F; or ____ degrees F>>**.
3. Connection: Waterproof vapor barrier adhesive.

C. Elastomeric Foam Adhesive: Air dried, contact adhesive, compatible with insulation.

2.07 WEATHER BARRIER COATINGS

A. Weather-Resistive Barrier Coating: Fire-resistive, UV resistant, water-based mastic for use over closed cell polyethylene and polyurethane foam insulation; applied with glass fiber or synthetic reinforcing mesh.

1. Manufacturers:
   a. H.B. Fuller Construction Products, Inc**<< ; Childers - CP Series Weather Barrier Coating; ; _____; or None - N/A>>**: www.fosterproducts.com/#sle.
   b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
2. Surface Burning Characteristics: Flame spread index of 25 or less, smoke developed index of 450 or less, Class A, when tested in accordance with **<<ASTM E84>>**.
3. Water Vapor Permeance: Greater than **<< 1.0 perm; or ____ perm>>** in accordance with **<<ASTM E96/E96M>>**.
4. Resistance to Fungal Growth: No growth when tested in accordance with **<<ASTM D5590>>**.
5. Color: **<< As selected by Architect; White; Metallic gray; Black; or _____>>**.

2.08 JACKETING AND ACCESSORIES

A. PVC Plastic:

1. Manufacturers:
   a. Johns Manville Corporation**<< ; _____; or None - N/A>>**: www.jm.com/#sle.

DRAFT

b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2. Jacket: Sheet material, off-white color.
   a. Minimum Service Temperature: **<< Minus 40 degrees F; or ____ degrees F>>**.
   b. Maximum Service Temperature: **<< 150 degrees F; or ____ degrees F>>**.
   c. Moisture Vapor Permeability: **<< 0.02 perm inch; 0.04 perm inch; 1.3 perm inch; or ____ perm inch>>**, when tested in accordance with **<<ASTM E96/E96M>>**.
   d. Thickness: **<< 10 mil, 0.010 inch; 15 mil, 0.015 inch; 20 mil, 0.020 inch; 30 mil, 0.030 inch; or _____ mil, _____ inch>>**.
   e. Connections: **<< Brush on welding adhesive; Tacks; Pressure sensitive color matching vinyl tape; or _____>>**.
3. Covering Adhesive Mastic: Compatible with insulation.

B. Canvas Jacket: UL listed **<< 6 oz/sq yd>>** plain weave cotton fabric treated with dilute fire-retardant lagging adhesive.
   1. Lagging Adhesive: Compatible with insulation.

C. Aluminum Jacket:
   1. Comply with **<<ASTM B209/B209M>>**, Temper H14, minimum thickness of **<< 0.016 inch>>** with factory-applied polyethylene and kraft paper moisture barrier on the inside surface.
   2. Thickness: **<< 0.016 inch; 0.020 inch; 0.025 inch; 0.032 inch; 0.040 inch; or ____ inch>>** sheet.
   3. Finish: **<< Smooth; Embossed; or _____>>**.
   4. Joining: Longitudinal slip joints and **<< 2 inch>>** laps.
   5. Fittings: **<< 0.016 inch; or ____ inch>>** thick die-shaped fitting covers with factory-attached protective liner.
   6. Metal Jacket Bands: **<< 3/8 inch>>** wide; **<< 0.015 inch; or ____ inch>>** thick aluminum.

D. Aluminum-Foil Laminate Jacket:
   1. Manufacturers:
      a. Ideal Tape Co., Inc**<< ; _____; or None - N/A>>**: www.idealtape.com/#sle.
      b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
   2. Factory-applied, pressure sensitive adhesive jacketing on paper release liner.
   3. Finish: **<< Aluminum smooth; Aluminum embossed; Gloss white; Embossed white; or _____>>**.
   4. Comply with **<<ASTM C1775>>**.

E. Aluminum-Foil Laminate Jacket:
   1. Manufacturers:
      a. H.B. Fuller Construction Products, Inc**<< ; Foster - Vapor-Fas; ; _____; or None - N/A>>**: www.fosterproducts.com/#sle.
   2. Factory-applied, pressure sensitive adhesive jacketing to comply with **<<ASTM C1775>>**.

F. Stainless Steel Jacket: **<<ASTM A666/A666M>>**, Type **<< 302; 304; 316; or _____>>** stainless steel.
   1. Thickness: **<< 0.010 inch; 0.016 inch; 0.018 inch; or ____ inch>>**.
   2. Finish: **<< Smooth.; Corrugated.; or _____>>**

DRAFT

3. Metal Jacket Bands: **<< 3/8 inch>>** wide; **<< 0.010 inch; or ____ inch>>** thick stainless steel.

G. Reinforced Tape:
1. Manufacturers:
a. Ideal Tape Co., Inc**<< ; _____; or None - N/A>>**: www.idealtape.com/#sle.
b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
2. **<< FSK; All Service Jacket; PSK; or _____>>** tape suitable for sealing seams in insulation, insulated pipe bends, and fittings resulting in a tight, smooth surface without wrinkles.
3. Comply with **<<UL 723>>** or **<<ASTM E84>>**.
4. Moisture Vapor Permeability: **<< 0.00 perm inch; or ____ perm inch>>**, when tested in accordance with **<<ASTM E96/E96M>>**.
5. Finish: Match insulation.

H. Plain Foil Tape:
1. Manufacturers:
a. Ideal Tape Co., Inc**<< ; _____; or None - N/A>>**: www.idealtape.com/#sle.
b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
2. Aluminum foil with pressure-sensitive adhesive on paper release liner.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that equipment has been tested before applying insulation materials.

B. Verify that surfaces are clean and dry, with foreign material removed.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Factory Insulated Equipment: Do not insulate.

C. Exposed Equipment: Locate insulation and cover seams in least visible locations.

D. Apply insulation close to equipment by grooving, scoring, and beveling insulation. Fasten insulation to equipment with studs, pins, clips, adhesive, wires, or bands.

E. Fill joints, cracks, seams, and depressions with bedding compound to form smooth surface. On cold equipment, use vapor barrier cement.

F. Insulated equipment containing fluids below ambient temperature; insulate entire system.

G. Fiber glass insulated equipment containing fluids below ambient temperature; provide vapor barrier jackets, factory-applied or field-applied. Finish with glass cloth and vapor barrier adhesive.

H. For hot equipment containing fluids **<< 140 degrees F; or ____ degrees F>>** or less, do not insulate flanges and unions, but bevel and seal ends of insulation.

I. For hot equipment containing fluids over **<< 140 degrees F; or ____ degrees F>>**, insulate flanges and unions with removable sections and jackets.

DRAFT

J. Fiber glass insulated equipment containing fluids above ambient temperature; provide standard jackets, with or without vapor barrier, factory-applied or field-applied. Finish with glass cloth and adhesive.

K. Inserts and Shields:
   1. Application: Equipment **<< 1-1/2 inches; 2 inches; or ____ inches>>** diameter or larger.
   2. Shields: **<< Galvanized steel; Steel; or _____>>** between hangers and inserts.
   3. Insert Location: Between support shield and equipment and under the finish jacket.
   4. Insert Configuration: Minimum **<< 6 inches>>** long, of same thickness and contour as adjoining insulation; may be factory fabricated.
   5. Insert Material: Hydrous calcium silicate insulation or other heavy density insulating material suitable for the planned temperature range.

L. Finish insulation at supports, protrusions, and interruptions.

M. Equipment in Mechanical Equipment Rooms or Finished Spaces: Finish with **<< canvas jacket sized for finish painting; PVC jacket and fitting covers; aluminum jacket; stainless steel jacket; or _____>>**.

N. Exterior Applications:
   1. Provide vapor barrier jacket or finish with glass mesh reinforced vapor barrier cement.
   2. Cover with **<< aluminum; stainless steel; or _____>>**.

O. Cover **<< glass fiber; cellular glass; hydrous calcium silicate; cellular foam; or _____>>** insulation with metal mesh and finish with heavy coat of insulating cement.

P. Nameplates and ASME Stamps: Bevel and seal insulation around; do not insulate over.

Q. Equipment Requiring Access for Maintenance, Repair, or Cleaning: Install insulation so it can be easily removed and replaced without damage.

3.03 SCHEDULE

A. Equipment: Chilled-water air separators and expansion/compression tanks.
   1. Operating Temperature: 35 to 75 deg F.
   2. Insulation Material: Semi-Rigid Mineral-Fiber Board
      a. Insulation Thickness: 2”
      b. Field-Applied Jacket: Glass cloth.
      c. Vapor Retarder Required: Yes.
      d. Finish: Painted.
   3. Insulation Material: Flexible Elastomeric
      a. Insulation Thickness: 1”
      b. Field-Applied Jacket: Glass cloth.
      c. Vapor Retarder Required: Yes.
      d. Finish: Painted.

B. Equipment: Chilled-water pumps
   1. Operating Temperature: 35 to 75 deg F.
   2. Insulation Material: Removable pump insulation cover
   3. Vapor Retarder Required: Yes.

END OF SECTION 230716

DRAFT

SECTION 230719
HVAC PIPING INSULATION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Piping insulation.

B. Flexible removable and reusable blanket insulation.

C. Weather barrier coatings.

D. Jacketing and accessories.

E. Engineered wall outlet seals and refrigerant piping insulation protection.

1.02 RELATED REQUIREMENTS

A. Section **<< 078400 - Firestopping>>**.

1.03 REFERENCE STANDARDS

A. ASTM A666/A666M - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.

B. ASTM B117 - Standard Practice for Operating Salt Spray (Fog) Apparatus.

C. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

D. ASTM C177 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus.

E. ASTM C195 - Standard Specification for Mineral Fiber Thermal Insulating Cement.

F. ASTM C449 - Standard Specification for Mineral Fiber Hydraulic-Setting Thermal Insulating and Finishing Cement.

G. ASTM C518 - Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus.

H. ASTM C534/C534M - Standard Specification for Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form.

I. ASTM C547 - Standard Specification for Mineral Fiber Pipe Insulation.

J. ASTM C553 - Standard Specification for Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications.

K. ASTM C795 - Standard Specification for Thermal Insulation for Use in Contact with Austenitic Stainless Steel.

L. ASTM C1136 - Standard Specification for Flexible, Low Permeance Vapor Retarders for Thermal Insulation.

M. ASTM C1393 - Standard Specification for Perpendicularly Oriented Mineral Fiber Roll and Sheet Thermal Insulation for Pipes and Tanks.

N. ASTM C1423 - Standard Guide for Selecting Jacketing Materials for Thermal Insulation.

O. ASTM C1775 - Standard Specification for Laminate Protective Jacket and Tape for Use Over Thermal Insulation for Outdoor Applications.

DRAFT

P. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers--Tension.

Q. ASTM D570 - Standard Test Method for Water Absorption of Plastics.

R. ASTM D610 - Standard Practice for Evaluating Degree of Rusting on Painted Steel Surfaces.

S. ASTM D5590 - Standard Test Method for Determining the Resistance of Paint Films and Related Coatings to Fungal Defacement by Accelerated Four-Week Agar Plate Assay.

T. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

U. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials.

V. ASTM E283/E283M - Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Skylights, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen.

W. ASTM E331 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference.

X. ASTM E2178 - Standard Test Method for Determining Air Leakage Rate and Calculation of Air Permeance of Building Materials.

Y. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

Z. ASTM G153 - Standard Practice for Operating Enclosed Carbon Arc Light Apparatus for Exposure of Nonmetallic Materials.

AA. FM 4924 - Examination Standard for Pipe and Duct Insulation.

BB. SAE AMS3779 - Tape, Adhesive, Pressure-Sensitive Thermal Radiation Resistant, Aluminum Coated Glass Cloth.

CC. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials.

DRAFT

1.04 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Product Data: Provide product description, thermal characteristics, list of materials and thickness for each service, and locations.

C. Manufacturer's Instructions: Indicate installation procedures that ensure acceptable workmanship and installation standards will be achieved.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with not less than **<< three; or _____>>** years of**<< documented; _____; or None - N/A>>** experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Accept materials on site, labeled with manufacturer's identification, product density, and thickness.

1.07 FIELD CONDITIONS

A. Maintain ambient conditions required by manufacturers of each product.

B. Maintain temperature before, during, and after installation for minimum of **<< 24; or ____>>** hours.

PART 2 PRODUCTS

2.01 REGULATORY REQUIREMENTS

A. Surface Burning Characteristics: Flame spread index/Smoke developed index of 25/50, maximum, when tested in accordance with **<< ASTM E84; UL 723; or _____>>**.

2.02 GLASS FIBER, FLEXIBLE

A. Manufacturers:
   1. JP Lamborn Co**<< ; _____; or None - N/A>>**: www.jpflex.com/#sle.
   2. Knauf Insulation**<< ; _____; or None - N/A>>**: www.knaufinsulation.com/#sle.
   3. Manson Insulation, a company of Knauf Insulation**<< ; _____; or None - N/A>>**: www.imanson.com/#sle.
   4. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Insulation: **<<ASTM C553>>**; flexible, noncombustible blanket.
   1. **<< K>>** Value: **<< 0.36 at 75 degrees F; 0.31 at 75 degrees F; 0.26 at 75 degrees F; 0.25 at 75 degrees F; or _____ at 75 degrees F>>**, when tested in accordance with **<<ASTM C518>>**.
   2. Maximum Service Temperature: **<< 250 degrees F; 450 degrees F; 850 degrees F; 1,000 degrees F; 1,200 degrees F; or ___ degrees F>>**.
   3. Maximum Water Vapor Absorption: 5.0 percent by weight.

C. Insulation: **<<ASTM C1393>>**; pipe and tank, end grain adhered to jacket.
   1. **<< K>>** Value: **<<ASTM C177>>**, **<< 0.27 at 75 degrees F; or _____ at 75 degrees F>>**.
   2. Maximum Service Temperature: **<< 850 degrees F; or ____ degrees F>>**.
   3. Maximum Moisture Absorption: 0.2 percent by volume.
   4. Products:
      a. Knauf Insulation; Performance+ Earthwool Pipe and Tank Insulation: www.knaufinsulation.com/#sle.
      b. Knauf Insulation; Performance+ KwikFlex Pipe and Tank Insulation: www.knaufinsulation.com/#sle.
      c. Manson Insulation, a company of Knauf Insulation; AK FLEX with ECOSE: www.imanson.com/#sle.
      d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

D. Aluminum-Foil Laminate Jacket:
   1. Manufacturers:
      a. H.B. Fuller Construction Products, Inc**<< ; Foster - Vapor-Fas; ; _____; or None - N/A>>**: www.fosterproducts.com/#sle.
      b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
   2. Factory-applied, pressure sensitive adhesive jacketing to comply with **<<ASTM C1775>>**.

E. Vapor Barrier Jacket:
   1. **<< Kraft paper with glass fiber yarn and bonded to aluminized film; 0.0032 inch vinyl; or _____>>**.
   2. Moisture Vapor Permeability: **<< 0.02 perm inch; 0.04 perm inch; 1.3 perm inch; or ____ perm inch>>**, when tested in accordance with **<<ASTM E96/E96M>>**.

DRAFT

3. Secure with pressure-sensitive tape.

F. Vapor Barrier Tape:
1. Kraft paper reinforced with glass fiber yarn and bonded to aluminized film with pressure-sensitive rubber-based adhesive.

G. Outdoor Vapor Barrier Mastic:
1. Vinyl emulsion type acrylic or mastic, compatible with insulation, black color.

H. Tie Wire: Annealed steel, **<< 16 gauge, 0.0508 inch diameter>>**.

2.03 GLASS FIBER, RIGID

A. Manufacturers:
1. CertainTeed Corporation**<< ; _____; or None - N/A>>**: www.certainteed.com/#sle.
2. Johns Manville Corporation**<< ; _____; or None - N/A>>**: www.jm.com/#sle.
3. Knauf Insulation**<< ; Performance+ Earthwool 1000 Pipe Insulation; ; _____; or None - N/A>>**: www.knaufinsulation.com/#sle.
4. Manson Insulation, a company of Knauf Insulation**<< ; Alley-K Pipe Insulation; ; _____; or None - N/A>>**: www.imanson.com/#sle.
5. Owens Corning Corporation**<< ; Fiberglas Pipe Insulation ASJ; ; _____; or None - N/A>>**: www.owenscorning.com/en-us/#sle.
6. Owens Corning Corporation**<< ; VaporWick Pipe Insulation; ; _____; or None - N/A>>**: www.owenscorning.com/en-us/#sle.
7. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Insulation: **<<ASTM C547>><< and ASTM C795; _____; or None - N/A>>**; rigid molded, noncombustible.
1. **<< K>>** Value: **<<ASTM C177>>**, **<< 0.24 at 75 degrees F; or ____ at 75 degrees F>>**.
2. Maximum Service Temperature: **<< 850 degrees F; 1200 degrees F; 1600 degrees F; or ____ degrees F>>**.
3. Maximum Moisture Absorption: 0.2 percent by volume.

C. Insulation: **<<ASTM C547>><< and ASTM C795; _____; or None - N/A>>**; semi-rigid, noncombustible, end grain adhered to jacket.
1. **<< K>>** Value: **<<ASTM C177>>**, **<< 0.24 at 75 degrees F; or _____ at 75 degrees F>>**.
2. Maximum Service Temperature: **<< 650 degrees F; or ____ degrees F>>**.
3. Maximum Moisture Absorption: 0.2 percent by volume.

D. Aluminum-Foil Laminate Jacket:
1. Manufacturers:
a. H.B. Fuller Construction Products, Inc**<< ; Foster - Vapor-Fas; ; _____; or None - N/A>>**: www.fosterproducts.com/#sle.
2. Factory-applied, pressure sensitive adhesive jacketing to comply with **<<ASTM C1775>>**.

E. Vapor Barrier Jacket: White kraft paper with glass fiber yarn, bonded to aluminized film; moisture vapor transmission when tested in accordance with **<<ASTM E96/E96M>>** of **<< 0.02 perm-inches>>**.

F. Tie Wire: **<< 0.048 inch>>** stainless steel with twisted ends on maximum **<< 12 inch>>** centers.

G. Vapor Barrier Lap Adhesive: Compatible with insulation.

H. Insulating Cement/Mastic: **<<ASTM C195>>**; hydraulic setting on mineral wool.

DRAFT

I. Fibrous Glass Fabric:
   1. Cloth: Untreated; **<< 9 oz/sq yd>>** weight.
   2. Blanket: **<< 1.0 pcf>>** density.
   3. Weave: **<< 5 by 5; 10 by 10; 10 by 20; or _____>>**.

J. Indoor Vapor Barrier Finish:
   1. Cloth: Untreated; **<< 9 oz/sq yd>>** weight.
   2. Vinyl emulsion type acrylic, compatible with insulation, **<< black; white; or _____>>** color.

K. Outdoor Vapor Barrier Mastic: Vinyl emulsion type acrylic or mastic, compatible with insulation, black color.

L. Insulating Cement: **<<ASTM C449>>**.

2.04 FLEXIBLE REMOVABLE AND REUSABLE BLANKET INSULATION

A. Manufacturers:
   1. Firwin**<< ; _____; or None - N/A>>**: www.firwin.com/#sle.
   2. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Description: Custom cut and fabricated, removable and reusable blanket insulation system, consisting of inner liner, insulation layer, outer protective jacket, and fastening system.

C. Provide insulation system based on surface temperature of piping, installed location of piping, and maximum safe-to-touch temperature of jacketing.

D. Performance Criteria:
   1. Maximum Service Temperature: Constructed for temperatures up to **<< 500 degrees F; 1200 degrees F; or _____ degrees F>>**.
   2. Safe-to-Touch Temperature of Jacketing: **<< 140 degrees F; 185 degrees F; 203 degrees F; or _____ degrees F>>**.
   3. Space Ambient Temperature, High: **<< 85 degrees F; or _____ degrees F>>**.
   4. Space Ambient Temperature, Low: **<< 40 degrees F; or _____ degrees F>>**.

E. Components:
   1. Inner Liner: Use **<< stainless steel mesh; silicone-impregnated fiberglass; or _____>>**.
   2. Insulation:
      a. Material: **<< Needled fiberglass felt mat; CMS (calcium, magnesium, silica) fiber wool; or _____>>**.
      b. Thickness: **<< 1 inch; 2 inches; or _____ inches>>**.
      c. Density: **<< 8 pcf; 10 pcf; 11 pcf; or _____ pcf>>**.
      d. Thermal Conductivity k-factor in **<< Btu inch/hr sq ft degrees F>>**: **<< 0.50 at 500 degrees F; 0.54 at 752 degrees F; or _____ at _____ degrees F>>**.
   3. Outer Jacket: **<< Silicone-impregnated fiberglass; or _____>>**.
   4. Fastening System: **<< Lacing wire; Snaps; Springs; Straps; Velcro; or _____>>**.

2.05 FLEXIBLE ELASTOMERIC CELLULAR INSULATION

A. Manufacturers:
   1. Aeroflex USA**<< ; AEROFLEX Self-Seal; ; AEROFLEX-EP; ; _____; or None - N/A>>**: www.aeroflexusa.com/#sle.

DRAFT

2. Armacell LLC**<< ; AP ArmaFlex; ; ArmaFlex Ultima; ; _____; or None - N/A>>**: www.armacell.us/#sle.
3. K-Flex USA LLC**<< ; Insul-Lock DS; ; Insul-Tube; ; Insul-Sheet; ; K-Flex Titan; ; _____; or None - N/A>>**: www.kflexusa.com/#sle.
4. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Insulation: Preformed flexible elastomeric cellular rubber insulation complying with **<<ASTM C534/C534M>><< Grade 1; Grade 2; Grade 3; or _____>>**; use molded tubular material wherever possible.
1. Minimum Service Temperature: **<< Minus 40 degrees F; or ____ degrees F>>**.
2. Maximum Service Temperature: **<< 180 degrees F; 220 degrees F; or ____ degrees F>>**.
3. Connection: Waterproof vapor barrier adhesive.
4. Flammability Rating: **<<FM 4924>>** approval for reduced combustibility testing.

C. Elastomeric Foam Adhesive: Air dried, contact adhesive, compatible with insulation.

D. Weather Barrier Coating: Air dried, contact adhesive, compatible with insulation and **<<ASTM E84>>** compliant.

E. For exterior refrigerant piping application, use K-Flex Titan or equal, with flexible coextruded jacketed composition material apply to K-Flex.

2.06 WEATHER BARRIER COATINGS

A. Weather-Resistive Barrier Coating: Fire-resistive, UV resistant, water-based mastic for use over closed cell polyethylene and polyurethane foam insulation; applied with glass fiber or synthetic reinforcing mesh.
1. Manufacturers:
a. H.B. Fuller Construction Products, Inc**<< ; Childers - CP Series Weather Barrier Coating; ; _____; or None - N/A>>**: www.fosterproducts.com/#sle.
b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
2. Surface Burning Characteristics: Flame spread index of 25 or less, smoke developed index of 450 or less, Class A, when tested in accordance with **<<ASTM E84>>**.
3. Water Vapor Permeance: Greater than **<< 1.0 perm; or ____ perm>>** in accordance with **<<ASTM E96/E96M>>**.
4. Resistance to Fungal Growth: No growth when tested in accordance with **<<ASTM D5590>>**.
5. Color: **<< As selected by Architect; White; Metallic gray; Black; or _____>>**.

2.07 JACKETING AND ACCESSORIES

A. PVC Plastic.
1. Manufacturers:
a. Johns Manville Corporation**<< ; _____; or None - N/A>>**: www.jm.com/#sle.
b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
2. Jacket: One piece molded type fitting covers and sheet material, off-white color.
a. Minimum Service Temperature: **<< 0 degrees F; or ____ degrees F>>**.
b. Maximum Service Temperature: **<< 150 degrees F; or ____ degrees F>>**.

DRAFT

c. Moisture Vapor Permeability: **<< 0.002 perm inch; or ____ perm inch>>**, maximum, when tested in accordance with **<<ASTM E96/E96M>>**.

d. Thickness: **<< 10 mil, 0.010 inch; 15 mil, 0.015 inch; 20 mil, 0.020 inch; 30 mil, 0.030 inch; or _____ mil, _____ inch>>**.

e. Connections: **<< Brush on welding adhesive; Tacks; Pressure sensitive color matching vinyl tape; or _____>>**.

3. Covering Adhesive Mastic: Compatible with insulation.

B. ABS Plastic:

1. Jacket: One piece molded type fitting covers and sheet material, off-white color.
   a. Minimum Service Temperature: **<< Minus 40 degrees F; or ____ degrees F>>**.
   b. Maximum Service Temperature: **<< 180 degrees F; or ____ degrees F>>**.
   c. Moisture Vapor Permeability: **<< 0.012 perm inch; or ____ perm inch>>**, when tested in accordance with **<<ASTM E96/E96M>>**.
   d. Thickness: **<< 30 mil, 0.030 inch; or ____ mil, ____ inch>>**.
   e. Connections: Brush on welding adhesive.

C. Canvas Jacket: UL listed **<< 6 oz/sq yd>>** plain weave cotton fabric treated with dilute fire-retardant lagging adhesive.

1. Lagging Adhesive: Compatible with insulation.

D. Aluminum Jacket:

1. Comply with **<<ASTM B209/B209M>>**, Temper H14, minimum thickness of **<< 0.016 inch>>** with factory-applied polyethylene and kraft paper moisture barrier on the inside surface.
2. Thickness: **<< 0.016 inch; 0.020 inch; 0.025 inch; 0.032 inch; 0.040 inch; or ____ inch>>** sheet.
3. Type: **<< Factory-applied, self-adhesive jacketing; or _____>>**.
4. Finish: **<< Smooth; Embossed; or _____>>**.
5. Joining: Longitudinal slip joints and **<< 2 inch>>** laps.
6. Fittings: **<< 0.016 inch; or ____ inch>>** thick die-shaped fitting covers with factory-attached protective liner.
7. Metal Jacket Bands: **<< 3/8 inch>>** wide; **<< 0.015 inch; or ____ inch>>** thick aluminum.

E. Aluminum-Foil Laminate Jacket:

1. Manufacturers:
   a. Ideal Tape Co., Inc**<< ; _____; or None - N/A>>**: www.idealtape.com/#sle.
   b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
2. Factory-applied, pressure sensitive adhesive jacketing on paper release liner.
3. Finish: **<< Aluminum smooth; Aluminum embossed; Gloss white; Embossed white; or _____>>**.
4. Comply with **<<ASTM C1775>>**.

F. Aluminum-Foil Laminate Jacket:

1. Manufacturers:
   a. H.B. Fuller Construction Products, Inc**<< ; Foster - Vapor-Fas; ; _____; or None - N/A>>**: www.fosterproducts.com/#sle.

DRAFT

b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2. Factory-applied, pressure sensitive adhesive jacketing to comply with **<<ASTM C1775>>**.

G. Stainless Steel Jacket: **<<ASTM A666/A666M>>**, Type **<< 302; 304; 316; or _____>>** stainless steel.

1. Thickness: **<< 0.010 inch; 0.016 inch; 0.018 inch; or ____ inch>>**.
2. Finish: **<< Smooth.; Corrugated.; or _____>>**
3. Metal Jacket Bands: **<< 3/8 inch>>** wide; **<< 0.010 inch; or ____ inch>>** thick stainless steel.

H. Reinforced Tape:

1. Manufacturers:
   a. Ideal Tape Co., Inc**<< ; _____; or None - N/A>>**: www.idealtape.com/#sle.
   b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
2. **<< FSK; All Service Jacket; PSK; or _____>>** tape suitable for sealing seams between insulation, insulated pipe bends, and fittings resulting in a tight, smooth surface without wrinkles.
3. Comply with **<<UL 723>>**, **<<ASTM E84>>**.
4. Moisture Vapor Permeability: **<< 0.00 perm inch; or ____ perm inch>>**, when tested in accordance with **<<ASTM E96/E96M>>**.
5. Finish: Match insulation.

I. Plain Foil Tape:

1. Manufacturers:
   a. Ideal Tape Co., Inc**<< ; _____; or None - N/A>>**: www.idealtape.com/#sle.
   b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
2. Aluminum foil with pressure-sensitive adhesive on paper release liner.
3. Finish: Plain foil.

J. Vapor Barrier Membranes: **<<ASTM C1136>>**, Type IX.

1. Multilayer Laminate Vapor Barrier:
   a. Provide multilayer laminate with **<< 1.0 mil, 0.001 inch; or _____ mil, _____ inch>>** foil, reversible.
   b. Thickness: **<< 2.4 mil, 0.002 inch; or _____ mil, _____ inch>>**.
   c. Moisture Vapor Permeability: **<< 0.00 perm inch; or ____ perm inch>>**, when tested in accordance with **<<ASTM E96/E96M>>**.
   d. Manufacturers:
      1) Polyguard Products**<< ; ZERO-PERM; ; ____; or None - N/A>>**: www.polyguardproducts.com/#sle.
      2) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
2. Rubberized Asphalt Vapor Barrier:
   a. Thickness: **<< 30 mil, 0.030 inch; 50 mil, 0.050 inch; or _____ mil, _____ inch>>**.
   b. Moisture Vapor Permeability: **<< 0.00 perm inch; or ____ perm inch>>**, when tested in accordance with **<<ASTM E96/E96M>>**.
   c. Manufacturers:

DRAFT

1) Polyguard Products**<< ; Insulrap 30 NG; ; Insulrap 50 NG; ; Insulrap JB; ; ____; or None - N/A>>**: www.polyguardproducts.com/#sle.
2) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.08 ENGINEERED WALL OUTLET SEALS AND REFRIGERANT PIPING INSULATION PROTECTION

A. Manufacturers:
1. Airex Manufacturing, Inc**<< ; ____; or None - N/A>>**: www.airexmfg.com/#sle.
2. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Basis of Design: Airex Manufacturing, Inc; www.airexmfg.com/#sle.
1. Pipe Penetration Wall Seal**<< : Airex Titan Outlet; : ____; or None - N/A>>**.
2. Refrigeration Pipe Insulation Protection System**<< : Airex E-Flex Guard; : ____; or None - N/A>>**.
3. Pipe Penetration Wall Seal and Insulation Protection System**<< : Airex Pro-System Kit; : ____; or None - N/A>>**.

C. Pipe Penetration Wall Seal: Seals HVAC piping wall penetrations with compression gasket wall mounted rigid plastic outlet cover.
1. Wall Outlet Size, Stucco and Masonry Applications: **<< 7-1/2 inch wide by 10 inch high>>**.
a. Elastomeric Sleeve Diameter: **<< 1-11/16 inch; 2-3/8 inch; 3-3/16 inch; or ___ inch>>**.
2. Outlet Cover Color: **<< Gray; White; or _____>>**.
3. Water Penetration: Comply with **<<ASTM E331>>**.
4. Air Leakage: Comply with **<<ASTM E283/E283M>>**.
5. Air Permeance: Comply with **<<ASTM E2178>>**.

D. Insulation Protection System: Refrigerant piping insulation PVC protective cover.
1. PVC Insulation Cover Color: **<< Black; White; or _____>>** with full-length velcro fastener.
2. Weatherization and Ultraviolet Exposure Protection: Comply with **<<ASTM G153>>**.
3. Water/Vapor Permeability: Comply with **<<ASTM E96/E96M>>**.
4. Anti-Fungal and Anti-Microbial Resistance: Comply with **<<ASTM G21>>**.
5. Flame Spread and Smoke Development Rating of 24/450: Comply with **<< ASTM E84; UL 723; or _____>>**.
6. Carbon Arc Light Exposure: Comply with **<<ASTM G153>>**.
7. Tensile Strength After UV Exposure and Water Immersion: Comply with **<<ASTM D412>>**.
8. Water Absorption of Plastics: Comply with **<<ASTM D570>>**.
9. Adhesive free.

2.09 ACCESSORIES

A. General Requirements:
1. Provide required accessories in accordance with and subject to the recommendations of the insulation manufacturer.
2. Furnish compatible materials which do not contribute to corrosion, soften, or otherwise attack surfaces to which applied, in either the wet or dry state.

DRAFT

3. Comply with **<<ASTM C795>>** requirements for materials to be used on stainless steel surfaces.
4. Supply materials that are asbestos free.
5. Provide calcium silicate, high-density, 100 psi minimum compressive strength for all piping support inserts at hangers and support locations.

B. Corrosion Inhibitors:
1. Corrosion Control Gel:
a. Manufacturers:
1) Polyguard Products**<< ; RG2400LT; ; RG2400CHW; ; ____; or None - N/A>>**: www.polyguardproducts.com/#sle.
2) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
b. Corrosion Protection: Comply with **<<ASTM B117>>** and **<<ASTM D610>>**.

PART 3 EXECUTION

3.01 EXAMINATION

A. Test piping for design pressure, liquid tightness, and continuity prior to applying insulation materials.

B. Verify that surfaces are clean and dry, with foreign material removed.

3.02 INSTALLATION

A. Install in accordance with **<< manufacturer's instructions; or _____>>**.

B. Install in accordance with NAIMA National Insulation Standards.

C. Exposed Piping: Locate insulation and cover seams in least visible locations.

D. Insulated Pipes Conveying Fluids Below Ambient Temperature:
1. Insulate entire system, including fittings, valves, unions, flanges, strainers, flexible connections,**<< pump bodies,; _____ ,; or None - N/A>>** and expansion joints.

E. Glass Fiber Insulated Pipes Conveying Fluids Below Ambient Temperature:
1. Provide vapor barrier jackets, factory-applied or field-applied; secure with self-sealing longitudinal laps and butt strips with pressure-sensitive adhesive. Secure with outward clinch expanding staples and vapor barrier mastic.
2. Insulate fittings, joints, and valves with molded insulation of like material and thickness as adjacent pipe. Finish with glass cloth and vapor barrier adhesive or PVC fitting covers.

F. For hot piping conveying fluids **<< 140 degrees F; or ____ degrees F>>** or less, do not insulate flanges and unions at equipment, but bevel and seal ends of insulation.

G. For hot piping conveying fluids over **<< 140 degrees F; or ____ degrees F>>**, insulate flanges and unions at equipment.

H. Glass Fiber Insulated Pipes Conveying Fluids Above Ambient Temperature:
1. Provide standard jackets, with or without vapor barrier, factory-applied, or field-applied. Secure with self-sealing longitudinal laps and butt strips with pressure-sensitive adhesive. Secure with outward clinch expanding staples.
2. Insulate fittings, joints, and valves with insulation of like material and thickness as adjoining pipe. Finish with glass cloth and adhesive or PVC fitting covers.

I. Inserts and Shields:

DRAFT

1. Application: Piping **<< 1-1/2 inches; 2 inches; or ____ inches>>** diameter or larger.
2. Shields: **<< Galvanized steel; Steel; or _____>>** between pipe hangers or pipe hanger rolls and inserts.
3. Insert location: Between support shield and piping and under the finish jacket.
4. Insert Configuration: Minimum **<< 6 inches>>** long, of same thickness and contour as adjoining insulation; may be factory fabricated.
5. Insert Material: Hydrous calcium silicate insulation or other heavy density insulating material suitable for the planned temperature range.

J. Continue insulation through walls, sleeves, pipe hangers, and other pipe penetrations. Finish at supports, protrusions, and interruptions. At fire separations, see Section **<< 078400>>**.

K. Pipe Exposed in Mechanical Equipment Rooms or Finished Spaces (less than **<< 10 feet>>** above finished floor): Finish with **<< canvas jacket sized for finish painting; PVC jacket and fitting covers; ABS jacket and fitting covers; aluminum jacket; stainless steel jacket; or _____>>**.

L. Exterior Applications: Provide vapor barrier jacket. Insulate fittings, joints, and valves with insulation of like material and thickness as adjoining pipe, and finish with glass mesh reinforced vapor barrier cement. Cover with **<< aluminum; stainless steel; or _____>>** jacket with seams located on bottom side of horizontal piping. Provide two coats of UV-resistant finish for flexible elastomeric cellular insulation without jacketing.

M. Buried Piping: Provide factory-fabricated assembly with inner all-purpose service jacket with self-sealing lap, and asphalt impregnated open mesh glass fabric, with **<< 1 mil, 0.001 inch>>** thick aluminum foil sandwiched between three layers of bituminous compound; outer surface faced with polyester film.

N. Heat Traced Piping: Insulate fittings, joints, and valves with insulation of like material, thickness, and finish as adjoining pipe. Size large enough to enclose pipe and heat tracer. Cover with **<< aluminum; stainless steel; or _____>>** jacket with seams located on bottom side of horizontal piping.

3.03 INDOOR APPLICATAION SCHEDULE

A. Service: Condensate drain piping except plastic.
1. Insulation Material: Mineral fiber preformed pipe insulation.
2. Insulation Thickness: 1”
3. Vapor Retarder Required: Yes.
4. Finish:
   a. Exposed, Finished Spaces: Painted.
   b. Concealed: None.

B. Service: Chilled water supply and return.
1. Insulation Material: Mineral fiber preformed pipe insulation.
2. Insulation Thickness: Apply the following insulation thickness:
   a. 40°F to 60°F Systems:
      1) Pipe sizes less than 1-1/2” diameter: 1/2 inch.
      2) Pipe sizes 1-1/2” diameter and larger: 1 inch.
   b. In mechanical rooms and unconditioned spaces, increase thickness by 1 inch.
3. Vapor Retarder Required: Yes
4. Finish:
   a. Exposed Finished Spaces: Painted.

DRAFT

b. Concealed: None.

C. Service: Heating hot-water supply and return.
1. Insulation Material: Mineral fiber preformed pipe insulation.
2. Insulation Thickness: Apply the following insulation thicknesses:
a. 105°F to 140°F Systems:
1) Pipe sizes less than 1-1/2” diameter: 1 inch.
2) Pipe sizes 1-1/2” diameter and larger: 1-1/2 inches.
b. 141°F to 200°F Systems:
1) Pipe sizes less than 1-1/2” diameter: 1-1/2 inches.
2) Pipe sizes 1-1/2” diameter and larger: 2 inches.
c. In mechanical rooms and unconditioned spaces, increase thickness by 1 inch.
3. Vapor Retarder Required: No.
4. Finish:
a. Exposed, Finished Spaces: Painted.
b. Concealed: None.

D. Refrigerant Suction and Hot-Gas Piping/Tubing:
1. Insulation Material and Thickness:
a. Flexible Elastomeric: 1 inch.

3.04 OUTDOOR APPLICATAION SCHEDULE

A. Insulation shall be applied after heat tracing and temperature sensors are in place and have been tested.

B. Service: Chilled water supply and return.
1. Insulation Material: Flexible elastomeric.
2. Insulation Thickness: 1 1/2”.
3. Field-Applied Jacket: Aluminum.
4. Vapor Retarder Required: Yes.
5. Finish: Two coats UV protectant applied to flexible elastomeric insulation prior to installation of aluminum jacket.

C. Refrigerant Suction and Hot-Gas Piping:
1. Insulation Material: Flexible elastomeric.
2. Insulation Thickness: 1”.
3. Intergral Jacketing System: K-Flex Tital or equal with flexible coextruded jacketed composite material.

END OF SECTION 230719

DRAFT

SECTION 230800
COMMISSIONING OF HVAC

PART 1 GENERAL

1.01 SUMMARY

A. See Section **<< 019113 - General Commissioning Requirements>>** for overall objectives; comply with the requirements of Section **<< 019113>>**.

B. This section covers the **<<Contractor>>**'s responsibilities for commissioning; each subcontractor or installer responsible for the installation of a particular system or equipment item to be commissioned is responsible for the commissioning activities relating to that system or equipment item.

C. The Commissioning Authority (CA) directs and coordinates all commissioning activities and provides Prefunctional Checklists and Functional Test Procedures for **<<Contractor>>**'s use.

D. The **<< entire HVAC system is; following HVAC equipment is; or _____>>** to be commissioned, including commissioning activities for the following specific items:

1. Control system.
2. Major and minor equipment items.
3. Piping systems and equipment.
4. Ductwork and accessories.
5. Terminal units.
6. Sound control devices.
7. Vibration control devices.
8. Variable frequency drives.
9. Special Ventilation:
    a. Fume hoods.
    b. Laboratory pressurization.
    c. Specialty fans.
    d. Egress pressurization.
10. Other equipment and systems explicitly identified elsewhere in Contract Documents as requiring commissioning.
11. Indoor Air Quality Procedures: The Commissioning Authority will coordinate; Contractor will execute; see Section **<< 015719>>**.

E. The Prefunctional Checklist and Functional Test requirements specified in this section are in addition to, not a substitute for, inspection or testing specified in other sections.

1.02 RELATED REQUIREMENTS

A. Section **<< 015719 - Temporary Environmental Controls>>**: Precautions and procedures; smoking room testing; building flush-out.

B. Section **<< 017800 - Closeout Submittals>>**: Scope and procedures for operation and maintenance manuals and project record documents.

C. Section **<< 017900 - Demonstration and Training>>**: Scope and procedures for **<<Owner>>** personnel training.

D. Section **<< 019113 - General Commissioning Requirements>>**: Commissioning requirements that apply to all types of work.

DRAFT

E. Section **<< 230593 - Testing, Adjusting, and Balancing for HVAC>>**.

1.03 REFERENCE STANDARDS

A. ASHRAE Guideline 1.1 - HVAC&R Technical Requirements for the Commissioning Process.

1.04 SUBMITTALS

A. Updated Submittals: Keep the Commissioning Authority informed of all changes to control system documentation made during programming and setup; revise and resubmit when substantial changes are made.

B. Draft Prefunctional Checklists and Functional Test Procedures for Control System: Detailed written plan indicating the procedures to be followed to test, checkout and adjust the control system prior to full system Functional Testing; include at least the following for each type of equipment controlled:
   1. System name.
   2. List of devices.
   3. Step-by-step procedures for testing each controller after installation, including:
      a. Process of verifying proper hardware and wiring installation.
      b. Process of downloading programs to local controllers and verifying that they are addressed correctly.
      c. Process of performing operational checks of each controlled component.
      d. Plan and process for calibrating valve and damper actuators and all sensors.
      e. Description of the expected field adjustments for transmitters, controllers and control actuators should control responses fall outside of expected values.
   4. Copy of proposed log and field checkout sheets to be used to document the process; include space for initial and final read values during calibration of each point and space to specifically indicate when a sensor or controller has “passed” and is operating within the contract parameters.
   5. Description of the instrumentation required for testing.
   6. Indicate what tests on what systems should be completed prior to TAB using the control system for TAB work. Coordinate with the Commissioning Authority and TAB contractor for this determination.

C. Startup Reports, Prefunctional Checklists, and Trend Logs: Submit for approval of Commissioning Authority.

D. HVAC Control System O&M Manual Requirements. In addition to documentation specified elsewhere, compile and organize at minimum the following data on the control system:
   1. Specific step-by-step instructions on how to perform and apply all functions, features, modes, etc. mentioned in the controls training sections of this specification and other features of this system. Provide an index and clear table of contents. Include the detailed technical manual for programming and customizing control loops and algorithms.
   2. Full as-built set of control drawings.
   3. Full as-built sequence of operations for each piece of equipment.
   4. Full points list; in addition to the information on the original points list submittal, include a listing of all rooms with the following information for each room:
      a. Floor.
      b. Room number.
      c. Room name.
      d. Air handler unit ID.

DRAFT

e. Reference drawing number.
f. Air terminal unit tag ID.
g. Heating and/or cooling valve tag ID.
h. Minimum air flow rate.
i. Maximum air flow rate.

5. Full print out of all schedules and set points after testing and acceptance of the system.
6. Full as-built print out of software program.
7. Electronic copy on disk of the entire program for this facility.
8. Marking of all system sensors and thermostats on the as-built floor plan and HVAC drawings with their control system designations.
9. Maintenance instructions, including sensor calibration requirements and methods by sensor type, etc.
10. Control equipment component submittals, parts lists, etc.
11. Warranty requirements.
12. Copies of all checkout tests and calibrations performed by the Contractor (not commissioning tests).
13. Organize and subdivide the manual with permanently labeled tabs for each of the following data in the given order:
    a. Sequences of operation.
    b. Control drawings.
    c. Points lists.
    d. Controller and/or module data.
    e. Thermostats and timers.
    f. Sensors and DP switches.
    g. Valves and valve actuators.
    h. Dampers and damper actuators.
    i. Program setups (software program printouts).

E. Project Record Documents: See Section **<< 017800>>** for additional requirements.
1. Submit updated version of control system documentation, for inclusion with operation and maintenance data.
2. Show actual locations of all static and differential pressure sensors (air, water and building pressure) and air-flow stations on project record drawings.

F. Draft Training Plan: In addition to requirements specified in Section **<< 017900>>**, include:
1. Follow the recommendations of ASHRAE Guideline 1.1.
2. Control system manufacturer's recommended training.
3. Demonstration and instruction on function and overrides of any local packaged controls not controlled by the HVAC control system.

G. Training Manuals: See Section **<< 017900>>** for additional requirements.
1. Provide **<< three extra copies; or ____>>** of the controls training manuals in a separate manual from the O&M manuals.

DRAFT

PART 2 PRODUCTS

2.01 TEST EQUIPMENT

A. Provide all standard testing equipment required to perform startup and initial checkout and required functional performance testing; unless otherwise noted such testing equipment will NOT become the property of **<<Owner>>**.

B. Equipment-Specific Tools: Where special testing equipment, tools and instruments are specific to a piece of equipment, are only available from the vendor, and are required in order to accomplish startup or Functional Testing, provide such equipment, tools, and instruments as part of the work at no extra cost to **<<Owner>>**; such equipment, tools, and instruments are to become the property of **<<Owner>>**.

PART 3 EXECUTION

3.01 PREPARATION

A. Cooperate with the Commissioning Authority in development of the Prefunctional Checklists and Functional Test Procedures.

B. Furnish additional information requested by the Commissioning Authority.

C. Prepare a preliminary schedule for HVAC pipe and duct system testing, flushing and cleaning, equipment start-up and testing, adjusting, and balancing start and completion for use by the Commissioning Authority; update the schedule as appropriate.

D. Notify the Commissioning Authority when pipe and duct system testing, flushing, cleaning, startup of each piece of equipment and testing, adjusting, and balancing will occur; when commissioning activities not yet performed or not yet scheduled will delay construction notify ahead of time and be proactive in seeing that the Commissioning Authority has the scheduling information needed to efficiently execute the commissioning process.

E. Put all HVAC equipment and systems into operation and continue operation during each working day of testing, adjusting, and balancing and commissioning, as required.

1. Include cost of sheaves and belts that may be required for testing, adjusting, and balancing.

F. Provide test holes in ducts and plenums where directed to allow air measurements and air balancing; close with an approved plug.

G. Provide temperature and pressure taps in accordance with Contract Documents.

1. Provide a pressure/temperature plug at each water sensor that is an input point to the control system.

3.02 INSPECTING AND TESTING - GENERAL

A. Submit startup plans, startup reports, and Prefunctional Checklists for each item of equipment or other assembly to be commissioned.

B. Perform the Functional Tests directed by the Commissioning Authority for each item of equipment or other assembly to be commissioned.

C. Provide two-way radios for use during the testing.

D. Valve/Damper Stroke Setup and Check:

1. For all valve/damper actuator positions checked, verify the actual position against the control system readout.
2. Set pump/fan to normal operating mode.

DRAFT

3. Command valve/damper closed; visually verify that valve/damper is closed and adjust output zero signal as required.
4. Command valve/damper open; verify position is full open and adjust output signal as required.
5. Command valve/damper to a few intermediate positions.
6. If actual valve/damper position does not reasonably correspond, replace actuator or add pilot positioner (for pneumatics).
7. Closure for Heating Coil Valves - Normally Open:
   a. Set heating setpoint **<< 20 degrees F; or ___ degrees F>>** above room temperature.
   b. Observe valve open.
   c. Remove control air or power from the valve and verify that the valve stem and actuator position do not change.
   d. Restore to normal.
   e. Set heating setpoint to **<< 20 degrees F; or ___ degrees F>>** below room temperature.
   f. Observe the valve close.
8. Closure for Cooling Coil Valves - Normally Closed:
   a. Observe the valve close.
   b. Remove control air or power from the valve and verify that the valve stem and actuator position do not change.
   c. Restore to normal.
   d. Set cooling setpoint to **<< 20 degrees F; or ___ degrees F>>** below room temperature.
   e. Observe valve open.

E. Coil Valve Leak Check:
1. Method 1 - Water Temperature With 2-Way Valve:
   a. Calibrate water temperature sensors on each side of coil to be within **<< 0.2 degree F ; or ____ >>** of each other.
   b. Turn off air handler fans, close outside air dampers. Keep pump running. Make sure appropriate coil dampers are open.
   c. Normally closed valves will close.
   d. Override normally open valves to the closed position.
   e. After 10 minutes observe water delta T across coil. If it is greater than **<< 2 degrees F (; or _____ (>>**, leakage is probably occurring.
   f. Reset valve stroke to close tighter.
   g. Repeat test until compliance is achieved.
2. Method 2 - Air Temperature With 2 or 3-Way Valve: Water leak-by less than 10 percent will likely not be detected with this method.
   a. Calibrate air temperature sensors on each side of coil to be within **<< 0.2 degree F ; or ____ >>** of each other.
   b. Air handler fans should be on.
   c. Change mixed or discharge air setpoint, override values or bleed or squeeze bulb pneumatic controller to cause the valve to close.
   d. After 5 minutes observe air delta T across coil. If it is greater than **<< one degree F (; or _____ (>>**, leakage is probably occurring.

DRAFT

e. Reset valve stroke to close tighter.
f. Repeat test until compliance is achieved.

3. Method 3 - Coil Drain Down: Not for 3-way valves.
   a. Put systems in normal mode.
   b. If cooling coil valve, remove all call for cooling; if heating coil valve, put system in full cooling.
   c. Close isolation valve on supply side of coil, open air bleed cap, open drain-down cock and drain water from coil.
   d. If water does not stop draining, there may be a leak through the control valve.
   e. Return all to normal when done.

F. Isolation Valve or System Valve Leak Check: For valves not by coils.
   1. With full pressure in the system, command valve closed.
   2. Use an ultra-sonic flow meter to detect flow or leakage.

G. Deficiencies: Correct deficiencies and re-inspect or re-test, as applicable, at no extra cost to **<<Owner>>**.

3.03 TAB COORDINATION

A. TAB: Testing, adjusting, and balancing of HVAC.

B. Coordinate commissioning schedule with TAB schedule.

C. Review the TAB plan to determine the capabilities of the control system toward completing TAB.

D. Provide all necessary unique instruments and instruct the TAB technicians in their use; such as handheld control system interface for setting terminal unit boxes, etc.

E. Have all required Prefunctional Checklists, calibrations, startup and component Functional Tests of the system completed and approved by the Commissioning Authority prior to starting TAB.

F. Provide a qualified control system technician to operate the controls to assist the TAB technicians or provide sufficient training for the TAB technicians to operate the system without assistance.

3.04 CONTROL SYSTEM FUNCTIONAL TESTING

A. Prefunctional Checklists for control system components will require a signed and dated certification that all system programming is complete as required to accomplish the requirements of Contract Documents and the detailed Sequences of Operation documentation submittal.

B. Do not start Functional Testing until all controlled components have themselves been successfully Functionally Tested in accordance with Contract Documents.

C. Using a skilled technician who is familiar with this building, execute the Functional Testing of the control system as required by the Commissioning Authority.

D. Functional Testing of the control system constitutes demonstration **<< and trend logging of control points monitored by the control system; or None - N/A>>**.
   1. The scope of trend logging is partially specified; trend log up to **<< 50 percent; 20 percent; or _____>>** more points than specified at no extra cost to **<<Owner>>**.
   2. Perform all trend logging specified in Prefunctional Checklists and Functional Test procedures.

DRAFT

E. Functionally Test integral or stand-alone controls in conjunction with the Functional Tests of the equipment they are attached to, including any interlocks with other equipment or systems; further testing during control system Functional Test is not required unless specifically indicated below.

F. Demonstrate the following to the Commissioning Authority during testing of controlled equipment; coordinate with commissioning of equipment.
   1. Setpoint changing features and functions.
   2. Sensor calibrations.

G. Demonstrate to the Commissioning Authority:
   1. That all specified functions and features are set up, debugged and fully operable.
   2. That scheduling features are fully functional and setup, including holidays.
   3. That all graphic screens and value readouts are completed.
   4. Correct date and time setting in central computer.
   5. That field panels read the same time as the central computer; sample 10 percent of field panels; if any of those fail, sample another 10 percent; if any of those fail test all remaining units at no extra cost to **<<Owner>>**.
   6. Functionality of field panels using local operator keypads and local ports (plug-ins) using portable computer/keypad; demonstrate 100 percent of panels and 10 percent of ports; if any ports fail, sample another 10 percent; if any of those fail, test all remaining units at no extra cost to **<<Owner>>**.
   7. Power failure and battery backup and power-up restart functions.
   8. Global commands features.
   9. Security and access codes.
   10. Occupant over-rides (manual, telephone, key, keypad, etc.).
   11. O&M schedules and alarms.
   12. Occupancy sensors and controls.
   13. “After hours” use tracking and billing.
   14. Communications to remote sites.
   15. Fire alarm interlocks and response.
   16. Fire protection and suppression systems interfaces.
   17. Security system interlocks.
   18. That points that are monitored only, having no control function, are reporting properly to the control system.
   19. All control strategies and sequences not tested during controlled equipment testing.
   20. Trend logging and graphing features that are specified.
   21. Other integrated tests specified in Contract Documents
   22. That control system features that are included but not specified to be setup are actually installed.

H. Perform and submit trend logging on the following using the control system, for minimum period of **<< 5 days including one weekend; or _____>>**, if the control points are monitored by the control system:
   1. Duty cycling, if specified.
   2. Demand limiting, including over-ride of limiting.
   3. Sequential staging ON of equipment; optionally demonstrate manually.
   4. Optimum start-stop functions.

DRAFT

5. Miscellaneous equipment current or status for duty cycling and demand limiting.
6. Equipment or building kW or current for demand limiting.
7. Equipment optimum start/stop functions.

I. If the control system, integral control components, or related equipment do not respond to changing conditions and parameters appropriately as expected, as specified and according to acceptable operating practice, under any of the conditions, sequences, or modes tested, correct all systems, equipment, components, and software required at no additional cost to **<<Owner>>**.

3.05 OPERATION AND MAINTENANCE MANUALS

A. See Section **<< 017800>>** for additional requirements.

B. Add design intent documentation furnished by **<<Architect>>** to manuals prior to submission to **<<Owner>>**.

C. Submit manuals related to items that were commissioned to Commissioning Authority for review; make changes recommended by Commissioning Authority.

D. Commissioning Authority will add commissioning records to manuals after submission to **<<Owner>>**.

3.06 DEMONSTRATION AND TRAINING

A. See Section **<< 017900>>** for additional requirements.

B. Demonstrate operation and maintenance of HVAC system to **<<Owner>>'** personnel; if during any demonstration, the system fails to perform in accordance with the information included in the O&M manual, stop demonstration, repair or adjust, and repeat demonstration. Demonstrations may be combined with training sessions if appropriate.

C. These demonstrations are in addition to, and not a substitute for, Prefunctional Checklists and demonstrations to the Commissioning Authority during Functional Testing.

D. Provide classroom and hands-on training of **<<Owner>>**'s designated personnel on operation and maintenance of the HVAC system, control system, and all equipment items indicated to be commissioned.

E. TAB Review: Instruct **<<Owner>>**'s personnel for minimum **<< 8>>** hours, after completion of TAB, on the following:
   1. Review final TAB report, explaining the layout and meanings of each data type.
   2. Discuss any outstanding deficient items in control, ducting or design that may affect the proper delivery of air or water.
   3. Identify and discuss any terminal units, duct runs, diffusers, coils, fans and pumps that are close to or are not meeting their design capacity.
   4. Discuss any temporary settings and steps to finalize them for any areas that are not finished.
   5. Other salient information that may be useful for facility operations, relative to TAB.

F. HVAC Control System Training: Perform training in at least three phases:
   1. Phase 1 - Basic Control System: Provide minimum of **<< 8>>** hours of actual training on the control system itself. Upon completion of training, each attendee, using appropriate documentation, should be able to perform elementary operations and describe general hardware architecture and functionality of the system.
      a. This training may be held on-site or at the manufacturer's facility.

DRAFT

b. If held off-site, the training may occur prior to final completion of the system installation.

c. For off-site training, **<<Contractor>>** shall pay expenses of up to **<< two; or ___>>** attendees.

2. Phase 2 - Integrating with HVAC Systems: Provide minimum of **<< 8>>** hours of on-site, hands-on training after completion of Functional Testing. Include instruction on:

a. The specific hardware configuration of installed systems in this facility and specific instruction for operating the installed system, including interfaces with other systems, if any.

b. Security levels, alarms, system start-up, shut-down, power outage and restart routines, changing setpoints and alarms and other typical changed parameters, overrides, freeze protection, manual operation of equipment, optional control strategies that can be considered, energy savings strategies and set points that if changed will adversely affect energy consumption, energy accounting, procedures for obtaining vendor assistance, etc.

c. Trend logging and monitoring features (values, change of state, totalization, etc.), including setting up, executing, downloading, viewing both tabular and graphically and printing trends; provide practice in setting up trend logging and monitoring during training session.

d. Every display screen, allowing time for questions.

e. Use of keypad or plug-in laptop computer at the zone level.

f. Use of remote access to the system via phone lines or networks.

g. Setting up and changing an air terminal unit controller.

h. Graphics generation.

i. Point database entry and modifications.

j. Understanding DDC field panel operating programming, when applicable.

3. Phase 3 - Post-Occupancy: **<< Six months; or _____>>** after occupancy conduct minimum of **<< 4>>** hours of training. Tailor training session to questions and topics solicited beforehand from **<<Owner>>**. Also be prepared to address topics brought up and answer questions concerning operation of the system.

G. Provide the services of manufacturer representatives to assist instructors where necessary.

H. Provide the services of the HVAC controls instructor at other training sessions, when requested, to discuss the interaction of the controls system as it relates to the equipment being discussed.

END OF SECTION 230800

DRAFT

SECTION 230900
BUILDING AUTOMATION SYSTEM

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Where materials, methods, and/or procedures specified in this section differ from similarly specified materials, methods, and/or procedures in other sections of the specifications, this section shall take precedence in governing the work by the energy management contractor.

B. Refer to Common Work Results for HVAC for additional requirements.

1.02 SCOPE

A. The intent of this Specification Section is to provide Montgomery County Public Schools (MCPS), the Owner, a complete temperature control system consisting of, but not limited to electric, and electronic controls and an automated energy management and digital control system. The general configuration of the automation system consists of microprocessor controllers communicating via a BACnet local area network within the school; remote access via MCPS Ethernet; and central server at MCPS Energy Management Office. The EMS is to meet all of the performance requirements outlined in this Section. The head end and all controllers are to be BACnet compliant and shall be able to integrate into the MCPS Dashboard. Dashboard shall be able to READ/WRITE thru BACnet device discovery protocol. Dashboard programming is performed separate from this project, but this contractor is required to coordinate the interface with and subcontract the dashboard programmer under this project. Comminications to main controller goes from controller to mini-switch to MCPS network switch. Ring protocal is not allowed. Only one mini-switch connected to MCPS network port.

B. All control work shall be installed by a single Automatic Temperature Controls (ATC) and Energy Management system (EMS) Contractor, unless specified otherwise. Certain mechanical systems such as packaged air conditioning units are equipped with manufacturer furnished controls and shall be interfaced with the automation system via hardwire and/or BACnet as herein after specified. All labor, materials, equipment, software, and services necessary for the installation of a complete integrated system of EMS, ATC, and manufacturers' controls shall be furnished as specified herein, on drawings, and in related Sections of the Specifications.

C. All labor, materials, equipment, software, and services necessary for the installation of a complete integrated system of EMS, ATC, and manufacturers' controls shall be furnished as specified herein, on drawings, and in related Sections of the Specifications. Equipment and labor not specifically referred to herein or on the plans that are required to meet the functional intent shall be provided without additional cost to the Owner.

D. The main building automation system panel shall be located in central plant mechanical room or main mechancial room.

1.03 SUMMARY

A. This Section includes control equipment for HVAC systems and components, including control components for terminal heating and cooling units not supplied with factory-wired controls.

B. Related Sections include the following:

1. Division 23 Section "Meters and Gages for HVAC Piping" for measuring equipment that relates to this Section.
2. Division 26 Sections for additional conduit requirements for all electronic safety and security systems specified under Division 26.

DRAFT

C. Work Under Other Sections:
   1. All wells, valves, taps, dampers, flow stations, etc. furnished by the BAS manufacturer shall be installed under Section “Hydronic Piping.”
   2. The following shall be provided under Division 23 specifications sections:
      a. 120V power to BAS panels and devices with circuits indicated on the drawings. Refer to “Coordination” paragraph below.
      b. Wiring of power feeds to disconnect switches and starters.
      c. Wiring from disconnect switches and starters to electric motors.
      d. Wiring of any remote start/stop switches and manual or automatic motor speed control devices not furnished under this section of the specifications.

1.04 DEFINITIONS

A. ATC: Automatic Temperature Controls.
B. BAS: Building Automation System.
C. DDC: Direct digital control.
D. EMS: Energy Management System.
E. I/O: Input/output.
F. IT: Information Technology.
G. IS: Information Systems.
H. LAN: Local Area Network.
I. MS/TP: Master-slave/token-passing
J. NAC: Network area controllers.
K. PC: Personal computer.
L. PID: Proportional plus integral plus derivative.
M. PPM: Parts per million.
N. RTD: Resistance temperature detector.
O. WAN: Wide-Area Network
P. EMS, BAS, ATC: The terms Energy Management System (EMS), Building Automation System (BAS), and Automatic Temperature Controls (ATC) are interchangeable throughout this specification and shall be the responsibility of the controls contractor.

DRAFT

1.05 REFERENCE STANDARDS

A. AMCA 500-D - Laboratory Methods of Testing Dampers for Rating.
B. IEEE 802.3 - IEEE Standard for Ethernet.
C. NFPA 70 - National Electrical Code.
D. NFPA 90A - Standard for the Installation of Air-Conditioning and Ventilating Systems.
E. UL 916 - Energy Management Equipment.

1.06 SYSTEM DESCRIPTION

A. Control system consists of sensors, indicators, actuators, final control elements, interface equipment, other apparatus, and accessories to control mechanical systems.
B. Control system includes interface to the following:

1. Security Systems. Provide interface outputs for selective annunciation and monitoring (i.e. alarm status).

1.07 WARRANTY

A. Upon achieving initial acceptance, submit warranty covering project hardware for two (2) years. Warranty shall become valid and operative upon issuance of certification of initial acceptance by the Owner. Warranty shall not apply to work where damage is the result of abuse, neglect by Owner or his successor(s) in interest.

B. The Contractor guarantees all work Specified, with any approved modifications, as follows:
   1. Against faulty or defective material or workmanship.
   2. That all mechanical and electrical devices and equipment shall operate satisfactorily with ordinary care and shall perform the specified or intended functions.
   3. That all software and control strategies shall perform their specified or intended functions.
   4. Against damage or undue deterioration resulting from normal use of the building(s).

C. In event of such required correction, Contractor shall make good all damage to other work caused by faulty work or corrective measures.

D. Neither the final payment, final certificate nor any provisions of the Contract Documents, relieves the Contractor from his responsibilities under this guarantee.

E. If, at any time, deficiencies in the Work are discovered which result from a deliberate attempt to defraud the Owner, the Contractor will be held liable for replacement or correction, regardless of the time limit on the guarantee.

F. If the Contractor, after notice, fails to proceed promptly to comply with the terms of the guarantee, the Owner may have the defects corrected and the Contractor and his Surety shall be liable for all expense incurred.

G. Should the Contractor be required to do off-time work after final payment, the Contractor shall pay "overtime" for the required presence of the custodian.

H. Over the 2-year warranty period, Contractor shall provide and install all software upgrades released by the manufacturer as applicable to the systems installed at the facility, at the head-end, on the POT, workstation and on the server. At the end of the warranty period, the latest version of the software and databases shall be installed for each of the active licenses, not just an update of the older version.

I. For the end-of warranty, the Controls Contractor submit a complete set of trends for review and shall arrange to meet with the Mechanical Engineer and the Owner within thirty (30) days prior to the specified end of the 2-year guarantee period for the purpose of compiling a list of items that require correction under specified guarantees. Should the Contractor fail to schedule the final meeting, then the 2-year controls system Guarantee shall be automatically extended until such time as the meeting takes place; and the Contractor shall be fully responsible for correcting such deficiencies as if they occurred under the original guarantee period.

J. Controls Contractor shall have qualified service personnel on staff to respond in person at the project site within twenty-four (24) hours of receiving of service call from the Owner to the Contractors' office throughout the guarantee period. A no-heat or emergency condition shall require an immediate response.

K. Provide monitoring analytics during life of warranty.

1.08 SUBMITTALS

DRAFT

A. Submit copies of appropriate shop drawings and control drawings for the HVAC equipment installation. The quantities of shop drawings submitted shall be in response to the requirements of the General Contractor; at a minimum, a copy shall be provided for each of the following:
   1. Provide to Architect, Mechanical Consulting Engineer, MCPS Construction Division, MCPS Energy Management Division, Commissioning Authority, Mechanical Subcontractor, and Electrical Subcontractor.
   2. Required shop drawings shall include but not be limited to the following items:
      a. Cover Sheet and Table of Contents
      b. Hardware to be furnished, with specific models/options clearly identified. Include shop drawings as applicable to the project for:
         1) Controllers.
         2) Transmitters.
         3) Power Monitors.
         4) Current Transducers.
         5) Switches.
         6) Software Manuals.
         7) WEB Interface Devices.
         8) Local Interface Equipment.
         9) Thermostats.
         10) Relays.
         11) Sensors.
         12) Microprocessors.
         13) Current Switches.
         14) Freezestats.
         15) Enclosures.
         16) Modems.
         17) Valves.
         18) Dampers.
         19) Actuators.
         20) Guards.
   3. General Control Drawing Requirement:
      a. Contractor shall maintain a set of all specs, drawings and documents on site during construction and make them available on request. This includes as-built notations to be recorded immediately as they occur and maintained.
      b. Control Drawings shall be 11” x 17”.
      c. The control drawing format shall be prepared such that all information regarding any control point or sub system shall be grouped in a single location on the drawings.
      d. Spreading control point information unnecessarily over several pages is not allowed.
      e. Copies shall be provided in searchable PDF format and AutoCAD DWG format. Scanned drawings are not allowed.
      f. There shall be a detailed index immediately after the cover page showing every item of equipment in alphabetical order.
      g. The index will show the page(s) that equipment is on, controller address number, building area served, mechanical drawing numbers where equipment is found.
      h. Provide equipment schedules for all terminal equipment showing at a minimum: room numbers, unit type, size, address, master controller connected, controller part

DRAFT

numbers and any other properties that apply to describing the unit. Each unit shall be on a separate line of the schedule.

i. Wherever it is unavoidable and a reference requires the reader to go to another page to follow the logic, that page number shall be shown.
j. Provide detailed overview of all installation requirements for the products to be used – cable types, cable colors to be used, standard installation practices, etc.
k. All text shall be in landscape orientation. Sideways or vertical text is not allowed.
l. Text shall be clear and be measured at least 1/16' height when printed.
m. Allowed fonts are Arial, Calibri or Tahoma.
n. Drawing formats that use only standard “boiler plate” details that do not precisely illustrate the systems to be installed are not allowed.
o. Drawing formats that put controller information solely in a spreadsheet in lieu of showing actual wiring details are not allowed.
p. Prior to engineering, provide a sample drawing set from a previous job for approval of the drawing style.
q. Show building zone plan, detailed equipment floor plan, installation plans (including all wire runs, circuit numbers, panel locations, equipment locations, etc). Provide these in searchable PDF format available from a link on the main school screen.
r. Sequences shall always appear on same sheet with flow diagrams and wiring details.
s. In all tables and wherever room numbers are displayed, show the original mechanical drawing room number and the final actual room number when it becomes available.

4. Controller details drawing shall include:
   a. A clear English language name for each point.
   b. All devices indicate manufacturer and part number.
   c. Controller termination numbers.
   d. Controller Input or Output number.
   e. Wire and tubing termination identification numbers.
   f. Cable numbering.
   g. The sensor range (i.e. 4-20mA = 0-100% RH)
   h. Actuator range (i.e. 2 VDC= Valve is 0% open, 10 VDC=valve 100% open)
   i. Position actuator fails to upon a loss of power (i.e. Open, Closed or Fails in Place)
   j. Device power supply source is clear and easily traced.
   k. Jumper settings or similar set up information.
   l. Cable specification requirements.
   m. Cable shielding and its termination requirements.
   n. Location of device in the building (i.e. 2/3 static sensor is above the ceiling in room 101)
   o. All VFD and starter wiring and safety interlocks shall be shown entirely in one location with all wires connected and detailed labeling.
   p. Give reference page number to find the equipment flow diagram and control sequence.
   q. Show a single power wiring detail for each control panel with all power supplies, transformers, etc. with all connected.
   r. Building area served by the controller.
   s. Provide an Excel Spreadsheet electronically and on control drawings listing all controllers in the project with all relevant data. Include at a minimum a column for:

DRAFT

unit served, building area served, controller part number, controller number, serial number, controller IP address, LAN connected to, controller location, BACnet device object name. Sort the data alphabetically by unit served. Example:

Controller details	
Unit Served	Ahu-5
Area served	Administration
Controller part number	TC-1043-X
Controller number	15
Serial number	abc123
Controller IP Address	10.10.1.115
LAN connected to	Ethernet Switch 3
Controller location	Mech Room 201
BACnet Device Object Name	433Ahu5Admin
Current communication status	Online

t. For each controller, provide an Excel spreadsheet electronically and on control drawings listing the details of all point data in columns shown in example spreadsheet. Include at a minimum a column for: point name, current value, terminal, point type, Engr units, device part number, I/O type/range, BACnet object name. Sort by AI, BI, AO, DO numerically. Include lines for all spare points. Example:

Point details for Ahu-5 Controller #15

Point Name	Current Value	Terminal	Type	Engr Units	Device Part number	I/O type/Range	BACnet Object Name
Ahu-5 Room Temperature	73.1 deg	IN-1	AI	deg F	TS-5711-850	10K thermister	Ahu5RoomTemp
Ahu-5 Fan Status	ON	IN-2	BI	On/Off	H800	Current Switch	Ahu5FanStatus
Ahu-5 Return Air RH	53%	IN-3	AI	% RH	HU-224A-1-1	4-20mA=0-100% RH	Ahu5RoomRH
Spare		IN-4					
Ahu-5 Supply Fan Command	ON	OUT-1	BO	On/Off	RIB-121C	Relay	Ahu5FanCommand
Ahu-5 Supply Fan Speed Control	65%	OUT-2	AO	%	VFD	2-10 vdc=0-100%	Ahu5FanSpeedControl
Ahu-5 HW Valve Control	0%	OUT-3	AO	%	B229+LF24-SR-NO	10-2 vdc=0-100% (N.O.)	Ahu5HwValve Control
Ahu-5 CHWS Valve Control	33%	OUT-4	AO	%	B229+LF24-SR-NC	2-10 vdc=0-100% (N.C.)	Ahu5ChwsValveControl

5. Equipment flow diagrams shall:
   a. Reflect all information shown on the design mechanical controls drawings. Flow diagrams in as-builts shall reflect the actual equipment as installed.
   b. The same numbering and identification shown on mechanical design drawings shall be used on the contractors control drawings.
   c. A clear English language description of each point which matches the one shown on the controller detail drawing (i.e. Supply Air Temperature).
   d. For each point display the controller number and point number (i.e. Controller #8, IN-3).
   e. The ductwork or piping shall be single line for clarity. 3-D diagrams are not allowed.
   f. The controller graphic symbols for valves, actuators, sensors, etc. shall be industry standard as approved in advance.
   g. The sequence of operation shall be included with the equipment flow diagrams.
   h. Notations indicating Normally Open or Closed shall be included.
   i. Give reference page number to find the controller details (i.e. “Next Sheet” or “Previous Sheet” is allowed where applicable).
   j. Display the building area served in the title block with the unit number.
6. Network diagrams shall include:
   a. All controllers on the project shall be represented.
   b. List the mechanical equipment each serves.
   c. Controller part number for all devices.

DRAFT

d. Installation routing of all LAN wiring.
e. BACnet device numbers and MAC addresses.
f. For all devices, give the location, floor and room number where the device is located.
g. Show the diagram in a riser diagram format.
h. Clearly label cable type (i.e. Cat5e, MSTP, Lonworks Bus, etc.).
i. Show All Ethernet switches and routers, servers, laptops, etc.
j. Show Port connection numbers.
k. Show End of Line terminators.
l. All connections are to be complete and show all devices on one sheet.
m. Each device type shall have a unique distinguished graphical appearance.

7. Damper schedules shall include:
   a. HVAC Equipment served (i.e. F-1).
   b. Exact description (i.e. Return Air Damper).
   c. Damper Dimensions - width and height.
   d. Damper manufacturer and part number.
   e. Type – Opposed or Parallel.
   f. Actuator manufacturer and model number.
   g. Actuator torque (inch/pounds).
   h. Quantity.
   i. Spring Return position (N.O., N.C. or Non-Spring).
8. Valve Schedule shall include:
   a. Equipment served.
   b. Building area served.
   c. Exact description (i.e. Ahu-1 Chilled Water).
   d. Valve size.
   e. Quantity.
   f. Design GPM.
   g. CV of valve.
   h. Actual pressure drop calculated.
   i. Valve manufacturer and part number including actuator.
   j. Valve tagging to be done at valve factory.
   k. Indicate 2-way or 3-way.
   l. Control Signal (i.e. 2VDC=Closed, 10 VDC=100% Open).
   m. Power source (i.e. 24 VAC).
   n. Indicate spring return position upon loss of power (N.O., N.C. or Non-Spring).
   o. Rated valve close-off pressure in PSI.
   p. Indicate if actuator is provided with a manual override capability.
9. Submit points list showing each control input and output, the device being controlled, the location of the device, and the symbol or label of the control point in the software. Indicate the point of connection and function where connections are made to equipment with manufacturers' controls.
10. Contactor’s quality assurance procedure shall be a narrative description of point-to-point installation verification procedures and sample of verification forms. Completed point-to-device / device-to-point verification forms are to be furnished by the contractor upon installation completion, prior to any graphics reviews, trending reviews, or on-site

DRAFT

performance verification performed by the Owner's energy management engineer or commissioning authority.

11. BACnet integrated points shall be coordinated with equipment manufacturers and identified on controls drawings; only those points indicated on contract control drawings and/or cited in Specifications shall communicate to the EMS via BACnet.

B. Coordination with Equipment Manufacturers:

1. Equipment/system manufacturers (DOAS, RTU, Variable Refrigerant Flow Systems, etc.) are required to coordinate control requirements with ATC/EMS prior to submission of equipment shop drawings and letters confirming coordination are to be included with the manufacturers' submittals. EMS contractor shall provide all necessary efforts to assure that equipment for the project are furnished with all controls required for the sequences specified via combination of manufacturers controls, ATC/EMS furnished controls, hardwire interfaces, and BACnet communications.
   a. OEM unit shall have an Occupied/Unoccupied input point and a separate Emergency Shutdown input point. OEM control systems must be able to provide 2 input separate inputs for EMS contractor to perform these functions.
   b. An EMS reset relay input shall be supplied on the factory supplied terminal strip to permit remote cycling of power to the OEM controller for EMS for remote reboot.
   c. EMS contractor shall provide via hardwired EMS points for occupied/unoccupied command, emergency shutdown, and controller remote reset.
   d. All BACnet points shall be shown in gray and all EMS points in black.
   e. If any of these capabilities are not available in the packaged unit, the manufacturer shall provide alternative solution for approval to meet the intended need.
   f. The controller shall be furnished with a standard factory program used successfully on previous projects. Customized programs are not permitted.
2. BAS submittals shall show all controls for all equipment, including those that are furnished by manufacturers and clearly identify the distinction between manufacturer/EMS furnished, factory/field wired, BACnet integrated. EMS submittals shall be prepared and submitted after all HVAC equipment submittals have been approved and shall incorporate the approved equipment submittals into the EMS submittals.

1.09 QUALITY ASSURANCE

A. The BAS system shall be designed and installed, commissioned, and serviced by a manufacturer's authorized installer.

B. Manufacturer Qualifications: A firm experienced in manufacturing automatic temperature-control systems similar to those indicated for this Project and with a record of successful in-service performance.

C. All materials and equipment used shall be standard components, regularly manufactured for this and/or other systems and not custom designed specially for this project.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in **<<NFPA 70>>**, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. Electronic equipment shall conform to the requirements of FCC Regulation, Part 15, Section 15, governing radio frequency electromagnetic interference and shall be so labeled.

F. Comply with **<<NFPA 90A>>**, "Installation of Air Conditioning and Ventilation Systems."

DRAFT

1.10 DELIVERY, STORAGE, AND HANDLING

A. Factory-Mounted Components: Where control devices specified in this Section are indicated to be factory-mounted on equipment, arrange for shipping of control devices to equipment manufacturer.

B. System Software: Update to latest version of software at Project completion.

1.11 COORDINATION

A. Control Wiring: The BAS manufacturer shall be responsible for all BAS and temperature control wiring for a complete and operable system. All wire and cable shall be plenum-rated and shall be in accordance with Division 26 specification sections and all local, state and national codes and ordinances.

B. Where plenum-rated BAS cable is routed in concealed, accessible spaces, the cable may be run in the cable trays or in J-Hooks provided under this section of the specifications. Where plenum-rated BAS cable is routed in exposed or inaccessible areas, it shall be run conduit provided under this section of the specifications.

C. Power Wiring:

1. Power wiring indicated (device and circuit designation indicated) on the drawings shall be provided under Division 26.
2. The BAS manufacturer shall be responsible for power wiring not indicated (device or circuit designation not indicated) on the Drawings. It shall be the BAS manufacturer's responsibility to review the Contract Documents to determine the extent of power wiring included in Division 26 and to provide additional power wiring as required. Work shall be in accordance with Division 26 specifications and all local, state and national codes and ordinances.
3. Where the contractor performing work under this section requires an additional circuit for power wiring to a device or panel under paragraph 2 above, an RFI shall be issued requesting approval to use an available circuit in the nearest panel. Once approval is granted, all wiring and conduit from the breaker to the device or panel shall be provided under this section of the specifications.

D. Coordinate location of thermostats, humidistats, and other exposed control sensors with plans and room details before installation. All conduits shall be concealed within walls and above ceilings unless indicated otherwise.

E. Coordinate installation of conduit to avoid cutting of finished surfaces.

F. Coordinate supply of conditioned electrical branch circuits for control units and operator workstation.

G. Coordinate equipment with Division 26 Section "Panelboards" to achieve compatibility with starter coils and annunciation devices.

H. Coordinate equipment with Division 26 Section “Switchboards” to achieve compatibility with power monitoring and metering devices in that equipment.

I. Refer to Division 1 “General Commissioning Requirements” for Commissioning Plan requirements.

J. The Montgomery County Public Schools mechanical inspector shall be copied on all written correspondence between the Building Automation System Contractor and the Mechanical Contractor concerning corrective items, preliminary findings, and any other issues relating to execution of the automatic temperature controls.

DRAFT

1.12 TEST AND GUARANTEE

A. Placing in service: Upon completion of the installation, calibrate equipment and verify transmission media operation before system is placed on line. All testing, adjusting, and calibrating shall be completed and systems shall be properly operating prior to acceptance by Owner. Cross check each control point by comparing the control command and the field controlled device, equipment.

B. Prior to final acceptance and authorization for final payment by the Owner, Energy Management Automation System inspections shall be performed as specified in PART 3 of this Section.

C. The entire control system shall be guaranteed free from all mechanical, electrical, and software defects for a period of two (2) years. The Energy Management Automation System (EMS) shall be guaranteed free from all mechanical, electrical, and programming (including graphics) defects for a period of five (5) years. During the two year warranty period, the Controls Contractor shall be responsible for the proper adjustments of all systems, equipment, and apparatus installed by him and do all work necessary to insure efficient and proper functioning of the systems hardware and software. For placing the controls system into warranty, the Controls Contractor shall arrange to meet with the Mechanical Contractor, the Mechanical Engineer, the Commissioning Authority, and the Owner for on-site inspection and demonstration.

D. For the end-of warranty, the Controls Contractor shall arrange to meet with the Owner within thirty (30) days prior to the specified end of the 2-year guarantee period for the purpose of compiling a list of items that require correction under specified guarantees. Should the Contractor fail to schedule the final meeting, then the 2-year controls system Guarantee shall be automatically extended until such time as the meeting takes place; and the Contractor shall be fully responsible for correcting such deficiencies as if they occurred under the original guarantee period.

E. During the additional 3-years guarantee (5 years total) for EMS parts and labor, the EMS Contractor shall be responsible for the repair and/or replacement of defective EMS hardware (Master Building Controller(s) and all Field Device Controller(s) and all EMS components such as sensors, actuators, transducers, relays, etc.) in response to notification of failures issued by MCPS. Where a failure has occurred that necessitates reloading of software, the work shall be performed by the Contractor. Final control devices such as valves, dampers, actuators, etc. shall be subject to the two year warranty only.

F. Over the two year guarantee period, the Contractor shall provide and install all software upgrades released by the manufacturer as applicable to the systems installed. At the end of the warranty period, the Contractor shall have installed the latest version of the software, updates and firmware available (not just the latest update of an old version).

1.13 CONTRACTOR CHECKLIST

A. Provide a checklist to the EMS Office with each invoice and acceptance request milestone. Use the completion checklist that confirms percent completion and edit as needed to include project steps. The goal is to be able to confirm completion status. Contractor to provide spreadsheet electronically in excel and pdf format.

1.14 PERMITS AND INSPECTIONS

A. Contractor shall be responsible for obtaining and paying for electrical permits for any power wiring performed in the execution of the controls work. Certificate of final inspection shall be delivered to the Owner upon completion of the work.

DRAFT

1.15 SPARE PARTSTHE CONTRACTOR SHALL INCLUDE IN THE CONTROLS BID AN ALLOWANCE FOR SPARE PARTS EQUAL TO 2% OF THE BASE COST OF INSTALLATION; I.E. IF THE CONTRACTOR'S PROPOSED COST FOR THE CONTROLS INSTALLATION IS "X", THE SUBMITTED BID SHALL BE (1.02"X"). THE USE AND APPLICATION OF THE 2% SPARE PARTS ALLOWANCE SHALL BE SOLELY AT THE DISCRETION OF MCPS.

A. The Contractor shall include in the controls bid an allowance for spare parts equal to 2% of the base cost of installation; i.e. if the Contractor's proposed cost for the controls installation is "x", the submitted bid shall be (1.02"x"). The use and application of the 2% spare parts allowance shall be solely at the discretion of MCPS.

B. Contractor shall keep an accounting of the monies charged against the 2% spare parts allowance. When warranty date is officially confirmed, the contractor shall be responsible to maintain a documented accounting of what products were provided to MCPS under the 2% allowance and provide the accounting upon request. Prior to the end of the warranty, the Contractor shall provide a summary spreadsheet and signed documents showing a listing of the charges and a total amount used by MCPS.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers of EMS:
   1. HI Solutions.
   2. Schneider Electric StruxureWare.

B. Manufacturers of ATC Components:
   1. ACI.
   2. BAPI.
   3. Belimo.
   4. Functional Devices (RIB).
   5. Honeywell.
   6. Invensys.
   7. Johnson Controls.
   8. Kele.
   9. Kreuter.
   10. Serta.
   11. Schneider Electric.
   12. Siemens.

C. Control systems shall be installed by:
   1. Control Sources.
   2. Performance Controls.
   3. Pritchett Controls.

D. Controls Contractor shall have qualified service personnel on staff to respond in person at the project site within twenty-four (24) hours of receiving of service call from the Owner to the Contractors' office throughout the guarantee period. A no-heat or emergency condition shall require an immediate response.

DRAFT

2.02 GENERAL

A. Materials and equipment installed shall be new and shall be approved by the Underwriters' Laboratories, Inc., for installation in each particular case where standards have been established. All basic electronic equipment shall be listed by Underwriters' Laboratories **<<UL 916>>** for energy management and be compliant with ANSI/ASHRAE BACnet Standard 135. Where any item of material or equipment is specified by proprietary name, trade name, or manufacturer, it is understood that the item named, or the equal thereof, is intended, subject to the approval of the Engineers. Any item substituted for that named shall be equal or better in quality, capacity or performance, and shall be suitable for the available space and required arrangement. It shall be the responsibility of the Contractor to furnish any and all data and samples including those of the specified item that the Engineers may require for him to determine the suitability of any substituted item. The approval by the Engineers of any item shall not relieve the Contractor of his responsibility for compliance with the specified requirements of the Specifications.

B. The products supplied and installed shall be standard components regularly manufactured for their intended use and shall have been tested and proven in actual use. Each product type shall be the equipment of a single manufacturer.

2.03 BAS/EMS COMPUTER HARDWARE

A. System Description: The control system shall consist of a high-speed, peer-to-peer network of DDC controllers, a control system server, and a web-based operator interface. System software shall be based on a server/thin client architecture, designed around the open standards of web technology. The control system server shall be accessed using a Web browser over the control system network, the owner's Ethernet-based, wide area network (WAN), and over the Internet. System shall use BACnet protocol for communication to the operator workstation, web server, and between control modules.

1. MCPS WAN: Internet-based network connecting multiple facilities with a central data warehouse and server, accessible via standard web-browser. This is an existing infrastructure and contractor is not required to configure any components of this WAN. Connection of a building's automation system to the WAN shall be at a single location with a single IP address.
2. Local Supervisory LAN: The Local Supervisory LAN shall be an Ethernet-based, 10/100 Mbps LAN connecting Primary Control LANs and OWSs. The LAN serves as the inter-BC gateway and OWS-to-BC gateway and communications path and as the connection point for the MCPS WAN.
3. Primary Controller LAN: High-speed, peer-to-peer communicating BACnet IP LAN used to connect the central MCPS BACnet Advanced Operator Workstation server to the BACnet Network and Building Controllers (BCs), Advanced Application Controllers (AACs), and Application Specific Controllers (ASCs) exclusively communicating control information. All networks shall be BACnet IP at all levels including terminal controllers.
4. Contractor shall provide Local Supervisory and Primary Controller LANs. LAN shall be **<<IEEE 802.3>>** Ethernet over Category 5E cable with switches and routers that support up to 1000 Mbps throughout. Exception: In cases where the EMS is enabling/disabling equipment via EMS with manufacturer's factory unit controls and an IP BACnet interface is confirmed in writing from the manufacturer as not available, RS485 BACnet wiring interface may be required to these units once approved by MCPS. These special cases shall be separated from the rest of the network and on its own branch of the LAN. Ethernet cable color shall be orange.
5. BACnet IP to be used at all network levels including terminal units. These shall be on a private LAN that allows controlled access from the MCPS network.

DRAFT

6. Networking to equipment manufacturers packaged controls shall be on a separate communication bus from standard EMS controllers.

B. Remote Data Access: The system shall support the following methods of remote access to the building data.
   1. Browser-based access: Thin-client architecture to provide complete access to the control system via a Web browser. No special software other than a web browser shall be required to access graphics, point displays, and trends, configure trends, configure points and controllers, or to download programming into the controllers.
   2. Mobile device: Access via Web browser on mobile device with Android 2.3.3 or higher and Apple iOS 6 or higher operating systems.
   3. Must be able to connect remotely to the school EMS via a MCPS provided mobile broadband connection to the internet, with full access to all features. This will be used to allow access when the building loses power or internet connections are lost or as needed.

C. Performance Standards: System shall conform to the following minimum standards over network connections.
   1. Graphics shall display a minimum of 20 dynamic points with current data within 10 seconds and automatically refresh within every 15 seconds.
   2. Devices shall react to command of a binary object or begin reacting to command of an analog object within 10 seconds.
   3. An object that goes into alarm shall be annunciated at the workstation within 45 seconds.
   4. Programmable controllers shall be able to completely execute DDC PID control loops at a frequency adjustable down to once per second.
   5. System shall report values with minimum end-to-end accuracy per “Electronic Sensors” article of this specification section.

D. Control System Server (CSS): Server specs must be per manufacturer’s recommendations and MCPS current server recommendations. Continue all such upgrades through the warranty period.
   1. The server shall conform to BACnet Advanced Workstation (B-AWS) device profile as specified in ASHRAE/ANSI 135 BACnet Annex L. Server shall reside on Owner’s WAN. Each standard browser connected to server shall be able to access all system information.
   2. Industry-standard hardware shall meet or exceed DDC system manufacturer’s recommended specifications and shall meet response times specified.
      a. Hard disk shall have sufficient memory to store a DDC database at least twice the size of the delivered systems databases and one year of trend data based on the points specified to be trended at their specified trend intervals.
      b. Provide additional hardware (serial, parallel, and network communication ports, video drivers, network interface cards, cabling, etc.) to facilitate all control functions and software requirements specified for the DDC system.

E. BACnet Network Controller (NC):
   1. The BACnet Building Network Controller shall contain its own microprocessor, RAM, battery, real-time clock, communication ports, and power supply. Battery shall provide for minimum 100 hour backup of all programs and data in RAM. The battery shall be sealed and self-charging. The network controller shall have a minimum of 4GB of storage space. All programming and stored data shall be retained in the event of a power loss, the controller’s non-volatile memory shall never lose program or configuration settings. Built-in rechargeable batter or capacitor maintains RAM memory for non-essential data only (i.e. trend logs). Upon restoration of power, all systems shall operate normally. While

DRAFT

UPS power supplies are required, retaining programming shall not be dependent on those devices.

2. NC shall allow centralized overall system supervision, operator interface, management report generation, alarm annunciation, acquisition of trend data, and communication with control units. NC shall provide a thin-client graphical user interface to the BAS.
   a. Local Access: The network controller shall support local operator access using standard web browsers.
   b. Remote Access: A high-speed connection from the NC to MCPS WAN for remote operator access to the BAS using the standard web browsers.
   c. Standard web browsers minimally include Microsoft Internet Explorer, Mozilla Firefox, Google Chrome, and Apple Safari.
3. NC shall support the following communication protocols at a minimum:
   a. ASHRAE 135-2008 BACnet
      1) Point-to-Point (PTP)
      2) Master Slave/Token Passing (MS/TP)
      3) Ethernet
      4) BACnet IP (B/IP)
   b. Modbus RTU and TCP
   c. Simple Mail Transfer Protocol (SMTP)
   d. Simple Network Management Protocol (SNMP)
   e. Hyper Text Transfer Protocol (HTTP)
4. NC shall allow system operators to perform the following functions from the CSS, OWSs, and laptops:
   a. Configure systems.
   b. Monitor and supervise control of all points.
   c. Change control setpoints.
   d. Override input values.
   e. Override output values.
   f. Enter programmed start/stop time schedules.
   g. View and acknowledge alarms and messages.
   h. Receive, store and display trend logs and management reports.
   i. Upload/Download programs, databases, etc. as specified.
5. NC database and all necessary graphical user interface resources including animations are to be stored on the NC. Web-enabled applications that require system graphics to be stored on the client machines will not be acceptable.
6. NC shall support unlimited access by five (5) simultaneous clients.
7. Multiple NC devices shall be capable of being installed on the same BACnet internetwork without any separate server applications, separate network management or additional licensing. Browser clients shall have the ability to access any NC on the internetwork directly.
8. NC shall provide native BACnet communications directly with all BACnet devices on the local network.

F. BACnet Building Controller (BC) (Field Level Controllers)
   1. The BACnet BC(s) shall provide fully distributed control independent of the operational status of the NC and Control System Server (CSS). All necessary calculations required to achieve control shall be executed within the BC independent of any other device. All

DRAFT

control strategies performed by the BC(s) shall be both operator definable and modifiable through the Operator Interfaces.

2. BCs shall perform overall system coordination, accept control programs, perform automated HVAC functions, control peripheral devices and perform all necessary mathematical and logical functions. BCs shall share information with the entire network of BCs and AACs/ASCs for full global control. Each controller shall permit multi-user operation from multiple workstations and portable operator terminals connected either locally or over the Primary Controller LAN. Each unit shall have its own internal RAM, non-volatile memory, microprocessor, battery backup, regulated power supply, power conditioning equipment, ports for connection of operating interface devices, and control enclosure. BCs shall be programmable from an operator workstation or portable operator terminal. BC shall contain sufficient memory for all specified global control strategies, user defined reports and trending, communication programs, and central alarming.
3. BCs shall be connected to Primary Controlling BACnet IP LAN.
4. All BCs shall be protected from any memory loss due to a loss of power by one or a combination of the following:
   a. Volatile RAM, where allowed for lower priority or temporary data, shall have a battery backup using a lithium battery with a rated service life of one hundred (100) hours, and a rated shelf life of at least five years. Self-diagnostic routine shall report an alarm for a low battery condition.
   b. EEPROM, EPROM, or NOVROM non-volatile memory.
   c. All programming and stored data shall be retained in the event of a power loss, the controller's non-volatile memory shall never lose program or configuration settings. Built-in rechargeable batter or capacitor maintains RAM memory for non-essential data only (i.e. trend logs). Upon restoration of power, all systems shall operate normally. While UPS power supplies are required, retaining programming shall not be dependent on those devices.
5. BC shall execute application programs, calculations, and commands via a microprocessor resident in the BC. The database and all application programs for each BC shall be stored in non-volatile or battery backed volatile memory within the BC and will be able to upload/download to/from the OWS and/or CSS. All BC point data, algorithms and application software shall be modifiable from the Operator Workstation.
6. BC shall provide buffer for holding alarms, messages, trends etc.
7. BC shall include self-test diagnostics, which allow the BC to automatically alarm any malfunctions, or alarm conditions that exceed desired parameters as determined by programming input.
8. BC shall contain software to perform full DDC/PID control loops.
9. Input-Output Processing:
   a. Digital Outputs (DO): Outputs shall be rated for a minimum 24 Vac or Vdc, 1 amp maximum current. Each shall be configurable as normally open or normally closed. Each output shall have an LED to indicate the operating mode of the output and a manual HOA switch to allow for override. Each DO shall be a discrete output from the BC's board (multiplexing to a separate manufacturer's board is unacceptable). Provide suppression to limit transients to acceptable levels.
   b. Analog Outputs (AO): AO shall be O-5 Vdc, 0-10 Vdc, and 4-20 mA. Provide zero and span calibration and circuit protection. D/A converters shall have a minimum resolution of 10 bits.
   c. Analog Inputs (AI): AI shall be O-5 Vdc, 0-10 Vdc, and 4-20 mA. Provide signal conditioning, and zero and span calibration for each input. Each input shall be a

DRAFT

discrete input to the BC's board (multiplexing to a separate manufacturers board is unacceptable). A/D converters shall have a minimum resolution of 12 bits.

d. Digital Inputs (DI): Monitor dry contact closures. Accept pulsed inputs of at least one per second. Source voltage for sensing shall be supplied by the BC and shall be isolated from the main board. Software multiplexing of an AI and resistors may only be done in non-critical applications and only with prior approval of Architect/Engineer.

e. Universal: Universal inputs or universal outputs configured on hardware and/or in software to serve as either analog or digital as specified above.

f. Each input/output shall have 24VAC over-voltage and short protection and LED indicator.

g. Each output point (analog and digital) shall have on-board integral physical Hand-Off-Auto (H-O-A) switch. H-O-A switch position shall be monitored and displayed in programming. Include this for all controllers except terminal units (VAV, FCU, etc.). If each controller has a built-in display that permits overrides as described here, that is an acceptable alternative.

10. A communication port for operator interface through a terminal shall be provided in each BC. It shall be possible to perform all program and database back-up, system monitoring, control functions, and BC diagnostics through this port. Standalone BC panels shall allow temporary use of portable devices without interrupting the normal operation of permanently connected modems or workstations.
11. Each BC shall be equipped with loop tuning algorithm for precise proportional, integral, derivative (PID) control. Loop tuning tools provided with the Operator Workstation software is acceptable. In any case, tools to support loop tuning must be provided such that P, I, and D gains are automatically calculated.
12. All analog output points shall have a selectable failure setpoint. The BC shall be capable of maintaining this failure setpoint in the event of a system malfunction, which causes loss of BC control, or loss of output signal, as long as power is available at the BC. The failure setpoint shall be selectable on a per point basis.
13. Slope intercepts and gain adjustments shall be available on a per-point basis.
14. BC Power Loss:
    a. Upon a loss of power to any BC, the other units on the primary controlling network shall not in any way be affected.
    b. Upon a loss of power to any BC, the battery backup shall ensure that the energy management control software, the Direct Digital Control software, the database parameters, and all other programs and data stored in the RAM are retained for a minimum of one hundred (100) hours. An alarm diagnostic message shall indicate that the BC is under battery power.
    c. Upon restoration of power within the specified battery backup period, the BC shall resume full operation without operator intervention. The BC shall automatically reset its clock such that proper operation of any time dependent function is possible without manual reset of the clock. All monitored functions shall be updated.
    d. Should the duration of a loss of power exceed the specified battery back-up period or BC panel memory be lost for any reason, the panel shall automatically report the condition (upon resumption of power) and be capable of receiving a download via the network and connected computer. In addition, the Owner shall be able to upload the most current versions of all energy management control programs, Direct Digital Control programs, database parameters, and all other data and programs in the memory of each BC to the operator workstation, system server, or local interface laptop.
15. BC Failure:

DRAFT

a. Building Controller LAN Data Transmission Failure: BC shall continue to operate in stand-alone mode. BC shall store loss of communication alarm along with the time of the event. All control functions shall continue with the global values programmable to either last value or a specified value. Peer BCs shall recognize the loss, report alarm and maintain the LAN.

b. BC Hardware Failure: BC shall cease operation and terminate communication with other devices. All outputs shall go to their specified fail position.

16. Each BC shall be equipped with firmware resident self-diagnostics for sensors and be capable of assessing an open or shorted sensor circuit and taking an appropriate control action (close valve, damper, etc.).
17. A minimum of four levels of password protection shall be provided at each BC.
18. BCs shall be mounted on equipment, in packaged equipment enclosures, or wall mounted in a NEMA 1 enclosure, as specified elsewhere.

G. BACnet Advanced Application Controller (AAC) and Application Specific Controller (ASC)

1. AACs and ASCs shall provide intelligent, standalone control of HVAC equipment. AACs and ASCs shall have peer-to-peer network communications with each other and all other controllers on the BACnet Primary LAN. Each unit shall have its own internal RAM, non-volatile memory and will continue to operate all local control functions in the event of a loss of communications. Controllers shall connect to the LAN via a CAT5E rated connector via BACnet IP.
2. Each AAC and ASC shall include self-test diagnostics that allow the AAC/ASC to automatically relay to the network any malfunctions or abnormal conditions within the controller or alarm conditions of inputs that exceed desired parameters as determined by programming input.
3. AACs and ASCs shall include sufficient memory to perform the specific control functions required for its application and to communicate with other devices.
4. Each AAC and ASC must be capable of stand-alone direct digital operation utilizing its own processor, non-volatile memory, input/output, minimum 8 bit A to D conversion, voltage transient and lightning protection devices. All volatile memory shall have a battery backup of at least fifty (50) hours with a battery life of five years. All programming and stored data shall be retained in the event of a power loss, the controller's non-volatile memory shall never lose program or configuration settings. Built-in rechargeable batter or capacitor maintains RAM memory for non-essential data only (i.e. trend logs). Upon restoration of power, all systems shall operate normally. While UPS power supplies are required, retaining programming shall not be dependent on those devices.
5. All point data; algorithms and application software within an AAC/ASC shall be modifiable over the BACnet network. Control systems that utilize 'canned' programs or programmable read only memory (PROM) level application programming are not acceptable.
6. AAC and ASC Input-Output Processing:
   a. Digital Outputs (DO): Outputs shall be rated for a minimum 24 VAC or VDC, 1 amp maximum current. Each shall be configurable as normally open or normally closed. Each output shall have an LED to indicate the operating mode of the output. Each DO shall be a discrete output from the AAC/ASC's board (multiplexing to a separate manufacturer's board is unacceptable). Provide suppression to limit transients to acceptable levels.
   b. Analog Outputs (AO): AO shall be 0-5 Vdc, 0-10 Vdc, 4-20 mA. Provide zero and span calibration and circuit protection. D/A converters shall have a minimum resolution of 8 bits.

DRAFT

c. Analog Inputs (AI): AI shall be 0-5 Vdc, 0-10Vdc, and 4-20 mA. Provide signal conditioning, and zero and span calibration for each input. Each input shall be a discrete input to the AAC/ASC's board (multiplexing to a separate manufacturers board is unacceptable). A/D converters shall have a minimum resolution of 8-10 bits depending on application.

d. Digital Inputs (DI): Monitor dry contact closures. Accept pulsed inputs of at least one per second. Source voltage for sensing shall be supplied by the AAC/ASC and shall be isolated from the main board. Software multiplexing of an AI and resistors may only be done in non-critical applications and only with prior approval of Engineer.

e. Universal: Universal inputs or universal outputs configured on hardware and/or in software to serve as either analog or digital as specified above.

f. Each input/output shall have 24VAC over-voltage and short protection.

g. Each output shall have on-board integral physical Hand-Off-Auto (H-O-A) switch. H-O-A switch position feedback shall be monitored and displayed. Points to terminal unit controllers serving VAV's, FCU's, UV's, CUH's, WSHP's are exempted and do not require H-O-A switches.

7. AACs/ASCs shall be mounted on equipment, in packaged equipment enclosures, or wall mounted in a NEMA 1 enclosure, as specified elsewhere.

8. Terminal Unit Controllers: Terminal Unit Controllers are ASCs that may be hardware and software dedicated for the controlled terminal equipment with only ROM and EEPROM memory; battery back-up need not be provided. Controllers shall communicate on the BACnet Primary LAN and shall continue to operate upon loss of LAN communication. Each controller shall contain all intelligence, and analog and digital input/output control points required for hardware and software points and sequence specified. Optimization, warm-up/cool-down, and night set-back/set-up shall be performed by terminal unit controller with appropriate inputs from the LAN such as outdoor air temperature, zone schedules, summer/winter operation, etc. Unit controllers shall be furnished with enclosures and enclosures shall be plenum rated when ceiling located.

H. Expansion Modules

1. Input/output expansion modules shall have a minimum of 10 universal inputs, 8 universal outputs. Building Controller (BC) expansion module outputs shall be equipped with H-O-As and potentiometers.

2. Input expansion modules shall have a minimum of 16 universal inputs.

3. Only one expansion module per controller.

I. Override Panel:

1. Touch screen override panel shall have building floor plans graphics with control zones represented and identified. The operator shall be able to manually override the "OFF" Scheduled Start/Stop Zones. The program shall permit operator selection of zones and shall enable all related equipment for that particular zone. The program shall index the selected zone to an "ON" mode in a minimum of one-hour increments for a period of up to three hours in the override condition. Once overridden, the zone equipment shall operate in the occupied mode, including exhaust fan interlocks.

2. The graphic shall be served from the MCPS server and accessible from a standard browser and mobile device anywhere on the network. Provide school level password protection in order to access and activate overrides, but limits access to that school's override screens only.

3. Provide a tablet PC equivalent to a Microsoft Surface Pro to be set in Kiosk mode, mounted in wall enclosure. Include Intel Core i5-8GP and 128 GB solid state hard drive, screen size 12.3" Screen Resolution 2736 x 1824. Front camera 5 megapixel and back camera 8 megapixel. Provide with administrator and user level password to get out of

DRAFT

kiosk mode. Include power supply. Mount tablet PC in Admin workroom in a locking mount (location to be coordinated with MCPS Energy Management).

J. Portable Operator Terminal (Laptop Computer): Portable Operator Terminal shall support system management by connection to the controllers, by connection via the Internet, and by dial-up communications while serving as the remote workstation.
   1. Provide one notebook personal computer (PC) with minimum Intel i5 processor, 2.66 GHz, 15" 1080p minimum display, Include 12 GB RAM and one 512 GB solid state hard drive. Provide 32 MB graphics card with 1080p resolution or better, minimum Three USB ports, 10/100 Base-T network card and CD-RW/DVD ROM Combo Drive. Meet factory software manufacturer's recommended specifications. Desktop is not Acceptable.
   2. Provide with a battery that will power the computer for a minimum of 8 hours.
   3. Provide a 10/100 LAN+56K CardBus Type III PC Card or USB to Internet adaptor.
   4. Provide minimum VGA active matrix display. 15" 1080p display.
   5. Laptop with Bluetooth 4.1 and wireless capable (dual band preferred).
   6. Provide carrying case, extra battery, and all required cables.
   7. Operating system shall be latest professional version of Microsoft Windows supported by BAS manufacturer. Provide the latest version of Microsoft Excel and Word software on the POT that is fully and permanently licensed. All software shall be at least the latest version available as of the date of contract completion; and at the end-of-warranty.
   8. Provide software, graphics and programming as specified herein after.
   9. Provide additional hardware, video drivers, etc., to facilitate all control functions and software requirements specified for the building automation system.
   10. Provide all controller configuration and interface software and/or plug ins for all devices applicable. All shall be loaded and functional. Provide all required interface cables required to connect to all networks, routers, controllers, etc.
   11. Wherever a POT connection point is not provided accessible in the same room as the device controlled, contractor shall provide a wireless system to permit configuration, testing and operation from within the room. Wireless system shall have the range to reliably communicate with the most remote room
   12. A POT (laptop) entirely compatible with the EMSs being installed for this contract shall be furnished.
   13. The POT shall be furnished with all the updated databases for the MCPS energy management systems installations previously completed by the contractor.

DRAFT

2.04 EMS SOFTWARE

A. GENERAL:
   1. Functionality and Completeness: The Contractor shall furnish and install all software and programming necessary to provide a complete and functioning system as specified. The Contractor shall include all software and programming not specifically itemized in these Specifications, which is necessary to implement, maintain, operate, and diagnose the system in compliance with these Specifications.
   2. Configuration: The software shall support the system as a distributed processing network configuration.
   3. Licensing:
      a. Include licensing for all software packages at all required workstations. EMS licensing shall allow unlimited simultaneous users for access to all aspects of the system including system access, workstations, points, programming, database management, graphics etc. No restrictions shall be placed on the licensing. All operator interface, programming environment, networking, database management

and any other software used by the Contractor to install the system or needed to operate the system to its full capabilities shall be licensed and provided to the Owner.

b. All software shall be available on all Operator Workstations, Control System Servers, and Portable Operator Terminals. Provide all required hardware and software rights keys. Provide all required third-party software licenses. At least 2 sets of CDs shall be provided with backup software for all software provided so that the Owner may reinstall any software as necessary.

c. Upgrade all software packages to the release (version) in effect at the end of the Warranty Period.

4. Interoperability: System shall be capable of supporting interoperability utilizing BACnet objects over MS/TP and/or IP. Communication networks to BACnet controllers within each building shall normally be by the Controls Contractor MS/TP and not be reliant on MCPS IT network drops. BACnet IP connections to equipment may be employed under special circumstances, but require prior approval by MCPS Energy Management personnel.

5. A new software point naming standard shall be provided by MCPS upon request. All point naming implemented on the project shall follow this standard and must be approved by MCPS. This also applies to controller naming, folder naming, etc.

6. All controller naming in software must follow standards and as approved by MCPS. The naming must identify the school and the item of equipment controlled.

7. Select controllers with ample programming capacity such that upon completion no more than 50% of the programming space and memory usage is taken. This is to allow for future expansion.

B. CONTROLLERS:

1. Building Controller Software Residency: Each BC shall be capable of control and monitoring of all points physically connected to it. All software including the following shall reside and execute at the BC:

a. Real-Time Operating System software

b. Real-Time Clock/Calendar and network time synchronization

c. BC diagnostic software

d. LAN Communication software/firmware

e. Direct Digital Control software

f. Alarm Processing and Buffering software

g. Energy Management software

h. Data Trending, Reporting, and Buffering software

i. I/O (physical and virtual) database

j. Remote Communication software

2. AAC/ASC Software Residency: Each AAC/ASC shall be capable of control and monitoring of all points physically connected to it. As a minimum, software including the following shall reside and execute at the AAC/ASC.

a. Real-Time Operating System software

b. AAC/ASC diagnostic software

c. LAN Communication software

d. Control software applicable to the unit it serves that will support a single mode of operation

e. I/O (physical and virtual) database to support one mode of operation.

DRAFT

3. Stand Alone Capability: BC shall continue to perform all functions independent of a failure in other NC/BC/AAC/ASC or other communication links to other BCs/AACs/ASCs. Trends and runtime totalizing shall be retained in memory. Runtime totalizing shall be available on all digital input points that monitor electric motor status.
4. Operating System: Controllers shall include a real-time operating system resident in ROM. This software shall execute independently from any other devices in the system. It shall support all specified functions. It shall provide a command prioritization scheme to allow functional override of control functions.
5. Network Communications: Each controller shall include software/firmware that supports networking on the BACnet LAN. Network support shall include the following:
    a. Building Controller/Primary LAN shall be a high-speed network designed and optimized for control system communication. If a Primary LAN communications trunk is severed, BCs shall reconfigure into two separate LANs and continue operations without interruption or Operator intervention.
    b. Controller communication software shall include error detection, correction, and re-transmission to ensure data integrity.
    c. Operator/System communication software shall facilitate communications between other BCs, all subordinate AACs/ASCs, Network Controller and LAN Interface Devices or Operator Workstations. Software shall allow point interrogation, adjustment, addition/deletion, and programming while the controller is on line and functioning without disruption to unaffected points. The software architecture shall allow networked controllers to share selected physical and virtual point information throughout the entire system.
6. Point Database/Summary Table: All points included in the typical equipment point list must be represented in a common, open protocol format. All points should be provided as BACnet standard analog, binary, schedule, or trend objects. Point/system database creation and modification shall be via a user-friendly, menu-driven program. System software shall support virtual or logic point (points not representing a physical I/O) creation. Software shall support virtual points with all services specified herein. Database software shall support definition of all parameters specified for a given point type. If database does not support all parameters software module shall be created and attached to the points which accomplish the respective function.
7. Diagnostic Software: Controller software shall include diagnostic software that checks memory and communications and reports any malfunctions.
8. Alarm/Messaging Software: Controller software shall support alarm/message processing and buffering software.
9. Application Programs: Controllers shall support and execute application programs. All Direct Digital Control software, Energy Management Control software, and application programming software templates shall be provided in a ‘ready-to-use’ state, and shall not require (but shall allow) Owner programming.
10. Security: Controller software shall support multiple level password access restriction as more fully specified below.
11. Direct Digital Control: Controller shall support application of Direct Digital Control Logic. All logic modules shall be provided pre-programmed with written documentation to support their application. Provide the following logic modules as a minimum:
    a. Proportional-Integral-Derivative (PID) control with analog and floating output
    b. Two Position control (Hi or Low crossing with deadband)
    c. Single-Pole Double-Throw relay
    d. Delay Timer (delay-on-make, delay-on-break, and interval)
    e. Hi/Low Selection

DRAFT

f. Reset or Scaling Module
g. Logical Operators (And, Or, Not, Xor)

12. Psychrometric Parameters: Controller software shall provide preprogrammed functions to calculated and present psychrometric parameters (given temperature and relative humidity) including Enthalpy and Wet Bulb Temperature as a minimum.
13. Updating/Storing Application Data: Site-specific programming residing in volatile memory shall be uploadable/downloadable from an OWS or CSS connected locally, to the Primary LAN, to the Local Supervisory LAN and remotely via the internet and modem and telephone lines as applicable but all must be available. Initiation of an upload or download shall include all of the following methods: Manually, Scheduled, and Automatically upon detection of a loss or change.
14. Restart: System software shall provide for orderly shutdown upon loss of power and automatic restart upon power restoration. Volatile memory shall be retained; outputs shall go to programmed fail (open, closed, or last) position. Equipment restart shall include a user definable time delay on each piece of equipment to stagger the restart. Loss of power shall be alarmed at operator interface indicating date and time.
15. Time Synchronization: Operators shall be able to set the time and date in any device on the network that supports time-of-day functionality. The operator shall be able to select to set the time and date for an individual device, devices on a single network, or all devices simultaneously. Automatic time synchronization shall be provided.
16. Misc. Calculations: System software shall automate calculation of psychometric functions, calendar functions, kWh/kW, and flow determination and totalizing from pulsed or analog inputs, curve-fitting, look-up table, input/output scaling, time averaging of inputs and A/D conversion coefficients.
17. Application Programming: Application software shall be user programmable. General approaches to application programming shall be provided by one, or a combination, of the following conventions:
    a. Point Definition: provide templates customized for point type, to support input of individual point information. Use standard BACnet Objects as applicable.
    b. Graphical Block Programming: Manipulation of graphic icon ‘blocks’, each of which represents a subroutine, in a functional/logical manner forming a control logic diagram. Blocks shall allow entry of adjustable settings and parameters via pop-up windows. Provide a utility that shall allow the graphic logic diagrams to be directly compiled into application programs. Logic diagrams shall be viewable either off-line, or on-line with real-time block output values.
    c. Functional Application Programming: Pre-programmed application specific programs that allow/require limited customization via ‘fill-in-the-blanks’ edit fields. Typical values would be setpoints gains, associated point names, alarm limits, etc.
    d. Line Programming: Textual syntax-based programming in a language similar to BASIC designed specifically for HVAC control. Subroutines or functions for energy management applications, setpoints, and adjustable parameters shall be customizable, but shall be provided preprogrammed and documented.
    e. Provide a means for testing and/or debugging the control programs both off-line and on-line.
    f. Within the programming environment, provide clear text documentation of programming at each step of control logic which explains and clarifies the operation. Include an explanation of loop set up parameters clarifying hot it is tuned.

C. SYSTEM:
1. Energy Management Applications: System shall have the ability to perform all of the following energy management routines via preprogrammed function blocks or template

DRAFT

programs. All programs shall be executed automatically without the need for operator intervention, and shall be flexible enough to allow operator customization. As a minimum provide the following whether or not required in the software:

a. Time-of-Day Scheduling (include mass scheduling via single schedule for all HS, MS, ES sites) Provide capability to permit BACnet schedule broadcasts to multiple sites.
b. Calendar-Based Scheduling
c. Holiday Scheduling
d. Temporary Schedule Overrides
e. Optimal Start/Optimal Stop-based on space temperature offset, outdoor air temperature, and building heating and cooling capacitance factors as a minimum
f. Night Setback and Morning Recovery Control, with ventilation only during occupancy
g. Economizer Control (enthalpy or dry-bulb)
h. Peak Demand Limiting / Load Shedding
i. Dead Band Control
j. The programming modifications can be accomplished in the workstations or system server.

2. Password Protection: Password must be Scalable: one login to all sites. Once logged in, user can access any school without logging in again. Adding or editing a password can be done one time for all schools. Passwords will be automatically distributed to and retained on each site's BC.
   a. Multiple-level password access protection shall be provided to limit workstation control, display and database manipulation capabilities as deemed appropriate for each user, based upon an assigned user name with a unique password.
   b. All passwords for the system shall be provided to the Owner including administrator, dealer, or factory level passwords.
   c. Passwords shall restrict access to all Control Units.
   d. Each user name shall be assigned to a discrete access level. A minimum of five levels of access shall be supported. Alternately, a comprehensive list of accessibility/functionality items shall be provided, to be enabled or disabled for each user.
   e. A minimum of 20 user names shall be supported and programmed per Owner's direction.
   f. Operators shall be able to perform only those commands available for the access level assigned to their user name.
   g. User-definable, automatic log-off timers of from 1 to 60 minutes shall be provided to prevent operators from inadvertently leaving interface device software on-line.
3. Alarm and Event Management Reporting:
   a. Alarm management shall be provided to monitor, buffer, and direct alarms and messages to operator devices and memory files. Each BC shall perform distributed, independent alarm analysis and filtering to minimize operator interruptions due to non-critical alarms, minimize network traffic, and prevent alarms from being lost. At no time shall a BC's ability to report alarms be affected by either operator activity at an Operator Workstation or local handheld device, or by communications with other panels on the network.
      1) Alarm Descriptor: Each alarm or point change shall include that point's English language description, and the time and date of occurrence. In addition to the alarm's descriptor and the time and date, the user shall be able to print, display and store an alarm message to more fully describe the alarm condition or direct operator response.

DRAFT

2) Alarm Prioritization: The software shall allow users to define the handling and routing of each alarm by their assignment to discrete priority levels. Critical alarms, as defined herein after, shall be discrete from all other alarms. Users shall have the ability to manually inhibit alarm reporting for each individual alarm and for each priority level.

3) Alarm Report Routing: Each alarm priority level shall be associated with a unique user-defined list of operator devices including any combination of local or remote workstation, storage devices, cell phones, tablets. All alarms associated with a given priority level shall be routed to all operator devices on the user-defined list associated with that priority level unless directed otherwise by owner operators. For each priority level, alarms shall be automatically routed to a default operator device in the event that alarms are unable to be routed to any operator device assigned to the priority level.

4) Alarm Routing: System shall be capable of sending critical alarms text messages to operators' cell phones and tablets. Text messaging shall be configurable such that messages may only be sent during periods when the central energy management office is not manned. (Note: Intent is to continue to have all "alarm" conditions turn red on graphics screens and to continue to graphically display critical alarms as currently handled. Systems are to be capable of sending critical alarms text messages to cell phones & tablets, and if so directed by MCPS, to only send text messages at times and to phones/tablets designated by MCPS.)

b. It shall be possible for any operator to receive a summary of all alarms regardless of acknowledgement status; for which a particular recipient is enrolled for notification; based on current event state; based on the particular BACnet event algorithm (e.g. change of value, change of state, out of range, and so on); alarm priority; and notification class.

c. Alarm Historical Database: The database shall store all alarms and events object occurrences allowing applications to access the data using standard Microsoft Windows Data Services.

4. Trending:

a. The software shall display historical data in both a tabular and graphical format. The requirements of this trending shall include the following:

1) Provide trends for all physical points, virtual points and calculated variables.

2) The sample rate and data selection shall be selectable by the operator.

3) The trended value range shall be selectable by the operator.

b. Controllers incorporating PID control loops shall also provide for high resolution sampling in less than six second increments for verification of control loop performance.

c. Trend data shall be buffered at the BC, and uploaded to hard disk storage when archival is desired, required, or scheduled. Uploads shall occur based upon a user-defined interval, manual command, or automatically when the trend buffers become full.

d. Provide a time master that is installed and configured to synchronize the clocks of all devices supporting time synchronization. Synchronization shall be done using Coordinated Universal Time (UTC). All trend sample times, including BACnet connected controllers, shall be able to be synchronized. The frequency of time synchronization message transmission shall be selectable by the operator.

DRAFT

e. Provide capability to quickly generate an all points summary report showing the current value of all points or in logical groups as selected by the operator. Must be capable of exporting data to a spreadsheet format.

5. Data Acquisition and Storage
   a. All points included in the typical equipment point list must be represented in a common, open or accessible format.
   b. Data from the EMS shall be stored in relational database format. The format and the naming convention used for storing the database files shall remain consistent across the database and across time. The relational structure shall allow for storage of any additional data points, which are added to the EMS in future. The descriptions of the tables, columns, domains, and constraints shall be provided for each database.
   c. The database shall allow applications to access the data while the database is running. The database shall not require shutting down in order to provide read-write access to the data. Data shall be able to be read from the database without interrupting the continuous storage of trend data being carried by the EMS.
   d. The database shall allow applications to access the data via Microsoft Windows standard data access services.
6. Totalizing
   a. The software shall support totalizing analog, digital, and pulsed inputs and be capable of accumulating, storing, and converting these totals to engineering units used in the documents. These values shall generally be accessible to the Operator Interfaces to support management-reporting functions.
   b. Totalizing of electricity use/demand shall allow application of totals to different rate periods, which shall be user definable.
   c. When specified to provide electrical or utility Use/Demand, the Contractor shall obtain from the local utility all information required to obtain meter data, including K factors, conversion constants, and the like.
7. Scheduling:
   a. Provide a graphic utility for user-friendly operator interface to adjust all operating schedules.
   b. Scheduling feature shall include multiple seven-day master and regular schedules, plus holiday, special, and “snow day” schedules. Each type of schedule shall have start time and stop time. Normal conventions shall be that “stop”, “unoccupied”, or “off” shall place the controlled building/zone/equipment in the unoccupied mode; “start”, “occupied”, or “on” shall place the controlled building/zone/equipment in the occupied mode. Default of the schedule shall be “off” (stop, unocc); operator entries shall be required to schedule equipment “on” (start, occ).
   c. Equipment shall be assigned to Zone schedules. Each and all zones shall be controllable by any of the five types of schedules in any combination and the schedules shall operate concurrently.
   d. Provide the ability to group user selected Zones for simultaneous scheduling. Intent is for user to be able enter a schedule that will be applied to multiple zones without having to either copy and paste schedule from one zone to another; e.g. user shall be able to select Zones 1, 3, & 5 and enter a schedule that applies to those zones while not impacting the schedules for non-selected zones.
   e. Schedule Types:
      1) Master Schedule: Provide a repeatable 7-day master schedule. All zones assigned to the Master Schedule shall respond to the daily on/off entered in that schedule. Each day schedule shall be able to have multiple on/off times. This schedule is construed as that which controls the building on a regular, daily

DRAFT

basis. Each building shall be provided with 10-month and 12-month Master schedules.

2) Regular Schedule: Provide repeatable 7-day Regular schedules for each Zone. Each day of the schedule shall function with multiple on/off times. Regular schedules shall be used to provide “on” times in addition to those scheduled in the Master schedule.

3) Holiday Schedule: Holiday schedules shall temporarily modify the Master and Regular schedules. It shall be possible to schedule holidays a year in advance. Holidays shall be entered by date; Master and Regular schedules shall respond to the holiday schedule for the date entered.

4) Special event schedules are accomplished through built-in capabilities of BACnet schedule objects using a higher priority level to supersede other schedules.

5) "Snow Day" Schedule: Provide a single point command accessible to the Energy Management personnel so that when the "Snow day" command is issued, all assigned schools are placed in their local "snow day" schedules.

6) Include capability for mass Scheduling value using a higher priority that supersedes other schedules including chiller lockout. Operator can set one schedule and send it to multiple schools as selected in one operation.

f. A yearly calendar feature shall allow assignment of holidays and automatic reset of system real time clocks for transitions between daylight savings time and standard time.

g. Schedules shall reside in building controllers, not on the system server.

8. Operator Interface Graphic Software

a. Graphic software shall facilitate user-friendly interface to all aspects of the System Software. The intent of this specification is to require a graphic package that provides for intuitive operation of the systems without extensive training and experience. It shall facilitate logical and simple system interrogation, modification, configuration, and diagnosis.

b. Graphic software shall support multiple simultaneous screens to be displayed and resizable in a ‘Windows’-like environment. All functions excepting text entry functions shall be executable with a mouse.

c. Graphic software shall provide for multitasking such that third-party programs can be used while the OWS software is on line. Software shall provide the ability to alarm graphically even when operator is in another software package.

d. Operating system software shall be latest version of Microsoft Windows supported by the EMS manufacturer.

e. The software shall allow for Owner creation of user-defined, color graphic displays of geographic maps, building plans, floor plans, and mechanical and electrical system schematics. These graphics shall be capable of displaying all point information from the database including any attributes associated with each point (i.e., engineering units, etc.). In addition, operators shall be able to command equipment or change setpoints from a graphic through the use of the mouse.

f. The operator interface shall allow users to access the various system graphic screens via a graphical penetration scheme by using the mouse to select from menus or ‘button’ icons. Each graphic screen shall be capable of having a unique list of other graphic screens that are directly linked through the selection of a menu item or button icon.

g. Dynamic physical point values shall automatically updated at a minimum frequency of 4 updates per minute without operator intervention. Point value fields shall be

DRAFT

displayed with a color code depicting normal, abnormal, override and alarm conditions.

h. Each displayed point shall be individually enabled/disabled to allow mouse-driven override of digital points or changing of analog points. Such overrides or changes shall occur in the control unit, not just in the workstation software. The graphic point override feature shall be subject to password level protection. Points that are overridden shall be reported and displayed in a coded color. The report message shall include the operator's user name. A list of points that are currently in an override state shall be available through menu selection.

i. Graphic development and generation software shall be provided to allow the user to add, modify, or delete system graphic displays. Contractor shall provide libraries of pre-engineered screens and symbols depicting standard air handling unit and energy recovery unit components (e.g. fans, cooling coils, filters, dampers, heat exchangers, etc.), mechanical system components (e.g., pumps, chillers, cooling towers, boilers, ground water system, etc.), complete mechanical systems (e.g. constant volume-terminal reheat, heat pump, etc.) and electrical symbols. Graphic Development Package shall use a mouse or similar pointing device to allow the user to define symbols, position items on graphic screens, attach physical or virtual points to a graphic, define background screens, define connecting lines and curves; locate, orient and size descriptive text, define and display colors for all elements, establish correlation between symbols or text and associated system points or other displays, create hot spots or link triggers to other graphic displays or other functions in the software.

j. New points displayed on OWS graphic screen shall appear automatically on the identical graphic screen served by the web-server with no further programming or file transfer required.

k. Graphics software must be compatible with Touchscreen Tablet PC.

l. Upon logging in with a lower level access login, access can be restricted to selected graphics only.

D. SET-UP: Specific applications to be provided are as follows:

1. Passwords: Passwords for system access control shall be provided in at least five levels. All higher level passwords can also perform all functions of lower level passwords. Contractor shall assist Owner's operators with assigning user names, passwords and password levels. Levels shall be set up akin to the following; actual extent of level of access shall be coordinated with MCPS Energy Management Supervisor:

a. Level 1 (Administrator): View, add, change and delete user names, passwords, password levels; all unrestricted system capabilities including all network management functions.

b. Level 2: (Programmer): Configure system software, modify control unit programs, modify graphic software; essentially unrestricted except for viewing or modifying user names, passwords, password levels.

c. Level 3: (Senior Technician): Override output points, change setpoints, change equipment schedules, exit BAS software to use third party programs.

d. Level 4: (Technician): Acknowledge alarms, temporarily override equipment schedules.

e. Level 5: (Viewer): View only all graphic displays, trend point data.

2. Trend Analysis Reporting:

a. Trends shall initially be set-up and programmed by the Contractor for 15 minute sampling intervals. Trends shall be stored in an open database that can be imported to third party software. Trends shall be in text spreadsheet style format. (Note: Spec

DRAFT

requirement for delivering trends for review at hourly intervals prior to walks-thru has not changed.)

b. Seventy two (72) hours of trends shall be constantly run and stored on site in the controller where the points are contained. Trends shall be viewable in real time; i.e. the previous 24 hours shall be viewable commencing with the latest trend stored at the time the operator elects to view trends. Each 24-hour trend shall be automatically saved at the system server.

c. Changing the time interval of trend samples, e.g. from 15 minutes to 1 minute, shall be achievable in blocks; not requiring point-by-point time interval entries. For example, it shall be possible to change the entire building trends from 15 minutes to 1 minute interval by one time interval entry. Similarly, if a select group of trends for a mechanical system, such as all points associated with an air handling unit, are to be changed; the block of selected points shall all be changed by a single time interval entry.

d. Trend printing shall provide point data according to an interval (length determined by user). Print a column header with point designation and engineering units for each point. Print the time and point data information in its respective column for all values for that point.

e. Trends set-up for initial system punch-out shall be retained in programming. Thirty-one (31) days of hourly trends shall be continuously stored on the automation system server. Trends shall be savable to CD as a 31-day group and/or selectively by operator command.

f. Access to trended data shall be achievable from graphic screens and/or menus.

g. Recovery or printing of trends shall be a multi-tasking function so that recovery or printing of trends from one facility does not prevent simultaneous access to another facility on the same server.

h. Provide Change-of-Value type trends for all binary point values with at least 500 samples.

i. Formatting of Trends: Provide spreadsheet format with all points for each unit, organized with approved point names. Group points together that naturally belong together (i.e. command and status, supply air temp and its setpoint. Standardize on a format and use it consistently. Submit sample formats for each unit type for approval in advance.

3. Overrides:

a. Refer to the building zone override section in this specification. Provide a touch screen graphic for manual override of the "OFF" for all Scheduled Start/Stop Zones. Locate the override touch screen in the Administration Area, coordinate location with MCPS Energy Management. Provide the necessary software to start any desired zone's equipment by touch screen. The program shall permit operator selection of zones and shall enable all related equipment for that particular zone. The program shall index the selected zone to an "ON" mode in a minimum of one-hour increments per push for a maximum override period of 6 hours. Once overridden, the zone equipment shall operate in the occupied mode, including exhaust fan interlocks.

b. Timed override feature shall allow an operator to temporarily change the state of scheduled equipment. An override command shall be selectable to apply to an individual unit, all units assigned to a given master schedule, or to all units in a building. Timed override shall terminate at the end of an operator selectable time, or at the end of the scheduled occupied/unoccupied period, whichever comes first. A password level that does not allow assignment of master schedules shall allow a timed override feature.

DRAFT

c. Provide equipment override programs for all energy recovery units, air handling units, rooftop units, and heating and ventilating units. Program shall allow operator to override DOAS, RTU, or HVU “Off” command to enable individual units for operation without overriding Zone command. Duration of override shall be for 3 hours. Intent is to allow DOAS, RTUs, or HVUs to run for maintenance servicing without requiring other equipment in the zone to operate as would be required if the Zone were overridden on.

d. Provide two (2) single point outdoor air damper overrides. Intent is to allow the EMS operator to command all outdoor air intake dampers controlled by EMS to be closed by a single command.

1) One OAD Override shall close all outdoor air dampers and shut down all Dedicated Outdoor Air Systems (DOASs). Intent is prevent any outdoor air entering the building thru the HVAC equipment. Label this override: “Global OAD OR”

2) The other OAD Override shall close all outdoor air dampers, but not shut down DOASs. Label this override: “Partial OAD OR”.

e. Provide a single point Emergency Shutdown override. Intent is to allow the EMS operator to command all equipment off.

f. Override shall be possible for analog or time clock values for a given period of time, until a given time or permanently. Overrides may be cleared at the keyboard or through programmable user functions.

4. Alarms Reporting:

a. Alarms shall be displayed in red on graphics and shall include all critical alarms as well as status and temperature alarm points designated by MCPS and/or as called for on systems points lists.

b. Critical Alarms: Building impending freeze alarm, EMS failure alarms, and building electrical power irregularities alarm shall be displayed at the Energy Management Office.

1) Building impending freeze alarm:

(a) Alarm condition shall be whenever outdoor air temperature is below 40°F (adjustable) and when the central plant is in the heating mode, and shall be generated when the heat pump loop water return temperature drops below 45°F (adjustable) for 40 minutes.

(b) Generated when both main and stand-by heating hot water pumps or both main and stand-by dual temperature pumps are showing off status when outdoor air temperature is below 40°F.

(c) Impending freeze alarm message shall read out on the display as "Low Loop Temperature" and give the name of the school or facility experiencing this condition.

(d) This alarm shall also be provided to MCPS Security Division via hardwire connection to the Security System installed at the building. Provide a contact output and coordinate interconnection with MCPS Security System; MCPS Security Division will connect to EMS provided relay and monitor this output through their own system's hardware and software.

(e) Critical alarms as approved by MCPS, shall be sent via email to EMSalerts@mcpsmd.org and their respective Depot (Bethesda: BMDalerts@mcpsmd.org, Clarksburg: CMDalerts@mcpsmd.org, and Randolph: RMDalerts@mcpsmd.org) and others as provided. Send depots only the alarms within their areas. Verify email addresses with MCPS prior to programming.

DRAFT

2) Incoming electrical power irregularities alarm shall be generated by the EMS monitoring of incoming phase, voltage, and frequency and display a message reading "In-coming Power Problem" upon sensing an alarm condition and identify the school or facility experiencing the problem.
3) Energy management systems system failure alarm reading "EMS System Failure" and identify the school or facility experiencing the problem.
4) Pump failures
5) Boilers (as generated by boiler manufacturer's controller)

5. Graphics: Provide graphics as follows:
   a. Color schemes and text:
      1) Normal text shall be black on a neutral colored box background. Normal conditions shall be displayed in normal text. Examples of normal conditions are temperature, pressure, humidity, etc. that are within setpoints; commands that are per programming and not overridden; status that gels with command (e.g. "Off" status is normal when the command is "Off"); etc.
      2) Alarm conditions shall be displayed in red text on a neutral background box or black text with red background; i.e. red color shall only be used for alarm conditions. Examples of alarm conditions are temperature, pressure, humidity, etc. that are outside of setpoints; commands that are not per programming and not overridden; status that does not equal command (e.g. "Off" status when the command is "On"); etc. For space temperatures, alarm conditions shall be when actual temperature is more than 2°F below the heating setpoint and when actual temperature is more than 2°F above cooling setpoint. For supply air temperatures, alarm condition shall be when actual temperature is ±5°F of setpoint. Pressure and humidity alarms shall be with actual is ±10% of setpoint.
      3) Overridden conditions shall be displayed in black text with bright yellow background box.
      4) BACnet mapped points from equipment manufacturers' controllers (i.e. control points not hardwired by EMS) shall be black text on a grey colored box background. Intent is for graphics to allow the operator to readily distinguish between EMS hard wired points and 3rd party BACnet mapped points. Any screens with BACnet points specified to be in gray shall also have a notation on the screen that "gray points are via BACnet".
      5) The foregoing color schemes are to be consistent throughout the project and no other color schemes (or techniques such as blinking) are to be utilized for text.
      6) Point data, attributes, and commands shall be displayed in and labeled with descriptive text; i.e. temperature in ºF, CO2 in ppm, humidity in %, etc.; modulating dampers and valves in % open, VFD speeds in %. Two-position on/off operations shall be displayed as on/off; open/closed shall be displayed as open/closed; alarm conditions shall be alarm/normal.
      7) Graphic backgrounds shall not be black nor any other dark color. Backgrounds shall be light colored as approved by MCPS.
   b. Links: Provide a display linking function so that clicking an object associated with the link changes the display to a new display. Data and attributes for points selected with the mouse shall be accessed; security settings shall limit the dynamic information displayed or capability of making changes. For example:
      1) A mouse click on a digital output text box (command) or on a digital input text (status) shall open a "pop-up" screen with data pertinent the point. It shall be possible to override the command or status from the pop-up screen.

DRAFT

2) A mouse click on an analog input text (temperature, pressure, humidity, etc.) or on an analog output text (damper command, VFD command, etc.) shall open a “pop-up” screen with data pertinent to the point. It shall be possible to override the input or output value from the pop-up screen; and it shall also be possible to change setpoints from the pop-up screen.
3) Duration of point override shall be selectable from the pop-up screen. Point may be overridden indefinitely, requiring operator action to remove the override; or point may be overridden for an adjustable time interval so that the point automatically returns to automatic control at the end of the timed interval.
4) Overridden points shall be displayed with bright yellow backgrounds in the pop-up screens.

c. Transfers: All screens shall have “transfer buttons”, icons, or navigation “trees” to expedite graphic interrogations and for quick navigation to other functions such as reverting to “central plant”, “home”, “back”, “trends”, “notepad”, etc
1) Back button shall revert to the previous page.
2) Each screen shall have a Home button. The Home button will revert to the specific school’s Home Page. The Main Menu button on the school’s Home Page shall revert to the server sign-in screen which lists all schools on the system.
3) Each screen shall have a Note Pad accessible into which the operator may enter text and save.
4) The name of the school shall appear on every school specific screen.
5) On each graphic, include button to open PDF control drawing showing full details for that unit (flow diagram, sequence, controller wiring, point details, safety interlocks, power supply, etc.). Provide a separate PDF showing that unit only for every unit. Typical units may all link to a single PDF if identical.
6) Individual unit Graphics for Tech troubleshooting: For each piece of equipment, show controller schematic drawing on a graphic screen showing current value dynamically for all points, setpoints, and values. Show the current status of all program modes (i.e. occupied/unoccupied). Refer to latest MCPS browser guide for examples.
7) In place of Notepad, provide editable spreadsheet file in MS Excel for technicians to add notes for all equipment. Provide one tab for every unit and include the spreadsheets with controller details and points details as described in this specification.
8) On every graphic in the school, add button to open sequence for that unit only in an Excel file format. Coordinate layout with MCPS standard. EF’s may be grouped into one file.

d. At a minimum, the graphics provided shall include:
1) Adding the school to the MCPS Dashboard. Dashboard work shall be done under this contract subcontracting to the approved dashboard vendor. This contract includes coordinating the interface to the dashboard and responding to requests for coordination such as point naming, BACnet priorities, etc. Make all programming preparations necessary so the school can be integrated into the new MCPS Dashboard programming which collects key points for all schools to a single web-based platform. Coordinate with the vendor doing the dashboard programming and provide information and programming interface in the BACnet protocol. Refer to the Brinjac PDF file “2018 Dashboard Graphics Guidelines” and the associated Brinjac Dashboard specification for the interface details.

DRAFT

2) Where EMS systems have been switched to another manufacturer, it is the responsibility of the Contractor whose system is replaced to remove all schools from the MCPS associated graphics screens, this is to be considered a retroactive requirement for all schools that have not been previously removed.
3) Server Sign-in: At sign-in to the server, the initial screen shall be the MCPS Dashboard. The dashboard and all associated screens and linkages are described in the 2018 MCPS Dashboard Guidelines. Links to all schools shall be provided on the dashboard.
4) On each graphic, include button to open PDF control drawing showing full details for that unit (flow diagram, sequence, controller wiring, point details, safety interlocks, power supply, etc.). Provide a separate PDF showing that unit only for every unit. Typical units may all link to a single PDF if identical.
5) Individual unit Graphics for Tech troubleshooting: For each piece of equipment, show the controller wiring schematic drawing on a graphic screen showing the current value dynamically for all input/output points. Show the current status of all program modes (i.e. occupied/unoccupied). Refer to latest MCPS browser guidelines for examples.
6) In place of Notepad, provide editable spreadsheet file in MS Excel for technicians to add notes for all equipment. Provide one tab for every unit and include the spreadsheets with controller details, control sequences and points details as described in this specification.
7) Wherever room numbers are displayed on graphics, show the final actual room numbers.
8) Label the function of each coil and device shown on graphics (i.e. Dual Temp Coil).
9) General Graphics Requirements:
   (a) All graphics to show arrows for direction of flow and label what is being supplied (i.e. HWS to Bldg). All equipment such as pumps, coils, fans, etc. shall indicate function and pump number (i.e. HW Pump-3 or DTW Pump-5) in clear English terms.
   (b) All setpoints shall be on graphics.
   (c) On all graphics, such as plant, Ahu, terminal unit, etc. Show valve with correct piping for HWS, CHWS, DTS, etc. Identify % open or % closed.
   (d) The requirements of the revised latest Brinjac graphics guideline document and the most recent graphics checklist are included in this specification.
   (e) For all equipment provide a button that opens the sequence of operation for that item of equipment only in a text format. Exhaust fan sequences may all be on one file. The file must be editable by the operator for cases where a sequence changes. These text files must be automatically backed up along with the server backups without any extra steps.
   (f) With multi-state points, English language operating mode descriptor (and operating codes, if used) shall be displayed for Manufacturer's controlled equipment.
   (g) Provide one link in navigation tree to open the complete ATC drawing set. In addition, each system graphic shall include a button that opens only those ATC controller pages related to that system including the flow diagram, controller details, sequence, etc. for that unit.
   (h) For all points include text on graphic clarifying where a point is a "Command" or a "Status" or a "Setpoint", etc. to differentiate the point type.

DRAFT

Show English language point identifiers on graphics in lieu of symbols. Differentiate between the meaning of Command vs Enable.

(i) All documentation shall be accessible from the graphics – control drawings, product data sheets, wiring as-builts, mechanical drawings (provided by Moseley Architects). All such files shall be in searchable PDF format and shall be fully searchable to locate text within the document.

(j) Add notes on graphics where possible to explain how things are controlled.

(k) Show communication cable runs on zone floor plan graphics, but only visible when hovering on a button will show communication bus on floor plan graphic. Alternatively, a duplicate of the zone floor plan with the communication cables is acceptable. Each separate bus must be in a different color.

(l) The navigation tree for StruxureWare projects shall precisely emulate the one on Cabin John Middle School.

(m) Display status of all control modes (i.e. Occupancy, Summer/Winter, economizer enable, etc.)

(n) In addition, each system shall include a button that opens only those ATC drawing pages related to that system (i.e. flow diagram, sequence, controller details, index tables, etc.)

(o) Engineer's review consists of the following: (1) One review upon receipt of the graphics checklist; (2) two follow up reviews after punch list items are corrected; (1) cross check when graphics are deemed acceptable. Reviews in excess of the above are to be considered chargeable to the Contractor.

10) School Home Page: Transferring to a specific school's home page, the home page shall present a picture of the facility along with its name, main office and building services phone numbers. The picture to be used shall be furnished by MCPS. The home page shall be displayed upon operator activity time-outs. Page displays and functions shall be as follows:

(a) Critical Alarms status shall be displayed in text, "Alarm" or "Normal".

(b) Building KWH (and KW when available) shall be displayed.

(c) Button and text links from this page shall be used to transfer to:

(1) Building floor and roof plans

(2) Central plant graphics

(3) Exhaust fans screen

(4) HVAC equipment screen

(5) Main menu (reverts to server sign-in page)

(6) As-built control drawings (complete set), all control product data sheets, all installation drawings and mechanical drawings, etc. These buttons for documents shall be in the navigation screen if the system allows, otherwise provide buttons on the main screen.

(7) Summer/Winter Changeover.

(d) Display the on/off status of the Master schedule on the school home page.

(e) Display plant supply temperature(s) on the building home main screen.

(f) Buttons on this screen, protected with highest password, shall be provided with the following functions:

(1) "SCHEDULE" button shall transfer to Schedules summary screen. Currently active building schedule shall be displayed in a dynamic box

DRAFT

that, when clicked, shall enable the operator to change building from occupied to unoccupied and vice-versa. Display the on/off status of the Master schedule on the school home page.

(2) "Global OAD OR" button, representing "outdoor air dampers override". Function shall command all outdoor air dampers in a facility closed and commanding Energy Recovery Units to off (closing outdoor air intakes).

(3) "EMERG" button shall provide emergency shut-down of building. Activation of the button shall turn all equipment off; button shall turn red when activated.

(4) "SUMMER-WINTER" button to command the Summer/Winter Changeover Program indexing of the building systems to "Summer Mode" or "Winter Mode": The active mode shall be displayed in the command box; text shall identify the command box as "S-W Switch". The entire school can be switched from this one button with built in safeties and error proof programming. The switch shall be capable of the following:

1. All equipment shall be enabled/disabled for proper summer or winter operation as indicated on the switch.

2. All devices such as automatic changeover valves, pneumatic pressure settings, etc. shall be commanded to their correct position.

3. DX cooling for specific zones such as administration, media center and computer Labs shall be enabled appropriately; DX cooling for non-critical areas such as Multipurpose rooms shall be enabled in the Winter mode only when the OA temperature is above 60°F.

4. Multiple Central Plants (including Heat Pump Plants): The mode of operation in each plant will be determined by the summer/winter button on the Home Page and will be indicated in a box on each individual plant screen.

5. On schools where there is no summer/winter changeover, the label shall say "No Changeover".

(5) PLM Override: This button disables the PLM Curtailment program for the individual school by the MCPS Operator Only. This button shall be accessible only by an operator with the highest level password.

(6) "NOTEPAD" button shall open notepad to allow text notes to be entered.

(7) "TRENDS" button shall display in text the last 72 hours trends of outdoor air temperatures, central plant operations, zone temperatures. Zone temperatures trended for zones with multiple space temperatures shall use the worst case space temperature (coldest space during heating, hottest space during cooling).

(g) A "Disabled Objects List" box consisting of buttons labeled "Inputs", "Outputs", "Numerics", and "Programs". Clicking on a button shall display the pertinent disabled or overridden objects.

(h) A "Central Plant Status" box displaying applicable central plant temperatures; clicking on a temperature shall transfer to the central plant. Temperatures to be displayed are:

(1) Heating Water Plant: Heating Water Supply & Return

(2) Water Source Heat Pump System: Heat Pump Loop Water Supply & Return

DRAFT

(i) An “Energy Management Communications Status” graphic displaying:
(1) On-Line status of proprietary LAN’s main building controller and BACnet router (as applicable), and
(2) On-Line status of HVAC equipment manufacturer’s BACnet controllers (as applicable)

11) Building Floor Plans: The link from the school’s home page to building floor plans shall provide color coded floor plans of the facility; each floor plan shall be fitted on a screen. Displayed on the floor plan:
(a) Zone identified by number
(b) “ON/OFF” zone status.
(c) Worst case space temperature within the Zone: On the main floor plan do not show the worst-case temperature, but rather make a block turn red when the alarm limits are exceeded (68/78 deg) so operator can go to zone screen for detail. If the temperature reading is out of range, <35°F or >100°F, the system shall consider these values as erroneous and shall show the block in orange. Define worst case as lowest in winter Mode and highest in summer Mode. Systems that do not have a defined summer/winter such as water source heat pumps shall switch summer/winter at 65°F.
(d) Text identification of zones, correlating zone numbers to specified zone names: e.g. Zone 1 Administration, Zone 4 Classrooms, Zone 9 Main Gym, etc.
(e) Active Displays and Links:
(1) Outdoor air temperature shall be displayed. Temperature display shall be a dynamic point that when clicked, shall allow the operator (with highest password) to override OAT value.
(2) Central plant status (Heating On, Cooling Off, etc.) shall be displayed. Dynamic button(s) shall transfer to the pertinent central plant when clicked.
(3) Buttons shall link to:
1. Other floor plans and roof plan
2. Zone Schedules
3. Exhaust Fan Screen
4. Trend button shall provide trends as described for the Home page.
5. Home, Back, Notepad as previously specified.
(f) Clicking on a Zone on the graphic floor plan shall transfer to a screen pertinent to that zone.
(g) Show all EMS panel locations on zone floor plan graphics.

12) Central Plant Graphics:
(a) Central plant graphics shall have real time values and setpoints displayed in locations on the graphic representative of the sensing device or controlled equipment location.
(b) Central plant graphics shall take the form of:
(1) One screen showing all central plant equipment for simple systems (e.g. Dual Temp Plant, Water Source Heat Pump Condenser Water Plant)
(2) One screen showing all data pertinent to the heating cycle (Heating Plant) and one showing all data pertinent to the cooling cycle (Chiller

DRAFT

Plant) on more complex plants; i.e. multiple chillers, 4-pipe systems, etc. Condenser water systems for water cooled chillers should be portrayed on the same screen as the chiller plant.

(3) Graphic flow diagrams shall be those that were approved in the controls submittal, modified per As-Built conditions.

(c) Outdoor air temperature and humidity shall be displayed

(d) Buttons shall be provided to display the central plant control sequences of operation and the control panels diagrams.

(e) Trend button shall display 72 hours of hourly trends of all points portrayed on the screen.

(f) Home, Back, Notepad as previously specified.

(g) Show piping with different colors: HW is red, condenser and tower water is green.

13) Exhaust Fans Screen(s): A text screen shall be provided listing all exhaust fans under EMS control with commands, status, and programming code listed. This screen shall be accessed via "button" from school's home page, building's floor plans, and HVAC equipment screens.

(a) Indication shall be given as to fan control program:

(1) "C" shall indicate a fan programmed to run continuously during the occupied mode

(2) "S" shall indicate a separate schedule not associated with a zone

(3) "E" shall indicate an economizer cycle fan

(4) "L" shall indicate a fan under local control (wall switch, thermostat)

(5) "P" shall indicate a fan with some other controlling program not covered above

(b) Trend button shall provide 72 hours of hourly trends for exhaust fans displayed on the screen.

(c) Home, Back, Notepad as previously specified.

14) HVAC Equipment Screen:

(a) A text screen shall be provided listing all major HVAC air handling equipment under EMS control (DOASs, ERUs, AHUs, HVUs, etc.) by equipment designation (i.e. AHU-1, ERU-3, HV-A, etc.). The following information shall be provided:

(1) Zone to which the equipment is assigned shall be listed.

(2) Active Zone schedule (Occupied or Unoccupied)

(3) Equipment's supply fan command and status

(4) Equipment's supply air temperature

(b) Clicking on the Equipment's name shall transfer to the graphic screen for that unit.

(c) Clicking on the Zone listing shall transfer to the Zone floor plan.

(d) Provide equipment maintenance override button for each unit. Program shall allow operator to override the unit's "Off" command to enable individual units for operation without overriding Zone command. Duration of override shall be for 3 hours. Intent is to allow ERUs, AHUs, or HVUs to run for maintenance servicing without requiring other equipment in the zone to operate as would be required if the Zone were overridden on. On/Off indication for the override shall be provided.

(e) Home, Back, Notepad as previously specified.

DRAFT

15) Roof Plan Screen: Screen shall depict building roof and show rooftop HVAC equipment and exhaust fans. Primary purpose of the plan is for equipment location. Transfers from this screen shall be: Home, Back, Exhaust Fans, HVAC Equipment, and to building floor plans. Roof plan shall indicate EF local control versus EMS control with different graphic scheme following format on roof plans. On roof plans, show exhaust fan commands and status points. Status turns red if in alarm.

16) Navigation through building graphics shall, in general, continue to follow a simple hierarchy similar to the following:

(a) Zone Screens: Mouse click on a zone from the building floor plan shall transfer to a screen of that zone.

(1) Zone screens shall display:

1. Zone name (and floor if Zone is comprised of more than one floor and requires multiple screens).

2. The Zone floor plan(s) with walls delineated. Where Zone is comprised of more than one floor and requires more than one screen, transfer button(s) shall be provided to access the other floors of the Zone without backing out of the Zone level screens.

3. Occupied/unoccupied status. This shall be in a dynamic box that allows the operator to change the command.

4. Space sensors locations and values (temperature, humidity, CO2, etc.). Clicking on the unit ID label within the Zone screen shall provide a pop-up screen displaying all pertinent data for that particular sensor and the equipment it controls.

5. Air handling and incremental equipment within the zone shall be symbolically shown and identified. Basic data pertinent to the AHU, DOAS, ERU, HVU serving the Zone shall be displayed; i.e. (Supply fan status, supply air temperature)

6. Exhaust fans interlocked with the Zone shall be displayed if located within the Zone boundaries.

7. EMS control panels (other than terminal equipment controllers) located within the Zone boundaries shall be shown and identified.

8. Simple duct runs shall be shown when it is not obvious as to which rooms are served by a piece of HVAC equipment.

9. Electric circuits for terminal equipment shall be shown and labeled where control of the equipment is by contactor interruption of circuits.

10. Outdoor air temperature

(2) Links, Transfer buttons:

1. Zone Schedule: transfers to the scheduling page for the zone

2. AHU(s), DOAS(s), ERU(s), HVU(s), etc. that serve the Zone shall be in buttons that transfer to the related equipment's screen.

3. Buttons shall be provided to transfer to terminal (VAVs, UVs, HPs, etc.) equipment screens pertinent to equipment in the zone.

4. Transfer to the building exhaust fans screen(s).

5. Home, Back, Notepad as previously specified.

6. Trend button shall provide 72 hours of hourly trends for Zone's space temperatures (humidity, CO2, etc.) and setpoints.

(b) Major Equipment Screens (AHUs, DOASs, ERUs, HVUs, etc.): Accessing equipment screens shall be achievable from multiple locations; i.e. from the

DRAFT

"HVAC Equipment" screen, from Zone floor plans, from incremental equipment screens. Equipment screens shall:

(1) Display the flow control diagram for the equipment (AHU, ERU, etc.); flow diagram shall be that approved in the controls submittal, modified per As-Built conditions. All sensing, monitoring, and control points shall be displayed in real time at their symbolic locations and shall include:

1. Temperatures, humidity, CO2, etc.

2. Controlling setpoints (i.e. supply air temp; static pressure, outdoor airflow, etc.)

3. All points shall be in dynamic boxes that allow overriding of commands and values.

4. BACnet mapped and displayed points from equipment manufacturer controllers shall be limited to those specified. Controlling temperature setpoints (discharge or space) shall be displayed as read-only.

5. English language operating mode descriptor (and operating codes, if used) shall be displayed for Manufacturer's controlled equipment. For example, the display for a DOAS that is enabled/disabled and indexed occupied/unoccupied by the EMS shall show in what mode the manufacturer's controller is operating; e.g. "Occupied, heating (22)"; "Unoccupied, dehumidification (39)".

(2) List interlocked exhaust fans with status and controlling legend. Button shall be provided to transfer to the building exhaust fans screen(s).

(3) Outdoor air conditions shall be displayed; i.e. temperature, humidity, enthalpy as applicable. For systems capable of economizer or enthalpy optimization, display whether Econ is enabled or disabled in a box that can be overridden by operator.

(4) Timed Override button shall allow operator to change equipment command from occupied to unoccupied and vice-versa.

(5) Links shall be provided to:

1. Sequence of operations; sequences shall be editable and changes savable.

2. Controller(s) diagram(s) consistent with As-Built documents

Central plant(s)

3. Zone floor plan to which the equipment is assigned

4. Terminal equipment (VAVs, FCUs, UVs, HPs, etc.) associated with the AHU, ERU, DOAS

5. Trend button shall bring up 72 hours of hourly trends of all points displayed on the screen

6. Home, Back, Notepad as previously specified.

(6) Label the coils to show their function (i.e. water source heat pump)

(7) In addition to all BACnet points from manufacturer's units, EMS contractor shall provide via hardwired EMS points for occupied/unoccupied command, emergency shutdown, controller remote reset, fan status(s), supply temperature, return temperature and where applicable mixed air temperature sensors.

(c) Terminal Equipment (Heat Pumps, Unit Ventilators, Fan Coils, Cabinet Heaters, etc.) Screens: Accessing terminal equipment screens shall be achievable from Zone floor plans and from related major air handling

DRAFT

equipment screens. Terminal units: use numbering that follows provided floor plans. Generally these should indicate the zone number the unit is in (i.e. Vav-5-23 is for zone 5). If such numbering is not on the contract documents, create such numbering following the standard. Assign numbering and reference on floor plan and all equipment tables.

(d) Terminal equipment screens shall:

(1) Display a typical equipment diagram illustrating flow and all sensing, monitoring, and control points.

(2) In table form, display all like terminals in a Zone; transfer buttons to additional screens shall be provided if needed to accommodate all of the terminals in the zone. Rather than using “more” button, provide separate buttons to each additional screen for direct access. The operating parameters shall be displayed. All points shall be in dynamic boxes that allow overriding of commands and values. Parameter headers should be descriptive to allow easy interpretation Where room sensor sliders exist, actual adjusted heat setpoint and actual cool setpoint (+/-2 deg) must be shown in addition to initial programmed heat and cool setpoints which are adjustable without override from the graphic. The slider adds +/- 2 deg to both the programmed heat and cool setpoints to calculate the two adjusted setpoints. Data to be shown includes:

(3) Water Source Heat Pumps:

1. Space temperature; heating setpoint, cooling setpoint, and actual
2. Fan command and status
3. Reversing valve command (or heat/cool indication)
4. Compressor command and status
5. Supply air temperature
6. Condenser water valve command, end switch status

(4) The AHU supplying the terminals, DOAS/ERU associated with the terminals, etc. shall be identified and be in a transfer button that brings up the AHU, DOAS, ERU screen. The AHU, DOAS, ERU supply fan status, supply air temperature, supply static pressure shall be displayed.

(5) Display outdoor air temperature.

(6) Links shall be provided to:

1. Terminal’s sequence of operations; sequences shall be editable and changes savable.
2. Central plant(s). Central plant links shall be pertinent to the terminal equipment; i.e. water source heat pumps shall have link to condenser water plant.
3. Zone floor plan to which the equipment is assigned
4. The AHU, DOAS, ERU, etc. associated with the terminals.
5. Trend button for the screen shall bring up 72 hours of hourly trends of all points displayed on the screen. Trend button shall be provided for each terminal that will display 72 hour trends only for that specific terminal.
6. Home, Back, Notepad as previously specified.

(7) Label the coils to show their function (i.e. water source heat pump)

DRAFT

(8) In addition to all BACnet points from manufacturer's units, EMS contractor shall provide via hardwired EMS points for occupied/unoccupied command, emergency shutdown, controller remote reset, fan status(s), supply temperature, return temperature and where applicable mixed air temperature sensors.

e. Symbol conventions shall be consistent with existing current MCPS graphics and symbols list included with this section and/or per contract drawings.

f. Graphics portrayed on a screen shall be scaled to fit the screen so that all diagrams and data are viewable without scrolling.

g. Changes made at a controller level shall be automatically reflected in the associated graphic.

6. Access to trended data shall be achievable from graphic screens. Each graphic screen shall be provided with a "trend" button. Clicking on the button will display pop-up window with the trends displayed in text form for all points germane to the graphic screen displayed.

7. On-line notepad: Provide on-line notepad accessible from systems graphic screen. Notepad shall have two functions:

   a. Sequence of operations as approved in "As-Built" documents shall be provided. Sequence shall be displayed when notepad is accessed from equipment graphic screen; e.g. when viewing the graphic screen for an air handling unit, clicking on the "Notepad" button will display a "pop-up" window with the text of the sequence of operation pertinent to that AHU. On-screen editing and saving of the sequence shall be possible.

   b. Notes, in addition to sequences of operations, may be entered and saved

8. Database Management: Copies of the current database and/or the most recently saved database shall be stored. The age of the most recently saved database is dependent on the user-defined database save interval. Save/restore/download function of database shall be demonstrated during Head-End punch-out at Energy Management central office and again at the End-of-Warranty.

9. "Snow day": Program a "snow-day" command so that, by a single command from the operator, all remote Energy Management Automation Systems shall be placed in their local special "snow day" schedules.

10. Contractor shall install all software and links on the school's computer located in the Building Service Manager's office to allow access to EMS from that computer.

11. Audit Trail: Provide an Audit Trail to automatically record the time, date, user, and action for all user changes made via Web Browser clients. Audit Trail shall be school/building specific, data retained for one year and retrievable by operator command.

12. Overridden Points: Provide a school/building specific record of currently overridden points retrievable by operator command.

2.05 CONTROL WIRING

A. No control voltage, either temperature or interlock, shall exceed 120 VAC. Color code or number all wires whether individual or in cables, for identification. Work shall be in compliance with the National Electric Code and as follows:

B. Minimum size conduit shall be 1/2" EMT.

C. Minimum line voltage, size wire shall be #14 and in accordance with hardware manufacturers' recommendations for signal wiring.

D. Control wiring to starters shall conform to Para. 430-74 of the National Electric Code.

DRAFT

E. Control cabling shall conform to NEC 725-2b and NEC 760-2b fire protective signaling, and U.L. classified as a low smoke flame retardant cable suitable for installation in plenums and environmental spaces. Maximum allowable voltage shall be 24V. Cable shall be stranded wire type. Shielding shall be provided on cable wiring where required to preclude interference from or to building electronic components and/or systems.

F. CAT5e or CAT6 cables shall be color coded to differentiate separate loops.

2.06 ELECTRONIC SENSORS

A. Description: Vibration and corrosion resistant; for wall, immersion, or duct mounting as required.

B. Thermistor Temperature Sensors and Transmitters and Resistance Temperature Detectors and Transmitters:

1. Electronic, RTD copper wound or Balco wire wound types, 1000 ohm at 70°F, or thermistor resistance sensor, maximum 10,000 ohms at 77°F.
2. Sensors shall be of a configuration to accurately sense temperature of medium (water or air) over the full range of piping, duct, casing, or equipment; i.e. eliminate errors due to stratification by apply averaging sensors to five to twenty four feet, six to twelve inch probes, etc.
3. All mixed air temperature sensors in air handling and energy recovery unit casings shall be 8’ avg. elements, minimum.
4. End to End Accuracy from sensor to operator interface:
   a. Space Temperature: Plus or minus 1.0° F.
   b. Ducted Air Temperature: Plus or minus 1.0° F.
   c. Outside Air Temperature: Plus or minus 2.0° F.
   d. Water Temperature: Plus or minus 1.0°F.
5. Wire: Twisted, shielded-pair cable.
6. Insertion Elements in Ducts: Single point, 6 to 12 inches long; use where not affected by temperature stratification or where ducts are smaller than 9 sq. ft.
7. Averaging Elements in Ducts: 5 feet to 24 feet long, flexible; use where prone to temperature stratification or where ducts are larger than 10 sq. ft.
8. Insertion Elements for Liquids: Brass or stainless steel socket with minimum insertion length of 2-1/2 inches.
9. Room Sensor Cover Construction: Manufacturer's standard locking covers.
   a. Set-Point Adjustment: Slider for 2 degrees F software limited adjustment. Surface mounted Zone sensors that only monitor temperature and do not perform temperature control of equipment shall not have setpoint adjusters.
   b. Set-Point Indication: No thermometer or display.
   c. Thermometer: Concealed.
   d. Color: Manufacturer’s standard.
   e. Orientation: Vertical.
   f. Override: None.
10. Outside-Air Sensors: Watertight inlet fitting, shielded from direct sunlight.
11. Space Sensor Guards: Provide heavy-duty, cast aluminum, hinged guards with security screws and lock for sensors located in Corridors, Storerooms, Gyms, Locker Rooms, Kitchen, Cafeteria/Dining, Multi-purpose rooms. Guards shall be equal to Honeywell model TG511D/1004.

DRAFT

12. Specific Sensor Type Locations: In corridors, storerooms, gyms, locker rooms, kitchen, cafeteria/dining, multi-purpose, restrooms, stairs and lobbies, provide flush mounted sensors or vandal-proof guards.

C. Enthalpy Sensors: Sensing element shall be combination bimetal/nylon suitable for duct mounting; 16 to 40 BTU/lb dry air range.

D. Humidity Sensors: Capacitance or bulk polymer resistance type.
   1. Accuracy: 5 percent full range with linear output.
   2. Room Sensor Range: 10 to 90 percent relative humidity.
   3. Room Sensor Cover Construction: Manufacturer's standard locking covers.
      a. Color: Manufacturer’s standard.
      b. Orientation: Vertical.
   4. Outside-Air Sensor: 10 to 90 percent relative humidity range with mounting enclosure, suitable for operation at outdoor temperatures of 0 to 185 deg F.
   5. Duct-Mounted: Electric insertion, 2-position type with adjustable, 2 percent throttling range, 10 to 90 percent operating range, and single- or double-pole contacts.

E. Pressure Transmitters/Transducers:
   1. Static-Pressure Transmitter: Nondirectional sensor with suitable range for expected input and temperature-compensated.
      a. Accuracy: 2 percent of full scale with repeatability of 0.5 percent.
      b. Output: 4 to 20 mA.
      c. Building Static-Pressure Range: -0.25 - to 0.25-inch wg.
      d. Duct Static-Pressure Range: 0- to 3-inch wg.
   2. Water Pressure Transducers: Stainless-steel diaphragm construction, suitable for service; minimum 150-psig operating pressure; linear output 4 to 20 mA.
   3. Differential Pressure Sensing in Piping: Pressure sensors for control of Variable Frequency Drives on pumping systems shall be of the solid state type with by-pass valve, isolation valves, snubbers and vents in a NEMA 1 cast aluminum housing; externally accessible zero and span adjustments; 4-20 mA output, -40° to +200° F operating temperature range, temperature compensated. Water pressure sensor shall have end-to-end accuracy of plus or minus 1 psi.
   4. Pressure Transmitters: Direct acting for gas or liquid service; range suitable for system; linear output 4 to 20 mA.

F. Overall combined system repeatability of sensors, controllers and readout devices for a particular application shall be plus or minus 2% of full scale of the operating range. Repeatability of overall combined system of sensor, controller and readout device in a control loop application will be plus or minus 5% of full scale of the operating range. Long-term electronic drift shall not exceed 0.4% per year.

2.07 PRESSURE SWITCHES

A. Air flow pressure switches shall be differential type adjustable between .07 to 3" W.G., single pole double throw switching mechanism.

B. Water flow:
   1. Pressure switches shall be differential type adjustable between 0 to 60 PSIG; single pole double throw switching mechanism.
   2. Paddle switches shall be single pole double throw switching mechanism, stainless steel paddle, equal to Kele F61 Series.

DRAFT

2.08 CARBON DIOXIDE SENSORS AND TRANSMITTERS

A. Carbon Dioxide Sensor and Transmitter: Single detectors using solid-state infrared sensors; suitable over a temperature range of 23 to 130 deg F and calibrated for 0 to 2 percent, with continuous or averaged reading, 4- to 20-mA output, for wall mounting. LCD, digital display indicating CO2 concentrations in PPM. Measurement range of 0-2000 PPM with less than 5% drift over 5 years. 5 year calibration interval. Vaisala GMD20 or approved equal for duct mounting and Vaisala GMW90 or approved equal for wall mounting.

1. Space Sensor Guards: Provide heavy-duty, cast aluminum, hinged guards with security screws and lock for sensors located in the Gyms, Cafeteria/Dining, and Multi-purpose rooms.

2.09 THERMOSTATS

A. Thermostats: Electric thermostats shall be two position type as dictated by the control sequence. The thermostats shall utilize fast responding bi-metal elements to make and break heavy duty silver contacts and shall be housed under a metal cover. The thermostat shall be completely adjustable and all adjustments shall be concealed. Thermostats shall have locking metal covers with Allen head screws. The thermostat temperature control point adjuster shall be provided with variable adjustment limits. Heavy metal tamper proof guards shall be provided where thermostats are installed in public areas or where subject to damage.

B. Low-Temperature Protection Thermostats: Provide low-temperature protection thermostats of automatic-reset type, with sensing elements 8'-0" or 20'-0" in length. Provide thermostat designed to operate in response to coldest 1'-0" length of sensing element, regardless of temperature at other parts of element. Support element properly to cover entire duct width. Provide separate thermostats for each 25 sq. ft. of coil face area or fraction thereof.

2.10 ACTUATORS

A. Approved Manufacturers:

1. Belimo AF and LF series.
2. Delta.
3. Siemens.

B. Electric Motors: Size to operate with sufficient reserve power to provide smooth modulating action or two-position action.

1. Permanent Split-Capacitor or Shaded-Pole Type: Gear trains completely oil immersed and sealed. Equip spring-return motors with integral spiral-spring mechanism in housings designed for easy removal for service or adjustment of limit switches, auxiliary switches, or feedback potentiometer.

C. Electronic Actuators:

1. Valves: Size to operate with sufficient reserve power to provide smooth modulating action or two-position action.
2. Dampers: Size to operate with sufficient reserve power to provide smooth modulating action or two-position action.
3. Coupling: V-bolt and V-shaped, toothed cradle.
4. Overload Protection: Electronic overload or digital rotation-sensing circuitry.
5. Fail-Safe Operation: Mechanical, spring-return mechanism. Provide external, manual gear release on nonspring-return actuators.
6. Power Requirements (Modulating): Maximum 10 VA at 24-V ac or 8 W at 24-V dc.
7. Proportional Signal: 2- to 10-V dc or 4 to 20 mA, and 2- to 10-V dc position feedback signal.

DRAFT

8. Temperature Rating: Minus 22 to plus 122 degrees F.
9. Temperature Rating (Smoke Dampers): Minus 22 to plus 250 degrees F.

2.11 CONTROL VALVES

A. Control Valves: Control valves shall be two-way or three-way pattern as shown, constructed for tight shutoff and shall operate satisfactorily against system pressures and differentials. Valves with size up to and including 2" shall be "screwed" type with 250 psi static pressure body rating; 2-1/2" and larger valves shall be flanged.

B. Bronze body, bronze trim, two or three ports as indicated, replaceable plugs and seats, and union and threaded ends.
   1. Proportional control valves shall be sized for a maximum pressure drop of 5 psig at rated flow (except as noted).
   2. Valves for condenser water shut-off are normally 2-way line size; 3-way line size valves are used to accommodate minimum condenser water flow.
   3. All valves are to be provided by controls contractor except those that may be integral to manufacturer’s equipment.

2.12 DAMPERS

A. Dampers: AMCA-rated, parallel for two-position control or opposed-blade design for modulating control; damper blades shall not be less than 16 gauge galvanized steel with maximum blade width of 10 inches and length of 48 inches. Dampers over 48 inches wide shall be equipped with a jack shaft to provide sufficient force throughout the intended operating range.
   1. Operating Temperature Range: From minus 40 to plus 200 degrees F.
   2. Edge Seals: Use inflatable blade edging or replaceable rubber blade seals and spring-loaded stainless-steel side seals, rated for leakage at less than 10 cfm per sq. ft. of damper area, at differential pressure of 4-inch wg when damper is held by torque of 40 in. x lbf; when tested according to **<<AMCA 500-D>>**.
   3. Dampers shall have black enamel finish or galvanized with nylon bearings.

B. Damper Actuators:
   1. Approved Manufacturers:
      a. Belimo AF and LF series.
      b. Delta.
      c. Siemens.
   2. All actuators shall be electric/electronic. Actuator shall be sized to operate dampers with sufficient reserve power to provide smooth modulating action. Modulating motors shall be of the synchronous type.
   3. Actuator shall have manual override.
   4. Spring return actuators shall be provided for all actuators associated with equipment introducing outdoor air for freeze protection or as otherwise indicated.
   5. End switches shall be provided as required by sequences of operation and drawings.

2.13 SMOKE DETECTORS

A. New smoke detectors indicated shall be installed under this Section.

B. Wiring from smoke detectors to fire alarm system shall be under Division 28.

C. Wiring from smoke detectors to mechanical equipment shall be under this Section.

DRAFT

2.14 FLOW METERS

A. Manufacturer: Onicon F-1110 turbine type with 4-20mA or 0-10VDC output linear to flow measured or approved equal for piping 2-1/2 inches and larger. Belimo FM series ultrasonic type with 0-10VDC output or approved equal for piping 2 inches and smaller.

B. Provide complete hardware necessary to enable insertion and removal of the meter without system shutdown.

C. End to end accuracy of flow meter shall be plus or minus 2% of actual value.

2.15 POWER MONITORING

A. Phase-voltage monitor shall be equal to Motor Saver Model MS250A providing two distinct alarm relay outputs; one shall be used by the controls system, MCPS Security will connect to the other.

B. Current operated switches shall be Kele 4CT, Diversified Electronics CT Series, or equal.

C. UPS/Surge protection shall be provided for all master building control panels and phone lines; APC Model BF-350 or equal. Metal-oxide varisters equal to Kele DTK Series shall be provided for all application control panels (unit controllers need not have surge protection). UPS power supplies shall be installed to allow being unplugged for replacement (not hard wired).

D. Control Voltage Transformer: Provide UL listed control voltage transformers and control voltage supply network to serve all electronic control requirements. Transformers shall be equal to Honeywell Series AT.

2.16 POWER METERING

A. Smart Meter: Schneider Electric METSEPM5560 (PM5560). An equivalent may be considered at the discretion of MCPS based on product features, functionality and interoperability. Power Monitor/Smart Meter must be able to integrate to EMS Schneider Electric Power Monitoring Server. Must be able to broadcast as a standalone device through a mobile broadband when power is loss at the facility. Meter and broadband must be energized through a building emergency circuit breaker.

2.17 CONDENSATE OVERFLOW SWITCHES

A. Sensor/switch to be installed in condensate pans to detect clogged drains, equal to Grainger 3XY17.

2.18 CURRENT TRANSFORMERS

A. Construction type shall be split core and capable of being used on existing wiring. Ratio error < 1% at rated current; Phase error < 2° at rated current. Device shall be of suitable amperage capacity for the application and shall provide a linear output signal. The device shall be compatible with the controls system it is to be connected to, and shall be UL Listed.

2.19 CONTROL ENCLOSURES

A. Enclosures shall be made of 14-gauge steel that is powder coated (gray). It shall be NEMA 1 rated and UL listed. Hinged cover shall have slotted flush latch. Acceptable manufacturers are Hoffman, Siemens or equivalent.

PART 3 EXECUTION

3.01 PROJECT MANAGEMENT

A. Provide a designated project manager who will be responsible for the following:

DRAFT

1. Construct and maintain project schedule
2. On-site coordination with all applicable trades and subcontractors
3. Authorized to accept and execute orders or instructions from owner/architect
4. Attend project meetings as necessary to avoid conflicts and delays
5. Make necessary field decisions relating to this scope of work
6. Coordination/Single point of contact.

3.02 EXAMINATION

A. Verify that power supply is available to control units and operator workstation.

B. Verify that duct-, pipe-, and equipment-mounted devices are installed before proceeding with installation.

3.03 INSTALLATION

A. General: Install systems and materials in accordance with manufacturer's instructions and roughing-in drawings and details on drawings. Install electrical components and use electrical products complying with requirements of applicable Division-26 sections of these specifications. Mount controllers at convenient locations and heights.

B. Install software in control units and operator workstation(s). Implement all features of programs to specified requirements and as appropriate to sequence of operation.

C. Connect and configure equipment and software to achieve sequence of operations indicated on the drawings.

D. Equipment and Control:
   1. On all 3rd party controlled equipment (DOASs, RTUs, Split Systems, etc.) provide a signal relay to show positive status of the enable command.
   2. All command/enable points must have a corresponding status. Exhaust fans controlled individually shall have a current switch; groups of fans controlled by a single digital output shall have a signal relay for status (same for terminal equipment).

E. Room Type Temperature Sensors and Thermostats:
   1. Install electronic temperature sensors at all locations where room or zone temperature control is placed on the EMS, electric type thermostats elsewhere. Sensors and thermostats shall be located as indicated on drawings. Where a sensor or thermostat has been inadvertently left off of the drawings, the Contractor shall obtain direction from the Engineer as to location. No change in contract price shall be made for providing thermostats or sensors not indicated on drawings.
   2. Electronic wall mounted room temperature sensors shall be provided with a blank cover without thermometer or display. Temperature setpoint adjuster shall be provided on all wall mounted space temperature sensors except:
      a. Those that are flush mounted
      b. Those that only monitor temperature and do not perform temperature control of equipment (i.e. equipment with local and/or manufacturer’s controls/thermostats).
      c. Local adjustments shall be software limited to ±2°F above/below the programmed heating/cooling setpoints.
   3. Space temperature sensors in Locker Rooms, Storerooms, Corridors, Gym, Dining/Cafeteria/Multi-Purpose Room, Kitchen shall be flush mounted in wall or protected with suitable vandal-proof guards. Guards shall be mounted independent of sensors.
   4. Wall mounted temperature sensors and thermostats shall be located for accurate room temperature sensing, i.e. away from supply air stream; mount with centerline 46" above

DRAFT

finished floor. Space temperature sensors and thermostats shall be suitably insulated from the surfaces in which they are installed so that the sense true space air temperature unaffected by such things as wall mass. Coordinate location of sensor/thermostat with work of other trades so sensor/thermostat does not conflict with or is obstructed by such items as blackboards, bleachers, bookcases, etc. Conceal all control wiring located in finished spaces; the use of wiremold is prohibited. Paint inside of rough-in box purple.

5. All space or zone sensors shall be labeled. Labels shall contain the zone reference and unit number. On the face of the cover, the label shall be made with a professional grade label maker; an additional label on the backer plate shall be made with a permanent marker. Sensor naming conventions shall be such as to readily identify the physical sensor on site to its address in the automation system without the need for a cross referencing index.
6. Furnish and install electric wall mounted thermostats for cabinet unit heaters and temperature controlled exhaust fans not indicated as being by DDC; provide guards for thermostats located in corridors, stairwells.
7. Electrical Contractor is responsible for roughing in outlet boxes and conduit for the installation of space or zone temperature sensors. Control Contractor shall provide coordination for locations and quantities.
8. Surface mounted humidity sensors, CO2 sensors and remote mounted manufacturer's controls (ex. For RTUs/DOASs) in Gym, Multi-Purpose Room, stairwells, and public corridors shall be protected by suitable vandal-proof guards. Guards shall be mounted independently of sensors. Guards shall be provided by the ATC Contractor for both EMS/ATC devices and those provided by the equipment manufacturer.

F. Duct and Immersion Type Sensors: Securely mount sensors and capillaries and position to measure correct average temperature. Thermally isolate air sensing elements from brackets and supports so that response is to air temperature only. Temperature sensors for piping shall be installed in wells.

G. Outdoor Air Temperature, Humidity, Carbon Dioxide:
1. Install an outdoor air temperature sensor and humidity sensor (separate sensors) on North facing wall with sunshield at a location not subject to damage or vandalism. These sensors shall provide backup values when the Internet is down.
2. The EMS shall utilize the outdoor air temperature and humidity values that are broadcast over the Internet for all outdoor air temperature references for all automation programs except as noted for rooftop equipment. If the values are not available over the Internet due too a communication issue, the outdoor air temperature and humidity values from sensors on the North facing wall shall be used.
3. Install CO2 sensor at roof level when comparative demand ventilation sequences are utilized.

H. Piping Differential Pressure Sensors: Locations of sensors controlling pumps' VFDs shall be identified both at the pumps' VFDs and at the sensors. Laminated plate shall be installed at the pumps VFDs defining sensors locations in the building; e.g. DPS-1 at AHU-2, DPS-2 in corridor ceiling at Room XXX. Sensors concealed above ceiling shall have ceiling plate installed identifying sensor.

I. Contactors and Relays: Installation of control contactors, relays, etc. shall be such as to not interfere with the required access for servicing of equipment and/or factory installed control devices.

J. Wiring:
1. The term "control wiring" is defined to include providing of wire, conduit and miscellaneous materials as required for mounting and connecting electric control devices. All wiring shall

DRAFT

be installed in conduit and in accordance with the electrical specifications except as otherwise noted.

2. Except for short apparatus connections, run conduit and air tubing parallel to or at right angles to the building structure. Conceal conduit in finished spaces. Pressure test tubing and correct leaks by re-making joints.
3. Do not run conduit concealed under insulation or inside ducts. Mount control devices, conduit located on ducts or apparatus with external insulation on stand-off support to avoid interference with insulation.
4. Run wire connecting devices on or in control cabinets parallel with the sides of the cabinet neatly racked to permit tracing, using Panduit or equivalent system. Rack connections bridging a cabinet door along the hinge side and protect from damage. Provide grommets, sleeves or vinyl tape to protect wires from sharp edges of panels, conduit, and other items.
5. Where any new wiring is installed and penetrates a rated fire or smoke barrier, the wiring shall be run in conduit and the area around the conduit penetration of the barrier shall be thoroughly sealed with fire stopping material.
6. Number-code or color-code conductors, excluding those used for local individual room controls, appropriately for future identification and servicing of control system.
7. Control cable installation is permitted in concealed accessible areas not subjected to mechanical damage or excessive temperature or humidity conditions. Plenum grade cable and wiring shall be used in ceiling cavities.
8. Control wiring shall be run concealed above ceilings and concealed where drywall partitions or other cavity type walls exist. Contractor shall patch and finish wall and ceiling surfaces to match existing. Where wiring cannot be run concealed due to the existence of solid masonry partitions, exposed wiremold or wiring trough in finished spaces shall be run when permitted by MCPS.
9. Install all control wires/cables parallel and perpendicular to surfaces or exposed structural members and follow surface contours. Secure and support wires/cables by straps, staples, or similar fittings designed and installed to avoid damage to wires/cables; support wires/cables from building structure independent from work of other trades such as ductwork, piping, conduit. Secure wires/cables at intervals not exceeding 60” and not more than 12” from cabinets, boxes, or fittings.

K. Automatic Dampers: Furnish all automatic dampers except those as may be provided as a component of manufactured equipment. Installation of dampers shall be by the sheet metal contractor under the supervision of the controls contractor.

L. Wells: Contractor shall coordinate with the Mechanical Subcontractor the location of temperature sensing wells in the central piping system. All sensor bulbs in water lines shall be installed in separable wells, packed with heat conductive compound.

M. Valves: Control valves are to be provided by the controls contractor for field mounting. Valves may be furnished to equipment manufacturers for factory installation at Contractor’s option and coordination.

N. H-O-A Switches:
   1. Leave starter “Hand” positions wired and operational.
   2. When connecting to exhaust fans with motor operated dampers, connect so that damper opens in both hand and automatic positions.

O. Warning Labels: The Contractor shall assure that warning labels are affixed to starters, disconnects, etc. that are under control of the EMS.

P. Safeties:

DRAFT

1. Freeze protection: Furnish and install freeze protection thermostats in each air handling unit as required by sequences of operation. Freezestats shall have twenty two foot non-averaging sensing elements. Install the sensing element in a serpentine manner across the face of the protected coil. If the sensing element senses temperature below the set point of the freeze stat over any one foot section, the unit supply air fan shall stop. Valves and dampers controlled by freeze protection thermostats shall be spring return to fail-safe.
2. Smoke detectors and smoke dampers: Furnished by Divisions 23 & 26 and installed by the mechanical contractor. Control interlock wiring for the smoke detectors and dampers shall be by the controls contractor so that, upon sensing products of combustion or closure of smoke damper, associated equipment fans shall stop, outdoor dampers shall close. Equipment shall not be able to restart until smoke detector has been reset, smoke damper opened. Must be Labeled.
3. All safeties shall be hard-wired and independent of automation system relay coil circuits.

Q. Ethernet and telephone line to the vicinity of the EMS Network Controller and Ethernet drop to the Touchscreen Override Panel shall be installed by the General Contractor. MCPS allocates a maximum of five (5) ethernet drops and IP addresses for EMS system use.

R. Incoming Power Monitoring: Furnish and install new Motor Saver 250A.
1. Contractor shall be responsible for providing a 3-phase breaker to accommodate monitoring incoming building electrical power.
2. Power Monitoring contacts shall be closed indicating fully normal operation. Upon a loss of power or phase interruption to the device or a building power phase alarm, the contract shall open indicating an alarm. This applies both to the connections to security and to EMS. When power is lost to the monitoring device the contacts will open indicating an alarm.
3. Contractor shall contact the MCPS Energy Management Office if there is a question as to which terminals are to be utilized. Corrections to the wiring cannot be accomplished by inverting the signal thru Software will NOT BE ACCEPTED.

S. Power Metering: Smart Meter shall be wired and integrated into Schneider Electric Power Monitoring Server for global utility usage monitoring and peak load implementation. Integrate this into the Schneider power monitor server at MCPS.

T. Power for EMS Controllers:
1. EMS controllers shall be wired to dedicated electrical power circuits. EMS Contractor shall provide switches at each control panel to serve as a panel disconnect; a panel may consist of multiple controllers within a single enclosure. Each panel shall be fuse protected.
2. Terminal unit controllers: Where dedicated 120V power circuits are not provided for terminal controllers, power to the controllers may be obtained from the power feed to the equipment they control. Power to the EMS controller must be taken ahead of the terminal equipment's disconnect so that the controller remains powered though the unit's power may be turned off. Provide disconnects and transformers for the controller power.
3. DOASs, H&Vs, ERUs, RTUs, and similar HVAC equipment controllers shall be wired independent of the equipment power such that the controller shall remain powered when the power to the equipment is disconnected.
4. All panels with 120V power supply shall be surge protected; UPS shall be provided for all Network or master Building Controllers.

U. Controller Enclosures:
1. In general, controllers shall be mounted in hinged door NEMA 1 enclosures with a latch. Controller terminal strips wiring terminations, power feeds and protection shall be within the enclosure. Hinged door enclosures shall not be required when controller is mounted

DRAFT

within HVAC incremental unit equipment enclosure (i.e. within console cover for heat pump, unit ventilator, etc.).

2. Put temporary wiring diagrams in controller enclosures during construction; permanent diagrams to be put in cabinets prior to initial on-site Performance Verification.

V. Spare Points/System Expansion:

1. Central plant equipment and global inputs (outdoor air, building power, system pumps, etc.) shall be on controllers in a single enclosure. A minimum of one spare AO, AI, DO, and DI shall be provided among the central plant equipment controllers.
2. Building wide, provide for a system minimum of 10% spare capacity of each type of point (digital input, digital output, analog input, analog output). This may be achieved by the installation of additional panels or expansion boards.
3. Controllers and controls network shall be capable of expanding network to include all shell spaces in addition to the 10% spare capacity.

W. Control System Server (CSS) shall be installed at MCPS Energy Management office; coordinate with Energy Management personnel. New server hardware need not be provided if server was installed under previous contract and currently operates properly and meets current MCPS requirements.

X. Contractor's option: Contractors have the option of placing certain equipment/systems under local controls or controlling via DDC and the EMS. The Points List defines the minimum requirements for system/equipment to be controlled via the EMS. Systems/equipment not included on the Points List, unless specifically excluded, may be provided with local controls or DDC. For example:

1. Thermostatically controlled exhaust fans are not included in the Points List, but are not specifically excluded. Contractors have the option of including thermostatically controlled exhaust fans in the DDC system or installing local electric thermostats.
2. Air Conditioning Units (Dry Food Storage, Computer Wire Closets, Elevator Machine Room, etc.) are not included in the Points List and are specifically excluded from EMS control. They are to be furnished completely with manufacturer's controls.

Y. Wiring of Manufacturer Devices: EMS contractor is responsible for installing and completing the wiring of equipment manufacturer supplied control devices such as space thermostats, interlocking wiring between condensate overflow switches and fans, variable refrigerant flow system communication wiring, etc.

DRAFT

3.04 SYSTEM ARCHITECTURE

A. Controller locations:

1. Locate Override Touchscreen in Work Room in Administration.
2. Locate the system building controller (with ethernet and phone connections) in the Building Services Manager's Office.
3. Locate controllers and enclosures within mechanical or electrical equipment rooms. On special exception with approval by MCPS given prior to submitting a bid, controllers and enclosures may be located within storage rooms. In no case shall controllers, other than terminal unit controllers, be located above ceilings. All controllers not located in mechanical/electrical rooms or in incremental equipment enclosures must have locations approved by MCPS prior to Shop Drawing submittal.
4. Controller(s) installed for global inputs and control of central water systems; i.e. sidewall outdoor air sensor, electric pulse metering, phase monitor, boilers, chillers, system pumps, etc. shall be installed in the Building Services Manager's Office unless shown otherwise on contract drawings. Control points for geothermal water system points (pumps,

temperatures) shall be in the global/central plant controller, or may be installed in an enclosure in the Pump Room.

5. Heat Pump unit controllers shall be:
   a. Vertical units: Field installed, wall mounted in the equipment closet in an enclosure. Controllers shall not be mounted inside of units' casings. Where two or more controllers are installed adjacent to one another, they may be installed in a single enclosure.

B. Point and software configurations within controllers:
   1. Global input points; central plants:
      a. Global input points, i.e. sidewall outdoor air temperature, phase monitor, electric pulse metering, shall be located in a single controller.
      b. All central plant points; i.e. heating water system, chilled water system, condenser water system, shall be located in a single controller. Where central plant points exceed the capacity of a single controller, additional controller(s) and/or expansion board(s) may be used; however, controllers shall be housed in a single enclosure.
   2. Controllers shall be configured such that all points and control strategies required for proper control of a particular mechanical system shall be resident within the one controller; i.e. stand-alone architecture. The only acceptable exceptions to this architecture are:
      a. The cases where the mechanical system control points requirements exceed the point capacity of a single controller, and
      b. Control points for exhaust fans need not be located in same controllers of the systems with which they are interlocked.
      c. Automation systems employing expansion modules to provide additional control points to base controller shall be limited to not more than one expansion module per base controller.

C. Controllers shall be numbered sequentially.
   1. Where it is required to have multiple controllers controlling a mechanical system, all system points shall be in sequentially numbered panels. For example, if an energy recovery unit requires points in two controllers, the points shall be in sequentially numbered panels; e.g. Controllers #3 & #4, not Controllers #3 & #18.
   2. All controllers serving equipment within a Zone shall be sequentially numbered. For example, if a Zone has fourteen heat pumps, the unit controllers shall be sequentially numbered; e.g. Controller #11, #12, #13 . . . #22, #23, #24.

DRAFT

3.05 SEQUENCES OF OPERATIONS

A. General:
   1. Satisfying this and all other sections of the specifications shall enable the Contractor to implement the control sequences specified on the drawings through the combination of electric and electronic hardware, software, and programming.
   2. Contractor shall perform all system adjusting, tuning, programming, etc., to provide the Owner with an operating control system that will function as described.
   3. Control sequences defined shall not be construed as absolute final sequences, i.e. Owner shall be able to reconstruct sequencing through program modifications at his discretion. Therefore, sequencing defined shall constitute the initial control strategies to be installed by Contractor.
   4. Other Programs
      a. Minimum ON/OFF times (all outputs).

b. Save and restore functions for dumping all memory to external storage device and back.

B. Sequences of Operation shall be as specified on contract drawings.

C. Economizer Operation (when controlled by the EMS):

1. Enthalpy Optimizer: When the central plant is in the mechanical cooling mode, economizer operation can reduce system cooling requirements when the outdoor air enthalpy levels and outdoor air dry-bulb conditions are within limits. The initial limits (adj.) set by MCPS are 26 BTU/Lbmda for enthalpy; 70 degrees F (Adj.) for dry-bulb temperature.
   a. If the outdoor air dry-bulb temperature and enthalpy are below the limits stated above, the outdoor air damper shall be allowed to modulate open beyond the minimum position to maintain temperature control, in conjunction with mechanical cooling. Conversely, if the outdoor air dry-bulb temperature and enthalpy are above limits stated above, the outdoor air damper shall not be allowed to open beyond the minimum position (except for demand control ventilation.)
   b. The enthalpy, or total heat, is the sum of the latent heat and sensible heat. Dry-bulb sensor inputs in conjunction with relative humidity input shall be used to calculate the enthalpy. The outdoor enthalpy is to be calculated using the outdoor air dry-bulb temperature and humidity values broadcast over the Internet for the school's location; values from the sensors located on the North wall shall be utilized when the internet is down.
2. Dry-bulb Economizer: When the central plant is not in the mechanical cooling mode, or mechanical cooling is not available (DX or chilled water), and the outdoor air temperature is <70 degrees F (Adj.), economizer control of air handling systems shall be in effect to modulate outdoor air dampers beyond minimum, subject to a min. discharge air temperature; outdoor air dampers shall not open beyond minimum unless the heating coil control valve is closed to the heating coil.

D. PLM Curtailment: During the cooling season, from Monday thru Friday, from 3:55 PM to 5:00 PM, June __ thru August __, the EMS shuts off the systems via a Special Schedule that is activated by a PLM Enable button on the MCPS Main Page as follows:

1. Schools with Heat Pump Loops:
   a. All HVAC equipment in the Zones shall be turned off.
   b. Administration and Media Center: MCPS Operator shall make the determination to include or exclude the Administration and Media Center in the shutdown.
   c. The main circulating pump serving the heat pump loop shall remain on.
   d. Auxiliary equipment such as the cooling tower and associated pump(s) shall be turned off.
   e. All exhaust fans and ventilation equipment (including DOASs and ERUs) under EMS control shall be turned off.
   f. Override panel shall be disabled.
2. Schools with Variable Refrigerant Systems:
   a. All HVAC equipment in the Zones shall be turned off.
   b. All exhaust fans and ventilation equipment (including DOASs and ERUs) under EMS control shall be turned off.
   c. Override panel shall be disabled.
3. At the conclusion of the curtailment period, the equipment that needs to run, shall start sequentially, with the Central Plant (where applicable) starting first.

DRAFT

4. The MCPS Operator at the Turkey Thicket Drive Facility shall exclude a school from the curtailment by pushing a PLM Disable Button on the individual School Home Page. The Operator may also override certain areas or zones on where the systems are able to operate without chilled water. The exceptions will be on a special list of schools.

3.06 POINTS LIST, FLOW DIAGRAMS, SEQUENCES

A. The Input/Output Summary Table shown on the contract drawings represents the minimum requirements control points listing, alarm, and software functions to be included in the project.

B. Sequences of operation, flow diagrams, and points list are complementary. All control strategies shall be satisfied even if some of the required control points, alarm, or software have been inadvertently left off of the points list or diagrams. Similarly, control points, alarm, and software strategies indicated on the points list shall be provided even if a written sequence or flow diagram device has been inadvertently omitted.

3.07 COORDINATION WITH TAB

A. The Controls Contractor shall allocate 8 man-hours to the testing and balancing procedures; providing a competent technician to assist the TAB Contractor. This time shall be in addition to that required for start-up and testing of the controls, and for the time required to respond to any punch list generated by the TAB Contractor or to the Commissioning process.

B. Controls Contractor shall obtain piping and system pressure setpoints from the TAB Contractor for controlling pump and fan VFDs; setpoints shall be documented in controls As-Builts.

C. Controls Contactor shall coordinate minimum outdoor air damper positions with TAB contractor and assure that balanced minimum damper position is permanently marked on damper shaft or at damper blades.

3.08 PLACING IN SERVICE AND ACCEPTANCE:

A. Placing in service:

1. Upon completion of the installation, calibrate equipment and verify transmission media operation before system is placed on line. All testing, adjusting, and calibrating shall be completed and systems shall be properly operating prior to acceptance by Owner. Cross check each control point by comparing the control command and the field controlled device, equipment.
2. EMS Contractor shall be present and participate in the start-up of DOASs, ERUs, RTUs and H&V. Control sequences of operations and coordination of interlocks with equipment manufacturers' controls/safeties shall be demonstrated to the satisfaction and acceptance of MCPS, the design team, and the commissioning authority.

B. Prior to final acceptance and authorization for final payment by the Owner, Control System "punch list" inspections shall be made by representatives of the Owner's construction, maintenance, and energy management departments. This is not to preclude that punch lists shall be made by the Contractor to check the completion of his work prior to final "punch lists" inspection. The punch lists inspections shall be in three parts. An inspection shall be performed and punch list (Installation Punch List) prepared regarding the physical installation of the EMS equipment, wiring, etc., and separate punch list shall be prepared regarding the graphics interface (Graphics Punch List); and a third punch list shall be prepared regarding the software programming and systems performance verification at the site (Site Performance Verification Punch List).

1. Graphics Acceptance:
   a. Contractor shall perform self-review of graphics prior to requesting graphics review by Engineer. At a minimum, prior to requesting a Graphics/Programming Punch List inspection, all required "head end" software and graphics at the server shall be

DRAFT

installed and functioning; graphics shall be accessible and demonstrated at the school. This work shall be performed prior to building occupancy.

b. Graphics checklist, provided by the Engineer to Contractor shall be completed by Contractor and returned to Engineer indicating that the Graphics are ready for review by Engineer. Engineer will provide review comments to Contractor. Contractor shall acknowledge that any corrective work cited in the review comments has been completed. Engineer will validate Contractor's response and acknowledge acceptance of Graphics when appropriate.

c. Engineer's review consist of the following: (1) One review upon receipt of the graphics checklist; (2) two follow up reviews after punch list items are corrected; (1) cross check when graphics are deemed acceptable. Reviews in excess of the above are to be considered chargeable to the Contractor.

2. Prior to requesting a Site Performance Verification Punch List inspection, all specified software and control strategies shall have been loaded into the computers at the facility to be inspected. It is recognized that not all software programming may be fully "debugged" at the time of Punch List inspections; however, the EMS Contractor shall be able to demonstrate that all required software strategies are installed and that equipment is being controlled by those strategies. To facilitate punch outs of installations, the Contractor shall have their software completely loaded and functional and a complete set of trends shall have been submitted to the Engineer and Commissioning Authority for review. Engineer shall not review trends until Head-End software and graphics have been approved by MCPS Energy Management personnel.

3. A minimum of two (2) complete sets of trends shall be submitted for review. Trends must be delivered to the Engineer and Commissioning Authority at least fourteen (14) days prior to a scheduled on-site performance verification of the facility. Provide a hardcopy and an electronic copy. Trends shall be submitted illustrating systems operations when the building is operating in the cooling mode (summer) and the heating mode (winter). The intent of this is to determine whether installed software is functioning and equipment performing as intended.

   a. Central plant and global control points must be included in all runs of trends.

   b. Trends shall be presented at hourly intervals for a 24 hour period, unless directed otherwise. Systems being monitored shall be operated with an occupancy schedule; i.e. indications that a system was scheduled off for the 24 hours of the trends and remained off are of no value. Occupancy schedules, zone overrides, and all system setpoints (both calculated and manual inputs) shall be provided with the trends and shall be in accordance with MCPS Energy Management standards and/or directions. Trends shall be submitted in hardcopy and electronically with English language point descriptor column header, engineering units provided for each point (e.g. °F, ppm, %RH, CFM, psig, amps, etc.); lengthy point path names as column headers are not acceptable. Print the time and point data information in its respective column for all values for that point. Digital points (commands and statuses) shall be presented as On/Off, Open/Closed (not 0/1); damper, valves shall be trended as % open (not 2-10 or 4-20); temperatures shall be in °F to tenths of a degree.

   c. Formatting of Trends: Provide spreadsheet format with all points for each unit, organized with approved point names. Group points together that natural belong together (i.e. command and status, supply air temp and its setpoint. Standardize on a format and use it consistently. Submit sample formats for each unit type for approval in advance.

      1) The trends shall be organized as follows:

         (a) Zone Schedules, Overrides, etc.

         (b) Central Plant(s) Data

DRAFT

(c) Zone 1 thru Zone X (all equipment associated with each zone to be trended in a group; not scattered throughout)

(d) Building Exhaust (they can be shown with the associated zone equipment or in a group at the end of the trends.)

2) Extraneous points shall not be trended i.e. allow boiler, allow chiller.

3) Trends for equipment shall be organized and consistent from device to device i.e. fan command, fan status, OA damper, space temp, cfm, etc., shall be in the same position device to device.

4) If more than a single page is required for a piece of equipment, do not repeat data on the subsequent pages.

d. Prior to submitting a set of trends to MCPS, the Contractor shall perform a self-review to identify and correct problems. Where trends indicate problems, discrepancies, and/or deficiencies and the Contractor has performed corrections, partial trends may be submitted as addenda or inserts with the original set of complete building trends indicating that the problem has been corrected. For example, if the complete set of building trends largely indicates that the control system functions properly, but an air handling unit was not running when commanded on; an addendum or insert trend for this air handling unit may be provided with the original complete set that indicates proper operations after the unit was made to run. All global and central plant points shall be included for the time period of the addendum trends. Include contractor review comments with trends submission.

e. To assure that trends suitably demonstrate appropriate operations, heating trends shall be run when outdoor air drops to an occurrence of at least 35°F during the trend period, cooling season trends can be run whenever outdoor air rises to an occurrence of at least 85°F during the trend period.

f. Predicated upon the discrepancies discerned by the engineer's review of trends, subsequent complete or partial trends may be required.

g. The following constitutes those items that, at a minimum and as applicable, shall be included in a trend submittal:

1) Outdoor air: Dry-bulb temperature, humidity, CO2, enthalpy (wall and roof locations)

2) Phase, Voltage: Trends should indicate time and duration of any occurrence of power interruption and normal power resumption.

3) Incoming Power: Kw, Kwh

4) Overrides: Run status

5) Hot Water Heating Systems:

(a) Supply water temperature actual and setpoint

(b) Return water temperature

(c) Mixing valve command

(d) Pumps commands, status

(e) Boilers

(1) Controller enable/disable or Boiler enable/disable

(2) Setpoint adjust

(3) Boiler temperature

(4) Header temperature

(5) Actual run status (fuel valve)

(6) Alarm

(f) Low loop alarm

DRAFT

6) Heat Pump Loop
   (a) Supply water temperature actual and setpoint
   (b) Return water temperature
   (c) HX entering water temperature
   (d) Pumps commands, status
   (e) Low loop alarm
7) Cooling Tower:
   (a) Pumps commands, status
   (b) Condenser water valve command
   (c) Tower fan: Command, Status, VFD speed & alarm
   (d) Tower leaving water temperature
   (e) Tower return water temperature
8) Incremental Units (UVs, FCUs, CUHs)
   (a) Space temperature actual and setpoint
   (b) Supply air temperature
   (c) Supply fan command and status
   (d) Cooling command
   (e) Heating valve command
   (f) Cooling valve command
   (g) Zone temperatures where applicable
   (h) FC/UV circuits enable/disable and command status where applicable
9) Heat Pumps:
   (a) Reversing valve command
   (b) Fan command and status
   (c) Discharge & space temperatures
   (d) Failure alarm
   (e) Heat Pump Loop valve command and status
   (f) Compressor command & status
10) H&V (DDC and BACnet points as applicable to unit configuration & function)
   (a) Outdoor and recirc air dampers commands
   (b) Supply fan command and status
   (c) Space temperature actual and setpoint
   (d) Space air temperature
   (e) Furnace commands
11) DOAS/ERU (DDC and BACnet points as applicable to unit configuration & function)
   (a) Enable/disable command
   (b) Occupied/unoccupied command
   (c) Supply and exhaust fan statuses, exhaust fan speed
   (d) Alarm status
   (e) Outdoor air temperature, humidity, & dewpoint
   (f) Supply air temperature
   (g) Exhaust air temperature
   (h) Space temperature, humidity, CO2

DRAFT

(i) Controlling setpoint (supply, space or effective temperature and/or humidity)
(j) Outdoor air / recirc dampers positions
(k) Recovery wheel command
(l) Compressors statuses; VFD scroll output
(m) Hot gas reheat valve position
(n) Outdoor airflow (cfm)
(o) Operating mode (occ/unocc, econ, dehumid, etc.)

12) Variable Refrigerant Systems (DDC and BACnet points)
(a) Occupied/unoccupied command
(b) EMS zone temperature
(c) General alarm status
(d) Individual space temperatures and setpoints
(e) Fan-coils on/off
(f) Fan-coils heating/cooling mode

13) Exhaust Fans (where EMS controlled and/or monitored):
(a) Scheduled run/enabled status
(b) Actual run status or enabled status

4. A minimum of two (2) on-site inspections for punch-out of software and systems operations shall be performed. The inspections shall occur with the building and/or central plants operating in either the mechanical heating or cooling mode. A follow-up on-site inspection shall occur while building and/or central plants are operating in the opposite season. If scheduled delivery of the project falls during a period in which a central plant is not operating or outdoor air temperatures are not conducive to witnessing comprehensive heating or cooling operations, EMS punch out will be delayed until such time as the central plant has been operating under EMS control for at least one week and outdoor air temperatures are such as to afford witnessing of heating or cooling operations. Example: an 85°F day in April will not provide acceptable cooling mode trends or building HVAC operations if chiller plant was not in operation. Initial acceptance of the EMS to start the warranty in the heating or cooling mode is conditional. Final acceptance shall be predicated on acceptance of the EMS in the subsequent seasonal operations; i.e. to maintain the warranty, the EMS must function properly in both modes.
a. EMS site inspections shall be made jointly with the EMS Engineer, Energy Management Office Representative and the designated Representative from the Division of Construction.
b. Prior to performing on-site inspections, trends and draft As-Built control drawings shall have been submitted and reviewed. All deficiencies cited from trends and As-Built reviews conveyed to the contractor shall be corrected and attested in writing by the contractor prior to on-site inspection.
c. Contractor shall be represented at the on-site demonstration by at a minimum by one programmer and one technician knowledgeable of the programming and installation at the facility.
d. Functionality of mobile device interface shall be demonstrated at the initial on-site software and operation inspection.

C. Over the two year guarantee period, a complete EMS trend shall be submitted by the Contractor four times a year to MCPS for their review. The submission of trends may be increased or decreased pursuant to their evaluation; i.e., decreased if all is well, increased if problems exist. Prior to submitting a trend to MCPS, the Contractor shall perform a self review

DRAFT

to identify and correct problems. The intent of trend reviews during the guarantee period by MCPS is fine tuning of the EMS, not debugging. The trends shall contain all of the points cited hereinbefore for Punch-Out trends. These items shall be enforced by EMS and DOC together during punchout phase with commissioning agent.

3.09 GRAPHICS

A. Provide dynamic graphic screens as previously specified. Phase pertinent graphics shall be accessible to MCPS operating and maintenance personnel on-site prior to initial occupancy of each completed phase.

3.10 INSTRUCTIONS AND DOCUMENTATION

A. Installation Documentation:
   1. Provide software documentation so all software programs may be easily referenced from summary sheets which compare control programs with hardware controlled and wiring. Documentation shall include complete point identification including terminal number, symbol, engineering units, and control program reference number; field information including location, device type and function, electrical parameters and installation drawing number, location of EMS control hardware.
   2. Maintain a complete set of control drawings separate from those being used for installation at the site. The express purpose of these drawings will be to record any and all changes made. The Contractor shall mark these prints showing any change whatsoever.
   3. Electrical circuits used to power EMS panels shall be identified on EMS As-Built installation drawings. Panel and circuit number powering the EMS panel shall be permanently marked inside the EMS cabinets. Circuits shall be marked in electrical panels and on panel schedules, noted “EMS, Do Not Turn Off”.
   4. Provide complete maintenance and program manual at the initial acceptance inspection. Maintenance manuals shall include complete wiring diagrams, parts lists, etc., so as to enable the Owner to perform any and all service, maintenance, troubleshooting, inspection, testing, etc. as may be necessary and/or required. Program manuals shall provide complete description of programming language including commands, editing and writing control programs, algorithms, printouts and logs, mathematical calculations, passwords, instructions on modifying any control algorithm or parameter, verifying errors or status, changing passwords, and initiating or disabling programs.
   5. At the completion and initial acceptance of the project, the Contractor shall furnish to the Owner:
      a. Two (2) installation manuals in 3-hole binders, 8-1/2” x 11” paper with project identified on cover and spline. Each binder shall have:
         1) Project controls specifications
         2) Copies of addenda, RFIs and responses
         3) As-built control drawings, panel layouts, and sequences (folded 11” x 17”)
         4) Color coded zoning floor plan, 8-1/2" x 11".
         5) As-built installation/distribution building floor plan(s) drawings showing panel locations, communication wiring runs, power sources, etc. (folded 11”x17”).
      b. Provide a 64GB USB Flash Drive 3.0 (or better) with all of the above, programs and data base.
      c. Copy of the binder and 64GB USB Flash Drive 3.0 shall also be provided to the Engineer.

DRAFT

d. (2) additional 11" x 17" color coded zone maps (laminated) shall be provided for retention at the school – (1) copy provided in a binder; (1) copy mounted in a frame in a location designated by MCPS.

e. As-built control drawings are to be turned over to MCPS electronically on a 64GB USB drive in the program they were created in (i.e. Visio) as well as AutoCAD DWG drawing format.

6. Attach laminated copy of each pertinent control drawing(s) to the interior of the controllers' enclosure door. Control drawing(s) shall include controller diagram with control points identified, controlled equipment flow diagram(s) and sequence(s) of operation.

B. Instructions: Instruct the Owner's representative in all the necessary procedures for satisfactory operation, maintenance, and programming of the controls systems. Instruction shall be by competent personnel totally familiar with the systems installed. Training sessions shall consist of at least eight (8) hours in response to Owner scheduling.

1. An additional allowance of forty (40) hours of training per school shall be provided to MCPS Energy Management and/or Maintenance personnel as requested through the 12 months following the award of contract. This training would include, but not limited to refresher training, hardware installation, troubleshooting, demonstrations of shortcuts, programming tips, graphics assistance, retrieval of data such as min and max values of cfm, etc. Unused training would be credited towards Factory Training at the hourly rate in this contract. The additional training would not be limited to the schools within this bid group. This must be done onsite, at EMS office or at school with an EMS representative present.

END OF SECTION 230900

DRAFT

SECTION 230934
VARIABLE-FREQUENCY MOTOR CONTROLLERS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Variable-frequency motor controllers for low-voltage (600 V and less) AC motor applications.

B. Overcurrent protective devices for motor controllers, including overload relays.

1.02 RELATED REQUIREMENTS

A. Section **<< 033000 - Cast-in-Place Concrete>>**: Housekeeping pads.

B. Section **<< 230529 - Hangers and Supports for HVAC Piping and Equipment>>**.

C. Section **<< 230548 - Vibration and Seismic Controls for HVAC>>**.

D. Section **<< 230553 - Identification for HVAC Piping and Equipment>>**: Identification products and requirements.

E. Section **<< 260526 - Grounding and Bonding for Electrical Systems>>**.

F. Section **<< 262813 - Fuses>>**.

1.03 REFERENCE STANDARDS

A. IEC 60529 - Degrees of Protection Provided by Enclosures (IP Code).

B. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

C. NEMA ICS 2 - Industrial Control and Systems Controllers, Contactors and Overload Relays Rated 600 Volts.

D. NEMA IA 10039 - Control Circuit and Pilot Devices.

E. NEMA IA 10030 - Industrial Control and Systems: Enclosures.

F. NEMA IS 10033 - Industrial Control and Systems: Adjustable-Speed Drives.

G. NEMA IS 10034 - Safety Standards for Construction and Guide for Selection, Installation and Operation of Adjustable Speed Drive Systems.

H. NEMA IS 10035 - Application Guide for AC Adjustable Speed Drive Systems.

I. NEMA ICS 61800-2 - Adjustable Speed Electrical Power Drive Systems, Part 2: General Requirements-Rating Specifications for Low Voltage Adjustable Frequency AC Power Drive Systems.

J. NEMA BS 31047 - Heavy Duty Enclosed and Dead-Front Switches (600 Volts Maximum).

K. NEMA MG 00001 - Motors and Generators.

L. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems.

M. NFPA 70 - National Electrical Code.

N. UL 98 - Enclosed and Dead-Front Switches.

O. UL 508A - Industrial Control Panels.

P. UL 61800-5-1 - Standard for Adjustable Speed Electrical Power Drive Systems - Part 5-1: Safety Requirements – Electrical, Thermal, and Energy (Ed. 2).

DRAFT

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate work to provide motor controllers suitable for use with actual motors to be installed.
   2. Coordinate work to provide controllers and associated wiring suitable for interface with control devices to be installed.
   3. Coordinate arrangement with dimensions and clearance requirements of actual equipment to be installed.
   4. Verify with manufacturer that conductor terminations are suitable for use with conductors to be installed.
   5. Notify **<<Architect>>** of conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

1.05 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>**, for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for motor controllers, enclosures, overcurrent protective devices, and other installed components and accessories.

C. Shop Drawings: Indicate dimensions, voltage, controller sizes, short circuit current ratings, conduit entry locations, conductor terminal information, and installed features and accessories.
   1. Include dimensioned plan and elevation views of controllers and adjacent equipment with required clearances indicated.
   2. Include wiring diagrams showing factory and field connections.
   3. Identify mounting conditions required for equipment seismic qualification.

D. Derating Calculations: Indicate ratings adjusted for applicable service conditions.

E. Specimen Warranty: Submit sample of manufacturer's warranty.

F. Manufacturer qualification statement.

G. Installer qualification statement.

H. Maintenance contractor qualification statement, if different entity from installer.

I. Manufacturer's equipment seismic qualification certification.

J. Manufacturer's certification that products meet or exceed specified requirements.

K. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

L. Source quality control test reports.

M. Manufacturer’s detailed field testing procedures.

N. Field quality control test reports.

O. Operation and Maintenance Data: Include detailed information on system operation, equipment programming and setup, replacement parts, and recommended maintenance procedures and intervals.
   1. Include contact information for entity providing contract maintenance and trouble call-back service.

P. Executed Warranty: Submit documentation of final executed warranty completed in **<<Owner>>**'s name and registered with manufacturer.

DRAFT

Q. Maintenance contracts.

R. Project Record Documents: Record actual installed locations of controllers and final equipment settings.
   1. Include nameplate data of actual installed motors and associated overload relay selections and settings.
   2. Motor Circuit Protectors: Include magnetic instantaneous trip settings.

S. Maintenance Materials: Furnish following for **<<Owner>>**'s use in maintenance of project.
   1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
   2. Electronic Trip Circuit Breakers: Provide **<< one; or _____>>** portable test set.
   3. Indicating Lights: **<< Two; or _____>>** of each different type.
   4. Air Filters: **<< Two; or _____>>** of each different type.
   5. See Section **<< 262813>>** for requirements for spare fuses and spare fuse cabinets.

1.06 QUALITY ASSURANCE

A. Comply with requirements of **<<NFPA 70>>**.

B. Maintain copy of each referenced document that prescribes execution requirements at project site.

C. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with minimum **<< three; or _____>>** years**<< documented; _____; or None - N/A>>** experience.
   1. Authorized service facilities located within **<< 200 miles; _____ miles; or _____>>** of project site.

D. Installer Qualifications: Company with minimum **<< three; or _____>>** years**<< documented; _____; or None - N/A>>** experience with variable-frequency motor control systems of similar size, type, and complexity**<< ; manufacturer's authorized installer; ; _____; or None - N/A>>**.

E. Product Listing Organization Qualifications: Organization recognized by OSHA as Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Store in clean, dry space. Maintain factory wrapping or provide additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.

B. Handle carefully in accordance with manufacturer's written instructions to avoid damage to internal components, enclosure, and finish.

1.08 FIELD CONDITIONS

A. Maintain field conditions within required service conditions during and after installation.

1.09 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Provide minimum five years manufacturer warranty (parts and labor) covering repair or replacement due to defective materials or workmanship.

DRAFT

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. ABB**<< ; _____; or None - N/A>>**: www.abb.com/#sle.

B. Danfoss**<< ; _____; or None - N/A>>**: www.danfoss.com/#sle.

C. Yaskawa America, Inc; **<< ; _____; or None - N/A>>**: www.yaskawa.com/#sle.

D. Trane

E. Eaton.

F. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

G. Source Limitations: Furnish variable-frequency motor controllers and associated components produced by a single manufacturer and obtained from a single supplier.

2.02 VARIABLE-FREQUENCY MOTOR CONTROLLERS

A. Provide variable-frequency motor control system consisting of required controller assemblies, operator interfaces, control power transformers, instrumentation and control wiring, sensors, accessories, system programming, etc. as necessary for complete operating system.

B. Provide products listed, classified, and labeled as suitable for purpose intended.

C. Controller Assemblies: Comply with **<<NEMA IS 10033>>**, **<<NEMA IS 10034>>**, and **<<NEMA ICS 61800-2>>**; list and label as complying with **<<UL 61800-5-1>>** or **<<UL 508A>>** as applicable.

D. Provide controllers selected for actual installed motors and coupled mechanical loads in accordance with **<<NEMA IS 10035>>**, **<<NEMA MG 00001>>** Part 30, and recommendations of manufacturers of both controller and load, where not in conflict with specified requirements; considerations include, but are not limited to:

1. Motor type (e.g., induction, reluctance, and permanent magnet); consider **<<NEMA MG 00001>>** design letter or inverter duty rating for induction motors.
2. Motor load type (e.g., constant torque, variable torque, and constant horsepower); consider duty cycle, impact loads, and high inertia loads.
3. Motor nameplate data.
4. Requirements for speed control range, speed regulation, and braking.
5. Motor suitability for bypass starting method, where applicable.

E. Single Controllers Serving Multiple Motors:

1. Control Method: Scalar/volts per hertz; do not use vector control method.
2. Provide separate overload relay for each motor; provide auxiliary contacts and control wiring as required to shut down controller upon trip of any single overload relay.
3. Consider combined length of motor leads for cable length limits.

F. Devices on Load Side of Controller: Suitable for application across full controller output frequency range.

G. Operating Requirements:

1. Input Voltage Tolerance: **<< Plus/minus 10 percent of nominal; or _____>>**.
2. Input Frequency Tolerance: **<< Plus/minus 5 percent of nominal; or _____>>**.
3. Efficiency: Minimum of **<< 96 percent; _____ percent; or _____>>** at full speed and load.
4. Input Displacement Power Factor: Minimum of **<< 0.96; or _____>>** throughout speed and load range.

DRAFT

5. Overload Rating:
   a. Variable Torque Loads: Minimum of **<< 110 percent of nominal; _____ percent of nominal; or _____>>** for 60 seconds.
   b. Constant Torque Loads: Minimum of **<< 150 percent of nominal; _____ percent of nominal; or _____>>** for 60 seconds.

H. Power Conversion System: Microprocessor-based, pulse width modulation type.
   1. **<< Diode-based, 6-pulse type; Diode-based, 12-pulse type; Diode-based, 18-pulse type; IGBT-based active front end type; Matrix converter type; or _____>>** unless otherwise indicated.

I. Control System:
   1. Provide microprocessor-based control system for automatic control, monitoring, and protection of motors. Include sensors, wiring, and connections necessary for functions and status/alarm indications specified.
   2. Provide integral operator interface for controller programming, display of status/alarm indications, fault reset, and local control functions**<< including motor run/stop, motor forward/reverse selection, motor speed increase/decrease, and local/remote control selection; _____; or None - N/A>>**.
   3. Control Functions:
      a. Control Method: **<< Selectable vector and scalar/volts per hertz; Scalar/volts per hertz; or _____>>** unless otherwise indicated.
         1) Scalar/Volts per Hertz Control: Provide **<< fixed voltage boost; IR compensation; or _____>>** for improved low-speed torque.
         2) Vector Control: Provide selectable autotuning function.
      b. Adjustable acceleration and deceleration time; linear and S-curve ramps; selectable coast to stop.
      c. Selectable braking control; **<< DC injection or flux braking; or _____>>**.
      d. Adjustable minimum/maximum speed limits.
      e. Adjustable pulse width modulation switching carrier frequency.
      f. Adjustable motor slip compensation.
      g. Selectable autorestart after noncritical fault; programmable number of time delay between restart attempts.
   4. Status Indications:
      a. Motor run/stop status.
      b. Motor forward/reverse status.
      c. Local/remote control status.
      d. Output voltage.
      e. Output current.
      f. Output frequency.
      g. DC bus voltage.
      h. Motor speed.
   5. Protective Functions/Alarm Indications:
      a. Overcurrent.
      b. Motor overload.
      c. Undervoltage.
      d. Overvoltage.
      e. Controller overtemperature.

DRAFT

f. Input/output phase loss.
g. Output short circuit protection.
h. Output ground fault protection.

6. Inputs:
   a. Digital Input(s): **<< Three; or _____>>**.
   b. Analog Input(s): **<< Two; or _____>>**.
7. Outputs:
   a. Analog Output(s): **<< One; or _____>>**.
   b. Relay Output(s): **<< Two; or _____>>**.
8. Communications: Compatible with connected systems. Provide accessories necessary for proper interface.
   a. Serial Communications: **<< RS-485; or _____>>**; support for **<< Modbus RTU; BACnet MS/TP; or _____>>** protocol.
   b. Ethernet Communications: Support for **<< Modbus TCP; BACnet IP; and _____>>** protocol.
   c. Remote Monitoring Capabilities:
      1) Motor run/stop status.
      2) Hand-off-auto status.
      3) Fault information.
      4) Discrete input/output status.
      5) Analog input/output values.
   d. Remote Control Capabilities:
      1) Motor run/stop command.
      2) Hand-off-auto selection.
      3) Speed adjustment.
      4) Fault reset.
9. Features:
   a. Password-protected security access.
   b. Event log.

J. Power Conditioning/Filtering:
   1. Provide **<< DC link choke or input/line reactor; DC link choke and input/line reactor; or _____>>** for each controller unless otherwise indicated or required.
   2. Reactor Impedance: **<< 3 percent; 5 percent; or _____>>**, unless otherwise indicated or required.

K. Packaged Controllers: Controllers factory-mounted in separate enclosure with externally operable disconnect and specified accessories.
   1. Disconnects: **<< Circuit breaker or disconnect switch type; Circuit breaker type; Disconnect switch type; or _____>>**.
      a. Disconnect Switches: Fusible type or nonfusible type with separate input fuses.
      b. Provide externally operable handle with means for locking in OFF position. Provide safety interlock to prevent opening cover with disconnect in ON position with capability of overriding interlock for testing purposes.
      c. Provide auxiliary interlock for disconnection of external control power sources where applicable.
   2. Provide door-mounted remote operator interface.

DRAFT

L. Service Conditions:
1. Provide controllers and associated components suitable for operation under following service conditions without derating:
a. Altitude: Less than **<< 3,300 feet>>**.
b. Ambient Temperature: Between **<< 32 degrees F>>** and **<< 104 degrees F>>**.
2. Provide controllers and associated components suitable for operation at indicated ratings under service conditions at installed location.

M. Short Circuit Current Rating:
1. Provide line/input reactors where specified by manufacturer for required short circuit current rating.

N. Conductor Terminations: Suitable for use with conductors to be installed.

O. Enclosures:
1. Comply with **<<NEMA IA 10030>>**.
2. **<<NEMA EN 10250>>** Environment Type or Equivalent **<<IEC 60529>>** Rating: **<< Unless otherwise indicated, as specified for following installation locations:; As indicated on drawings.; or _____ .>>**
a. Indoor Clean, Dry Locations: **<< Type 1 or Type 12; or _____>>**.
b. Outdoor Locations: **<< Type 3R or Type 4; or _____>>**.
c. Hazardous/Classified Locations: **<< Type 7/9; or _____>>**, as required for classification of installed location.
3. Finish: **<< Manufacturer's standard unless otherwise indicated; or _____>>**.
4. Cooling: Forced air or natural convection as determined by manufacturer.
5. Enclosure Space Heaters:
a. Provide in each controller enclosure installed **<< outdoors; in unconditioned indoor spaces; and _____>>**.
b. Size according to manufacturer's recommendations for worst case ambient temperature to prevent condensation.
c. Heater Control: **<< Thermostat; Humidistat; or _____>>**.
d. Heater Power Source: Provide connection to **<< transformer factory-installed in enclosure; suitable external branch circuit as indicated or as required; or _____>>**.

2.03 OVERCURRENT PROTECTIVE DEVICES

A. Overload Relays:
1. Provide overload relays and, where applicable, associated current elements/heaters selected for actual installed motor nameplate data, in accordance with manufacturer's recommendations and **<<NFPA 70>>**; include consideration for motor service factor and ambient temperature correction, where applicable.
2. Comply with **<<NEMA ICS 2>>**.
3. Inverse-Time Trip Class Rating: **<< Class 20 unless otherwise indicated or required; As indicated on drawings; or _____>>**.
4. Trip-free operation.
5. Visible trip indication.
6. Resettable:
a. Employ **<< automatic reset; remote reset; or _____>>**.
7. Solid State Overload Relays:

DRAFT

a. Adjustable full load current**<< ; minimum range of 2 to 1; ; _____; or None - N/A>>**.
b. Phase loss protection**<< ; selectable; ; _____; or None - N/A>>**.
c. Phase imbalance protection**<< ; selectable; ; _____; or None - N/A>>**.
d. Ambient temperature insensitive.
e. Thermal memory.
f. Trip test function.
g. Provide isolated alarm contact.

B. Fusible Disconnect Switches:
1. Description: Quick-make, quick-break, dead-front fusible switch units complying with **<<NEMA BS 31047>>**, and listed and labeled as complying with **<<UL 98>>**; ratings, configurations, and features as indicated or as required.
2. Fuse Clips: As required to accept indicated fuses.
a. Where NEMA Class R fuses are installed, provide rejection feature to prevent installation of fuses other than Class R.
3. Provide externally operable handle with means for locking in OFF position. Provide means for locking switch cover in closed position. Provide safety interlock to prevent opening of cover with switch in ON position with capability of overriding interlock for testing purposes.

2.04 ACCESSORIES

A. Auxiliary Contacts:
1. Comply with **<<NEMA IA 10039>>**.
2. Provide number and type of contacts indicated or required to perform necessary functions, including holding (seal-in) circuit and interlocking**<< , plus one normally open (NO) and one normally closed (NC) spare contact for each bypass motor starter, minimum; , _____; or None - N/A>>**.

2.05 SOURCE QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.
B. Factory test controllers in accordance with **<<NEMA ICS 61800-2>>**.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.
B. Verify that ratings of controllers are consistent with indicated requirements.
C. Verify that mounting surfaces are ready to accept controllers.
D. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Install products in accordance with manufacturer's instructions.
B. Install in accordance with **<<NEMA IS 10034>>** and manufacturer's instructions.
C. Do not exceed manufacturer's recommended maximum cable length between controller and motor.

DRAFT

D. Arrange equipment to provide minimum clearances in accordance with manufacturer's instructions and **<<NFPA 70>>**.

E. Provide required support and attachment in accordance with Section **<< 230529>>**.

F. Provide required seismic controls in accordance with Section **<< 230548>>**.

G. Install controllers plumb and level.

H. Unless otherwise indicated, mount floor-mounted controllers on properly sized **<< 3 inch; 4 inch; or _____>>** high concrete pad constructed in accordance with Section **<< 033000; or _____>>**.

I. Provide grounding and bonding in accordance with Section **<< 260526>>**.

J. Install field-installed devices, components, and accessories.

K. Provide fuses complying with Section **<< 262813>>** for fusible switches as indicated.

L. Where accessories are not self-powered, provide control power source as indicated or as required to complete installation.

M. Set field-adjustable settings of controllers and associated components according to installed motor requirements, in accordance with recommendations of manufacturers of controller and load.

N. Identify controllers in accordance with Section **<< 230553>>**.

3.03 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Provide services of manufacturer's authorized representative to **<< observe installation and assist in inspection and testing; perform inspection and testing; or _____>>**. Include manufacturer's reports with submittals.

C. Inspect and test in accordance with **<<NETA ATS>>**, except Section 4.

D. Perform inspections and tests listed in **<<NETA ATS>>**, Section 7.17. Insulation-resistance test on control wiring listed as optional is **<< not required; required; or _____>>**.

E. Fusible Switches: Perform inspections and tests listed in **<<NETA ATS>>**, Section 7.5.1.1.

F. Test for proper interface with other systems.

G. Correct deficiencies and replace damaged or defective controllers or associated components.

H. Submit detailed reports indicating inspection and testing results and corrective actions taken.

3.04 ADJUSTING

A. Adjust tightness of mechanical and electrical connections to manufacturer's recommended torque settings.

3.05 CLEANING

A. Clean dirt and debris from controller enclosures and components according to manufacturer's instructions.

B. Repair scratched or marred exterior surfaces to match original factory finish.

3.06 CLOSEOUT ACTIVITIES

A. See Section **<< 017800 - Closeout Submittals>>**, for closeout submittals.

B. See Section **<< 017900 - Demonstration and Training>>**, for additional requirements.

DRAFT

C. Demonstration: Demonstrate proper operation of controllers to **<<Owner>>**, and correct deficiencies or make adjustments as directed.

D. Training: Train **<<Owner>>**'s personnel on operation, adjustment, and maintenance of controllers and associated devices.

1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
2. Provide minimum of **<< two hours; or _____>>** of training.
3. Instructor: **<< Manufacturer's authorized representative; or _____>>**.
4. Location: **<< At project site; or _____>>**.

3.07 PROTECTION

A. Protect installed controllers from subsequent construction operations.

3.08 MAINTENANCE

A. See Section **<< 017000 - Execution and Closeout Requirements>>**, for additional requirements relating to maintenance service.

END OF SECTION 230934

DRAFT

SECTION 230993
SEQUENCE OF OPERATIONS FOR HVAC CONTROLS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. This section defines the manner and method by which controls function. Requirements for each type of control system operation are specified. Equipment, devices, and system components required for control systems are specified in other sections.

1.02 RELATED REQUIREMENTS

A. Section **<< 019113 - General Commissioning Requirements>>**: Commissioning requirements that apply to all types of work.

B. Section **<< 230913 - Instrumentation and Control Devices for HVAC>>**.

1.03 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Sequence of Operation Documentation: Submit written sequence of operation for entire HVAC system and each piece of equipment.

1. Preface: 1 or 2 paragraph overview narrative of the system describing its purpose, components and function.
2. State each sequence in small segments and give each segment a unique number for referencing in Functional Test procedures; provide a complete description regardless of the completeness and clarity of the sequences specified in Contract Documents.
3. Include at least the following sequences:
   a. Start-up.
   b. Warm-up mode.
   c. Normal operating mode.
   d. Unoccupied mode.
   e. Shutdown.
   f. Capacity control sequences and equipment staging.
   g. Temperature and pressure control, such as setbacks, setups, resets, etc.
   h. Detailed sequences for all control strategies, such as economizer control, optimum start/stop, staging, optimization, demand limiting, etc.
   i. Effects of power or equipment failure with all standby component functions.
   j. Sequences for all alarms and emergency shut downs.
   k. Seasonal operational differences and recommendations.
   l. Interactions and interlocks with other systems.
4. Include initial and recommended values for all adjustable settings, setpoints and parameters that are typically set or adjusted by operating staff; and any other control settings or fixed values, delays, etc. that will be useful during testing and operating the equipment.
5. For packaged controlled equipment, include manufacturer's furnished sequence of operation amplified as required to describe the relationship between the packaged controls and the control system, indicating which points are adjustable control points and which points are only monitored.

DRAFT

C. Control System Diagrams: Submit graphic schematic of the control system showing each control component and each component controlled, monitored, or enabled.
   1. Label with settings, adjustable range of control and limits.
   2. Include flow diagrams for each control system, graphically depicting control logic.
   3. Include the system and component layout of all equipment that the control system monitors, enables or controls, even if the equipment is primarily controlled by packaged or integral controls.
   4. Include draft copies of graphic displays indicating mechanical system components, control system components, and controlled function status and value.
   5. Include all monitoring, control and virtual points specified in elsewhere.
   6. Include a key to all abbreviations.

D. Points List: Submit list of all control points indicating at least the following for each point.
   1. Name of controlled system.
   2. Point abbreviation.
   3. Point description; such as dry bulb temperature, airflow, etc.
   4. Display unit.
   5. Control point or setpoint (Yes / No); i.e. a point that controls equipment and can have its setpoint changed.
   6. Monitoring point (Yes / No); i.e. a point that does not control or contribute to the control of equipment but is used for operation, maintenance, or performance verification.
   7. Intermediate point (Yes / No); i.e. a point whose value is used to make a calculation which then controls equipment, such as space temperatures that are averaged to a virtual point to control reset.
   8. Calculated point (Yes / No); i.e. a “virtual” point generated from calculations of other point values.

E. Designer's Qualification Statement.

F. Project Record Documents: Record actual locations of components and setpoints of controls, including changes to sequences made after submission of shop drawings.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.01 TO BE EDITED BY DESIGN TEAM

END OF SECTION 230993

DRAFT

SECTION 232113
HYDRONIC PIPING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Hydronic system requirements.
B. Heating water and glycol piping, buried.
C. Heating water and glycol piping, above grade.
D. Chilled water piping, buried.
E. Chilled water piping, above grade.
F. Condenser water piping, buried.
G. Condenser water piping, above grade.
H. Equipment drains and overflows.
I. Pipe hangers and supports.
J. Unions, flanges, mechanical couplings, and dielectric connections.
K. Valves:
    1. Ball valves.
    2. Check valves.
L. Flow controls.

1.02 RELATED REQUIREMENTS

A. Section **<< 078400 - Firestopping>>**.
B. Section **<< 083100 - Access Doors and Panels>>**.
C. Section **<< 099123 - Interior Painting>>**.
D. Section **<< 230516 - Expansion Fittings and Loops for HVAC Piping>>**.
E. Section **<< 230719 - HVAC Piping Insulation>>**.
F. Section **<< 232500 - HVAC Water Treatment>>**: Pipe cleaning.

1.03 REFERENCE STANDARDS

A. ASME B16.3 - Malleable Iron Threaded Fittings: Classes 150 and 300.
B. ASME B16.18 - Cast Copper Alloy Solder Joint Pressure Fittings.
C. ASME B16.22 - Wrought Copper and Copper Alloy Solder-Joint Pressure Fittings.
D. ASME B16.51 - Copper and Copper Alloy Press-Connect Pressure Fittings.
E. ASME B31.9 - Building Services Piping.
A. ASME BPVC-IX - Boiler and Pressure Vessel Code, Section IX - Qualification Standard for Welding, Brazing, and Fusing Procedures; Welders; Brazers; and Welding, Brazing, and Fusing Operators.
B. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.

DRAFT

C. ASTM A106/A106M - Standard Specification for Seamless Carbon Steel Pipe for High-Temperature Service.

D. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

E. ASTM A234/A234M - Standard Specification for Piping Fittings of Wrought Carbon Steel and Alloy Steel for Moderate and High Temperature Service.

F. ASTM A536 - Standard Specification for Ductile Iron Castings.

G. ASTM B32 - Standard Specification for Solder Metal.

H. ASTM B88 - Standard Specification for Seamless Copper Water Tube.

I. ASTM B88M - Standard Specification for Seamless Copper Water Tube (Metric).

J. ASTM D1785 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe, Schedules 40, 80, and 120.

K. ASTM D2241 - Standard Specification for Poly(Vinyl Chloride) (PVC) Pressure-Rated Pipe (SDR Series).

L. ASTM D2466 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 40.

M. ASTM D2467 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 80.

N. ASTM D2855 - Standard Practice for the Two-Step (Primer and Solvent Cement) Method of Joining Poly (Vinyl Chloride) (PVC) or Chlorinated Poly (Vinyl Chloride) (CPVC) Pipe and Piping Components with Tapered Sockets.

O. ASTM F708 - Standard Practice for Design and Installation of Rigid Pipe Hangers.

P. ASTM F1476 - Standard Specification for Performance of Gasketed Mechanical Couplings for Use in Piping Applications.

Q. ASTM F3226/F3226M - Standard Specification for Metallic Press-Connect Fittings for Piping and Tubing Systems.

R. AWS A5.8M/A5.8 - Specification for Filler Metals for Brazing and Braze Welding.

S. AWS D10.12M/D10.12 - Guide for Welding Mild Steel Pipe.

T. AWWA C105/A21.5 - Polyethylene Encasement for Ductile-Iron Pipe Systems.

U. AWWA C110/A21.10 - Ductile-Iron and Gray-Iron Fittings.

V. AWWA C111/A21.11 - Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.

W. AWWA C151/A21.51 - Ductile-Iron Pipe, Centrifugally Cast.

X. AWWA C606 - Grooved and Shouldered Joints.

Y. IAPMO (UMC) - 2024 Uniform Mechanical Code.

Z. IAPMO/ANSI/CAN Z1117 - Standard for Press Connections.

AA. ICC (IMC) - International Mechanical Code.

BB. MSS SP-58 - Pipe Hangers and Supports - Materials, Design, Manufacture, Selection, Application, and Installation.

1.04 ADMINISTRATIVE REQUIREMENTS

DRAFT

A. Preinstallation Meeting: Conduct a preinstallation meeting**<< one week; at least one week; _____; or None - N/A>>** prior to the start of the work of this section; require attendance by all affected installers.

B. Sequencing: Ensure that utility connections are achieved in an orderly and expeditious manner.

1.05 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Welders Certificate: Include welders certification of compliance with **<< ASME BPVC-IX; AWS D1.1/D1.1M; or _____>>**.

C. Product Data:
   1. Include data on pipe materials, pipe fittings, valves, and accessories.
   2. Provide manufacturers catalog information.
   3. Indicate valve data and ratings.

D. Manufacturer's Installation Instructions: Indicate hanging and support methods, joining procedures.

E. Project Record Documents: Record actual locations of **<< valves; or _____>>**.

F. Maintenance Data: Include installation instructions, spare parts lists, exploded assembly views.

1.06 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this section, with minimum **<< three; or _____>>** years of**<< documented; or None - N/A>>** experience.

B. Date stamp all castings used for coupling housings, fittings, valve bodies, etc. for quality assurance and traceability.

C. Coupling Manufacturer:
   1. Perform on-site training by factory-trained representative to the Contractor's field personnel in the proper use of grooving tools and installation of grooved joint products.
   2. Periodic job site visits by factory-trained representative to ensure best practices in grooved joint installation.
   3. A distributor's representative is not considered qualified to perform the training.

D. Welder Qualifications: Certify in accordance with **<< ASME BPVC-IX; AWS D1.1/D1.1M; or _____>>**.
   1. Provide certificate of compliance from **<< authority having jurisdiction,; or _____>>** indicating approval of welders.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Accept valves on site in shipping containers with labeling in place. Inspect for damage.

B. Provide temporary protective coating on cast iron and steel valves.

C. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.

D. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.

DRAFT

1.08 FIELD CONDITIONS

A. Do not install underground piping when bedding is wet or frozen.

PART 2 PRODUCTS

2.01 HYDRONIC SYSTEM REQUIREMENTS

A. Comply with **<<ASME B31.9>>** and applicable federal, state, and local regulations.

B. Piping: Provide piping, fittings, hangers, and supports as required, as indicated, and as follows:

1. Where more than one piping system material is specified, provide joining fittings that are compatible with piping materials and ensure that the integrity of the system is not jeopardized.
2. Use only yellow brass nipples whenever jointing dissimilar metals.
3. Grooved mechanical joints **<< may be used in accessible locations only; are required in accessible locations and not permitted in other locations; are required in all locations; may be used in any location; are not permitted in any location; or only used in accessible locations and should not be used in mechanical rooms>>**
   a. Accessible locations include those exposed on interior of building, in pipe chases, and in mechanical rooms, aboveground outdoors, and as approved by **<<Architect>>**.
   b. Grooved mechanical connections and joints comply with **<<AWWA C606>>**.
      1) Ductile Iron: Comply with **<<ASTM A536>>**, Grade 65-45-12.
      2) Steel: Comply with **<<ASTM A106/A106M>>**, Grade B or **<<ASTM A53/A53M>>**.
   c. Use rigid joints unless otherwise indicated.
4. Provide pipe hangers and supports in accordance with **<< ASME B31.9; MSS SP-58; or _____>>** unless indicated otherwise.

C. Pipe-to-Valve and Pipe-to-Equipment Connections: Use **<< flanges; unions; grooved couplings; or _____>>** to allow disconnection of components for servicing; do not use direct welded, soldered, or threaded connections.

D. Valves: Provide valves where indicated:

1. Provide drain valves where indicated, and if not indicated, provide at least at main shut-off, low points of piping, bases of vertical risers, and at equipment. Use **<< 3/4 inch; or ____ inch>><< gate; ball; or ____>>** valves with cap; pipe to nearest floor drain.
2. On discharge of **<< condenser water; or _____>>** pumps, use spring-loaded check valves.
3. Isolate equipment using butterfly valves with lug end flanges or grooved mechanical couplings.
4. For throttling, bypass, or manual flow control services, use **<< globe; ball; butterfly; or _____>>** valves.
5. For throttling and isolation service in chilled and condenser water systems, use only butterfly valves.
6. In **<< heating water; chilled water; condenser water; or _____>>** systems, butterfly valves may be used interchangeably with gate and globe valves.
7. For shut-off and to isolate parts of systems or vertical risers, use **<< gate; ball; butterfly; or _____>>** valves.
8. For throttling service, use plug cocks. Use non-lubricated plug cocks only when shut-off or isolating valves are also provided.

DRAFT

E. Welding Materials and Procedures: Comply with **<<ASME BPVC-IX>>**.

2.02 HEATING WATER<< AND GLYCOL; OR NONE - N/A>> PIPING, BURIED

A. Steel Pipe: **<<ASTM A53/A53M>>**, Schedule 40, black**<< , with AWWA C105/A21.5 polyethylene jacket, or double layer, half-lapped polyethylene tape; , _____; or None - N/A>>**.
   1. Fittings: **<<ASTM A234/A234M>>**, wrought steel welding type**<< with double layer, half-lapped polyethylene tape; _____; or None - N/A>>**.
   2. Joints: Welded in accordance with **<<AWS D10.12M/D10.12>>**.
   3. Casing: **<< Closed glass cell insulation; Polyurethane insulation with high-density polyethylene jacket and heat shrink sleeves; or _____>>**.

B. Steel Pipe Sizes **<< 12 inches>>** and Greater: **<<ASTM A53/A53M>>**, **<< 3/8 inch>>** wall, black**<< with AWWA C105/A21.5 polyethylene jacket, or double layer, half-lapped polyethylene tape; _____; or None - N/A>>**.
   1. Fittings: **<<ASTM A234/A234M>>**, wrought steel welding type**<< with double layer, half-lapped polyethylene tape; None - N/A; or _____>>**.
   2. Joints: Welded in accordance with **<<AWS D10.12M/D10.12>>**.
   3. Casing: **<< Closed glass cell insulation; Polyurethane insulation with high density polyethylene jacket and heat shrink sleeves; or _____>>**.

C. Copper Tube: **<<ASTM B88>>** (**<<ASTM B88M>>**), **<< Type K; Type L; or _____>>**, drawn temper.
   1. Fittings: **<<ASME B16.22>>**, wrought copper.
   2. Mechanical Press Sealed Fittings: **<<ASME B16.51>>** or **<<IAPMO/ANSI/CAN Z1117>>**, **<<ICC (IMC)>>**, and **<<IAPMO (UMC)>>** approved, with EPDM seals.
      a. Manufacturers:
         1) Bonomi North America, Inc**<< ; BONOMI PRESS; ; _____; or None - N/A>>**: www.bonominorthamerica.com/#sle.
         2) FNW**<< ; Copper Press; ; _____; or None - N/A>>**: www.fnw.com/#sle.
         3) Mueller Streamline, Co**<< ; PRS; ; _____; or None - N/A>>**: www.muellerstreamline.com/#sle.
         4) NIBCO INC**<< ; Press System; ; _____; or None - N/A>>**: www.nibco.com/#sle.
         5) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
   3. Joints: **<< Solder, lead free, ASTM B32 HB alloy (95-5 tin-antimony), or tin and silver.; Braze, AWS A5.8M/A5.8 BCuP copper/silver alloy.; or _____ .>>** (15% silver)
   4. Casing: **<< Closed glass cell insulation; Polyurethane insulation with high density polyethylene jacket and heat shrink sleeves; or _____>>**.

2.03 HEATING WATER<< AND GLYCOL; OR NONE - N/A>> PIPING, ABOVE GRADE

A. Steel Pipe: **<<ASTM A53/A53M>>**, Schedule 40, black, using one of the following joint types:
   1. Welded Joints: **<<ASTM A234/A234M>>**, wrought steel welding type fittings; **<<AWS D10.12M/D10.12>>** welded.
   2. Threaded Joints: **<<ASME B16.3>>**, malleable iron fittings.
   3. Grooved Joints: **<<AWWA C606>>** grooved pipe, fittings of same material, and mechanical couplings.

DRAFT

4. Mechanical Press Sealed Fittings: **<<ASTM F3226/F3226M>>**, **<<ICC (IMC)>>**, and **<<IAPMO (UMC)>>** approved, with EPDM seals.
   a. Manufacturers:
      1) Mueller Streamline, Co**<< ; STL; ; _____; or None - N/A>>**: www.muellerstreamline.com/#sle.
      2) NIBCO INC**<< ; Bench Press; ; _____; or None - N/A>>**: www.nibco.com/#sle.
      3) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Steel Pipe Sizes **<< 12 Inches>>** and Greater: **<<ASTM A53/A53M>>**, **<< 3/8 inch>>** wall, black, using one of the following joint types:
   1. Welded Joints: **<<ASTM A234/A234M>>**, wrought steel welding type fittings; **<<AWS D10.12M/D10.12>>** welded.
   2. Threaded Joints: **<<ASTM A536>>** ductile iron fittings.
   3. Grooved Joints: **<<AWWA C606>>** grooved pipe, fittings of same material, and mechanical couplings.

C. Copper Tube: **<<ASTM B88>>** (**<<ASTM B88M>>**), **<< Type K; Type L; or _____>>**, drawn temper, using one of the following joint types:
   1. Solder Joints: **<<ASME B16.18>>** cast brass/bronze or **<<ASME B16.22>>** solder wrought copper fittings.
      a. Solder: **<<ASTM B32>>** lead-free solder, HB alloy (95-5 tin-antimony) or tin and silver.
      b. Braze: **<<AWS A5.8M/A5.8>>** BCuP copper/silver alloy. (15% silver)
   2. Grooved Joints: **<<AWWA C606>>** grooved tube, fittings of same material, and copper-tube-dimension mechanical couplings.
   3. Tee Connections: Mechanically extracted collars with notched and dimpled branch tube.
   4. Mechanical Press Sealed Fittings: **<<ASME B16.51>>** or **<<IAPMO/ANSI/CAN Z1117>>**, **<<ICC (IMC)>>**, and **<<IAPMO (UMC)>>** approved, with EPDM seals.
      a. Manufacturers:
         1) Apollo Valves**<< ; _____; or None - N/A>>**: www.apollovalves.com/#sle.
         2) Bonomi North America, Inc**<< ; BONOMI PRESS; ; _____; or None - N/A>>**: www.bonominorthamerica.com/#sle.
         3) FNW**<< ; Copper Press; ; _____; or None - N/A>>**: www.fnw.com/#sle.
         4) Mueller Streamline, Co**<< ; PRS; ; _____; or None - N/A>>**: www.muellerstreamline.com/#sle.
         5) NIBCO INC**<< ; Press System; ; _____; or None - N/A>>**: www.nibco.com/#sle.
         6) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.04 CHILLED WATER PIPING, BURIED

A. Steel Pipe: **<<ASTM A53/A53M>>**, Schedule 40, black**<< with AWWA C105/A21.5 polyethylene jacket, or double layer, half-lapped polyethylene tape; None - N/A; or _____>>**.
   1. Fittings: **<<ASTM A234/A234M>>**, wrought steel welding type**<< with double layer, half-lapped polyethylene tape; _____; or None - N/A>>**.
   2. Joints: Welded in accordance with **<<AWS D10.12M/D10.12>>**.

DRAFT

3. Casing: **<< Closed glass cell insulation; Polyurethane insulation with high density polyethylene jacket and heat shrink sleeves; or _____>>**.

B. Steel Pipe Sizes **<< 12 Inches>>** and Greater: **<<ASTM A53/A53M>>**, **<< 3/8 inch>>** wall, black**<< with AWWA C105/A21.5 polyethylene jacket, or double layer, half-lapped polyethylene tape; _____; or None - N/A>>**.
1. Fittings: **<<ASTM A234/A234M>>**, wrought steel welding type**<< with double layer, half-lapped polyethylene tape; None - N/A; or _____>>**.
2. Joints: Welded in accordance with **<<AWS D10.12M/D10.12>>**.
3. Casing: **<< Closed glass cell insulation; Polyurethane insulation with high density polyethylene jacket and heat shrink sleeves; or _____>>**.

C. Copper Tube: **<<ASTM B88>>** (**<<ASTM B88M>>**), **<< Type K; Type L; or _____>>**, drawn temper.
1. Fittings: **<<ASME B16.22>>**, wrought copper.
2. Mechanical Press Sealed Fittings: **<<ASME B16.51>>** or **<<IAPMO/ANSI/CAN Z1117>>**, **<<ICC (IMC)>>**, and **<<IAPMO (UMC)>>** approved, with EPDM seals.
   a. Manufacturers:
      1) Bonomi North America, Inc**<< ; BONOMI PRESS; ; _____; or None - N/A>>**: www.bonominorthamerica.com/#sle.
      2) FNW**<< ; Copper Press; ; _____; or None - N/A>>**: www.fnw.com/#sle.
      3) Mueller Streamline, Co**<< ; PRS; ; _____; or None - N/A>>**: www.muellerstreamline.com/#sle.
      4) NIBCO INC**<< ; Press System; ; _____; or None - N/A>>**: www.nibco.com/#sle.
      5) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
3. Joints: **<< Solder, lead-free, ASTM B32 HB alloy (95-5 tin-antimony), or tin and silver.; Braze, AWS A5.8M/A5.8 BCuP silver/phosphorus/copper alloy.; or _____ .>>**
4. Casing: **<< Closed glass cell insulation; Polyurethane insulation with high density polyethylene jacket and heat shrink sleeves; or _____>>**.

D. Ductile Iron Pipe: **<<AWWA C151/A21.51>>**.
1. Fittings: **<<AWWA C110/A21.10>>**, ductile iron, standard thickness.
2. Joints: **<<AWWA C111/A21.11>>**, Styrene-butadiene rubber (SBR) or vulcanized SBR gasket with **<< 3/4-inch>>** diameter rods.

2.05 CHILLED WATER PIPING, ABOVE GRADE

A. Steel Pipe: **<<ASTM A53/A53M>>**, Schedule 40, black; using one of the following joint types:
1. Welded Joints: **<<ASTM A234/A234M>>**, wrought steel welding type fittings; **<<AWS D10.12M/D10.12>>** welded.
2. Threaded Joints: **<<ASME B16.3>>**, malleable iron fittings.
3. Grooved Joints: **<<AWWA C606>>** grooved pipe, fittings of same material, and mechanical couplings.
4. Mechanical Press Sealed Fittings: **<<ASTM F3226/F3226M>>**, **<<ICC (IMC)>>**, and **<<IAPMO (UMC)>>** approved, with EPDM seals.
   a. Manufacturers:
      1) Mueller Streamline, Co**<< ; STL; ; _____; or None - N/A>>**: www.muellerstreamline.com/#sle.

DRAFT

2) NIBCO INC**<< ; Bench Press; ; _____; or None - N/A>>**: www.nibco.com/#sle.
3) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Steel Pipe Sizes **<< 12 Inches>>** and Greater: **<<ASTM A53/A53M>>**, **<< 3/8 inch>>** wall, black; using one of the following joint types:
1. Welded Joints: **<<ASTM A234/A234M>>**, wrought steel welding type fittings; **<<AWS D10.12M/D10.12>>** welded.
2. Threaded Joints: **<<ASTM A536>>** ductile iron fittings.
3. Grooved Joints: **<<AWWA C606>>** grooved pipe, fittings of same material, and mechanical couplings.

C. Copper Tube: **<<ASTM B88>>** (**<<ASTM B88M>>**), **<< Type K; Type L; or _____>>**, drawn temper.
1. Solder Joints: **<<ASME B16.18>>** cast brass/bronze or **<<ASME B16.22>>**, solder wrought copper fittings.
a. Solder: **<<ASTM B32>>** lead-free solder, HB alloy (95-5 tin-antimony) or tin and silver.
b. Braze: **<<AWS A5.8M/A5.8>>** BCuP copper/silver alloy. (15% silver)
2. Grooved Joints: **<<AWWA C606>>** grooved tube, fittings of same material, and copper-tube-dimension mechanical couplings.
3. Tee Connections: Mechanically extracted collars with notched and dimpled branch tube.
4. Mechanical Press Sealed Fittings: **<<ASME B16.51>>** or **<<IAPMO/ANSI/CAN Z1117>>**, **<<ICC (IMC)>>**, and **<<IAPMO (UMC)>>** approved, with EPDM seals.
a. Manufacturers:
1) Apollo Valves**<< ; _____; or None - N/A>>**: www.apollovalves.com/#sle.
2) Bonomi North America, Inc**<< ; BONOMI PRESS; ; _____; or None - N/A>>**: www.bonominorthamerica.com/#sle.
3) FNW**<< ; Copper Press; ; _____; or None - N/A>>**: www.fnw.com/#sle.
4) Mueller Streamline, Co**<< ; PRS; ; _____; or None - N/A>>**: www.muellerstreamline.com/#sle.
5) NIBCO INC**<< ; Press System; ; _____; or None - N/A>>**: www.nibco.com/#sle.
6) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.06 CONDENSER WATER PIPING, BURIED

A. PVC Pipe: **<<ASTM D1785>>**, Schedule 80, or **<<ASTM D2241>>**, SDR 21 or 26.
1. Fittings: **<<ASTM D2466>>** or **<<ASTM D2467>>**, PVC.
2. Joints: Solvent welded in accordance with **<<ASTM D2855>>**.

2.07 CONDENSER WATER PIPING, ABOVE GRADE

A. PVC Pipe: **<<ASTM D1785>>**, Schedule 80, or **<<ASTM D2241>>**, SDR 21 or 26.
1. Fittings: **<<ASTM D2466>>** or **<<ASTM D2467>>**, PVC.
2. Joints: Solvent welded in accordance with **<<ASTM D2855>>**.

DRAFT

2.08 EQUIPMENT DRAINS AND OVERFLOWS

A. Steel Pipe: **<<ASTM A53/A53M>>**, Schedule 40 galvanized; using one of the following joint types:
   1. Threaded Joints: Galvanized cast iron, or **<<ASME B16.3>>** malleable iron fittings.

B. Copper Tube: **<<ASTM B88>>** (**<<ASTM B88M>>**), Type **<< K (A); M (C); L (B); or _____>>**, drawn; using one of the following joint types:
   1. Solder Joints: **<<ASME B16.18>>** cast brass/bronze or **<<ASME B16.22>>** solder wrought copper fittings; **<<ASTM B32>>** lead-free solder, HB alloy (95-5 tin-antimony) or tin and silver. (15% silver)

C. PVC Pipe: **<<ASTM D1785>>**, Schedule 40, or **<<ASTM D2241>>**, SDR 21 or 26.
   1. Fittings: **<<ASTM D2466>>** or D2467, PVC.
   2. Joints: Solvent welded in accordance with **<<ASTM D2855>>**.

2.09 PIPE HANGERS AND SUPPORTS

A. Provide hangers and supports that comply with **<<MSS SP-58>>**.
   1. If type of hanger or support for a particular situation is not indicated, select appropriate type using **<<MSS SP-58>>** recommendations.
   2. Hangers for Pipe Sizes **<< 1/2 to 1-1/2 Inches>>**: **<< Malleable iron; Carbon steel; or _____>>**, adjustable swivel, split ring.
   3. Hangers for Cold Pipe Sizes **<< 2 Inches>>** and Greater: Carbon steel, adjustable, clevis.
   4. Hangers for Hot Pipe Sizes **<< 2 to 4 Inches>>**: Carbon steel, adjustable, clevis.
   5. Hangers for Hot Pipe Sizes **<< 6 Inches>>** and Greater: Adjustable steel yoke, cast iron roll, double hanger.
   6. Multiple or Trapeze Hangers: Steel channels with welded spacers and hanger rods.
   7. Multiple or Trapeze Hangers for Hot Pipe Sizes **<< 6 Inches>>** and Greater: Steel channels with welded spacers and hanger rods, cast iron roll.
   8. Wall Support for Pipe Sizes to **<< 3 Inches>>**: Cast iron hook.
   9. Wall Support for Pipe Sizes **<< 4 Inches>>** and Greater: Welded steel bracket and wrought steel clamp.
   10. Wall Support for Hot Pipe Sizes **<< 6 Inches>>** and Greater: Welded steel bracket and wrought steel clamp with adjustable steel yoke and cast iron roll.
   11. Vertical Support: Steel riser clamp.
   12. Floor Support for Cold Pipe: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.
   13. Floor Support for Hot Pipe Sizes to **<< 4 Inches>>**: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.
   14. Floor Support for Hot Pipe Sizes **<< 6 Inches>>** and Greater: Adjustable cast iron roll and stand, steel screws, and concrete pier or steel support.
   15. Copper Pipe Support: Carbon steel ring, adjustable, copper plated.
   16. Hanger Rods: Mild steel threaded both ends, threaded one end, or continuous threaded.
   17. Inserts: Malleable iron case of**<< galvanized; None - N/A; or _____>>** steel shell and expander plug for threaded connection with lateral adjustment, top slot for reinforcing rods, lugs for attaching to forms; size inserts to suit threaded hanger rods.

DRAFT

B. In grooved installations, use rigid couplings with offsetting angle-pattern bolt pads or with wedge-shaped grooves in header piping to permit support and hanging in accordance with **<<ASME B31.9>>**.

C. Rooftop Supports for Low-Slope Roofs: Steel pedestals with bases that rest on top of roofing membrane, not requiring any attachment to the roof structure and not penetrating the roofing assembly, with support fixtures as specified; and as follows:

1. Bases: High-density polypropylene.
2. Base Sizes: As required to distribute load sufficiently to prevent indentation of roofing assembly.
3. Steel Components: Stainless steel or carbon steel hot-dip galvanized after fabrication in accordance with **<<ASTM A123/A123M>>**.
4. Attachment/Support Fixtures: As recommended by manufacturer, same type as indicated for equivalent indoor hangers and supports; corrosion-resistant material.
5. Height: Provide minimum clearance of **<< 6 inches; or _____ inches>>** under pipe to top of roofing.
6. Manufacturers:
   a. PHP Systems/Design**<< ; _____; or None - N/A>>**: www.phpsd.com/#sle.
   b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.10 UNIONS, FLANGES, MECHANICAL COUPLINGS, AND DIELECTRIC CONNECTIONS

A. Unions for Pipe of **<< 2 Inches>>** and Less:

1. Ferrous Piping: **<< 150 psi>><< brass; malleable iron; or _____>>**, **<< threaded; sweat; press; or _____>>**.
2. Copper Pipe: Bronze, soldered joints.

B. Flanges for Pipe **<< 2 Inches>>** and Greater:

1. Ferrous Piping: **<< 150 psig>>** forged steel, slip-on.
2. Copper Piping: Bronze.
3. Gaskets: **<< 1/16 inch>>** thick, preformed neoprene.

C. Mechanical Couplings for Grooved and Shouldered Joints: Two or more curved housing segments with continuous key to engage pipe groove, circular C-profile gasket, and bolts to secure and compress gasket.

1. Dimensions and Testing: In accordance with **<<AWWA C606>>**.
2. Mechanical Couplings: Comply with **<<ASTM F1476>>**.
3. Housing Material: **<< Ductile iron; or _____>><< , galvanized; or None - N/A>>** complying with **<<ASTM A536>>**.
4. Gasket Material: EPDM suitable for operating temperature range from **<< minus 30 degrees F>>** to **<< 230 degrees F>>**.
5. Bolts and Nuts: Hot dipped galvanized or zinc-electroplated steel.
6. When pipe is field grooved, provide coupling manufacturer's grooving tools.

D. Dielectric Connections:

1. Only use dielectric yellow brass nipples.

2.11 BALL VALVES

A. Manufacturers:

1. Anvil International**<< ; _____; or None - N/A>>**: www.anvilintl.com/#sle.

DRAFT

2. Apollo Valves**<< ; _____; or None - N/A>>**: www.apollovalves.com/#sle.
3. Shurjoint Piping Products, Inc**<< ; _____; or None - N/A>>**: www.shurjoint.com/#sle.
4. Victaulic Company**<< ; _____; or None - N/A>>**: www.victaulic.com/#sle.
5. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Where piping/ valve is insulated, provided extensions on operators as required for instthickness.

C. Up To and Including **<< 2 Inches>>**:
1. **<< Bronze; Stainless steel; Brass; or _____>><< one; or two>>** piece body, **<< chrome plated brass; stainless steel; or _____>>** ball, teflon seats and stuffing box ring, lever handle**<< with balancing stops; None - N/A; or _____>>**, **<< solder; threaded; or _____>>** ends**<< with union; None - N/A; or _____>>**. Full port.

D. Over **<< 2 Inches>>**:
1. **<< Ductile iron; Cast steel; or _____>>** body, chrome plated**<< stainless; or None - N/A>>** steel ball, **<< teflon; Virgin TFE; or _____>>** seat and stuffing box seals, **<< lever handle; gear operated; or _____>>**, **<< flanged; grooved; or _____>>** ends, rated to **<< 800 psi; or ____ psi>>**. Ful

2.12 SWING CHECK VALVES

A. Manufacturers:
1. Anvil International**<< ; _____; or None - N/A>>**: www.anvilintl.com/#sle.
2. Apollo Valves**<< ; _____; or None - N/A>>**: www.apollovalves.com/#sle.
3. Shurjoint Piping Products, Inc**<< ; _____; or None - N/A>>**: www.shurjoint.com/#sle.
4. Victaulic Company**<< ; _____; or None - N/A>>**: www.victaulic.com/#sle.
5. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Up To and Including **<< 2 Inches>>**:
1. Bronze body, bronze trim, bronze rotating swing disc, with composition disc, **<< solder; threaded; or _____>>** ends.

C. Over **<< 2 Inches>>**:
1. Iron body, **<< bronze; or _____>>** trim, **<< stainless steel; bronze; bronze faced rotating; or _____>>** swing disc, renewable disc and seat, **<< flanged; grooved; or _____>>** ends.

2.13 SPRING LOADED CHECK VALVES

A. Manufacturers:
1. Anvil International**<< ; _____; or None - N/A>>**: www.anvilintl.com/#sle.
2. Shurjoint Piping Products, Inc**<< ; _____; or None - N/A>>**: www.shurjoint.com/#sle.
3. Victaulic Company**<< ; _____; or None - N/A>>**: www.victaulic.com/#sle.
4. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Iron body, bronze trim, split plate, hinged with stainless steel spring, resilient seal bonded to body, wafer, or threaded lug ends.

2.14 AUTOMATIC FLOW-CONTROL VALVES

A. Manufacturers:
1. Bell & Gossett
2. Flow Design, Inc.

DRAFT

3. Griswold Controls
4. Hays Fluid Controls
5. Nexus
6. NuTech Hydronic Speciality Products
7. Pro Hydronic Specialties
8. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Factory set to maintain constant flow with plus or minus 10 percent over system pressure fluctuations. Each valve shall have an identification tag attached by chain, and be factory marked with the zone or equipment identification, valve number, and flow rate. Valve shall be line size and as follows:
1. Gray-iron or brass body, designed for 175 psig at 200 deg F or; brass or ferrous-metal body, designed for 300 psig at 250 deg F.
2. Stainless steel or nickel chrome plated brass, tamperproof, self-cleaning, piston-spring assembly, or polyphenylsulfone orifice seat with polymer diaphragm (Hays) easily removable for inspection or replacement.
3. "Y" or other configuration permitting cartridge replacement without valve removal for sizes 2" and smaller.
4. Unions and isolation valves or other configuration permitting cartridge replacement with valve removal for sizes larger than 2".
5. Flow and pressure differential adjustable by cartridge replacement.
6. Minimum pressure differential shall not exceed 2 psi. (Unless otherwise indicated)
7. Maximum pressure differential shall not be less than 32 psi. (Unless otherwise indicated)
8. Flow rates shall be as indicated on equipment schedules on the drawings.
9. Valves shall be installed in return piping.
10. Ball valves and unions included as part of a valve package may be used in place of ball valves and unions specified and indicated on the drawings only when in positions indicated. Ball valves shall be provided with a solid stainless-steel ball.
11. Provide a #20 mesh Y-strainer with blow-down valve and garden hose connection between the supply side valve and equipment

PART 3 EXECUTION

3.01 PREPARATION

A. Ream pipe and tube ends. Remove burrs. **<< Bevel plain end ferrous pipe.; None - N/A; or _____ .>>**

B. Prepare pipe for grooved mechanical joints as required by coupling manufacturer.

C. Remove scale and dirt on inside and outside before assembly.

D. Prepare piping connections to equipment using jointing system specified.

E. Keep open ends of pipe free from scale and dirt. Protect open ends with temporary plugs or caps.

F. After completion, fill, clean, and treat systems. See Section **<< 232500>>** for additional requirements.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

DRAFT

B. Install heating water, glycol, chilled water, condenser water, and engine exhaust piping to **<<ASME B31.9>>** requirements.

C. PVC Pipe: Make solvent-welded joints in accordance with **<<ASTM D2855>>**.

D. Route piping in orderly manner, parallel to building structure, and maintain gradient.

E. Install piping to conserve building space and to avoid interference with use of space.

F. Group piping whenever practical at common elevations.

G. Sleeve pipe passing through partitions, walls, and floors.

H. Install firestopping to preserve fire resistance rating of partitions and other elements, using materials and methods specified**<< in Section 078400; in Section _____; _____; or None - N/A>>**.

I. Slope piping and arrange to drain at low points.

J. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment. See Section **<< 230516>>**.
   1. Flexible couplings may be used in header piping to accommodate thermal growth, thermal contraction in lieu of expansion loops.
   2. Use flexible couplings in expansion loops.

K. Grooved Joints:
   1. Install in accordance with the manufacturer's latest published installation instructions.
   2. Gaskets to be suitable for the intended service, molded, and produced by the coupling manufacturer.

L. Inserts:
   1. Provide inserts for placement in concrete formwork.
   2. Provide inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.
   3. Provide hooked rod to concrete reinforcement section for inserts carrying pipe over **<< 4 inches>>**.
   4. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.
   5. Where inserts are omitted, drill through concrete slab from below and provide through-bolt with recessed square steel plate and nut **<< above; flush with top of; recessed into and grouted flush with; or _____>>** slab.

M. Pipe Hangers and Supports:
   1. Install in accordance with **<< ASME B31.9; ASTM F708; MSS SP-58; or _____>>**.
   2. Support horizontal piping as scheduled.
   3. Install hangers to provide minimum **<< 1/2-inch>>** space between finished covering and adjacent work.
   4. Place hangers within **<< 12 inches>>** of each horizontal elbow.
   5. Use hangers with **<< 1-1/2 inches>>** minimum vertical adjustment. Design hangers for pipe movement without disengagement of supported pipe.
   6. Support vertical piping at every**<< other; None - N/A; or _____>>** floor. Support riser piping independently of connected horizontal piping.
   7. Where several pipes can be installed in parallel and at same elevation, provide multiple or trapeze hangers.
   8. Provide **<< copper plated hangers and supports for copper piping; sheet lead packing between hanger or support and piping; or _____>>**.

DRAFT

9. Prime coat exposed steel hangers and supports.**<< See Section 09 9123.; _____; or None - N/A>>** Hangers and supports located in crawl spaces, pipe shafts, and suspended ceiling spaces are not considered exposed.

N. Provide clearance in hangers and from structure and other equipment for installation of insulation and access to valves and fittings. See Section **<< 230719>>**.

O. Provide access where valves and fittings are not exposed. **<< Coordinate size and location of access doors with Section 083100 .; None - N/A; or _____ .>>**

P. Use eccentric reducers to maintain top of pipe level.

Q. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc-rich primer to welds.

R. Prepare unfinished pipe, fittings, supports, and accessories, ready for finish painting. See Section **<< 099123>>**.

S. Install valves with stems upright or horizontal, not inverted.

3.03 PIPING APPLICATIONS

A. Condensate-Drain Piping: Type DWV, drawn-temper copper tubing, wrought-copper fittings, and soldered joints or Schedule 40 PVC or CPVC plastic pipe and fittings with solvent-welded joints.
1. Exceptions where PVC, CPVC, and other forms of plastic are not permitted:
2. Jails/Prisons.
3. Plenums.
4. Locations prohibited by codes or standards.

B. Air-Vent Piping:
1. Inlet: Same as service where installed.
2. Outlet: Type K, annealed-temper copper tubing with soldered or flared joints.

C. Safety-Valve-Inlet and -Outlet Piping: Same materials and joining methods as for piping specified for the service in which safety valve is installed.

D. Miscellaneous: Same materials and joining methods as connecting service.

3.04 HANGERS AND SUPPORTS

A. Hanger Spacing for Copper Tubing.
1. **<< 1/2 Inch>>** and **<< 3/4 inch>>**: Maximum span, **<< 5 feet>>**; minimum rod size, **<< 1/4 inch>>**.
2. **<< 1 Inch>>**: Maximum span, **<< 6 feet>>**; minimum rod size, **<< 1/4 inch>>**.
3. **<< 1-1/2 Inches>>** and **<< 2 Inches>>**: Maximum span, **<< 8 feet>>**; minimum rod size, **<< 3/8 inch>>**.
4. **<< 2-1/2 Inches>>**: Maximum span, **<< 9 feet>>**; minimum rod size, **<< 3/8 inch>>**.
5. **<< 3 Inches>>**: Maximum span, **<< 10 feet>>**; minimum rod size, **<< 3/8 inch>>**.
6. **<< 4 Inches>>**: Maximum span, **<< 12 feet>>**; minimum rod size, **<< 1/2 inch>>**.
7. **<< 6 Inches>>**: Maximum span, **<< 14 feet>>**; minimum rod size, **<< 1/2 inch>>**.
8. **<< 8 Inches>>**: Maximum span, **<< 16 feet>>**; minimum rod size, **<< 5/8 inch>>**.
9. **<< 10 Inches>>**: Maximum span, **<< 18 feet>>**; minimum rod size, **<< 3/4 inch>>**.
10. **<< 12 inches>>**: Maximum span, **<< 19 feet>>**; minimum rod size, **<< 7/8 inch>>**.

B. Hanger Spacing for Steel Piping.

DRAFT

1. **<< 1/2 Inch>>**, **<< 3/4 Inch>>**, and **<< 1 Inch>>**: Maximum span, **<< 7 feet>>**; minimum rod size, **<< 1/4 inch>>**.
2. **<< 1-1/4 Inches>>**: Maximum span, **<< 8 feet>>**; minimum rod size, **<< 3/8 inch>>**.
3. **<< 1-1/2 Inches>>**: Maximum span, **<< 9 feet>>**; minimum rod size, **<< 3/8 inch>>**.
4. **<< 2 Inches>>**: Maximum span, **<< 10 feet>>**; minimum rod size, **<< 3/8 inch>>**.
5. **<< 2-1/2 Inches>>**: Maximum span, **<< 11 feet>>**; minimum rod size, **<< 3/8 inch>>**.
6. **<< 3 Inches>>**: Maximum span, **<< 12 feet>>**; minimum rod size, **<< 3/8 inch>>**.
7. **<< 4 Inches>>**: Maximum span, **<< 14 feet>>**; minimum rod size, **<< 1/2 inch>>**.
8. **<< 6 Inches>>**: Maximum span, **<< 17 feet>>**; minimum rod size, **<< 1/2 inch>>**.
9. **<< 8 Inches>>**: Maximum span, **<< 19 feet>>**; minimum rod size, **<< 5/8 inch>>**.
10. **<< 10 Inches>>**: Maximum span, **<< 20 feet>>**; minimum rod size, **<< 3/4 inch>>**.
11. **<< 12 Inches>>**: Maximum span, **<< 23 feet>>**; minimum rod size, **<< 7/8 inch>>**.
12. **<< 14 Inches>>**: Maximum span, **<< 25 feet>>**; minimum rod size, **<< 1 inch>>**.
13. **<< 16 Inches>>**: Maximum span, **<< 27 feet>>**; minimum rod size, **<< 1 inch>>**.
14. **<< 18 Inches>>**: Maximum span, **<< 28 feet>>**; minimum rod size, **<< 1-1/4 inches>>**.
15. **<< 20 Inches>>**: Maximum span, **<< 30 feet>>**; minimum rod size, **<< 1-1/4 inches>>**.

C. Hanger Spacing for Plastic Piping: Space hangers according to pipe manufacturer's written instructions for service conditions. Avoid point loading. Space and install hangers with the fewest practical rigid anchor points.

END OF SECTION 232113

DRAFT

SECTION 232113.33
GROUND-LOOP HEAT-PUMP PIPING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Ground-coupled heat exchanger and connections to building piping system, serving:
   1. Hydronic piping system specified in Section **<< 232113>>**.
   2. Refrigerant piping system specified in Section **<< 232300>>**.
   3. Heat pump specified in Section **<< _____>>**.
   4. Desuperheater, to supply hot water, specified in Section **<< _____>>**.

1.02 RELATED REQUIREMENTS

A. Section **<< 232113 - Hydronic Piping>>**: Building heating piping system.

B. Section **<< 232300 - Refrigerant Piping>>**: Copper piping and fittings for direct exchange ground-coupled heat exchanger.

C. Section **<< 312316.26 - Rock Removal>>**: Procedures for removal of rock during execution of work of this section.

D. Section **<< _____>>** - Water-to-Air Heat Pumps.

1.03 REFERENCE STANDARDS

A. APHA (EWWW) - Standard Methods for the Examination of Water and Wastewater.

B. ASTM B88 - Standard Specification for Seamless Copper Water Tube.

C. ASTM B88M - Standard Specification for Seamless Copper Water Tube (Metric).

D. ASTM B280 - Standard Specification for Seamless Copper Tube for Air Conditioning and Refrigeration Field Service.

E. ASTM D2683 - Standard Specification for Socket-Type Polyethylene Fittings for Outside Diameter-Controlled Polyethylene Pipe and Tubing.

F. ASTM D2837 - Standard Test Method for Obtaining Hydrostatic Design Basis for Thermoplastic Pipe Materials or Pressure Design Basis for Thermoplastic Pipe Products.

G. ASTM D3035 - Standard Specification for Polyethylene (PE) Plastic Pipe (DR-PR) Based on Controlled Outside Diameter.

H. ASTM D3261 - Standard Specification for Butt Heat Fusion Polyethylene (PE) Plastic Fittings for Polyethylene (PE) Plastic Pipe and Tubing.

I. ASTM D3350 - Standard Specification for Polyethylene Plastics Pipe and Fittings Materials.

J. ASTM F714 - Standard Specification for Polyethylene (PE) Plastic Pipe (DR-PR) Based on Outside Diameter.

K. ASTM F1055 - Standard Specification for Electrofusion Type Polyethylene Fittings for Outside Diameter Controlled Polyethylene and Crosslinked Polyethylene (PEX) Pipe and Tubing.

L. IGSHPA (GROUT) - Grouting Procedures for GHP Systems; International Ground Source Heat Pump Association.

M. IGSHPA (SLINK) - Closed-Loop Geothermal Systems Slinky Installation Guide; International Ground Source Heat Pump Association.

DRAFT

N. PPI TR-4 - PPI HSB Listing of Hydrostatic Design Basis (HDB), Hydrostatic Design Stress (HDS), Strength Design Basis (SDB), Pressure Design Basis (PDB) and Minimum Required Strength (MRS) Ratings for Thermoplastic Piping Materials or Pipe.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene **<< one week; or _____>>** before starting work of this section. Require attendance by all installers involved with site work and HVAC work.

1.05 SUBMITTALS

A. Product Data, Polyethylene Piping: Provide manufacturer's data for piping and pipe fittings, showing compliance with specified requirements.
   1. Provide manufacturer's recommendations for fusion jointing.
   2. Include certification of long term hydrostatic basis, or test reports.

B. Product Data, Heat Exchange Fluid: Provide data showing compliance with specified requirements.
   1. Provide manufacturer's Material Data Safety Sheets.
   2. Provide results of biodegradability studies conducted in accordance with **<<APHA (EWWW)>>**:
      a. Statement of ecological behavior.
      b. Total oxygen demand, in **<< pounds>>** of oxygen per **<< pound>>** of fluid.
      c. Percent of fluid degraded in five days.

C. Product Data, Grout and Slurry: Provide information on thermal conductivity of proposed materials.

D. Shop Drawings: Show complete piping layout, water table, water level, depths of excavation, final depths of piping, backfill placement, point of entrance to building, point of connection to equipment, test point locations, and fittings used for all joints and connections.

E. Design Calculations: Submit all design calculations along with drawings.

F. Samples: Provide **<< one; or __>><< 2-inch; or __ -inch>>** length of pipe in selected size.

G. Soil**<< and Rock; _____; or None - N/A>>** Samples: Provide **<< one sample; two samples; or _____>>** from the area of proposed installation.

H. Test Reports, Soil: Indicate test methods and results for all tests performed on soil samples to determine stability, conductivity, and thermal values.

I. Test Reports, Piping: Indicate test method and results of hydrostatic pressure tests.

J. Record Documents: Record actual locations of all underground piping installed relative to **<<Owner>>**'s permanent structure on same property.

K. Operation and Maintenance Data: Provide procedures for pressurizing, charging, and isolation for equipment replacement.

1.06 QUALITY ASSURANCE

A. Designer Qualifications: **<< Licensed Professional Engineer; IGSHPA-certified contractor; or _____>>**, regularly engaged in the design of systems of the type and capacity specified in this section, with not less than **<< three; or _____>>** years of **<< documented; _____; or None - N/A>>** experience**<< , and accredited by IGSHPA; , _____; or None - N/A>>**.

DRAFT

B. Installer Qualifications: Company specializing in performing the work of this section with minimum **<< ____>>** years of**<< documented; _____; or None - N/A>>** experience**<< and accredited by IGSHPA; _____; or None - N/A>>**.

C. Heat Fusion Technician Certification: **<< IGSHPA training and certification; Qualified in accordance with 49 CFR 192.285; or _____>>**, certified within three years from **<< the date of project commencement; or _____>>**.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver piping and fittings to project site**<< in shipping containers; _____; or None - N/A>>** with labeling in place.

1. Comply with local and state regulations.
2. Verify that labels on piping indicate manufacturer's name, pipe or tube size, and PE cell classification.
3. Verify that piping complies with specifications and is undamaged.

B. Deliver chemicals for heat exchange fluid to project site in unopened shipping containers with labeling in place; comply with local and state regulations.

C. Protect from weather, humidity and temperature variations, dirt and dust, and other environmental contaminants.

D. Store piping capped or plugged until time of installation.

PART 2 PRODUCTS

2.01 HEAT EXCHANGER

A. The ground-coupled heat exchanger has been designed; **<<Contractor>>** is responsible for execution as required in Contract Documents.

B. Heat Exchanger Configuration: Closed system; polyethylene piping in vertical boreholes located **<< adjacent to; under; or _____>>** building**<< , as indicated on drawings; , _____; or None - N/A>>**.

C. Heat Exchanger Performance:

2.02 MATERIALS

A. Pipe: High density polyethylene pipe, type PE3408, PE3608, or PE4710, with minimum **<<ASTM D3350>>** cell classification of PE345364C.

1. Pipe Used in Vertical Bore Applications: Comply with **<<ASTM D3035>>** with minimum working pressure rating of **<< 160 psi; or ___ psi>>**.
2. **<< Other ; _____ ; or None - N/A>>**Pipe of **<< 3 Inches; or __ Inches>>** Diameter and Larger: Comply with **<<ASTM D3035>>** or **<<ASTM F714>>**, with minimum working pressure rating of **<< 100 psi; ___ psi; or __>>**.
3. **<< Other ; _____ ; or None - N/A>>**Pipe **<< 1.25 Inches; or ___ Inches>>** But Less Than **<< 3 Inches; or __ Inches>>** In Diameter (Nominal): Comply with **<<ASTM D3035>>** with minimum working pressure rating of **<< 110 psi; or ___ psi>>**.
4. **<< Other ; _____ ; or None - N/A>>**Pipe Less Than **<< 1.25 Inches; or __ Inches>>** in Diameter (Nominal): Comply with **<<ASTM D3035>>** with minimum working pressure rating of **<< 160 psi; or ___ psi>>**.
5. Long Term Hydrostatic Design Basis: **<< 1600 psi>>** at **<< 73 degrees F>>**, when tested in accordance with **<<ASTM D2837>>**; appropriate listing in current edition of **<<PPI TR-4>>** will constitute evidence of compliance with this requirement; otherwise, submit independent test results.

DRAFT

6. Joints and Fittings: Polyethylene of same type as pipe, of sizes and types suitable for the pipe being used; use only heat fusion or stab-type mechanical fittings that are quality controlled to provide a leak-free union between piping ends that is stronger than the piping itself. Do not use other barbed fittings or hose clamps.
   a. Electrofusion Type Fittings: Comply with **<<ASTM F1055>>**.
   b. Butt Fusion Fittings: Comply with **<<ASTM D3261>>**.
   c. Socket Type Fittings: Comply with **<<ASTM D2683>>**.
   d. Where threaded fittings must be used for connection to equipment or dissimilar piping, use fittings and thread sealant compatible and effective with antifreeze used.
7. Manufacturers:
   a. Any manufacturer listed in **<<PPI TR-4>>** for the material to be used.
   b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Pipe, Fittings, and Jointing: Copper, see Section **<< 232300>>**, coated with polyethylene for corrosion protection.
   1. Pipe Over **<< 7/8 Inches; or ____ Inches>>** Outside Diameter: Copper tubing, refrigeration grade, **<<ASTM B280>>**, H58 hard drawn**<< or O60 soft annealed; _____; or None - N/A>>**.
   2. Pipe of **<< 7/8 Inches; or ____ Inches>>** Outside Diameter or Less: Copper tubing, refrigeration grade, **<<ASTM B88>>** (**<<ASTM B88M>>**) Type K **<< annealed; drawn; or _____>>**.

C. Heat Exchange Fluid: Potable water.

D. Pipe Insulation: Closed cell, water resistant plastic foam with thermal resistance of at least R2.

E. Detectable Underground Tape: Magnetic detectable conductor in **<< 2 inch; 4 inch; 6 inch; or ___ inch>>** wide rot-resistant plastic tape or mesh, brightly colored, imprinted with "Water Line" in large letters.

F. Backfill for Vertical Boreholes: **<< Bentonite; Fine sand; Thermally enhanced bentonite; or _____>>**.

PART 3 EXECUTION

3.01 EXAMINATION AND PREPARATION

A. Verify location of existing structures and utilities prior to excavation.

B. Verify soil composition and rock depth, if any, before beginning excavation.

C. Protect adjacent structures from the effects of excavation.

D. Verify that layout dimensions are correct and that available land is sufficient for design.

E. Notify **<<Architect>>** of unsatisfactory conditions.

F. Do not proceed with installation until unsatisfactory conditions have been corrected.

G. Coordinate work with site grading, site backfilling, and foundation construction.

3.02 EXCAVATION

A. Excavate in accordance with requirements of authorities having jurisdiction.

B. Remove rock in accordance with Civil drawings and Division 31 sections.

C. Vertical Boreholes: Drill to depths required.

DRAFT

1. Minimize over-drilling; fill over-drilled areas with backfill or excavated materials.
2. Piping: Assemble heat exchanger piping and test before installation.

D. Trenches: Excavate trenches for piping to lines and grades shown on drawings.
1. Minimize over-excavation; fill over-excavated areas with backfill or excavated materials.
2. Excavate to accommodate grade changes.
3. Excavate using the procedures specified in Section **<< 312316.13>>**.
4. Maintain trenches free of debris, material, and obstructions that may damage pipe.
5. Piping: Assemble heat exchanger piping and test before backfilling.

3.03 POLYETHYLENE PIPING

A. Join piping and fittings using heat fusion or electrofusion; do not use solvents, adhesives, or mechanical fittings.

B. Provide flanges or unions to connect heat exchanger piping to equipment or piping of different type; locate all transitions between piping of different types inside the building or otherwise accessible (i.e. above grade).

C. Keep dirt, water, and debris out of pipe assemblies; cap or plug open ends until connected to adjacent piping.

D. Do not bend piping to shorter radius than recommended by pipe manufacturer; do not kink piping; use elbow or other fittings for sharp bends.

E. Partially backfill radius bends in narrow trenches by hand to ensure that piping is properly supported and to prevent kinking.

F. Test piping to be installed in boreholes after assembly but before installation in boreholes; re-cap tested assemblies before installation.

G. Test piping to be installed in trenches after installation but before backfilling.

H. Testing: Perform hydrostatic test on all piping; portions of assembled piping may be tested separately.
1. Prior to testing, isolate piping from all connections to building systems.
2. Flush all dirt and debris using potable water flowing at twice the normal operating flow rate for a minimum of four hours or until no dirt or debris is visible, whichever is longer.
3. Plug or cap piping.
4. Pressurize piping to **<< 150 psi; or ___ psi>>** for **<< 30 minutes; 8 hours; or _____>>** and monitor.
5. If there is any pressure loss or visible leakage, identify leak and repair in accordance with manufacturer's recommendations.
6. Repeat test until there is no loss of pressure for the duration of the test.

I. Insulation: Insulate the following heat exchanger piping:
1. Above ground piping.
2. Below ground but within **<< 36 inches; or ____ inches>>** of ground surface.
3. Below ground running parallel with and within **<< 5 feet; or __ feet>>** of walls, structures, or water pipes.
4. Indoor piping that will be colder than ambient air temperature.

J. Where piping passes through foundation walls, provide sleeves sealed with non-hardening, waterproof material.

K. After connection of piping to building systems and installation of equipment served by heat exchanger, fill piping with heat exchange fluid and pressurize.

DRAFT

1. Water Temperature of **<< 70 to 90 degrees F>>**: Pressurize to **<< 20 to 30 psi; or ___ psi>>**, minimum.
2. Water Temperature of **<< 40 to 50 degrees F>>**: Pressurize to **<< 40 to 50 psi; or ___ psi>>**, minimum.
3. If adequate flooding of circulating pump can be accomplished without pressurization and pump manufacturer approves, pressurization is not required.
4. After pressurization, remove charging valve handles, or plug ports, whichever is applicable, and deliver handles to **<<Owner>>**.
5. Install system label at charging valves, indicating:
   a. Heat exchange fluid, including antifreeze type and concentration.
   b. Service date.
   c. Company name.
   d. Company phone number and responsible person.

3.04 COPPER PIPING

A. Install and test piping, see Section **<< 232300>>**.

B. Join pipe and fittings by **<< brazing; soldering; or _____ >>**. Do not bend pipe, use fittings. Provide flanges or unions to connect to equipment and building piping system.

C. Keep dirt, water, and debris out of assembled piping; plug or cap open ends immediately.

D. Provide for thermal movement of components in system.

E. Insulation: Insulate the following heat exchanger piping:
   1. Above ground piping.
   2. Below ground but within **<< 36 inches; or ____ inches>>** of ground surface.
   3. Below ground running parallel with and within **<< 5 feet; or __ feet>>** of walls, structures, or water pipes.
   4. Indoor piping that will be colder than ambient air temperature.

F. Where piping passes through foundation walls, provide sleeves sealed with non-hardening, waterproof material.

G. Coordinate charging of piping with refrigerant with Section **<< 232300>>**.

3.05 BACKFILLING

A. Install in compliance with local authorities having jurisdiction.

B. Vertical Boreholes: Backfill after pipe installation in accordance with **<< IGSHPA (GROUT) - IGSHPA Grouting Procedures for GHP Systems; IGSHPA (GVERT) - IGSHPA Grouting for Vertical GHP Systems; or _____>>**.

C. Horizontal Boreholes: Fill annual space around pipe with water-bentonite slurry.

D. Trenches:
   1. Provide minimum **<< __ inch>>** cover over piping.
   2. Backfill trenches after pipe has been installed and tested, using fill free of rocks and other debris.
   3. Backfill spiral pipe installation ("Slinky") in accordance with ISGHPA Slinky Installation Guide - **<<IGSHPA (SLINK)>>**.
   4. Install detectable tape continuously **<< 6 inches>>** above top of all buried pipe.
   5. Backfill and compact using the procedures specified in Section **<< 312316.13>>**.
   6. Backfill to original grades with sufficient overfill to allow for settlement.

DRAFT

E. Protect piping from displacement.

3.06 CLEANING

A. Leave adjacent paved areas broom clean.

B. Clear debris, including excess backfill and excavated dirt and rock, from heat exchanger area.

3.07 PROTECTION

A. Protect area during excavation from excess runoff and erosion.

B. Protect pipe protrusions from damage until connections to building systems are installed.

END OF SECTION 232113.33

DRAFT

SECTION 232114
HYDRONIC SPECIALTIES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Expansion tanks.
B. Air vents.
C. Air separators.
D. Strainers.
E. Suction diffusers.
F. Pressure-temperature test plugs.
G. Balancing valves.
H. Automatic flow control valves.
I. Relief valves.
J. Pressure reducing valves.

1.02 RELATED REQUIREMENTS

A. Section **<< 221119 - Domestic Water Piping Specialties>>**: Backflow preventers.
B. Section **<< 232113 - Hydronic Piping>>**.

1.03 REFERENCE STANDARDS

A. ASME B16.1 - Gray Iron Pipe Flanges and Flanged Fittings: Classes 25, 125, and 250.
B. ASME BPVC-VIII-1 - Boiler and Pressure Vessel Code, Section VIII, Division 1: Rules for Construction of Pressure Vessels.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Sequencing: Ensure that utility connections are achieved in an orderly and expeditious manner.

1.05 SUBMITTALS

A. See Section **<< 013000>>** - Administrative Requirements for submittal procedures.
B. Product Data: Provide product data for manufactured products and assemblies required for this project. Include component sizes, rough-in requirements, service sizes, and finishes. Include product description**<< and model; , model, and dimensions; _____; or None - N/A>>**.
C. Certificates: Inspection certificates for pressure vessels from **<< _____; or authority having jurisdiction>>**.
D. Manufacturer's qualification statement.
E. Maintenance Data: Include installation instructions, assembly views, lubrication instructions, and replacement parts list.

1.06 QUALITY ASSURANCE

DRAFT

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum **<< three; or _____>>** years of**<< documented; _____; or None - N/A>>** experience.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Accept valves on site in shipping containers with labeling in place. Inspect for damage.

B. Provide temporary protective coating on cast iron and steel valves.

C. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.

D. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.

PART 2 PRODUCTS

2.01 EXPANSION TANKS

A. Manufacturers:

1. American Wheatley, a company of Global Flow Products, LLC**<< ; _____; or None - N/A>>**: www.wheatleyhvac.com/#sle.
2. Amtrol Inc**<< ; _____; or None - N/A>>**: www.amtrol.com/#sle.
3. Bell & Gossett, a brand of Xylem, Inc**<< ; _____; or None - N/A>>**: www.bellgossett.com/#sle.
4. Taco, Inc**<< ; _____; or None - N/A>>**: www.taco-hvac.com/#sle.
5. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Maximum Rated Working Pressure: **<< 125 psi; 150 psi; 300 psi; or _____ psi>>**.

C. Maximum Allowable Service Temperature: **<< 240 degrees F; 280 degrees F; or _____ degrees F>>**.

D. Construction: Welded steel, tested and stamped in accordance with **<<ASME BPVC-VIII-1>>**; supplied with National Board Form U-1, adjustable flexible **<< butyl; EPDM; replaceable butyl; replaceable EPDM; or _____>>** diaphragm or bladder seal factory precharged to **<< 12 psi; or _____ psi>><< , and steel support stand; , _____; or None - N/A>>.<< Constructed using NSF 61 compliant materials.; _____ .; or None - N/A>>**

E. Automatic Cold Water Fill Assembly: Pressure reducing valve, reduced-pressure-principle backflow preventer, test cocks, strainer, vacuum breaker, and valved by-pass.

1. See Section **<< 221119>>** for backflow preventer specifications.

F. Accessories: Provide **<< air-charging fitting; bulls eye sight glass; epoxy coating finish; pressure gauge; seismic-mounting clips; seismic-mounting legs; tank drain ball valve; and _____>>**.

2.02 AIR VENTS

A. Manufacturers:

1. Armstrong International, Inc**<< ; _____; or None - N/A>>**: www.armstronginternational.com/#sle.
2. Bell & Gossett, a brand of Xylem, Inc**<< ; _____; or None - N/A>>**: www.bellgossett.com/#sle.
3. Flamco**<< ; _____; or None - N/A>>**: www.flamcogroup.us/#sle.
4. Taco, Inc**<< ; _____; or None - N/A>>**: www.taco-hvac.com/#sle.

DRAFT

B. Manual Air Vent: Short vertical sections of **<< 2-inch>>** diameter pipe to form air chamber, with **<< 1/8 inch>>** brass needle valve at top of chamber.

C. Float Air Vent:
   1. Brass or semi-steel body, copper, polypropylene, or solid non-metallic float, stainless steel valve and valve seat; suitable for system operating temperature and pressure; with isolating valve.

D. Hygroscopic Air Vent:
   1. Brass with hygroscopic fiber discs, vent ports, adjustable cap for manual shut-off, and integral spring-loaded ball check valve.

E. Maximum Fluid Pressure: **<< 150 psi; 200 psi; or _____ psi>>**.

F. Maximum Fluid Temperature: **<< 250 degrees F; or _____ degrees F>>**.

2.03 AIR DIRT SEPARATORS

A. Coalescing Air/Dirt Separators:
   1. Manufacturers:
      a. Spirotherm, Inc**<< ; _____; or None - N/A>>**: www.spirotherm.com/#sle.
      b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
   2. Tank: Fabricated steel tank; tested and stamped in accordance with **<<ASME BPVC-VIII-1>>** for maximum fluid service subject to application requirements and manufacturer's standard maximum operating conditions. Provide removable head.
   3. Coalescing Medium: Provide **<< structured copper; stainless steel; or _____>>** medium filling the entire vessel to suppress turbulence and provide air elimination efficiency of 100 percent free air, 100 percent entrained air, and 99.6 percent dissolved air at the installed location. Removable heat
   4. Air Vent: Integral float actuated air vent at top fitting of tank rated at **<< 150 psi; 125 psi; or _____ psi>>**, threaded to top of separator.
   5. End Connections: Class 150 flanged for **<< 2-1/2 inch>>** and larger otherwise threaded.
   6. Blowdown Connection: Threaded.
   7. Size: **<< 2-1/2 to 12 inch; 2-1/2 inch; 3 inch; 4 inch; 5 inch; 6 inch; 8 inch; 10 inch; 12 inch; _____ inch; As indicated on drawings; or Match system flow capacity>>**.
   8. Maximum Fluid Service Pressure: **<< 145 psi; 150 psi; or _____ psi>>**.
   9. Maximum Fluid Service Temperature: **<< 250 degrees F; 270 degrees F; or _____ degrees F>>**.

2.04 STRAINERS

A. Manufacturers:
   1. American Wheatley, a company of Global Flow Products, LLC**<< ; _____; or None - N/A>>**: www.wheatleyhvac.com/#sle.
   2. Armstrong International, Inc**<< ; _____; or None - N/A>>**: www.armstronginternational.com/#sle.
   3. Flexicraft Industries**<< ; _____; or None - N/A>>**: www.flexicraft.com/#sle.
   4. Nexus Valve, Inc**<< ; _____; or None - N/A>>**: www.nexusvalve.com/#sle.
   5. The Metraflex Company**<< ; LPD Y Strainer; ; _____; or None - N/A>>**: www.metraflex.com/#sle.
   6. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

DRAFT

B. Size **<< 2 inch>>** and Under:
   1. Provide **<< threaded; grooved; sweat; or _____>>** brass or iron body for up to **<< 175 psi; 600 psi; or _____ psi>>** working pressure, Y-pattern strainer **<< with; with integrated ball valve and; or _____>><< 1/32 inch>>** stainless steel perforated screen.**<< None - N/A; Include threaded ports for accesories.; or _____ .>>**
   2. Body Material by Fluid Service:
      a. Cast Iron or Brass:
         1) Steam: Up to **<< 250 psi at 450 degrees F; or ____ psi at ____ degrees F>>**.
         2) Liquids: Up to **<< 400 psi at 150 degrees F; or ____ psi at ____ degrees F>>**.
      b. Stainless Steel:
         1) Steam: Up to **<< 600 psi at 486 degrees F; or ____ psi at ____ degrees F>>**.
         2) Liquids: Up to **<< 1,440 psi at 100 degrees F; or ____ psi at ____ degrees F>>**.

C. Size **<< 2-1/2 inch>>** to **<< 4 inch; 12 inch; or _____ inch>>**:
   1. Provide **<< flanged; grooved; or _____>>** iron body for up to **<< 175 psi>>** working pressure, up to **<< 250 degrees F; or _____ degrees F>>** working temperature, Y-pattern strainer **<< with; with integrated butterfly valve and; or _____>><< 1/16 inch; 3/64 inch; or ____ inch>>** stainless steel perforated screen.**<< None - N/A; Include threaded ports for accesories.; or _____ .>>**
   2. Body Material by Fluid Service:
      a. Cast Iron:
         1) Steam: Up to **<< 125 psi at 350 degrees F; or ____ psi at ____ degrees F>>**.
         2) Liquids: Up to **<< 200 psi at 150 degrees F; or ____ psi at ____ degrees F>>**.
      b. Stainless Steel:
         1) Liquids: Up to **<< 285 psi at 100 degrees F; or ____ psi at ____ degrees F>>**.

D. Size **<< 5 inch>>** and Larger:
   1. Provide **<< flanged; grooved; or _____>>** iron body for up to **<< 175 psi>>** working pressure, basket pattern with **<< 1/8 inch>>** stainless steel perforated screen.
   2. Liquid Fluid Service: Up to **<< 285 psi at 100 degrees F; or ____ psi at ____ degrees F>>**.

E. Basket-Type, Size **<< 1 to 30 inch; or _____ inch>>** for Liquid Service:
   1. Flanged carbon steel body with **<< 1/2 inch; 1/4 inch; 1/8 inch; 1/16 inch; 3/64 inch; 5/32 inch; or ____ inch>>** stainless steel perforated basket screen, bottom drain and capped air vent.**<< Duplex-fabricated assembly with butterfly isolation valves.; _____ .; or None - N/A>>**
   2. Fluid Service: Up to **<< 285 psi at 100 degrees F; or ____ psi at ____ degrees F>>**.

2.05 SUCTION DIFFUSERS

A. Manufacturers:
   1. American Wheatley, a company of Global Flow Products, LLC**<< ; _____; or None - N/A>>**: www.wheatleyhvac.com/#sle.
   2. Anvil International**<< ; _____; or None - N/A>>**: www.anvilintl.com/#sle.

DRAFT

3. Bell & Gossett, a brand of Xylem, Inc**<< ; _____; or None - N/A>>**: www.bellgossett.com/#sle.
4. Bell & Gossett, a brand of Xylem, Inc**<< ; _____; or None - N/A>>**: www.bellgossett.com/#sle.
5. Shurjoint Piping Products, Inc**<< ; _____; or None - N/A>>**: www.shurjoint.com/#sle.
6. Victaulic Company of America**<< ; _____; or None - N/A>>**: www.victaulic.com/#sle.
7. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Fitting: Angle pattern, cast-iron body, threaded for **<< 2 inch>>** and smaller, flanged for **<< 2-1/2 inch>>** and larger, rated for **<< 175 psi>>** working pressure, with inlet vanes, cylinder strainer with **<< 3/16 inch>>** diameter openings, disposable **<< 5/32 inch; 1/8 inch; or ____ inch>>** mesh strainer to fit over cylinder strainer, **<< 20 mesh; or _____>>** startup screen, and permanent magnet located in flow stream and removable for cleaning.

C. Class 125:
1. Horizontally or vertically mounted angle-pattern fitting with integral-cast vanes, fine particle mesh screen and magnetic drain plugs for particle removal without disassembly.
2. Maximum Operating Service: **<< 175 psi>>** and **<< 300 degrees F>>**.
3. Sizes, Material, and Connection:
   a. **<< 2 inch>>** and Smaller: Cast iron body, threaded.
   b. **<< 2-1/2 to 12 inch>>**: Ductile iron body, flanged.

D. Class **<< 150; 250; 300; and ____>>**, Size **<< 1-1/2 to 4 inch>>**:
1. Angle-pattern flanged **<< carbon steel; stainless steel; or _____>>** fitted with integral**<< stainless steel; _____; or None - N/A>>** vanes, removable strainer, and magnetic drain plugs for particle removal without disassembly.
2. Maximum Operating Service:
   a. Class 150: **<< 150 psi at 450 degrees F; or ____ psi at ____ degrees F>>**.

E. Accessories: Adjustable foot support, blowdown tapping in bottom, gauge tapping in side.

2.06 PUMP CONNECTORS

A. Manufacturers:
1. American Wheatley, a company of Global Flow Products, LLC**<< ; _____; or None - N/A>>**: www.wheatleyhvac.com/#sle.
2. Anvil International**<< ; AnviFlex; ; _____; or None - N/A>>**: www.anvilintl.com/#sle.
3. FNW**<< ; _____; or None - N/A>>**: www.fnw.com/#sle.
4. The Metraflex Company**<< ; Vane Flex; ; _____; or None - N/A>>**: www.metraflex.com/#sle.
5. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Flexible Connectors: **<< Flanged; Threaded; or _____>>**, **<< braided; EPDM rubber sphere; EPDM rubber double-sphere; or _____>>** type**<< with wetted components of stainless steel; with wetted components of bronze; with wetted components of _____; _____; or None - N/A>>**, sized to match piping.
1. Maximum Operating Service: **<< 300 psi; 175 psi; 150 psi; or _____ psi>>** at **<< 120 degrees F; 240 degrees F; or _____ degrees F>>**.
2. Accommodate the Following:
   a. Axial Deflection in **<< Compression; Expansion; or Compression and Expansion>>**: **<< _____inch>>**.
   b. Lateral Movement: **<< _____inch>>**.

DRAFT

c. Angular Rotation: **<< 15; or _____>>** degrees.

d. Force developed by **<< 1.5; or _____>>** times specified maximum allowable operating pressure.

3. End Connections: Flanged **<< ductile iron; or _____>>**; complying with **<< ASME B16.1; or ASME B16.5>>** Class **<< 125; 150; 300; or _____>>**.

4. Provide pump connector with integral vanes to reduce turbulent flow.

5. Provide necessary accessories including, but not limited to, **<< swivel joints; limit stops; internal guides; anti-torque device; internal flow liners; control rods; control cables; and _____>>**.

2.07 PRESSURE-TEMPERATURE TEST PLUGS

A. Manufacturers:

1. FNW**<< ; _____; or None - N/A>>**: www.fnw.com/#sle.
2. Peterson Equipment Company Inc**<< ; _____; or None - N/A>>**: www.petesplug.com/#sle.
3. Sisco Manufacturing Company Inc**<< ; _____; or None - N/A>>**: www.siscomfg.com/#sle.
4. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Construction: Brass body designed to receive temperature or pressure probe with removable protective cap, and **<< Neoprene; EPDM; Nordel; or _____>>** rated for minimum **<< 200 degrees F; or ____ degrees F>>**.

C. Application: Use extended length plugs to clear insulated piping.

2.08 BALANCING VALVES

A. Manufacturers:

1. American Wheatley, a company of Global Flow Products, LLC**<< ; _____; or None - N/A>>**: www.wheatleyhvac.com/#sle.
2. Armstrong International, Inc**<< ; _____; or None - N/A>>**: www.armstronginternational.com/#sle.
3. Bell & Gossett, a brand of Xylem, Inc**<< ; _____; or None - N/A>>**: www.bellgossett.com/#sle.
4. Bell & Gossett, a brand of Xylem, Inc**<< ; _____; or None - N/A>>**: www.bellgossett.com/#sle.
5. FNW**<< ; _____; or None - N/A>>**: www.fnw.com/#sle.
6. Hays Fluid Controls**<< ; _____; or None - N/A>>**: www.haysfluidcontrols.com/#sle.
7. Nexus Valve, Inc**<< ; _____; or None - N/A>>**: www.nexusvalve.com/#sle.
8. NIBCO INC**<< ; _____; or None - N/A>>**: www.nibco.com/#sle.
9. Oventrop Corporation**<< ; Hydrocontrol F; ; Hydrocontrol G; ; Hydrocontrol R; ; Hydrocontrol MTR; ; _____; or None - N/A>>**: www.oventrop.com/#sle.
10. Taco, Inc**<< ; _____; or None - N/A>>**: www.taco-hvac.com/#sle.
11. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Size **<< 2 inch>>** and Smaller:

1. Provide **<< ball; globe; or _____>>** style with **<< flow balancing; removable flow-balancing cartridge; or _____>>**, shut-off capabilities, memory stops, and minimum of two metering ports and **<< female sweat; NPT threaded; press; soldered; or _____>>** connections.
2. Metal construction materials consist of **<< bronze; brass; or _____>>**.

DRAFT

3. Non-metal construction materials consist of **<< Teflon; EPDM; engineered resin; or _____>>**.
4. Maximum Service Operation: **<< 255 psi at 240 degrees F; 300 psi at 250 degrees F; or _____ psi at _____ degrees F>>**.

C. Size **<< 2-1/2 inch>>** and Larger:
1. Provide **<< ball; globe; butterfly; or _____>>** style with **<< flow balancing; removable flow-balancing cartridge; or _____>>**, shut-off capabilities, memory stops, and minimum of two metering ports and **<< flanged; grooved; weld-end; or _____>>** connections.
2. Valve body construction materials consist of **<< cast iron; carbon steel; ductile iron; or _____>>**.
3. Internal components construction materials consist of **<< brass; aluminum bronze; bronze; Teflon; EPDM; NORYL; engineered resin; or _____>>**.
4. Maximum Service Operation: **<< 175 psi at 250 degrees F; 255 psi at 240 degrees F; 300 psi at 250 degrees F; or _____ psi at _____ degrees F>>**.

2.09 AUTOMATIC FLOW CONTROL VALVES

A. Manufacturers:
1. Armstrong International**<< ; _____; or None - N/A>>**: www.armstronginternational.com/#sle.
2. Bell & Gossett, a brand of Xylem, Inc**<< ; _____; or None - N/A>>**: www.bellgossett.com/#sle.
3. Bell & Gossett, a brand of Xylem, Inc**<< ; _____; or None - N/A>>**: www.bellgossett.com/#sle.
4. Hays Fluid Controls**<< ; Mesurflo Balancing Valve; ; _____; or None - N/A>>**: www.haysfluidcontrols.com/#sle.
5. Nexus Valve, Inc**<< ; _____; or None - N/A>>**: www.nexusvalve.com/#sle.
6. NIBCO INC**<< ; _____; or None - N/A>>**: www.nibco.com/#sle.
7. Taco Inc**<< ; _____; or None - N/A>>**: www.taco-hvac.com/#sle.
8. Griswold
9. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Construction:
1. Brass, bronze, or iron body with union on inlet**<< and outlet; _____; or None - N/A>>**, temperature and pressure test plug on inlet**<< and outlet; _____; or None - N/A>><< with blowdown/backflush drain; _____; or None - N/A>>**.
2. Built-in lug-type outlet butterfly valve with 2-position handle**<< and venturi flow-meter insert; _____; or None - N/A>>**.

C. Calibration: Control flow within **<< 5; 10; or _____>>** percent of selected rating, over operating pressure range of 10 times minimum pressure required for control, minimum pressure **<< 2 psi; 3.5 psi; or _____ psi>>**.

D. Control Mechanism: Provide stainless steel or nickel-plated, brass piston or regulator cup, operating against stainless steel helical or wave formed spring**<< None - N/A; or or elastomeric diaphragm and polyphenylsulfone orifice plate>>**.

E. Size: **<< 2-1/2 to 12 inch; 2-1/2 inch; 3 inch; 4 inch; 5 inch; 6 inch; 8 inch; 10 inch; 12 inch; _____ inch; As indicated on drawings; or Match system flow capacity>>**.

DRAFT

F. Accessories: Provide **<< air vent; blowdown vent/drain; gearbox with hand wheel; hanging tag; inlet in-line strainer; manual air vent; outlet ball valve; PT test plug extension; and _____>>**.

2.10 RELIEF VALVES

A. Manufacturers:
1. American Wheatley, a company of Global Flow Products, LLC**<< ; _____; or None - N/A>>**: www.wheatleyhvac.com/#sle.
2. Apollo Valves**<< ; _____; or None - N/A>>**: www.apollovalves.com/#sle.
3. Armstrong International, Inc**<< ; _____; or None - N/A>>**: www.armstronginternational.com/#sle.
4. Bell & Gossett, a brand of Xylem, Inc**<< ; _____; or None - N/A>>**: www.bellgossett.com/#sle.
5. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Bronze body, teflon seat, stainless steel stem and springs, automatic, direct pressure actuated, capacities ASME certified and labelled.

2.11 PRESSURE REDUCING VALVES

A. Manufacturers:
1. American Wheatley, a company of Global Flow Products, LLC**<< ; _____; or None - N/A>>**: www.wheatleyhvac.com/#sle.
2. Apollo Valves**<< ; _____; or None - N/A>>**: www.apollovalves.com/#sle.
3. Armstrong International, Inc**<< ; _____; or None - N/A>>**: www.armstronginternational.com/#sle.
4. Bell & Gossett, a brand of Xylem, Inc**<< ; _____; or None - N/A>>**: www.bellgossett.com/#sle.
5. Taco, Inc**<< ; _____; or None - N/A>>**: www.taco-hvac.com/#sle.
6. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Operation: Automatically feeds make-up water to the hydronic system whenever pressure in the system drops below the pressure setting of the valve. Refer to Section **<< 232113>>**.

C. Materials of Construction:
1. Valve Body: Constructed of **<< bronze; cast iron; brass; iron; or _____>>**.
2. Internal Components: Construct of **<< stainless steel; brass; or _____>>** and **<< engineered plastics; composition material; or _____>>**.

D. Connections:
1. NPT threaded: **<< 1/2 inch; 3/4inch; or ____ inch>>**.
2. Soldered: **<< 1/2 inch; or ____ inch>>**.

E. Provide integral check valve and strainer.

F. Maximum Inlet Pressure: **<< 100 psi; 400 psi; or ____ psi>>**.

G. Maximum Fluid Temperature: **<< 180 degrees F; or ____ degrees F>>**.

H. Adjustable Pressure Range: From **<< 10 to 45 psi; or ___ psi>>**, set to **<< 25 psi; 45 psi; or ___ psi>>**.

DRAFT

PART 3 EXECUTION

3.01 EXAMINATION

3.02 INSTALLATION

A. Install specialties and equipment in accordance with manufacturer's instructions.

B. Provide manual air vents at system high points and as indicated.

C. For automatic air vents in ceiling spaces or other concealed locations, provide vent tubing to nearest drain.

D. Provide air separator on suction side of system circulation pump and connect to expansion tank.

E. Provide valved drain and hose connection on strainer blowdown connection.

F. Provide pump suction fitting on suction side of base-mounted centrifugal pumps**<< where indicated; _____; or None - N/A>>**. Remove temporary strainers after cleaning systems.

G. Support pump fittings with floor-mounted pipe and flange supports.

H. Provide relief valves on pressure tanks, low-pressure side of reducing valves, heat exchangers, and expansion tanks.

I. Select system relief valve capacity so that it is greater than make-up pressure reducing valve capacity. Select equipment relief valve capacity to exceed rating of connected equipment.

J. Pipe relief valve outlet to nearest floor drain.

K. Where one line vents several relief valves, make cross-sectional area equal to sum of individual vent areas.

3.03 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>** for additional requirements.

3.04 CLEANING

A. See Section **<< 017000 - Execution and Closeout Requirements>>** for additional requirements.

B. Clean interior of water tanks in accordance with manufacturer's instructions.

3.05 MAINTENANCE

A. See Section **<< 017000>>** - Execution Requirements for additional requirements relating to maintenance service.

B. Provide service and maintenance of glycol system for **<< one year; or _____>>** from date of Substantial Completion at no extra charge to **<<Owner>>**.

C. Perform **<< monthly; or _____>>** visit to make glycol fluid concentration analysis on site with refractive index measurement instrument. Report findings in detail in writing, including analysis and amounts of glycol or water added.

D. Explain corrective actions to **<<Owner>>**'s maintenance personnel in person.

END OF SECTION 232114

DRAFT

SECTION 232123
HYDRONIC PUMPS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. In-line pumps.

B. End-suction pumps.

1.02 RELATED REQUIREMENTS

A. Section **<< 033000 - Cast-in-Place Concrete>>**.

B. Section **<< 230513 - Common Motor Requirements for HVAC Equipment>>**.

C. Section **<< 230934 - Variable-Frequency Motor Controllers>>**.

1.03 REFERENCE STANDARDS

A. NFPA 70 - National Electrical Code.

B. UL 778 - Standard for Motor-Operated Water Pumps.

1.04 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Product Data: Provide certified pump curves showing performance characteristics with pump and system operating point plotted. Include NPSH curve when applicable. Include electrical characteristics and connection requirements.

C. Millwright's Certificate: Certify that base mounted pumps have been aligned.

D. Manufacturer's Installation Instructions: Indicate hanging and support requirements and recommendations.

E. Operation and Maintenance Data: Include installation instructions, assembly views, lubrication instructions, and replacement parts list.

F. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.

1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
2. Extra Pump Seals: **<< One set; or _____>>** for each type and size of pump.

DRAFT

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Armstrong Fluid Technology, Inc www.armstrongfluidtechnology.com/#sle.

B. Bell & Gossett, a Xylem Inc. brand: www.bellgossett.com/#sle.

C. Taco

D. Aurora

E. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.02 GENERAL

A. Provide pumps that operate at specified system fluid temperatures without vapor binding and cavitation, are non-overloading in parallel or individual operation, and operate within 25 percent of midpoint of published maximum efficiency curve.

B. Minimum Quality Standard: **<<UL 778>>**.

C. Base Mounted Pumps: Aligned by qualified millwright.

D. Electrical Requirements:

1. Listed and classified by **<< UL; testing agency acceptable to authority having jurisdiction; or _____>>** as suitable for the purpose specified and indicated.
2. Variable Frequency Drives (VFDs): Provide in accordance with Section **<< 230934; 262923; or _____>>**, except for integral-VFDs.
3. Enclosures: Provide unspecified product(s) required to fit motor:

2.03 IN-LINE PUMPS

A. Split-Coupled, Single-Stage Pump: Vertical pump with radially-**<< or horizontally-; _____; or None - N/A>>**split casing**<< and integral controls; _____; or None - N/A>>**; rated for discharge pressures up to **<< 175 psi; 250 psi; 300 psi; or ___ psi>>**.

B. Casing: **<< Cast iron; Cast steel; Stainless steel; or _____ ,>>** with**<< casing wear ring,; _____ ,; or None - N/A>>** seal flush connection, **<< threaded; flanged; or _____>>** suction, and discharge ports with gauge port and drain plug.

C. Impeller: **<< Bronze; Cast iron; Stainless steel; or _____>>**, fully enclosed, keyed directly to motor shaft or extension.

D. Shaft: **<< Carbon steel; Stainless steel; or _____>>** with stainless steel impeller cap screw or nut**<< and bronze sleeve; and stainless steel sleeve; _____; or None - N/A>>**.

E. Seal: **<< Mechanical seal; Carbon rotating against a stationary ceramic seat; Manufacturer's standard seal; or _____>>**, **<< 225 degrees F; 212 degrees F; 275 degrees F; or _____ degrees F>>** maximum continuous duty temperature.

F. Electrical:

1. Motor: 1,750 rpm**<< , total-enclosed, fan-cooled (TEFC); , open drip-proof (ODP); , mill processing duty; , chemical processing duty; , washdown duty; unless specified otherwise; or _____>>**; see Section **<< 230513>>**.
2. Wiring Terminations: Provide terminal lugs to match branch circuit conductor quantities, sizes, and materials indicated. Enclose terminal lugs in terminal box sized to **<<NFPA 70>>**.

2.04 END-SUCTION PUMPS

A. Split-Coupled Pump: **<< Base; Frame; or _____>>**-mounted, single-stage pump with horizontal shaft**<< , integral controls,; , _____ ,; or None - N/A>>** and radially-**<< or horizontally-; _____; or None - N/A>>**split casing rated for discharge pressures up to **<< 125 psi; 175 psi; 250 psi; or ___ psi>>**.

B. Casing: Cast iron**<< or ductile iron; or _____; or None - N/A>>** with renewable bronze casing wearing rings, seal flush connection, drain plug, flanged suction, and discharge flanged connections with gauge ports.

C. Impeller: **<< Stainless steel; Bronze; or _____>>**, balanced, fully enclosed, keyed to shaft.

D. Bearings: **<< Oil; Grease; Permanently; or _____>>** lubricated roller or ball bearings.

DRAFT

E. Shaft: Alloy steel with copper, bronze, or stainless steel shaft sleeve.

F. Seal: **<< Mechanical; Carbon rotating against a stationary ceramic seat; Manufacturer's standard seal; Carbon rotating against a stationary ceramic seat, viton fitted; or _____>>**, **<< 225 degrees F; 212 degrees F; 275 degrees F; or ___ degrees F>>** maximum continuous duty temperature.

G. Drive: Flexible coupling with coupling guard.

H. Baseplate: Cast iron or fabricated steel with integral drain rim.

I. Electrical:

1. Motor: 1,750 rpm**<< , total-enclosed, fan-cooled (TEFC); , open drip-proof (ODP); unless specified otherwise; or _____>>**; see Section **<< 230513>>**.
2. Wiring Terminations: Provide terminal lugs to match branch circuit conductor quantities, sizes, and materials indicated. Enclose terminal lugs in terminal box sized to **<<NFPA 70>>**.

PART 3 EXECUTION

3.01 PREPARATION

A. Verify that electric power is available and of the correct characteristics.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Provide access space around pumps for service. Provide no less than minimum space recommended by manufacturer.

C. Decrease from line size with long radius reducing elbows or reducers. Support piping adjacent to pump such that no weight is carried on pump casings. For close-coupled or base-mounted pumps, provide supports under elbows on pump suction and discharge line sizes **<< 4 inches>>** and over.

D. Provide line sized shut-off valve and **<< strainer; pump suction fitting; or _____>>** on pump suction, and line sized **<< soft seat check valve and balancing valve; combination pump discharge valve; or check valve>>** on pump discharge.

E. Provide air cock and drain connection on horizontal pump casings.

F. Provide drains for bases and seals, piped to and discharging into floor drains.

G. Check, align, and certify alignment of base-mounted pumps prior to start-up.

H. Install**<< close-coupled and; _____; or None - N/A>>** base-mounted pumps on concrete housekeeping base, with anchor bolts, set and level, and grout in place. See Section **<< 033000>>**.

I. Lubricate pumps before start-up.

END OF SECTION 232123

DRAFT

SECTION 232300
REFRIGERANT PIPING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Piping.
B. Refrigerant.
C. Moisture and liquid indicators.
D. Valves.
E. Strainers.
F. Check valves.
G. Pressure regulators.
H. Pressure relief valves.
I. Filter-driers.
J. Solenoid valves.
K. Expansion valves.
L. Receivers.
M. Conduit for piping.
N. Flexible connections.
O. Engineered wall seals and insulation protection.
P. Exterior penetration accessories.

DRAFT

1.02 RELATED REQUIREMENTS

A. Section **<< 078400 - Firestopping>>**.
B. Section **<< 083100 - Access Doors and Panels>>**.
C. Section **<< 099123 - Interior Painting>>**.
D. Section **<< 230716 - HVAC Equipment Insulation>>**.
E. Section **<< 230719 - HVAC Piping Insulation>>**.
F. Section **<< 260583 - Wiring Connections>>**: Electrical characteristics and wiring connections.

1.03 REFERENCE STANDARDS

A. AHRI 495 - Performance Rating of Refrigerant Liquid Receivers.
B. AHRI 710 (I-P) - Performance Rating of Liquid-Line Driers.
C. AHRI 711 (SI) - Performance Rating of Liquid-Line Driers.
D. AHRI 730 (I-P) - Flow Capacity Rating of Suction Line Filters and Suction Line Filter Driers.
E. AHRI 760 (I-P) - Performance Rating of Solenoid Valves for Use with Volatile Refrigerants.
F. ASHRAE Std 15 - Safety Standard for Refrigeration Systems.
G. ASHRAE Std 34 - Designation and Safety Classification of Refrigerants.
H. ASME B16.22 - Wrought Copper and Copper Alloy Solder-Joint Pressure Fittings.

I. ASME B16.26 - Cast Copper Alloy Fittings for Flared Copper Tubes.

J. ASME B31.5 - Refrigeration Piping and Heat Transfer Components.

K. ASME B31.9 - Building Services Piping.

L. ASME BPVC-IX - Boiler and Pressure Vessel Code, Section IX - Qualification Standard for Welding, Brazing, and Fusing Procedures; Welders; Brazers; and Welding, Brazing, and Fusing Operators.

M. ASME BPVC-VIII-1 - Boiler and Pressure Vessel Code, Section VIII, Division 1: Rules for Construction of Pressure Vessels.

N. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

O. ASTM B88 - Standard Specification for Seamless Copper Water Tube.

P. ASTM B88M - Standard Specification for Seamless Copper Water Tube (Metric).

Q. ASTM B280 - Standard Specification for Seamless Copper Tube for Air Conditioning and Refrigeration Field Service.

R. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

S. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials.

T. ASTM E283/E283M - Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Skylights, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen.

U. ASTM E331 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference.

V. ASTM E2178 - Standard Test Method for Determining Air Leakage Rate and Calculation of Air Permeance of Building Materials.

W. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

X. ASTM G153 - Standard Practice for Operating Enclosed Carbon Arc Light Apparatus for Exposure of Nonmetallic Materials.

Y. AWS A5.8M/A5.8 - Specification for Filler Metals for Brazing and Braze Welding.

Z. MSS SP-58 - Pipe Hangers and Supports - Materials, Design, Manufacture, Selection, Application, and Installation.

AA. UL 429 - Electrically Operated Valves.

BB. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials.

1.04 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Product Data: Provide general assembly of specialties, including manufacturers catalogue information. Provide manufacturers catalog data including load capacity.

C. Sustainable Design Documentation: Submit manufacturer's product data on refrigerant used, showing compliance with specified requirements.

D. Shop Drawings: Indicate schematic layout of system, including equipment, critical dimensions, and sizes.

DRAFT

E. Design Data: Submit design data indicating pipe sizing. Indicate load carrying capacity of trapeze, multiple pipe, and riser support hangers.

F. Test Reports: Indicate results of leak test, acid test.

G. Manufacturer's Installation Instructions: Indicate support, connection requirements, and isolation for servicing.

H. Submit welders certification of compliance with **<< ASME BPVC-IX; AWS D1.1/D1.1M; or _____>>**.

I. Designer's qualification statement.

J. Installer's qualification statement.

K. Project Record Documents: Record exact locations of equipment and refrigeration accessories on record drawings.

L. Maintenance Data: Include instructions for changing cartridges, assembly views, spare parts lists.

M. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.
   1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing the type of work specified in this section, with minimum **<< 5>>** years of**<< documented; _____; or None - N/A>>** experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store piping with labeling in place.

B. Protect piping and specialties from entry of contaminating material by leaving end caps and plugs in place until installation.

C. Dehydrate and charge components such as piping and receivers, seal prior to shipment, until connected into system.

PART 2 PRODUCTS

2.01 SYSTEM DESCRIPTION

A. Where more than one piping system material is specified ensure system components are compatible and joined to ensure integrity of system is not jeopardized. Provide necessary joining fittings. Ensure flanges, union, and couplings for servicing are consistently provided.

B. Provide pipe hangers and supports in accordance with **<< ASME B31.5; MSS SP-58; or _____>>** unless indicated otherwise.

C. Liquid Indicators:
   1. Use line size liquid indicators in main liquid line leaving condenser.
   2. If receiver is provided, install in liquid line leaving receiver.
   3. Use line size on leaving side of liquid solenoid valves.

D. Valves:
   1. Use service valves on suction and discharge of compressors.
   2. Use gauge taps at compressor inlet and outlet.
   3. Use gauge taps at hot gas bypass regulators, inlet and outlet.

DRAFT

4. Use check valves on compressor discharge.
5. Use check valves on condenser liquid lines on multiple condenser systems.

E. Refrigerant Charging (Packed Angle) Valve: Use in liquid line between receiver shut-off valve and expansion valve.

F. Strainers:
1. Use line size strainer upstream of each automatic valve.
2. Where multiple expansion valves with integral strainers are used, use single main liquid line strainer.
3. On steel piping systems, use strainer in suction line.
4. Use shut-off valve on each side of strainer.

G. Pressure Relief Valves: Use on ASME receivers**<< and pipe to outdoors; _____; or None - N/A>>**.

H. Filter-Driers:
1. Use a filter-drier immediately ahead of liquid-line controls, such as thermostatic expansion valves, solenoid valves, and moisture indicators.
2. Use a filter-drier on suction line just ahead of compressor.
3. Use sealed filter-driers in lines smaller than **<< 1/2 inch; 3/4 inch; or ____ inch>>** outside diameter.
4. Use sealed filter-driers in low temperature systems.
5. Use sealed filter-driers in systems utilizing hermetic compressors.
6. Use replaceable core filter-driers in lines of **<< 1/2 inch; 3/4 inch; or ____ inch>>** outside diameter or greater.
7. Use replaceable core liquid-line filter-driers in systems utilizing receivers.
8. Use filter-driers for each solenoid valve.

I. Solenoid Valves:
1. Use in liquid line of systems operating with single pump-out or pump-down compressor control.
2. Use in liquid line of single or multiple evaporator systems.
3. Use in oil bleeder lines from flooded evaporators to stop flow of oil and refrigerant into the suction line when system shuts down.

J. Receivers:
1. Use on systems with long piping runs.

K. Flexible Connectors: Utilize at or near compressors where piping configuration does not absorb vibration.

2.02 REGULATORY REQUIREMENTS

A. Comply with **<<ASME B31.9>>** for installation of piping system.

B. Welding Materials and Procedures: Comply with **<<ASME BPVC-IX>><< and applicable state labor regulations; _____; or None - N/A>>**.

C. Welders Certification: In accordance with **<< ASME BPVC-IX; AWS D1.1/D1.1M; or _____>>**.

D. Products Requiring Electrical Connection: Listed and classified by UL, as suitable for the purpose indicated.

DRAFT

2.03 PIPING

A. Copper Tube: **<<ASTM B280>>**, H58 hard drawn**<< or O60 soft annealed; _____; or None - N/A>>**.
   1. Fittings: **<<ASME B16.22>>** wrought copper.
   2. Joints: Braze, **<<AWS A5.8M/A5.8>>** BCuP silver/phosphorus/copper alloy (15% silver)

B. Preinsulated Refrigerant Piping Linesets:
   1. Copper Tube: **<<ASTM B280>>** seamless, anticorrosion pipe; **<< lineset is precoupled to include two joined pipes; line includes single, individual pipe; or _____>>**.
   2. Insulation: Polyethelene closed-cell foam; preapplied to entire length of lineset.**<< Weather- and UV-resistant for outdoor installation.; _____; or None - N/A>>** Maximum flame spread index of 25 and maximum smoke developed index of 50, when tested in accordance with **<<ASTM E84>>** or **<<UL 723>>**. White in color.
   3. Manufacturers:
      a. Inaba Denko America Inc**<< ; Paircoil; ; _____; or None - N/A>>**: www.inabadenko-america.com/#sle.
      b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

C. Pipe Supports and Anchors:
   1. Provide hangers and supports complying with **<<MSS SP-58>>**.
      a. If type of hanger or support for a particular situation is not indicated, select appropriate type using **<<MSS SP-58>>** recommendations.
      b. For pre-insulated linesets, provide Snap-A-Saddle Pro piping supports to protect all insulation or equal with zip ties sized correctly. Provide white color snap-a-saddle and black zip tie.
         1) Clevis hanger with saddle and zip tie is allowed for single refrigerant pipign runs (ie BS box to cassette).
      c. Where pipe clamps are required, provide B-line Amflex or ZSI Cush-A-Therm insulated pipe clamp or approved equal.
   2. Hangers for Pipe Sizes **<< 1/2 to 1-1/2 Inch>>**: **<< Malleable iron; Carbon steel; or _____>>** adjustable swivel, split ring.
   3. Hangers for Pipe Sizes **<< 2 Inches>>** and Over: Carbon steel, adjustable, clevis.
   4. Multiple or Trapeze Hangers: Steel channels with welded spacers and hanger rods.
   5. Wall Support for Pipe Sizes to **<< 3 Inches>>**: Cast iron hook.
   6. Wall Support for Pipe Sizes **<< 4 Inches>>** and Over: Welded steel bracket and wrought steel clamp.
   7. Vertical Support: Steel riser clamp.
   8. Vertical Riser Load Reducer: Designed for installation on pipe midpoint to reduce load stress from weight and thermal expansion; directs thermal expansion both upward and downward.
      a. Clamp: **<< Corrosion-resistant steel; Stainless steel; Type 304 stainless steel; or _____>>**; attaches to piping.
      b. Base Bracket: **<< Corrosion-resistant steel; Galvanized steel; or _____>>** support; mounts **<< horizontally; vertically; or _____>>**.
      c. Load Support: Up to **<< 700 lbf; 600 lbf; 500 lbf; _____ lbf; or _____>>** or greater.
      d. Manufacturers:

DRAFT

1) Inaba Denko America Inc**<< ; TKL LineBrace; ; _____; or None - N/A>>**: www.inabadenko-america.com/#sle.
2) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

9. Floor Support: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.
10. Copper Pipe Support: Carbon steel ring, adjustable, copper plated.
11. Hanger Rods: Mild steel threaded both ends, threaded one end, or continuous threaded.
12. Inserts: Malleable iron case of**<< galvanized; _____; or None - N/A>>** steel shell and expander plug for threaded connection with lateral adjustment, top slot for reinforcing rods, lugs for attaching to forms; size inserts to suit threaded hanger rods.
13. Rooftop Supports for Low-Slope Roofs: Steel pedestals with bases that rest on top of roofing membrane, not requiring any attachment to the roof structure and not penetrating the roofing assembly, with support fixtures as specified; and as follows:
    a. Bases: High density, UV tolerant, polypropylene or reinforced PVC.
    b. Base Sizes: As required to distribute load sufficiently to prevent indentation of roofing assembly.
    c. Steel Components: Stainless steel, or carbon steel hot-dip galvanized after fabrication in accordance with **<<ASTM A123/A123M>>**.
    d. Attachment/Support Fixtures: As recommended by manufacturer, same type as indicated for equivalent indoor hangers and supports; corrosion resistant material.
    e. Height: Provide minimum clearance of **<< 6 inches; or _____ inches>>** under pipe to top of roofing.
    f. Manufacturers:
        1) Green Link, Inc**<< ; _____; or None - N/A>>**: www.greenlinkengineering.com/#sle.
        2) PHP Systems/Design**<< ; _____; or None - N/A>>**: www.phpsd.com/#sle.
        3) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.04 REFRIGERANT

A. Refrigerant: Use only refrigerants that have ozone depletion potential (ODP) of **<< zero; or _____>>** and global warming potential (GWP) **<< no greater than that allowed by federal code; of less than 50; or _____>>**.

B. Refrigerant: **<< R-454B; R-134A; or _____>>** or R-32as defined in **<<ASHRAE Std 34>>**.

2.05 MOISTURE AND LIQUID INDICATORS

A. Manufacturers:
    1. Henry Technologies**<< ; _____; or None - N/A>>**: www.henrytech.com/#sle.
    2. Mueller Refrigeration**<< ; _____; or None - N/A>>**: www.muellerrefrigeration.com/#sle.
    3. Parker Hannifin - Sporlan Division**<< ; See-All; ; _____; or None - N/A>>**: www.parker.com/#sle.
    4. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Indicators: **<< Single; Double; or _____>>** port type, UL listed, with copper or brass body, flared or soldered ends, sight glass, color coded paper moisture indicator**<< with removable element cartridge; _____; or None - N/A>>** and plastic cap; for maximum temperature of

DRAFT

<< 200 degrees F>> and maximum working pressure of **<< 500 psi; 460 psi; 430 psi; or _____>>**.

2.06 VALVES

A. Manufacturers:
   1. Hansen Technologies Corporation**<< ; _____; or None - N/A>>**: www.hantech.com/#sle.
   2. Henry Technologies**<< ; _____; or None - N/A>>**: www.henrytech.com/#sle.
   3. Flomatic Valves**<< ; _____; or None - N/A>>**: www.flomatic.com/#sle.
   4. Mueller Refrigeration**<< ; _____; or None - N/A>>**: www.muellerrefrigeration.com/#sle.
   5. Parker Hannifin - Sporlan Division**<< ; _____; or None - N/A>>**: www.parker.com/#sle.
   6. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Diaphragm Packless Valves:
   1. UL listed, globe or angle pattern, forged brass body and bonnet, phosphor bronze and stainless steel diaphragms, rising stem and handwheel, stainless steel spring, nylon seat disc, soldered or flared ends, with positive backseating; for maximum working pressure of **<< 500 psi>>** and maximum temperature of **<< 275 degrees F>>**.

C. Packed Angle Valves:
   1. Forged brass**<< or nickel plated forged steel; _____; or None - N/A>>**, forged brass seal caps with copper gasket, rising stem and seat**<< with backseating; _____; or None - N/A>>**, molded stem packing, soldered or flared ends; for maximum working pressure of **<< 500 psi>>** and maximum temperature of **<< 275 degrees F>>**.

D. Ball Valves:
   1. Two piece**<< bolted; _____; or None - N/A>>** forged brass body with teflon ball seals and copper tube extensions, brass**<< bonnet and; _____; or None - N/A>>** seal cap, chrome plated ball, stem with neoprene ring stem seals; for maximum working pressure of **<< 500 psi>>** and maximum temperature of **<< 300 degrees F; 325 degrees F; or _____>>**.

E. Service Valves:
   1. Forged brass body with copper stubs, brass caps, removable valve core,**<< integral ball check valve,; _____ ,; or None - N/A>>** flared or soldered ends, for maximum pressure of **<< 500 psi>>**.

2.07 STRAINERS

A. Manufacturers:
   1. Hansen Technologies Corporation**<< ; _____; or None - N/A>>**: www.hantech.com/#sle.
   2. Mueller Refrigeration**<< ; _____; or None - N/A>>**: www.muellerrefrigeration.com/#sle.
   3. Parker Hannifin - Sporlan Division**<< ; _____; or None - N/A>>**: www.parker.com/#sle.
   4. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Straight Line or Angle Line Type:
   1. Brass or steel shell, steel cap and flange, and replaceable cartridge, with screen of stainless steel wire or monel reinforced with brass; for maximum working pressure of **<< 430 psi>>**.

C. Straight Line, Noncleanable Type:

DRAFT

1. Steel shell, copper plated fittings, stainless steel wire screen, for maximum working pressure of **<< _____ psi>>**.

2.08 CHECK VALVES

A. Manufacturers:
   1. Hansen Technologies Corporation**<< ; _____; or None - N/A>>**: www.hantech.com/#sle.
   2. Mueller Refrigeration**<< ; _____; or None - N/A>>**: www.muellerrefrigeration.com/#sle.
   3. Parker Hannifin**<< ; _____; or None - N/A>>**: www.parker.com/#sle.
   4. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Globe Type:
   1. Cast bronze or forged brass body, forged brass cap with neoprene seal, brass guide and disc holder, phosphor-bronze or stainless steel spring, teflon seat disc; for maximum temperature of **<< 300 degrees F>>** and maximum working pressure of **<< 425 psi; 450 psi; 500 psi; or _____>>**.

C. Straight Through Type:
   1. Brass body and disc, phosphor-bronze or stainless steel spring, neoprene seat; for maximum working pressure of **<< 500 psi>>** and maximum temperature of **<< 200 degrees F; 250 degrees F; or _____>>**.

2.09 PRESSURE REGULATORS

A. Manufacturers:
   1. Hansen Technologies Corporation**<< ; _____; or None - N/A>>**: www.hantech.com/#sle.
   2. Parker Hannifin**<< ; _____; or None - N/A>>**: www.parker.com/#sle.
   3. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Brass body, stainless steel diaphragm, **<< direct acting; pilot operated with remote pressure pilot; or _____>>**, adjustable over **<< 0 to 80 psi>>** range, for maximum working pressure of **<< 450 psi>>**.

2.10 PRESSURE RELIEF VALVES

A. Manufacturers:
   1. Hansen Technologies Corporation**<< ; _____; or None - N/A>>**: www.hantech.com/#sle.
   2. Henry Technologies**<< ; _____; or None - N/A>>**: www.henrytech.com/#sle.
   3. Mueller Refrigeration**<< ; _____; or None - N/A>>**: www.muellerrefrigeration.com/#sle.
   4. Sherwood Valve/Harsco Corporation**<< ; _____; or None - N/A>>**: www.sherwoodvalve.com/#sle.
   5. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Straight Through or Angle Type: Brass body and disc, neoprene seat, factory sealed and stamped with ASME UV and National Board Certification NB, selected to **<<ASHRAE Std 15>>**, with standard setting of **<< 235 psi; 300 psi; 350 psi; 400 psi; 425 psi; 450 psi; or _____>>**.

2.11 FILTER-DRIERS

A. Manufacturers:

DRAFT

1. Flow Controls Division of Emerson Electric**<< ; _____; or None - N/A>>**: www.emersonflowcontrols.com/#sle.
2. Mueller Refrigeration**<< ; _____; or None - N/A>>**: www.muellerrefrigeration.com/#sle.
3. Parker Hannifin - Sporlan Division**<< ; Catch-All; ; _____; or None - N/A>><< ; _____; or None - N/A>>**: www.parker.com/#sle.
4. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Performance:
1. Flow Capacity - Liquid Line: **<< ____ ton; As indicated in schedule; or _____>>**, minimum, rated in accordance with **<<AHRI 710 (I-P)>>** (**<<AHRI 711 (SI)>>**).
2. Flow Capacity - Suction Line: **<< ____ ton; As indicated in schedule; or _____>>**, minimum, rated in accordance with **<<AHRI 730 (I-P)>>**.
3. Pressure Drop: **<< 2 psi; ___ psi; As indicated in schedule; or _____>>**, maximum, when operating at full connected evaporator capacity.
4. Design Working Pressure: **<< 350 psi; 500 psi; ____ psi; As indicated in schedule; or _____>>**, minimum.

C. Cores: **<< Molded or loose-fill; Molded; Loose-fill; or _____>>** molecular sieve desiccant compatible with refrigerant, activated alumina,**<< activated charcoal,; _____ ,; or None - N/A>>** and filtration to 40 microns**<< , with secondary filtration to 20 microns; , _____; or None - N/A>>**; of construction that will not pass into refrigerant lines.

D. Construction: UL listed.
1. Replaceable Core Type: Steel shell with removable cap.
2. Sealed Type: **<< Copper; Steel; or _____>>** shell.
3. Connections: As specified for applicable pipe type.

2.12 SOLENOID VALVES

A. Manufacturers:
1. Flow Controls Division of Emerson Electric**<< ; _____; or None - N/A>>**: www.emersonflowcontrols.com/#sle.
2. Parker Hannifin - Sporlan Division**<< ; _____; or None - N/A>>**: www.parker.com/#sle.
3. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Valve: **<<AHRI 760 (I-P)>>**, pilot operated, copper, **<< or brass; brass or steel; or _____>>** body and internal parts, synthetic seat, stainless steel stem and plunger assembly (permitting manual operation in case of coil failure),**<< integral strainer,; _____ ,; or None - N/A>>** with flared, soldered, or threaded ends; for maximum working pressure of **<< 500 psi; 450 psi; 300 psi; or _____>>**.

C. Coil Assembly: **<< UL 429 ; _____ ; or None - N/A>>**UL listed, replaceable with molded electromagnetic coil, moisture and fungus proof, with surge protector and color coded lead wires, integral junction box**<< with pilot light; _____; or None - N/A>>**.

2.13 EXPANSION VALVES

A. Manufacturers:
1. Flow Controls Division of Emerson Electric**<< ; _____; or None - N/A>>**: www.emersonflowcontrols.com/#sle.
2. Parker Hannifin - Sporlan Division**<< ; _____; or None - N/A>>**: www.parker.com/#sle.
3. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

DRAFT

B. Angle or Straight Through Type: **<<AHRI 760 (I-P)>>**; design suitable for refrigerant, brass body, internal or external equalizer, **<< bleed hole; mechanical pressure limit (maximum operating pressure MOP feature); or _____>>**, **<< adjustable; nonadjustable; or _____>>** superheat setting, replaceable inlet strainer, with **<< nonreplaceable; replaceable; or _____>>** capillary tube and remote sensing bulb**<< and remote bulb well; _____; or None - N/A>>**.

C. Selection: Evaluate refrigerant pressure drop through system to determine available pressure drop across valve. Select valve for maximum load at design operating pressure and minimum **<< 10 degrees F>>** superheat. Select to avoid being undersized at full load and excessively oversized at part load.

2.14 ELECTRONIC EXPANSION VALVES

A. Manufacturers:
   1. Flomatic Valves**<< ; _____; or None - N/A>>**: www.flomatic.com/#sle.
   2. Parker Hannifin - Sporlan Division**<< ; _____; or None - N/A>>**: www.parker.com/#sle.
   3. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Valve:
   1. Brass body with flared or soldered connection, needle valve with floating needle and machined seat, stepper motor drive.

C. Evaporation Control System:
   1. Electronic microprocessor based unit in enclosed case, proportional integral control with adaptive superheat, maximum operating pressure function, preselection allowance for electrical defrost and hot gas bypass.

D. Refrigeration System Control: Electronic microprocessor based unit in enclosed case, with proportional integral control of valve, on/off thermostat, air temperature alarm (high and low), solenoid valve control, liquid injection adaptive superheat control, maximum operating pressure function, night setback thermostat, timer for defrost control.

2.15 RECEIVERS

A. Manufacturers:
   1. Henry Technologies**<< ; _____; or None - N/A>>**: www.henrytech.com/#sle.
   2. Parker Hannifin**<< ; _____; or None - N/A>>**: www.parker.com/#sle.
   3. Sherwood Valve/Harsco Corporation**<< ; _____; or None - N/A>>**: www.sherwoodvalve.com/#sle.
   4. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Internal Diameter **<< 6 inch>>** and Smaller:
   1. **<<AHRI 495>>**, UL listed, steel, brazed; **<< 400 psi>>** maximum pressure rating, with tappings for inlet, outlet, and pressure relief valve.

C. Internal Diameter Over **<< 6 inch>>**:
   1. **<<AHRI 495>>**, welded steel, tested and stamped in accordance with **<<ASME BPVC-VIII-1>>**; **<< 400 psi>>** with tappings for liquid inlet and outlet valves, pressure relief valve**<< , and magnetic liquid level indicator; , _____; or None - N/A>>**.

2.16 CONDUIT FOR PIPING

A. Heavy-Duty, Protective Multi-Lineset Enclosure:
   1. Manufacturers:

DRAFT

a. Inaba Denko America Inc**<< ; Slimduct RD Metal Lineset Cover; ; _____; or None - N/A>>**: www.inabadenko-america.com/#sle.

b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2. Description: Rigid encasement to cover and enclose multiple linesets; suitable for outdoor and rooftop applications; provides protection agains impact force and weather; installs on both horizontal and vertical piping.

3. Construction: **<< Metal; Steel; Stainless steel; or _____>>** exterior; **<< weather-; corrosion-; salt-; and _____>>**resistant.

a. Coating: Layer of **<< zinc chemical mixture; chemical mixture; or _____>>** applied to exterior for corrosion resistance.

4. Tensile Strength: **<< 30 lbf/sq in; _____ lbf/sq in; or _____>>** or greater.

5. Load Rating: Cover provides resistance to loads up to **<< 100 lbf/sq ft; 1000 lbf/sq ft; _____ lbf/sq ft; or _____>>** or greater.

2.17 FLEXIBLE CONNECTORS

A. Manufacturers:

1. Circuit Hydraulics, Ltd**<< ; _____; or None - N/A>>**: www.circuit-hydraulics.co.uk/#sle.
2. Flexicraft Industries**<< ; _____; or None - N/A>>**: www.flexicraft.com/#sle.
3. Penflex**<< ; _____; or None - N/A>>**: www.penflex.com/#sle.
4. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Corrugated **<< stainless steel; bronze; or _____>>** hose with single layer of**<< stainless steel; _____; or None - N/A>>** exterior braiding, minimum **<< 9 inches>>** long with copper tube ends; for maximum working pressure of **<< 500 psi; 400 psi; 350 psi; 300 psi; or _____>>**.

2.18 ENGINEERED WALL SEALS AND INSULATION PROTECTION

A. Manufacturers:

1. Airex Manufacturing, Inc**<< ; ____; or None - N/A>>**: www.airexmfg.com/#sle.
2. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Basis of Design: Airex Manufacturing, Inc; www.airexmfg.com/#sle.

1. Pipe Penetration Wall Seal**<< : Airex Titan Outlet; : ____; or None - N/A>>**.
2. Refrigeration Pipe Insulation Protection System**<< : Airex E-Flex Guard; : ____; or None - N/A>>**.
3. Pipe Penetration Wall Seal and Insulation Protection System**<< : Airex Pro-System Kit; : ____; or None - N/A>>**.

C. Pipe Penetration Wall Seal: Seals HVAC piping wall penetrations with compression gasket wall mounted rigid plastic outlet cover.

1. Wall Outlet Size, Stucco and Masonry Applications: **<< 7-1/2 inch wide by 10 inch high>>**.

a. Elastomeric Sleeve Diameter: **<< 1-11/16 inch; 2-3/8 inch; 3-3/16 inch; or ___ inch>>**.

2. Wall Outlet Size, Siding and Compact Applications: **<< 6-7/8 inch wide by 3-7/8 inch high>>**.

a. Elastomeric Sleeve Diameter: **<< 1-11/16 inch; 2-3/8 inch; or ___ inch>>**.

3. Outlet Cover Color: **<< Gray; White; or _____>>**.
4. Water Penetration: Comply with **<<ASTM E331>>**.

DRAFT

5. Air Leakage: Comply with **<<ASTM E283/E283M>>**.
6. Air Permeance: Comply with **<<ASTM E2178>>**.

D. Insulation Protection System: Mechanical line insulation and PVC cover.
1. PVC Insulation Cover Color: **<< Black; White; or _____>>** with full-length velcro fastener.
2. Weatherization and Ultraviolet Exposure Protection: Comply with **<<ASTM G153>>**.
3. Water/Vapor Permeability: Comply with **<<ASTM E96/E96M>>**.
4. Anti-Fungal and Anti-Microbial Resistance: Comply with **<<ASTM G21>>**.
5. Flame Spread and Smoke Development Rating of 25/450: Comply with **<<ASTM E84>>**.
6. Adhesive free.

2.19 EXTERIOR PENETRATION ACCESSORIES

A. Flashing Panels for Exterior Wall Penetrations: Premanufactured components and accessories as required to preserve integrity of building envelope; suitable for conduits and facade materials to be installed.
1. Products:
a. Quickflash Weatherproofing Products, Inc**<< ; _____; or None - N/A>>**: www.quickflashproducts.com/#sle.
b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Sealing Systems for Roof Penetrations: Premanufactured components and accessories as required to preserve integrity of roofing system and maintain roof warranty; suitable for conduits and roofing system to be installed; designed to accommodate existing penetrations where applicable.
1. Products:
a. Alta Products, LLC; Sigrist Pipe Chase Housing, Curbs, and Exit Seals: www.altaproductsllc.com/#sle.
b. Menzies Metal Products**<< ; _____; or None - N/A>>**: www.menzies-metal.com/#sle.
c. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

DRAFT

PART 3 EXECUTION

3.01 PREPARATION

A. Ream pipe and tube ends. Remove burrs.**<< Bevel plain end ferrous pipe.; _____ .; or None - N/A>>**

B. Remove scale and dirt on inside and outside before assembly.

C. Prepare piping connections to equipment with flanges or unions.

3.02 INSTALLATION

A. Install refrigeration specialties in accordance with manufacturer's instructions.

B. Route piping in orderly manner, with plumbing parallel to building structure, and maintain gradient.

C. Install piping to conserve building space and avoid interference with use of space.

D. Group piping whenever practical at common elevations and locations. Slope piping one percent in direction of oil return.

E. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.

F. Inserts:
   1. Provide inserts for placement in concrete formwork.
   2. Provide inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.
   3. Provide hooked rod to concrete reinforcement section for inserts carrying pipe over **<< 4 inches>>**.
   4. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.
   5. Where inserts are omitted, drill through concrete slab from below and provide through-bolt with recessed square steel plate and nut **<< above; flush with top of; recessed into and grouted flush with; or _____>>** slab.

G. Pipe Hangers and Supports:
   1. Install in accordance with **<< ASME B31.5; ASTM F708; MSS SP-58; and _____>>**.
   2. Support horizontal piping as indicated.
   3. Install hangers to provide minimum **<< 1/2 inch>>** space between finished covering and adjacent work.
   4. Place hangers within **<< 12 inches>>** of each horizontal elbow.
   5. Support vertical piping at every**<< other; _____; or None - N/A>>** floor. Support riser piping independently of connected horizontal piping.
   6. Where several pipes can be installed in parallel and at same elevation, provide multiple or trapeze hangers. Only use trapeze hangers to support all refrigerant piping 3 feet apart.
   7. Provide **<< copper plated hangers and supports for copper piping; sheet lead packing between hanger or support and piping; or _____>>**.

H. Arrange piping to return oil to compressor. Provide traps and loops in piping, and provide double risers as required. Slope horizontal piping 0.40 percent in direction of flow.

I. Provide clearance for installation of insulation and access to valves and fittings.

J. Provide access to concealed valves and fittings. **<< Coordinate size and location of access doors with Section 083100.; _____ .; or None - N/A>>**

K. Flood piping system with nitrogen when brazing.

L. Where pipe support members are welded to structural building frame, brush clean, and apply one coat of zinc rich primer to welding.

M. Prepare unfinished pipe, fittings, supports, and accessories ready for finish painting. See Section **<< 099123>>**.

N. Insulate piping**<< and equipment; _____; or None - N/A>>**.

O. Follow **<<ASHRAE Std 15>>** procedures for charging and purging of systems and for disposal of refrigerant.

P. Provide replaceable cartridge filter-driers, with isolation valves and valved bypass.

Q. Locate expansion valve sensing bulb immediately downstream of evaporator on suction line.

R. Provide external equalizer piping on expansion valves with refrigerant distributor connected to evaporator.

DRAFT

S. Install flexible connectors at right angles to axial movement of compressor, parallel to crankshaft.

T. Fully charge completed system with refrigerant after testing.

U. Provide electrical connection to solenoid valves. See Section **<< 260583>>**.

3.03 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Test refrigeration system in accordance with **<<ASME B31.5>>**.

C. Pressure test system with dry nitrogen to **<< 200 psi>>**. Perform final tests at 500 microns vacuum and **<< 500 psi>>** using **<< halide torch; electronic leak detector; or _____>>**. Test to no leakage. Test per manufacturers recommendations.

3.04 SCHEDULES

A. Hanger Spacing for Copper Tubing.

1. **<< 1/2 inch>>**, **<< 5/8 inch>>**, and **<< 7/8 inch>>** OD: Maximum span, **<< 3 feet>>**; minimum rod size, **<< 1/4 inch>>**.
2. **<< 1-1/8 inch>>** OD: Maximum span, **<< 3 feet>>**; minimum rod size, **<< 1/4 inch>>**.
3. **<< 1-3/8 inch>>** OD: Maximum span, **<< 3 feet>>**; minimum rod size, **<< 3/8 inch>>**.
4. **<< 1-5/8 inch>>** OD: Maximum span, **<< 3 feet>>**; minimum rod size, **<< 3/8 inch>>**.
5. **<< 2-1/8 inch>>** OD: Maximum span, **<< 3 feet>>**; minimum rod size, **<< 3/8 inch>>**.
6. **<< 2-5/8 inch>>** OD: Maximum span, **<< 3 feet>>**; minimum rod size, **<< 3/8 inch>>**.
7. **<< 3-1/8 inch>>** OD: Maximum span, **<< 3 feet>>**; minimum rod size, **<< 3/8 inch>>**.
8. **<< 3-5/8 inch>>** OD: Maximum span, **<< 3 feet>>**; minimum rod size, **<< 1/2 inch>>**.
9. **<< 4-1/8 inch>>** OD: Maximum span, **<< 3 feet>>**; minimum rod size, **<< 1/2 inch>>**.

END OF SECTION 232300

DRAFT

SECTION 232500
HVAC WATER TREATMENT

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Materials.
   1. System cleaner.
   2. Closed system treatment (water).
   3. Condenser water system treatment (cooling towers).

B. By-pass (pot) feeder.

C. Solution metering pump.

D. Solution tanks.

E. Agitator.

F. Liquid level switch.

G. Conductivity controller.

H. Water meter.

I. Solenoid valves.

J. Timers.

K. Glycol.

L. Test equipment.

DRAFT

1.02 RELATED REQUIREMENTS

A. Section **<< 016000 - Product Requirements>>**: **<<Owner>>** furnished **<< treatment equipment; chemicals; and _____>>**.

1.03 REFERENCE STANDARDS

A. FM (AG) - FM Approval Guide.

B. ITS (DIR) - Directory of Listed Products.

C. UL (DIR) - Online Certifications Directory.

1.04 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>**, for submittal procedures.

B. Product Data: Provide chemical treatment materials, chemicals, and equipment including electrical characteristics and connection requirements.

C. Shop Drawings: Indicate system schematic, equipment locations, and controls schematics, electrical characteristics and connection requirements.

D. Manufacturer's Installation Instructions: Indicate placement of equipment in systems, piping configuration, and connection requirements.

E. Manufacturer's Field Reports: Indicate start-up of treatment systems when completed and operating properly. Indicate analysis of system water after cleaning and after treatment.

F. Certificate: Submit certificate of compliance from **<< Authority Having Jurisdiction; or _____>>** indicating approval of chemicals and their proposed disposal.

G. Project Record Documents: Record actual locations of equipment and piping, including sampling points and location of chemical injectors.

H. Operation and Maintenance Data: Include data on chemical feed pumps, agitators, and other equipment including spare parts lists, procedures, and treatment programs. Include step by step instructions on test procedures including target concentrations.

I. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.
   1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
   2. Sufficient chemicals for treatment and testing during required maintenance period.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum **<< three; ten; or _____>>** years of**<< documented; _____; or None - N/A>>** experience. Company shall have local representatives with water analysis laboratories and full time service personnel.

B. Installer Qualifications: Company specializing in performing the type of work specified in this section,**<< with minimum _____ years of experience; with minimum 5 years of documented experience; _____; or None - N/A>>** and approved by manufacturer.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. AmSolv-Amrep, Inc**<< ; _____; or None - N/A>>**: www.amsolv.com/#sle.

B. GE Water & Process Technologies**<< ; _____; or None - N/A>>**: www.gewater.com/#sle.

C. Nalco, an Ecolab Company**<< ; _____; or None - N/A>>**: www.nalco.com/#sle.

D. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.02 REGULATORY REQUIREMENTS

A. Comply with applicable codes for addition of non-potable chemicals to building mechanical systems and to public sewage systems.

B. Comply with **<< UL (DIR); FM (AG); ITS (DIR) or Warnock Hersey; or ___>>** requirements.

C. Perform work in accordance with **<< local health department; or _____>>** regulations.

D. Provide certificate of compliance from **<< Authority Having Jurisdiction; or _____>>** indicating approval of installation.

2.03 MATERIALS

A. System Cleaner:
   1. Manufacturers:
      a. AmSolv-Amrep, Inc**<< ; _____; or None - N/A>>**: www.amsolv.com/#sle.
      b. GE Water & Process Technologies**<< ; _____; or None - N/A>>**: www.gewater.com/#sle.
      c. Nalco, an Ecolab Company**<< ; _____; or None - N/A>>**: www.nalco.com/#sle.
      d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

DRAFT

2. Liquid alkaline compound with emulsifying agents and detergents to remove grease and petroleum products**<< ; sodiumtripoly phosphate and sodium molybdate; ; _____; or None - N/A>>**.
3. Biocide **<< chlorine release agents such as sodium hypochlorite or calcium hypochlorite; microbiocides such as quarternary ammonia compounds, tributyltin oxide, methylene bis (thiocyanate); isothiazolones; or _____>>**.

B. Closed System Treatment (Water):
1. Manufacturers:
   a. AmSolv-Amrep, Inc**<< ; _____; or None - N/A>>**: www.amsolv.com/#sle.
   b. GE Water & Process Technologies**<< ; _____; or None - N/A>>**: www.gewater.com/#sle.
   c. Nalco, an Ecolab Company**<< ; _____; or None - N/A>>**: www.nalco.com/#sle.
   d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
2. Sequestering agent to reduce deposits and adjust pH**<< ; polyphosphate; ; _____; or None - N/A>>**.
3. Corrosion inhibitors**<< ; boron-nitrite, sodium nitrite and borax, sodium totyltriazole, low molecular weight polymers, phosphonates, sodium molybdate, or sulphites; ; liquid boron-nitrite, sodium nitrite and borax, sodium totyltriazole, low molecular weight polymers, phosphonates, sodium molybdate, or sulphites; ; _____; or None - N/A>>**.
4. Conductivity enhancers**<< ; phosphates or phosphonates; or ; _____>>**.

C. Condenser Water System Treatment (Cooling Towers):
1. Manufacturers:
   a. AmSolv-Amrep, Inc**<< ; _____; or None - N/A>>**: www.amsolv.com/#sle.
   b. GE Water & Process Technologies**<< ; _____; or None - N/A>>**: www.gewater.com/#sle.
   c. Nalco, an Ecolab Company**<< ; _____; or None - N/A>>**: www.nalco.com/#sle.
   d. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
2. Sequestering agent to inhibit scaling**<< ; phosphonates, sodium polyphosphates, lignin derivatives, synthetic polymer polyelectrolytes, or organic phosphates; ; _____; or None - N/A>>**.
3. Acid to reduce alkalinity and pH**<< ; sulphuric acid; ; _____; or None - N/A>>**.
4. Corrosion inhibitor**<< ; zinc-phosphate, phosphonate-phosphate, phosphonate-molybdate and phosphonate-silicate, sodium tolyltriazole, or low molecular weight polymers; ; _____; or None - N/A>>**.
5. Biocide **<< chlorine release agents such as sodium hypochlorite or calcium hypochlorite; microbiocides such as quaternary ammonia compounds, tributyl tin oxide, methylene bis (thiocyanate); isothiazolones; or _____>>**.

2.04 BY-PASS (POT) FEEDER

A. Manufacturers:
1. Griswold Controls**<< ; _____; or None - N/A>>**: www.griswoldcontrols.com/#sle.
2. J. L. Wingert Company**<< ; _____; or None - N/A>>**: www.jlwingert.com/#sle.
3. Neptune, a brand of the Dover Company**<< ; _____; or None - N/A>>**: www.neptune1.com/#sle.

DRAFT

4. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. **<< 2 quart; 1.8 gal; 6.0 gal; or __ gal>>** quick opening cap for working pressure of **<< 175 psi; or ___ psi>>**.

2.05 SOLUTION METERING PUMP

A. Manufacturers:
1. J. L. Wingert Company**<< ; _____; or None - N/A>>**: www.jlwingert.com/#sle.
2. Dover Corporation**<< ; _____; or None - N/A>>**: www.neptune1.com/#sle.
3. Pulsafeeder Engineered Products**<< ; _____; or None - N/A>>**: www.pulsa.com/#sle.
4. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Positive displacement, diaphragm pump with adjustable flow rate, thermoplastic construction, continuous-duty fully enclosed electric motor and drive, and**<< built-in; _____; or None - N/A>>** relief valve.

C. Electrical Characteristics:
1. Cord and Plug: Provide unit with **<< 6 foot; or __ foot>>** cord and plug for connection to electric wiring system**<< including grounding connector; _____; or None - N/A>>**.

2.06 SOLUTION TANKS

A. **<< 30 gallon; 50 gallon; or __ gallon>>** capacity, polyethylene, self-supporting, **<< 1 gallon; 5 gallon; or __ gallon>>** graduated markings; molded fiberglass cover with recess for mounting pump, agitator, and liquid level switch.

2.07 AGITATOR

A. **<< Totally enclosed; Explosion-proof; or _____>>** electric motor, **<< cast iron; stainless steel; or _____>>** clamp and motor mount, **<< 1/2 inch; 5/8 inch; or __ inch>>** diameter **<< coated ; _____; or None - N/A>>**Type 316 stainless steel propeller.

B. Electrical Characteristics:
1. Cord and Plug: Provide unit with **<< 6 foot; or ____ foot>>** cord and plug for connection to electric wiring system**<< including grounding connector; _____; or None - N/A>>**.

2.08 LIQUID LEVEL SWITCH

A. Polypropylene housing with integrally mounted PVC air trap, receptacles for connection to metering pump, and low level alarm.

2.09 CONDUCTIVITY CONTROLLER

A. Manufacturers:
1. Envirocare International**<< ; _____; or None - N/A>>**: www.envirocare.com/#sle.
2. JENCO Instruments Incorporated**<< ; _____; or None - N/A>>**: www.jencoi.com/#sle.
3. Omega Engineering, Inc**<< ; _____; or None - N/A>>**: www.omega.com/#sle.
4. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Packaged monitor controller with solid state circuiting, five percent accuracy, linear dial adjustment, built-in calibration switch, on-off switch and light, control function light, output to control circuit**<< and recorder; _____; or None - N/A>>**.

DRAFT

2.10 WATER METER

A. Displacement type cold water meter with sealed, tamper-proof magnetic drive, impulse contact register**<< , single pole, double throw dry contact switch; , _____; or None - N/A>>**.

2.11 SOLENOID VALVES

A. Forged brass body globe pattern, normally open or closed as required, **<< general purpose; or explosion-proof and watertight>>** solenoid enclosure, and continuous duty coil.

2.12 TIMERS

A. Electronic timers, infinitely adjustable over full range, 150 second and five minute range, mounted together in cabinet with hands-off-automatic switches and status lights.

2.13 GLYCOL

A. Manufacturers:
   1. CORECHEM, Inc**<< ; _____; or None - N/A>>**: www.corecheminc.com/#sle.
   2. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Description: Glycol-based anti-freeze protection for heat-transfer fluid in hydronic systems; corrosion inhibitors added for prevention of metal piping deterioration.

C. Application: For **<< hydronic heating and cooling; geothermal; or _____>>** system.

D. Composition: Use **<< ethylene; nontoxic propylene; or _____>>** glycol.

E. Operating Temperature: Rated for operating range of hydronic system.
   1. Minimum Mixture Operating Temperature: **<< 0 degrees F; _____ degrees F; or _____>>**.
   2. Maximum Mixture Operating Temperature: **<< 215 degrees F; _____ degrees F; or _____>>**.

F. pH: **<< 9.0 to 11.0; 8.5 to 10.5; 7.0 to 9.0; or _____>>**.

G. Food Safe: NSF-certified nonfood compound, Category HT-1 heat transfer fluid for incidental food contact.

2.14 TEST EQUIPMENT

A. Provide white enamel test cabinet with local and fluorescent light, capable of accommodating 4 - 10 ml zeroing titrating burettes and associated reagents.

B. Provide the following test kits:
   1. Alkalinity titration test kit.
   2. Chloride titration test kit.
   3. Sulfite titration test kit.
   4. Total hardness titration test kit.
   5. Low phosphate test kit.
   6. Conductivity bridge, range 0 - 10,000 micro-ohms.
   7. Creosol red pH slide complete with reagent.
   8. Portable electronic conductivity meter.
   9. High nitrite test kit.

DRAFT

PART 3 EXECUTION

3.01 PREPARATION

A. Systems shall be operational, filled, started, and vented prior to cleaning. Use water meter to record capacity in each system.

B. Place terminal control valves in open position during cleaning.

C. Verify that electric power is available and of the correct characteristics.

3.02 CLEANING SEQUENCE

A. Concentration:
   1. As recommended by manufacturer.

B. Hot Water Heating Systems:
   1. Apply heat while circulating, slowly raising temperature to **<< 160 degrees F>>** and maintain for 12 hours minimum.
   2. Remove heat and circulate to **<< 100 degrees F>>** or less; drain systems as quickly as possible and refill with clean water.
   3. Circulate for 6 hours at design temperatures, then drain.
   4. Refill with clean water and repeat until system cleaner is removed.

C. Chilled Water Systems:
   1. Circulate for 48 hours, then drain systems as quickly as possible.
   2. Refill with clean water, circulate for 24 hours, then drain.
   3. Refill with clean water and repeat until system cleaner is removed.

D. Use neutralizer agents on recommendation of system cleaner supplier and approval of **<<Architect>>**.

E. Flush open systems **<< and glycol filled closed systems; or None - N/A>>** with clean water for one hour minimum. Drain completely and refill.

F. Remove, clean, and replace strainer screens.

G. Inspect, remove sludge, and flush low points with clean water after cleaning process is completed. Include disassembly of components as required.

3.03 INSTALLATION

A. Install in accordance with manufacturer's instructions.

3.04 CLOSED SYSTEM TREATMENT

A. Provide one bypass feeder on each system. Install isolating and drain valves and necessary piping. Install around balancing valve downstream of circulating pumps unless indicated otherwise.

B. Introduce closed system treatment through bypass feeder when required or indicated by test.

C. Provide **<< 3/4 inch>>** water coupon rack around circulating pumps with space for **<< 4; 12; or _____>>** test specimens.

3.05 CONDENSER WATER SYSTEMS (COOLING TOWERS)

A. Provide automatic condenser water control systems for inhibitor feed, blowdown and biocide feeds. Inhibitor application shall be meter activated, blowdown shall be conductivity activated, and biocide shall be meter fed with blowdown locked out to ensure biocide retention time.

DRAFT

B. Control system shall incorporate solid state integrated circuits and digital LED displays, in NEMA-12 steel enclosure. Provide gasketed and lockable door.

C. Base dissolved solids control on conductivity and include:
   1. LED digital readout display (micro-ohm/cm).
   2. Temperature compensated sensor probe adaptable to sample stream manifold.
   3. High, low, normal conductance indicator lights (LED).
   4. High or low conductance alarm light (flash or steady switch), trip points field adjustable. Flash or steady switch shall have silence position.
   5. Illuminated legend shall indicate "ALARM" whenever alarm condition exists.
   6. Hand-off-automatic switch for solenoid bleed valve.
   7. Illuminated legend shall indicate "BLEED" when valve is operated.
   8. Adjustable hysteresis or dead-band (internal).

D. Base inhibitor feed control on make-up volume and include:
   1. Solid state counter (1-15 field selectable).
   2. Solid state timer (adjustable 1/4 to 5 minutes).
   3. Test switch.
   4. Hand-off-automatic switch for chemical pump.
   5. Illuminated legend shall indicate "FEED" when pump is activated.
   6. Solid state lock-out timer (adjustable 1/4 to 3 hours) and indicator light. Lock-out timer shall deactivate the pump and activate alarm circuits.
   7. Panel totalizer (amount of makeup), electro-mechanical type.

E. Biocide programmer to include:
   1. 24 hour timer with 14 day skip feature to permit activation any hour of the day.
   2. Precision solid state bleed lock-out timer (0-9 hours) and biocide pump timer (0 - 2-1/4 hours), clock controlled.
   3. Solid state alternator to enable the use of two different formulations.
   4. Digital display of the time of day (24 hours).
   5. LED display of day of week (14 days).
   6. Fast and slow clock set controls (internal).
   7. Battery back-up so clock is not disturbed by power outages, quartz timekeeping accuracy.
   8. Hand-off-automatic switches for biocide pumps.
   9. Illuminated legend shall indicate "BIOCIDE A" or "BIOCIDE B" when pump is activated.

F. Provide water meter on system make-up**<< , wired to control system; , _____; or None - N/A>>**.

G. Provide solution pumps to feed sequestering agent and corrosion inhibitor from solution tank into condenser water supply to tower. Provide agitator as required.

H. Provide conductivity controller to sample condenser water and operate **<< 1 inch; or _ inch>>** solenoid bleed valve and piping to blowdown controller sampler wired to open when condensing water pump is operating.

I. Introduce biocide to tower by **<< intermittent slug feed; continuous feed with solution pump or solenoid valve on tank (chlorine); or _____>>**.

J. Provide liquid level switch in each solution tank to deactivate solution pump and agitator and **<< sound local alarm bell; signal mechanical alarm system; refer to Section 230913; or _____>>**.

DRAFT

K. Provide **<< 3/4 inch>>** water coupon rack around circulating pumps with space for **<< 4; 12; or _____>>** test specimens.

3.06 CLOSEOUT ACTIVITIES

A. Training: Train **<<Owner>>**'s personnel on operation and maintenance of chemical treatment system.
   1. Provide minimum of **<< two hours; or _____>>** of instruction for **<< two people; or _____>>**.
   2. Have operation and maintenance data prepared and available for review during training.
   3. Conduct training using actual equipment after treated system has been put into full operation.

3.07 MAINTENANCE

A. See Section **<< 017000>>** - Execution Requirements, for additional requirements relating to maintenance service.

B. Provide a separate maintenance contract for specified maintenance service.

C. Perform maintenance work using competent and qualified personnel **<< under the supervision; in the direct employ; and _____>>** of the equipment manufacturer or original installer.

D. Maintenance service shall not be assigned or transferred to any agent or subcontractor without prior written consent of **<<Owner>>**.

E. Provide service and maintenance of treatment systems for **<< one year; ___ years; or _____>>** from Date of Substantial Completion.

F. Provide **<< monthly; or _____>>** technical service visits to perform field inspections and make water analysis on-site. Detail findings in writing on proper practices, chemical treating requirements, and corrective actions needed. Submit two copies of field service report after each visit.

G. Provide laboratory and technical assistance services during this maintenance period.

H. Provide on-site inspections of equipment during scheduled or emergency shutdown to properly evaluate success of water treatment program, and make recommendations in writing based upon these inspections.

END OF SECTION 232500

DRAFT

SECTION 233100
HVAC DUCTS AND CASINGS

<<<< UPDATE NOTES

PART 1 GENERAL

2.01 SECTION INCLUDES

A. Metal ducts.

B. Flexible ducts.

C. Air plenums and casings.

D. Ducts for kitchen exhaust applications.

2.02 RELATED REQUIREMENTS

A. Section **<< 078400 - Firestopping>>**.

B. Section **<< 099113 - Exterior Painting>>**: Weld priming, weather resistant, paint or coating.

C. Section **<< 099123 - Interior Painting>>**: Weld priming, paint or coating.

D. Section **<< 114000 - Foodservice Equipment>>**: Kitchen range hoods.

E. Section **<< 230130.51 - HVAC Air-Distribution System Cleaning>>**: Post install duct cleaning.

F. Section **<< 230713 - Duct Insulation>>**: External insulation and duct liner.

G. Section **<< 233319 - Duct Silencers>>**.

H. Section **<< 233700 - Air Outlets and Inlets>>**: Fabric air distribution devices.

2.03 REFERENCE STANDARDS

A. ASHRAE (FUND) - ASHRAE Handbook - Fundamentals.

B. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.

C. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

D. ASTM A666/A666M - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.

E. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

F. ASTM C177 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus.

G. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

H. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.

I. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.

J. ASTM E814 - Standard Test Method for Fire Tests of Penetration Firestop Systems.

K. ASTM E2336 - Standard Test Methods for Fire Resistive Grease Duct Enclosure Systems.

L. ICC-ES AC01 - Acceptance Criteria for Expansion Anchors in Masonry Elements.

DRAFT

M. ICC-ES AC106 - Acceptance Criteria for Predrilled Fasteners (Screw Anchors) in Masonry.

N. ICC-ES AC193 - Acceptance Criteria for Mechanical Anchors in Concrete Elements.

O. ICC-ES AC308 - Acceptance Criteria for Post-Installed Adhesive Anchors in Concrete Elements.

P. NFPA 90A - Standard for the Installation of Air-Conditioning and Ventilating Systems.

Q. NFPA 90B - Standard for the Installation of Warm Air Heating and Air-Conditioning Systems.

R. NFPA 96 - Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations.

S. SMACNA (DCS) - HVAC Duct Construction Standards Metal and Flexible.

T. SMACNA (KVS) - Kitchen Ventilation Systems and Food Service Equipment Fabrication and Installation Guidelines.

U. SMACNA (LEAK) - HVAC Air Duct Leakage Test Manual.

V. UL 181 - Standard for Factory-Made Air Ducts and Air Connectors.

W. UL 1479 - Standard for Fire Tests of Penetration Firestops.

X. UL 1978 - Grease Ducts.

Y. UL 2221 - Tests of Fire Resistive Grease Duct Enclosure Assemblies.

2.04 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Product Data: Provide data for **<< duct materials; duct liner; duct connections; and _____>>**.

1. Sealants and gaskets where applicable.

C. Shop Drawings: Indicate duct fitting types, gauges, sizes, welds, and configuration**<< for _____ pressure class and higher systems; for kitchen hood exhaust systems; for glass fiber duct systems; for _____ systems; or None - N/A>>**.

D. Test Reports: Indicate pressure tests performed. Include date, section tested, test pressure, and leakage rate per appropriate seal class, following **<<SMACNA (LEAK)>>**.

E. Manufacturer's Installation Instructions: Indicate special procedures for glass fiber ducts.

F. Project Record Documents: Record actual locations of ducts and duct fittings. Record changes in fitting location and type. Show additional fittings used.

2.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum **<< three; or _____>>** years of**<< documented; _____; or None - N/A>>** experience**<< , and approved by manufacturer; , _____; or None - N/A>>**.

B. Installer Qualifications: Company specializing in performing the type of work specified in this section, with minimum **<< three; five; or ____>>** years of**<< documented; _____; or None - N/A>>** experience.

2.06 FIELD CONDITIONS

A. Do not install duct sealants when temperatures are less than those recommended by sealant manufacturers.

B. Maintain temperatures within acceptable range during and after installation of duct sealants.

DRAFT

PART 2 PRODUCTS

3.01 GENERAL REQUIREMENTS

A. Provide**<< UL Class 0; UL Class 1; _____; or None - N/A>> << None - N/A; or reinforced >>**ductwork, fittings, hangers, supports, and appurtenances in accordance with **<< NFPA 90A; NFPA 90B; SMACNA (DCS); and _____>>** guidelines unless stated otherwise**<< . Apply illustrated design guides and specifics for underground construction; _____; or None - N/A>>**.

B. Provide metal duct unless otherwise indicated.

C. Acoustical Treatment: Provide sound-absorbing liner where indicated.

D. Duct Shape and Material in accordance with Allowed Static Pressure Range:

1. Round: Plus or minus **<< 2 in-wc; 4 in-wc; 10 in-wc; or ___ in-wc>>** of **<< G60-coated galvanized steel; galvanized steel; stainless steel; or _____>>**.
2. Rectangular: Plus or minus **<< 1/2 in-wc; 1 in-wc; 2 in-wc; 3 in-wc; 4 in-wc; 6 in-wc; 10 in-wc; or ___ in-wc>>** of **<< G60-coated galvanized steel; galvanized steel; stainless steel; or _____>>**.
3. Flat Oval: Plus **<< 1 in-wc; 2 in-wc; 3 in-wc; 4 in-wc; 6 in-wc; 10 in-wc; or _____ in-wc>>** of **<< galvanized steel; stainless steel; or _____>>**.
4. Flexible Duct (Fabric and wire): Plus or minus **<< 1/2 in-wc; 1 in-wc; 2 in-wc; 3 in-wc; 4 in-wc; 6 in-wc; 10 in-wc; or ___ in-wc>>**; see Section **<< 233700>>**.

E. Duct Sealing and Leakage in accordance with Static Pressure Class:

1. Duct Pressure Class and Material for Common Mechanical Ventilation Applications:
   a. Supply Air: **<< 1/2 in-wc; 1 in-wc; or ___ in-wc>>** pressure class**<< , galvanized steel; , _____; or None - N/A>>**.
   b. Outside Air Intake: **<< 1/2 in-wc; 1 in-wc; or ___ in-wc>>** pressure class**<< , galvanized steel; , _____; or None - N/A>>**.
   c. Return and Relief Air: **<< 1/2 in-wc; 1 in-wc; or ___ in-wc>>** pressure class**<< , galvanized steel; , _____; or None - N/A>>**.
   d. General Exhaust Air: **<< 1/2 in-wc; 1 in-wc; or ___ in-wc>>** pressure class**<< , galvanized steel; , _____; or None - N/A>>**.
   e. Transfer-air and Sound Booths: **<< 1/2 in-wc; 1 in-wc; 2 in-wc; or ___ in-wc>>** pressure class**<< , fibrous glass; , _____; or None - N/A>>**.
2. Low Pressure Service: Up to 2 in wc:
   a. Seal: Class A, apply to seal off transverse joints.
   b. Leakage:
      1) Rectangular: Class 6 or **<< 6 cfm/100 sq ft>>**.
      2) Round: Class 12 or **<< 3 cfm/100 sq ft>>**.
3. Medium Pressure Service: From 2 in wc to 6 in wc:
   a. Seal: Class A, apply sealing of transverse joints and longitudinal seams.
   b. Leakage:
      1) Rectangular: Class 12 or **<< 6 cfm/100 sq ft>>**.
      2) Round: Class 6 or **<< 3 cfm/100 sq ft>>**.

F. Duct Fabrication Requirements:

1. Duct and Fitting Fabrication and Support: **<<SMACNA (DCS)>>** including specifics for continuously welded round and oval duct fittings.

DRAFT

2. No variation of duct configuration or size permitted except by written permission. Size round duct installed in place of rectangular ducts in accordance with **<<ASHRAE (FUND)>>** Handbook - Fundamentals.
3. Use reinforced and sealed sheet-metal materials at recommended gauges for indicated operating pressures or pressure class.
4. Construct tees, bends, and elbows with radius of not less than 1-1/2 times width of duct on centerline. Where not possible and where rectangular elbows must be used, provide **<< airfoil; or _____>>** turning vanes of perforated metal with glass fiber insulation.
5. Provide turning vanes of perforated metal with glass fiber insulation when acoustical lining is indicated.
6. Increase duct sizes gradually, not exceeding 15 degrees divergence wherever possible; maximum 30 degrees divergence upstream of equipment and 45 degrees convergence downstream.
7. Provide turning vanes of perforated metal with glass fiber insulation when an acoustical lining is required.
8. Where ducts are connected to exterior wall louvers and duct outlet is smaller than louver frame, provide blank-out panels sealing louver area around duct. Use same material as duct, painted black on exterior side; seal to louver frame and duct.

3.02 METAL DUCTS

A. Material Requirements:
   1. Galvanized Steel: Hot-dipped galvanized steel sheet, **<<ASTM A653/A653M>>** FS Type B, with **<< G60/Z180; G90/Z275; or _____>>** coating.
   2. Aluminum: **<<ASTM B209/B209M>>**, aluminum sheet, alloy 3003-H14.
   3. Aluminum Connectors and Bar Stock: Alloy 6061-T651 or of equivalent strength.
   4. Stainless Steel: **<< ASTM A240/A240M; ASTM A276/A276M; ASTM A480/A480M; ASTM A666; or _____>>**, Type **<< 304; 316; 302; or _____>>**.

B. Flat-Oval Metal Ducts:
   1. Flat-Oval Single Wall Duct: Machine made from a round spiral lock seam duct.
      a. Fittings: Manufacture at least two gauges heavier metal than the duct.
      b. Provide duct material, gauges, reinforcing, and sealing for operating pressures indicated.
   2. Flat-Oval Double Wall Insulated Duct: Machine made from round spiral lock seam duct.
      a. Fittings: Manufacture with solid inner wall.
      b. Inner Wall: Perforated galvanized steel.
      c. Insulation:
         1) Thickness: **<< 1 inch; or ___ inch>>** fiberglass.

C. Round Metal Ducts:
   1. Round Single Wall Duct: Round lock seam duct with galvanized steel outer wall.
   2. Round Double Wall Insulated Duct: Round spiral lock seam duct with galvanized steel outer wall,**<< perforated; _____; or None - N/A>>** galvanized steel inner wall; fitting with the solid inner wall.
      a. Insulation:
         1) Thickness: **<< 1 inch; or ___ inch>>**.
         2) Material: **<< Air; Fiberglass; or _____>>**.
   3. Round Connection System: Interlocking duct connection system in accordance with **<<SMACNA (DCS)>>**.

DRAFT

D. Round Spiral Duct:
   1. Round spiral lock seam duct with galvanized steel outer wall.

E. Connectors, Fittings, Sealants, and Miscellaneous:
   1. Fittings: Manufacture with solid inner wall of perforated galvanized steel.
   2. Transverse Duct Connection System: **<< SMACNA "E" rated; SMACNA "J" rated; SMACNA "F" rated; or _____>>** rigid class connection, interlocking angle and duct edge connection system with sealant, gasket, cleats, and corner clips in accordance with **<<SMACNA (DCS)>>**.
   3. Joint Sealers and Sealants: Non-hardening, water resistant, mildew and mold resistant.
      a. Type: Heavy mastic or liquid used alone or with tape, suitable for joint configuration and compatible with substrates, and recommended by manufacturer for pressure class of ducts. No tape only sealing permitted.
      b. VOC Content: Not more than 250 g/L, excluding water.
      c. Surface Burning Characteristics: Flame spread index of zero and smoke developed index of zero, when tested in accordance with **<<ASTM E84>>**.
      d. For Use with Flexible Ducts: UL labeled.
      e. Manufacturers:
         1) Carlisle HVAC Products**<< ; Hardcast Versa-Grip 181 Water Based Fiber Reinforced Duct Sealant; ; Hardcast Duct-Seal 321 Indoor/Outdoor Water Based Duct Sealant; ; Hardcast Flex-Grip 550 Flexible Water Based Duct Sealant; ; Hardcast Iron-Grip 601 Water Based Duct Sealant; ; Hardcast Foil-Grip 1404 UL 181 True Zero VOC Rolled Sealant; ; Hardcast Foil-Grip 1402 UL 723 Classified True Zero VOC Rolled Sealant; ; Hardcast Spray-Seal Water Based Duct Sealant; ; Hardcast Aluma-Grip 701 Heavy Duty, Zero VOC Rolled Sealant; ; Hardcast Sure-Grip 404 Solvent Based Fiber Free Duct Sealant; ; Model _____; or None - N/A>>**: www.carlislehvac.com/#sle.
         2) Design Polymerics**<< ; DP 1010 Water Based Smooth Duct Sealant, Premium Quality; ; DP 1020 Water Based, Premium Quality, Fiber Reinforced Duct Sealant; ; DP 1030 Water Based, Fiber Reinforced Duct Sealant; ; DP 1090 Solvent Based, Low VOC, Duct Sealant; ; _____; or None - N/A>>**: www.designpoly.com/#sle.
         3) Ductmate Industries, Inc, a DMI Company**<< ; _____; or None - N/A>>**: www.ductmate.com/#sle.
         4) Elgen Manufacturing Company, Inc**<< ; Duct Sealer; ; _____; or None - N/A>>**: www.elgenmfg.com/#sle.
         5) H.B. Fuller Construction Products, Inc**<< ; _____; or None - N/A>>**: www.fosterproducts.com//#sle.
         6) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
   4. Gasket Tape:
      a. Provide butyl rubber gasket tape for a flexible seal between transfer duct connector (TDC), transverse duct flange (TDF), applied flange connections, and angle ring connections.
      b. Manufacturers:
         1) Design Polymerics**<< ; DP 1040 100 Percent Solids, High Pressure/High-Velocity Butyl Gasket Tape; ; _____; or None - N/A>>**: www.designpoly.com/#sle.

DRAFT

2) Elgen Manufacturing Company, Inc**<< ; 440 Butyl Gasket Tape; ; _____; or None - N/A>>**: www.elgenmfg.com/#sle.

3) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

5. Hanger Rod: **<<ASTM A36/A36M>>**; steel**<< , galvanized; , _____; or None - N/A>>**; threaded both ends, threaded one end, or continuously threaded.
6. Duct Straps: Use a minimum of three #10 screws on hanger straps, two in side and one on the bottom on each side of ductwork.
7. Hanger Fasteners: Attach hangers to structure using appropriate fasteners. Use beam clamps wherever possible.

3.03 FLEXIBLE DUCTS

A. Flexible Ducts: **<<UL 181>>**, Class 1, polyethylene film, mechanically fastened and rolled using galvanized steel to form spiral helix.
1. Insulation: **<< R6; Fiberglass; or _____>>** insulation with **<< polyethylene; aluminized; or _____>>** vapor barrier film.
2. Pressure Rating: **<< 10 in-wc; or ___ in-wc>>** positive and **<< 1 in-wc; 5 in-wc; or ___ in-wc>>** negative.
3. Maximum Velocity: **<< 4000 fpm; 5500 fpm; or ___ fpm>>**.
4. Temperature Range: **<< Minus 20 degrees F to 250 degrees F; or _____ degrees F>>**.
5. Manufacturers:
a. Flexmaster USA, a brand of Masterduct, Inc**<< ; Type 1; ; Type 1M; or None - N/A>>**: www.flexmasterusa.com/#sle.
b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Medium Pressure Flexible Ducts: **<<UL 181>>**, Class 1, aluminized laminate, mechanically fastened and rolled using galvanized steel to form spiral helix.
1. Insulation: **<< Fiberglass insulation with metallic vapor barrier; Fiberglass insulation with flame-retardant vapor barrier; None; or _____>>**.
2. Inner Core: **<< Tri-laminate of polyester, fiberglass, and aluminum foil; _____; or None - N/A>>**.
3. Pressure Rating: **<< 10 in-wc; 15 in-wc; or ___ in-wc>>** positive and **<< 1 in-wc; 5 in-wc; 10 in-wc; or ___ in-wc>>** negative.
4. Maximum Velocity: **<< 4000 fpm; 5500 fpm; or ___ fpm>>**.
5. Temperature Range: **<< Minus 20 degrees F to 250 degrees F; or _____ degrees F>>**.
6. Manufacturers:
a. Flexmaster USA, a brand of Masterduct, Inc**<< ; Type 5; ; ____; or None - N/A>>**: www.flexmasterusa.com/#sle.

3.04 AIR PLENUMS AND CASINGS

A. Fabricate in accordance with **<<SMACNA (DCS)>>** for indicated operating pressures indicated.

B. Minimum Fabrication Requirements:
1. Fabricate acoustic plenum or casing with reinforcing turned inward.

DRAFT

2. Provide **<< 16-gauge, 0.059-inch>>** sheet steel back facing and **<< 22-gauge, 0.029-inch>>** perforated sheet steel front facing with **<< 3/32 inch>>** diameter holes on **<< 5/32 inch>>** centers.
3. Construct panels **<< 3 inches>>** thick, packed with **<< 4.5 pcf>>** minimum glass fiber insulation media, on inverted channel of **<< 16-gauge, 0.059-inch>>** sheet steel.
4. Mount floor-mounted plenum or casings on **<< 4-inch; 6-inch; or _____-inch>>** high concrete curbs. At floor, rivet panels on **<< 8-inch; or ___-inch>>** centers to angles. Where floors are acoustically insulated, provide liner of galvanized **<< 18-gauge, 0.052-inch; or __-gauge, __-inch>>** expanded metal mesh supported at **<< 12-inch; or ___-inch>>** centers, turned up **<< 12 inches; or ___ inches>>** at sides with sheet metal shields.

C. Access Doors:
1. Install hinged access doors where indicated or required for access to equipment for cleaning and inspection.
2. Reinforce door frames with steel angles tied to horizontal and vertical plenum supporting angles.
3. Provide clear wire glass observation ports, minimum **<< 6 by 6 inch>>** size.

D. Thermal Panels:
1. Material: Steel-faced composite panel with noncombustible structural high density mineral fiber core for plenum fabrication.
   a. Facing: Galvanized steel (G90), **<< 24 gauge, 0.0275 inch; 26 gauge, 0.0217 inch; or _____ gauge, _____ inch>>**.
   b. Finish: **<< Unpainted; or _____>>**.
   c. Core: Mineral wool board.
   d. Structural: Nonload bearing.
2. Panel Thickness: **<< 2.5 inches; 3 inches; 4 inches; 5 inches; or _____ inches>>**.
3. R-Value: **<< 12; 14; 18; 22; or _____>>** when tested in accordance with **<<ASTM C177>>**.
4. Manufacturers:
   a. DuraSystems Barriers Inc**<< ; _____; or None - N/A>>**: www.durasystems.com/#sle.
   b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

E. Fire-Rated Metal Panels:
1. Fire Rating: **<< 60 minutes; 120 minutes; or _____ minutes>>** when tested in accordance with **<<ASTM E119>>**.
2. Material: Steel-faced composite panel with noncombustible structural high density mineral fiber core, UL or ETL labeled, nonload bearing fire separations.
   a. Facing: Galvanized steel (G90), **<< 24 gauge (0.0275 inch); 26 gauge (0.0217 inch); or _____ gauge (_____ inch)>>**.
   b. Finish: **<< Unpainted; or _____>>**.
   c. Core: Mineral wool board.
   d. Structural: Nonload bearing.
3. Panel Thickness: **<< 4 inches; 6 inches; or _____ inches>>**.
4. Sound Transmission Class: **<< 30; 32; or _____>>** when tested in accordance with **<<ASTM E90>>**.
5. Manufacturers:

DRAFT

a. DuraSystems Barriers Inc**<< ; _____; or None - N/A>>**: www.durasystems.com/#sle.

b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

3.05 DUCTS FOR KITCHEN EXHAUST APPLICATIONS

A. Provide ductwork, fittings, and appurtenances in accordance with **<<NFPA 96>>**, **<<SMACNA (KVS)>>**, **<<UL 1978>>**, and **<<UL 2221>>** requirements and guidelines.

B. Class 1 duct for air with gas and grease particle exhaust at an air velocity of **<< 1,500 to 2,500 fpm>>**.

C. Where ducts are not self-draining back to equipment, provide low-point drain pocket with the copper drain pipe to a sanitary sewer.

D. Design, fabricate, and install liquidtight preventing exhaust leakage into building.

E. Dishwasher Exhaust Duct:

1. Duct Size: **<< 1/2 in-wc; 1 in-wc; 2 in-wc; or ___ in-wc>>** pressure class**<< stainless steel; galvanized steel; ungalvanized steel; _____; or None - N/A>>**.
2. Fabricate using single wall, **<< 21-gauge, 0.034-inch; 20-gauge, 0.035-inch; 18-gauge, 0.050-inch; or ___-gauge, ___-inch>><< Type 304; Type 306; _____; or None - N/A>>** stainless steel with external welded joints.
3. Seal joints during installation with factory-supplied overlapping V-bands and sealant.

F. Kitchen Hood and Grease Exhaust Duct:

1. Fabricate in accordance with**<< ductwork manufacturer's instructions,; _____ ,; or None - N/A>> <<SMACNA (DCS)>>**, **<<SMACNA (KVS)>>**, and **<<NFPA 96>>**.
2. Round, Single-Wall, Premanufactured Grease Exhaust Duct:
   a. UL Listed and labeled to **<<UL 1978>>**.
   b. Construct of **<< 20-gauge, 0.035-inch; or 18-gauge, 0.050-inch>>** Type 304 stainless steel.
   c. Seal joints during installation with factory-supplied overlapping V-bands and sealant.
   d. Minimum horizontal slope of **<< 1/16 inch per foot>>** per manufacturers listing to **<<UL 1978>>**.
   e. Manufacturers:
      1) AMPCO by Hart & Cooley, Inc**<< ; Model N; ; _____; or None - N/A>>**: www.ampcostacks.com/#sle.
      2) Selkirk Corporation**<< ; Model G; ; _____; or None - N/A>>**: www.selkirkcommercial.com/#sle.
      3) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
3. Rectangular, Single-Wall, Premanufactured Grease Exhaust Duct:
   a. UL Listed and labeled to **<<UL 1978>>**.
   b. Construct of **<< 16-gauge, 0.059-inch; or __-gauge, __-inch>>** sheet steel using continuous external welded joints in rectangular sections.
   c. Construct of **<< 18-gauge, 0.050-inch; or ___-gauge, ___-inch>>** stainless steel using continuous external welded joints in rectangular sections.
4. Zero Clearance,**<< 2-Hour ; _____ ; or None - N/A>>**Fire-Rated, Round, Double-Wall, Premanufactured Grease Duct:

DRAFT

a. UL Listed and labeled to **<<UL 1978>>** and **<<UL 2221>>**.
b. Nominal **<< 3 inches; or __ inches>>** thick, high density body soluble fiber insulation between **<< 20-gauge, 0.035-inch; or __-gauge, __-inch>>** Type 304 stainless steel liner, and **<< 24-gauge, 0.0239-inch; or __-gauge, __-inch>>** aluminized steel sheet outer jacket.
c. Seal joints during installation with factory-supplied overlapping V-bands and sealant.
d. Through-penetration firestop listed to **<<UL 1479>>** or **<<ASTM E814>>**.
e. Minimum horizontal slope of **<< 1/16 inch per foot>>** per manufacturers listing to **<<UL 1978>>**.

5. Zero Clearance, 2-Hour Fire-Rated, Rectangular, Double-Wall, Premanufactured Grease Duct:
   a. Listed when tested in accordance with **<<UL 1978>>** and **<<ASTM E2336>>**.
   b. Construct of **<< 16-gauge, 0.059-inch; or __-gauge, __-inch>>** sheet steel using continuous external welded joints in rectangular sections.
   c. Construct of **<< 18-gauge, 0.050-inch; or ___-gauge, ___-inch>>** stainless steel using continuous external welded joints in rectangular sections.
   d. Liquidtight with continuous external weld for seams and joints.
   e. Where ducts are not self-draining back to equipment, provide low-point drain pocket with copper drain pipe to sanitary sewer.
   f. Through-penetration firestop listed to **<<UL 1479>>** or **<<ASTM E814>>**.
   g. Manufacturers:
      1) DuraSystems Barriers Inc**<< ; _____; or None - N/A>>**: www.durasystems.com/#sle.
      2) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
6. Grease Exhaust Duct Access Doors:
   a. Listed when tested in accordance with **<<UL 1978>>**.
   b. Provide with preinsulated door to comply with **<<ASTM E2336>>**.
   c. Install hinged access doors where indicated or required for access for cleaning and inspection of duct.
   d. Reinforce door frames with steel angles tied to horizontal and vertical plenum supporting angles.
   e. Size: **<< 6 by 6 inches; 6 by 10 inches; 8 by 12 inches; 12 by 12 inches; 12 by 16 inches; 14 by 18 inches; 20 by 20 inches; or _____ by _____ inches>>**.
   f. Manufacturers:
      1) Fire Shield, LLC**<< ; Easy Access Grease Duct Door; ; _____; or None - N/A>>**: www.fireshieldlv.com/#sle.
      2) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

PART 3 EXECUTION

4.01 INSTALLATION

A. Install, support, and seal ducts in accordance with **<<SMACNA (DCS)>>**.

B. Duct air leak test all ductwork to pressure classes indicated per **<<SMACNA (LEAK)>>**. Engage Owner and TAB agent to witness all leakage testing.

C. Install products following the manufacturer's instructions.

DRAFT

D. Comply with safety standards **<<NFPA 90A>>** and **<<NFPA 90B>>**.

E. During construction, provide temporary closures of metal or taped polyethylene on open ductwork to prevent construction dust from entering the ductwork system.

F. Increase duct sizes gradually, not exceeding 15 degrees divergence wherever possible; maximum 30 degrees divergence upstream of equipment and 45 degrees convergence downstream.

G. Flexible Ducts: Connect to metal ducts with **<< adhesive; adhesive plus sheet metal screws; draw bands; liquid adhesive plus tape; mechanical fastener; or _____>>**. Length of flexible duct shall be no longer than **<< 4 feet; 5 feet; and _____>>** .

H. Kitchen Range Hoods: Install when provided by Section **<< 114000>>** then fit-out with respective ductwork and accessories to interconnect exhaust system.

I. Kitchen Hood Exhaust: Provide residue traps at the base of vertical risers with provisions for the cleanout.

J. Duct sizes indicated are precise inside dimensions. For lined ducts, maintain sizes inside lining.

K. Provide openings in ductwork as indicated to accommodate thermometers and controllers. Provide pilot tube openings as indicated for testing of systems, complete with metal can with spring device or screw to insure against air leakage. For openings, insulate ductwork and install insulation material inside a metal ring.

L. Locate ducts with sufficient space around equipment to allow normal operating and maintenance activities.

M. Use crimp joints with or without bead for joining round duct sizes **<< 8 inch; or ____ inch>>** and smaller with a crimp in the direction of airflow.

N. Use double nuts and lock washers on threaded rod supports.

O. Connect terminal units to supply ducts**<< directly or; _____; or None - N/A>>** with **<< one foot>>** maximum length of flexible duct. Do not use flexible duct to change direction.

P. Connect diffusers or light troffer boots to low-pressure ducts**<< directly or; _____; or None - N/A>>** with **<< 5 feet>>** maximum length of flexible duct held in place with strap or clamp.

Q. Set plenum doors at **<< 6 to 12 inches>>** above floor. Arrange door swings so that fan static pressure holds door in closed position.

R. At exterior wall louvers, seal duct to louver frame**<< and install blank-out panels; and install blank-out panels supplied in Section 089100; and install blank-out panels supplied in Section _____; _____; or None - N/A>>**.

S. Louver Fit-out:
   1. Provide blank-out panels sealing available area of wall-mounted exterior-faced louver when connected ductwork is smaller than actual louver free area, and duct outlet is smaller than the louver frame.
   2. Use the same duct material painted black on the exterior side, then seal louver frame and duct.

T. Plenums and Casings:
   1. Mount floor-mounted casings on **<< 4 inch; 6 inch; or __ inch>>** high concrete curbs.
   2. At floor, rivet panels on **<< 8 inch; or ___ inch>>** centers to angles.
   3. Where floors are acoustically insulated, provide liner of galvanized **<< 18-gauge, 0.052-inch; or __-gauge, __-inch>>** expanded metal mesh supported at **<< 12-inch; or ___-**

DRAFT

inch>> centers, turned up **<< 12 inches; or ___ inches>>** at sides with sheet metal shields.

U. Fire Partitions: Provide firestopping sealing. See Section **<< 078400>>**.

V. Duct Insulation: Provide duct insulation. See Section **<< 230713>>**.

W. Painting: Provide surface finish as indicated on drawings. See Sections **<< 099113>>** and **<< 099123>>**. Where ductwork is visbile through return and exhaust grilles, paint black to reduce visibilty through the grilles.

4.02 CLEANING

A. See Section **<< 017419 - Construction Waste Management and Disposal>>** for additional requirements.

B. Clean thoroughly each duct system. See Section **<< 230130.51>>**.

END OF SECTION 233100

DRAFT

SECTION 233300
AIR DUCT ACCESSORIES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Air turning devices/extractors.
B. Backdraft dampers - metal.
C. Backdraft dampers - fabric.
D. Combination fire and smoke dampers.
E. Duct access doors.
F. Duct test holes.
G. Fire dampers.
H. Flexible duct connectors.
I. Smoke dampers.
J. Smoke and fire-smoke damper test module.
K. Volume control dampers.
L. Low leakage (Class 1A) control dampers.
M. Miscellaneous Products:
    1. Fire-rated enclosures.
    2. Internal strut end plugs.
    3. Duct opening closure film.
    4. Airflow meters, thermal-dispersion type.

1.02 RELATED REQUIREMENTS

A. Section **<< 230548 - Vibration and Seismic Controls for HVAC>>**.
B. Section **<< 233100 - HVAC Ducts and Casings>>**.
C. Section **<< 253513 - Integrated Automation Actuators and Operators>>**: Damper operators.
D. Section **<< 253516 - Integrated Automation Sensors and Transmitters>>**: Damper position switch.

1.03 REFERENCE STANDARDS

A. ASHRAE Std 135 - BACnet - A Data Communication Protocol for Building Automation and Control Networks.
B. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
C. NFPA 80 - Standard for Fire Doors and Other Opening Protectives.
D. NFPA 90A - Standard for the Installation of Air-Conditioning and Ventilating Systems.
E. NFPA 92 - Standard for Smoke Control Systems.
F. NFPA 96 - Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations.

DRAFT

G. NFPA 105 - Standard for Smoke Door Assemblies and Other Opening Protectives.

H. SMACNA (DCS) - HVAC Duct Construction Standards Metal and Flexible.

I. UL 33 - Safety Heat Responsive Links for Fire-Protection Service.

J. UL 555 - Standard for Fire Dampers.

K. UL 555C - Standard for Safety Ceiling Dampers.

L. UL 555S - Standard for Smoke Dampers.

M. UL 1978 - Grease Ducts.

1.04 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Product Data: Provide for shop-fabricated assemblies including **<< volume control dampers; duct access doors; duct test holes; hardware used; and _____>>**. Include electrical characteristics and connection requirements.

C. Shop Drawings: Indicate for shop fabricated assemblies including **<< volume control dampers; duct access doors; duct test holes; and _____>>**.

D. Manufacturer's Installation Instructions: Provide instructions for **<< fire dampers; combination fire and smoke dampers; and _____>>**.

E. Project Record Drawings: Record actual locations of **<< access doors; test holes; and _____>>**.

F. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.

1. See Section **<< 016000 - Product Requirements>>** for additional provisions.
2. Extra Fusible Links: **<< One; Two; or ____>>** of each type and size.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum **<< three; or _____>>** years of**<< documented; _____; or None - N/A>>** experience.

B. Products Requiring Electrical Connection: Listed and classified by **<< Underwriters Laboratories Inc.; testing firm acceptable to the Authority Having Jurisdiction; or _____>>** as suitable for the purpose specified and indicated.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Protect dampers from damage to operating linkages and blades.

PART 2 PRODUCTS

2.01 AIR TURNING DEVICES/EXTRACTORS

A. Manufacturers:

1. Carlisle HVAC Products**<< ; Dynair Hollow Vane and Rail (Double Wall Vane); ; Model _____; or None - N/A>>**: www.carlislehvac.com/#sle.
2. Elgen Manufacturing Company, Inc**<< ; _____; or None - N/A>>**: www.elgenmfg.com/#sle.
3. Krueger-HVAC, Division of Air System Components**<< ; _____; or None - N/A>>**: www.krueger-hvac.com/#sle.
4. Ruskin Company**<< ; _____; or None - N/A>>**: www.ruskin.com/#sle.

DRAFT

5. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Multi-blade device with blades aligned in short dimension; **<< steel; aluminum; or _____>>** construction; with individually adjustable blades, mounting straps.

2.02 BACKDRAFT DAMPERS - METAL

A. Manufacturers:
1. Louvers & Dampers, Inc, a brand of Mestek, Inc**<< ; _____; or None - N/A>>**: www.louvers-dampers.com/#sle.
2. Nailor Industries, Inc**<< ; _____; or None - N/A>>**: www.nailor.com/#sle.
3. Pottorff**<< ; _____; or None - N/A>>**: www.pottorff.com/#sle.
4. Ruskin Company**<< ; _____; or None - N/A>>**: www.ruskin.com/#sle.
5. United Enertech**<< ; _____; or None - N/A>>**: www.unitedenertech.com/#sle.
6. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Multi-Blade, Parallel Action Gravity Balanced Backdraft Dampers: **<< Galvanized steel; Extruded aluminum; or _____>>**, with**<< center pivoted; _____; or None - N/A>>** blades of maximum **<< 6 inch; or ___ inch>>** width, with felt or flexible vinyl sealed edges, linked together in rattle-free manner with **<< 90 degree; or _____>>** stop, steel ball bearings, and plated steel pivot pin; adjustment device to permit setting for varying differential static pressure.

2.03 BACKDRAFT DAMPERS - FABRIC

A. Fabric Backdraft Dampers: Factory-fabricated.
1. Blades: Neoprene coated **<< fabric; fiberglass; or _____>>** material.
2. Birdscreen: **<< 1/2 inch; or ____ inch>>** nominal mesh of **<< galvanized steel; aluminum; or _____>>**.
3. Maximum Velocity: 1000 fpm (5 mps) face velocity.

2.04 COMBINATION FIRE AND SMOKE DAMPERS

A. Manufacturers:
1. AireTechnologies, Inc, a DMI Company**<< ; _____; or None - N/A>>**: www.airetechnologies.com/#sle.
2. Lloyd Industries, Inc**<< ; _____; or None - N/A>>**: www.firedamper.com/#sle.
3. Louvers & Dampers, Inc, a brand of Mestek, Inc**<< ; _____; or None - N/A>>**: www.louvers-dampers.com/#sle.
4. Nailor Industries, Inc**<< ; _____; or None - N/A>>**: www.nailor.com/#sle.
5. NCA, a brand of Metal Industries Inc**<< ; _____; or None - N/A>>**: www.ncamfg.com/#sle.
6. Pottorff**<< ; _____; or None - N/A>>**: www.pottorff.com/#sle.
7. Ruskin Company**<< ; _____; or None - N/A>>**: www.ruskin.com/#sle.
8. United Enertech**<< ; _____; or None - N/A>>**: www.unitedenertech.com/#sle.
9. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Fabricate in accordance with **<<NFPA 90A>>**, **<<UL 555>>**, **<<UL 555S>>**, and as indicated.

C. Provide factory sleeve and collar for each damper.

D. Multiple Blade Dampers: Fabricate with **<< 16 gauge, 0.0598 inch; or ___ gauge, _____ inch>>** galvanized steel frame and blades, oil-impregnated bronze or stainless steel sleeve bearings and plated steel axles, stainless steel jamb seals, **<< 1/8 by 1/2 inch; or ___ by ___**

DRAFT

inch>> plated steel concealed linkage, stainless steel closure spring, blade stops, and lock, and **<< 1/2 inch; or ___ inch>>** actuator shaft.

E. Operators: UL listed and labeled; spring-return, electric-type suitable for 120 volts, single phase, 60 Hz.**<< Provide end switches to indicate damper position.; _____ .; or None - N/A>>** Locate damper operator on **<< interior; exterior; or _____>>** of duct and link to damper operating shaft.

F. Normally Closed Smoke Responsive Fire Dampers: Curtain type, opening by gravity upon actuation of electro thermal link, flexible stainless steel blade edge seals to provide constant sealing pressure.

G. Electro Thermal Link: Fusible link melting at **<< 165 degrees F; or ____ degrees F>>**; 120 volts, single phase, 60 Hz; UL listed and labeled.

2.05 DUCT ACCESS DOORS

A. Manufacturers:
1. Acudor Products Inc, a Division of Nelson Industrial Inc**<< ; _____; or None - N/A>>**: www.acudor.com/#sle.
2. Ductmate Industries, Inc, a DMI Company**<< ; _____; or None - N/A>>**: www.ductmate.com/#sle.
3. Elgen Manufacturing Company, Inc**<< ; _____; or None - N/A>>**: www.elgenmfg.com/#sle.
4. Lloyd Industries, Inc**<< ; _____; or None - N/A>>**: www.firedamper.com/#sle.
5. Nailor Industries, Inc**<< ; _____; or None - N/A>>**: www.nailor.com/#sle.
6. Ruskin Company**<< ; _____; or None - N/A>>**: www.ruskin.com/#sle.
7. SEMCO LLC**<< ; _____; or None - N/A>>**: www.semcohvac.com/#sle.
8. The Williams Brothers Corporation of America**<< ; _____; or None - N/A>>**: www.wbdoors.com/#sle.
9. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Fabricate in accordance with **<<SMACNA (DCS)>>** and as indicated.

C. Fabrication: Rigid and close fitting of galvanized steel with sealing gaskets and quick-fastening locking devices. For insulated ducts, install minimum **<< 1-inch>>** thick insulation with sheet metal cover.
1. Less Than **<< 12 inches; or ___ inches>>** Square: Secure with sash locks.
2. Up to **<< 18 inches; or ___ inches>>** Square: Provide two hinges and two sash locks.
3. Up to **<< 24 by 48 inches; or ___ by ___ inches>>**: Three hinges and two compression latches**<< with outside and inside handles; _____; or None - N/A>>**.
4. Larger Sizes: Provide an additional hinge.
5. High Temperature Duct Access Doors:
   a. Comply with **<<NFPA 96>>**.
   b. Comply with **<<UL 1978>>**.
   c. Manufacturers:
      1) Ductmate Industries, Inc, a DMI Company**<< ; _____; or None - N/A>>**: www.ductmate.com/#sle.
      2) Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

D. Access doors with sheet metal screw fasteners are not acceptable.

DRAFT

2.06 DUCT TEST HOLES

A. Temporary Test Holes: Cut or drill in ducts as required. Cap with neat patches, neoprene plugs, threaded plugs, or threaded or twist-on metal caps.

B. Permanent Test Holes: Factory fabricated, air tight flanged fittings with screw cap. Provide extended neck fittings to clear insulation.

1. Manufacturers:
   a. Carlisle HVAC Products**<< ; Dynair Test Port with Red Cap with O-Ring Seal; ; Model _____; or None - N/A>>**: www.carlislehvac.com/#sle.
   b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.07 FIRE DAMPERS

A. Manufacturers:

1. AireTechnologies, Inc, a DMI Company**<< ; _____; or None - N/A>>**: www.airetechnologies.com/#sle.
2. Lloyd Industries, Inc**<< ; _____; or None - N/A>>**: www.firedamper.com/#sle.
3. Louvers & Dampers, Inc, a brand of Mestek, Inc**<< ; _____; or None - N/A>>**: www.louvers-dampers.com/#sle.
4. Nailor Industries, Inc**<< ; _____; or None - N/A>>**: www.nailor.com/#sle.
5. NCA, a brand of Metal Industries Inc**<< ; _____; or None - N/A>>**: www.ncamfg.com/#sle.
6. Panasonic Corporation of North America**<< ; Flex Damper; ; _____; or None - N/A>>**: www.panasonic.com/#sle.
7. Pottorff**<< ; _____; or None - N/A>>**: www.pottorff.com/#sle.
8. Ruskin Company**<< ; _____; or None - N/A>>**: www.ruskin.com/#sle.
9. United Enertech**<< ; _____; or None - N/A>>**: www.unitedenertech.com/#sle.
10. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Fabricate in accordance with **<<NFPA 90A>>** and **<<UL 555>>**, and as indicated.

C. Ceiling (Radiation) Dampers: Galvanized steel, **<< 22-gauge, 0.0299-inch; or ___-gauge, _____-inch>>** frame and **<< 16-gauge, 0.0598-inch; or ___-gauge, _____-inch>>** flap, two layers of **<< 0.125-inch; or ___-inch>>** thick ceramic fiber on top side**<< and one layer on bottom side for round flaps,; _____ ,; or None - N/A>>** with locking clip.

1. Boot Fitting: Factory-provided **<< as indicated on drawings; el type (90 degree); end type; straight type; or _____>>**. Include **<< field-provided collar; flanged recess; ceramic thermal blanket; and _____>>**.
2. Box Fitting: Factory-provided **<< 26 gauge, 0.0179 inch; or ___ gauge, _____ inch>>** with **<< field-provided collar; flanged recess; ceramic thermal blanket; and _____>><< None - N/A; or , and tagged as compliant with {\rs\#1} when used in floor or ceiling wood truss assemblies rated for one hour or less>>**.
3. Rated for **<< one; three; or ____>>** hour service in compliance with **<<UL 555C>>**.
4. Manufacturers:
   a. Pottorff**<< ; _____; or None - N/A>>**: www.pottorff.com/#sle.
   b. Ruskin Company**<< ; _____; or None - N/A>>**: www.ruskin.com/#sle.
   c. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

DRAFT

D. Horizontal Dampers: Galvanized steel, **<< 22-gauge, 0.0299-inch; or ___-gauge, ____-inch>>** frame, stainless steel closure spring, and lightweight, heat-retardant, non-asbestos fabric blanket.

E. Curtain Type Dampers: Galvanized steel with interlocking blades. Provide stainless steel closure springs and latches for **<< horizontal installations; closure under air flow conditions; or _____>>**. Configure with blades out of air stream except for **<< 1-inch; or __-inch>>** pressure-class ducts up to **<< 12 inches; or ___ inches>>** in height.

F. Multiple Blade Dampers: **<< 16-gauge, 0.0598-inch; or ___-gauge, _____-inch>>** galvanized steel frame and blades, oil-impregnated bronze or stainless steel sleeve bearings and plated steel axles, **<< 1/8 by 1/2 inch; or ___ by ___ inch>>** plated steel concealed linkage, stainless steel closure spring, blade stops, and lock.

G. Fusible Links: **<<UL 33>>**, separate at **<< 160 degrees F; 165 degrees F; 212 degrees F; or ___ degrees F>>** with adjustable link straps for combination fire/balancing dampers.

2.08 FLEXIBLE DUCT CONNECTORS

A. Manufacturers:

1. Carlisle HVAC Products**<< ; Dynair Connector Plus G90 Steel Offset Seam Neoprene Fabric; ; Dynair Connector Plus G90 Steel Offset Seam Hypalon Fabric (Extended Outdoor UV Stable); ; Model _____; or None - N/A>>**: www.carlislehvac.com/#sle.
2. Ductmate Industries, Inc, a DMI Company**<< ; _____; or None - N/A>>**: www.ductmate.com/#sle.
3. Elgen Manufacturing Company, Inc**<< ; _____; or None - N/A>>**: www.elgenmfg.com/#sle.
4. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Fabricate in accordance with **<<SMACNA (DCS)>>** and as indicated.

C. Flexible Duct Connections: Fabric crimped into metal edging strip.

1. Fabric: UL listed fire-retardant neoprene coated woven glass fiber fabric to **<<NFPA 90A>>**, minimum density **<< 30 oz/sq yd; or __ oz/sq yd>>**.
   a. Net Fabric Width: Approximately **<< 2 inches; 3 inches; 6 inches; or __ inch>>** wide.
2. Metal: **<< 3 inches; or __ inches>>** wide, **<< 24 gauge, 0.0239 inch; or ___ gauge, ___ inch>>** thick **<< galvanized steel; or _____>>**.

D. Leaded Vinyl Sheet: Minimum **<< 0.55 inch; or ___ inch>>** thick, **<< 0.87 lbs per sq ft; or ___ lbs per sq ft>>**, 10 dB attenuation in 10 to 10,000 Hz range.

E. Maximum Installed Length: **<< 14 inch; or ___ inch>>**.

2.09 SMOKE DAMPERS

A. Manufacturers:

1. AireTechnologies, Inc, a DMI Company**<< ; _____; or None - N/A>>**: www.airetechnologies.com/#sle.
2. Louvers & Dampers, Inc, a brand of Mestek, Inc**<< ; _____; or None - N/A>>**: www.louvers-dampers.com/#sle.
3. Nailor Industries, Inc**<< ; _____; or None - N/A>>**: www.nailor.com/#sle.
4. Pottorff**<< ; _____; or None - N/A>>**: www.pottorff.com/#sle.
5. Ruskin Company**<< ; _____; or None - N/A>>**: www.ruskin.com/#sle.
6. United Enertech**<< ; _____; or None - N/A>>**: www.unitedenertech.com/#sle.

DRAFT

7. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Fabricate in accordance with **<<NFPA 90A>>** and **<<UL 555S>>**, and as indicated.

C. Dampers: UL Class 1 **<< airfoil blade; v-groove blade; true round; or _____>>** type smoke damper, normally **<< open; closed; or _____>>** automatically operated by **<< pneumatic; electric; or _____>>** actuator.

D. Electro Thermal Link: Fusible link melting at **<< 165 degrees F; or __ degrees F>>**; 120 volts, single phase, 60 Hz; UL listed and labeled.

2.10 SMOKE AND FIRE-SMOKE DAMPER TEST MODULE

A. Addressable fire alarm system proprietary controller module preconfigured for remote testing of dedicated smoke damper or combination fire-smoke damper.

B. Provide module, accessories, and connectivity to meet **<<NFPA 80>>** and **<<NFPA 105>>** requirements.

2.11 VOLUME CONTROL DAMPERS

A. Manufacturers:

1. AireTechnologies, Inc, a DMI Company**<< ; _____; or None - N/A>>**: www.airetechnologies.com/#sle.
2. Louvers & Dampers, Inc, a brand of Mestek, Inc**<< ; _____; or None - N/A>>**: www.louvers-dampers.com/#sle.
3. Elgen Manufacturing Company, Inc**<< ; _____; or None - N/A>>**: www.elgenmfg.com/#sle.
4. MKT Metal Manufacturing**<< ; _____; or None - N/A>>**: www.mktduct.com/#sle.
5. Nailor Industries, Inc**<< ; _____; or None - N/A>>**: www.nailor.com/#sle.
6. NCA, a brand of Metal Industries Inc**<< ; _____; or None - N/A>>**: www.ncamfg.com/#sle.
7. Pottorff**<< ; _____; or None - N/A>>**: www.pottorff.com/#sle.
8. Ruskin Company**<< ; _____; or None - N/A>>**: www.ruskin.com/#sle.
9. United Enertech**<< ; _____; or None - N/A>>**: www.unitedenertech.com/#sle.
10. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Fabricate in accordance with **<<SMACNA (DCS)>>** and as indicated.

C. Splitter Dampers:

1. Material: Same gauge as duct to **<< 24 inches; or ___ inches>>** size in either direction, and two gauges heavier for sizes over **<< 24 inches; or ___ inches>>**.
2. Blade: Fabricate of **<< single; double; or _____>>** thickness sheet metal to streamline shape, secured with continuous hinge or rod.
3. Operator: Minimum **<< 1/4 inch; or ___ inch>>** diameter rod in self aligning, universal joint action, flanged bushing with set screw.

D. Single Blade Dampers:

1. Fabricate for duct sizes up to **<< 6 by 30 inch; 12 by 48 inch; or ___ by ___ inch>>**.
2. Blade: **<< 24 gauge, 0.0239 inch; or ___ gauge, _____ inch>>**, minimum.

E. Multi-Blade Damper: Fabricate consisting of opposed blades with maximum blade sizes **<< 8 by 72 inches; or ___ by ___ inches>>**. Assemble center- and edge-crimped blades in prime-coated or galvanized-channel frame with suitable hardware.

1. Blade: **<< 18 gauge, 0.0478 inch; or ___ gauge, _____ inch>>**, minimum.

DRAFT

F. End Bearings: Except in round ducts **<< 12 inches; or __ inches>>** and smaller, provide end bearings. On multiple blade dampers, provide oil-impregnated nylon, thermoplastic elastomer, or sintered bronze bearings.

G. Quadrants:
1. Provide locking, indicating quadrant regulators on single and multi-blade dampers.
2. On insulated ducts mount quadrant regulators on stand-off mounting brackets, bases, or adapters.
3. Where rod lengths exceed **<< 30 inches; or ___ inches>>** provide regulator at both ends.

2.12 LOW LEAKAGE (CLASS 1A) CONTROL DAMPERS

A. Manufacturers:
1. Ruskin Company**<< ; CD50; ; _____; or None - N/A>>**: www.ruskin.com/#sle.
2. United Enertech**<< ; _____; or None - N/A>>**: www.unitedenertech.com/#sle.
3. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Maximum Leakage Allowed: **<< 3 cfm/sq ft at 1 in-wc>>**.

C. Frame:
1. Material: **<< 12-gauge; 16-gauge; 18-gauge; 20-gauge; or _____>><< aluminum; aluminum, perforated; carbon steel; galvanized steel; 304 stainless steel; 316 stainless steel; or _____>>**.
2. Free-area: **<< As indicated on drawings; Array cross section; Custom _____ cross section; Horizontal-face and by-pass; Vertical-face and by-pass; Single cross section; or _____ >>**.
3. Blanked-off: Split frame into two free-area sections to allow a smaller free-area to be used for a minimum airflow intake or exhaust application and secondary free-area fully blanked-off.

D. Blade:
1. Type: **<< Multi-blade airfoil for high pressure; Multi-blade extruded airfoil for high pressure; Multi-blade such as V or 3V for low to medium pressure; Single-blade square shape; Single-blade rectangle shape; Single-blade round or butterfly shape; As indicated on drawings; or _____>>**.
2. Operation: **<< As indicated on drawings; Diffuser type; Inlet vane type; Opposed type; Parallel type; or _____>>**.
3. Maximum Individual Blade Height: **<< 8 inches>>**.
4. Material: **<< 12-gauge; 16-gauge; 18-gauge; 20-gauge; or _____>><< aluminum; aluminum, perforated; carbon steel; galvanized steel; 304 stainless steel; 316 stainless steel; or _____>>**.
5. Authority: **<< As indicated on drawings; Opposed type, 5 to 50 percent (typically 10 percent); Parallel type, 10 to 100 percent (typically 50 percent); Specialty, _____; or _____>>**.

E. Insulation: **<< Water-resistant sound absorbing material; Thermally-broken blade and frame for _____ degree __ range; or _____>>**.

F. Temperature Service Range: **<< Minus 25 to 185 degrees F; or _____ to _____ degrees F>>**.

G. Other Requirements:
1. Paint Finish: **<< Standard; or _____>>**.

DRAFT

2. Rust Inhibitor Coating: **<< Moisture and salt water-resistant; or _____>>**.
3. Sleeve or Flange: **<< Factory-mounted standard; Factory-mounted custom; or _____>>**.
4. Duct Transition Fitting: **<< Round; Oval; Square; or _____>>**.
5. Custom: Include **<< bird screen; filter rack of the _____ type; insect screen; security bars; and _____>>**.

2.13 MISCELLANEOUS PRODUCTS

A. Damper Operators: Provide **<< manual; electric; pneumatic; and _____>>** operators; see Section **<< 253513>>**.

B. Damper position switch; see Section **<< 253516>>**.

C. Fire-Rated Enclosures:
1. Provide as required to preserve fire resistance rating of building elements.

D. Internal Strut End Plugs: Combination end-mounting and sealing plugs for metal conduit used as internal reinforcement struts for metal ducts; plug crimped inside conduit with outside gasketed washer seal.

E. Duct Opening Closure Film: Mold-resistant, self-adhesive film to keep debris out of ducts during construction.
1. Thickness: **<< 2 mils; or __ mils>>**.
2. High tack water based adhesive.
3. UV stable light blue color.
4. Elongation Before Break: 325 percent, minimum.

F. Residential Dryer Exhaust Receptacle: Formed aluminized-steel in-wall receptacle to house flexible transition duct; seamless interior, rounded corners; integral nailing flanges. Match depth of box to depth of stud cavity.
1. Manufacturers:
a. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

G. Airflow Meters, Thermal-Dispersion Type:
1. Manufacturers:
a. Ebtron**<< ; _____; or None - N/A>>**: www.ebtron.com/#sle.
b. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
2. Configuration: Duct or plenum inserted assembly using up to eight water-resistant thermal dispersion sensors per metal probe wired into external access box holding self-diagnosing sensor interface electronics with respective field wire and cable landing terminals.
3. Monitoring Range:
a. Air Velocity: **<< As indicated on drawings; 0 to 5,000 fpm; _____ to _____ fpm; or _____>>** converted to airflow using section area.
b. Temperature: **<< Minus 20 to 120 degrees F; or _____ to _____ degrees F>>**.
4. Accuracy: Plus or minus **<< 1 percent, NIST; 2 percent, NIST; 2 percent; 3 percent; 5 percent; or _____>>** with a plus or minus **<< 0.25 percent; or _____>>** repeatability over listed range. Includes means to zero, adjust, and calibrate outputs.
5. Access Box: **<<NEMA EN 10250>>**, **<< Type 1; Type 2; Type 4; Type 4x; or _____>>** with hinged cover housing and cable access ports.

DRAFT

6. Interface: **<< Fitted; External linked device; or _____>>** with 16 character, 2-line, backlit, alphanumeric display and labeled pad-type surface membrane buttons.
7. Controller: Fitted with factory-installed module to handle up to 16 external ancillary probes to form an extended measuring probe array for custom duct or plenum sizes.
8. Outputs: **<< Two-wire; Three-wire; Four-wire; or _____>>**, **<< 0 to 10 VDC; 0 to 5 VDC; 2 to 10 VDC; 0 to 20 mA; 4 to 20 mA; _____ to _____ VDC; or _____ to _____ mA>>**, for airflow and temperature signals, configurable.
9. BAS, SCADA, or other Integrated Automation Link: **<< ASHRAE Std 135 BACnet IP; ASHRAE Std 135 BACnet MS/TP; ASHRAE Std 135 BACnet SC; Modbus (PS) Modbus IP; Modbus (PS) Modbus RTU; LonMark Interoperability Guide LonWorks; Bluetooth CS wireless using Bluetooth ; IEEE 802.11 wireless using Wi-Fi ; IEEE 802.15.4 wireless using Zig-bee; or _____>>**.

PART 3 EXECUTION

3.01 PREPARATION

A. Verify that electric power is available and of the correct characteristics.

3.02 INSTALLATION

A. Install accessories in accordance with manufacturer's instructions, **<<NFPA 90A>>**, and follow **<<SMACNA (DCS)>>**. See Section **<< 233100>>** for duct construction and pressure class.

B. Provide backdraft dampers on exhaust fans or exhaust ducts nearest to outside and where indicated.

C. Provide duct access doors for inspection and cleaning before and after filters, coils, fans, automatic dampers, at fire dampers, combination fire and smoke dampers, and elsewhere as indicated.**<< Provide for cleaning kitchen exhaust ducts in accordance with NFPA 96; _____; or None - N/A>>** Provide minimum **<< 8 by 8 inch; or ___ by ___ inch>>** size access door for hand and shoulder access, or as indicated on drawings. Provide minimum **<< 4 by 4 inch; or ___ by ___ inch>>** size access door for balancing dampers only. Review locations prior to fabrication.

D. Provide duct test holes where indicated and required for testing and balancing purposes.

E. Provide **<< fire dampers; combination fire and smoke dampers; smoke dampers; and _____>>** at locations indicated, where ducts and outlets pass through fire-rated components**<< , and where required by authorities having jurisdiction; , _____; or None - N/A>>**. Install with required perimeter mounting angles, sleeves, breakaway duct connections, corrosion resistant springs, bearings, bushings and hinges.

F. Install smoke dampers and combination smoke and fire dampers in accordance with **<<NFPA 92>>**.

G. Demonstrate re-setting of fire dampers to **<<Owner>>**'s representative.

H. At fans and motorized equipment associated with ducts, provide flexible duct connections immediately adjacent to the equipment.

I. At equipment supported by vibration isolators, provide flexible duct connections immediately adjacent to the equipment.
   1. See Section **<< 230548>>**.

J. For fans developing static pressures of **<< 5.0 inches; or ___ inches>>** and over, cover flexible connections with leaded vinyl sheet, held in place with metal straps.

DRAFT

K. Provide balancing dampers at points on supply, return, and exhaust systems where branches are taken from larger ducts as required for air balancing. Install minimum two duct widths from duct take-off.

L. Use splitter dampers only where indicated.

M. Provide balancing dampers on duct take-off to diffusers, grilles, and registers, regardless of whether dampers are specified as part of the diffuser, grille, or register assembly.

END OF SECTION 233300

DRAFT

SECTION 233319
DUCT SILENCERS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Duct silencers.

1.02 RELATED REQUIREMENTS

1.03 REFERENCE STANDARDS

1.04 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>**, for submittal procedures.

B. Product Data: Provide catalog information indicating, materials, dimensional data, pressure losses, and acoustical performance.

C. Shop Drawings: Indicate assembly, materials, thicknesses, dimensional data, pressure losses, acoustical performance, layout, and connection details.

D. Design Data: Provide engineering calculations, referenced to specifications and **<< AHRI 270; AMCA 301; AMCA 302; AMCA 303; ANSI S12.1; and _____>>** standards indicating that maximum room sound levels are not exceeded.

E. Test Reports: Indicate **<< dynamic insertion loss and noise generation values of silencers; acoustic housings meet or exceed specified sound transmission loss values; and _____>>**.

F. Manufacturer's Installation Instructions: Indicate installation procedures necessary to maintain integrity of sound isolation.

G. Manufacturer's Field Reports: Indicate installation is complete and in accordance with instructions.

H. Project Record Documents: Record actual locations of **<< cross-talk silencers; acoustic housings; ductwork lagging; air transfer silencers; and _____>>**.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum **<< three; or _____>>** years of**<< documented; _____; or None - N/A>>** experience.

B. Perform Work in accordance with **<< AHRI 575; AMCA 300; ANSI S1.13; or _____>>** standards and recommendations of **<< ASHRAE Std 68; NEBB (STDS); or _____>>**.

PART 2 PRODUCTS

2.01 REGULATORY REQUIREMENTS

A. Comply with **<< applicable; sound transmission class (STC) rating; or _____>>** codes for sound levels **<< at the property line; between wall partitions; at the property line and between wall partitions; or _____>>**.

2.02 DUCT SILENCERS

A. Manufacturers:

DRAFT

5. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Basis of Design: Price Industries, Inc.

1. Absorptive Silencers:
   a. Axial Fan Silencers - **<< AFS; or _____>>**.
   b. Circular Silencers - **<< CM (Medium Velocity); CMP (Medium Velocity Pod); CH (High Velocity); or _____>>**.
   c. Circular, Extended Casing Silencers - **<< CMX (Medium Velocity); CHX (High Velocity); or _____>>**.
   d. Rectangular Silencers - **<< RL (Low Velocity); RH (High Velocity); or _____>>**.
   e. Rectangular, Extended Casing Silencers - **<< RLX (Low Velocity); RHX (High Velocity); or _____>>**.
   f. Rectangular, Legacy Silencers - **<< L (Low Pressure); LF (Low Pressure); M (Medium Pressure); MF (Medium Pressure); H (High Pressure); HF (High Pressure); LL (Low-Frequency Pressure); LLF (Low-Frequency Pressure); LM (Low-Frequency Medium Pressure); LMF (Low-Frequency Medium Pressure); LH (Low-Frequency High Pressure); LHF (Low-Frequency High Pressure); or _____>>**.
2. Absorptive Elbow Silencers:
   a. Elbow Silencers - **<< ERM; or _____>>**.
   b. Extended Casing, Elbow Silencers - **<< ERMX; or _____>>**.
3. Film-Lined Silencers:
   a. Circular Silencers - **<< CMT (Medium Velocity); CHT (High Velocity); or _____>>**.
   b. Circular, Extended Casing - **<< CMX (Medium Velocity); CHX (High Velocity); or _____>>**.
   c. Rectangular Silencers - **<< RLT (Low Velocity); RHT (Hight Velocity); or _____>>**.
4. Film-Lined Elbow Silencers:
   a. Elbow Silencers - **<< ERMT (Medium Velocity); or _____>>**.
   b. Extended Casing, Elbow Silencer - **<< ERMTX (Medium Velocity); or _____>>**.
5. Packless Silencers:
   a. Circular Silencers - **<< PCLS (Low Velocity - 20 Inch x 20 Inch Casing); PCLB (Low Velocity - 30 Inch x 30 Inch Casing); PCMS (Medium Velocity - 20 Inch x 20 Inch Casing); PCMB (Medium Velocity - 30 Inch x 30 Inch Casing); PCHS (High Velocity - 20 Inch x 20 Inch Casing); PCHB (High Velocity - 30 Inch x 30 Inch Casing); or _____>>**.
   b. Rectangular Silencers - **<< PRM (Medium Velocity); or _____>>**.
6. Packless Elbow Silencers:
   a. Circular Elbow Silencers - **<< PECLS (Low Velocity - 20 Inch x 20 Inch Casing); PECLB (Low Velocity - 30 Inch x 30 Inch Casing); PECMS (Medium Velocity - 20 Inch x 20 Inch Casing); PECMB (Medium Velocity - 30 Inch x 30 Inch**

DRAFT

Casing); PECHS (High Velocity - 20 Inch x 20 Inch Casing); PECHB (High Velocity - 30 Inch x 30 Inch Casing); or _____>>.

b. Elbow Silencers - **<< PERM (Medium Velocity); or _____>>**.

C. Description: Duct section with sheet metal outer casing, sound absorbing fill material, and inner casing of perforated sheet metal; incorporating interior baffles of similar construction. Fabricate in accordance with **<<SMACNA (DCS)>>** HVAC Duct Construction Standards.

D. General Requirements:

1. Casing, sealants, adhesives, accessory materials, and packing materials to comply with **<<ASTM E84>>**.
2. Airstream surfaces installed in a return air plenum to comply with requirements in **<<ASHRAE Std 62.1>>**.
3. Factory-fabricated, field-installed products.

2.03 AIR TRANSFER SILENCERS

A. Manufacturers:

1. Price Industries, Inc**<< ; _____; or None - N/A>>**: www.priceindustries.com/#sle.
2. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Basis of Design: Price Industries, Inc.

1. Rectangular Sounds Transmission Class - **<< R-STC; or _____>>**.
2. Return Air Canopy - **<< RAC; or _____>>**.
3. Thin Line Return - **<< TLRD; or _____>>**.

C. Description: Duct sections with sheet metal outer casing, sound absorbing fill material**<< , and inner casing of perforated sheet metal; , _____; or None - N/A>>**; incorporating interior baffles of similar construction. Fabricate in accordance with **<<SMACNA (DCS)>>** HVAC Duct Construction Standards.

D. Materials:

1. Outer Casing: Minimum **<< 22 gauge, 0.0299 inch>>** thick galvanized steel with **<< mastic filled lock formed; welded; or _____>>** seams, **<< 3 inch>>** long, **<< 11 gauge, 0.1196 inch>>** slip joint on both ends.
2. Inner Casing and Splitters: Minimum **<< 24 gauge, 0.0239 inch>>** thick perforated galvanized steel.
3. Fill: Glass fiber or mineral wool of minimum **<< 4 lb/cu ft; 3 lb/cu ft; or _____ lb/cu ft>>** density.
4. Fill Liner: **<< Bonded glass fiber matting; Mylar film; or _____>>**.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Support duct silencers **<< independent of; rigidly to; or _____>>** ducts**<< with flexible duct connections, lagged with leaded vinyl sheet on inlet and outlet; _____; or None - N/A>>**. Refer to Section **<< 233100>>** and Section **<< 233300>>**.

C. Where indicated, lag ductwork by wrapping with insulation and covering. Apply covering to be air tight. Do not attach covering rigidly to ductwork.

DRAFT

D. Attach ductwork to acoustic louvers with flexible duct connections. Refer to Section **<< 233300>>**.

E. Provide Return Air Canopy - RAC option on all return grilles open to plenum.

END OF SECTION 233319

DRAFT

SECTION 233423
HVAC POWER VENTILATORS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Roof exhausters.

B. Wall exhausters.

C. Cabinet exhaust fans.

D. Upblast roof exhausters.

E. Inline centrifugal fans and blowers.

F. Kitchen hood upblast roof exhausters.

G. Utility vent blowers.

1.02 REFERENCE STANDARDS

A. AMCA (DIR) - (Directory of) Products Licensed Under AMCA International Certified Ratings Program.

B. AMCA 99 - Standards Handbook.

C. AMCA 204 - Balance Quality and Vibration Levels for Fans.

D. AMCA 210 - Laboratory Methods of Testing Fans for Certified Aerodynamic Performance Rating.

E. AMCA 300 - Reverberation Room Methods of Sound Testing of Fans.

F. AMCA 301 - Methods for Calculating Fan Sound Ratings from Laboratory Test Data.

G. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

H. NFPA 96 - Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations.

I. UL 705 - Power Ventilators.

DRAFT

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate fan roof curbs and service utilities installation according to fan size.

B. Sequencing: Ensure that utility connections are completed in an orderly and expeditious manner.

1.04 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Product Data: Provide data on fans and accessories, including fan curves with specified operating point plotted, power, rpm, sound power levels at rated capacity, and electrical characteristics and connection requirements.

C. Manufacturer's Instructions: Indicate installation instructions.

D. Maintenance Data: Include instructions for lubrication, motor and drive replacement, spare parts list, and wiring diagrams.

E. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.

1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.

2. Extra Fan Belts: **<< One set; Two sets; or ____ sets>>** for each individual fan.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum **<< three; or _____>>** years of**<< documented; _____; or None - N/A>>** experience.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Greenheck Fan Corporation**<< ; _____; or None - N/A>>**: www.greenheck.com/#sle.

B. Loren Cook Company**<< ; _____; or None - N/A>>**: www.lorencook.com/#sle.

C. PennBarry, Division of Air System Components**<< ; _____; or None - N/A>>**: www.pennbarry.com/#sle.

D. Twin City Fan & Blower**<< ; _____; or None - N/A>>**: www.tcf.com/#sle.

E. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.02 POWER VENTILATORS - GENERAL

A. Static and Dynamically Balanced: Comply with **<<AMCA 204>>**.

B. Performance Ratings: Comply with **<<AMCA 210>><< , bearing certified rating seal; , _____; or None - N/A>>**.

C. Sound Ratings: Comply with **<<AMCA 301>>**, tested to **<<AMCA 300>><< , bearing certified sound ratings seal; , _____; or None - N/A>>**.

D. Fabrication: Comply with **<<AMCA 99>>**.

E. UL Compliance: **<<UL 705>>**, listed, labeled, designed, manufactured, and tested.

F. Electrical Components: Listed and classified by **<< Underwriters Laboratories Inc.; testing firm acceptable to the Authority Having Jurisdiction; or _____>>** as suitable for the purpose specified and indicated.

2.03 ROOF << EXHAUSTERS; VENTILATORS; OR _____>>

A. Fan Unit: V-belt or direct driven as indicated, with **<< spun aluminum; galvanized steel with baked-on enamel; fiberglass reinforced plastic; upblast spun aluminum; or _____>>** housing; resilient mounted motor; **<< 1/2 inch>>** mesh, **<< 0.62 inch>>** thick aluminum wire birdscreen; square base to suit roof curb with continuous curb gaskets.

B. Roof Curb: **<< 8 inch; 12 inch; 16 inch; 20 inch; 24 inch; or ___ inch>>** high**<< self-flashing; _____; or None - N/A>>** of **<< galvanized steel; aluminum; or _____>>** with continuously welded seams, **<< built-in cant strips; insulation and curb bottom; interior baffle with acoustic insulation, curb bottom; ventilated double wall; hinged curb adapter; factory installed nailer strip; and _____>>**.

C. Disconnect Switch: Factory wired, nonfusible, in housing for thermal overload protected motor**<< and wall mounted multiple speed switch; and wall mounted multiple speed switch or solid-state speed controller; and wall mounted solid-state speed controller; _____; or None - N/A>>**.

D. Backdraft Damper: Gravity actuated, aluminum multiple blade construction, felt edged with offset hinge pin, nylon bearings, blades linked**<< , and line voltage motor drive, power open, spring return; , _____; or None - N/A>>**.

DRAFT

E. Sheaves: Cast iron or steel, dynamically balanced, bored to fit shafts and keyed; variable and adjustable pitch motor sheave selected so required rpm gets attained with sheaves set at mid-position; fan shaft with self-aligning pre-lubricated ball bearings.

2.04 WALL EXHAUSTERS

A. Fan Unit: V-belt or direct driven with spun aluminum housing; resiliently mounted motor; **<< 1/2 inch>>** mesh, **<< 0.062 inch>>** thick aluminum wire bird screen.

B. Disconnect Switch: Factory wired, nonfusible, in housing for thermal overload protected motor**<< , and wall mounted multiple speed switch; , and wall mounted multiple speed switch or solid-state speed controller; , and wall mounted solid-state speed controller; , _____; or None - N/A>>**.

C. Backdraft Damper: Gravity actuated, aluminum multiple blade construction, felt edged with offset hinge pin, nylon bearings, blades linked**<< , and line voltage motor drive, power open, spring return; , _____; or None - N/A>>**.

D. Sheaves: For V-belt drives, provide cast iron or steel, dynamically balanced, bored to fit shafts and keyed; variable and adjustable pitch motor sheaves selected so required rpm can be reached with sheaves set at mid-position; fan shaft with self-aligning prelubricated ball bearings.

2.05 << CABINET; CEILING; OR _____>> EXHAUST FANS

A. Centrifugal Fan Unit: V-belt or direct driven with galvanized steel housing**<< lined with acoustic insulation; _____; or None - N/A>>**, resiliently mounted motor, gravity backdraft damper in discharge.

B. Disconnect Switch: Cord and plug-in housing for thermal overload protected motor**<< and wall mounted switch; and wall mounted multiple speed switch; and wall mounted solid state speed controller; _____; or None - N/A>>**.

C. Grille: **<< Molded white plastic; Aluminum; Aluminum with baked white enamel finish; or _____>>**.

D. Sheaves: Cast iron or steel, dynamically balanced, bored to fit shafts and keyed; variable and adjustable pitch motor sheaves selected so required rpm is reached with sheaves set at mid-position; fan shaft with self-aligning pre-lubricated ball bearings.

2.06 UPBLAST ROOF EXHAUSTERS

A. **<< Direct; Belt; or _____>>** Drive Fan:

1. Fan Wheel:
   a. Type: Non-overloading, backward inclined centrifugal.
   b. Material: **<< Aluminum; Aluminum with non-stick coating; or _____>>**, statically and dynamically balanced.
2. Housing:
   a. Construct of heavy gauge aluminum including curb cap, windband, and motor compartment.
   b. Rigid internal support structure.
   c. One-piece fabricated or fully welded curb-cap base to windband for leak proof construction.
   d. Construct drive frame assembly of heavy gauge steel, mounted on vibration isolators.
   e. Provide breather tube for fresh air motor cooling and wiring.

B. Shafts and Bearings:

DRAFT

1. Fan Shaft:
   a. Ground and polished steel with anti-corrosive coating.
   b. First critical speed at least **<< 25 percent; or _____>>** over maximum cataloged operating speed.
2. Bearings:
   a. Permanently sealed or pillow block type.
   b. Minimum **<< L10; or __>>** life in excess of **<< 100,000 hours (equivalent to L50 average life of 500,000 hours); or _____>>**, at maximum cataloged operating speed.
   c. **<< 100 percent; or _____>>** factory tested.

C. Drive Assembly:
1. Belts, pulleys, and keys oversized for a minimum of **<< 150 percent; or _____>>** of driven horsepower.
2. Belts: Static free and oil resistant.
3. Fully machined cast iron type, keyed and securely attached to the wheel and motor shafts.
4. Motor pulley adjustable for final system balancing.
5. Readily accessible for maintenance.

D. Disconnect Switches:
1. **<< Factory mounted and wired; Shipped loose for field mounting; or _____>>**.
2. Environment Type per **<<NEMA EN 10250>>**: **<< Unless otherwise indicated, as specified for the following installation locations:; As indicated on the drawings.; _____ .; or _____ :>>**
   a. Indoor Clean, Dry Locations: **<< Type 1; or _____>>**.
   b. Outdoor Locations: **<< Type 3R; Type 4X, stainless steel; or _____>>**.
3. Finish for Painted Steel Enclosures: Provide **<< manufacturer's standard; factory-applied gray; or _____>>** unless otherwise indicated.
4. Positive electrical shutoff.
5. Wired from fan motor to junction box installed within motor compartment.

E. Roof Curb: **<< 8 inch; 12 inch; 16 inch; 20 inch; 24 inch; or ___ inch>>** high**<< self-flashing; _____; or None - N/A>>** of **<< galvanized steel; aluminum; or _____>>** with continuously welded seams, **<< built-in cant strips; insulation and curb bottom; curb bottom; ventilated double wall; factory installed nailer strip; and _____>>**.

F. Drain Trough: Allows for single-point drainage of water, grease, and other residues.

G. Options/Accessories:
1. Birdscreen:
   a. Provide **<< galvanized steel; aluminum; or _____>>** construction.
   b. Protects fan discharge.
2. Dampers: Provide **<< motorized; gravity; or _____>>** type.
3. Finishes: **<< Factory primed; Standard factory finish; or _____>>**.

2.07 INLINE CENTRIFUGAL FANS AND BLOWERS

A. Centrifugal Fan Unit: V-belt or direct driven, with galvanized steel housing**<< lined with acoustic insulation; _____; or None - N/A>>**, resiliently-mounted motor, gravity backdraft damper in discharge.

B. **<< Low Profile ; _____; or None - N/A>>**Forward Curved Blower:

DRAFT

1. **<< Adjustable belt; Direct; Adjustable belt- or direct; or _____>>**-driven, resiliently mounted**<< , electrically commutated; , induction; , _____; or None - N/A>>** motor, heavy-duty ball bearings, **<< galvanized steel; powder-coated steel; or _____>>** housing for **<< indoor or outdoor; indoor; outdoor; or _____>>** service**<< lined with acoustic insulation; _____; or None - N/A>>**, and removable service panels.
2. Service Temperature: **<< Minus 65 to 250 degrees F; or _____ degrees F>>**.
3. Accessories: Provide **<< backdraft damper; external vibration isolator spring; filter section; intake hood with bird screen; MERV- __ filters; motor out of airstream; and _____>>**.

C. Disconnect Switch: Cord and plug-in housing for thermal overload protected motor**<< and wall mounted switch; and wall mounted multiple speed switch; and wall mounted solid state speed controller; _____; or None - N/A>>**.

D. Sheaves: Cast iron or steel, dynamically balanced, bored to fit shafts and keyed; variable and adjustable pitch motor sheaves selected so required rpm gets reached with sheaves set at mid-position; fan shaft with self-aligning prelubricated ball bearings.

2.08 KITCHEN HOOD UPBLAST ROOF EXHAUSTERS

A. **<< Direct; Belt; or _____>>** Drive Fan:
1. Fan Wheel:
a. Type: Non-overloading, backward inclined centrifugal.
b. Material: **<< Aluminum; Aluminum with non-stick coating; or _____>>**, statically and dynamically balanced.
2. Housing:
a. Construct of heavy gauge aluminum including curb cap, windband, and motor compartment.
b. Rigid internal support structure.
c. One-piece fabricated or fully welded curb-cap base to windband for leak proof construction.
d. Construct drive frame assembly of heavy gauge steel, mounted on vibration isolators.
e. Provide breather tube for fresh air motor cooling and wiring.

B. Shafts and Bearings:
1. Fan Shaft:
a. Ground and polished steel with anti-corrosive coating.
b. First critical speed at least **<< 25 percent; or _____>>** over maximum cataloged operating speed.
2. Bearings:
a. Permanently sealed or pillow block type.
b. Minimum **<< L10; or ___>>** life in excess of **<< 100,000 hours (equivalent to L50 average life of 500,000 hours); or _____>>**, at maximum cataloged operating speed.
c. **<< 100 percent; or _____>>** factory tested.

C. Drive Assembly:
1. Belts, pulleys, and keys oversized for a minimum of **<< 150 percent; or _____>>** of driven horsepower.
2. Belts: Static free and oil resistant.

DRAFT

3. Fully machined cast iron type, keyed and securely attached to the wheel and motor shafts.
4. Motor pulley adjustable for final system balancing.
5. Readily accessible for maintenance.

D. Disconnect Switches:
1. **<< Factory mounted and wired; Shipped loose for field mounting; or _____>>**.
2. Environment Type per **<<NEMA EN 10250>>**: **<< Unless otherwise indicated, as specified for the following installation locations:; As indicated on the drawings.; _____ .; or _____ :>>**
a. Outdoor Locations: **<< Type 3R; Type 4X, stainless steel; or _____>>**.
3. Finish for Painted Steel Enclosures: Provide **<< manufacturer's standard; factory-applied gray; or _____>>** unless otherwise indicated.
4. Positive electrical shutoff.
5. Wired from fan motor to junction box installed within motor compartment.

E. Roof Curb: **<< 8 inch; 12 inch; 16 inch; 20 inch; 24 inch; or ___ inch>>** high**<< self-flashing; _____; or None - N/A>>** of **<< galvanized steel; aluminum; or _____>>** with continuously welded seams, **<< built-in cant strips; insulation and curb bottom; curb bottom; ventilated double wall; factory installed nailer strip; and _____>>**.

F. Drain Trough: Allows for single-point drainage of water, grease, and other residues.

G. Options/Accessories:
1. Automatic Belt Tensioner: Automatic device that adjusts for correct belt tension for single drives.
2. Clean Out Port: Removable grease repellent compression rubber plug allows access for cleaning wheel through windband.
3. Roof Curb Extension: Vented curb extension where required for compliance with minimum clearances required by **<<NFPA 96>>**.
4. Drain Connection:
a. Aluminum construction.
b. Container allows single-point drainage of grease, water, or other residues.
5. Finishes: **<< Factory primed; Standard factory finish; or _____>>**.
6. Grease Trap:
a. Aluminum.
b. Built-in drain connection.
c. Container system to collect grease residue.
7. Hinge Kit:
a. Aluminum hinges.
b. Hinges and restraint cables mounted to base sleeve.
c. Allows fan to tilt away for access to wheel and ductwork for inspection and cleaning.
8. Heat Baffle: Prevents heat from radiating into motor compartment.

2.09 UTILITY VENT << BLOWERS; BLOWER SETS; OR _____>>

A. **<< Direct; Belt; or _____>>** Drive Fan:
1. Fan Wheel:
a. Type: Non-overloading, backward inclined centrifugal.
b. Material: **<< Aluminum; Aluminum with non-stick coating; or _____>>**, statically and dynamically balanced.

DRAFT

2. Housing:
   a. Construct of heavy gauge aluminum including curb cap, windband, and motor compartment.
   b. Rigid internal support structure.
   c. One-piece fabricated or fully welded curb-cap base to windband for leak proof construction.
   d. Construct drive frame assembly of heavy gauge steel, mounted on vibration isolators.
   e. Provide breather tube for fresh air motor cooling and wiring.

B. Shafts and Bearings:
   1. Fan Shaft:
      a. Ground and polished steel with anti-corrosive coating.
      b. First critical speed at least **<< 25 percent; or _____>>** over maximum cataloged operating speed.
   2. Bearings:
      a. Permanently sealed or pillow block type.
      b. Minimum **<< L10; or __>>** life in excess of **<< 100,000 hours (equivalent to L50 average life of 500,000 hours); or _____>>**, at maximum cataloged operating speed.
      c. **<< 100 percent; or _____>>** factory tested.

C. Drive Assembly:
   1. Belts, pulleys, and keys oversized for a minimum of **<< 150 percent; or _____>>** of driven horsepower.
   2. Belts: Static free and oil resistant.
   3. Fully machined cast iron type, keyed and securely attached to the wheel and motor shafts.
   4. Motor pulley adjustable for final system balancing.
   5. Readily accessible for maintenance.

D. Drain Trough: Allows for single-point drainage of water, grease, and other residues.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with **<< manufacturer's instructions; or _____>>**.

B. Secure **<< roof; wall; or _____>>** exhausters with **<< cadmium plated steel; aluminum; stainless steel; or _____>>** lag screws to **<< roof curb; structure; or _____>>**.

C. Extend ducts to **<< roof; wall; or _____>>** exhausters into **<< roof curb; structure; or _____>>**. Counterflash duct to **<< roof; wall; or _____>>** opening.

D. Provide sheaves required for final air balance.

E. Install backdraft dampers on inlet to roof and wall exhausters.

F. Provide backdraft dampers on outlet from cabinet and ceiling exhauster fans and as indicated.

A. Section **<< 230548 - Vibration and Seismic Controls for HVAC>>**: Vibration isolators.

1.03 REFERENCE STANDARDS

A. ACGIH (IV) - Industrial Ventilation: A Manual of Recommended Practice for Design, 31st Edition.

B. AMCA (DIR) - (Directory of) Products Licensed Under AMCA International Certified Ratings Program.

C. AMCA 99 - Standards Handbook.

D. AMCA 210 - Laboratory Methods of Testing Fans for Certified Aerodynamic Performance Rating.

E. AMCA 300 - Reverberation Room Methods of Sound Testing of Fans.

F. AMCA 301 - Methods for Calculating Fan Sound Ratings from Laboratory Test Data.

G. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

H. ASTM A666/A666M - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.

I. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength.

J. AWS D9.1/D9.1M - Sheet Metal Welding Code.

K. NFPA 91 - Standard for Exhaust Systems for Air Conveying of Vapors, Gases, Mists, and Particulate Solids.

L. SMACNA (DCS) - HVAC Duct Construction Standards Metal and Flexible.

M. SMACNA (RIDC) - Rectangular Industrial Duct Construction Standards.

N. SMACNA (ROUND) - Round Industrial Duct Construction Standards.

O. UL 181 - Standard for Factory-Made Air Ducts and Air Connectors.

1.04 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

DRAFT

B. Shop Drawings: Indicate dimensions, sizes, weights and point loadings, material thickness, and locations and sizes of field connections.**<< Submit construction layout and details for inlet fittings.; _____ .; or None - N/A>>**

C. Product Data: Provide manufacturers literature and data indicating rated capacities, dimensions, weights and point loadings, accessories, electrical characteristics and connection requirements, wiring diagrams, and location and sizes of field connections.

D. Provide fan curves with specified operating point clearly plotted.

E. Submit sound power levels for both fan inlet and outlet at rated capacity.

F. Manufacturer's Installation Instructions: Indicate assembly and installation instructions.

G. Operation and Maintenance Data: Include instructions for lubrication, motor and drive replacement, spare parts list, and wiring diagrams.

H. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.
   1. See Section **<< 016000 - Product Requirements>>**, for additional provisions.
   2. Extra Filter Separator Filters: **<< One; Two; or ____>>**.
   3. Extra Filter Bags: **<< One; Two; or ____>>**.

1.05 QUALITY ASSURANCE

A. Fans:
   1. Performance Ratings: Comply with **<<AMCA 210>><< and bear the AMCA Certified Rating Seal; _____; or None - N/A>>**.
   2. Sound Ratings: **<<AMCA 301>>**, tested to **<<AMCA 300>><< , and bear AMCA Certified Sound Rating Seal; , _____; or None - N/A>>**.
   3. Fabrication: Comply with **<<AMCA 99>>**.

B. Products Requiring Electrical Connection: Listed and classified by **<< Underwriters Laboratories Inc.,; testing firm acceptable to the Authority Having Jurisdiction; or _____>>** as suitable for the purpose specified and indicated.

PART 2 PRODUCTS

2.01 INDUSTRIAL CENTRIFUGAL EXHAUST FANS

2.02 DUCTWORK AND DUCT ACCESSORIES

A. Manufacturers:
   1. Dust Duct Systems (a Hranec Corporation Company)**<< ; Welded Pipe One Seam; ; _____; or None - N/A>>**: www.dustductsystems.com/#sle.
   2. EHG, a DMI Company**<< ; _____; or None - N/A>>**: www.ehgduct.com/#sle.
   3. Linx Industries, Inc, a DMI Company**<< ; _____; or None - N/A>>**: www.li-hvac.com/#sle.
   4. Nordfab Ducting**<< ; _____; or None - N/A>>**: www.nordfab.com/#sle.
   5. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Materials:
   1. Galvanized Steel Ducts: Hot-dipped galvanized steel sheet, **<<ASTM A653/A653M>>**, FS Type B, with **<< G60/Z180; G90/Z275; or ____>>** coating.
      a. Thickness: Base sheet steel, **<< 24 gauge, 0.0239 inch; or ___ gauge, ___ inch>>** minimum.

DRAFT

b. Thickness: As indicated on drawings.

2. Steel Ducts: **<<ASTM A1011/A1011M>>**, Designation CS, Type **<< B; A; C; or __>>** carbon steel, **<< 24 gauge, 0.0239 inch; or ___ gauge, ___ inch>>** minimum thickness.
3. Stainless Steel Ducts: **<<ASTM A666/A666M>>**, Type **<< 304; or ____>>**, **<< 26 gauge, 0.0187 inch; 24 gauge, 0.0250 inch; or ___ gauge, ___ inch>>** minimum thickness.

C. Ductwork:

1. Fabricate and Support**<< to UL 181; _____; or None - N/A>>** in Accordance With:
   a. **<<SMACNA (DCS)>>**, **<< 2 inch; or _____ inch>>** pressure class.
   b. **<<SMACNA (ROUND)>>** and **<<SMACNA (RIDC)>>**.
   c. **<<ACGIH (IV)>>** Industrial Ventilation Manual.
2. Construct T's, bends, and elbows with radius of not less than 1-1/2 times width of duct on centerline.
3. Increase duct sizes gradually, not exceeding 15 degrees divergence wherever possible; maximum 30 degrees divergence upstream of equipment and 45 degrees convergence downstream.
4. Fabricate continuously welded round and oval duct fittings two gauges heavier than duct gauges indicated in **<<SMACNA (ROUND)>>**. Prime coat welded joints.
5. Use crimp joints with or without bead for joining round duct sizes **<< 8 inch; or ____ inch>>** and smaller with crimp in direction of air flow, with liquid adhesive plus sheet metal screws.
6. Joints: Minimum **<< 4 inch>>** cemented slip type, brazed, or electric welded to comply with **<<AWS D9.1/D9.1M>>**.
7. Provide standard 45-degree lateral wye branch fittings unless otherwise indicated.
8. Use double nuts and lock washers on threaded rod supports.

D. Flexible Connectors: UL listed, fire-retardant chloroprene or chlorosulfonated polyethylene impregnated fabric, minimum density **<< 20 oz per sq yd; 36 oz per sq yd; or __ oz per sq yd>>**, approximately **<< 2 inches; 3 inches; 6 inches; or __ inches>>** wide, crimped into metal edging strip.

E. Angle Rings: Carbon steel, unpainted, leg out, drilled with bolt holes.

F. Blast Gates: **<< Half; Full; or ___>>** collar of **<< cast aluminum; steel; or _____>>**, with galvanized steel slide, set screw.

G. Flat Back Elbows: Long radius rectangular elbow at duct material with heavy gauge, removable, **<< stainless steel; rubber lined; or _____>>** back strip.

H. Ball Joints: **<< Cast iron; Spun galvanized steel; or _____>>** with tubular studs for connecting ducts, allowing 25 degree angle off center.

2.03 INLET FITTINGS

2.04 CENTRIFUGAL SEPARATOR

A. Manufacturers:

1. Kraemer Tool & Manufacturing Company Inc**<< ; _____; or None - N/A>>**: www.kraemertool.com/#sle.
2. Spencer Turbine Company**<< ; _____; or None - N/A>>**: www.spencerturbine.com/#sle.
3. Donaldson Company, Inc**<< ; _____; or None - N/A>>**: www.donaldson.com/#sle.
4. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

DRAFT

B. Cyclone dust collector consisting of cyclone with integral fan and structural stand incorporating dust storage.

C. Frame and Casing: Steel frame with enameled finish, **<< 16 gauge, 0.0598 inch; or _____ gauge, _____ inch>>** structure with **<< 18 gauge, 0.0478 inch; or _____ gauge, _____ inch>>** panels and **<< 20 gauge, 0.0359 inch; or _____ gauge, _____ inch>>** cyclone minimum base metal thicknesses, and **<< _____ cubic feet>>** dust storage capacity.

D. Cyclone Efficiency: **<< 99; 84; or _____>>** percent of **<< steel grindings; sawdust; baking flour; corn starch; or _____>>**.

E. Fan: Welded construction centrifugal fan with material handling wheel, direct drive.

F. Accessories: **<< Discharge silencer; Push Button control panel with motor starter; Polyester bag filter; and _____>>**.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as **<< indicated; indicated on shop drawings; instructed by the manufacturer; or _____>>**.

3.02 INSTALLATION

A. Install equipment in accordance with manufacturer's instructions.

B. Install in accordance with **<< NFPA 91; SMACNA (DCS); SMACNA (ROUND); SMACNA (RIDC); ACGIH (IV); and _____>>** except as indicated.

C. Do not operate fans for any purpose until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation.

D. Install fans with resilient mountings and flexible electrical leads. See Section **<< 230548>>**.

E. Install flexible connections at **<< fan; separator; or _____>>** inlet and discharge. Ensure metal bands of connectors are parallel with minimum **<< 1-inch>>** flex between ductwork and fan while running.

F. Provide pitot tube openings where required for testing of systems, complete with metal cap with spring device or screw to ensure against air leakage.

G. Locate ducts with sufficient space around equipment to allow normal operating and maintenance activities.

END OF SECTION 233513

DRAFT

SECTION 233600
AIR TERMINAL UNITS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Single-duct terminal units.
   1. Variable-volume units.
B. Fan-powered units.

1.02 REFERENCE STANDARDS

A. AHRI 410 - Forced-Circulation Air-Cooling and Air-Heating Coils.
B. AHRI 880 (I-P) - Performance Rating of Air Terminals.
C. AHRI 885 - Procedure for Estimating Occupied Space Sound Levels in the Application of Air Terminals and Air Outlets.
D. ASHRAE Std 62.1 - Ventilation for Acceptable Indoor Air Quality.
E. ASHRAE Std 130 - Laboratory Methods of Testing Air Terminal Units.
F. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
G. ASTM E488/E488M - Standard Test Methods for Strength of Anchors in Concrete Elements.
H. NFPA 70 - National Electrical Code.
I. NFPA 90A - Standard for the Installation of Air-Conditioning and Ventilating Systems.
J. UL 181 - Standard for Factory-Made Air Ducts and Air Connectors.

1.03 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.
B. Product Data: Provide data indicating configuration, general assembly, and materials used in fabrication. Include catalog performance ratings that indicate airflow, static pressure, and NC designation. Include electrical characteristics and connection requirements.
C. Shop Drawings: Indicate configuration, general assembly, and materials used in fabrication, and electrical characteristics and connection requirements.
   1. Include schedules listing discharge and radiated sound power level for each of the second through sixth-octave bands at inlet static pressures of **<< 1 to 4 in-wc>>**.
D. Certificates: Certify that **<< air coil capacities, pressure drops, and selection procedures meet or exceed specified requirements; coils are tested and rated in accordance with AHRI 410; or _____>>**.
E. Manufacturer's Installation Instructions: Indicate support and hanging details, installation instructions, recommendations, and service clearances required.
F. Project Record Documents: Record actual locations of **<< units; controls components; and _____>>** and locations of access doors required for access of valving.
G. Operation and Maintenance Data: Include manufacturer's descriptive literature, operating instructions, maintenance and repair data, and parts lists. Include directions for resetting constant-volume regulators.
H. Warranty: Submit manufacturer warranty and ensure forms have been completed in **<<Owner>>**'s name and registered with manufacturer.

DRAFT

I. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.
   1. See Section **<< 016000 - Product Requirements>>** for additional provisions.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum **<< three; eight; or _____>>** years of**<< documented; _____; or None - N/A>>** experience.

B. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.05 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Provide **<< five; or ____>>** year manufacturer warranty for **<< air terminal units; integral sound attenuators; integral heating coils; and integral controls>>**.

PART 2 PRODUCTS

2.01 SINGLE-DUCT, << VARIABLE-VOLUME; AND CONSTANT-VOLUME>> UNITS

A. Manufacturers:
   1. Carrier, a part of UTC Building and Industrial Systems, a unit of United Technologies Corp.**<< ; _____; or None - N/A>>**: www.commercial.carrier.com/#sle.
   2. Johnson Controls, Inc**<< ; _____; or None - N/A>>**: www.johnsoncontrols.com/#sle.
   3. Krueger-HVAC**<< ; _____; or None - N/A>>**: www.krueger-hvac.com/#sle.
   4. Metalaire, a brand of Metal Industries Inc**<< ; _____; or None - N/A>>**: www.metalaire.com/#sle.
   5. Price Industries, Inc**<< ; _____; or None - N/A>>**: www.priceindustries.com/#sle.
   6. Trane, a brand of Ingersoll Rand**<< ; _____; or None - N/A>>**: www.trane.com/#sle.
   7. Tuttle and Bailey**<< ; _____; or None - N/A>>**: www.tuttleandbailey.com/#sle.
   8. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Acoustic Performance Requirements:
   1. Use attenuation values found in appendix E of **<<AHRI 885>>**.

C. General:
   1. Factory-assembled, **<<AHRI 880 (I-P)>>** rated**<< and bearing the AHRI seal; or None - N/A>>**, air volume control terminal with damper assembly, flow sensor, externally mounted volume controller, duct collars, and all required features.
   2. Control box bearing identification, including but not necessarily limited to nominal cfm, maximum and minimum factory-set airflow limits, coil type and coil (right or left hand) connection, where applicable.

D. Unit Casing:
   1. Minimum **<< 22 gauge, 0.0299 inch; or _____ gauge, _____ inch>>** galvanized steel.
      a. Assembled with longitudinal lock seam construction.
      b. Casing leakage to meet **<<ASHRAE Std 130>>**.
   2. Air Inlet Collar: Provide **<< round; rectangular; or _____>>**, suitable for standard flexible duct sizes.
   3. Unit Discharge: Rectangular, with slip-and-drive connections.

DRAFT

4. Acceptable Liners:
   a. **<< 1/2 inch; 3/4 inch; 1 inch; or _____ inch>>** thick, coated, fibrous-glass complying with **<<ASTM C1071>>**.
      1) Secure with adhesive.
      2) Coat edges exposed to airstream with **<<NFPA 90A>>** approved sealant.
      3) Cover liner with **<< non-porous foil; perforated metal; and _____>>**.
   b. Liner not to contain pentabrominated diphenyl ether (CAS #32534-81-9) or octabrominated diphenyl ether.

E. Sound Attenuator:
1. Provide if required to meet scheduled acoustical performance requirements.
2. Construction to consist of a continuous extension of the casing and liner as required to achieve required attenuation.

F. Damper Assembly:
1. Heavy-gauge, galvanized steel, or extruded aluminum construction with solid steel, nickel-plated shaft pivoting on HDPE, self-lubricating bearings.
2. Provide integral position indicator or alternative method for indicating damper position over full range of 90 degrees.

G. Hot Water Heating Coil:
1. Coil Casing: Minimum **<< 22 gauge, 0.0299 inch; or _____ gauge, _____ inch>>** galvanized steel, factory-installed on terminal discharge with rectangular outlet, duct connection type.
   a. Access Door: Gasketed and insulated located **<< on bottom; on top; downstream of coils; and _____>>**.
   b. Right or left coil inlets.
2. Coil Fins: Aluminum or aluminum plated**<< None - N/A; 0.0045 inch; or _____ inch>>** fins, mechanically-bonded to seamless**<< None - N/A; 0.50 by 0.016 inch; or _____ inch>>** copper tubes.
   a. Fins to be formed in a high heat transfer sine wave configuration.
3. Coil leak tested to minimum **<< 350 psig; 300 psig; or _____ psig>>**.
4. Base performance data on tests run in accordance with **<<AHRI 410>><< and units to bear AHRI 410 label; or None - N/A>>**.

H. Electric Heating Coil:
1. Listed and provided by the terminal unit manufacturer.
2. Coil Casing: **<< 20 gauge, 0.0359 inch; or _____ gauge, _____ inch>>** galvanized steel.
3. Heating Elements: Nickel chrome, supported by ceramic insulators.
4. Integral Control Panel: **<<NEMA EN 10250>>**, Type **<< 2; 12; or __>>** enclosure with hinged access door for access to all controls and safety devices.
5. Furnish a primary automatic reset thermal cutout and differential pressure airflow switch for proof of airflow.
6. Provide the following additional components, mounted and/or wired within the control enclosure:
   a. Fused or non-fused door interlocking disconnect switch.

DRAFT

7. Factory wired, including all limit switches and steps of control as **<< indicated; indicated on the equipment schedule; or _____>>**, with the SSR (solid-state relay) proportional heat control.
8. Provide SCR (Silicon Controlled Rectifier) controller.

I. Electrical Requirements:
1. Single-point power connection.
2. Equipment wiring to comply with requirements of **<<NFPA 70>>**.

J. Control Transformers: Factory supplied and mounted for electric and electronic control applications.

K. Controls:
1. Airflow Sensor: Differential pressure airflow device measuring total, static, and wake pressures.
a. Basis of Design: Price Industries, Inc; SP300 Air Flow Sensor: www.priceindustries.com/#sle.
1) Plastic parts are fire-resistant, complying with **<<UL 94>>**.
2) Provides accuracy within 5 percent with a 90 degree sheet metal elbow directly at the inlet of the assembly.
3) Control tubing is protected by grommets at the wall of the air flow sensor's housing.
4) Furnished with twelve total pressure sensing ports and a center averaging chamber that amplifies the sensed air flow signal.
5) Provide sensor with a pressure transducer to interface with **<< a DDC system; the building management system; and _____>>**.
6) Provide velocity pressure sensor with a removable access section for maintenance.
b. Signal accuracy: Plus/minus five percent throughout terminal operating range.

2.02 FAN-POWERED<< NONE - N/A; PARALLEL; OR SERIES>> UNITS

A. Manufacturers:
1. Carrier, a part of UTC Building and Industrial Systems, a unit of United Technologies Corp.**<< ; _____; or None - N/A>>**: www.commercial.carrier.com/#sle.
2. Johnson Controls, Inc**<< ; _____; or None - N/A>>**: www.johnsoncontrols.com/#sle.
3. Krueger-HVAC**<< ; _____; or None - N/A>>**: www.krueger-hvac.com/#sle.
4. Metalaire, a brand of Metal Industries Inc**<< ; _____; or None - N/A>>**: www.metalaire.com/#sle.
5. Price Industries, Inc**<< ; _____; or None - N/A>>**: www.priceindustries.com/#sle.
6. Trane, a brand of Ingersoll Rand**<< ; _____; or None - N/A>>**: www.trane.com/#sle.
7. Tuttle and Bailey**<< ; _____; or None - N/A>>**: www.tuttleandbailey.com/#sle.
8. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. General:
1. Factory-assembled and wired, **<<AHRI 880 (I-P)>>** rated, horizontal fan-powered terminal unit with blower, blower motor, mixing plenum, and primary air damper contained in a single unit housing.

C. Unit Casing:
1. Minimum **<< 22 gauge, 0.0299 inch; 20 gauge, 0.0359 inch; or _____ gauge, _____ inch>>** galvanized steel.

DRAFT

2. Primary Air Inlet Collar: Suitable for standard flexible duct sizes.
3. Unit Discharge: Rectangular, suitable for flanged duct connection.
4. Plenum Inlet: Filter rack with disposable filters.
   a. **<< 1 inch>>** thick disposable fiberglass filters.
   b. Minimum Efficiency Reporting Value (MERV): **<< 8>>**, when tested in accordance with **<<ASHRAE Std 52.2>>**.
5. Acceptable Liners:
   a. **<< 1/2 inch; or _____ inch>>** thick, coated, fibrous-glass complying with **<<ASTM C1071>>**.
      1) Secure with adhesive.
      2) Coat edges exposed to airstream with **<<NFPA 90A>>** approved sealant.
      3) Cover liner with **<< non-porous foil; perforated metal; and _____>>**.

D. Sound Attenuator:
   1. Provide if required to meet scheduled acoustical performance requirements.
   2. Construction to consist of a continuous extension of the casing and liner as required to achieve required attenuation.

E. Primary Air Damper Assembly:
   1. Heavy-gauge, galvanized steel, or extruded aluminum construction with solid shaft rotating in bearings.
   2. Provide indicator on damper shaft or alternative method for indicating damper position over full range of 90 degrees.
   3. Fan(s): Forward curved, centrifugal type.
   4. Fan Motor:
      a. ECM (Electrically Commutated Motor):
         1) Brushless DC controlled by an integrated controller/inverter that operates the wound stator and senses rotor position to electrically commutate the stator.
         2) Permanent magnet type motor with near-zero rotor losses designed for synchronous rotation.
         3) Designed to maintain 70 percent efficiency over the entire operating range.
      b. Fan motor shaft directly connected to fan and isolated from unit casing to prevent transmission of vibration.

F. Electric Heating Coil:
   1. Listed and provided by the terminal unit manufacturer.
   2. Coil Casing: Minimum **<< 20 gauge, 0.0359 inch; or _____ gauge, _____ inch>>** galvanized steel.
   3. Heating Elements: Open wire, nickel chrome, supported by ceramic insulators.
   4. Integral Control Panel: **<<NEMA EN 10250>>**, Type **<< 2; 12; or __>>** enclosure, with hinged access door for access to all controls and safety devices.
   5. Provide a primary automatic reset thermal cutout and differential pressure airflow switch for proof of airflow or electrical interlock to prevent heater operation when fan is not running.
   6. Provide the following additional components, mounted and/or wired within the control enclosure:
      a. Fused or non-fused door interlocking disconnect switch.
   7. Provide SCR (Silicon Controlled Rectifier) controller.

DRAFT

G. Hot Water Heating Coil:
   1. Coil Casing: Minimum **<< 22 gauge, 0.0299 inch; or _____ gauge, _____ inch>>** galvanized steel, factory-installed on terminal unit with flanged discharge for attachment to downstream ductwork.
   2. Heavy-gauge aluminum fins, mechanically bonded to tubes.
   3. Copper Tubes: **<< 0.016 inch; or _____ inch>>** minimum wall thickness with male solder header connections.
   4. Coil leak tested to minimum **<< 305 psig; or _____ psig>>**.
   5. Base performance data on tests run in accordance with **<<AHRI 410>>**.

H. Electrical Requirements:
   1. Single-point power connection.
   2. Equipment wiring to comply with requirements of **<<NFPA 70>>**.

I. Controls:
   1. Airflow Sensor: Differential pressure airflow device measuring total, static, and wake pressures.
      a. Basis of Design: Price Industries, Inc; SP300 Air Flow Sensor: www.priceindustries.com/#sle.
         1) Plastic parts are fire-resistant, complying with **<<UL 94>>**.
         2) Provides accuracy within 5 percent with a 90 degree sheet metal elbow directly at the inlet of the assembly.
         3) Control tubing is protected by grommets at the wall of the air flow sensor's housing.
         4) Furnished with twelve total pressure sensing ports and a center averaging chamber that amplifies the sensed air flow signal.
         5) Provide sensor with a pressure transducer to interface with **<< a DDC system; the building management system; and _____>>**.
         6) Provide velocity pressure sensor with a removable access section for maintenance.
      b. Signal accuracy: Plus/minus five percent throughout terminal operating range.

2.03 HOSE KITS AND VALVES

A. Manufacturers:
   1. Griswold Controls**<< ; _____; or None - N/A>>**: www.griswoldcontrols.com/#sle.
   2. Hays Fluid Controls**<< ; _____; or None - N/A>>**: www.haysfluidcontrols.com/#sle.
   3. IMI Flow Design, a brand of IMI Hydronic Engineering Division of IMI plc**<< ; _____; or None - N/A>>**: www.flowdesign.com/#sle.
   4. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. Hoses:
   1. Provide hoses for all units for connection to main water supply and return headers.
   2. Length: **<< 2 feet; or __ feet>>**.
   3. Material: Braided stainless steel rated to minimum **<< 400 psi; or ___ psi>>** at **<< 265 degrees F; or ___ degrees F>>**.

C. **<< Automatic ; Manual ; or None - N/A>>**Balancing Valves:
   1. Brass body for shutoff and hydronic balancing.

D. Ball Valves:

DRAFT

1. Brass body for shutoff and hydronic balancing.
2. Provide pressure/temperature ports.
3. Provide balancing valves.

E. Y Strainers:
1. Bronze body.
2. "Y" type configuration with brass cap.
3. Maximum Operating Pressure: Minimum **<< 450 psi; or ___ psi>>**.
4. Screen: Stainless steel.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that conditions are suitable for installation.

B. Verify that field measurements are as indicated on drawings.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install the inlets of air terminal units and air flow sensors a minimum of four duct diameters from elbows, transitions, and duct takeoffs.

C. See drawings for the size(s) and duct location(s) of the air terminal units.

D. Provide ceiling access doors or locate units above easily removable ceiling components.

E. Support units individually from structure**<< with wire rope complying with ASTM A492 and ASTM A603; _____; or None - N/A>>** in accordance with **<<SMACNA (SRM)>>**. **<< See Section 23 0548.; _____ .; or None - N/A>>**

F. Embed anchors in concrete in accordance with **<<ASTM E488/E488M>>**.

G. Do not support from ductwork.

H. Connect to ductwork in accordance with Section **<< 233100>>**.

I. Install heating coils in accordance with Section **<< 238200>>**.

J. Verify that electric power is available and of the correct characteristics.

K. Insulate hot water coil ends, minimum R-6.

3.03 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>** for additional requirements.

B. Provide manufacturer's field representative to **<< test; inspect; instruct; observe; and _____>>** field-assembled components and equipment installation, including connections**<< and to assist in field testing; _____; or None - N/A>>**. Report results in writing.
1. Operational Test:
a. After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
b. Test and adjust controls and safeties.
c. Replace damaged and malfunctioning controls and other equipment.
d. Remove and replace malfunctioning units and retest as specified above.

DRAFT

3.04 CLEANING

A. See Section **<< 017419 - Construction Waste Management and Disposal>>** for additional requirements.

B. Vacuum clean coils and inside of units.

C. Install new filters.

3.05 CLOSEOUT ACTIVITIES

A. See Section **<< 017800 - Closeout Submittals>>** for closeout submittals.

B. See Section **<< 017900 - Demonstration and Training>>** for additional requirements.

END OF SECTION 233600

DRAFT

SECTION 233700
AIR OUTLETS AND INLETS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Diffusers

B. Kiln exhaust hoods.

C. Roof hoods.

D. Goosenecks.

E. Gravity ventilators.

1.02 REFERENCE STANDARDS

A. AMCA 511 - Certified Ratings Program Product Rating Manual for Air Control Devices.

B. AMCA 550 - Test Method for High Velocity Wind Driven Rain Resistant Louvers.

C. ASHRAE Std 70 - Method of Testing the Performance of Air Outlets and Air Inlets.

D. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

E. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric).

F. SMACNA (ASMM) - Architectural Sheet Metal Manual.

G. SMACNA (DCS) - HVAC Duct Construction Standards Metal and Flexible.

1.03 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Product Data: Provide data for equipment required for this project. Review outlets and inlets as to size, finish, and type of mounting prior to submission. Submit schedule of outlets and inlets showing type, size, location, application, and noise level.

1.04 QUALITY ASSURANCE

A. Test and rate air outlet and inlet performance in accordance with **<<ASHRAE Std 70>>**.

B. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum **<< three; or _____>>** years of**<< documented; _____; or None - N/A>>** experience.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Anemostat, Inc.

B. Krueger.

C. Metalaire.

D. Nailor Industries, Inc.

E. Price Industries.

DRAFT

F. Titus.

G. Tuttle and Bailey.

H. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

2.02 GENERAL

A. All trim pieces shall be mechanically fastened. Friction fit trim rings/frames shall not be provided or shall be mechanically fastened in the field. Fasteners shall not be visible.

B. Finish: Powder-coated or baked enamel, white unless noted otherwise.
   1. For inlets or outlets in metal or wood ceilings, provide finish suitable for field painting where indicated (color shall be selected by Architect) or provide anodized clear finish where indicated.
   2. For sidewall-mounted inlets and outlets, provide finish suitable for field painting where indicated (color shall be selected by Architect) or provide anodized clear finish where indicated.
   3. Finish for Exposed Ductwork: Where ductwork is exposed, inlets and outlets mounted in exposed ductwork shall be factory primed for field painting.

C. Filter Grille Inlets: Grille shall accommodate a 2" deep, MERV 8 pleated filter. Refer to Section 234000.

D. Mounting: As indicated in schedule or match condition indicated.

2.03 LINEAR SLOT DIFFUSER PLENUMS

A. Linear slot diffuser plenums shall be fully insulated. Provide one of the following:
   1. Factory-installed, internal fiberglass insulation on sides and end caps.
   2. Factory-installed, external aluminum foil-backed insulation.

2.04 CEILING DIFFUSERS

A. Ceiling diffuser backpans shall be externally insulated.
   1. Factory-installed with foil/scrim vapor barrier insulation with a minimum R-value of 6.

B. For diffusers connected to flexible duct, provide the following:
   1. Field-provided 12” long duct collar with diameter matching diffuser inlet. Attach to diffuser inlet with a minimum of four sheet metal screws evenly distributed around collar.

DRAFT

2.05 KILN EXHAUST HOODS

A. Provide Greenheck Model GO Type II hood or equal over each kiln.

B. General: Air inlet device configured to exhaust suspended gases, vapors, fumes and fine dust particles under 20 microns in diameter**<< sourced from cold processes; sourced from hot processes; _____; or None - N/A>>**.

2.06 ROOF HOODS

A. Fabricate air inlet or exhaust hoods in accordance with **<<SMACNA (DCS)>>**.

B. Fabricate of galvanized steel, minimum **<< 16 gauge, 0.0598 inch>>** base and **<< 20 gauge, 0.0359 inch>>** hood, or aluminum, minimum **<< 16 gauge, 0.0598 inch>>** base and **<< 18 gauge, 0.0598 inch>>** hood; suitably reinforced; with removable hood; birdscreen with **<< 1/2 inch>>** square mesh for exhaust and **<< 3/4 inch>>** for intake, and factory **<< prime coat; baked enamel; or _____>>** finish.

C. Mount unit on minimum **<< 12 inch>>** high curb base with insulation between duct and curb.

D. Make hood outlet area minimum of twice throat area.

2.07 GOOSENECKS

A. Fabricate in accordance with of minimum **<< 18 gauge, 0.0598 inch>>** galvanized steel.

B. Mount on minimum **<< 12 inch>>** high curb base where size exceeds **<< 9 by 9 inch; or _____ inch>>**.

2.08 GRAVITY VENTILATORS

A. Hood **<< Intake; Relief; and _____>>** Gravity Ventilator:

1. Manufacturers:
   a. Greenheck Fan Corporation**<< ; _____; or None - N/A>>**: www.greenheck.com/#sle.
   b. Loren Cook Company**<< ; _____; or None - N/A>>**: www.lorencook.com/#sle.
   c. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
2. General:
   a. Low silhouette for **<< intake; relief; and _____>>** applications with natural gravity or negative pressure system(s).
   b. Performance ratings and factory testing in accordance with **<<AMCA 511>>** and **<<AMCA 550>>**.
   c. Suitable for non-ducted applications.
   d. Equipment to bear permanently affixed manufacturer's nameplate listing model and serial number.
3. Hood and Base:
   a. Material: **<< Aluminum; Galvanized steel; or _____>>**.
   b. Hood Construction: Precision formed, arched panels with interlocking seams.
   c. Vertical End Panels: Fully locked into hood end panels.
   d. Curb Cap: Pre-punched mounting holes for installation.
4. Birdscreen:
   a. Fabricate in accordance with **<<ASTM B221>>** (**<<ASTM B221M>>**).
   b. Construction: **<< 1/2 inch; or __ inch>><< Galvanized; Aluminum; or _____>>** mesh.

DRAFT

c. Horizontally mounted across hood intake area.

5. Hood Support: Galvanized steel construction and fastened so hood can be removed completely from base or hinged open.
6. Options/Accessories:
   a. Roof Curbs:
      1) Flat Roofs:
         (a) Welded, straight side curb with flashing flange**<< and wood nailer; _____; or None - N/A>>**.
      2) Pitched Roofs: Welded, straight side curb with flashing flange**<< and wood nailer; _____; or None - N/A>>**.
      3) Mounted on roof with fan.
      4) Material: **<< Aluminum; Galvanized; or _____>>**.
      5) Insulation Thickness: **<< 1 inch; 1-1/2 inches; 2 inches; or __ inches>>**.
   b. Provide extended base minimum **<< 7 inch; or __ inches>>** extension to base height making overall base **<< 12 inches; or __ inches>>** in height to prevent snow or moisture intake.
   c. Curb Seal: Rubber seal between fan and roof curb.
   d. Dampers:
      1) Type: **<< Gravity; Motorized; or _____>>**.
      2) Factory designed to prevents outside air from entering back into building when fan is off.
      3) Galvanized frames with pre-punched mounting holes.
   e. Factory Finish: **<< Thermo-setting polyester urethane; Polyester meeting or exceeding the chemical resistance properties of air dry phenolic (heresite); Factory primed for field application of final finish; Baked enamel matching or complementing building colors; None; or _____>>**.

B. Spun Aluminum **<< Intake; Relief; and _____>>** Gravity Ventilator:
   1. Manufacturers:
      a. Greenheck Fan Corporation**<< ; _____; or None - N/A>>**: www.greenheck.com/#sle.
      b. Loren Cook Company**<< ; _____; or None - N/A>>**: www.lorencook.com/#sle.
      c. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.
   2. General:
      a. Provide **<< low silhouette; tiered; or ____>>** configuration for **<< intake; relief; and _____>>** applications with natural gravity or negative pressure system.
      b. Performance ratings and factory testing in accordance with **<<AMCA 511>>** and **<<AMCA 550>>**.
      c. Suitable for non-ducted applications.
      d. Equipment to bear permanently affixed manufacturer's nameplate listing model and serial number.
   3. Hood:
      a. Material: Aluminum.
      b. Internal structure constructed of galvanized steel.
   4. Birdscreen:
      a. Fabricate in accordance with **<<ASTM B221>>** (**<<ASTM B221M>>**).

DRAFT

b. Construction: **<< 1/2 inch; or __ inch>><< galvanized; aluminum; or _____>>** mesh.
c. Horizontally mounted across hood intake area.

5. Housing:
   a. Curb Cap:
      1) Type: **<< Hinged; No Hinged; or _____>>**.
      2) Construction: **<< Aluminum; or _____>>**.
      3) Integral deep spun inlet venturi with pre-punched mounting holes to ensure correct attachment to roof.
   b. Windband:
      1) One piece spun aluminum construction with uniform, original material thickness throughout housing.
      2) Include integral rolled bead for strength.
6. Options/Accessories:
   a. Roof Curbs:
      1) Flat Roofs:
         (a) Welded, straight side curb with flashing flange**<< and wood nailer; _____; or None - N/A>>**.
      2) Pitched Roofs: Welded, straight side curb with flashing flange**<< and wood nailer; _____; or None - N/A>>**.
      3) Mounted upon roof with fan.
      4) Material: **<< Aluminum; Galvanized steel; or _____>>**.
      5) Insulation Thickness: **<< 1 inch; 1-1/2 inches; 2 inches; or __ inches>>**.
   b. Curb Seal: Rubber seal between fan and roof curb.
   c. Dampers:
      1) Type: **<< Gravity; Motorized; or _____>>**.
      2) Factory designed to prevent outside air from entering back into building when fan is off.
   d. Factory Finish: **<< Thermo-setting polyester urethane; Polyester meeting or exceeding the chemical resistance properties of air dry phenolic; Factory primed for field application of final finish; Baked enamel matching or complementing building colors; None; or _____>>**.

DRAFT

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install air inlets and outlets level and flush with ceiling unless noted otherwise.

C. For linear slot diffusers, unless noted otherwise, adjust diffuser so half the slots throw horizontally in each direction. For linear slot diffusers at an exterior wall, adjust half the slots vertically downward at the exterior wall and half horizontally toward the interior.

D. Ceiling-mounted inlets and outlets shall be supported independently from the ceiling system to structure and shall not be supported from conduit, piping, or ductwork.

E. Comply with **<<SMACNA (ASMM)>>** for flashing/counter-flashing of roof penetrations and supports for roof curbs and roof mounted equipment.

F. Check location of outlets and inlets and make necessary adjustments in position to comply with architectural features, other ceiling-mounted devices, and lighting.

G. Install diffusers to ductwork with air tight connection.

H. Provide balancing dampers on duct take-off to diffusers and grilles and registers, despite whether dampers are specified as part of diffuser, or grille and register assembly.

I. Paint ductwork visible behind air outlets and inlets matte black, see Section **<< 099123>>**.

J. Provide Price return air canopy (RAC) option for all open to plenum return grilles.

K. Install all ceiling return air filter grilles to open into the wall for easier access.

3.02 CLOSEOUT ACTIVITIES

A. Demonstrate operational system to Owner's representative.

B. Instruct Owner's representative to maintain system and use occupant controls or interfaces, as required.

3.03 PROTECTION

A. Protect installed products until completion of project.

B. Replace, repair, or touch-up damaged products before Substantial Completion.

END OF SECTION 233700

DRAFT

SECTION 234000
HVAC AIR CLEANING DEVICES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Disposable, extended area panel filters.

B. Disposable panel filters.

C. Extended surface high efficiency media filters.

D. Extended surface non-supported media filters.

E. Washable permanent panel filters.

F. Filter frames and housings.

G. Filter gauges.

1.02 REFERENCE STANDARDS

A. AHRI 851 (SI) - Performance Rating of Commercial and Industrial Air Filter Equipment.

B. ASHRAE Std 52.2 - Method of Testing General Ventilation Air-Cleaning Devices for Removal Efficiency by Particle Size.

C. UL 900 - Standard for Air Filter Units.

1.03 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Product Data: Provide data on filter media, filter performance data, filter assembly and filter frames, dimensions, motor locations and electrical characteristics and connection requirements.

C. Shop Drawings: Indicate filter assembly and filter frames, dimensions, motor locations, and electrical characteristics and connection requirements.

D. Manufacturer's Installation Instructions: Indicate assembly and change-out procedures.

E. Operation and Maintenance Data: Include instructions for operation, changing, and periodic cleaning.

F. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.

1. See Section **<< 016000 - Product Requirements>>** for additional provisions.
2. Extra Filters: **<< One set; 9 sets; or Two sets>>** of each type and size.

1.04 QUALITY ASSURANCE

A. Products Requiring Electrical Connection: Listed and classified by **<< Underwriters Laboratories Inc.; testing firm acceptable to the Authority Having Jurisdiction; or _____>>** as suitable for the purpose specified and indicated.

PART 2 PRODUCTS

2.01 FILTER MANUFACTURERS

A. American Air Filter Company, Inc

B. Camfil, a company of the The Camfil Group

C. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

DRAFT

2.02 PERFORMANCE REQUIREMENTS

A. Comply with the rating requirements in **<< AHRI 851 (SI); or AHRI 850 (I-P)>>**.

2.03 DISPOSABLE, EXTENDED AREA PANEL FILTERS

2.04 DISPOSABLE PANEL FILTERS

A. Media: **<<UL 900>>** Class 2, fiber blanket, factory sprayed with flameproof, non-drip, non-volatile adhesive.
   1. Nominal Size: **<< 12 by 24 inches; 16 by 25 inches; 24 by 24 inches; or ____ by ____ inches>>**.
   2. Thickness: **<< 1 inch; 2 inch; or ___ inch>>**.
   3. Minimum Efficiency Reporting Value (MERV): **<< 8; 13; 15; or ____>>**, when tested in accordance with **<<ASHRAE Std 52.2>>**.

B. Performance Rating:
   1. Face Velocity: **<< 500 fpm>>**.
   2. Initial Resistance: **<< 0.15 in-wc; 0.10 in-wc; or ____ in-wc>>**.
   3. Recommended Final Resistance: **<< 0.50 in-wc>>**.

C. Casing: Cardboard frame.

2.05 EXTENDED SURFACE HIGH EFFICIENCY MEDIA FILTERS

2.06 EXTENDED SURFACE NON-SUPPORTED MEDIA FILTERS

2.07 WASHABLE PERMANENT PANEL FILTERS

2.08 FILTER FRAMES AND HOUSINGS

A. General: Fabricate filter frames and supporting structures of **<< 16 gauge, 0.0598 inch>>** galvanized steel or extruded aluminum T-section construction with necessary gasketing between frames and walls.

B. Standard Sizes: Provide for interchangeability of filter media of other manufacturers; for panel filters, size for **<< 24 by 24 inches; or ___ by ____ inches>>** filter media, minimum **<< 2 inches>>** thick, for extended surface and high efficiency particulate air filters, provide for upstream mounting of panel filters.

C. Side Servicing Housings: Flanged for insertion into ductwork, of reinforced **<< 16 gauge, 0.0598 inch>>** galvanized steel; access doors with continuous gasketing and positive locking devices on both sides; extruded aluminum tracks or channels for primary **<< secondary; tertiary; and _____>>** filters with positive sealing gaskets.

2.09 FILTER GAUGES

PART 3 EXECUTION

3.01 INSTALLATION

A. Install air cleaning devices in accordance with manufacturer's instructions.

B. Prevent passage of unfiltered air around filters with felt, rubber, or neoprene gaskets.

DRAFT

C. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing, with clean set.

END OF SECTION 234000

DRAFT

SECTION 235100
BREECHINGS, CHIMNEYS, AND STACKS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Manufactured breechings.

B. Type B double wall gas vents.

C. Double wall metal stacks.

D. Special gas venting.

1.02 RELATED REQUIREMENTS

A. Section **<< 078400 - Firestopping>>**.

1.03 REFERENCE STANDARDS

A. ANSI Z21.66 - Automatic Damper Devices for Use with Gas-Fired Appliances.

B. NFPA 31 - Standard for the Installation of Oil-Burning Equipment.

C. NFPA 54 - National Fuel Gas Code.

D. NFPA 82 - Standard on Incinerators and Waste and Linen Handling Systems and Equipment.

E. NFPA 211 - Standard for Chimneys, Fireplaces, Vents, and Solid Fuel-Burning Appliances.

F. SMACNA (DCS) - HVAC Duct Construction Standards Metal and Flexible.

G. UL 103 - Factory-Built Chimneys for Residential Type and Building Heating Appliances.

H. UL 441 - Standard for Gas Vents.

I. UL 1738 - Standard for Venting Systems for Gas-Burning Appliances, Categories II, III, and IV.

J. UL 1777 - Chimney Liners.

K. ULC CAN-S635 - Standard for Lining Systems for Existing Masonry or Factory-Built Chimneys and Vents.

DRAFT

1.04 DEFINITIONS

A. Breeching: Vent connector.

B. Vent: That portion of a venting system designed to convey flue gases directly outdoors from a vent connector or from an appliance when a vent connector is not used.

C. Vent Connector: That part of a venting system that conducts the flue gases from the flue collar of an appliance to a chimney or vent, and may include a draft control device.

1.05 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Product Data: Provide data indicating factory built chimneys, including dimensional details of components and flue caps, dimensions and weights, electrical characteristics and connection requirements.

C. Shop Drawings: Indicate general construction, dimensions, weights, support and layout of breechings. Submit layout drawings indicating plan view and elevations**<< where factory-built units are used; _____; or None - N/A>>**.

D. Manufacturer's Instructions: Include installation instructions, and indicate assembly, support details, and connection requirements.

1.06 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum **<< three; or _____>>** years of**<< documented; _____; or None - N/A>>** experience.

B. Obtain listed system components through one source from a single manufacturer.

1.07 COORDINATION

A. Coordinate installation of roof curbs, equipment supports, and roof penetrations including work specified in Division 07.

1.08 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of venting system that fail in material or workmanship within the warranty period. Failures include, but are not limited to, structural failure caused by expansion and contraction.

B. Warranty Period: 10 years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 BREECHINGS, CHIMNEYS, AND STACKS - GENERAL REQUIREMENTS

A. Regulatory Requirements:

1. Comply with **<< applicable codes; NFPA 54; or _____>>** for installation of **<< natural gas; propane; or _____>>** burning appliances and equipment.
2. Comply with **<< applicable code; NFPA 31; or _____>>** for installation of oil burning appliances and equipment.
3. Factory-built vents and chimneys used for venting natural draft appliances to comply with **<<NFPA 211>>** and UL listed and labeled.

2.02 MANUFACTURED BREECHINGS

A. Manufacturers:

1. AMPCO**<< ; _____; or None - N/A>>**: www.ampcostacks.com/#sle.
2. Selkirk Corporation**<< ; _____; or None - N/A>>**: www.selkirkcommercial.com/#sle.

B. Provide factory-built, modular connector and manifold system, tested to **<<UL 103>>** with positive pressure rating.

C. Assembly to be UL listed for use with building equipment in accordance with **<<NFPA 211>>**.

D. Fabricate with **<< 1-inch; or ___-inch>>** minimum **<< body soluble fiber insulation; ceramic fiber insulation; air space; or _____>>** between walls, and construct inner liner of **<< 20-gauge, 0.0375-inch>><< 304 stainless steel; 316 stainless steel; or _____>>** and outer jacket of **<< 24-gauge, 0.0239-inch>><< 304 stainless steel; 316 stainless steel; aluminized steel; or _____>>**.

1. Protect aluminized steel surfaces exposed to elements with a minimum of one base coat of primer and one finish coat of corrosion-resistant paint suitable for outer jacket skin temperatures of application.

DRAFT

E. Design, fabricate, and install gastight to prevent products of combustion from leaking into building.
   1. Securely connect inner joints, and seal with factory-supplied overlapping V-bands and appropriate sealant in accordance with manufacturer's instructions.
   2. Design system to compensate for all flue-gas-induced thermal expansion.

2.03 TYPE B DOUBLE WALL GAS VENTS

A. Manufacturers:
   1. Amerivent**<< ; _____; or None - N/A>>**: www.ameri-vent.com/#sle.
   2. Hart & Cooley, LLC**<< ; _____; or None - N/A>>**: www.hartandcooley.com/#sle.
   3. Selkirk Corporation**<< ; _____; or None - N/A>>**: www.selkirkcommercial.com/#sle.

B. Fabrication: Inner pipe of sheet aluminum, and outer pipe of galvanized sheet steel, tested in compliance with **<<UL 441>>**.

C. Electrically Actuated Vent Dampers: Same size as draft hood collar, constructed of stainless steel or galvanized steel, with corrosion-resistant components, in compliance with **<<ANSI Z21.66>>**.

2.04 SINGLE WALL METAL STACKS

A. Manufacturers:
   1. AMPCO**<< ; Model N; ; _____; or None - N/A>>**: www.ampcostacks.com/#sle.
   2. Selkirk Corporation**<< ; Model G; ; _____; or None - N/A>>**: www.selkirkcommercial.com/#sle.

B. Provide single-wall metal stacks, tested to **<<UL 1777>>** or **<<ULC CAN-S635>>** and UL listed with positive pressure rating for use with building heating equipment; comply with **<<NFPA 211>>**.

C. Fabricate with **<< 20-gauge, 0.0375-inch>><< 304 stainless steel; 316 stainless steel; or _____>>**.

D. Design, fabricate, and install gastight to prevent products of combustion from leaking into building.
   1. Securely connect inner joints, and seal with factory-supplied overlapping V-bands and appropriate sealant in accordance with manufacturer's instructions.
   2. Design system to compensate for flue-gas-induced thermal expansion.

E. Accessories, UL Labeled:
   1. Ventilated Roof Thimble: Consists of roof penetration, vent flashing with spacers, and storm collar.
   2. Rain/Stack Cap: Consists of conical rainshield with inverted cone for partial rain protection with low flow resistance.

2.05 DOUBLE WALL METAL STACKS

A. Manufacturers:
   1. AMPCO**<< ; _____; or None - N/A>>**: www.ampcostacks.com/#sle.
   2. Selkirk Corporation**<< ; _____; or None - N/A>>**: www.selkirkcommercial.com/#sle.

B. Provide double-wall metal stacks, tested to **<< UL 103; UL 127; UL 641; or _____>>** and UL listed with positive pressure rating for use with building heating equipment; comply with **<<NFPA 211>>**.

DRAFT

C. Fabricate with **<< 1-inch; ___-inch; or _____>>** minimum **<< body soluble fiber insulation; ceramic fiber insulation; air space; or _____>>** between walls, and construct inner liner of **<< 20 gauge, 0.0375-inch>><< 304; 316; or _____>>** stainless steel, and outer jacket of **<< 24 gauge, 0.0239-inch>><< aluminized steel; 304 stainless steel; 316 stainless steel; or _____>>**.

1. Protect aluminized steel surfaces exposed to elements with minimum of one base coat of primer and one finish coat of corrosion-resistant paint suitable for outer jacket skin temperatures of application.

D. Design, fabricate, and install gastight to prevent products of combustion from leaking into building.

1. Securely connect inner joints, and seal with factory-supplied overlapping V-bands and appropriate sealant in accordance with manufacturer's instructions.
2. Design system to compensate for flue-gas-induced thermal expansion.

E. Accessories, UL Labeled:

1. Ventilated Roof Thimble: Consists of roof penetration, vent flashing with spacers, and storm collar.
2. Rain/Stack Cap: Consists of conical rainshield with inverted cone for partial rain protection with low flow resistance.

2.06 SPECIAL GAS VENTING (CATEGORY II, III, AND IV)

A. Application:

1. Category II Appliances: Non-positive pressure and condensing type.
2. Category IV Appliances: Positive pressure and condensing type.

B. Single-Wall Special Gas Venting:

1. Manufacturers:
   a. Heatfab Saf-T Vent**<< ; Model EZ Seal; ; _____; or None - N/A>>**: www.heatfab.com/#sle.
   b. Z-Flex U.S. Inc**<< ; _____; or None - N/A>>**: www.z-flex.com/#sle.
2. Provide single-wall metal stacks, tested to **<<UL 1738>>** and UL listed with positive pressure rating for use with building heating equipment; comply with **<<NFPA 54>>**.
3. Fabricate with **<< 28-gauge, 0.0156-inch>><< 29-4C stainless steel; 316 stainless steel; or _____>>** minimum.
4. Design, fabricate, and install gastight to prevent products of combustion from leaking into building. Securely connect inner joints and seal in accordance with manufacturer's instructions.
5. Accessories, UL Labeled:
   a. Ventilated Roof Thimble: Consists of roof penetration, vent flashing with spacers, and storm collar.
   b. Rain/Stack Cap: Consists of conical rainshield with inverted cone for partial rain protection with low flow resistance.

C. Listed Special Gas Venting, Double-Wall:

1. Manufacturers:
   a. Schebler Chimney Systems.
   b. Selkirk, Inc. - HeatFab
   c. Metal-Fab, Inc.

DRAFT

d. Heatfab Saf-T Vent**<< ; Model CI Plus; ; _____; or None - N/A>>**: www.heatfab.com/#sle.

e. Z-Flex U.S. Inc**<< ; _____; or None - N/A>>**: www.z-flex.com/#sle.

2. Provide double-wall metal stacks, tested to **<<UL 1738>>** and UL listed with positive pressure rating for use with building heating equipment; comply with **<<NFPA 54>>**.

3. Fabricate with **<< 1-inch; or ___-inch>>** minimum **<< air space; fiber insulation; ceramic fiber insulation; or _____>>** between walls and construct inner liner of **<< 28-gauge, 0.015-inch>><< 29-4C stainless steel; 316 stainless steel; or _____>>** minimum and outer jacket of **<< 24 gauge, 0.025-inch>><< stainless steel; aluminized steel; or _____>>** minimum.

   a. Protect aluminized steel surfaces exposed to elements with minimum of one base coat of primer and one finish coat of corrosion-resistant paint suitable for outer jacket skin temperatures of application.

4. Design, fabricate, and install gastight to prevent products of combustion from leaking into building. Securely connect inner joints and seal in accordance with manufacturer's instructions.

5. Accessories, UL Labeled:

   a. Ventilated Roof Thimble: Consists of roof penetration, vent flashing with spacers, and storm collar.

   b. Rain/Stack Cap: Consists of conical rainshield with inverted cone for partial rain protection with low flow resistance.

   c. Fittings, draft-hood connectors, terminations, adjustable roof flashings and counterflashing, storm collars, support assemblies, guides, expansion joints or bellows, guying, bracing, firestop spacers, anchors, and fasteners; listed for the assembly.

2.07 GUYING AND BRACING MATERIALS

A. Provide galvanized steel cable and guying tensioners, galvanized steel pipe, and/or galvanized steel angle to provide guying and bracing where chimneys or vents have a termination height above the roof that requires lateral guying or bracing above the roof as determined by the manufacturer of the chimney or vent.

2.08 DRAIN MATERIAL

A. Piping: ASTM A 53, Schedule 40 galvanized steel pipe, minimum NPS 1.5 (DN 40) with galvanized malleable iron threaded fittings, ASME B16.3, Class 150.

B. Drain Valve: Ball valve, Class 150 SWP, bronze, two-piece body, full port, TFE seats and seals, stainless steel ball and stem, threaded ends.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install in accordance with **<< NFPA 54; NFPA 31; or _____ .>>**

C. Install breechings with minimum of joints. Align accurately at connections, with internal surfaces smooth.

D. Rigidly support breechings from building structure with suitable ties, braces, hangers and anchors to hold to shape and prevent buckling. Support vertical breechings, chimneys, and

DRAFT

stacks at **<< 12-foot>>** spacing, to adjacent structural surfaces, or at floor penetrations. Refer to **<<SMACNA (DCS)>>** for equivalent duct support configuration and size.

E. Pitch breechings with positive slope up from fuel-fired equipment to chimney or stack.

F. Install firestopping to preserve fire resistance rating of partitions and other elements, using materials and methods specified**<< in Section 078400; in Section _____; _____; or None - N/A>>**.

G. For Type B, double-wall gas vents, maintain UL-listed minimum clearances from combustibles. Assemble pipe and accessories as required for complete installation.

H. Assemble and install stack sections in accordance with **<<NFPA 82>>**, UL Listings, and industry practices. Join sections with acid-resistant joint cement. Connect base section to foundation using anchor lugs.

I. Level and plumb chimney and stacks.

3.02 LISTED SPECIAL GAS VENT INSTALLATION

A. Slope vent down in direction of appliance.

B. Seal between sections according to manufacturer's written installation instructions using factory-supplied sealants and V-bands. Perforated V-bands not permitted.

C. Make 90-degree changes in direction with

D. Clean breechings, chimneys, and stacks during installation, removing dust and debris.

E. At appliances, provide slip joints permitting removal of appliances without removal or dismantling of breechings, breeching insulation, chimneys, or stacks.

END OF SECTION 235100

DRAFT

SECTION 235213
ELECTRIC BOILERS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Boiler.

B. Boiler controls.

C. Indoor/outdoor reset controller.

D. Water connections.

E. Electrical hook-up.

1.02 REFERENCE STANDARDS

A. ASME BPVC-IV - Boiler and Pressure Vessel Code, Section IV - Rules for Construction of Heating Boilers.

B. ASME BPVC-VIII-1 - Boiler and Pressure Vessel Code, Section VIII, Division 1: Rules for Construction of Pressure Vessels.

C. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

1.03 SUBMITTALS

A. Product Data: Provide literature indicating general assembly components, controls, safety controls, wiring diagrams with electrical characteristics and connection requirements, and service connections.

B. Shop Drawings: Indicate assembly, weights, heater configuration, and electrical characteristics and connection requirements.

C. Manufacturer's Instructions: Indicate rigging, installation, and start-up procedures.

D. Manufacturer's Field Reports: Indicate conditions observed after start-up, including control settings.

E. Operation and Maintenance Data: Include manufacturer's descriptive literature, operating instructions, cleaning procedures, replacement parts list, and maintenance and repair data.

F. Warranty: Submit manufacturer warranty and ensure forms have been completed in **<<Owner>>**'s name and registered with manufacturer.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum **<< three; or _____>>** years of**<< documented; _____; or None - N/A>>** experience.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Protect units before, during, and after installation from damage to casing by leaving factory shipping packaging in place until immediately prior to final acceptance.

1.06 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Provide **<< five; or ____>>** year warranty to include coverage for boiler package.

DRAFT

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. ACME Engineering Products Ltd.

B. Bradford White Corporation.

C. Bryan Steam Corporation.

D. INDEECO.

E. PVI Industries, Inc.

F. Substitutions: **<< See Section 016000 - Product Requirements; or Not Permitted>>**.

2.02 REGULATORY REQUIREMENTS

A. Comply with **<< applicable codes; NFPA 70; or _____>>** for internal wiring of factory wired equipment.

B. Comply with **<<ASME BPVC-IV>>** and **<<ASME BPVC-VIII-1>>** for boiler construction.

C. Units: **<<UL (DIR)>>** listed and labeled**<< per UL 834; _____; or None - N/A>>**.

D. Products Requiring Electrical Connection: Listed and classified by **<< UL (DIR); testing firm acceptable to authorities having jurisdiction; or _____>>** as suitable for the purpose specified and indicated.

2.03 PERFORMANCE REQUIREMENTS

A. Performance rating in accordance with **<<AHRI 1500 (I-P)>>**.

2.04 MANUFACTURED UNITS

A. Description: Electric **<< hot water; steam; or ____>>** boiler completely packaged, factory assembled, ready for operation except for connections of piping and electrical connections.

2.05 FABRICATION

A. Assembly: **<< Welded steel; Cast iron; or _____>>** shell; heater support nipples or flanges; inspection handhole; necessary fittings to accept gauges, safety and operating controls; threaded or flanged inlet and outlet connections; inlet diffuser; and lifting lugs, complying with **<<ASME BPVC-IV>><< and ASME BPVC-VIII-1; _____; or None - N/A>>** requirements, and tested for maximum working pressure of **<< 160 psig>>**.

B. Heating Elements: Threaded or flanged, **<< incoloy; copper; stainless steel; or _____>>** sheathed, with maximum density of **<< 75 W/sq in>>**, suitable for operation at **<< 160 psig>>**. Attach each element to tube sheet by mechanical assembly permitting single elements to be replaced without replacing entire tube bundle.

C. Enclose in**<< galvanized; _____; or None - N/A>>** steel jacket with factory applied baked enamel, insulated with **<< 2 inch; 3 inch; or __ inch>>** thick fiberglass insulation.

2.06 TRIM

A. ASME rated pressure relief valve.

B. Assemble with pressure gauge, thermometer in brass separable well, automatic air vent, and drain valve.

C. Low water cut-off with manual reset**<< and inlet flow switch; _____; or None - N/A>>** to automatically prevent operation when water falls below safe level**<< or on low flow through boiler; _____; or None - N/A>>**.

DRAFT

D. Operating temperature controller**<< with outdoor reset; _____; or None - N/A>>** with remote bulb in brass separable well to control heating elements to maintain supply water temperature.

E. Electronic operating temperature controller with full cover for wall mounting, ambient temperature range **<< minus 30 to 150 degrees F>>**, adjustable reset ration of outside air temperature change to discharge control point change 1:2 to 100:1, integral setpoint adjustment **<< 80 to 230 degrees F>>**, electronic primary and outdoor sensors, for on-off switching of pilot duty relays.

F. High limit temperature controller with **<< automatic; manual; or _____>>** reset to prevent boiler water temperature from exceeding safe system temperature.

2.07 CONTROLS

A. Provide pre-wired, factory assembled electric controls enclosed in **<<NEMA EN 10250>>**, Type 1 cabinet, factory mounted integral with unit.

B. Controls:
   1. Unfused disconnect switch with door interlock.
   2. Splitter arrangement and fused magnetic contactors for each element.
   3. Fused control circuit transformer with control circuit on/off switch.
   4. Proportioning step controller.
   5. Remote bulb operating thermostat complete with brass separable well.
   6. Remote bulb high limit thermostat complete with brass separable well.
   7. Pilot lights for each step of control.
   8. Terminals for connection of: **<< _____>>**.

C. Peak load control system.
   1. Pump motor starter auxiliary contact.
   2. Flow switch.
   3. Remote mounted three wire temperature controller.

D. BAS, SCADA, or other Integrated Automation Link: **<< ASHRAE Std 135 BACnet IP; ASHRAE Std 135 BACnet MS/TP; ASHRAE Std 135 BACnet SC; Modbus (PS) Modbus IP; Modbus (PS) Modbus RTU; LonMark Interoperability Guide LonWorks; Bluetooth CS Bluetooth wireless; IEEE 802.11 Wi-Fi; IEEE 802.15.4 Zig-bee wireless; or _____>>**.
   1. External Point Mapping: Provide mapping table for each parameter included in the local visual interface with software-toggle flag to allow reduced mapping of available points.
   2. Remotely coordinated by boiler plant demand optimization controller; see Section **<< 251400>>**.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install boiler on concrete housekeeping base, sized minimum **<< 4 inches>>** larger than boiler base; see Section **<< 033000>>**.

C. Provide piping connections and accessories as indicated; see Section **<< 232114>>**.

D. Provide piping connections and accessories as indicated; see Section **<< 232214>>**.

DRAFT

E. Pipe relief valves to nearest floor drain.

F. Provide for connection to electrical service; see Section **<< 260583>>**.

G. Coordinate BAS, BMS, or Integrated Automation linking between unit controller(s) and remote **<< front-end interface; see Section 251500; software app or terminal; see Section 253500; or _____>>**.

3.02 SYSTEM STARTUP

A. Provide the services of manufacturer's field representative for starting and testing unit.

3.03 CLOSEOUT ACTIVITIES

A. See Section **<< 017800 - Closeout Submittals>>** for closeout submittals.

B. See Section **<< 017900 - Demonstration and Training>>** for additional requirements.

C. Train operating personnel in operation and maintenance of units.

D. Provide the services of manufacturer's field representative to conduct training.

3.04 MAINTENANCE

A. See Section **<< 017000 - Execution and Closeout Requirements>>** for additional requirements.

B. Provide a separate maintenance contract for specified maintenance service.

C. Provide service and maintenance of boilers for **<< one; or __>>** year from Date of Substantial Completion.

END OF SECTION 235213

DRAFT

SECTION 235216
CONDENSING BOILERS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Manufactured units.

B. Boiler construction.

C. Boiler trim.

D. Fuel burning system.

E. Factory installed controls.

1.02 RELATED REQUIREMENTS

A. Section **<< 033000 - Cast-in-Place Concrete>>**.

B. Section **<< 230913 - Instrumentation and Control Devices for HVAC>>**.

C. Section **<< 232123 - Hydronic Pumps>>**.

D. Section **<< 235100 - Breechings, Chimneys, and Stacks>>**.

E. Section **<< 251500 - Integrated Automation Software>>**.

1.03 REFERENCE STANDARDS

A. AHRI Directory of Certified Product Performance - Air-Conditioning, Heating, and Refrigeration Institute (AHRI).

B. ANSI Z21.13 - American National Standard for Gas-Fired Low-Pressure Steam and Hot Water Boilers.

C. ASHRAE Std 90.1 I-P - Energy Standard for Buildings Except Low-Rise Residential Buildings.

D. ASHRAE Std 135 - BACnet - A Data Communication Protocol for Building Automation and Control Networks.

E. ASME BPVC-IV - Boiler and Pressure Vessel Code, Section IV - Rules for Construction of Heating Boilers.

F. NBBI Manufacturer and Repair Directory - The National Board of Boiler and Pressure Vessel Inspectors (NBBI).

G. NFPA 54 - National Fuel Gas Code.

H. SCAQMD 1146.1 - Emissions of Oxides of Nitrogen from Small Industrial, Institutional, and Commercial Boilers, Steam Generators, and Process Heaters.

1.04 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittals procedures.

B. Product Data: Provide data indicating general assembly, components, controls, safety controls, and wiring diagrams with electrical characteristics and connection requirements, and service connections.

C. Manufacturer's Installation Instructions: Indicate assembly, support details, connection requirements, and include start up instructions.

D. Manufacturer's Factory Inspection Report: Submit boiler inspection prior to shipment.

DRAFT

E. Manufacturer's Field Reports: Burner manifold gas pressure, percent carbon monoxide (CO), percent oxygen (O), percent excess air, flue gas temperature at outlet, ambient temperature, net stack temperature, percent stack loss, percent combustion efficiency, and heat output.

F. Operation and Maintenance Data: Include manufacturer's descriptive literature, operating instructions, cleaning procedures, replacement parts list, and maintenance and repair data.

G. Warranty: Submit manufacturer warranty and ensure forms have been completed in **<<Owner>>**'s name and registered with manufacturer.

H. Certifications:
   1. Mayland State Boiler Inspection Certificate.
   2. CSD-1, CG-500, and DLLR Notice of Installation forms.
      a. Obtain and complete all forms. Samples of select forms are included at the end of this section.
      b. Leave a copy of each form with each boiler provided under this Section.

I. Service agreement specfied in Maintenance Service below, executed to the Owner and notarized.

J. Preventative Maintenance During Warranty: Listing of seasonal maintenance requirements to be performed during the warranty period.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum **<< three; or _____>>** years of**<< documented; _____; or None - N/A>>** experience.

B. Test condensing boilers to comply with UL 795 "Commercial-Industrial Gas Heating Equipment."

C. ASHRAE 90.1 Compliance: Condensing boilers shall have minimum efficiency required in Table 10-8.

1.06 REGULATORY REQUIREMENTS

A. Before construction begins, obtain and complete forms, and apply for the permit and registration of the burners and boilers with the Authority Having Jurisdiction.

B. Components and installation, including sequences of operation, shall comply with the applicable requirements of ASME CSD-1, Controls and Safety Devices for Automatically Fired Boilers.

C. Costs of complying with these and other applicable regulatory requirements shall be included in the Contract sum.

1.07 MAINTENANCE SERVICE

A. In addition to the startup service specified in Section 230100, the qualified service and maintenance organization shall provide a 5-year service agreement covering all parts and labor for regular service, emergencies, and repairs.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Protect boilers from damage by leaving factory inspection openings and shipping packaging in place until final installation.

1.09 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

DRAFT

B. Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of condensing boilers that fail in materials or workmanship within specified warranty period.

C. Warranty Period:
   1. Boiler: Two years from date of Substantial Completion.
   2. Pressure Vessel / Heat Exchanger: Ten years from date of Substantial Completion for corrosion, thermal stress failure, material defects, or workmanship.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Natural Gas, Propane, or Combination Natural Gas/Propane for Indoor Applications:
   1. Advanced Thermal Hydronics - Hydrotherm.
   2. Fulton Heating Solutions.
   3. Harsco / Patterson-Kelley.
   4. Riello.
   5. Viessmann.

2.02 MANUFACTURED UNITS

A. Factory assembled, factory fire-tested, self-contained, readily transported unit ready for automatic operation except for connection of water, fuel, electrical, and vent services.

B. Unit: Metal membrane wall, water or fire tube, condensing boiler on integral structural steel frame base with integral fuel burning system, firing controls, boiler trim, insulation, and removable jacket, suitable for **<< indoor; outdoor; or _____>>** application.

2.03 BOILER CONSTRUCTION

A. Comply with the minimum requirements of **<< ASME BPVC-IV; ANSI Z21.13; and _____>>** for construction of boilers.

B. Assembly to bear the ASME "H" stamp and comply with the efficiency requirements of the latest edition of **<<ASHRAE Std 90.1 I-P>>**.

C. Required Directory Listings:
   1. **<<AHRI Directory of Certified Product Performance>>** - Air-Conditioning, Heating, and Refrigeration Institute (AHRI)**<<>>**.
   2. **<<NBBI Manufacturer and Repair Directory>>** - The National Board of Boiler and Pressure Vessel Inspectors (NBBI)**<<>>**.

D. Heat Exchanger: Construct with materials that are impervious to corrosion where subject to contact with corrosive condensables.

E. Provide adequate tappings, observation ports, removable panels, and access doors for entry, cleaning, and inspection.

F. Insulate casing with insulation material, protected and covered by heavy-gauge metal jacket.

G. Factory apply boiler base and other components, that are subject to corrosion, with durable, **<< acrylic; powder coated; painted; weather-proofed; or _____>>** finish.

2.04 BOILER TRIM

A. ASME rated pressure relief valve.

B. Flow switch.

DRAFT

C. Electronic Low Water Cut-off: Complete with test light and manual reset button to automatically prevent firing operation whenever boiler water falls below safe level.

D. Temperature and pressure gauge.

E. Pressure Switches:
   1. High gas pressure.
   2. Low gas pressure.
   3. Air pressure.

F. Manual reset high limit.

G. Boiler Pump (where required by boiler design):
   1. Primary pump, factory supplied and sized for field installation to ensure minimum, continuous circulation through boiler.
   2. Where pump is not provided by boiler manufacturer, provide pump in accordance with boiler manufacturer's recommendations.
   3. Pump time delay.

2.05 FUEL BURNING SYSTEM

A. Provide **<< forced draft automatic burner; pulse combustion; or _____>>**, integral to boiler, designed to burn **<< natural gas; propane; No. 2 fuel oil; and _____>>**, and maintain fuel-air ratios automatically.
   1. Blower Design: Statically and dynamically balanced to supply combustion air; direct connected to motor.
   2. Forced Draft Design: Mixes combustion air and gas to achieve **<< 90; or ___>>** percent combustion efficiency.
   3. Pulse Combustion Design: Self-aspirating, not requiring blower for combustion.
   4. Combustion Air Filter: Protects fuel burning system from debris.

B. Gas Train: Plug valve, safety gas valve, gas-air ratio control valve, and pressure regulator controls air and gas mixture.

C. Emission of Oxides of Nitrogen Requirements: Comply with **<< SCAQMD 1146.1; SCAQMD 1146.2; and _____>>** for natural gas fired system, as applicable.

D. Intakes: Combustion air intake capable of accepting free mechanical room air or direct outside air through a sealed intake pipe.

2.06 FACTORY INSTALLED CONTROLS

A. Option for internal or external (0-10) VDC control.

B. Temperature Controls:
   1. Automatic reset type to control fuel burning system **<< on-off; firing rate; and _____>>** to maintain temperature.
   2. Manual reset type to control fuel burning system to prevent boiler water temperature from exceeding safe system water temperature.
   3. Low-fire start time delay relay.

C. Electronic PI setpoint/modulation control system.

D. Microprocessor-based, fuel/air mixing controls.

E. BAS, SCADA, or other Integrated Automation Link: **<< ASHRAE Std 135 BACnet IP; ASHRAE Std 135 BACnet MS/TP; ASHRAE Std 135 BACnet SC; Modbus (PS) Modbus IP; Modbus (PS) Modbus RTU; LonMark Interoperability Guide LonWorks; Bluetooth**

DRAFT

CS Bluetooth wireless; IEEE 802.11 Wi-Fi; IEEE 802.15.4 Zig-bee wireless; or _____>>.

1. External Point Mapping: Provide mapping table for each parameter included in the local visual interface with software-toggle flag to allow reduced mapping of available points.
2. BAS shall monitor and control hot water supply temperature setpoint and display boiler status and alarms.

2.07 COMBUSTION AIR INTAKE

A. Schedule 40 PVC. Piping, fittings, and solvent cement shall conform to ANSI and ASTM standards

2.08 ACCESSORIES

A. Device plate for emergency boiler switch. As specified in Section 230500, engraved plastic, red letters on white background, reading "EMERGENCY BOILER DISCONNECT."

B. PH Neutralization Kit: Polyethylene container, six 1-pound bags of magnesium oxide neutralizing medium, 1.5 inch NPT plastic pipe fittings.

C. Provide boiler disconnect switch at each boiler.

2.09 SOURCE QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>** for additional requirements.

B. Provide factory tests to check construction, controls, and operation of unit.

C. Manufacturer to conduct boiler inspection prior to shipment; submit copy of inspection report to **<<Architect>>**.

D. Non-Complying Work: See Section **<< 014000>>**.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install boiler and provide connection of natural gas service in accordance with requirements of **<<NFPA 54>>** and applicable codes.

C. Install boiler on concrete housekeeping base, sized minimum of **<< 4 inches>>** larger than boiler base in accordance with Section **<< 033000>>**.

D. Coordinate factory installed controls with Section **<< 230913>>**.

E. Pipe relief valves to nearest floor drain.

F. Pipe cooled condensate produced by the combustion process from the boiler condensate connection and/or flue stack with suitable piping material to neutralizer prior to discharging into nearest floor drain.

G. Install primary boiler pump in accordance with Section **<< 232123>>**.

H. Connect vent combustion generated fumes to breeching, chimney or exhaust stack; see Section **<< 235100>>**.

I. Coordinate BAS, BMS, or Integrated Automation linking between unit controller(s) and remote **<< front-end interface; see Section 251500; software app or terminal; see Section 253500; or _____>>**.

DRAFT

3.02 CLOSEOUT ACTIVITIES

A. See Section **<< 017800 - Closeout Submittals>>** for closeout submittals.

B. See Section **<< 017900 - Demonstration and Training>>** for additional requirements.

C. Training: Train **<<Owner>>**'s personnel on operation and maintenance of system.

1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
2. Provide minimum of **<< two hours; one day; or _____>>** of training.
3. Instructor: Manufacturer's training personnel.

3.03 EXAMPLE FORMS

A. Samples of CG-500 and DLLR forms follow Section.

END OF SECTION 235216

DRAFT

SECTION 235700
HEAT EXCHANGERS FOR HVAC

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Shell and tube type heat exchangers.

B. Plate type heat exchangers.

1.02 RELATED REQUIREMENTS

A. Section **<< 232114 - Hydronic Specialties>>**.

1.03 REFERENCE STANDARDS

A. ASME BPVC-VIII-1 - Boiler and Pressure Vessel Code, Section VIII, Division 1: Rules for Construction of Pressure Vessels.

1.04 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Product Data: Provide data with dimensions, locations, and size of tappings and performance data.

C. Shop Drawings: Indicate dimensions, locations, and size of tappings and performance data.

1. Design Data: Indicate in sufficient detail to verify that heat exchangers meet or exceed specified requirements.

D. Certificates: Certify that **<< Products; or _____>>** meet or exceed **<< specified requirements; or _____>>**.

E. Manufacturer's Instructions: Indicate installation and support requirements.

F. Operation and Maintenance Data: Include start up and shut down instructions, assembly drawings, and spare parts lists.

G. Warranty: Submit manufacturer's warranty and ensure forms have been completed in **<<Owner>>**'s name and registered with manufacturer.

H. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.

1. See Section **<< 016000 - Product Requirements>>** for additional provisions.
2. Extra Gaskets: **<< One set; Two sets; or _____>>** of each type and size.
3. Plate Type Heat Exchanger Tools: **<< One set; or _____ sets>>** of wrenches for disassembly.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Protect internals from entry of foreign material by temporary caps on flanged openings.

1.06 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Provide **<< five; or _____>>** year manufacturer warranty for **<< _____>>**.

DRAFT

PART 2 PRODUCTS

2.01 PLATE AND FRAME TYPE HEAT EXCHANGER

A. Manufacturers:
   1. Alfa Laval**<< ; _____; or None - N/A>>**: www.alfalaval.com/#sle.
   2. Armstrong Pumps Inc**<< ; _____; or None - N/A>>**: www.armstrongpumps.com/#sle.
   3. Bradford White Corporation**<< ; _____; or None - N/A>>**: www.bradfordwhite.com/#sle.
   4. ITT Standard**<< ; _____; or None - N/A>>**: www.ittstandard.com/#sle.

B. Comply with **<<ASME BPVC-VIII-1>>** for manufacture of **<< plate and frame type heat exchangers; and _____>>**.

C. Plates: **<< Stainless steel Type 304; Stainless steel Type 316; Titanium; Incoloy; Hastelloy; or _____>>**.

D. Gaskets: **<< Nitrile rubber; Ethylene propylene diene monomer (EPDM); Viton; Neoprene; Hypalon; Resin-cured butyl rubber; Silicone; or _____>>**.

E. Nozzles: **<< 125 psi; 150 psi; 300 psi; or ___ psi>>** rated lined flange type.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install to permit removal of **<< tube bundle; plates; or ____>>** with minimum disturbance to installed equipment and piping.

C. Support heat exchangers **<< from structure; on concrete housekeeping pad; or _____>>**.

D. Pitch shell to completely drain condensate.

E. Pipe relief valves to nearest floor drain.

F. Pipe drain valves to nearest floor drain.

3.02 WATER TO WATER HEAT EXCHANGER TRIM

A. Water Inlets and Outlets: Thermometer wells, pressure gauge tappings.

B. Heated Water Outlet: Thermometer well for temperature regulator sensor, ASME rated pressure and temperature relief valve, valved drain; see Section **<< 232114>>**.

END OF SECTION 235700

DRAFT

SECTION 236416
CENTRIFUGAL WATER CHILLERS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Centrifugal water chiller.

1.02 RELATED REQUIREMENTS

A. Section **<< 230513 - Common Motor Requirements for HVAC Equipment>>**.

B. Section **<< 230593 - Testing, Adjusting, and Balancing for HVAC>>**.

C. Section **<< 251500 - Integrated Automation Software>>**.

D. Section **<< 260583 - Wiring Connections>>**.

E. Section **<< 284400 - Refrigerant Detection and Alarm>>**.

1.03 REFERENCE STANDARDS

A. AHRI 550/590 (I-P) - Standard for Performance Rating of Water-Chilling and Heat Pump Water-Heating Packages Using the Vapor Compression Cycle.

B. ASHRAE Std 15 - Safety Standard for Refrigeration Systems.

C. ASHRAE Std 90.1 I-P - Energy Standard for Buildings Except Low-Rise Residential Buildings.

D. ASHRAE Std 135 - BACnet - A Data Communication Protocol for Building Automation and Control Networks.

E. ASME BPVC-VIII-1 - Boiler and Pressure Vessel Code, Section VIII, Division 1: Rules for Construction of Pressure Vessels.

F. UL 508 - Industrial Control Equipment.

G. UL 1995 - Heating and Cooling Equipment.

1.04 SUBMITTALS

A. Product Data: Provide rated capacities, weights, specialties and accessories, electrical requirements and wiring diagrams.

B. Shop Drawings: Indicate components, assembly, dimensions, weights and loadings, required clearances, and location and size of field connections. Indicate equipment, piping and connections, valves, strainers, and thermostatic valves required for complete system.

C. Manufacturer's Certificate: Certify that components of package not furnished by manufacturer have been selected in accordance with manufacturer's requirements.

D. Test Reports: Indicate energy input versus cooling load output from 0 to 100 percent of full load**<< at specified and minimum condenser water temperature;**
_____; or None - N/A>>.

E. Manufacturer's Instructions: Submit manufacturer's complete installation instructions.

F. Sustainable Design Documentation: Submit manufacturer's product data on refrigerant used, showing compliance with specified requirements.

G. Operation and Maintenance Data: Include start-up instructions, maintenance data, parts lists, controls, and accessories. Include trouble- shooting guide.

DRAFT

H. Warranty: Submit manufacturer's warranty and ensure forms have been filled out in **<<Owner>>**'s name and registered with manufacturer.

I. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.

1. See Section **<< 016000 - Product Requirements>>** for additional provisions.
2. Extra Refrigerant: **<< One container; Two containers; or ____>>**.
3. Extra Lubricating Oil: **<< One container; Two containers; or ____>>**.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with minimum **<< three; or _____>>** years**<< documented; _____; or None - N/A>>** experience.

B. Provide certification of inspection in compliance with the requirements of **<< Authority Having Jurisdiction; or _____>>**.

C. Products Requiring Electrical Connection: Listed and classified by **<< Underwriters Laboratories Inc.; testing firm acceptable to the Authority Having Jurisdiction; or _____>>** as suitable for the purpose specified and indicated.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.

1.07 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Provide a **<< two; five; or ____>>** year warranty to include coverage for **<< compressor; compressor motor; evaporator; condenser; complete chiller package as manufactured and delivered to site; and _____>>** including **<< materials only; labor only; materials and labor; or _____>>**.

C. Variable Frequency Drives of Variable Speed Drives: Provide manufacturer warranty for period of twelve months from date of installation or eighteen months from date of shipment whichever comes first. Warranty to include parts, labor, travel costs, and living expenses incurred by manufacturer to provide factory-authorized on-site services.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Carrier Corporation**<< ; _____; or None - N/A>>**: www.carrier.com/#sle.

B. Trane Technologies, PLC**<< ; _____; or None - N/A>>**: www.trane.com/#sle.

C. York, a brand of Johnson Controls International, PLC**<< ; _____; or None - N/A>>**: www.york.com/#sle.

D. Substitutions: **<< See Section 016000 - Product Requirements; or Not Permitted>>**.

1. The chilled water system has been designed based on specific capacities and characteristics of equipment specified in this section and other sections.
2. When substitution of a different manufacturer or model number is desired, submit sufficient information to demonstrate to **<<Architect>>** that the substitute will have the same or better performance as that specified AND that the related equipment in the system will perform acceptably with the substitute.

DRAFT

3. If the related equipment must be modified to perform acceptably with the substitute, the entity proposing the substitution is responsible for all additional costs due to re-design and provision of different related equipment.

2.02 CENTRIFUGAL WATER CHILLER CONSTRUCTION REQUIREMENTS

A. Factory assembled and tested, packaged, water cooled chillers consisting of centrifugal compressors, compressor motor, condenser, evaporator, refrigeration accessories, instrument and control panel including gauges and indicating lights, auxiliary components and accessories, and motor starters.
   1. Rating: Comply with **<<AHRI 550/590 (I-P)>>**.
   2. Safety: Comply with **<<UL 1995>>**.
   3. Comply with **<<ASME BPVC-VIII-1>>** for construction and testing of centrifugal chillers.
   4. Comply with **<<ASHRAE Std 15>>** for safe construction and operation of centrifugal chillers.

B. Energy Efficiency: **<< ASHRAE Std 90.1; Federal Energy Management Program; or _____>>**.
   1. kW/Ton of Refrigeration: Equal or lower than **<< _____>>** at full load and **<< _____>>** at integrated part load value.
   2. Energy Efficiency Ratio: Equal or higher than **<< _____>>** at full load and **<< _____>>** at integrated part load value.

C. Evaporator Side:
   1. Provide evaporator of shell and tube type, seamless or welded steel construction with cast iron or fabricated steel heads, seamless copper tubes or red brass tubes with integral fins, rolled or silver brazed into tube sheets. Position intermediate tube support sheets along length of shell to avoid contact and relative motion between adjacent tubes.
   2. Test and, where applicable, stamp refrigerant side for **<< 45 psi; 185 psi; 180 psi; _____ psi; or _____>>** working pressure and water side for **<< 150 psi; 300 psi; _____ psi; 1.5 times; or _____>>** working pressure, in accordance with **<<ASME BPVC-VIII-1>>**.
   3. Provide marine type water boxes, machine welded to heat exchanger with tapped drain and vent connections, and flanged or mechanical joint connections arranged to permit inspection of tubes from either end without disturbing refrigerant and removable without disturbing water piping.
   4. Insulate evaporator and cold surfaces with **<< 0.75 inch; _____ inch; or _____>>** minimum thick flexible**<< expanded polyvinyl chloride; _____; or None - N/A>>** insulation with maximum K factor of **<< 0.28.; 0.26.; or ___ .>>**
   5. Provide thermometer wells or thermistors for temperature controller and low temperature cutout.
   6. Design and construct evaporator to prevent liquid refrigerant from entering the compressor.
   7. Provide carbon rupture disc or relief valve on shell in accordance with **<<ASHRAE Std 15>>**.
   8. Construction and materials to comply with **<<ASME BPVC-VIII-1>>** or **<<ASHRAE Std 15>>** as applicable to chiller manufacturer and chiller model.

D. Condenser Side:
   1. Provide condensers of shell and tube type, seamless or welded steel construction with cast iron or fabricated steel heads, seamless copper tubes or red brass tubes with integral fins, rolled or silver brazed into tube sheets. Position intermediate tube support sheets

DRAFT

along shell length to avoid contact and relative motion between adjacent tubes.**<< Provide additional condensers on heat recovery units.; _____ .; or None - N/A>>**

2. Test and, where applicable, stamp refrigerant side for **<< 45 psi; 185 psi; 180 psi; _____ psi; or _____>>** working pressure and water side for **<< 150 psi; 300 psi; _____ psi; 1.5 times; or _____>>** working pressure, in accordance with **<<ASME BPVC-VIII-1>>**.
3. Provide marine type water boxes, machine welded to heat exchanger with tapped drain and vent connections, and flanged or mechanical joint connections arranged to permit inspection of tubes from either end without disturbing refrigerant and removable without disturbing water piping.
4. Provide carbon rupture disc or relief valve on shell in accordance with **<<ASHRAE Std 15>>**.
5. Provide baffles to ensure even distribution of incoming gas and to concentrate noncondensible gases.
6. Construction and materials to comply with **<<ASME BPVC-VIII-1>>**.

E. Purge System:
1. Provide purge system on positive pressure units, incorporating a low temperature refrigeration system to automatically remove noncondensibles, water and air.
2. Limit system discharge to maximum of **<< 0.60 pound>>** of refrigerant per **<< pound>>** of air discharged.

F. Centrifugal Compressor:
1. Compressor Casing: Cast iron, horizontally or vertically split with machined passages and leak tested to **<< 45 psi; 185 psi; or _____ psi>>**. Provide refrigerant sight glass.
2. Impellers: Single or multi-stage, in-line design, fully shrouded, statically and dynamically balanced, tested to 20 percent over operating speed, mounted on heat treated forged or rolled steel shaft, nonferrous, labyrinth seals between stages.
3. Guide Vanes: Modulating radial blade dampers, on each stage, with externally mounted **<< electric; or _____>>** operator, suitable for capacity reduction to 10 percent of specified load without hot gas bypass when supplied with design entering water quantity and temperature.
4. Bearings: Steel or aluminum journal bearings, pressure lubricated.
5. Gear Box: Double helical design, symmetrical and center supported by spherically seated, self-aligning bearing, arranged for inspection without disassembly.
   a. Provide speed increasing transmissions for variable speed chillers to not exceed 10,000 rpm compressor speed.
6. Motor: Hermetically sealed, single speed, low slip induction type; see Section **<< 230513>>**.
7. Lubrication: Oil pump, with oil cooler, pressure regulator, oil filters, thermostatically controlled oil heater, and motor controls. Interlock to start before chiller motor and run after motor is shut down. Provide sight glass or electronic sensors for monitoring oil level.
8. Refrigerant: **<< Factory precharge unit with refrigerant specified above; Site-charge unit with refrigerant specified above; or _____>>**.

G. Electrical Starters and Drives, **<< Low Voltage (208 to 600 VAC); Medium Voltage (2,300 to 6,600 VAC); Medium Voltage (10,000 to 13,800 VAC); or _____>>**:
1. **<< Air-Cooled; Water-Cooled; or _____>>**, **<< Unit-Mounted; Remote-Mounted Free-Standing; Remote-Mounted Wall-Cabinet; or _____>>** Variable Frequency Drive (VFD):

DRAFT

a. Specifically design VFD to interface with the centrifugal water chiller controls and allow for the operating ranges and specific characteristics of the chiller. VFD-control logic is to optimize chiller efficiency by coordinating compressor motor speed and compressor inlet guide vane position to maintain the chilled water setpoint while avoiding surge. If surge is detected, VFD is to move away from and avoid surge at similar conditions in the future.
b. Efficiency: 97 percent or better at full speed and full load.
c. Fundamental Displacement Power Factor: Minimum of 0.97.
d. Provide voltage and current regulated, solid state, microprocessor-based pulse-width modulated (PWM). Output power devices to be IGBT transistors.
e. Provide liquid- or air-cooled heatsink to cool power semiconductor and capacitor.
f. House VFD in NEMA Type 1 metal enclosure having a minimum short circuit withstand rating of 65,000 amps per **<<UL 508>>**. Include three phase input lugs plus a grounding lug for electrical connections, output motor connection via factory installed bus bars and components properly segregated and completely enclosed in a single metal enclosure.
    1) Enclosure to include padlockable, door-mounted circuit breaker with minimum AIC rating of 65,000 amps.
    2) Entire chiller package to be listed by **<< Underwriter's Laboratories Inc; testing firm acceptable to the Authority Having Jurisdiction; or _____>>**.
g. Test VFD according to **<<UL 508>>** and listed by a National Recognized Testing Laboratory (NRTL) as designated by OSHA.
h. Comply with recommendations for harmonic mitigation.
    1) Include a DC link reactor on positive and negative rails to minimize power line harmonics and protect the VFD from power line transients.
i. Line Frequency: 38 to 60 Hertz with plus or minus 10 percent tolerance.
j. VFD is to include the following features:
    1) Control circuit voltages physically and electrically isolated from power circuit voltage.
    2) 150 percent instantaneous torque available for improved surge control.
    3) Soft start, adjustable linear acceleration, coast-to-stop.
    4) Adjustable current limiting and UL-approved electronic motor overload protection.
    5) Insensitivity to incoming power phase sequence.
    6) VFD and motor protection from the following faults:
        (a) Output line-to-line short circuit.
        (b) Line-to-ground short circuit.
        (c) Phase loss at AFD input.
        (d) Phase reversal/imbalance.
        (e) Over-voltage.
        (f) Under-voltage.
        (g) Over-temperature.
k. VFD Status Indicators:
    1) Output speed in hertz and rpm.
    2) Input line voltage.
    3) Input line kW.

DRAFT

4) Output/load amps.
5) Average current in percent RLA.
6) Load power factor.
7) Fault.
8) VFD transistor temperature.

l. Service Conditions:
1) Operating Ambient Temperature: **<< 14 to 104 degrees F>>**.
2) Room Ambient Relative Humidity: Up to 95 percent.
3) Elevation: Up to **<< 3,300 feet>>**. For every **<< 3,300 feet>>** above **<< 3,300 feet>>**, decrease the rated output current by 4 percent up to **<< 9,900 feet>>**.

H. Controls Package:
1. Unit Controls: **<< Factory-installed DDC; see Section 251400; Factory-supplied DDC; or _____>>**:
a. Control-panel mounted with required input-output expansions, power supply, fused disconnect, hand switches, knobs, and accessories required to control chiller unit to manufacturer required sequences to meet intended use with listed performance.
b. Factory configured to interface prewired sensors, switches, and safeties with allowance to add up to four chiller valves and flow sensors.
c. Graphic-based touchscreen to include unit operation controls and user filter based interface for faults, alarms, performance, unit diagnostics, and data recording up to 12 months.
d. BAS, SCADA, or other Integrated Automation Link: **<< ASHRAE Std 135 BACnet IP; ASHRAE Std 135 BACnet MS/TP; ASHRAE Std 135 BACnet SC; Modbus (PS) Modbus IP; Modbus (PS) Modbus RTU; LonMark Interoperability Guide LonWorks; Bluetooth CS Bluetooth wireless; IEEE 802.11 Wi-Fi; IEEE 802.15.4 Zig-bee wireless; or _____>>**.
e. External Point Mapping: Provide mapping table for each parameter included in the local visual interface with software-toggle flag to allow reduced mapping of available points.
f. Isolation Valves: Field-installed, **<< 2-position; modulating; position-adjusted; or _____ >>**, butterfly type**<< with position tracking; with open-closed status; _____; or None - N/A>>**; **<< manufacturer provided; see Section 253519; or _____>>**.
2. Disconnect Switch: Factory mount disconnect switch **<< in starter control panel.; on equipment under provisions of Section 262717.; or _____ .>>**
3. On or near chiller, provide microprocessor based control panel containing solid state, fully automatic operating and safety controls.
4. Provide the following manufacturer's standard safety controls, including the following minimum functions, so that operating any one will shut down machine and require manual reset:
a. Low evaporator refrigerant temperature.
b. High condenser refrigerant pressure.
c. Low oil pressure.
d. Low refrigerant evaporator pressure.
5. Provide the manufacturer's standard safety controls arranged so that operating any one will shut down machine and automatically reset.
6. Provide the following devices on control panel:

DRAFT

a. Manual Switches:
   1) Machine off-auto switch.
   2) Oil pump switch, manual or automatic.
   3) Purge pump switch, manual-off-auto.
   4) Machine selector switch to allow load, unload, hold or automatic operation.
b. Manual Setpoint Adjustments:
   1) Leaving chilled water temperature.
   2) Current demand limit.
c. Status Lights:
   1) Chilled water flow proven.
   2) Cooling required.
   3) Unit running.
   4) Unit loading.
   5) Unit unloading.
   6) Manual reset required.
   7) Remote chilled water setpoint active.
   8) Remote current water setpoint active.
d. Setpoint and Temperature Display:
   1) Chilled water setpoint.
   2) Current limit setpoint.
   3) Entering evaporator water temperature.
   4) Leaving evaporator water temperature.
   5) Entering condenser water temperature.
   6) Leaving condenser water temperature.

7. Provide the following operating controls:
   a. Solid state, chilled water temperature controller that controls electronic guide vane operator**<< and hot gas bypass; _____; or None - N/A>>**. Locate temperature sensor in **<< entering; leaving; or _____>>** chilled water.
   b. Adjustable thirty minute off timer prevents compressor from short cycling.
   c. Demand limit device to manually set maximum current infinitely between 40 percent and 100 percent of full load amperes.
   d. Automatic start that determines demand for chilled water from proof of chilled water flow and temperature differential between chilled water setpoint and supply temperature.

DRAFT

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Provide for connection to electrical service.

C. Provide for connection of electrical wiring between starter and chiller control panel, oil pump, and purge unit.

D. Align chiller on concrete foundations, sole plates, and sub-bases. Level, grout, and bolt in place.

E. Install units on vibration isolation.

F. Provide evaporator connections to chilled water piping.
   1. On inlet, provide:
      a. Thermometer well for temperature controller.
      b. Thermometer well and thermometer.
      c. Nipple and flow switch.
      d. Flexible pipe connector.
      e. Pressure gauge.
      f. Shut-off valve.
   2. On outlet, provide:
      a. Thermometer well and thermometer.
      b. Flexible pipe connector.
      c. Pressure gauge.
      d. **<< Shut-off; Balancing; or _____>>** valve.

G. Furnish and install necessary auxiliary water piping for oil cooling units and purge condensers.

H. Insulate evaporator and cold surfaces.

I. Provide condenser connection to condenser water piping.
   1. On inlet, provide:
      a. Thermometer well for temperature controller.
      b. Thermometer well and thermometer.
      c. Strainer.
      d. Nipple and flow switch.
      e. Flexible pipe connector.
      f. Pressure gauge.
      g. Shut-off valve.
   2. On outlet, provide:
      a. Thermometer well and thermometer.
      b. Flexible pipe connector.
      c. Pressure gauge.
      d. **<< Shut-off; Balancing; or _____>>** valve.

J. Arrange piping for easy dismantling to permit tube cleaning.

K. Provide piping from chiller rupture disc to outdoors. Size as recommended by manufacturer.

L. Coordinate BAS, BMS, or Integrated Automation linking between unit controller(s) and remote **<< front-end interface; see Section 251500; software app or terminal; see Section 253500; or _____>>**.

M. Provide refrigerant detection systems for units and piping; see Section **<< 284400>>**.

3.02 SYSTEM STARTUP

A. See Section **<< 017800 - Closeout Submittals>>** for closeout submittals.

B. See Section **<< 017900 - Demonstration and Training>>** for additional requirements.

C. Provide services of factory trained representative for minimum of **<< one day; _____ days; or _____>>** to leak test, refrigerant pressure test, evacuate, dehydrate, charge, start-up, and calibrate controls.

D. Supply initial charge of refrigerant and oil.

DRAFT

E. Demonstrate system operation and verify specified performance; see Section **<< 230593>>**.

3.03 CLOSEOUT ACTIVITIES

A. See Section **<< 017800 - Closeout Submittals>>** for closeout submittals.

B. See Section **<< 017900 - Demonstration and Training>>** for additional requirements.

C. Train operating personnel in operation and maintenance of units.

D. Provide the services of the manufacturer's field representative to conduct training.

3.04 MAINTENANCE

A. See Section **<< 017000 - Execution and Closeout Requirements>>** for additional requirements.

B. Furnish service and maintenance of complete assembly for **<< one year; ___ years; or _____>>** from Date of Substantial Completion.

END OF SECTION 236416

DRAFT

SECTION 236423
SCROLL WATER CHILLERS

PART 1 GENERAL

1.01 RELATED REQUIREMENTS

A. Section **<< 033000 - Cast-in-Place Concrete>>**: Concrete housekeeping pads.

B. Section **<< 232113 - Hydronic Piping>>**.

C. Section **<< 232114 - Hydronic Specialties>>**.

D. Section **<< 251500 - Integrated Automation Software>>**.

E. Section **<< 260583 - Wiring Connections>>**.

1.02 REFERENCE STANDARDS

A. ASHRAE Std 90.1 I-P - Energy Standard for Buildings Except Low-Rise Residential Buildings.

1.03 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Product Data: Provide rated capacities, weights, specialties and accessories, electrical requirements and wiring diagrams.

C. Shop Drawings: Indicate components, assembly, dimensions, weights and loadings, required clearances, and location and size of field connections. Indicate equipment, piping and connections, valves, strainers, and thermostatic valves required for complete system.

D. Manufacturer's Performance Data: Indicate energy input versus cooling load output from 0 to 100 percent of full load at specified and minimum condenser water temperature for water-cooled chillers and at specified and minimum outdoor air temperature for air-cooled chillers.

E. Operation and Maintenance Data: Include start-up instructions, maintenance data, parts lists, controls, and accessories; include trouble-shooting guide.

F. Warranty: Submit manufacturer's warranty and ensure forms have been filled out in **<<Owner>>**'s name and registered with manufacturer.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Comply with manufacturer's written installation instructions for rigging, unloading, and transporting units.

B. Deliver units to the job site completely assembled and charged with refrigerant and oil by manufacturer.

1.05 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Manufacturer's Warranty: Provide minimum **<< five; or _____>>** year warranty to include coverage for **<< materials only; labor only; materials and labor; or _____>>** for **<< compressor; evaporator; condenser; complete assembly; and _____>>**.

DRAFT

PART 2 PRODUCTS

2.02 SCROLL-WATER CHILLER PERFORMANCE REQUIREMENTS

A. Packaged **<< Water-Cooled; Air-Cooled; or _____>>** Chiller**<< , CH-1; , _____; or None - N/A>>**:

1. Refrigerant: **<< R-454B; R-410A; R-407C; or _____>>**; use only refrigerants that have ozone depletion potential (ODP) of **<< zero; or _____>>** and global warming potential (GWP) **<< no greater than that allowed by federal code; of less than 50; or _____>>**.
2. Energy Efficiency: **<< ASHRAE Std 90.1; Federal Energy Management Program; or _____>>**.
3. Evaporator:
   a. Fouling Factor: **<< 0.00010 sq ft-hr-degrees F/Btu>>**.
4. Packaged Water-Cooled Condenser:
   a. Fouling Factor: **<< 0.00025 sq ft-hr-degrees F/Btu>>**.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Align chiller package on steel or concrete foundations.

C. Install units on vibration isolators.

D. Connect to electrical service.

E. Connect to chilled water piping.

F. Arrange piping for easy dismantling to permit tube cleaning and removal.

G. Coordinate BAS Integrated Automation linking between unit controller(s) and remote **<< front-end interface; see Section 251500; software app or terminal; see Section 253500; or _____>>**.

3.02 CLOSEOUT ACTIVITIES

A. See Section **<< 017800 - Closeout Submittals>>** for closeout submittals.

B. Demonstration: Demonstrate operation of system to **<<Owner>>**'s personnel.

1. Use operation and maintenance data as reference during demonstration.
2. Briefly describe function, operation, and maintenance of each component.

C. Training: Train **<<Owner>>**'s personnel on operation and maintenance of system.

1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
2. Provide minimum of **<< two hours; one day; or _____>>** of training.

DRAFT

3.03 MAINTENANCE

A. See Section **<< 017000 - Execution and Closeout Requirements>>** for additional requirements.

B. Provide a separate maintenance contract for the service and maintenance for **<< 12>><< years; months; or _____>>** from Date of Substantial Completion.

END OF SECTION 236423

SECTION 236426
ROTARY-SCREW WATER CHILLERS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Water-cooled rotary-screw chiller.

B. Air-cooled rotary-screw chiller.

1.02 RELATED REQUIREMENTS

A. Section **<< 033000 - Cast-in-Place Concrete>>**: Concrete housekeeping pads.

B. Section **<< 230593 - Testing, Adjusting, and Balancing for HVAC>>**.

C. Section **<< 230800 - Commissioning of HVAC>>**.

D. Section **<< 230923 - Direct-Digital Control System for HVAC>>**.

E. Section **<< 230993 - Sequence of Operations for HVAC Controls>>**.

F. Section **<< 232113 - Hydronic Piping>>**.

G. Section **<< 232114 - Hydronic Specialties>>**.

H. Section **<< 251500 - Integrated Automation Software>>**.

I. Section **<< 253519 - Integrated Automation Control Valves>>**.

J. Section **<< 260583 - Wiring Connections>>**.

1.03 REFERENCE STANDARDS

A. AHRI 550/590 (I-P) - Standard for Performance Rating of Water-Chilling and Heat Pump Water-Heating Packages Using the Vapor Compression Cycle.

B. ASHRAE Std 15 - Safety Standard for Refrigeration Systems.

C. ASHRAE Std 90.1 I-P - Energy Standard for Buildings Except Low-Rise Residential Buildings.

D. ASHRAE Std 135 - BACnet - A Data Communication Protocol for Building Automation and Control Networks.

E. ASME BPVC-VIII-1 - Boiler and Pressure Vessel Code, Section VIII, Division 1: Rules for Construction of Pressure Vessels.

F. ASTM B117 - Standard Practice for Operating Salt Spray (Fog) Apparatus.

G. IEEE 519 - IEEE Standard for Harmonic Control in Electric Power Systems.

H. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

I. NEMA MG 00001 - Motors and Generators.

J. UL 984 - Hermetic Refrigerant Motor-Compressors.

K. UL 1995 - Heating and Cooling Equipment.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate physical size, weight and location of major pieces of equipment to be installed. Notify **<<Architect>>** of any major deviations from the equipment originally specified prior to ordering equipment.

DRAFT

1.05 SUBMITTALS

A. Product Data: Provide rated capacities, weights, specialties and accessories, electrical requirements and wiring diagrams.

B. Shop Drawings: Indicate components, assembly, dimensions, weights and loadings, required clearances, and location and size of field connections. Indicate equipment, piping and connections, valves, strainers, and thermostatic valves required for complete system.

C. Manufacturer's Certificate: Certify that components furnished but not produced by manufacturer meet or exceed manufacturer's requirements.

D. Manufacturer's Performance Data: Indicate energy input versus cooling load output from 0 to 100 percent of full load at specified and minimum condenser water temperature for water-cooled chillers and at specified and minimum outdoor air temperature for air-cooled chillers.

E. Manufacturer's Instructions: Submit manufacturer's complete installation instructions.

F. Sustainable Design Documentation: Submit manufacturer's product data on refrigerant used, showing compliance with specified requirements.

G. Operation and Maintenance Data: Include start-up instructions, maintenance data, parts lists, controls, and accessories; include trouble-shooting guide.

H. Warranty: Submit manufacturer's warranty and ensure forms have been filled out in **<<Owner>>**'s name and registered with manufacturer.

I. Maintenance Materials: Furnish the following for **<<Owner>>**'s use in maintenance of project.

1. See Section **<< 016000 - Product Requirements>>** for additional provisions.
2. Extra Refrigerant: **<< One container; Two containers; or _____>>**.
3. Extra Lubricating Oil: **<< One container; Two containers; or _____>>**.

1.06 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum **<< three; or _____>>** years of**<< documented; _____; or None - N/A>>** experience.

B. When required, provide certification of inspection in compliance with the requirements of **<< Authority Having Jurisdiction; or _____>>**.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Comply with manufacturer's written installation instructions for rigging, unloading, and transporting units.

B. Deliver units to the job site completely assembled and charged with refrigerant and oil by manufacturer.

1.08 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Manufacturer's Warranty: Provide minimum **<< five; or ___>>** year warranty to include coverage for **<< materials only; labor only; materials and labor; or _____>>** for **<< compressor; evaporator; condenser; complete assembly; and _____>>**.

DRAFT

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Carrier Corporation**<< ; _____; or None - N/A>>**: www.carrier.com/#sle.

B. Daikin Applied**<< ; _____; or None - N/A>>**: www.daikinapplied.com/#sle.

C. Trane Technologies, PLC**<< ; _____; or None - N/A>>**: www.trane.com/#sle.

D. York, a brand of Johnson Controls International, PLC**<< ; _____; or None - N/A>>**: www.york.com/#sle.

E. Substitutions: **<< See Section 016000 - Product Requirements; or Not Permitted>>**.

1. The chilled water system has been designed based on specific capacities and characteristics of equipment specified in this section and other sections.
2. When substitution of a different manufacturer or model number is desired, submit sufficient information to demonstrate to **<<Architect>>** that the substitute will have the same or better performance as that specified AND that the related equipment in the system will perform acceptably with the substitute.
3. If the related equipment must be modified to perform acceptably with the substitute, the entity proposing the substitution is responsible for all additional costs due to re-design and provision of different related equipment.

2.02 << AIR-COOLED; WATER-COOLED; OR _____>>, ROTARY-SCREW, WATER CHILLER CONSTRUCTION REQUIREMENTS

A. Factory assembled and tested chiller consisting of compressor(s), compressor motor(s), motor starter(s) or variable frequency drives as indicated, evaporator, condenser, enclosure, refrigeration circuits(s) and specialties, interconnecting piping, microprocessor-based controls, readouts, and diagnostics.

1. Rating: **<<AHRI 550/590 (I-P)>>**.
2. Safety: **<<ASHRAE Std 15>>** and **<<UL 1995>>**.
3. Construction and Testing: **<<ASME BPVC-VIII-1>>**.
4. Energy Efficiency: **<< ASHRAE Std 90.1; Federal Energy Management Program; or _____>>**.
5. Enclosures:
   a. Structural Framing: Mount structural steel on welded steel base**<< with hot-dip galvanized; with air-dried paint; _____; or None - N/A>>** finish.
   b. Steel Cabinet:
      1) Factory apply **<< baked on enamel; baked on powder paint; corrosion resistant paint ; zinc coating; or _____>>**prior to assembly.
      2) Provide gasketing and weatherproofing to panels with fully opening doors containing starters or variable frequency drives, terminal blocks, through-the-door type disconnects and circuit breaker with lockable handles indicating "power-on" or "power-off".
      3) Provide door stays.
   c. Perform 500-hour salt spray test in accordance with **<<ASTM B117>>** for outdoor applications.

B. Rotary-Screw Compressors:

1. Unit: **<< Semi-hermetic; Open; or _____>>** type with **<< two; or _____>>**, **<< direct; variable speed; or _____>>** drive compressors with **<< multiple; or**

DRAFT

_____>> independent refrigeration circuit(s)**<< , internal muffler; , _____; or None - N/A>>**, **<< discharge; check; suction; and _____>>** service valves.

2. Oil Lubrication System: Positive pressure system, oil heater, oil separator, check valves, solenoid valves, and filtration devices.
3. Valves: Check valves in compressor discharge.
4. Capacity Reduction System: **<< Load/unload valve; Variable speed; or _____>>** control down to **<< 20; 15; 10; 7.5; 5; or _____>>** percent of full load without the activation of hot gas bypass.
5. Motors: **<<UL 984>>**, **<< 3,600; 3,570; or _____>>** rpm, suction gas-cooled, hermetically sealed, squirrel cage induction with **<< starter; variable frequency drive; or _____>>**.

C. Evaporator, Shell and Tube Type:
1. **<<ASME BPVC-VIII-1>>**, **<< three; two; single; or _____>>** pass type, with **<< three; two; or _____>>** independent refrigeration circuits.
2. Shell, Removable Heads and Tube Support Sheets: Carbon steel.
3. Tubes: Mechanically treated copper tubes fixed and aligned into intermediate tube support sheets across the shell to maintain consistent spacing between tubes with the capability of being **<< cleanable; individually replaceable; or _____>>**.
4. Working Pressure Rating, Refrigerant-Side: **<< 200 psi; 220 psi; 235 psi; 300 psi; 354 psi; or ____ psi>>**.
5. Working Pressure Rating, Water-Side: **<< 150 psi; 225 psi; 300 psi; or _____ psi>>**.
6. Cold Surface Insulation:
   a. **<< Factory; Field; or _____>>** install on shell and all other cold surfaces.
   b. **<< 0.75-inch; or ____-inch>>** minimum thickness, closed cell, expanded **<< polyvinyl chloride; polyurethane; or _____>>** flexible foam insulation with a maximum K factor of **<< 0.28; or _____>>**.

D. Provide vents and water drain connections.

E. Provide fittings for temperature control sensors.

F. Freeze Protection: Provide evaporator heater with thermostat to protect from freezing at ambient temperatures down to **<< minus 20 degrees F; or ____ degrees F>>**.

G. Air-Cooled Condenser:
1. Heat Exchanger:
   a. Arrangement: **<< Two; or _____>>** pass, **<< round; flat; or _____>>** tubes.
   b. Mechanically bond aluminum fins to internally enhanced, **<< seamless copper; aluminum alloy; or _____>>** tubing and protect with corrosion resistant materials or coatings.
   c. Clean, dehydrate and test.
   d. Leak Test: **<< 506 psi; 450 psi; 375 psi; or ____ psi>>**.
   e. Seal: **<< Nitrogen; Refrigerant; or _____>>** holding charge.
2. Coil Guards: Provide **<< expanded metal; louvered; PVC coated wire mesh screen; grilles; or _____>>** with **<< lint screens; or _____>>**. Protect condenser coil by enclosing with heavy plastic to prevent damage during shipping or rigging.
3. Fans and Motors:
   a. Dynamically balanced **<< propeller; shrouded-axial; airfoil; or _____>>** type, direct drive fans of **<< reinforced polymer; fiberglass reinforced composite; or**

DRAFT

_____>> corrosion resistant construction and equip with sealed, permanently lubricated ball bearings.

b. Discharge Fan Guards: **<< Coated steel wire; PVC coated; Close-meshed; or _____>>**.

c. Discharge Direction: Vertical.

d. Motors: Totally enclosed, high efficiency, suitable for outdoor use, three phase, permanent split capacitor, single speed with **<< internal overload; current overload; or _____>>** protection.

H. Refrigeration Circuits:

1. Provide **<< two; or _____>>** independent refrigeration circuit(s) with **<< two; or _____>>** compressor(s) per circuit.
2. Minimum Refrigerant Specialties per Circuit:
   a. Isolation and service valves for refrigerant removal and charging.
   b. Removable-core filter driers.
   c. **<<ASHRAE Std 15>>** compliant relief valves.
   d. Liquid line sight glass with moisture indicator.
   e. Refrigerant expansion valves or metering devices.
   f. Complete **<< operating; holding; or _____>>** charge of both refrigerant and oil.

I. Starters and Drives:

1. Starters: Design **<< unit mounted; remote mounted; or _____>>**, **<< across-the-line; wye-delta closed transition; reduced voltage solid state; or _____>>** starter to operate in temperatures up to **<< 104 degrees F; or ____ degrees F>>**.
   a. Provide incoming line provisions for **<< aluminum; or _____>>**, mechanical type incoming line lugs based on the number and cable sizes shown on drawings.
   b. Provide properly sized, double break main contacts with weld resistant silver cadmium faces and low resistance auxiliary interlocks with **<< palladium silver; or _____>>** contacts for interlocks that interface with control panel.
   c. Provide control power transformer with fused primary, secondary, and current transformers of the proper size, ratio, and burden capacity.
   d. Provide control relays to interface with control panel.
   e. Wiring:
      1) Power and Control: Type MTW copper stranded **<< 194 degrees F>>**.
      2) **<< 14 gauge, 0.0641 inch>>**, minimum, for control wiring.
   f. Motor Protection System Attributes:
      1) Three phase overload protection.
      2) Startup overload protection.
      3) Phase imbalance, loss, and reversal.
      4) Low voltage.
      5) Distribution fault protection.
2. Variable Frequency Drives: Completely assemble, wire, pipe, and factory test, factory or field mounted variable frequency drive (VFD). Limit the field electrical connections for compressor motor power to the main power leads to the VFD, wiring of liquid pumps and tower fans to the control panel.
   a. Characteristics:
      1) **<< Refrigerant; or _____>>** cooled.

DRAFT

2) Microprocessor based pulse width modulation (PWM) with input/output power devices, DC voltage rectifier, and inverter/control regulator to convert DC voltage to sinusoidal PWM waveform.
3) Physically isolate low voltage control from main power sections.
4) Control motor speed by integrated controls over wide range of operating conditions.
5) Provide short circuit interrupt and withstand rating suitable for available current.

b. Performance:
1) Do not exceed **<<IEEE 519>>** requirements for voltage total harmonic distortion (THD) and harmonic current total demand distortion (TDD) using VFD circuit breaker input terminals as the point of common coupling (PCC).
2) Full Load Efficiency: Minimum 97 percent at 100 percent VFD rated capacity.
3) Unity Displacement Power Factor: 0.99 minimum.
4) Voltage Boost Capability: Full motor voltage at reduced line voltage conditions.
5) Soft start, linear acceleration, and coast to stop capabilities.
6) Base Motor Adjustable Frequency Range: Control to 15 percent capacity at nameplate voltage.
7) Torque Generation: 150 percent instantaneous.

c. Heat Sink and Mating Flange:
1) Design for **<< 185 psi; or ____ psi>>** waterside working pressure.
2) Meter to maintain temperature within acceptable limits.

d. Suitable Ratings:
1) Operation at plus or minus 10 percent nameplate voltage.
2) Continuous Operation at:
(a) 100 percent of nameplate amperes and 5 seconds at 15 percent.
(b) Ambient temperature range of **<< 40 to122 degrees F; or _____ degrees F>>**, 95 percent humidity noncondensing for altitudes up to **<< 6,000 feet; or _____ feet>>**.
3) Comply with **<<NEMA EN 10250>>** and **<<NEMA MG 00001>>**.

e. User Interface for Programming and Display of the Following Parameters:
1) Operating, configuration and fault messages.
2) Hertz frequency.
3) VFD load, line side voltage, and current.
4) kW.
5) Input/output power devices temperature.

f. Electrical Service, Single Point Power:
1) Input Circuit Breaker: Suitable for the available current indicated.
2) Provide power for chiller oil pump via factory wired standard branch circuit breaker.
3) Provide power for oil heater, VFD and controls via 3 kVA control power transformer and factory wired circuit breaker.

g. Discrete Dry-Contact Outputs:
1) Circuit breaker shunt trip.
2) Chilled water pump.
3) Condenser water pump.

DRAFT

4) Alarm status.

h. Analog Outputs: 4 to 20 mA for head pressure reference and condenser water control valve as applicable.

i. Provide protection for under/over-voltage, phase loss/reversal/unbalance, ground fault, single cycle voltage loss, programmable auto restart after power loss, and motor overload/over temperature protection.

J. Controls Package:

1. Unit Controls: **<< Factory-installed DDC; see Section 251400; Factory-supplied DDC; or _____>>**:

a. Control-panel mounted with required input-output expansions, power supply, fused disconnect, hand switches, knobs, and accessories required to control chiller unit to manufacturer required sequences to meet intended use with listed performance.

b. Factory configured to interface prewired sensors, switches, and safeties with allowance to add up to four chiller valves and flow sensors.

c. Graphic-based touchscreen to include unit operation controls and user filter based interface for faults, alarms, performance, unit diagnostics, and data recording up to 12 months.

d. BAS, SCADA, or other Integrated Automation Link: **<< ASHRAE Std 135 BACnet IP; ASHRAE Std 135 BACnet MS/TP; ASHRAE Std 135 BACnet SC; Modbus (PS) Modbus IP; Modbus (PS) Modbus RTU; LonMark Interoperability Guide LonWorks; Bluetooth CS Bluetooth wireless; IEEE 802.11 Wi-Fi; IEEE 802.15.4 Zig-bee wireless; or _____>>**.

e. External Point Mapping: Provide mapping table for each parameter included in the local visual interface with software-toggle flag to allow reduced mapping of available points.

f. Isolation Valves: Field-installed, **<< 2-position; modulating; position-adjusted; or _____>>**, butterfly type**<< with position tracking; with open-closed status; _____; or None - N/A>>**; **<< manufacturer provided; see Section 253519; or _____>>**.

2. Control Components for Preventing Shutdown:

a. Provide high pressure limit with indicating light for each compressor, set lower than factory pressure switch to automatically unload compressor and prevent nuisance high pressure condenser control trip.

b. Provide one protector with indicating light for each compressor, with current limit setpoint of 120 percent of compressor running load amperage to automatically unload compressor preventing over-current trip.

c. Provide low refrigerant limit to automatically unload each compressor preventing a low evaporator temperature trip.

3. Chiller Operation in Abnormal Operating Conditions:

a. Unloaded Running: Adequate chilled water production.

b. Trip-out Limit Reached: Chiller goes off-line and manual reset is required for continued operation.

4. Control Panel Display:

a. Evaporator pressure.

b. Condenser refrigerant pressure.

c. Entering and leaving evaporator water temperature.

5. Points for Remote Monitoring and Control:

a. Entering and leaving condenser water temperature as applicable.

DRAFT

b. Chilled water setpoint.
c. Electrical 3 phase current limit and percent RLA setpoint.
d. Electrical 3 phase amp draw.
e. Chiller operating mode.
f. Condenser refrigerant temperature.
g. Elapsed time and number of starts counter.
h. Chiller compressor run status relay.
i. Minimum of 20 diagnostics with time and date stamp.
j. Identification of the fault, date, time and operating mode at time of occurrence, type of reset required, and help message.
k. Relay output energized upon detecting a fault requiring manual reset.
l. Relay output energized whenever unit is operating in a limit mode for an extended period of time.
m. Analog input to control leaving chilled water temperature setpoint based upon a 4-20ma or 0-10 VDC signal from the building automation system.
n. Programmable soft during pull-down period via ramped current limit or fully adjustable, temperature pull-down rate.
o. Leaving chilled water reset based upon return water temperature.
p. Provide RS-232 for printer interface.

K. Electrical Characteristics (Single Point Power Connection):
1. Electrical: **<<NEMA EN 10250>>** or **<<UL 1995>>** as applicable.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.
B. Align chiller package on steel or concrete foundations.
C. Install units on vibration isolators.
D. Connect to electrical service.
E. Connect to chilled water piping.
F. Arrange piping for easy dismantling to permit tube cleaning and removal.
G. Coordinate BAS, BMS, or Integrated Automation linking between unit controller(s) and remote **<< front-end interface; see Section 251500; software app or terminal; see Section 253500; or _____>>**.

3.02 MANUFACTURER'S FIELD SERVICES

A. Perform factory startup of the chiller by factory trained and authorized servicing technicians confirming equipment has been correctly installed prior to equipment becoming operational and covered under the manufacturer's warranty.
B. Supply initial charge of refrigerant and oil if not completely factory charged.
C. Demonstrate system operations and verify specified performance.

3.03 CLOSEOUT ACTIVITIES

A. Demonstrate proper operation of **<< equipment; or _____>>** to **<<Owner>>**'s designated representative.

DRAFT

B. Demonstration: Demonstrate operation of system to **<<Owner>>**'s personnel.
   1. Use operation and maintenance data as reference during demonstration.
   2. Briefly describe function, operation, and maintenance of each component.

C. Training: Train **<<Owner>>**'s personnel on operation and maintenance of system.
   1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
   2. Provide minimum of **<< two hours; one day; or _____>>** of training.

3.04 MAINTENANCE

A. See Section **<< 017000 - Execution and Closeout Requirements>>** for additional requirements.

END OF SECTION 236426

DRAFT

SECTION 236513
FORCED-DRAFT COOLING TOWERS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Forced-draft cooling towers.

B. Controls.

1.02 RELATED REQUIREMENTS

A. Section **<< 221005 - Plumbing Piping>>**.

B. Section **<< 230548 - Vibration and Seismic Controls for HVAC>>**.

C. Section **<< 232113 - Hydronic Piping>>**.

1.03 REFERENCE STANDARDS

A. ABMA STD 9 - Load Ratings and Fatigue Life for Ball Bearings.

B. ABMA STD 11 - Load Ratings and Fatigue Life for Roller Bearings.

C. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

D. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

E. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

F. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

G. CTI STD-201 RS - Performance Rating of Evaporative Heat Rejection Equipment.

H. UL (DIR) - Online Certifications Directory.

1.04 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Product Data: Provide rated capacities, dimensions, weights and point loadings, accessories, required clearances, electrical requirements and wiring diagrams, and location and size of field connections. Submit schematic indicating capacity controls.

C. Shop Drawings: Indicate suggested structural steel supports including dimensions, sizes, and locations for mounting bolt holes.

D. Manufacturer's Certificate: Certify that cooling tower performance, based on **<< ASME PTC 23; CTI ATC-105; CTI STD-201 OM; CTI STD-201 RS; or _____>>** meets or exceeds specified requirements and submit performance curve plotting leaving water temperature against wet bulb temperature.

E. Operation and Maintenance Data: Include start-up instructions, maintenance data, parts lists, controls, and accessories.

F. Warranty: Submit manufacturer's warranty and ensure forms have been filled out in **<<Owner>>**'s name and registered with manufacturer.

DRAFT

1.05 DELIVERY, STORAGE, AND HANDLING

A. Factory assemble complete unit. For shipping, disassemble into as large as practical sub-assemblies so that minimum amount of field work is required for re-assembly.

B. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.

1.06 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

B. Provide a **<< five; or ____>>** year warranty to include **<< labor only; materials only; labor and materials; or _____>>** coverage for **<< corrosion resistance of cooling tower structure; cooling tower package; fan drive; motor; and _____>>**.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Baltimore Aircoil Company.

B. EvapcoO, Inc.

C. Reymsa Cooling Towers, Inc.

2.02 FORCED-DRAFT COOLING TOWERS

A. General Requirements:

1. Provide units for outdoor use, factory assembled, sectional, counterflow, vertical discharge, blow-through design, with fan assemblies built into pan and casing.
2. Products Requiring Electrical Connection: Listed and classified by **<< UL (DIR); testing firm acceptable to authority having jurisdiction; or _____>>** as suitable for purpose specified and indicated.

B. **<< Forced-Draft Cooling Tower; Open-Circuit, Forced-Draft, Counter-Flow Cooling Tower; Closed-Circuit, Forced-Draft, Counter-Flow Cooling Tower; Closed-Circuit, Forced-Draft, Cross-Flow Cooling Tower; or _____>><< Type _____; for _____; or None - N/A>>**:

1. Pan and Casing: Galvanized steel, **<< 12 gauge, 0.1046 inch; 14 gauge, 0.0747 inch; or ____ gauge, _____ inch>>** for casing and **<< 8 gauge, 0.1644 inch>>** for reinforcing angles and channels with access doors at both ends of tower to air plenum.
2. Cold Water Basin: Heavy-gauge stainless steel with access doors at both ends of tower to air plenum. Provide sloped basin with drain/clean-out connection.
3. Fans: **<< Multiblade, cast aluminum, axial type; Forward curved centrifugal type mounted on steel shaft; or _____>>**, with belt drive, bearings with **<<ABMA STD 9>>** or **<<ABMA STD 11>>** L-10 life at 75,000 hours, with extended grease fittings. Fan and motor sheaves shall be fabricated from corrosion-resistant materials for low maintenance and maximum operating life. Fan motor shall be TEAO or TEFC and suitable for use with variable frequence drive.
4. Fan VFD: Provide VFD for cooling tower fan(s) with ICM Controls Model ICM450 phase monitor.
5. Fan Guard: Welded steel rod and wire guard, hot-dipped-galvanized after fabrication.
6. Safety: Safety railings, and ladder**<< with safety cage; _____; or None - N/A>>** from **<< grade; roof; or ____>>** to fan deck.

DRAFT

7. Distribution Section: **<< Polyvinyl chloride; Galvanized steel; or _____>>** piping header and branches with**<< ABS; ____; or None - N/A>>** plastic spray nozzles.
8. Fill:
   a. Self-supporting, fluted polyvinyl chloride plastic**<< with flame spread index of 5 or less, when tested in accordance with ASTM E84; with flame spread index of 10 or less, when tested in accordance with ASTM E84; _____; or None - N/A>>**.
   b. Fungal Resistance: No growth when tested in accordance with **<<ASTM G21>>**.
9. Drift Eliminators: Two- or three-pass hot-dipped-galvanized steel, drift loss limited to **<< 0.7; 0.2; or ___>>** percent of total water circulated.
10. Electric Water Level Control: Provide electric probe and a motorized valveElectric Switch: Probe type, mounted in a stilling chamber external of the tower, with a solid-state control relay, in a weatherproof enclosure.Valve: Slow-acting, motorized, voltage shown on drawings, installed in make-up
11. Hardware: **<< Galvanized steel; Stainless steel; or _____>>** nuts, bolts, washers, and nails**<< ; assembled with phenolic-epoxy-coated, corrosion-resistant washer head fasteners; ; _____; or None - N/A>>**.
12. Galvanized Steel Sheet Components: Hot-dipped-galvanized steel, **<<ASTM A653/A653M>>**, with G210/Z600 coating, and finished with zinc-chromatized-aluminum paint.
13. Steel Angles, Plates, Bars, and Shapes: Galvanized after fabrication to comply with **<<ASTM A123/A123M>>**, Coating Thickness Grade 100.

2.03 CONTROLS

A. Provide a dedicated control panel for each cooling tower. Each control panel shall be fully assembled, internally wired, and tested for field mounting. Include:
   1. Enclosure: NEMA 250 Type 4X stainless steel cabinet
      a. Circuit Protection: Type HMCP.
      b. Disconnect switch with a lockable, external operating handle accessible from the exterior of the control panel.
   2. Control Power Transformer: Step down primary voltage to 120 volts, single phase. Two fuses on primary side and single fuse on secondary side.
   3. Motor drive: Factory-mounted and wired, pulse-width modulating variable frequency drive (VFD) utilizing IGBT and microprocessor technology. Size the VFD for fan motor horsepower with a three contactor bypass circuit. Selector mode through an inverter-off-bypass selector switch.
      a. Provide ICM Controls Model ICM450 phase monitor, including all required wiring for final connections between phase monitor and motor/VFD.
   4. Terminal Strip: 120-volt Control Circuit:Allow field supplied dry contact to enable or disable cooling tower operation. Contact shall not disable basin heater circuit.
   5. Basin Heater Control: Provide three-pole contactor with branch fuse protection. Extend holding coil control circuit to the terminal strip for field connection for a remote thermostat and low-water cutout device. Provide a pilot light to annunciate heater activation.
   6. Cooling Fan: Fan shall provide cooling air across cabinet and across the VFD heat sink.
   7. Water Level Control: Control panel shall provide power for the electric water level control.
   8. BAS controls to start, stop, and provide the required speed signal to the VFD in response to the condenser water temperature shall be provided in the control panel. A Hand-Off-Auto selector switch shall be provided to bypass BAS control.

DRAFT

9. Status Indicating Lights: For power on, inverter, and bypass.
10. Mechanical and electrical interlocks on all electrical controls required to operate the fan motors. Provide hard-wired interlock from condenser pumps to tower fan motors/VFDs so that tower fan(s) cannot start unless condenser water pumps are running.

2.04 ACCESSORIES

A. Electric Immersion Heaters: In pan, suitable to maintain temperature of water in pan at **<< 42 degrees F>>** when outside temperature is **<< 0 degrees F>>** and wind velocity is **<< 15 mph>>**; immersion thermostat and float control operate heaters on low temperature when pan is filled.

B. Provide external factory-assembled basin level platform and ladders from cooling tower manufacturer from grade/roof to service platform.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Provide the services of the manufacturer's field representative to supervise rigging, hoisting, and installation, allowing for minimum of **<< one 8-hour day; two 8-hour days; or ____ 8-hour days>>** per tower.

C. Install tower on structural steel beams as instructed by manufacturer.

D. Where indicated, install tower on vibration isolators. See Section **<< 230548>>**.

E. Connect condenser water piping with flanged connections to tower. Pitch condenser water supply to tower and condenser water suction away from tower. See Section **<< 232113>>**.

F. Connect make-up water piping with flanged or union connections to tower. Pitch to tower. See Section **<< 221005>>**.

G. Connect overflow, bleed, and drain, to **<< floor drain; storm sewer; or _____>>**.

H. Install piping to tower and provide electric heat trace on piping prior to installing insulation where indicated on drawings.

I. Mount tower control panel.

J. Install water level control in a standpipe in piping beside tower.

K. Install basin heater controls.

L. Control wiring shall comply with Section 230900 and with cooling tower manufacturer's instructions.

M. Field wire fan motors, basin heaters, temperature sensors, and any remote control devices for the cooling tower to control panel.

N. Maintain manufacturer's recommended clearances for service and maintenance.

3.02 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Provide the services of the manufacturer's field representative to inspect tower after installation and submit report prior to start-up, verifying installation is in accordance with specifications and manufacturer's recommendations.

DRAFT

3.03 SYSTEM STARTUP

A. Start-up tower in presence of and instruct **<<Owner>>**'s operating personnel.

3.04 WARRANTY PERIOD OPERATION

A. Contractor shall provide all maintenance and cleaning during warranty period with a minimum of six inspections per year. Pull and clean strainer.

END OF SECTION 236513

12. Galvanized Steel Sheet Components: Hot-dipped-galvanized steel, **<<ASTM A653/A653M>>**, with G210/Z600 coating, and finished with zinc-chromatized-aluminum paint.
13. Steel Angles, Plates, Bars, and Shapes: Galvanized after fabrication to comply with **<<ASTM A123/A123M>>**, Coating Thickness Grade 100.

DRAFT

2.03 CONTROLS

A. Provide a dedicated control panel for each cooling tower. Each control panel shall be fully assembled, internally wired, and tested for field mounting. Include:
   1. Enclosure: NEMA 250 Type 4X stainless steel cabinet
      a. Circuit Protection: Type HMCP.
      b. Disconnect switch with a lockable, external operating handle accessible from the exterior of the control panel.
   2. Control Power Transformer: Step down primary voltage to 120 volts, single phase. Two fuses on primary side and single fuse on secondary side.
   3. Motor drive: Factory-mounted and wired, pulse-width modulating variable frequency drive (VFD) utilizing IGBT and microprocessor technology. Size the VFD for fan motor horsepower with a three contactor bypass circuit. Selector mode through an inverter-off-bypass selector switch.

a. Provide ICM Controls Model ICM450 phase monitor, including all required wiring for final connections between phase monitor and motor/VFD.

4. Terminal Strip: 120-volt Control Circuit:Allow field supplied dry contact to enable or disable cooling tower operation. Contact shall not disable basin heater circuit.
5. Basin Heater Control: Provide three-pole contactor with branch fuse protection. Extend holding coil control circuit to the terminal strip for field connection for a remote thermostat and low-water cutout device. Provide a pilot light to annunciate heater activation.
6. Cooling Fan: Fan shall provide cooling air across cabinet and across the VFD heat sink.
7. Water Level Control: Control panel shall provide power for the electric water level control.
8. BAS controls to start, stop, and provide the required speed signal to the VFD in response to the condenser water temperature shall be provided in the control panel. A Hand-Off-Auto selector switch shall be provided to bypass BAS control.
9. Status Indicating Lights: For power on, inverter, and bypass.
10. Mechanical and electrical interlocks on all electrical controls required to operate the fan motors. Provide hard-wired interlock from condenser pumps to tower fan motors/VFDs so that tower fan(s) cannot start unless condenser water pumps are running.

2.04 ACCESSORIES

A. Electric Immersion Heaters: In pan, suitable to maintain temperature of water in pan at **<< 42 degrees F>>** when outside temperature is **<< 0 degrees F>>** and wind velocity is **<< 15 mph>>**; immersion thermostat and float control operate heaters on low temperature when pan is filled.

B. Provide external factory assembled basin level platform and ladders from cooling tower manufacturer from grade/roof to service platform.

C. Davit hoist for replacement of fan motor.

D. Fan vibration cut-off switch.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Provide the services of the manufacturer's field representative to supervise rigging, hoisting, and installation, allowing for minimum of **<< one 8-hour day; two 8-hour days; or ____ 8-hour days>>** per tower.

C. Install tower on structural steel beams as instructed by manufacturer.

D. Where indicated, install tower on vibration isolators. See Section **<< 230548>>**.

E. Connect condenser water piping with flanged connections to tower. Pitch condenser water supply to tower and condenser water suction away from tower. See Section **<< 232113>>**.

F. Connect make-up water piping with flanged or union connections to tower. Pitch to tower. See Section **<< 221005>>**.

G. Connect overflow, bleed, and drain, to **<< floor drain; storm sewer; or _____>>**.

H. Install piping to tower and provide electric heat trace on piping prior to installing insulation where indicated on drawings.

I. Mount tower control panel.

J. Install water level control in a standpipe in piping beside tower.

DRAFT

K. Install basin heater controls.

L. Control wiring shall comply with Section 230900 and with cooling tower manufacturer's instructions.

M. Field wire fan motors, basin heaters, temperature sensors, and any remote control devices for the cooling tower to control panel.

N. Maintain manufacturer's recommended clearances for service and maintenance.

3.02 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>** for additional requirements.

B. Provide the services of the manufacturer's field representative to inspect tower after installation and submit report prior to start-up, verifying installation is in accordance with specifications and manufacturer's recommendations.

3.03 SYSTEM STARTUP

A. Start-up tower in presence of and instruct **<<Owner>>**'s operating personnel.

3.04 WARRANTY PERIOD OPERATION

A. Contractor shall provide all maintenance and cleaning during warranty period with a minimum of six inspections per year. Pull and clean strainer.

END OF SECTION 236514

DRAFT

SECTION 237200
AIR-TO-AIR ENERGY RECOVERY EQUIPMENT

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Energy recovery ventilators.

B. Energy recovery heat exchangers.

C. Heat recovery ventilators.

D. Heat recovery heat exchangers.

1.02 RELATED REQUIREMENTS

A. Section **<< 077200 - Roof Accessories>>**: Equipment roof curb.

B. Section **<< 230548 - Vibration and Seismic Controls for HVAC>>**.

C. Section **<< 230923 - Direct-Digital Control System for HVAC>>**.

D. Section **<< 251500 - Integrated Automation Software>>**: BAS, BMS, or SCADA.

E. Section **<< 260583 - Wiring Connections>>**.

1.03 REFERENCE STANDARDS

A. AHRI 1060 (I-P) - Performance Rating of Air-to-Air Exchangers for Energy Recovery Ventilation Equipment.

B. ASHRAE Std 52.2 - Method of Testing General Ventilation Air-Cleaning Devices for Removal Efficiency by Particle Size.

C. ASHRAE Std 90.1 I-P - Energy Standard for Buildings Except Low-Rise Residential Buildings.

D. ASHRAE Std 135 - BACnet - A Data Communication Protocol for Building Automation and Control Networks.

E. ASTM C1338 - Standard Test Method for Determining Fungi Resistance of Insulation Materials and Facings.

F. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

G. NFPA 70 - National Electrical Code.

H. NFPA 90A - Standard for the Installation of Air-Conditioning and Ventilating Systems.

I. UL 181 - Standard for Factory-Made Air Ducts and Air Connectors.

1.04 SUBMITTALS

A. Product Data: Manufacturer's installation instructions, product data, and engineering calculations.

B. Shop Drawings: Show design and assembly of energy recovery unit and installation and connection details.

1.05 DELIVERY, STORAGE, AND HANDLING

A. See Section **<< 017419 - Construction Waste Management and Disposal>>** for packaging waste requirements.

DRAFT

B. Store products in manufacturer's unopened packaging until ready for installation.

C. Store equipment and products to be installed indoors in dry heated area.

1.06 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Manufacturer Warranty: Provide **<< 1-year; 3-year; or _____>>** manufacturer warranty for equipment including parts, materials, workmanship, and operation commencing on date of Substantial Completion. Complete forms in **<<Owner>>**'s name and register with manufacturer.

C. Motor Warranty: Provide **<< 18-month; 24-month; 30-month; 36-month; or _____>>** manufacturer warranty against breakdowns, malfunctions, or defects in material and workmanship under expected service conditions.

D. Energy Wheel Warranty: Provide **<< 5-year; or _____>>** manufacturer warranty against desiccant coating or wheel material and workmanship defects including issues arising from reduced performance under circumstances of normal use from listed design figures.

PART 2 PRODUCTS

2.01 ENERGY RECOVERY VENTILATOR

A. Manufacturers:
1. Greenheck**<< ; _____; or None - N/A>>**: www.greenheck.com/#sle.
2. RenewAire**<< ; _____; or None - N/A>>**: www.renewaire.com/#sle.
3. Ruskin Company**<< ; EnERVent+ Series; ; _____; or None - N/A>>**: www.ruskin.com/#sle.
4. Substitutions: **<< See Section 016000 - Product Requirements; or Not permitted>>**.

B. ERV Equipment Construction Requirements:
1. Energy Recovery Exchanger Type: **<< Energy wheel; Membrane plate; Liquid desiccant; Multiple; Energy and heat wheels; Multiple; Energy and heat wheels with heat recovery loop; Multiple; Liquid desiccant system with energy and heat wheels; or _____>>**.
2. Supply and Return Duct Connection Orientation: **<< As indicated on drawings; Downward; Over unit; Side-by-side; or _____>>**.
3. Casing and Frame:
   a. Frame: Galvanized steel body or welded extruded aluminum tubular frame capable of supporting components and casings including integral **<< base lifting holes; suspension brackets; or _____>>**.
   b. Double Wall Panels: Minimum of **<< 18 gauge, 0.040 inch; 20 gauge, 0.036 inch; 22 gauge, 0.029 inch; or ___ gauge, _____ inch>><< aluminum; aluminzed steel; galvanized steel; or _____>>**.
   c. Doors: Construct doors of same construction and thickness as wall panels. Include p-shaped extruded neoprene gasket, prop rod, chain with spring, exterior handle, and interior 3-point latching device. Label each door to identify equipment located within.
   d. Insulation Requirements:
      1) Mold Resistance: **<< "Pass" when tested in accordance with ASTM C1338; and _____>>**.
      2) Fungal Resistance: **<< No growth when tested in accordance with ASTM G21; and _____>>**.

DRAFT

3) Bacteria Resistance: **<< No growth when tested in accordance with UL 181; and _____>>**.

4) Flame spread index of 25 or less and maximum smoke developed index of 50.

e. Isolation and Sealing: Form continuous, thermally isolated, weathertight seal between inner wall of panels and structural framing with closed cell PVC foam gasketing and seal seams to prevent job site caulking.

f. Access Panels: Provide access to components through a large, tightly sealed and easily removable hinged or screwed access panel.

g. Finish: **<< Polyurethane enamel; Baked powder paint; or _____>>** over weather-protected, corrosion-resistant assembly.

h. Nameplate: Permanent name plate listing **<< manufacturer; model number; serial number; voltage with tolerance; amp ratings; and _____>>** mounted inside door near electrical panel.

4. Supply and Exhaust Fans:

a. Provide separate non-overloading, statically and dynamically balanced, draw-through, forward curved centrifugal fan or fan-array for each air stream.

b. Fan Motor: **<< Constant Speed; Variable Frequency Drive; or _____>>**, **<< high; premium; or _____>>** efficiency, load matched, belt-driven, open drip proof, thermal overload protected **<< ODP; TEFC; ODP or TEFC; or _____>>** motor with **<< fixed; variable; or _____>>** sheave belt drive, and adjustable-removable motor-slide base. Size drives to 150 percent of load, minimum.

c. Belt Guards: Full sized, hinged, painted with high-visibility safety color, and accessible with standard tools.

d. Motor Bearings: Permanently lubricated sealed ball bearings rated for not less than 200,000 hours of operation with accessible greased fittings.

5. Filter Sections:

a. Outdoor-Intake and Exhaust Sides: **<< 2 inch; or ___ inch>>** thick, pleated**<< , washable; , _____; or None - N/A>>**, **<< MERV 7; MERV 11; MERV 13; 30-30 pleated prefilters; or _____>>** filters, **<<ASHRAE Std 52.2>>**.

b. Filter Racks: Bolt-on rack constructed of aluminum with minimum size of **<< 1/12 inch; or ___ inch>>** thick. Include hinged side access door and snap fasteners.

6. Roof Curbs:

a. Curbs: Provide full perimeter, watertight, **<< flat; sloped; flat and sloped; or _____>>**, weight-supporting roof curb fabricated from minimum of **<< 10 gauge, 0.1345 inch; 12 gauge, 0.1046 inch; or ___ gauge, _____ inch>>** aluminized steel.

b. Isolation Rails: Provide factory-installed, **<< 12 gauge, 0.1046 inch; or ___ gauge, _____ inch>>** aluminized steel angles top and bottom, connected with flexible, outdoor rated membrane and factory-installed vibration isolation springs.

c. Gaskets: Provide closed cell PVC foam, field **<< installed top of curb; installed between top flange of isolation rail and bottom; or _____>>**.

7. Vibration Isolation: Provide corrosion-resistant vibration isolation products for internal motors and other revolving parts. See Section **<< 230548>>**.

8. Electrical:

a. **<< 575; 480; 460; 220; or _____>>** VAC, **<< 1-; 3-; or _____>>**phase with single-point power connection to nonfused main disconnect interlocked with control panel and other components.

b. Install internal wiring in accordance with **<<NFPA 70>>** within **<< flexible, liquid tight steel conduit; S/O cord; or _____>>**.

DRAFT

9. Controls and Local Control Panel:
   a. Unit Controls: **<< Factory installed DDC; see Section 251400; Factory supplied DDC; or _____>>** with sensors, limit switches, and frost control.
   b. Provide fused disconnect within local control panel with power supplies, transformers, terminal strip or terminal blocks for interface of field installed components.
   c. Service Status: Provide both local and remote indication of sensor readings and status of safeties and other status items including power on, wheel-rotation alarm, outside-air loaded filter and exhaust-air loaded filter.
   d. Provide temperature, humidity, dewpoint temperature, CO2, and wheel rotation sensors.
   e. Freeze Protection Thermostat: Provide and configure to stop unit when outdoor air intake**<< dewpoint; _____; or None - N/A>>** temperature drops below **<< 23 degrees F; 38 degrees F; or ___ degrees F>>**, adjustable.
10. BAS, SCADA, or other Integrated Automation Link: **<< ASHRAE Std 135 BACnet IP; ASHRAE Std 135 BACnet MS/TP; ASHRAE Std 135 BACnet SC; Modbus (PS) Modbus IP; Modbus (PS) Modbus RTU; LonMark Interoperability Guide LonWorks; Bluetooth CS Bluetooth wireless; IEEE 802.11 Wi-Fi wireless; IEEE 802.15.4 Zig-bee wireless; or _____>>**.
11. Configuration: Adjust listed requirements in conformance with **<<ASHRAE Std 90.1 I-P>>**.
12. Certification: **<<AHRI 1060 (I-P)>>** labeled, include copy of published ratings for operating conditions.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that structure is ready for installation including openings, ductwork, mechanical utilities, and electrical utilities.

B. Rooftop Installation: Verify that equipment supplied roof curbs are installed and ready to receive intended unit otherwise provide equipment matched roof curbs; see Section **<< 077200>>**.

3.02 INSTALLATION

A. Install equipment in accordance with manufacturer's written installation instructions.

B. Do not obstruct maintenance access to equipment piping, electrical conduit, or any other utility.

C. Vibration Isolation: Provide corrosion-resistant equipment isolation products; see Section **<< 230548>>**.

D. Electrical: Provide equipment raceway, wiring, and cables; see Section **<< 260583>>**.

E. Coordinate installation and fire alarm system interface of system compatible duct-mounted smoke detectors and other appurtenances following **<<NFPA 90A>>** guidelines.

F. Start system and adjust controls and equipment for satisfactory operation.

G. Coordinate hardwired or software interfacing links to enable coordinate as minimum start-stop, occupied, unoccupied functions as well as specific schedules and setpoints functions with other DDC controls onboard airside systems serving common spaces; see Section **<< 230923>>**.

H. Coordinate BAS, BMS, or Integrated Automation linking between unit controller(s) and remote **<< front-end interface; see Section 251500; software app or terminal; see Section 253500; or _____>>**.

DRAFT

3.03 SYSTEM STARTUP

A. Provide services of manufacturer's authorized representative to provide start up of unit.

3.04 CLEANING

A. See Section **<< 017000 - Execution and Closeout Requirements>>** for additional requirements.

B. Clean filters, air plenums, interior and exposed-to-view surfaces prior to Substantial Completion.

3.05 CLOSEOUT ACTIVITIES

A. See Section **<< 017800 - Closeout Submittals>>** for additional submittals.

B. See Section **<< 017900 - Demonstration and Training>>** for additional requirements.

C. Demonstrate proper operation of **<< equipment; or _____>>** to **<<Owner>>**'s designated **<< representative; personnel; or _____>>**.

D. Training: Train **<<Owner>>**'s personnel on operation and maintenance of system.

1. Training Reference: Operation and maintenance manual and additional training materials as required.
2. Provide minimum of **<< two hours; one day; or _____>>** of training.

END OF SECTION 237200

DRAFT

SECTION 237313
MODULAR INDOOR CENTRAL-STATION AIR-HANDLING UNITS

PART 2 PRODUCTS

1.01 CASING CONSTRUCTION

A. Full Perimeter Base Rail:
   1. Construct of **<< galvanized steel; or _____>>**.
   2. Provide base rail of sufficient height to raise unit for external trapping of condensate drain pans.

B. Casing:
   1. Construct of one piece, insulated, double wall panels.
   2. Provide mid-span, no through metal, internal thermal break.
   3. Construct outer panels of **<< galvanized steel; stainless steel; or _____>>** and inner panels of **<< galvanized steel; stainless steel; or _____>>**.
   4. Casing Air Pressure Performance Requirements:
      a. Able to withstand up to **<< 8 in-wc; or __ in-wc>>** positive or negative static pressure.
      b. Not to exceed **<< 0.0042 inches per inch; or _____ inches per inch>>** deflection at **<< 1.5; or ___>>** times design static pressure up to a maximum of plus **<< 8 in-wc; or ___ in-wc>>** in positive pressure sections and minus **<< 8 in-wc; or __ in-wc>>** in negative pressure sections.

C. Access Doors:
   1. Construction, thermal and air pressure performance same as casing.
   2. Provide surface mounted handles on hinged, swing doors.

D. Outside Air and Exhaust Air Weather Hood:
   1. Fabricate from same material as casing outer panel.
   2. Extend hood past perimeter of unit casing opening so as not to instruct airflow path.
   3. Paint hoods with same finish as external surface of outdoor units.
   4. Provide inlet hood for each fresh air damper with a**<< sine wave; _____; or None - N/A>>** moisture eliminator to prevent entrainment of water into the unit from outside air.
   5. Provide exhaust hoods for each exhaust air opening.
   6. Size each hood for 100 percent of nominal fresh air damper capacities.
   7. Protect each hood with **<< bird screen; and _____>>** to prevent **<< nesting; and _____>>** at intake or exhaust airflow paths.

E. Unit Flooring: Construct with sufficient strength to support expected people and equipment loads associated with maintenance activities.

F. Casing Leakage: Seal joints and provide airtight access doors so that air leakage does not exceed **<< one; or ___>>** percent of design flow at the specified casing pressure.

G. Insulation:
   1. Provide minimum thermal thickness of **<< 12 R; or ___ R>>** throughout.
   2. Completely fill panel cavities in each direction to prevent voids and settling.
   3. Comply with **<<NFPA 90A>>**.

H. Drain Pan Construction:

DRAFT

1. Provide **<< cooling coil; humidifier; and _____>>** sections with an insulated, double wall, **<< galvanized steel; stainless steel; or _____>>** drain pan complying with **<<ASHRAE Std 62.1>>** for indoor air quality and sufficiently sized to collect all **<< condensate; and _____>>**.
2. Slope in two planes to promote positive drainage and eliminate stagnate water conditions.
3. Locate outlet of sufficient diameter at lowest point of pan to prevent overflow at normal operating conditions.
4. Provide**<< threaded; _____; or None - N/A>>** drain connections constructed of drain pan material, extended sufficient distance beyond the base to accommodate field installed, condensate drain trapping.

I. Louvers: **<< Stationary; Adjustable; or _____>>**, of galvanized steel, **<< 4 inches; 6 inches; or _____ inches>>** deep with plenum,**<< nylon bearings,; _____ ,; or None - N/A>> << 1/2-inch>>** mesh, **<< 0.04-inch>>** galvanized wire bird screen in **<< aluminum; galvanized; or _____>>** frame, and bearing AMCA Certified Ratings Seal in accordance with **<<AMCA 500-L>>**. Furnish adjustable louvers with hollow vinyl bulb edging on blades and foam side stops to limit leakage to maximum 2 percent at **<< 4 in-wc>>** differential pressure when sized for **<< 2000 fpm>>** face velocity.

J. Finish:

1.02 FAN SECTION

A. Type: **<< Forward curved,; Backward inclined,; Air foil,; or _____>> << single width, single inlet, centrifugal; double width, double inlet, centrifugal; vane axial; or _____>> << plug; or None - N/A>>** fan, in accordance with **<<AMCA 99>>**. **<< See Section 233413; See Section 233416; or None - N/A>>**

B. Performance Ratings: Determined in accordance with **<<AMCA 210>><< and labeled with AMCA Certified Rating Seal; _____; or None - N/A>>**.

C. Sound Ratings: **<<AMCA 301>>**; tested to **<<AMCA 300>><< and label with AMCA Certified Sound Rating Seal; _____; or None - N/A>>**.

D. Bearings: Self-aligning, grease lubricated, with lubrication fittings extended to exterior of casing with **<< plastic; aluminum; copper; or _____>>** tube and grease fitting rigidly attached to casing.

E. External Motor Junction Box: Factory mount NEMA 4 external junction box and connect to extended motor leads from internally mounted motors.

F. Motor Wiring Conduit: Factory wire fan motor wiring to the unit mounted **<< starter-disconnect; variable frequency drive; external motor junction box; and _____>>**.

G. Fan Accessories:

H. Flexible Duct Connections:
1. For separating fan, coil, and adjacent sections.

I. Drives:
1. Comply with **<<AMCA 99>>**.
2. Bearings: Heavy duty pillow block type, **<< ball bearings, with ABMA STD 9 L-10 life at 50,000 hours; ball bearings, with ABMA STD 9 L-50 life at 100,000 hours; roller bearings with ABMA STD 11 L-10 life at 120,000 hours; roller bearings with ABMA STD 11 L-50 life at 400,000 hours; or _____>>**.
3. Shafts: Solid, hot rolled steel, ground and polished, with key-way, and protectively coated with lubricating oil.

DRAFT

4. V-Belt Drive: Cast iron or steel sheaves, dynamically balanced, bored to fit shafts, and keyed. Variable and adjustable pitch sheaves for motors **<< 15 hp>>** and under selected so required rpm is obtained with sheaves set at mid-position; fixed sheave for **<< 20 hp>>** and over, matched belts, and drive rated as recommended by manufacturer or minimum 1.5 times nameplate rating of the motor.
5. Belt Guard: Fabricate to **<<SMACNA (DCS)>>**; **<< 0.106 inch>>** thick, **<< 3/4 inch>>** diamond mesh wire screen welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short circuiting vibration isolation, with provision for adjustment of belt tension, lubrication, and use of tachometer with guard in place.

1.03 COIL SECTION

A. Casing: Provide access to both sides of coils. Enclose coils with headers and return bends **<< exposed outside; fully contained within; or _____>>** casing. Slide coils into casing through removable end panel**<< with blank off sheets and sealing collars at connection penetrations; _____; or None - N/A>>**.

B. Drain Pans: **<< 24 inch>>** downstream of coil and down spouts for cooling coil banks more than one coil high.

C. Eliminators: Three break of **<< PVC; galvanized steel; Type 304 stainless steel; or _____>>**, mounted over drain pan.

D. Air Coils:
1. Certify capacities, pressure drops, and selection procedures in accordance with **<<AHRI 410>>**.

E. Fabrication:
1. Tubes: **<< 5/8 inch>>** OD seamless copper expanded into fins, brazed joints.
2. Fins: Aluminum.
3. Casing: Die formed channel frame of galvanized steel.

1.04 FILTER AND AIR CLEANER SECTION

A. General: Provide filter sections with filter racks, minimum of one access door for filter removal, and filter block-offs to prevent air bypass.

B. Differential Pressure Gauge:
1. Provide factory installed dial type differential pressure gauge, flush mounted with casing outer wall, and fully piped to both sides of each filter to indicate status.
2. Maintain plus/minus **<< 5 percent; or _____ percent>>** accuracy within operating limits of **<< 20 degrees F; or ___ degrees F>>** to **<< 120 degrees F; or ____ degrees F>>**.

1.05 DAMPER SECTION

A. **<< Mixing; Filter-Mixing; or _____>>** Section: Provide a functional section to support the damper assembly for modulating the volume of **<< outdoor; return; exhaust; and _____>>** air.

B. Damper Blades:
1. Double-skin airfoil design with metal, compressible jamb seals and extruded-vinyl blade-edge seals on each blade.
2. Self-lubricating stainless steel or synthetic sleeve bearings.
3. Comply with **<<ASHRAE Std 90.1 I-P>>** for rated maximum leakage rate.
4. Provide leakage testing and pressure ratings in compliance with **<<AMCA 500-D>>** test methods.

DRAFT

5. Arrange in parallel or opposed-blade configuration.

C. Barometric Relief Dampers:
1. Frame: Roll formed galvanized steel.
2. Blades: Roll formed galvanized steel.
3. Blade Seals: Extruded vinyl, mechanically attached to the blade edge.
4. Material:

DRAFT

SECTION 237413
PACKAGED OUTDOOR CENTRAL-STATION AIR-HANDLING UNITS

PART 2 PRODUCTS

1.01 MANUFACTURED UNITS

A. General: Roof mounted units having **<< gas burner; electric heating elements; or _____>>** and electric refrigeration.

B. Description: Self-contained, packaged, factory assembled and prewired, consisting of cabinet and frame, supply fan,**<< return fan,; _____ ,; or None - N/A>><< heat exchanger and burner,; electric heating elements,; _____ ,; or None - N/A>><< heat recovery coil,; _____ ,; or None - N/A>>** controls, air filters, refrigerant cooling coil and compressor, condenser coil and condenser fan.

C. Refrigerant: Use only refrigerants that have ozone depletion potential (ODP) of **<< zero; or _____>>** and global warming potential (GWP) **<< no greater than that allowed by federal code.; of less than 50.; or _____>>**

1.02 FABRICATION

A. Cabinet: **<< Steel; Galvanized steel; or _____>>** with baked enamel finish, including access **<< panels with screwdriver operated flush cam type fasteners; doors with piano hinges and locking handle; or _____>>**. Structural members shall be minimum **<< 18 gauge, 0.0478 inch>>**, with access doors or panels of minimum **<< 20 gauge, 0.0359 inch>>**.

B. Heat Exchangers: **<< Aluminized; Stainless; or _____>>** steel, of welded construction.

C. Supply**<< and Return; and Exhaust; _____; or None - N/A>>** Fan: Forward curved centrifugal type, resiliently mounted with V-belt drive,**<< adjustable variable pitch pulley,; _____ ,; or None - N/A>>** and rubber isolated hinge mounted**<< high efficiency; _____; or None - N/A>>** motor**<< or direct drive; _____; or None - N/A>>**; see Section **<< 230548>>**.**<< Isolate complete fan assembly.; _____ .; or None - N/A>>**

1.03 BURNER

A. Gas Burner: **<< Atmospheric; Induced draft; Forced draft; or _____>>** type burner with adjustable combustion air supply, pressure regulator, gas valves, manual shut-off, intermittent spark or glow coil ignition, flame sensing device, and automatic 100 percent shut-off pilot.

B. Gas Burner Safety Controls: Energize ignition, limit time for establishment of flame, prevent opening of gas valve until pilot flame is proven, stop gas flow on ignition failure, energize blower motor, and after airflow proven and slight delay, allow gas valve to open.

1.04 << EVAPORATOR; INDOOR; OR _____>> COIL

A. Provide copper tube aluminum fin coil assembly with galvanized drain pan and connection.

B. Provide capillary tubes or thermostatic expansion valves for units of **<< 6 Tons of refrigeration>>** capacity and less, and thermostatic expansion valves and alternate row circuiting for units **<< 7.5 Tons of refrigeration>>** cooling capacity and larger.

1.05 COMPRESSOR

A. Provide **<< hermetic; semi-hermetic; or _____>>** compressors, 3600 rpm maximum, resiliently mounted with positive lubrication, crankcase heater, high and low pressure safety

DRAFT

controls, motor overload protection, suction and discharge service valves and gauge ports, and filter drier.

1.06 << CONDENSER; OUTDOOR; OR _____>> COIL

A. Provide copper tube **<< aluminum; copper; or _____>>** fin coil assembly with subcooling rows**<< and coil guard; _____; or None - N/A>>**.

B. Provide direct drive propeller fans, resiliently mounted with fan guard, motor overload protection, wired to operate with compressor.**<< Provide high efficiency fan motors.; _____ .; or None - N/A>>**

1.07 HEAT RECOVERY COIL

A. Provide copper tube aluminum fin coil assembly**<< with multiple circuits; _____; or None - N/A>>** arranged to provide heat recovery.

END OF SECTION 237413

SECTION 237416
PACKAGED ROOFTOP AIR-CONDITIONING UNITS

PART 1 GENERAL

1.01 RELATED REQUIREMENTS

A. Section **<< 230548 - Vibration and Seismic Controls for HVAC>>**.

1.02 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Product Data: Provide capacity and dimensions of manufactured products and assemblies required for this project. Indicate electrical service with electrical characteristics and connection requirements, and duct connections.

C. Shop Drawings: Indicate capacity and dimensions of manufactured products and assemblies required for this project. Indicate electrical service with electrical characteristics and connection requirements, and duct connections.

D. Manufacturer's Instructions: Indicate assembly, support details, connection requirements, and include start-up instructions.

E. Operation and Maintenance Data: Include manufacturer's descriptive literature, operating instructions, installation instructions, maintenance and repair data, and parts listing.

F. Warranty: Submit manufacturer's warranty and ensure forms have been filled out in **<<Owner>>**'s name and registered with manufacturer.

1.03 DELIVERY, STORAGE, AND HANDLING

A. Protect units from physical damage by storing off site until roof mounting curbs are in place and ready for immediate installation of units.

1.04 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Provide a **<< five; or _____>>** year warranty to include coverage for **<< refrigeration compressors; heat exchangers; or _____>>**.

DRAFT

2.02 PACKAGED, SMALL-CAPACITY, ROOFTOP AIR-CONDITIONING UNITS

A. General: Roof mounted units having **<< gas burner; electric heating elements; or _____>>** and electric refrigeration that are 6 tons and smaller in capacity.

B. Description: Self-contained, packaged, factory assembled and prewired, consisting of cabinet and frame, supply fan,**<< return fan,; _____ ,; or None - N/A>><< heat exchanger and**

burner,; electric heating elements,; _____ ,; or None - N/A>><< heat recovery coil,; _____ ,; or None - N/A>> controls, air filters, refrigerant cooling coil and compressor, condenser coil and condenser fan.

C. Refrigerant: Use only refrigerants that have ozone depletion potential (ODP) of **<< zero; or _____>>** and global warming potential (GWP) **<< no greater than that allowed by federal code; of less than 50; or _____>>**.

2.03 PACKAGED, INTERMEDIATE-CAPACITY, ROOFTOP AIR-CONDITIONING UNITS

A. General: Roof mounted units having **<< gas burner; electric heating elements; or _____>>** and electric refrigeration that are 7.5 tons to 25 tons in capacity.

B. Description: Self-contained, packaged, factory assembled and prewired, consisting of cabinet and frame, supply fan,**<< return fan,; _____ ,; or None - N/A>><< heat exchanger and burner,; electric heating elements,; _____ ,; or None - N/A>><< heat recovery coil,; _____ ,; or None - N/A>>** controls, air filters, refrigerant cooling coil and compressor, condenser coil and condenser fan.

C. Refrigerant: Use only refrigerants that have ozone depletion potential (ODP) of **<< zero; or _____>>** and global warming potential (GWP) **<< no greater than that allowed by federal code; of less than 50; or _____>>**.

2.04 PACKAGED, LARGE-CAPACITY, ROOFTOP AIR-CONDITIONING UNITS

A. General: Roof mounted units having **<< gas burner; electric heating elements; or _____>>** and electric refrigeration that are 25 tons and larger in capacity.

B. Description: Self-contained, packaged, factory assembled and prewired, consisting of cabinet and frame, supply fan,**<< return fan,; _____ ,; or None - N/A>><< heat exchanger and burner,; electric heating elements,; _____ ,; or None - N/A>><< heat recovery coil,; _____ ,; or None - N/A>>** controls, air filters, refrigerant cooling coil and compressor, condenser coil and condenser fan.

C. Refrigerant: Use only refrigerants that have ozone depletion potential (ODP) of **<< zero; or _____>>** and global warming potential (GWP) **<< no greater than that allowed by federal code; of less than 50; or _____>>**

2.05 SPLIT-SYSTEM ROOFTOP UNITS

A. General: Roof mounted units having **<< gas burner; electric heating elements; or _____>>** and electric refrigeration that are 3 to 6 tons in capacity.

B. Description: Split-system, packaged, factory assembled and prewired, consisting of cabinet and frame, supply fan,**<< return fan,; _____ ,; or None - N/A>><< heat exchanger and burner,; electric heating elements,; _____ ,; or None - N/A>><< heat recovery coil,; _____ ,; or None - N/A>>** controls, air filters, refrigerant cooling coil.

C. Refrigerant: Use only refrigerants that have ozone depletion potential (ODP) of **<< zero; or _____>>** and global warming potential (GWP) **<< no greater than that allowed by federal code; of less than 50; or _____>>**.

2.06 CASING

A. Cabinet: **<< Steel; Galvanized steel; or _____>>** with baked enamel finish, including access **<< panels with screwdriver-operated flush, cam type fasteners; doors with piano hinges and locking handle; or _____>>**. Structural members to be minimum **<< 18 gauge, 0.0478 inch>>**, with access doors or panels of minimum **<< 20 gauge, 0.0359 inch>>**.

DRAFT

B. Insulation: **<< One-inch>>** thick, neoprene-coated glass fiber with edges protected from erosion.

2.07 FANS

A. Supply**<< and Return; and Exhaust; _____; or None - N/A>>** Fan: Forward curved centrifugal type, resiliently mounted with V-belt drive,**<< adjustable variable pitch pulley,; _____ ,; or None - N/A>>** and rubber isolated hinge mounted. Provide with**<< high efficiency; _____; or None - N/A>>** motor**<< or direct drive as indicated; _____; or None - N/A>>.<< Isolate complete fan assembly.; _____ .; or None - N/A>>** See Section **<< 230548>>**.

2.08 BURNERS

A. Gas Burner: **<< Atmospheric; Induced draft; Forced draft; or _____>>** type burner with adjustable combustion air supply, pressure regulator, gas valves, manual shut-off, intermittent spark or glow coil ignition, flame-sensing device, and automatic 100 percent shutoff pilot.

B. Gas Burner Safety Controls: Energize ignition, limit time for establishment of flame, prevent opening of gas valve until pilot flame is proven, stop gas flow on ignition failure, energize blower motor, and after airflow proven and slight delay, allow gas valve to open.

2.09 ELECTRIC HEATING COIL

A. **<< Finned tube heating elements; Helical nickel-chrome resistance wire coil heating elements with refractory ceramic support bushings; or _____>>** easily accessible with automatic reset thermal cut-out. Provide with built-in **<< magnetic; mercury; or _____>>** contactors, galvanized steel frame,**<< control circuit transformer and fuse,; _____ ,; or None - N/A>><< manual reset thermal cut-out,; _____ ,; or None - N/A>><< airflow proving device,; _____ ,; or None - N/A>><< pilot duty toggle switch.; _____ ,; or None - N/A>>** load fuses.

B. Controls: Start supply fan before electric elements are energized and continue operating until air temperature reaches minimum setting, with switch for continuous fan operation.

2.10 << EVAPORATOR; INDOOR; OR _____>> COIL

A. Provide copper tube aluminum fin coil assembly with galvanized drain pan and connection.

B. Provide capillary tubes or thermostatic expansion valves for units of **<< 6 tons>>** capacity and less, and thermostatic expansion valves and alternate row circuiting for units **<< 7.5 tons>>** cooling capacity and larger.

2.11 << CONDENSER; OUTDOOR; OR _____>> COIL

A. Provide copper tube **<< aluminum; copper; or _____>>** fin coil assembly with subcooling rows**<< and coil guard; _____; or None - N/A>>**.

B. Provide direct drive propeller fans, resiliently mounted with fan guard, motor overload protection, wired to operate with compressor.**<< Provide high efficiency fan motors.; _____ .; or None - N/A>>**

2.12 COMPRESSORS

A. Provide **<< hermetic; semi-hermetic; or _____>>** compressors, 3600 rpm maximum, resiliently mounted with positive lubrication, crankcase heater, high and low pressure safety controls, motor overload protection, suction and discharge service valves and gauge ports, and filter drier.

DRAFT

B. For heat pump units, provide reversing valve, suction line accumulator,**<< discharge muffler.; _____ .; or None - N/A>>** flow control check valve, and solid-state defrost control utilizing thermistors.

2.13 AIR FILTERS:

A. **<< 2-inch>>** thick, glass fiber disposable media in metal frames.

2.14 OPERATING CONTROLS

A. Provide low voltage, adjustable**<< room; ____; or None - N/A>>** thermostat to control **<< burner operation; heater stages in sequence with delay between stages; or _____>><< , compressor and condenser fan.; , _____ .; or None - N/A>>** and supply fan to maintain temperature setting.

1. Include system selector switch **<< heat-off-cool; off-heat-auto-cool; or _____>><< and auto-on fan control switch; _____; or None - N/A>>**.

B. Provide remote-mounted auto-on fan control switch.

2.15 OPERATING CONTROLS - SINGLE ZONE UNITS

A. Electric solid state microcomputer-based room thermostat,**<< located as indicated in service area with remote sensor; _____; or None - N/A>><< located as indicated in service area with remote sensor; _____; or None - N/A>>**.

2.16 OPERATING CONTROLS - VARIABLE VOLUME UNITS

A. Temperature transmitter located in supply air to signal electronic logic panel to control mixing dampers and cooling in sequence. Mixing section to operate as first stage of cooling and revert to minimum outside air above approximately **<< 75 degrees F>>** as determined by **<< enthalpy; temperature; or _____>>** of return and outdoor air.

B. Control cooling by cycling compressors, cylinder unloading, and hot gas bypass.

2.17 ROOF CURBS

A. Roof Mounting Curb: **<< 24 inches>>** high, galvanized steel, channel frame with gaskets, nailer strips.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that roof is ready to receive work and opening dimensions are as **<< indicated on shop drawings.; required by manufacturer.; or _____ .>>**

B. Verify that proper power supply is available.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Mount units on factory built roof mounting curb providing watertight enclosure to protect ductwork and utility services. Install roof mounting curb level.

3.03 SYSTEM STARTUP

A. Prepare and start equipment. Adjust for proper operation.

DRAFT

3.04 CLOSEOUT ACTIVITIES

A. See Section **<< 017800 - Closeout Submittals>>** for additional submittals.

B. See Section **<< 017900 - Demonstration and Training>>** for additional requirements.

C. Demonstrate proper operation of **<< equipment; or _____>>** to **<<Owner>>**'s designated **<< representative; personnel; or _____>>**.

3.05 MAINTENANCE

A. See Section **<< 017000 - Execution and Closeout Requirements>>** for additional requirements relating to maintenance service.

B. Provide service and maintenance of packaged rooftop units for **<< one year; ____ years; or _____>>** from Date of Substantial Completion.

C. Provide routine maintenance service with a two-month interval as maximum time period between calls.

D. Include maintenance items as outlined in manufacturer's operating and maintenance data, including minimum of six filter replacements, minimum of one fan belt replacement, and controls check-out, adjustments, and recalibration.

E. After each service call, submit copy of service call work order or report that includes description of work performed.

END OF SECTION 237416

SECTION 237433
DEDICATED OUTDOOR AIR UNITS

PART 1 GENERAL

1.01 RELATED REQUIREMENTS

A. Section **<< 230513 - Common Motor Requirements for HVAC Equipment>>**.

B. Section **<< 230548 - Vibration and Seismic Controls for HVAC>>**.

C. Section **<< 230934 - Variable-Frequency Motor Controllers>>**.

D. Section **<< 233300 - Air Duct Accessories>>**: Flexible duct connections.

E. Section **<< 251400 - Integrated Automation Local Control Units>>**.

F. Section **<< 251500 - Integrated Automation Software>>**: BAS, BMS, or SCADA.

1.02 REFERENCE STANDARDS

A. AHRI 210/240 - Performance Rating of Unitary Air-Conditioning and Air-Source Heat Pump Equipment.

B. AHRI 270 (SI/I-P) - Sound Performance Rating of Outdoor Unitary Equipment.

C. AHRI 520 - Performance Rating of Positive Displacement Condensing Units.

D. ASHRAE Std 23 - Methods for Performance Testing Positive Displacement Refrigerant Compressors and Compressor Units.

E. ASHRAE Std 90.1 I-P - Energy Standard for Buildings Except Low-Rise Residential Buildings.

F. NFPA 70 - National Electrical Code.

G. NFPA 90A - Standard for the Installation of Air-Conditioning and Ventilating Systems.

H. UL (DIR) - Online Certifications Directory.

I. UL 207 - Standard for Refrigerant-Containing Components and Accessories, Nonelectrical.

1.03 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Product Data: Provide data with dimensions, duct and service connections, accessories, controls, electrical nameplate data, and wiring diagrams.

C. Shop Drawings: Indicate dimensions, duct and service connections, accessories, controls, electrical nameplate data, and wiring diagrams.

D. Manufacturer's Instructions: Indicate rigging, assembly, and installation instructions.

E. Operation And Maintenance Data: Include manufacturer's descriptive literature, operating instructions, installation instructions, maintenance and repair data, and parts listing.

F. Warranty: Submit manufacturers warranty and ensure forms have been filled out in **<<Owner>>**'s name and registered with manufacturer.

1.04 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Provide **<< five; or _____>>** year manufacturers warranty for **<< compressor/condenser unit; or _____>>**.

DRAFT

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. AAON, Inc.

B. Annexair.

C. Innovent.

D. Venmar - Nortek Air Solutions.

E. XeteX.

2.02 << INDOOR-MOUNTED; MODULAR-INDOOR; OUTDOOR-MOUNTED; ROOF-MOUNTED; OR _____>> DOAS PERFORMANCE REQUIREMENTS

A. Performance Ratings: **<< ASHRAE Std 90.1; ASHRAE Std 90.2; or _____>>**, EER and COP as applicable.

B. Regulatory Requirements: **<<AHRI 270 (SI/I-P)>>** rated, **<<NFPA 70>>**, and **<<UL (DIR)>>** listed.

C. Electrical: **<< 480; 220; or _____>>** VAC, 3-phase, 60 Hz, single point to factory-mounted fused disconnect switch internally wired into motors and compressors, and other powered components including system safeties.

2.03 << INDOOR-MOUNTED; MODULAR-INDOOR; OUTDOOR-MOUNTED; ROOF-MOUNTED; OR _____>> DOAS

A. Packaged Unit:

1. Casing and Components:
   a. Fabrication: **<<AHRI 210/240>><< and UL 207; _____; or None - N/A>>** construction, **<<ASHRAE Std 23>>** tested.
   b. **<< 18 gauge, 0.0478 inch>>** steel panels reinforced with structural angles and channels to ensure rigidity.
   c. Provide bolted access panels to access each sections from either side of unit.
   d. Provide hinged door with lockable handle for serviceable sections.
   e. Drain Pan: Galvanized steel with corrosion-resistant coating.
2. Performance Ratings: **<< ASHRAE Std 90.1; ASHRAE Std 90.2; or _____>>**, EER and COP as applicable.
3. Regulatory Requirements: **<<AHRI 270 (SI/I-P)>>** rated, **<<NFPA 70>>**, and **<<UL (DIR)>>** listed.
4. Insulation: Minimum **<< 1/2 inch>>** thick acoustic duct liner for lining cabinet interior.
5. External Surface Finish: Heat resistant baked enamel.
6. Outdoor Installation: Weatherproofed casing, with intake louver or hood.
7. Outside Air Damper with Rain Hood and Screen:
   a. Dampers to modulate when unit is on economizer, space pressurization, or CO2 control.

B. Filter Section:

1. Filter: Removable, **<< 2 inches; 4 inches; or _____ inches>>** thick **<< MERV-7; MERV-8; MERV-11; MERV-13; MERV-14; MERV-___; combined MERV-8 and MERV-14; or _____>>**.

C. **<< Heating; Preheating; Preheating and Heating; or _____>>** Section:

DRAFT

1. Indirect Gas-Fired Furnace:
   a. Fully sealed **<< natural gas; propane gas; or _____>>** burning assembly configured for modulated 25:1 turn down ratio using electrically operated devices including modulating main gas valve, shut down valve, main gas, and pilot gas regulators. Manual main gas shut-off valve and pilot adjustment valve.
   b. Insulation: Neoprene faced glass fiber insulation, **<< 1 inch>>** thick, on **<< inlet components to burner profile plate; complete unit; or _____>>**.
   c. Observation Port: On burner section for observing main and pilot flames.
   d. Pilot: Electrically ignited by spark rod through high voltage ignition transformer.
   e. Damper: Motorized with end switch to prove position before burner will fire.
2. Electrical:
   a. **<< Finned tube heating elements; Helical nickel-chrome resistance wire coil heating elements with refractory ceramic support bushings; or _____>>** easily accessible with automatic reset thermal cut-out, built-in **<< magnetic contactors; mercury contactors; silicone-controlled rectifier (SCR) interface; or _____>>**, galvanized steel frame with **<< airflow proving switch; load fuse; manual reset switch; pilot-duty toggle switches; step-down controls transformer; service lights; service GFCI receptacle; thermal cut-out switch; and _____>>**.
   b. Controls: Start supply fan before electric elements are energized and continue operating until air temperature reaches minimum setting, with switch for continuous fan operation. Integrate or coordinate controls with unit controller.

D. Cooling Section:
1. **<< Chilled; Glycol; or _____>>** Water:
   a. Provide copper tube aluminum fin coil assembly with galvanized drain pan and connection.
   b. Provide capillary tubes or thermostatic expansion valves for units of **<< 6 Tons>>** capacity and less, and thermostatic expansion valves and alternate row circuiting for units **<< 7.5 Tons>>** cooling capacity and larger.
2. Air-Source Heat Pump:
   a. Packaged air-source heat pump with integrated or coordinated controls.
   b. Compressor Section:
      1) Hermetically sealed, direct-driven **<< single-stage scroll; dual-stage scroll; or _____>>** type with centrifugal type oil pumps.
      2) Motor: Suction gas-cooled with voltage utilization range of plus/minus 10 percent of unit nameplate voltage.
      3) Internal spring isolation and sound muffling to minimize vibration transmission and noise.
      4) External high-and low-pressure switches.
   c. Refrigerant Load Control: Provide **<< hot-gas bypass; hot-gas reheat coil; and _____>>**.
   d. Evaporator Section: Internally finned **<< aluminum; copper; cupro-nickel; or _____>>** tubes mechanically bonded to aluminum plate fins.
3. **<< Packaged; Split; or _____>>** DX Cooling:
   a. Configuration: **<<AHRI 520>>**-rated, **<< R-454B; R-410A; or _____>>** refrigerant system with hot gas bypass.
   b. Evaporator Coil: Copper tube aluminum fin coil assembly with alternate row circuiting, and with galvanized drain pan and thermostatic expansion valve.

DRAFT

c. Compressor: **<< One; Two; Inverter-duty; or ___>>** hermetic **<< single-stage scroll; dual-stage scroll; reciprocating; or _____>>**, 3,600 rpm maximum resilience with positive lubrication, crankcase heater, high pressure control, low pressure control, motor overload protection, service valves and dryer.

d. Condenser Side: Aluminum fin and copper tube coil, direct drive axial fan resiliently mounted, galvanized fan guard. ECM condenser fans.

e. Operating and Safety Controls: Internally coordinated with main unit controls.

E. Fan Section:

1. Provide direct or plenum mounted **<< 2 speed; 5 speed; constant volume; variable-speed; or _____>>** fan motors; see Section **<< 230513>>**.
2. Draw-through, **<< forward; backward; or _____>>**-curved fan, constructed of corrosion-resistant, galvanized material and designed for efficient, quiet operation.
3. Factory program for both soft start and constant flow output over static pressure range.
4. Provide preinstalled neutral wire protection when required to support specified fan type.
5. Motor to include thermal overload protection, quick disconnect plug, and permanently lubricated bearings.
6. Belt-Driven Motor Requirements: Provide adjustable blower motor/sheave combination device based on indicated flow performance requirements. Statically and dynamically balanced centrifugal fan mounted on solid steel shaft with heavy-duty, self-aligning, prelubricated ball bearings and V-belt drive with matching motor sheaves and belts.
7. Variable Speed Control: Configure controller to maintain adjustable flow setpoint for modulating or speed-switched units; see Section **<< 230934>>**.
8. Fan Turndown: Design control features to allow fan speed reduction to adjustable **<< 50; or __>>** percent of its capacity when the zone set point temperature is satisfied or when unit runs in fan-only mode.

F. Unit Controls:

1. DDC:
   a. Application Specific Controller; see Section **<< 251400>>** unless factory-provided.
   b. Tested to monitor and handle sequencing functions and other operational modes using field-mounted thermostat and other sensors.
   c. Coordination and Sequencing:
      1) Internal Devices: Include compressors, blower, sensors, switches, valves, safeties, other components.
      2) Field-Installed Devices: Solenoid valves, thermostat, EWT sensors, LWT sensors, internal and remote contacts, and other devices required for operation.
      3) Safeties: At minimum include anti-short-cycle compressor protection, condensate overflow, refrigerant high pressure, refrigerant low pressure, loss-of-charge, refrigerant freeze protection, and freezestat.
2. Thermostat:
   a. Field mounted and wired, tied into prewired control-interface terminals.
   b. Smart Thermostat:
      1) BASIntegrated Automation linked programmable thermostat; see Section **<< 251400>>**.
   c. Programmable Thermostat:
      1) Electro-mechanical type with **<< key- or pushbutton-operated display; touchscreen; or _____>>**.
      2) Programmable occupied/unoccupied weekly and holiday schedule.

DRAFT

d. Nonprogrammable Thermostat:
1) Electro-mechanical type with **<< key- or pushbutton-operated display; touchscreen; or _____>>**.
2) User-configurable, precoded options aligned with equipment functions.
e. Thermostat: Single-gang-box-mounted platinum or thermistor.
1) Local Interface to Include:
(a) Filter maintenance indicating status.

3. Local Control Panel: Interface to include on-off**<< -auto; - ____; or None - N/A>>** switch,**<< summer-winter switch,; _____ ,; or None - N/A>><< heat-off-cool switch,; _____ ,; or None - N/A>>** indicating lights for supply fan,**<< exhaust fan,; return fan,; return-exhaust fan,; _____ ,; or None - N/A>>** pilot operation, burner operation,**<< lockout indication,; _____ ,; or None - N/A>>** and clogged filter indication.

G. Electrical: **<< 480; 220; or _____>>** VAC, 3-phase, 60 Hz, single point to factory-mounted **<< fused; nonfused; or _____>>** disconnect switch internally wired into motors and compressors, and other powered components including system safeties.

H. Furnish dedicated outdoor air unit and associated components and accessories produced by a single manufacturer.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Provide unit- or duct-mounted smoke detectors and other **<<NFPA 90A>>** provisions.

C. Install unit on vibration isolator pad or roof curb; see Section **<< 230548>>**.

D. Provide flexible duct connections on**<< inlet and; _____; or None - N/A>>** outlet from unit; see Section **<< 233300>>**.

E. Connect drain pan outlet to nearest building drain system piping.

F. Adjusting: Use plenum static pressure readings against manufacturer calibration chart to adjust primary airflow as other measuring methods will not work.

G. Coordinate BAS, BMS, or Integrated Automation linking between unit controller(s) and remote **<< front-end interface; see Section 251500; software app or terminal; see Section 253500; or _____>>**.

SECTION 238126.13
SMALL-CAPACITY SPLIT-SYSTEM AIR CONDITIONERS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. AHRI 210/240 - Performance Rating of Unitary Air-Conditioning and Air-Source Heat Pump Equipment.

B. AHRI 520 - Performance Rating of Positive Displacement Condensing Units.

C. ASHRAE Std 15 - Safety Standard for Refrigeration Systems.

D. ASHRAE Std 23 - Methods for Performance Testing Positive Displacement Refrigerant Compressors and Compressor Units.

E. NEMA MG 00001 - Motors and Generators.

F. NFPA 90A - Standard for the Installation of Air-Conditioning and Ventilating Systems.

G. NFPA 90B - Standard for the Installation of Warm Air Heating and Air-Conditioning Systems.

H. UL 207 - Standard for Refrigerant-Containing Components and Accessories, Nonelectrical.

1.02 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>**, for submittal procedures.

B. Product Data: Provide rated capacities, weights, accessories, electrical nameplate data, and wiring diagrams.

C. Shop Drawings: Indicate assembly, required clearances, and location and size of field connections.

D. Design Data: Indicate refrigerant pipe sizing.

E. Manufacturer's Instructions: Indicate rigging, assembly, and installation instructions.

F. Sustainable Design Documentation: Submit manufacturer's product data on refrigerant used, showing compliance with specified requirements.

G. Operation and Maintenance Data: Include manufacturer's descriptive literature, operating instructions, installation instructions, maintenance and repair data, and parts listing.

H. Warranty: Submit manufacturers warranty and ensure forms have been filled out in **<<Owner>>**'s name and registered with manufacturer.

1.03 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>**, for additional warranty requirements.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Carrier Corporation.

B. Daikin AC.

C. LG, Inc.

D. Mitsubishi Electric Trane

DRAFT

2.02 SYSTEM DESIGN

A. Split-System Heating and Cooling Units: Self-contained, packaged, matched factory-engineered and assembled, pre-wired indoor and outdoor units; UL listed.

1. Heating and Cooling: **<< Air-source; Water-source; or _____>>** electric heat pump located in outdoor unit with evaporator**<< ; auxiliary electric heat; ; _____; or None - N/A>>**.
2. Provide refrigerant lines internal to units and between indoor and outdoor units, factory cleaned, dried, pressurized and sealed, with insulated suction line.

2.03 INDOOR AIR HANDLING UNITS FOR DUCTED SYSTEMS

A. Indoor Units: Self-contained, packaged, factory assembled, pre-wired unit consisting of cabinet, supply fan, heating and cooling element(s), controls, and accessories; wired for single power connection with control transformer.

1. Air Flow Configuration: **<< Upflow; or Horizontal>>**.
2. Cabinet: Steel with baked enamel finish, easily removed and secured access doors with safety interlock switches, glass fiber insulation with reflective liner.

B. Supply Fan: Centrifugal type rubber mounted with direct or belt drive with adjustable variable pitch motor pulley.

1. Motor:**<< NEMA MG 1;; _____ ;; or None - N/A>>** 1750 rpm **<< single speed; two-speed; multiple speed; or _____ >>**, permanently lubricated**<< , hinge mounted; , _____; or None - N/A>>**.

C. Air Filters: **<< 1 inch>>** thick **<< urethane, washable; glass fiber, disposable; or _____>>** type arranged for easy replacement.

D. Evaporator Coils: Copper tube aluminum fin assembly, galvanized or polymer drain pan sloped in all directions to drain, drain connection, refrigerant piping connections, restricted distributor or thermostatic expansion valve.

1. Construction and Ratings: In accordance with **<<AHRI 210/240>><< and UL 207; _____; or None - N/A>>**.
2. Manufacturers: System manufacturer.

2.04 OUTDOOR UNITS

A. Outdoor Units: Self-contained, packaged, pre-wired unit consisting of cabinet, with compressor and condenser.

1. Refrigerant: **<< R-454B; or R-32>>**.
2. Cabinet: **<< Galvanized steel; Steel; or _____>>** with **<< baked enamel; baked powder; powder coat paint; or _____>>** finish, easily removed and secured access doors with safety interlock switches, glass fiber insulation with reflective liner.
3. Construction and Ratings: In accordance with **<<AHRI 210/240>>** with testing in accordance with **<<ASHRAE Std 23>><< and UL 207; _____; or None - N/A>>**.

B. Compressor: **<< Hermetic; Scroll; or _____>>,<< two speed 1800 and; _____; or None - N/A>>** 3600 rpm,**<< AHRI 520; _____; or None - N/A>>** resiliently mounted integral with condenser, with positive lubrication, crankcase heater, high-pressure control, motor overload protection, service valves and drier. Provide time delay control to prevent short cycling**<< and rapid speed changes; _____; or None - N/A>>**.

C. Air Cooled Condenser: Aluminum fin and copper tube coil,**<< AHRI 520; _____; or None - N/A>>** with direct drive axial propeller fan resiliently mounted, galvanized fan guard.

1. Condenser Fans: **<< Direct-drive propeller type; or _____>>**.

DRAFT

2. Condenser Fan Motor: Enclosed, **<< 1-phase type; or _____>>**, permanently lubricated.

D. Coil: Air-cooled, aluminum fins bonded to copper tubes.

E. Accessories: Filter drier, high-pressure switch (manual reset), low pressure switch (automatic reset), service valves and gauge ports, thermometer well (in liquid line).
   1. Provide thermostatic expansion valves.
   2. Provide heat pump reversing valves.

F. Operating Controls:
   1. Control by room thermostat to maintain room temperature setting.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions and requirements of local authorities having jurisdiction.

B. Install in accordance with **<< NFPA 90A; NFPA 90B; NFPA 90A and NFPA 90B; or _____>>**.

C. Install refrigeration systems in accordance with **<<ASHRAE Std 15>>**.

END OF SECTION 238126.13

DRAFT

SECTION 238129
VARIABLE REFRIGERANT FLOW HVAC SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Air-source outdoor units.

B. Water-source outdoor units.

C. Refrigerant piping.

D. Refrigerant branch units.

E. Indoor units.

1.02 RELATED REQUIREMENTS

A. Section **<< 230529 - Hangers and Supports for HVAC Piping and Equipment>>**.

B. Section **<< 230719 - HVAC Piping Insulation>>**.

E. Section **<< 250800 - Commissioning of Integrated Automation>>**.

F. Section **<< 251500 - Integrated Automation Software>>**.

1.03 REFERENCE STANDARDS

A. AHRI 210/240 - Performance Rating of Unitary Air-Conditioning and Air-Source Heat Pump Equipment.

B. AHRI 1230 - Performance Rating of Variable Refrigerant Flow (VRF) Multi-Split Air-Conditioning and Heat Pump Equipment.

C. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures.

D. ASHRAE Std 15 - Safety Standard for Refrigeration Systems.

E. ASHRAE Std 34 - Designation and Safety Classification of Refrigerants.

F. ASHRAE Std 90.1 I-P - Energy Standard for Buildings Except Low-Rise Residential Buildings.

G. ASHRAE Std 135 - BACnet - A Data Communication Protocol for Building Automation and Control Networks.

H. ITS (DIR) - Directory of Listed Products.

I. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

J. NFPA 70 - National Electrical Code.

K. UL 1995 - Heating and Cooling Equipment.

1.04 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Product Data: Submit manufacturer's standard data sheets showing the following for each item of equipment, marked to correlate to equipment item markings indicated in Contract Documents:

1. Outdoor Units:

DRAFT

a. Refrigerant Type and Size of Charge.
b. Output and Input Cooling Capacity: **<< Btu/h>>**.
c. Output and Input Heating Capacity: **<< Btu/h>>**.
d. Operating Temperature Range, Cooling and Heating.
e. Fan Capacity: Flow in **<< cfm>>** with respective fan curves.
f. External Static Pressure (ESP): **<< In-wc>>**.
g. Sound Pressure Level: dB(A).
h. Electrical Data: Complete including motor size.
i. Maximum number of indoor units that can be served.
j. Maximum refrigerant piping run from outdoor unit to indoor unit(s).
k. Maximum height difference between outdoor unit to Indoor unit(s), both above and below.

2. Indoor Units:
a. Output and Input Cooling Capacity: **<< Btu/h>>**.
b. Output and Input Heating Capacity: **<< Btu/h>>**.
c. Fan Capacity: Flow in **<< cfm>>** with respective fan curves.
d. External Static Pressure (ESP): **<< In-wc>>**.
e. Electrical Data: Complete including motor size.
f. Maximum Lift of Built-in Condensate Pump.

3. Control Panels: Complete data of controllers, input-output points, and zones.

C. Shop Drawings: Installation drawings custom-made for this project; include as-designed HVAC layouts, locations of equipment items, refrigerant piping sizes and locations, condensate piping sizes and locations, remote sensing devices, control components, electrical connections, control wiring connections. Include:
1. Detailed piping diagrams, with branch balancing devices.
2. Condensate piping routing, size, and pump connections.
3. Detailed power wiring diagrams.
4. Detailed control wiring diagrams.
5. Locations of required access through fixed construction.
6. Drawings required by manufacturer.

D. Design Data:
1. Provide design calculations showing that system will achieve performance specified.
2. Provide design data with respective calculations for respective climate zone in accordance with **<<ASHRAE Std 90.1 I-P>>**, **<<ASHRAE Std 15>>**, and **<<ASHRAE Std 34>>**.
3. Outdoor units' connection ratio shall not exceed 130%.

E. Sustainable Design Documentation: Submit manufacturer's product data on refrigerant used, showing compliance with specified requirements.

F. Operating and Maintenance Data:
1. Manufacturer's complete standard instructions for each unit of equipment and control panel.
2. Custom-prepared system operation, troubleshooting, and maintenance instructions and recommendations.
3. Identification of replaceable parts and local source of supply.

G. Warranty: Executed warranty, made out in **<<Owner>>**'s name.

DRAFT

H. Project Record Documents: Record the following:
   1. As-installed routing of refrigerant piping and condensate piping.
   2. Locations of access panels.
   3. Locations of control panels.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications:
   1. Company that has been manufacturing variable refrigerant volume heat pump equipment for at least **<< 5 years; or _____>>**.
   2. Company that provides system design software to installers.

B. Installer Qualifications: Trained and approved by manufacturer of equipment.

1.06 DELIVERY, STORAGE AND HANDLING

A. Deliver, store, and handle equipment and refrigerant piping according to manufacturer's recommendations.

1.07 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Provide a manufacturer's extended ten year warranty from date of Substantial Completion for material to replace compressors, indoor units, branch controllers, and outdoor units that fail in materials or workmanship.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Carrier Corporation - Carrier-Toshiba.

B. Daikin Comfort Technologies North America, Inc.

C. LG Electronics U.S.A., Inc.

D. Mitsubishi Electric Trane HVAC US, LLC.

E. Coordinate any changes from the basis of design manufacturer with all other trades. Any additional costs with the alternate manufacturer shall be covered by the equipment manufacturer. No additional costs shall be incurred by the Owner.

2.02 VARIABLE REFRIGERANT FLOW SYSTEM

A. Minimum System Requirements:
   1. System Testing, Capacity Rating, and Performance:
      a. **<<AHRI 1230>>** when cooling capacity is equal or greater than **<< 65,000 Btu/h>>**.
      b. **<<AHRI 210/240>>** when cooling capacity is below **<< 65,000 Btu/h>>**.
   2. Safety Certification: Bear **<<UL 1995>>** tested and **<<ITS (DIR)>>** listed certification label.
   3. Outdoor Units: Furnish installation and surface support hardware products in accordance with **<<ASCE 7>>** for**<< seismic and; _____; or None - N/A>>** wind restraint.

B. System Design and Installation Considerations:
   1. Conditioned spaces and zones are indicated on drawings.
   2. Outside unit locations **<< are; are not; or _____>>** indicated on drawings.

DRAFT

3. Indoor unit locations **<< are; are not; or _____>>** indicated on drawings.
4. Branch refrigerant unit locations **<< are not; are; or _____>>** indicated on drawings.
5. Required equipment unit capacities are **<< indicated on drawings; indicated in the attached equipment list; not defined in Contract Documents; or _____>>**.
6. Refrigerant piping sizes are not indicated on drawings.
7. Condensate piping to nearest drain **<< is; is not; or _____>>** indicated on drawings.
8. Provide calculations showing **<<ASHRAE Std 15>>** guideline compliance.

2.03 AIR-SOURCE OUTDOOR UNITS

A. **<< Air Conditioning; Heat Pump; Heat Recovery; or _____>>** Type:
   1. DX refrigeration unit piped to one or more compatible indoor units either directly or indirectly through one or more intermediate refrigeration branch units.
   2. Manifold two or to three units as recommended by manufacturer to handle sequencing and coordination of multiple indoor units.

B. Unit Cabinet:
   1. Capable of being installed with wiring and piping to the left, right, rear or bottom.
   2. Designed to allow side-by-side installation with minimum spacing and vibration isolation.
   3. Weatherproof and corrosion resistant; rust-proofed mild steel panels coated with baked enamel finish.
   4. Sound Pressure Level: **<< 54; 55; 59; 60; or ___>>** dB measured at **<< 3 feet; or ___ feet>>** from front of unit**<< ; provide night setback sound control with selectable sound level steps of 55 dB, 50 dB, and 45 dB; ; _____; or None - N/A>>**.

C. Heat Sink Side:
   1. Condenser Fans:
      a. Provide minimum of 2 fans for each condenser within the outdoor unit.
      b. Minimum External Static Pressure: Factory set at **<< 0.12 in-wc; or ___ in-wc>>**.
      c. Fan Type: Vertical discharging, direct-driven propeller type with variable speed operation using DC-controlled ECM motors mechanically connected using permanently lubricated bearings having whole assembly protected with fan guards.
   2. Condenser Coils:
      a. **<< Copper; Hi-X seamless copper; or _____>>** tubes expanded into aluminum fins to form mechanical bond; waffle louver fin and rifled bore tube design to ensure high efficiency performance.

D. Refrigeration Side:
   1. Factory assembled and wired with instrumentation, switches, and controller(s) to handle unit specifics with direct coordination of remote controller(s) from indoor unit(s).
   2. Refrigeration Circuit: ECM driven dual scroll compressors, fans, condenser heat sink coil, expansion valves, solenoid valves, distribution headers, capillaries, filters, shutoff valves, oil separators, service ports, and refrigerant regulator.
   3. Refrigerant: **<< R-454B; or R-32>>** factory charged. Controller to alarm when charge is below capacity.
   4. Variable Volume Control: Modulate compressed refrigerant capacity automatically to maintain constant suction and condensing pressures under varying refrigerant volume required to handle remote loads. Include defrost control.
   5. Provide refrigerant subcooling to ensure the liquid refrigerant does not flash when supplying to use indoor units.

DRAFT

6. Capable of heating operation at low end of operating range as specified, without additional low ambient controls or auxiliary heat source; during heating operation, reverse cycle, oil return, or defrost is not permitted due to potential reduction in space temperature.
7. Power Failure Mode: Automatically restarts operation after power failure without loss of programmed settings.
8. Safety Devices: High pressure sensor with cut-out switch, low pressure sensor with cut-out switch, control circuit fuses, crankcase heaters, fusible plug, overload relay, inverter overload protector, thermal protectors for compressor and fan motors, overcurrent protection for the inverter and antirecycling timers.
9. Oil Recovery Cycle: Automatic, occurring 2 hours after start of operation and then every 8 hours of operation; maintain continuous heating during oil return operation.

E. Local Controls:
1. Include factory-wired instruments, sensors, switches, and safeties for unit control.
2. Configured to coordinate internal unit operation with remote indoor units and with built-in capacity to coordinate other manifolded outdoor units and remote refrigerant branch unit(s).
3. Include **<< color touchscreen; monochrome touchscreen; screen and button; or _____>>** interface to setup operating schedules, setpoints, alarms, and remote unit setpoint coordination. Also used for system troubleshooting.
4. Self diagnostic, auto-check functions to detect malfunctions and display the type and location.

F. BAS Integrated Automation Link: **<< ASHRAE Std 135 BACnet IP; ASHRAE Std 135 BACnet SC; ASHRAE Std 135 BACnet MS/TP; Modbus (PS) Modbus IP; Modbus (PS) Modbus RTU; LonMark Interoperability Guide LonWorks; Bluetooth CS Bluetooh wireless; IEEE 802.11 Wi-Fi wireless; IEEE 802.15.4 Zig-Bee wireless; or _____>>**.

G. Power:
1. Electrical Requirement: **<< 208 to 230; or 460>>** VAC, 3-phase, 60 Hz.
2. Outdoor Mounted: Provide fused **<<NEMA EN 10250>>** Type 4X disconnect switch.
3. Interior Mounted: Provide fused **<<NEMA EN 10250>>** Type 1 disconnect switch.

2.04 WATER-SOURCE OUTDOOR UNITS

A. **<< Air Conditioning; Heat Pump; Heat Recovery; or _____>>** Type:
1. DX refrigeration unit piped to one or more compatible indoor units either directly or indirectly through one or more intermediate refrigeration branch units.
2. Manifold two or to three units as recommended by manufacturer to handle sequencing and coordination of multiple indoor units.

B. Unit Cabinet:
1. Capable of being installed with wiring and piping to the left, right, rear or bottom.
2. Designed to allow side-by-side installation with minimum spacing and vibration isolation.
3. Weatherproof and corrosion resistant; rust-proofed mild steel panels coated with baked enamel finish.
4. Sound Pressure Level: **<< 54; 55; 59; 60; or ___>>** dB measured at **<< 3 feet; or ___ feet>>** from front of unit**<< ; provide night setback sound control with selectable sound level steps of 55 dB, 50 dB, and 45 dB; ; _____; or None - N/A>>**.

C. Heat Exchanger Side:
1. High efficiency stainless steel plate and frame heat exchanger.

DRAFT

2. Threaded piping-end connections for external **<< 2-pipe hot; 2-pipe cold; 2-pipe chilled; 2-pipe ground-loop; 4-pipe hot and chilled; 4-pipe hot and cold; or _____>>** water source.
3. Provide manual isolation valve and pete's plug on each pipe side for maintenance.
4. Provide unit-controlled solenoid valve on return water side to start source flow when in use.

D. Refrigeration Side:
1. Factory assembled and wired with instrumentation, switches, and controller(s) to handle unit specifics with direct coordination of remote controller(s) from indoor unit(s).
2. Refrigeration Circuit: ECM driven dual scroll compressors, fans, condenser heat sink coil, expansion valves, solenoid valves, distribution headers, capillaries, filters, shutoff valves, oil separators, service ports, and refrigerant regulator.
3. Refrigerant: **<< R-454B; R-32; or _____>>** factory charged. Controller to alarm when charge is below capacity.
4. Variable Volume Control: Modulate compressed refrigerant capacity automatically to maintain constant suction and condensing pressures under varying refrigerant volume required to handle remote loads. Include defrost control.
5. Provide refrigerant subcooling to ensure the liquid refrigerant does not flash when supplying to use indoor units.
6. Capable of heating operation at low end of operating range as specified, without additional low ambient controls or auxiliary heat source; during heating operation, reverse cycle, oil return, or defrost is not permitted due to potential reduction in space temperature.
7. Power Failure Mode: Automatically restarts operation after power failure without loss of programmed settings.
8. Safety Devices: High pressure sensor with cut-out switch, low pressure sensor with cut-out switch, control circuit fuses, crankcase heaters, fusible plug, overload relay, inverter overload protector, thermal protectors for compressor and fan motors, overcurrent protection for the inverter and antirecycling timers.
9. Oil Recovery Cycle: Automatic, occurring 2 hours after start of operation and then every 8 hours of operation; maintain continuous heating during oil return operation.

E. Local Controls:
1. Include factory-wired instruments, sensors, switches, and safeties for unit control.
2. Configured to coordinate internal unit operation with remote indoor units and with built-in capacity to coordinate other manifolded outdoor units and remote refrigerant branch unit(s).
3. Include **<< color touchscreen; monochrome touchscreen; screen and button; or _____>>** interface to setup operating schedules, setpoints, alarms, and remote unit setpoint coordination. Also used for system troubleshooting.
4. Self diagnostic, auto-check functions to detect malfunctions and display the type and location.

F. BAS Integrated Automation Link: **<< ASHRAE Std 135 BACnet IP; ASHRAE Std 135 BACnet SC; ASHRAE Std 135 BACnet MS/TP; Modbus (PS) Modbus IP; Modbus (PS) Modbus RTU; LonMark Interoperability Guide LonWorks; Bluetooth CS Bluetooh wireless; IEEE 802.11 Wi-Fi wireless; IEEE 802.15.4 Zig-Bee wireless; or _____>>**.

G. Power:
1. Electrical Requirement: **<< 208 to 230; 460; or _____>>** VAC, 3-phase, 60 Hz.
2. Outdoor Mounted: Provide fused **<<NEMA EN 10250>>** Type 4X disconnect switch.

DRAFT

3. Interior Mounted: Provide fused **<<NEMA EN 10250>>** Type 1 disconnect switch.

2.05 REFRIGERANT PIPING

A. Two-Pipe Run: Provide low-pressure vapor and high-pressure vapor gas pipes for each indoor unit selected for seasonal heating or cooling service.

B. Three-Pipe Run: Provide low-pressure vapor, high-pressure vapor gas, and liquid pipes for each indoor unit selected for off-season heating and cooling changeover service.

C. Refrigerant Flow Balancing: Provide refrigerant piping joints and headers specifically designed to ensure proper refrigerant balance and flow for optimum system capacity and performance; T-style joints are prohibited.

2.06 REFRIGERANT BRANCH UNITS

A. Outdoor unit interface to handle two or more indoor units required to do automatic off-season heating and cooling changeover.

B. Concealed box consisting internally-piped refrigeration loops, subcooling heat exchanger, and other devices coordinated by electronic valves to facilitate off-season load management between outdoor and indoor units.

C. Provide labeling and valve tags for each zone isolation valve and what equipment/ indoor unit it serves and include in valve tag schedule.

D. Minimum Requirements:

1. Control direction of refrigerant flow using electronic expansion valves; use of solenoid valves for changeover and pressure equalization is not permitted due to refrigerant noise; use of multi-port branch selector boxes is not permitted unless spare ports are provided for redundancy.
2. Provide one electronic expansion valve for each downstream indoor unit served except when multiple indoor units are connected, provide balancing joints in downstream piping to keep total capacity within branch unit capacity.
3. Energize subcooling heat exchanger during simultaneous heating and cooling service.
4. Casing: Galvanized steel sheet with flame and heat resistant foamed polyethylene sound and thermal insulation.
5. Refrigerant Connections: Braze type.
6. Condensate Drainage: Provide condensate drain where required by manufacturer.

2.07 INDOOR UNITS

A. Manufacturers:

B. Minimum Unit Requirements:

1. DX Evaporator Coil:
   a. Copper tubes expanded into aluminum fins to form a mechanical bond; waffle louver fin and high heat exchange, rifled bore tube design; factory tested.
   b. 2-, 3-, or 4-row cross fin design with 14 to 17 fins per inch and flare end-connections.
   c. Provide thermistor on liquid and gas lines wired into local controller.
   d. Refrigerant circuits factory-charged with dehydrated air for field charging.
2. Fan Section:
   a. Variable or three-speed ECM fan with automatic airflow adjustment; external static pressure selectable during commissioning.
   b. Thermally protected, direct-drive motor with statically and dynamically balanced fan blades.

DRAFT

c. Minimum-adjustable external static pressure **<< 0.32 in-wc; or ___ in-wc>>**; provide for mounting of field-installed ducts.

3. Local Unit Controls:
   a. Exposed Thermostat: Wall-mounted thermostat wired into controller. Wall sensor shall display space temperature. Do not control based on return air temperature. Controller shall maintain setpoint for two hours after loss of power.
   b. Temperature Control: Wall thermostat air control using thermistor tied to computerized Proportional-Integral-Derivative (PID) control of superheat.
   c. Temperature Zones:
      1) Single Indoor Unit: Set served space(s) as the local temperature zone.
      2) Multiple Indoor Units: For large zones, group and coordinate related indoor units with served spaces as the local temperature zone with each indoor unit as sub-zone.
4. Return Air Filter:
   a. Provide air filter rack for non-manufacturer's standard filters.
5. Condensate:
   a. Built-in condensate drain pan with PVC drain connection for drainage.
   b. Units With Built-In Condensate Pumps: Provide condensate safety shutoff and alarm.
   c. Units Without Built-In Condensate Pump: Provide built-in condensate float switch and wiring connections.
6. Cabinet Insulation: Sound absorbing foamed polystyrene and polyethylene insulation.

C. Ceiling-Recessed Cassette, Indoor Units:
1. Ceiling mount, 4-way, 2-way, or 1-way supply air flow units with central return air grill, DX coil, tubed drain pan, and built-in controls with thermostat remotely coordinated by outdoor air unit to maintain local air temperature setpoint.
2. Cabinet Height: Maximum of **<< 10 inches; or ___ inches>>** above face of ceiling.
3. Exposed Housing: White, impact resistant, with washable decoration panel.
4. Supply Airflow Adjustment:
   a. Horizontally and vertically adjustable dampers with electronic actuators.
   b. Four-way distribution field-modifiable to 3-way and 2-way airflow.
   c. Three auto-swing positions, including standard, draft prevention and ceiling stain prevention.
5. Return Air Filter: **<< Manufacturer's standard; High efficiency, MERV 8; High efficiency, MERV 13; or _____>>**.
6. Sound Pressure Range: Between 28 to 33 dB(A) at low speed measured at **<< 5 feet>>** below the unit.
7. Fan: Direct-drive turbo type, with motor output range of **<< 1/16 to 1/8 hp; or ___ hp>>**.
8. Condensate Pump: Built-in with minimum lift of **<< 21 inches; or ___ inches>>**.

D. Ceiling-Concealed Ducted Indoor Units:
1. Type: Ducted unit with DX coil, tubed drain pan, and built-in controls with thermostat remotely coordinated by outdoor air unit to maintain local air temperature setpoint.
2. Ducted horizontal discharge and side or back-end return; galvanized steel cabinet.
3. Variable or three-speed ECM fan with automatic airflow adjustment; external static pressure selectable during commissioning.
4. Return Air Filter: **<< Manufacturer's standard; High efficiency, MERV 8; High efficiency, MERV 13; or _____>>**.

DRAFT

5. Sound Pressure: Measured at low speed at **<< 5 feet>>** below unit.
6. Provide external static pressure switch adjustable for high efficiency filter operation
7. Condensate Pump: Built-in, with lift of **<< 9 inches; or ___ inches>>**, minimum.
8. Switchbox accessible from side or bottom.

E. Wall Mounted, Indoor Units:
1. DX coil, tubed drain pan, and built-in controls with thermostat remotely coordinated by outdoor air unit to maintain local air temperature setpoint.
2. Variable or three-speed ECM cross-flow fan with automatic airflow adjustment; external static pressure selectable during commissioning.
3. Return Air Filter: **<< Manufacturer's standard; High efficiency, MERV 8; High efficiency, MERV 13; or _____>>**.
4. Provide exposed unit casing with removable front grille; foamed polystyrene and polyethylene sound insulation; wall mounting plate; polystyrene condensate drain pan.
5. Airflow Control: Auto-swing louver that closes automatically when unit stops; five (5) steps of discharge angle, set using remote controller; upon restart, discharge angle defaults to same angle as previous operation.
6. Sound Pressure Range: Measured at low speed at **<< 3.3 feet>>** below and away from unit.
7. Condensate Pump: Built-in, concealed.
8. Condensate Drain Connection: **<< Back, with piping concealed in wall; Side (end), not concealed in wall; or _____>>**.

F. Air Handling, Indoor Units:
1. Vertical Configuration: Top discharge air and bottom return air; **<< floor mounted; mounted as indicated; or _____>>**.
2. Horizontal Right Configuration: Horizontal discharge air and horizontal return air.
3. DX coil, tubed drain pan, and built-in controls with thermostat remotely coordinated by outdoor air unit to maintain local air temperature setpoint.
4. Variable or three-speed ECM fan with automatic airflow adjustment; external static pressure selectable during commissioning.
5. Return Air Filter: **<< Manufacturer's standard; High efficiency, MERV 8; High efficiency, MERV 13; or _____>>**, provide pressure differential gauge with adjustable signal flag outside the unit for local monitoring.
6. Factory-painted heavy gauge steel casing insulated with sound absorbing foil faced insulation.
7. Secondary condensate drain pan; field installed.
8. Electric Heating: Field installed, with circuit breaker for each unit.
9. External insulation; field installed.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that required electrical services have been installed and are in the proper locations prior to starting installation.

B. Verify that condensate piping has been installed and is in the proper location prior to starting installation.

C. Notify **<<Architect>>** if conditions for installation are unsatisfactory.

DRAFT

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install refrigerant piping in accordance with equipment manufacturer's instructions.

C. Perform wiring in accordance with **<<NFPA 70>>**, National Electric Code (NEC).

D. Coordinate with installers of systems and equipment connecting to this system.

E. Refrigerant Piping: See Section **<< 232300>>** with Section **<< 230719>>** for insulation, and Section **<< 230529>>** for hangers and supports unless following specific manufacturer recommendations.

F. Connect indoor units to condensate piping.

G. Coordinate BAS, BMS, or Integrated Automation linking between local controller(s) and remote front end interface.

3.03 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>** for additional requirements.

B. Provide manufacturer's field representative to inspect installation prior to startup.

3.04 SYSTEM STARTUP

A. Provide manufacturer's field representative to **<< perform; observe and approve; or _____>>** system startup.

B. Prepare and start equipment and system in accordance with manufacturer's instructions and recommendations.

C. Adjust equipment for proper operation within manufacturer's published tolerances.

3.05 CLEANING

A. Clean exposed components of dirt, finger marks, and other disfigurements.

3.06 COMMISSIONING

A. See Section **<< 019113 - General Commissioning Requirements>>** for additional requirements.

B. Execute mechanical system commissioning as indicated on Section **<< 230800>>**.

C. Execute BAS, SCADA, or other linked integration automation system commissioning as indicated on Section **<< 250800>>**.

D. Replace components not functioning properly.

3.07 CLOSEOUT ACTIVITIES

A. See Section **<< 017900 - Demonstration and Training>>** for additional requirements.

B. Demonstration: Demonstrate operation of system to **<<Owner>>**'s personnel.

1. Use operation and maintenance data as reference during demonstration.
2. Briefly describe function, operation, and maintenance of each component.

C. Training: Train **<<Owner>>**'s personnel on operation and maintenance of system.

1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
2. Provide minimum of **<< two hours; one day; or _____>>** of training.
3. Instructor: Manufacturer's training personnel.

DRAFT

4. Location: At project site.

3.08 PROTECTION

A. Protect installed components from subsequent construction operations.

B. Replace exposed components broken or otherwise damaged beyond repair.

3.09 MAINTENANCE

A. See Section **<< 017000 - Execution and Closeout Requirements>>** for additional requirements.

B. Provide a separate maintenance contract for the service and maintenance of **<< VRF systems>>** for **<< 12>> << years; months; or _____>>** from Date of Substantial Completion.

END OF SECTION 238129

DRAFT

SECTION 238146
WATER-SOURCE UNITARY HEAT PUMPS

PART 1 GENERAL

1.01 RELATED REQUIREMENTS

A. Section **<< 221005 - Plumbing Piping>>**: Condensate drains.

B. Section **<< 230593 - Testing, Adjusting, and Balancing for HVAC>>**.

C. Section **<< 232113 - Hydronic Piping>>**.

D. Section **<< 232114 - Hydronic Specialties>>**.

E. Section **<< 233300 - Air Duct Accessories>>**.

F. Section **<< 251400 - Integrated Automation Local Control Units>>**.

G. Section **<< 251500 - Integrated Automation Software>>**.

H. Section **<< 253519 - Integrated Automation Control Valves>>**.

1.02 REFERENCE STANDARDS

A. ASHRAE Std 52.2 - Method of Testing General Ventilation Air-Cleaning Devices for Removal Efficiency by Particle Size.

B. ASHRAE Std 90.1 I-P - Energy Standard for Buildings Except Low-Rise Residential Buildings.

C. ASHRAE Std 135 - BACnet - A Data Communication Protocol for Building Automation and Control Networks.

D. ASHRAE Std 13256-1 - Water-Source Heat Pumps - Testing and Rating for Performance - Part 1: Water-to-Air and Brine-to-Air Heat Pumps.

E. ASTM B117 - Standard Practice for Operating Salt Spray (Fog) Apparatus.

F. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

G. UL 94 - Tests for Flammability of Plastic Materials for Parts in Devices and Appliances.

H. UL 181 - Standard for Factory-Made Air Ducts and Air Connectors.

I. UL 508 - Industrial Control Equipment.

J. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials.

K. UL 1995 - Heating and Cooling Equipment.

1.03 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Product Data: Provide drawings indicating dimensions, rough-in connections, and electrical characteristics and connection requirements.

C. Manufacturer's Instructions: Include assembly instructions, support details, connection requirements, and start-up instructions.

D. Sustainable Design Documentation: Submit manufacturer's product data on refrigerant used, showing compliance with specified requirements.

E. Operation and Maintenance Data: Provide maintenance data, parts lists, controls, and accessories. Include trouble-shooting guide.

DRAFT

F. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in **<<Owner>>**'s name and registered with manufacturer.

1.04 QUALITY ASSURANCE

A. Products Requiring Electrical Connection: Listed and classified by**<< Underwriters Laboratories Inc.; testing firm acceptable to the Authority Having Jurisdiction; or _____>>** as suitable for the purpose specified and indicated.

B. Provide ARI certificaition for compliance with ARI 13256-1 "Water-Source Heat Pumps - Testing and Rating for Performance."

1.05 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Provide a **<< five; or _____>>** year warranty to include coverage for **<< all refrigeration components; or _____>>** from the date of Substantial Completion.

C. Provide a two year warranty for whole unit. For the first two years after Substantial Completion, warranty items shall warrant a response within 24 hours from contact by owner. Labor and refrigerant shall be included in the warranty in the first two years after Substantial Completion.

1.06 SERVICE

A. Contractor providing work under this Section shall provide all preventative maintenance on the equipment for a period of two years after the date of Substantial Completion.

B. Preventative maintenance shall include items required by the manufacturer with checking unit as required or every 6 months at a minimum.

1.07 EXTRA MATERIALS

A. Furnish one set of matched fan belts for each belt-driven fan. Furnish nine sets of filters for each unit type.

PART 2 PRODUCTS

2.01 GENERAL HEAT PUMP FABRICATION REQUIREMENTS

A. Energy Efficiency: **<<ASHRAE Std 90.1 I-P>>** EER and COP ratings, minimum.

B. **<<ASHRAE Std 13256-1>>**, factory-assembled unit including safety-controls, accessories, filters, piping, cables, wires, and precharged with **<< R-454B; R-410A; or _____>>** refrigerant prior to testing.

C. Include marked terminal strip to interface field-mounted components, accessories, and thermostat.

D. Comply with **<<UL 1995>>**; place service and caution labels on unit.

E. Cabinet Assembly:

1. Construct of zinc-coated, heavy-gauge, galvanized steel with exposed edges rounded.
2. Finish: Factory apply **<< electrostatic powder paint; baked enamel; or _____>>** finish. Coordinate with **<<Architect>>** for specific color finish requirements of console units or other units installed within occupied spaces.
3. Provide access panels for inspection, cleaning, and servicing of refrigerant, controls, condensate drain pan, coil, and blower.
4. Furnish **<< 1-inch; 3-inch; or _-inch>>** duct flange on open-discharge selections.

DRAFT

5. Interior Insulation: Minimum **<< 1/2 inch; or __ inch>>** thick, dual density, bonded glass fiber.
6. Provide flame spread of less than 25, and smoke developed classification of less than 50 in compliance with **<<ASTM E84>>** and **<<UL 723>>**.
7. Sound and Noise Suppression:
   a. Compressor enclosure lined with **<< 1/2 inch; or __ inch>>** thick insulation.
   b. Include vibration isolation between compressor and heat exchanger.
   c. Include length-wise, unit base stiffeners.
   d. Foam gasket sealant around compressor and end panel perimeter.

F. Blower Section:
1. Draw-through, forward curved fan, constructed of corrosion-resistant, galvanized material and designed for efficient, quiet operation.
2. Factory program for both soft start and constant flow output over static pressure range.
3. Provide preinstalled neutral wire protection when required to support specified fan type.
4. Motor to include thermal overload protection, quick disconnect plug, and permanently lubricated bearings.
5. Variable Speed Control: Configure controller to maintain adjustable flow setpoint for modulating or speed-switched units.
6. Fan Turndown: Design control features to allow fan speed reduction to adjustable **<< 50; or __>>** percent of its capacity when the zone set point temperature is satisfied or when unit runs in fan-only mode.

G. Evaporator Section:
1. Internally finned, aluminum or copper tubes mechanically bonded to configured aluminum plate fin, corrosion inhibitor coated as indicated.
2. Refrigerant Coil Distributor Assembly: Orifice style with round copper distributor tubes.
3. Thermostatic Expansion Valve: Factory select and install for wide control range.
4. Factory leak test to minimum **<< 450 psi; or ___ psi>>** and pressure test to minimum **<< 600 psi; or ___ psi>>**.
5. Tubes: Size tubes consistent with coil capacity. Fabricate suction header from rounded copper pipe.
6. Completely evacuate air and charge with proper column of refrigerant prior to shipment.
7. Drain Pan:
   a. Construct of **<< ABS plastic; HDPE; stainless steel; other corrosion-resistant; or _____>>** material and flame rated in accordance with **<<UL 94>>** when using polymers.
   b. Slope on two planes to pitch condensate to drain connection**<< , include secondary drain; , _____; or None - N/A>>**.
   c. Float Switch: **<<UL 508>>**, rated for protection against condensate overflow, controller connected.

H. Compressor Section:
1. Provide rubber mounting devices located underneath compressor mounting base.
2. Safety Interlocked Devices:
   a. Thermal overload protection.
   b. High pressure switch for protection against excessive discharge pressure.
   c. Low pressure safety for protection against loss of refrigerant charge.

DRAFT

I. Refrigerant Tubing Lines:
   1. Tubing made of **<< aluminum; copper; or _____>>** with service pressure ports on high- and low-pressure sides.
   2. Free from contaminants and conditions such as drilling fragments, dirt, and oil.
   3. Include drier, thermal expansion valve, and other related components.
   4. Freeze Protection: **<< 15 degrees F; 30 degrees F; or __ degrees F>>**, thermistor based.
   5. Insulation: Evaporator and heat exchanger sides; minimum **<< 3/8 inch; or __ inch>>** thick elastomeric insulation.

J. Water-to-Refrigerant Heat Exchanger:
   1. Coaxial Type: Provide **<< aluminum; copper; cupro-nickel; or _____>>** tube and fins**<< , corrosion-inhibitor coated; , corrosion-inhibitor coated, and insulated; , insulated; , _____; or None - N/A>>**.
   2. Insulate heat exchanger, water lines, and refrigerant suction lines for prevention of condensation at temperatures below **<< 60 degrees F; or ___ degrees F>>**.
   3. Provide rubber isolation to heat exchanging device for enhanced sound attenuation.
   4. Freeze Protection: **<< 35 degrees F; 20 degrees F; or __ degrees F>>** by thermistor sensing.
   5. Minimum Working Pressure: **<< 400 psi; or ___ psi>>** water side, **<< 600 psi; or ___ psi>>** DX side.
   6. End Connections: Copper NPT. Provide flow shut-off ball valves.
   7. Accessories:
      a. Strainer, PT test plug, and flow regulator.
      b. Unit-controlled, return-water-side solenoid valve**<< ; see Section 253619; ; _____; or None - N/A>>**.

K. Filter Section:
   1. MERV **<< 13; or _____>>** filters per **<<ASHRAE Std 52.2>>**.
   2. Filter Box: Provide field-installed return duct-mounted filter housing with side access.
   3. For horizontal units above ceiling, provide return filter grille in lieu of filter at unit.

L. Electrical:
   1. Provide factory-installed phase loss safety device for 3-phase units.
   2. Configure unit for single point connection, include terminal for field-installed components.
   3. Include separate holes and knockouts with plastic ferrules for respective electrical and controls wiring.

M. Unit Controls:
   1. DDC:
      a. Application Specific Controller; see Section **<< 251400>>** unless factory-provided.
      b. Tested to monitor and handle sequencing functions and other operational modes using field-mounted thermostat and other sensors.
      c. Coordination and Sequencing:
         1) Internal Devices: Include compressors, blower, sensors, switches, valves, safeties, other components.
         2) Field-Installed Devices: Solenoid valves, thermostat, EWT sensors, LWT sensors, load-pump contact, source pump contact, and other devices required for operation.

DRAFT

3) Safeties: At minimum include anti-short-cycle compressor protection, condensate overflow, refrigerant high pressure, refrigerant low pressure, loss-of-charge, refrigerant freeze protection, and freezestat.

2. Thermostat:
   a. Field mounted and wired, tied into prewired control-interface terminals.
   b. Smart Thermostat:
      1) BAS- or BMS-linked programmable thermostat; see Section **<< 251400>>**.

2.02 HORIZONTAL / VERTICAL WATER-SOURCE HEAT PUMP

A. Manufacturers:
   1. Bosch Thermotechnology Corp. - Florida Heat Pump
   2. Carrier Corporation.
   3. Climate Master, Inc.
   4. Daikin Applied Americas, Inc.
   5. Trane Technologies, PLC.

B. Compressor: Hermetically sealed, single stage or two stage **<< rotary; scroll; swing; or ____>>** type as scheduled.

C. Water-to-Refrigerant Heat Exchanger: **<< Coaxial; Brazed-plate; or _____>>** type**<< with factory-installed water economizer; with factory-supplied water economizer; _____; or None - N/A>>**.

D. Blower Section: Provide **<< high-static, permanent split capacitor (PSC) motor; low-static, permanent split capacitor (PSC) motor; permanent split capacitor (PSC) motor; 5-speed, electrically commutated motor (ECM); variable-speed, electrically commutated motor (ECM); or _____>>** fan type.

E. Filter Section: Include **<< MERV 4; MERV 13; or MERV 10>>** rated air filter**<< and secondary MERV-13 rated filter; and secondary MERV- __ rated filter; and secondary MERV- __ rated filter with filter box; _____; or None - N/A>>**. Side access filter housing shall accommodate required quantity of 2-inch flat filters. Housing shall be factory-assembled, with one hinged access door with quick access latches, and be constructed of 18 gauge minimum aluminized steel.
   1. Horizontal units above ceilings shall have MERV 10 filters in return filter grilles in lieu of filters located at unit return air connection.

F. Accessories:
   1. Provide **<< ball valves; automatic balancing-valve; manual balancing-valve; hoses; Y-strainer; and _____>>**. Provide 2 foot long metal braided hoses with swivel connectors on one end, rated per UL 94 and 300 psi working pressure.
   2. Provide RectorSeal EZ-trap condensate drain with high water cutoff switch.

G. Unit Controls: **<< Factory-installed DDC with thermostat; see Section 251400; Factory-supplied DDC with thermostat; Factory-supplied DDC with wireless thermostat; Factory-supplied DDC with blind-face thermostat; Factory-supplied programmable thermostat; Factory-supplied nonprogrammable thermostat; Smart thermostat; or _____>>**.
   1. BAS Integrated Automation Link: **<< BACnet IP in accordance with ASHRAE Std 135; BACnet MS/TP in accordance with ASHRAE Std 135; BACnet SC in accordance with ASHRAE Std 135; Modbus IP in accordance with Modbus (PS); Modbus RTU in accordance with Modbus (PS); LonWorks in accordance with LonMark Interoperability Guide; Wireless (Bluetooth) in accordance with Bluetooth CS;**

DRAFT

Wireless (Wi-Fi) in accordance with IEEE 802.11; Wireless (Zig-bee) in accordance with IEEE 802.15.4; or _____>>.

2. Control Valve: Return-installed, **<< 2-position; modulating; position-adjusted; or _____>>**, **<< ball; globe; pressure independent; pressure-independent ball; or _____>>** type; **<< manufacturer provided; see Section 253519; or _____>>**.

H. Sound Package: Provide with sound attenuating compressor blankets, casings, and sound asborbing material within the heat pump.

2.03 ROOFTOP-MOUNTED WATER-SOURCE HEAT PUMP

A. Manufacturers:
1. Carrier Corporation.
2. ClimateMaster, Inc.
3. Daikin Applied Americas, Inc.
4. Trane Technologies, PLC.

B. Discharge Configuration: Roof-curb-mounted unit with bottom-end duct openings field convertible on supply and return sides to tie-in side-mounted ductwork.

C. Casing Assembly:
1. Construct of zinc-coated, heavy-gauge, galvanized steel.
2. Finish: Factory apply weather-resistant **<< baked enamel; electrostatic powder paint; or _____>>** finish. Coordinate with **<<Architect>>** for specific color finish requirements of console units or other units installed within occupied spaces.
3. Unit Surface: Test for 100 hours in salt spray in accordance with **<<ASTM B117>>**.
4. Cabinet construction allows for maintenance on one side of unit.
5. Hinged Access Doors: Factory install sheet metal hinges on indoor fan section, supply fan, and compressor control access doors.
6. Service Panels: Provide with lifting handles and water/air tight seal.
7. Indoor Air Section: Insulate exposed vertical and top covers with cleanable, foil-faced, fire-retardant, permanent, and odorless glass fiber material.
8. Base of Unit:
   a. Insulate with minimum **<< 3/8 inch; or ___ inch>>**, **<< 1 lb per cu ft ; or ___ lb per cu ft>>** density foil-faced, closed-cell material.
   b. Provisions for forklift and crane lifting.
9. Insulation Edges: Captured or sealed.
10. Base Pan: No penetrations within curb perimeter other than raised down flow discharge and return openings for protection against condensate drain back-up when required.

D. Compressor Section:
1. Hermetically sealed, direct-driven **<< single-stage scroll; dual-stage scroll; or _____>>** type with centrifugal type oil pumps.
2. Motor: Suction gas-cooled with voltage utilization range of plus/minus 10 percent of unit nameplate voltage.
3. Internal spring isolation and sound muffling to minimize vibration transmission and noise.
4. External high-and low-pressure switches.

E. Evaporator Section: Internally finned, 5/16 inch **<< aluminum; copper; cupro-nickel; or _____>>** tubes mechanically bonded to aluminum plate fins.

F. Drain Pan Section:

DRAFT

1. Construct of **<< nonferrous; stainless steel; or _____>>**, corrosion-resistant material.
2. Reversible, double sloped with provisions for through-the-base condensate drain.
3. Units with Sizes **<< 5 Tons>>** or Lower: Plastic, removable, dual-sloped drain pan, easy to clean, and reversible to allow installation of drain trap on either side of the unit.
4. Units with Sizes Above **<< 5 Tons>>**: Sloped, prepainted for corrosion resistance.

G. Water-to-Refrigerant Heat Exchanger: **<< Coaxial; Brazed-plate; or _____>>** type**<< with factory-installed water economizer; with factory-supplied water economizer; _____; or None - N/A>>**.

H. Refrigerant Load Control: Provide **<< hot-gas bypass; hot-gas reheat coil; and _____>>**.

I. Blower Section: Provide direct or plenum mounted **<< 5-speed, ECM; variable-speed, ECM; backward-inclined, belt-driven; forward-inclined, belt-driven; or _____>>** fan motors.

J. Filter Section: Include **<< MERV 8; MERV 13; or _____ >>** rated air filter**<< and secondary MERV-13 rated filter; and secondary MERV- __ rated filter; and secondary MERV- __ rated filter with filter box; _____; or None - N/A>>**.

K. Outside Air Damper with Rain Hood and Screen:
1. Damper(s) to modulate when unit is on economizer, space pressurization, or CO2 control.

L. Return Air Damper:
1. Damper(s) to modulate when unit is on economizer, space pressurization, or CO2 control.

M. Relief Damper:
1. Motorized: Coordinate motorized control to maintain flow balance during economizer control mode.

N. **<< Wet-Bulb; Dry-Bulb; or _____>>** Economizer Control:
1. Provide enthalpy sensor kit and wire into unit controller for coordinated control of outside air, return air, and relief dampers.
2. Enthalpy sensors to be either wet bulb type or temperature and humidity combination sensor for outdoor air, return air, and mixed air sides. Use temperature-only for dry bulb economizer.
3. Enthalpy sensors to apply differential enthalpy control to compare total heat content of indoor air verses outdoor air for most efficient air source.

O. Electrical:
1. **<< 208 to 230 VAC, 3-phase; 208 to 230 VAC, 1-phase; 460 VAC, 3-phase; or _____>>**, 60 Hz**<< with field-installed disconnect switch; with factory-provided disconnect switch; _____; or None - N/A>>**.
2. Through-Base Electrical with Disconnect Switch:
   a. Factory install 3-pole, molded-case, disconnect switch, installed in watertight enclosure with swinging door access, and provisions for through-base electrical connections.
   b. Provide factory wiring from switch to high-voltage terminal block.
   c. Size disconnect switch in accordance with **<<UL 1995>>**.
   d. Switch not to be used for overcurrent protection.

P. Unit Controls: **<< Factory-installed DDC with thermostat; see Section 251400; Factory-supplied DDC with thermostat; Factory-supplied DDC with wireless thermostat;**

DRAFT

Factory-supplied DDC with blind-face thermostat; Factory-supplied DDC, return-air-controlled; Factory-supplied programmable thermostat; Factory-supplied nonprogrammable thermostat; Smart thermostat; or _____>>.

1. BAS Integrated Automation Link: **<< BACnet IP in accordance with ASHRAE Std 135; BACnet MS/TP in accordance with ASHRAE Std 135; BACnet SC in accordance with ASHRAE Std 135; Modbus IP in accordance with Modbus (PS); Modbus RTU in accordance with Modbus (PS); LonWorks in accordance with LonMark Interoperability Guide; Wireless (Bluetooth) in accordance with Bluetooth CS; Wireless (Wi-Fi) in accordance with IEEE 802.11; Wireless (Zig-bee) in accordance with IEEE 802.15.4; or _____>>**.
2. Control Valve: Return-installed, **<< 2-position; modulating; position-adjusted; or _____>>**, **<< ball; globe; pressure-independent; pressure-independent ball; or _____>>** type with position tracking; **<< manufacturer provided; see Section 253519; or _____>>**.

Q. Accessories:
1. Roof Curb with Nailer Strips:
   a. Factory designed to mate with the down flow supply and return air openings, providing unit support and water tight installation.
   b. Design to allow field-fabricated rectangular supply/return ductwork to be connected directly to field assembled roof curb.
   c. Comply with NRCA requirements.

2.04 WATER-TO-WATER SOURCE HEAT PUMP

A. Manufacturers:
1. Bosch Thermotechnology**<< ; _____; or None - N/A>>**: www.bosch-thermotechnology.us/#sle.
2. **<< _____>>**.
3. **<< _____>>**.

B. General:
1. Factory assemble, pipe, internally wire, test, and fully charge with **<< R-454B; R-410A; or _____>>** refrigerant.
2. Comply with **<<ASHRAE Std 13256-1>>** and **<<UL 1995>>**.
3. Provide with filters, factory-installed safety controls, and thermostat field interface strip.
4. System Water Inlet/Outlet Connections: Female NPT copper.
5. Securely affix service and caution labels on unit in appropriate locations.

C. Cabinet:
1. Construct casing from zinc coated, heavy-gauge, galvanized steel.
2. Provide access panel(s) for inspection and servicing of refrigerant, controls, condensate drain pan, and coils.
3. Insulation:
   a. Factory insulate all panels with minimum **<< 1/2 inch; or __ inch>>** thick, dual density, bonded glass fiber.
   b. Exposed Side of Insulation: High-density, erosion-proof material suitable for use in air streams up to **<< 3,600 fpm; or ____ fpm>>**, complying with erosion requirements of **<<UL 181>>**.
   c. Provide flame spread of less than 25, and smoke developed classification of less than 50 in accordance with **<<ASTM E84>>** and **<<UL 723>>**.

DRAFT

4. Include electrical box for entrance of line voltage with separate knockout for control wiring.

D. Water-To-Refrigerant Heat Exchanger:
1. Construction: Co-axial coil for maximum heat transfer.
2. Coil Material: Deeply fluted **<< copper; cupro-nickel; or _____>>** to enhance heat transfer and minimize fouling and scaling.
3. Factory insulate heat exchanger, water lines, and refrigerant suction lines for prevention of condensation at temperatures below **<< 60 degrees F; or ___ degrees F>>**.
4. Provide rubber isolation to heat exchanging device for enhanced sound attenuation.
5. Working Pressure:
   a. Water Side: Minimum **<< 400 psi; or ___ psi>>**.
   b. Refrigerant Side: Minimum **<< 600 psi; or ___ psi>>**.

E. Compressor:
1. High efficiency **<< rotary; scroll; or ____>>** compressor.
2. External Vibration Isolation: Provide rubber mounting devices located underneath compressor mounting base.
3. Safety Devices:
   a. Internal thermal overload protection.
   b. High pressure switch for protection against excessive discharge pressure.
   c. Low pressure safety for protection against loss of refrigerant charge.

F. Refrigerant Circuits:
1. Thermal expansion device.
2. Service pressure ports on high and low pressure sides.
3. Filter driers.

G. Refrigerant Tubing:
1. Material: **<< Copper; or _____>>**.
2. Free from contaminants and conditions such as drilling fragments, dirt, and oil.
3. Insulation:
   a. Water Lines Located in Indoor Air Stream: Minimum **<< 3/8 inch; or ___ inch>>** thick elastomeric insulation.
   b. Refrigerant Lines Located in Indoor Air Stream Not Over Drain Pan: Minimum **<< 3/8 inch; or __ inch>>** thick elastomeric insulation.

H. Ball Valves: Provide for field installation between unit and supply/return lines of loop to stop water flow to unit in maintenance or service situation.

2.05 HOSE KITS, VALVES, FITTINGS, AND ACCESORIES

A. Control valves for water-source heat pumps shall be provided by the BAS provider under Section 230923.

B. **<< Automatic ; Manual ; or None - N/A>>**Balancing Valves:
1. Brass body for shutoff and hydronic balancing.

C. Ball Valves:
1. Brass body for shutoff and hydronic balancing.
2. Provide pressure/temperature ports.
3. Provide with balancing valves.

D. Y Strainers:

DRAFT

1. Bronze body.
2. "Y" type configuration with brass cap.
3. Maximum Operating Pressure: Minimum **<< 450 psi; or ___ psi>>**.
4. Screen: Stainless steel.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Floor Mounted Unit(s):
   1. Support on neoprene pads with **<< 0.125 inch; or ____ inch>>** minimum static deflection.
   2. Secure unit(s) to anchor bolts installed in concrete bases.
   3. Secure vertical units on a metal stand using 1.5-inch angle, welded with a full metal plate installed on top of stand.
   4. Provide Rubberlite, Inc. Model SCE41B neoprene/EPDM/SBR vibration isolation pad under heat pump and above sheet steel top of stand.

C. Suspended Units: Suspend from structure with threaded steel rods and **<< 0.25 inch; or ___ inch>>** minimum **<< static deflection rubber-in-shear vibration isolators; seismic restraints; and _____>>**.

D. Roof Mounted Units:
   1. Mount units on factory-built, roof mounting curb providing watertight enclosure to protect ductwork and utility services.
   2. Install roof mounting curb level.

E. Coordinate installation of units with architectural,**<< mechanical,; _____ ,; or None - N/A>>** and electrical work.

F. On water coils, provide shut-off valve on supply line and **<< balancing valve; flow control and shut-off valve; or _____>>** on return line. Provide **<< manual; float operated automatic; or _____>>** air vents at high points complete with stop valve.

G. Install wall-mounted thermostats, humidistats, and switch controls in electrical outlet boxes at heights to match lighting controls. Provide thermal break barrier for outdoor walls.

3.02 CONNECTIONS

A. Connect supply/return piping from heat pump to appropriate water source piping; see Section **<< 232113>>**. Complete end connections with **<< unions and shut-off valves; see Section 232114; hose kits; or _____>>**.

B. Connect condensate drain pan to indirect waste connection with P-trap of adequate depth to seal against fan pressure; see Section **<< 221005>>**.

C. Install cleanouts at each directional change in piping.

D. Connect supply/return air ducts with flexible connectors; see Section **<< 233300>>**.

E. Installation of piping adjacent to heat pump to allow for maintenance and service.

F. Field Install all electrical devices provided by the heat pump manufacturer not specified to be factory-installed.

DRAFT

3.03 SYSTEM STARTUP

A. Provide manufacturer's field representative to **<< perform; observe and approve; instruct; or _____>>** systems startup; see Section **<< 230593>>**.

B. Adjust for proper operation within manufacturer's published tolerances.

3.04 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>** for additional requirements.

B. Provide manufacturer's field representative to **<< test; inspect; instruct; observe; and _____>>**.

C. Inspect for and remove blocks, shipping bolts, and tie-down straps.

D. Test the heat pumps for performance compliance upon completion of the installation and energization of all electrical circuitry.

E. Operational Test: Start units to confirm unit operation and motor rotation.

F. Controls and Safety Switches: Test, adjust, and replace damaged/malfunctioning controls and equipment.

G. Coordinate BAS, BMS, or Integrated Automation linking between unit controller(s) and remote **<< front-end interface; see Section 251500; software app or terminal; see Section 253500; or _____>>**.

H. Malfunctioning Units: Remove, replace, and retest as specified above.

3.05 CLOSEOUT ACTIVITIES

A. See Section **<< 017800 - Closeout Submittals>>** for closeout submittals.

B. See Section **<< 017900 - Demonstration and Training>>** for additional requirements.

C. Demonstration: Demonstrate operation of system to **<<Owner>>** personnel.
   1. Use operation and maintenance data as reference during demonstration.
   2. Briefly describe function, operation, and maintenance of each component.

D. Training: Train **<<Owner>>**'s personnel on operation and maintenance of system.
   1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
   2. Provide minimum of **<< two hours; one day; or _____>>** of training.
   3. Instructor: Manufacturer's training personnel.
   4. Location: At project site.

END OF SECTION 238146

DRAFT

SECTION 238149
GROUND-SOURCE UNITARY HEAT PUMPS

PART 1 GENERAL

1.01 RELATED REQUIREMENTS

A. Section **<< 223000 - Plumbing Equipment>>**: Domestic water heater or storage tanks.

B. Section **<< 251400 - Integrated Automation Local Control Units>>**.

1.02 REFERENCE STANDARDS

A. ASHRAE Std 52.2 - Method of Testing General Ventilation Air-Cleaning Devices for Removal Efficiency by Particle Size.

B. ASHRAE Std 90.1 I-P - Energy Standard for Buildings Except Low-Rise Residential Buildings.

C. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

D. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials.

E. UL 1995 - Heating and Cooling Equipment.

1.03 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittal procedures.

B. Product Data: Manufacturer's data sheets for each product furnished, including:

1. Electrical and performance data showing compliance with specifications.
2. Required water flow rates and temperatures for inflow and outflow.
3. Detailed electrical wiring diagrams.
4. Storage and handling requirements and recommendations.
5. Installation instructions.
6. Start-up, troubleshooting, and TAB instructions.
7. Specimen warranty.

C. Shop Drawings: Indicate piping connections and interface to supply and return ductwork, source-side water piping to buried loop, circulator pumps, and condensate drains. Include control wiring diagrams prepared specifically for this project including unit controls interface.

D. Field Test Reports.

E. Operation and Maintenance Data: Include replaceable parts lists, parts sources, and troubleshooting guide.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this section, with not less than **<< three; or _____>>** years of**<< documented; _____; or None - N/A>>** experience.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Verify upon delivery that equipment nameplate data, including electrical data, matches specified and ordered equipment. Verify that refrigerant charge has been retained during shipping.

B. Store products in manufacturer's unopened packaging until ready for installation.

C. Store products under cover and elevated above grade.

DRAFT

1.06 WARRANTY

A. See Section **<< 017800 - Closeout Submittals>>** for additional warranty requirements.

B. Provide **<< two; or _____>>** year manufacturer warranty for compressors and motors, expansion devices, heat exchangers, and reversing valves.

PART 2 PRODUCTS

2.01 GENERAL UNITARY HEAT PUMP FABRICATION REQUIREMENTS

A. Energy Efficiency: **<<ASHRAE Std 90.1 I-P>>** EER and COP ratings, minimum.

B. Factory assemble internal components, safety controls, accessories, filters, piping, cable, and wires, then charge with **<< R-454B; R-410A; or _____>>** refrigerant prior to testing.

C. Include marked terminal strip to interface field-mounted components, accessories, and thermostat.

D. Comply with **<<UL 1995>>**, place service and caution labels on unit.

E. Cabinet Assembly:

1. Construct of zinc-coated, heavy-gauge, galvanized steel with exposed edges rounded.
2. Finish: Factory apply **<< electrostatic powder paint; baked enamel; or _____>>** finish. Coordinate with **<<Architect>>** for specific color finish requirements of console units or other units installed within occupied spaces.
3. Provide access panels for inspection, cleaning, and servicing of refrigerant, controls, condensate drain pan, coil, and blower.
4. Furnish **<< 1-inch; 3-inch; or _-inch>>** duct flange on open-discharge selections.
5. Interior Insulation: Minimum **<< 1/2 inch; or __ inch>>** thick, dual-density, bonded glass fiber.
6. Provide flame spread of less than 25, and smoke developed classification of less than 50 in accordance with **<<ASTM E84>>** and **<<UL 723>>**.
7. Sound and Noise Suppression:
   a. Mechanical Rooms: **<< 18 gauge, 0.05 inch; or ___ gauge, ___ inch>>**, minimum.
   b. Occupied Spaces: **<< 16 gauge, 0.06 inch; or __ gauge, __ inch>>**, minimum.
   c. Compressor enclosure lined with **<< 1/2 inch; or __ inch>>** thick insulation.
   d. Include vibration isolation between compressor and heat exchanger.
   e. Include length-wise unit base stiffeners.
   f. Foam gasket sealant around compressor and end panel perimeter.

F. Blower Section:

1. Draw-through, forward-curved fan, constructed of corrosion-resistant, galvanized material and designed for efficient, quiet operation.
2. Factory program for both soft start and constant flow output over static pressure range.
3. Provide preinstalled neutral-wire protection when required to support specified fan type.
4. Motor to include thermal overload protection, quick-disconnect plug, and permanently lubricated bearings.
5. Belt-Driven Motor Requirements: Provide adjustable blower-motor/sheave combination device based on indicated flow performance requirements.
6. Variable Speed Control: Configure controller to maintain adjustable flow setpoint for modulating or speed-switched units.

DRAFT

7. Fan Turndown: Design control features to allow fan-speed reduction to adjustable **<< 50; or __>>** percent of its capacity when zone set point temperature is satisfied or when unit runs in fan-only mode.

G. Evaporator Section:
1. Internally finned, aluminum or copper tubes mechanically bonded to configured aluminum plate fin, corrosion-inhibitor coated as indicated.
2. Refrigerant Coil Distributor Assembly: Orifice style with round copper distributor tubes.
3. Thermostatic Expansion Valve: Factory select and install for wide control range.
4. Factory leak test to minimum **<< 450 psi; or ___ psi>>** and pressure test to minimum **<< 600 psi; or ___ psi>>**.
5. Tubes: Size tubes consistent with coil capacity. Fabricate suction header from rounded copper pipe.
6. Completely evacuate air and charge with proper column of refrigerant prior to shipment.

H. Compressor Section:
1. Provide rubber mounting devices located underneath compressor mounting base.
2. Safety Interlocked Devices:
   a. Thermal overload protection.
   b. High-pressure switch for protection against excessive discharge pressure.
   c. Low-pressure safety for protection against loss of refrigerant charge.

I. Refrigerant Tubing Lines:
1. Tubing made of **<< aluminum; copper; or _____>>** with service pressure ports on high- and low-pressure sides.
2. Free from contaminants and conditions such as drilling fragments, dirt, and oil.
3. Include drier, thermal expansion valve, and other related components.
4. Freeze Protection: **<< 15 degrees F; 30 degrees F; or __ degrees F>>**, thermistor based.

J. Refrigerant Load Control:
1. Hot-Gas Bypass: Provide to increase heat transfer efficiency at low temperatures.
2. Hot-Gas Reheat Coil:
   a. Humidity Control: Upgrade thermostat to include humidity sensor tied to unit controller for integral dehumidification control.
   b. Coil Assembly: Aluminum or copper tubes mechanically expanded into evenly spaced aluminum fins.
   c. Coil Testing: Proof test at minimum of **<< 1.5; or __>>** times maximum operating pressure, then leak test at maximum operating pressure.
3. Hot-Water Generator:
   a. Secondary coil or heat exchanger**<< with load-matched, field-installed pump; _____; or None - N/A>>**, reversing valve, and accessories.
   b. Storage: **<< Interconnect to existing water heater or external storage tanks; See Section 223000 for domestic water heaters or storage tanks; or _____>>**.

K. Water-to-Refrigerant Heat Exchanger:
1. Coaxial Type: Provide **<< aluminum; copper; cupro-nickel; or _____>>** tube and fins**<< , corrosion-inhibitor coated; , corrosion-inhibitor coated, and insulated; , insulated; , _____; or None - N/A>>**.

DRAFT

2. Brazed-Plate Type: Stainless steel, with bidirectional liquid line filter drier.
3. Insulate heat exchanger, water lines, and refrigerant suction lines for prevention of condensation at temperatures below **<< 60 degrees F; or ___ degrees F>>**.
4. Provide rubber isolation to heat exchanging device for enhanced sound attenuation.
5. Freeze Protection: **<< 35 degrees F; 20 degrees F; or __ degrees F>>** by thermistor sensing.
6. Minimum Working Pressure: **<< 400 psi; or ___ psi>>** waterside, **<< 600 psi; or ___ psi>>** DX side.
7. End Connections: Copper NPT. Provide flow shut-off ball valves.
8. Accessories:
   a. Strainer, PT test plug, and flow regulator.
   b. Unit-controlled, return-waterside solenoid valve**<< ; see Section 253619; ; _____; or None - N/A>>**.

L. Waterside Economizer Section:
1. Thermostat-controlled, metered, prepiped return air coil with 3-way valve assembly tied and coordinated by unit controller.
2. Provide assembly factory installed or shipped loose for field installation as indicated.
3. Performance Requirements:**<< As indicated on drawings.; _____ .; or None - N/A>>**
4. Air-to-Water Hydronic Coil:
   a. Aluminum or copper tubes and aluminum plate fin combination.
   b. Accessible, cleanable, dual-sloped, noncorrosive drain pan.
   c. Leak test at maximum operating pressure.
   d. Factory proof test at minimum **<< 1.5; or ___>>** times maximum operating pressure.
5. Modulating or position-adjusted control valve to engage and control coil at listed EWT.

M. Filter Section:
1. **<<ASHRAE Std 52.2>>**, minimum efficiency reported value or MERV listing.
2. Filter Box: Provide field-installed, return-duct-mounted filter housing with side access.

N. Electrical:
1. Provide factory-installed phase loss safety device for 3-phase units.
2. Configure unit for single-point connection, include terminal for field-installed components.
3. Include separate holes and knockouts with plastic ferrules for respective electrical and controls wiring.

O. Unit Controls:
1. DDC:
   a. Tested to monitor and handle sequencing functions and other operational modes using field-mounted thermostat and other sensors.
   b. Coordination and Sequencing:
      1) Internal Devices: Include compressors, blower, sensors, switches, valves, safeties, other components.
      2) Field-Installed Devices: Solenoid valves, thermostat, EWT sensors, LWT sensors, load-pump contact, source-pump contact, and other devices required for operation.

DRAFT

3) Safeties: At minimum include anti-short-cycle compressor protection, condensate overflow, refrigerant high pressure, refrigerant low pressure, loss-of-charge, refrigerant freeze protection, and freezestat.

2. Thermostat:
   a. Field mounted and wired, tied into prewired control-interface terminals.
   b. Smart Thermostat:
      1) BAS or BMS linked programmable thermostat; see Section **<< 251400>>**.
   c. Programmable Thermostat:
      1) Electro-mechanical type with **<< key or pushbutton operated display; touchscreen; or _____>>**.
      2) Programmable occupied/unoccupied weekly and holiday schedule.
   d. Non-Programmable Thermostat:
      1) Electro-mechanical type with **<< key- or pushbutton-operated display; touchscreen; or _____>>**.
      2) User configurable precoded options aligned with equipment functions.
   e. Thermostat: Single-gang-box-mounted platinum or thermistor.
      1) Local Interface to Include:
         (a) Filter maintenance indicating status.

SECTION 238200
CONVECTION HEATING AND COOLING UNITS

PART 2 PRODUCTS

END OF SECTION 238200

DRAFT

SECTION 238241
WATER-TO-WATER HEAT PUMPS

PART 2 PRODUCTS

1.01 GENERAL WATER-TO-WATER HEAT PUMP FABRICATION REQUIREMENTS

A. Energy Efficiency: **<<ASHRAE Std 90.1 I-P>>** EER and COP ratings, minimum.

B. Factory assemble internal components, safety-controls, accessories, filters, piping, cable, and wires, then charge with **<< R-454B; R-410A; or _____>>** refrigerant prior to testing.

C. Include marked terminal strip to interface field mounted components and accessories.

D. Comply with **<<UL 1995>>**, place service and caution labels on unit in appropriate locations.

E. Cabinet Assembly:
   1. Construct of zinc-coated, heavy-gauge, galvanized steel with exposed edges rounded.
   2. Finish: Factory apply **<< electrostatic powder paint; baked enamel; or _____>>** finish. Coordinate with **<<Architect>>** for specific color finish requirements of console units or other units installed within occupied spaces.
   3. Provide access panels for inspection, cleaning, and servicing of refrigerant, controls, and heat exchangers.
   4. Interior Insulation: Minimum **<< 1/2 inch; or __ inch>>** thick, dual density, bonded glass fiber.
   5. Provide flame spread of less than 25, and smoke developed classification of less than 50 when tested in accordance with **<<ASTM E84>>** and **<<UL 723>>**.
   6. Sound and Noise Suppression:
      a. Mechanical Rooms: **<< 18 gauge, 0.05 inch; or ___ gauge, ___ inch>>**, minimum.
      b. Occupied Spaces: **<< 16 gauge, 0.06 inch; or __ gauge, __ inch>>**, minimum.
      c. Compressor enclosure lined with **<< 1/2 inch; or __ inch>>** thick insulation.
      d. Include vibration isolation between compressor and heat exchanger.
      e. Include length-wise unit base stiffeners.
      f. Foam gasket sealant around compressor and end panel perimeter.

F. Compressor Section:
   1. Provide rubber mounting vibration isolation devices underneath mounting base.
   2. Safety Interlocked Devices:
      a. Thermal overload protection.
      b. High pressure switch for protection against excessive discharge pressure.
      c. Low pressure safety for protection against loss of refrigerant charge.

G. Refrigerant Tubing Lines:
   1. Tubing made of **<< aluminum; copper; or _____>>** with service pressure ports on high and low pressure sides.
   2. Free from contaminants and conditions such as drilling fragments, dirt, and oil.
   3. Include drier, thermal expansion valve, and other related components.
   4. Freeze Protection: **<< 15 degrees F; 30 degrees F; or __ degrees F>>**, thermistor based.

H. Water-to-Refrigerant Heat Exchanger:

DRAFT

1. Coaxial Type: Provide **<< aluminum; copper; cupro-nickel; or _____>>** tube and fins**<< , corrossion-inhibitor coated; , corrossion-inhibitor coated, and insulated; , insulated; , _____; or None - N/A>>**.
2. Brazed-Plate Type: Stainless steel, with bidirectional liquid line filter drier.
3. Insulate heat exchanger, water lines, and refrigerant suction lines for prevention of condensation at temperatures below **<< 60 degrees F; or ___ degrees F>>**.
4. Provide rubber isolation to the heat exchanging device for enhanced sound attenuation.
5. Freeze Protection: **<< 35 degrees F; 20 degrees F; or __ degrees F>>** by thermistor sensing.
6. Minimum Working Pressure: **<< 400 psi; or ___ psi>>** water side, **<< 600 psi; or ___ psi>>** DX side.
7. End Connections: Copper NPT. Provide flow shut-off ball valves.
8. Accessories:
   a. Strainer, PT test plug, and flow regulator.
   b. Unit-controlled, return-water-side solenoid valve**<< ; see Section 253619; ; _____; or None - N/A>>**.

I. Electrical:
1. Provide factory-installed phase loss safety device for 3-phase units.
2. Configure unit for single point connection, include terminal for field-installed components.

J. Unit Controls: DDC.
1. Application Specific Controller; see Section **<< 251400>>** unless factory-provided.
2. Tested to monitor and handle sequencing functions and other operational modes using supplied field mounted sensors and switches.
3. Controller Interface:
   a. **<< Wall; Unit; or _____>>** mounted device with monitoring display.
   b. Pushbutton or key operated for local control and configuration.
4. Coordination and Sequencing:
   a. Internal Devices: Include compressors, sensors, switches, valves, safeties, other components.
   b. Field-Installed Devices: Solenoid valves, EWT sensors, LWT sensors, load-pump contact, source pump contact, and other devices required for operation.
   c. Safeties: At minimum include anti-short-cycle compressor protection, condensate overflow, refrigerant high-pressure, refrigerant low-pressure, loss-of-charge, and refrigerant freeze protection.
5. Power:
   a. Factory-mounted and internally-wired into nonfused electrical disconnect.
   b. Configure safety-lockout circuits to be reset either using reset switch or power cycling.
   c. 24 VAC/VDC, include minimum of 10 VA spare load capacity for potential field use.

END OF SECTION 238241

DRAFT

SECTION 260505
SELECTIVE DEMOLITION FOR ELECTRICAL

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Electrical demolition.

PART 2 PRODUCTS

2.01 MATERIALS AND EQUIPMENT

A. Materials and equipment for patching and extending work: As specified in individual sections.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify field measurements and circuiting arrangements are as indicated.

B. Verify that abandoned wiring and equipment serve only abandoned facilities.

C. Demolition drawings are based on casual field observation**<< and existing record documents; _____; or None - N/A>>**.

D. Report discrepancies to **<<Architect>>** before disturbing existing installation.

E. Beginning of demolition means installer accepts existing conditions.

3.02 PREPARATION

A. Disconnect electrical systems in walls, floors, and ceilings to be removed.

B. Coordinate utility service outages with utility company.

C. Provide temporary wiring and connections to maintain existing systems in service during construction. When work must be performed on energized equipment or circuits, use personnel experienced in such operations.

D. Existing Electrical Service: Maintain existing system in service until new system is complete and ready for service. Disable system only to make switchovers and connections. Minimize outage duration.

E. Existing Fire Alarm System: Maintain existing system in service until new system is accepted. Disable system only to make switchovers and connections. Minimize outage duration.

1. Notify **<<Owner>>** before partially or completely disabling system.
2. Make temporary connections to maintain service in areas adjacent to work area as required.

3.03 DEMOLITION AND EXTENSION OF EXISTING ELECTRICAL WORK

A. Perform work for removal and disposal of equipment and materials containing toxic substances regulated under the Federal Toxic Substances Control Act (TSCA) in accordance with**<< Section 028400 and; _____; or None - N/A>>** applicable federal, state, and local regulations. Applicable equipment and materials include, but are not limited to:

1. PCB- and DEHP-containing lighting ballasts.

DRAFT

2. Mercury-containing lamps and tubes, including fluorescent lamps, high intensity discharge (HID), arc lamps, ultra-violet, high pressure sodium, mercury vapor, ignitron tubes, neon, and incandescent.

B. Remove, relocate, and extend existing installations to accommodate new construction.

C. Remove abandoned wiring to source of supply.

D. Remove exposed abandoned conduit, including abandoned conduit above accessible ceiling finishes. Cut conduit flush with walls and floors, and patch surfaces.

E. Disconnect abandoned outlets and remove devices. Remove abandoned outlets if conduit servicing them is abandoned and removed. Provide blank cover for abandoned outlets that are not removed.

F. Disconnect and remove electrical devices and equipment serving utilization equipment that has been removed.

G. Repair adjacent construction and finishes damaged during demolition and extension work.

H. Maintain access to existing electrical installations that remain active. Modify installation or provide access panel as appropriate.

I. Extend existing installations using materials and methods**<< compatible with existing electrical installations, or; _____; or None - N/A>>** as specified.

3.04 CLEANING AND REPAIR

A. Clean and repair existing materials and equipment that remain or that are to be reused.

B. Panelboards: Clean exposed surfaces and check tightness of electrical connections. Replace damaged circuit breakers and provide closure plates for vacant positions. Provide typed circuit directory showing revised circuiting arrangement.

C. Luminaires: Remove existing luminaires for cleaning. Use mild detergent to clean all exterior and interior surfaces; rinse with clean water and wipe dry. Replace lamps**<< , ballasts; , _____; or None - N/A>>** and broken electrical parts.

END OF SECTION 260505

DRAFT

SECTION 260519
LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Wire and cable rated 600-volts and less.

B. Type AC-HCF and Type NM cables are not permitted.

C. Wiring connectors.

D. Electrical tape.

E. Heat shrink tubing.

F. Oxide inhibiting compound.

G. Wire pulling lubricant.

H. Cable ties.

I. Firestop sleeves.

1.02 RELATED REQUIREMENTS

A. Section **<< 078400 - Firestopping>>**.

B. Section **<< 260505 - Selective Demolition for Electrical>>**: Disconnection, removal, and/or extension of existing electrical conductors and cables.

C. Section **<< 260526 - Grounding and Bonding for Electrical Systems>>**: Additional requirements for grounding conductors and grounding connectors.

D. Section **<< 260553 - Identification for Electrical Systems>>**: Identification products and requirements.

1.03 REFERENCE STANDARDS

A. ASTM B3 - Standard Specification for Soft or Annealed Copper Wire.

B. ASTM B8 - Standard Specification for Concentric-Lay-Stranded Copper Conductors, Hard, Medium-Hard, or Soft.

C. ASTM B33 - Standard Specification for Tin-Coated Soft or Annealed Copper Wire for Electrical Purposes.

D. ASTM B787/B787M - Standard Specification for 19 Wire Combination Unilay-Stranded Copper Conductors for Subsequent Insulation.

E. ASTM D3005 - Standard Specification for Low-Temperature Resistant Vinyl Chloride Plastic Pressure-Sensitive Electrical Insulating Tape.

F. ASTM D4388 - Standard Specification for Nonmetallic Semi-Conducting and Electrically Insulating Rubber Tapes.

G. NECA 1 - Standard for Good Workmanship in Electrical Construction.

H. NEMA WC 70 - Power Cables Rated 2000 Volts or Less for the Distribution of Electrical Energy.

I. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems.

J. NFPA 70 - National Electrical Code.

DRAFT

K. UL 44 - Thermoset-Insulated Wires and Cables.

L. UL 83 - Thermoplastic-Insulated Wires and Cables.

M. UL 267 - Outline of Investigation for Wire-Pulling Compounds.

N. UL 486A-486B - Wire Connectors.

O. UL 486C - Splicing Wire Connectors.

P. UL 486D - Sealed Wire Connector Systems.

Q. UL 493 - Thermoplastic-Insulated Underground Feeder and Branch-Circuit Cables.

R. UL 510 - Polyvinyl Chloride, Polyethylene, and Rubber Insulating Tape.

S. UL 719 - Nonmetallic-Sheathed Cables.

T. UL 854 - Service-Entrance Cables.

U. UL 1569 - Metal-Clad Cables.

V. UL 4703 - Standard for Photovoltaic Wire.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate sizes of raceways, boxes, and equipment enclosures installed under other sections with the actual conductors to be installed, including adjustments for conductor sizes increased for voltage drop.
2. Coordinate with electrical equipment installed under other sections to provide terminations suitable for use with the conductors to be installed.
3. Notify **<<Architect>>** of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

1.05 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>**, for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for conductors and cables, including detailed information on materials, construction, ratings, listings, and available sizes, configurations, and stranding.

1. Each type of wire and cable, including accessories.
2. Include copies of UL certifications showing compliance with requirements in "Quality Assurance" below.

C. Product schedule: Provie schedule or detailed statement on use of wires and cables. Indicate wire or cable type, product use, and representative location(s).

1. Identify proposed use of wire or cable types in locations not specifically listed in contract documents.

1.06 QUALITY ASSURANCE

A. Comply with requirements of **<<NFPA 70>>**.

B. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

DRAFT

1.07 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store conductors and cables in accordance with manufacturer's instructions.
   1. Wire and cable shall be packaged in a manner that protects them during ordinary handling and shipping. Ship from manufacturer with ends temporarily sealed against moisture.
   2. Protect wire and cable during storage (both onsite and offsite).
      a. Store in a clean and dry location. Elevate from surfaces where water can accumulate, and cover cable rolls to protect against weather.
   3. Damaged wire and cable shall be removed from the project site.

1.08 FIELD CONDITIONS

A. Do not install or otherwise handle thermoplastic-insulated conductors at temperatures lower than **<< 14 degrees F>>**, unless otherwise permitted by manufacturer's instructions. When installation below this temperature is unavoidable, notify **<<Architect>>** and obtain direction before proceeding with work.

PART 2 PRODUCTS

2.01 COPPER BUILDING WIRE (600-VOLTS MAX.)

A. Conductors: UL listed and NEMA WC 70 compliant; Copper, 98 percent conductivity, suitable for 600-volt duty; rated 90-degree Celsius temperature for wet/dry applications; solid bare annealed copper for No. 10 and smaller complying with ASTM B3, and stranded for No. 8 and larger complying with ASTM B8.

B. Conductor Insulation:
   1. Type THHN/THWN-2: Comply with UL 83; PVC insulation, nylon jacket.
   2. Type RHH/RHW-2: Comply with UL 44; stranded conductors, XLPE insulation.
   3. Type XHHW-2: Comply with UL 44; stranded conductors XLPE insulation.

C. Conductor identification: Markings along outer braid denoting conductor size, voltage classification, type of insulation, and manufacturer's trade name, and color code. Identification shall extend to branch circuits and outlets. Use the color coding system indicated below throughout the building's network of feeders and circuits, unless otherwise required by the authority having jurisdiction.
   1. Colors on conductors No. 10 and smaller, or No. 6 and smaller for grounded and grounding conductors: Solid colored insulation.
   2. Colors on conductors No. 8 and larger, or No. 4 and larger grounded and grounding conductors: Colored tape wrapped a minimum of 6 inches on either end of conductor.
      a. 480Y/277 V, 3-phase, 4-wire System:
         1) Phase A: Brown.
         2) Phase B: Orange.
         3) Phase C: Yellow.
         4) Neutral/Grounded: Gray.
      b. 208Y/120 V, 3-phase, 4-wire System:
         1) Phase A: Black.
         2) Phase B: Red.
         3) Phase C: Blue.
         4) Neutral/Grounded: White.

DRAFT

D. Wires used solely for grounding purposes shall be green, where insulated.

E. Control wiring shall be coded with colors different from those used to designate phase wires.

2.02 ALUMINUM CONDUCTORS

A. Aluminum conductors: UL 44 listed and NEMA WC 70 compliant; suitable for 600-volt duty; rated 90-degree Celsius temperature for wet/dry applications; complying with ASTM B800 and ASTM B801. Compact, stranded Aluminum Association 8000 series electrical conductor alloy material, equal to Alcan Cable "Stabiloy".
   1. Sizes No. 2 through 750 kmils only.

B. Conductor insulation:
   1. Type THHN/THWN-2: Comply with UL 83; PVC insulation, nylon jacket.
   2. Type XHHW-2: Comply with UL 44; stranded conductors XLPE insulation.

2.03 WIRING ACCESSORIES

A. Factory-fabricated connectors and splices of size, ampacity rating, material type, and class for application and service where installed.

B. Twist-on wire connectors (dry locations): Color-keyed, Ideal Industries, Inc., Wingnut, 3M Company "Scotchlok", or approved equal by King Innovation.

C. Twist-on wire connectors (damp and wet locations): Ideal Industries, Inc., UnderGround, models 60, 64 or 66 as appropriate; King Innovation DryConn; or approved equal by 3M Company. Connectors shall be listed under UL 486D.

D. Compression connectors

2.04 CONDUCTOR AND CABLE APPLICATIONS

A. Do not use conductors and cables for applications other than as permitted by **<<NFPA 70>>** and product listing.

B. Wiring methods and locations: Wires and cables shall be installed based on the following requirements, unless noted otherwise.
   1. Feeders, exposed: Type THHN/THWN-2, single conductors in raceway.
   2. Feeders, concealed in ceilings, walls, partitions, and crawlspaces: Type THHN/THWN-2, single conductors in raceway.
   3. Feeders, concealed in concrete and below slab-on-grade: Type XHHW-2, single conductors in raceway.
   4. Feeders, underground: Type RHW-2, single conductors in raceway.
   5. Feeders, concealed in raised flooring or partitions: Type THHN/THWN-2, single conductors in raceway.
   6. Branch circuits, concealed in ceilings, walls and partitions:
      a. Type THHN/THWN-2, single conductors in raceway.
      b. Metal-clad cable, Type MC cable and MC luminary cable.
   7. Branch circuits, exposed: Type THHN/THWN-2, single conductors in raceway.
   8. Branch circuits, concealed in concrete and below slab-on-grade: Type THHN/THWN-2, single conductors in raceway.
   9. Branch circuits, underground: Type RHW-2, single conductors in raceway.
   10. Feeders serving fire pump controller equipment: Mineral-insulated cable, Type MI.
   11. Feeders serving vertical risers: Type XHHW-2, single conductors in raceway.

DRAFT

12. All other applications: Provide Type THHN/THWN-2, single conductors in raceway or wire and cable type as indicated.

2.05 CONDUCTOR AND CABLE GENERAL REQUIREMENTS

A. Provide products that comply with requirements of **<<NFPA 70>>**.

B. Provide products listed, classified, and labeled as suitable for the purpose intended.

C. Unless specifically indicated to be excluded, provide all required conduit, boxes, wiring, connectors, etc. as required for a complete operating system.

D. Comply with **<<NEMA WC 70>>**.

E. Thermoplastic-Insulated Conductors and Cables: Listed and labeled as complying with **<<UL 83>>**.

F. Thermoset-Insulated Conductors and Cables: Listed and labeled as complying with **<<UL 44>>**.

G. Conductors for Grounding and Bonding: Also comply with Section **<< 260526>>**.

H. Conductor Material:
   1. For feeders, provide copper conductors for feeders smaller than No. 4 AWG. Provide copper or aluminum for feeders No. 4 AWG and larger. Conductor sizes indicated are based on copper.
   2. For branch circuits, provide copper conductors only. Provide solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.
      a. For VFC cable, extra flexible stranded is allowable.
   3. Copper Conductors: Soft drawn annealed, 98 percent conductivity, uncoated copper conductors complying with **<<ASTM B3>>**, **<<ASTM B8>>**, or **<<ASTM B787/B787M>>** unless otherwise indicated.
   4. Tinned Copper Conductors: Comply with **<<ASTM B33>>**.

I. Minimum Conductor Size: Minimum sizes shall be as follows, unless a larger size is indicated on the drawings.
   1. 120-volt branch circuits:
      a. Homerun from first outlet/device to panel: No. 12 AWG when the run is 50 feet or less; No. 10 AWG when the run is between 50 feet and 100 feet; No. 8 AWG when the run is more than 100 feet.
      b. First outlet/device to the other outlets/devices: No. 12 AWG.
   2. Control Circuits:
      a. Provide No. 14 AWG.

J. Where conductor size is not indicated, size to comply with **<<NFPA 70>>** but not less than applicable minimum size requirements specified.

K. Conductor Color Coding:
   1. Color code conductors as indicated unless otherwise required by the authority having jurisdiction. Maintain consistent color coding throughout project.
   2. Color Coding Method: Integrally colored insulation.

2.06 SINGLE CONDUCTOR BUILDING WIRE

A. Manufacturers:
   1. Copper Building Wire:
      a. Encore Wire Corporation**<< ; _____; or None - N/A>>**: www.encorewire.com/#sle.

DRAFT

b. General Cable Technologies Corporation**<< ; _____; or None - N/A>>**: www.generalcable.com/#sle.
c. Service Wire Co**<< ; _____; or None - N/A>>**: www.servicewire.com/#sle.
d. Southwire Company**<< ; _____; or None - N/A>>**: www.southwire.com/#sle.

B. Description: Single conductor insulated wire.

C. Conductor Stranding:
1. Feeders and Branch Circuits:**<< Stranded.; _____ .; or None - N/A>>**
a. Size 10 AWG and Smaller: Solid.
b. Size 8 AWG and Larger: Stranded.
2. Control Circuits: Stranded.

D. Insulation Voltage Rating: 600 V.

E. Insulation:
1. Copper Building Wire: Type **<< THHN/THWN; THHN/THWN-2; XHHW-2; RHH/RHW-2; or _____>><< , except as indicated below; , _____; or None - N/A>>**.

2.07 WIRING CONNECTORS

A. Description: Wiring connectors appropriate for the application, suitable for use with the conductors to be connected, and listed as complying with **<<UL 486A-486B>>** or **<<UL 486C>>** as applicable.

B. Connectors for Grounding and Bonding: Comply with Section **<< 260526>>**.

C. Splicing shall be done in outlet boxes and junction boxes, and not in conduit.
1. Conductors No. 8 and larger: Termianted, spliced and taped, wherever practical, with connectors as indicated below. Use tools recommended by the manufacturer.
2. Splices in conductors No. 10 and smaller, including lighting fixtures: Made with wire connectors.
3. Taps in conductors No. 6 and larger: Made with compression taps or power distribution blocks.

D. Wiring Connectors for Terminations:
1. Provide terminal lugs for connecting conductors to equipment furnished with terminations designed for terminal lugs.
2. Provide compression adapters for connecting conductors to equipment furnished with mechanical lugs when only compression connectors are specified.
3. Where over-sized conductors are larger than the equipment terminations can accommodate, provide connectors suitable for reducing to appropriate size, but not less than required for the rating of the overcurrent protective device.

E. Wiring in high ambient temperature areas shall be of types required by NFPA 70 including over boilers and breechings, in fixture channels, in kitchen hoods, and on rooftops.

F. Wires shall be neatly shaped in panels, wireways, boxes and appurtenances.

G. Twist-on Insulated Spring Connectors: Rated 600 V, **<< 221 degrees F>>** for standard applications and **<< 302 degrees F>>** for high temperature applications; pre-filled with sealant and listed as complying with **<<UL 486D>>** for damp and wet locations.

H. Mechanical Connectors: Provide set-screw type for all interior applications. ***** MCPS Standard *****

I. Compression Connectors: Provide compression type for all exterior applications. ***** MCPS Standard *****

DRAFT

J. Crimped Terminals: Nylon-insulated, with insulation grip and terminal configuration suitable for connection to be made.

2.08 ACCESSORIES

A. Electrical Tape:
   1. Vinyl Color Coding Electrical Tape: Integrally colored to match color code indicated; listed as complying with **<<UL 510>>**; minimum thickness of **<< 7 mil>>**; resistant to abrasion, corrosion, and sunlight; suitable for continuous temperature environment up to **<< 221 degrees F>>**.
   2. Vinyl Insulating Electrical Tape: Complying with **<<ASTM D3005>>** and listed as complying with **<<UL 510>>**; minimum thickness of **<< 7 mil; 8.5 mil; or _____>>**; resistant to abrasion, corrosion, and sunlight; conformable for application down to **<< 0 degrees F>>** and suitable for continuous temperature environment up to **<< 221 degrees F>>**.
   3. Rubber Splicing Electrical Tape: Ethylene Propylene Rubber (EPR) tape, complying with **<<ASTM D4388>>**; minimum thickness of **<< 30 mil>>**; suitable for continuous temperature environment up to **<< 194 degrees F>>** and short-term **<< 266 degrees F>>** overload service.
   4. Electrical Filler Tape: Rubber-based insulating moldable putty, minimum thickness of **<< 125 mil>>**; suitable for continuous temperature environment up to **<< 176 degrees F>>**.
   5. Varnished Cambric Electrical Tape: Cotton cambric fabric tape**<< , with or without adhesive; , with adhesive; , without adhesive; , _____; or None - N/A>>**, oil-primed and coated with high-grade insulating varnish; minimum thickness of **<< 7 mil>>**; suitable for continuous temperature environment up to **<< 221 degrees F>>**.
   6. Moisture Sealing Electrical Tape: Insulating mastic compound laminated to flexible, all-weather vinyl backing; minimum thickness of **<< 90 mil>>**.

B. Heat Shrink Tubing: Heavy-wall, split-resistant, with factory-applied adhesive; rated 600 V; suitable for direct burial applications; listed as complying with **<<UL 486D>>**.

C. Oxide Inhibiting Compound: Listed; suitable for use with the conductors or cables to be installed.

D. Wire Pulling Lubricant:
   1. Listed and labeled as complying with **<<UL 267>>**.
   2. Suitable for use with conductors/cables and associated insulation/jackets to be installed**<< , when tested in accordance with IEEE 1210; , _____; or None - N/A>><< ; approved by conductor/cable manufacturer; ; _____; or None - N/A>>**.
   3. Suitable for use at installation temperature.

E. Cable Ties: Material and tensile strength rating suitable for application.

F. Sealing Systems for Roof Penetrations: Premanufactured components and accessories as required to preserve integrity of roofing system and maintain roof warranty; suitable for cables and roofing system to be installed; designed to accommodate existing penetrations where applicable.

G. Firestop Sleeves: Listed; provide as required to preserve fire resistance rating of building elements.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that interior of building has been protected from weather.

DRAFT

B. Verify that work likely to damage wire and cable has been completed.

C. Verify that raceways, boxes, and equipment enclosures are installed and are properly sized to accommodate conductors and cables in accordance with **<<NFPA 70>>**.

D. Verify that field measurements are as indicated.

E. Verify that conditions are satisfactory for installation prior to starting work.

3.02 PREPARATION

A. Clean raceways thoroughly to remove foreign materials before installing conductors and cables.

3.03 INSTALLATION

A. General:
   1. Provide wire and cable indicated in accordance with national, state and local electrical codes.
   2. Conceal wire and cable in new construction and in locations with finished walls, ceilings and floors, unless noted otherwise.
   3. Wire and cable serving systems over 100-volts shall be installed in raceways, except where noted otherwise.

B. Interior Wiring
   1. Exit light and emergency lighting circuits: Do not install in raceways, outlet boxes, or other locations with non-emergency wiring systems.
   2. Other systems (over 100-volts): Minimum No. 12 AWG unless specified or shown on drawings to be smaller.

C. Exterior Wiring
   1. Minimum sizes shall be as follows, unless a larger size is indicated on the drawings:
      a. 600-volt branch circuits: Copper, No. 10 AWG minimum.
      b. Exterior lighting circuits: Copper, No. 10 AWG minimum, with an extra No. 10 AWG (minimum) bare copper ground conductors.

D. Cable Rated Below 100-volts
   1. Install in raceway, unless otherwise indicated in contract documents.
   2. Where individual specification sections allow cable to installed either in raceway, on cable trays, or on J-hooks, install as follows:
      a. Wiring in walls, above inaccessible ceilings, where exposed in finished spaces, exposed on walls, and wherever it may not be accessible or may be subject to physical damage: Install cables in raceway.
      b. Wiring exposed in ceilings of unfinished spaces: Install cables in raceway or on cable trays.
      c. Wiring concealed above accessible suspended ceilings: Install cables on cable trays.
      d. Wiring within enclosures, consoles, cabinets, desks, and counters: Bundle, lace, and train cables to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and/or distribution spools.
   3. Conceal raceway and cables, except in unfinished spaces and in open ceiling spaces.
   4. Cable not in raceways or on cable tray:
      a. Do not install in hangers used for pipes, electrical conduits, or ceiling hangers, nor support in any way by attachments to pipes, conduits, or ceiling hangers.

DRAFT

b. Install without damaging conductors, shield or jacket. Cables shall not run through structural members or be in contact with pipes, ducts, or other potentially damaging items.
c. Install away from potential EMI sources, including electrical power lines and equipment.
d. Install parallel and perpendicular to surfaces or exposed structural members adn follow surface contours where possible.

5. Cable support with J-hooks:
   a. Install J-hooks at intervals not exceeding 60 inches.
   b. Secure cables on J-hooks with Velcro cable straps. Avoid cinching cables.
6. Each cable run shall contain a 'S' loop or other means to accommodate expansion or contraction.
7. Where ceiling plenums are used for passage of air by heating and air conditioning system, install cable in conduit or use UL listed plenum cable.

E. For cable installed in conduit, comply with requirements for raceways and boxes specified in Section 260533, Conduits, and Section 260534, Boxes.
   1. Provide separate conduit systems for each low-voltage system.
   2. Pull cables without exceed cable manufacturer's recommended pulling tensions.
      a. Pull cables simultaneously if more than one is being installed in the same raceway.
      b. Use pulling compound or lubricant. Use compounds that will not damage conductor or insulation.
      c. Use pulling means, including fish tape, cable, rope, and basket-weave wire or cable grips, that will not damage cables or raceway.

F. Avoid installing near hot utilities, which might adversely affect system performance or result in damage to the cables. If cable must be placed close to such utilities, keep it separate and protect with insulation.

G. Cable bends shall have a radius not less than the value recommended by the cable manufacturer.

H. Tage cables connected to electronic equipment, to show funtion and the location of other end. Securely fasten labels to the cable.

I. Circuiting Requirements:
   1. Unless dimensioned, circuit routing indicated is diagrammatic.
   2. When circuit destination is indicated without specific routing, determine exact routing required.
   3. Arrange circuiting to minimize splices.
   4. Include circuit lengths required to install connected devices within **<< 10 ft; or ____ ft>>** of location indicated.
   5. Maintain separation of Class 1, Class 2, and Class 3 remote-control, signaling, and power-limited circuits in accordance with **<<NFPA 70>>**.
   6. Maintain separation of wiring for emergency systems in accordance with **<<NFPA 70>>**.
   7. Circuiting Adjustments: Unless otherwise indicated, when branch circuits are indicated as separate, combining them together in a single raceway is **<< not permitted.; permitted, under the following conditions:; or _____>>**
   8. Common Neutrals: Unless otherwise indicated, sharing of neutral/grounded conductors among**<< up to three; _____; or None - N/A>>** single phase branch circuits of different phases installed in the same raceway is **<< not permitted. Provide dedicated**

DRAFT

neutral/grounded conductor for each individual branch circuit.; permitted where not otherwise prohibited, except for the following:; or _____ .>>

J. Install products in accordance with manufacturer's instructions.

K. Perform work in accordance with **<<NECA 1>>** (general workmanship).

L. Installation in Raceway:
   1. Tape ends of conductors and cables to prevent infiltration of moisture and other contaminants.
   2. Pull all conductors and cables together into raceway at same time.
   3. Do not damage conductors and cables or exceed manufacturer's recommended maximum pulling tension and sidewall pressure.
   4. Use suitable wire pulling lubricant where necessary, except when lubricant is not recommended by the manufacturer.

M. Paralleled Conductors: Install conductors of the same length and terminate in the same manner.

N. Secure and support conductors and cables in accordance with **<<NFPA 70>>** using suitable supports and methods approved by the authority having jurisdiction. Provide independent support from building structure. Do not provide support from raceways, piping, ductwork, or other systems.
   1. Installation Above Suspended Ceilings: Do not provide support from ceiling support system. Do not provide support from ceiling grid or allow conductors and cables to lay on ceiling tiles.
   2. Installation in Vertical Raceways: Provide supports where vertical rise exceeds permissible limits.

O. Install conductors with a minimum of **<< 12 inches; or _____ inches>>** of slack at each outlet.

P. Where conductors are installed in enclosures for future termination by others, provide a minimum of **<< 5 feet; or _____ feet>>** of slack.

Q. Neatly train and bundle conductors inside boxes, wireways, panelboards and other equipment enclosures.

R. Group or otherwise identify neutral/grounded conductors with associated ungrounded conductors inside enclosures in accordance with **<<NFPA 70>>**.

S. Make wiring connections using specified wiring connectors.
   1. Make splices and taps only in **<< accessible boxes; or _____>>**. Do not pull splices into raceways or make splices in **<< conduit bodies; wiring gutters; or _____>>**.
   2. Remove appropriate amount of conductor insulation for making connections without cutting, nicking or damaging conductors.
   3. Do not remove conductor strands to facilitate insertion into connector.
   4. Clean contact surfaces on conductors and connectors to suitable remove corrosion, oxides, and other contaminates. Do not use wire brush on plated connector surfaces.
   5. Mechanical Connectors: Secure connections according to manufacturer's recommended torque settings.
   6. Compression Connectors: Secure connections using manufacturer's recommended tools and dies.

T. Insulate splices and taps that are made with uninsulated connectors using methods suitable for the application, with insulation and mechanical strength at least equivalent to unspliced conductors.

DRAFT

1. Dry Locations: Use **<< insulating covers specifically designed for the connectors; electrical tape; heat shrink tubing; or _____>>**.
   a. For taped connections, first apply adequate amount of **<< rubber splicing electrical tape; electrical filler tape; or _____>>**, followed by outer covering of vinyl insulating electrical tape.
   b. For taped connections likely to require re-entering**<< , including motor leads.; , _____; , including _____; or None - N/A>>** first apply varnished cambric electrical tape, followed by adequate amount of rubber splicing electrical tape, followed by outer covering of vinyl insulating electrical tape.
2. Damp Locations: Use **<< insulating covers specifically designed for the connectors; electrical tape; heat shrink tubing; or _____>>**.
   a. For connections with insulating covers, apply outer covering of moisture sealing electrical tape.
   b. For taped connections, follow same procedure as for dry locations but apply outer covering of moisture sealing electrical tape.
3. Wet Locations: Use **<< heat shrink tubing; or _____>>**.

U. Insulate ends of spare conductors using **<< vinyl insulating electrical tape; or _____>>**.

V. Identify conductors and cables in accordance with Section **<< 260553>>**.

W. Install firestopping to preserve fire resistance rating of partitions and other elements, using materials and methods specified in Section **<< 078400; or _____>>**.

X. Unless specifically indicated to be excluded, provide final connections to all equipment and devices, including those furnished by others, as required for a complete operating system.

3.04 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>**, for additional requirements.

B. Inspect and test in accordance with **<<NETA ATS>>**, except Section 4.

C. Perform inspections and tests listed in **<<NETA ATS>>**, Section 7.3.2. The insulation resistance test is **<< required for all conductors; only required for conductors larger than _____; only required for services and feeders; not required; or _____>>**. The resistance test for parallel conductors listed as optional is **<< not required; required; or _____>>**.
   1. Disconnect surge protective devices (SPDs) prior to performing any high potential testing. Replace SPDs damaged by performing high potential testing with SPDs connected.

D. Correct deficiencies and replace damaged or defective conductors and cables.

END OF SECTION 260519

DRAFT

SECTION 260526
GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Grounding and bonding electrical systems and equipment.

B. Ground system test.

1.02 RELATED REQUIREMENTS

A. Section **<< 260519 - Low-Voltage Electrical Power Conductors and Cables>>**: Additional requirements for conductors for grounding and bonding, including conductor color coding.

B. Section **<< 270536 - Cable Trays for Communication Systems>>**: Additional grounding and bonding requirements for cable tray systems.

C. Section **<< 260553 - Identification for Electrical Systems>>**: Identification products and requirements.

D. Section 264100 - Facility Lightning Protection.

E. Section 231123 - Facility Natural-Gas Piping

1.03 REFERENCE STANDARDS

A. IEEE 81 - IEEE Guide for Measuring Earth Resistivity, Ground Impedance, and Earth Surface Potentials of a Grounding System.

B. NECA 1 - Standard for Good Workmanship in Electrical Construction.

C. NEMA GR 1 - Grounding Rod Electrodes and Grounding Rod Electrode Couplings.

D. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems.

E. NFPA 70 - National Electrical Code.

F. NFPA 780 - Standard for the Installation of Lightning Protection Systems.

G. UL 467 - Grounding and Bonding Equipment.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Verify exact locations of underground metal water service pipe entrances to building.
2. Coordinate the work with other trades to provide steel reinforcement complying with specified requirements for concrete-encased electrode.
3. Notify **<<Architect>>** of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Sequencing:

1. Do not install ground rod electrodes until final backfill and compaction is complete.

1.05 SUBMITTALS

A. See Section **<< 013000 - Administrative Requirements>>** for submittals procedures.

B. Product Data: Ground rods and connections.

C. Certifications: System test.

DRAFT

D. Field quality control test reports.

E. Project Record Documents: Record actual locations of **<< grounding electrode system components and connections; or _____>>**.

1.06 QUALITY ASSURANCE

A. Comply with requirements of **<<NFPA 70>>**.

B. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

PART 2 PRODUCTS

2.01 GROUNDING AND BONDING REQUIREMENTS

A. Do not use products for applications other than as permitted by **<<NFPA 70>>** and product listing.

B. Unless specifically indicated to be excluded, provide all required components, conductors, connectors, conduit, boxes, fittings, supports, accessories, etc. as necessary for a complete grounding and bonding system.

C. Where conductor size is not indicated, size to comply with **<<NFPA 70>>** but not less than applicable minimum size requirements specified.

D. Grounding System Resistance:

1. Achieve specified grounding system resistance under normally dry conditions unless otherwise approved by **<<Architect>>**. Precipitation within the previous 48 hours does not constitute normally dry conditions.
2. Grounding Electrode System: Not greater than **<< 5 ohms; 25 ohms; or _____>>** to ground, when tested according to **<<IEEE 81>>** using "fall-of-potential" method**<< or alternate test described in IEEE 81; _____; or None - N/A>>**.

E. Grounding Electrode System:

1. Provide connection to required and supplemental grounding electrodes indicated to form grounding electrode system.
   a. Provide continuous grounding electrode conductors without splice or joint.
   b. Install grounding electrode conductors in raceway**<< where exposed to physical damage; _____; or None - N/A>>**. Bond grounding electrode conductor to metallic raceways at each end with bonding jumper.
2. Metal Underground Water Pipe(s):
   a. Provide connection to underground metal**<< domestic and fire protection (where present); _____; or None - N/A>>** water service pipe(s) that are in direct contact with earth for at least **<< 10 feet>>** at an accessible location not more than **<< 5 feet>>** from the point of entrance to the building.
   b. Provide bonding jumper(s) around insulating joints/pipes as required to make pipe electrically continuous.
   c. Provide bonding jumper around water meter of sufficient length to permit removal of meter without disconnecting jumper.
3. Concrete-Encased Electrode:
   a. Provide connection to concrete-encased electrode consisting of not less than **<< 20 feet; or _____>>** of **<< either steel reinforcing bars or bare copper conductor not smaller than 4 AWG; bare copper conductor not smaller than 4**

DRAFT

AWG; steel reinforcing bars; or _____>> embedded within concrete foundation or footing that is in direct contact with earth in accordance with **<<NFPA 70>>**.

4. Ground Ring:
   a. Provide a ground ring encircling the building or structure consisting of bare copper conductor not less than **<< 2 AWG; or _____>>** in direct contact with earth, installed at a depth of not less than **<< 30 inches; _____ inches; or _____>>**.
5. **<< Ground Rod; Chemically-Enhanced Ground; Ground Plate; or _____>>** Electrode(s):
   a. Provide **<< three electrodes in an equilateral triangle configuration; two electrodes; single electrode; or _____>>** unless otherwise indicated or required.
   b. Space electrodes not less than **<< 10 feet; _____ feet; or _____>>** from each other and any other ground electrode.
6. Provide additional ground electrode(s) as required to achieve specified grounding electrode system resistance.
7. Ground Riser: Provide common grounding electrode conductor not less than **<< 3/0 AWG; or _____>>** for tap connections to multiple separately derived systems as permitted in **<<NFPA 70>>**.

F. Service-Supplied System Grounding:
   1. For each service disconnect, provide grounding electrode conductor to connect neutral (grounded) service conductor to grounding electrode system. Unless otherwise indicated, make connection **<< at neutral (grounded) bus in service disconnect enclosure; or _____>>**.
   2. For each service disconnect, provide main bonding jumper to connect neutral (grounded) bus to equipment ground bus where not factory-installed. Do not make any other connections between neutral (grounded) conductors and ground on load side of service disconnect.

G. Grounding for Separate Building or Structure Supplied by Feeder(s) or Branch Circuits:
   1. Provide grounding electrode system for each separate building or structure.
   2. Provide equipment grounding conductor routed with supply conductors.
   3. For each disconnecting means, provide grounding electrode conductor to connect equipment ground bus to grounding electrode system.
   4. Do not make any connections and remove any factory-installed jumpers between neutral (grounded) conductors and ground.

H. Separately Derived System Grounding:
   1. Separately derived systems include, but are not limited to:
      a. Transformers (except autotransformers such as buck-boost transformers).
      b. Uninterruptible power supplies (UPS), when configured as separately derived systems.
      c. Generators, when neutral is switched in the transfer switch.
   2. Provide grounding electrode conductor to connect derived system grounded conductor to **<< nearest effectively grounded metal building frame; nearest effectively grounded metal water pipe; common grounding electrode conductor ground riser; or _____>>**. Unless otherwise indicated, make connection at **<< neutral (grounded) bus in source enclosure; neutral (grounded) bus in first disconnecting means; or _____>>**.

DRAFT

3. Provide bonding jumper to connect derived system grounded conductor to nearest metal building frame and nearest metal water piping in the area served by the derived system, where not already used as a grounding electrode for the derived system. Make connection at same location as grounding electrode conductor connection.
4. Provide system bonding jumper to connect system grounded conductor to equipment ground bus. Make connection at same location as grounding electrode conductor connection. Do not make any other connections between neutral (grounded) conductors and ground on load side of separately derived system disconnect.
5. Where the source and first disconnecting means are in separate enclosures, provide supply-side bonding jumper between source and first disconnecting means.

I. Bonding and Equipment Grounding:
1. Provide bonding for equipment grounding conductors, equipment ground busses, metallic equipment enclosures, metallic raceways and boxes, device grounding terminals, and other normally non-current-carrying conductive materials enclosing electrical conductors/equipment or likely to become energized as indicated and in accordance with **<<NFPA 70>>**.
2. Provide insulated equipment grounding conductor in each feeder and branch circuit raceway. Do not use raceways as sole equipment grounding conductor.
3. Where circuit conductor sizes are increased for voltage drop, increase size of equipment grounding conductor proportionally in accordance with **<<NFPA 70>>**.
4. Unless otherwise indicated, connect wiring device grounding terminal to branch circuit equipment grounding conductor and to outlet box with bonding jumper.
5. Terminate branch circuit equipment grounding conductors on solidly bonded equipment ground bus only. Do not terminate on neutral (grounded) or isolated/insulated ground bus.
6. Provide bonding jumper across expansion or expansion/deflection fittings provided to accommodate conduit movement.

J. Lightning Protection Systems:
1. Do not use grounding electrode dedicated for lightning protection system for component of building grounding electrode system provided under this section.
2. Provide bonding of building grounding electrode system provided under this section and lightning protection grounding electrode system in accordance with **<<NFPA 70>>** and **<<NFPA 780>>**.

K. Cable Tray Systems: Also comply with Section **<< 270536>>**.

2.02 MANUFACTURED UNITS

A. Ground conductor, unless specifically noted otherwise, shall be copper, 98 percent conductivity, solid for No. 10 AWG and smaller, and stranded for No. 8 AWG and larger.
1. Isolated equipment grounding conductors shall have green insulation with a yellow stripe, or shall be identified as specified in Part 3.

B. Grounding busbar: Predrilled rectangular bars of electro-tin plated copper, 0.25 inches thick, 12 inch long, unless otherwise indicated on the drawings, with 0.3125 inch or 0.4375 inch diameter holes horizontally spaced 1 to 1.125 inches apart.
1. Intersystem bonding termination grounding busbar (IBGB) and telecommunications main grounding busbbar (TMGB) shall be 4 inches wide, with four rows of holes. Telecommunications main grounding busbar shall comply with ANSI/TIA/EIE-J-STD-607.
2. Other grounding busbars shall be 2 inches wide with two rows of holes. Each telecommunication ground busbar (TGB) shall comply with ANSI/IA/EIA J-STD-607.

DRAFT

3. Stand-off insulators for busbar shall be flame-resistant fiberglass-reinforced thermoset polyester, UL recognized per UL Standard 891.

C. Ground Rods: Copper bonded steel, 0.75 inch diameter by 10 feet long, one end pointed and the other end tinned.

D. Mechanical type ground connectors:
1. Connectors: IEEE 837 and UL 467 compliant, listed for specific types, sizes and combinations of conductors and connected items.
2. Nuts, bolts and washers: Silicon bronze alloy type B per ASTM F467 and F468.

E. Exothermic type ground connections: Exothermic welding systems shall be equal to "Cadweld", manufacturered by Erico International Corporation.

F. Lugs: Lugs shall be two-hole or four-hole, equal to Burndy Hylug series.

2.03 GROUNDING AND BONDING COMPONENTS

A. General Requirements:
1. Provide products listed, classified, and labeled as suitable for the purpose intended.
2. Provide products listed and labeled as complying with **<<UL 467>>** where applicable.

B. Conductors for Grounding and Bonding, in Addition to Requirements of Section **<< 260526>>**:
1. Use insulated copper conductors unless otherwise indicated.
a. Exceptions:
1) Use **<< bare copper conductors; bare tinned copper conductors; or _____>>** where installed underground in direct contact with earth.
2) Use **<< bare copper conductors; bare tinned copper conductors; or _____>>** where directly encased in concrete (not in raceway).

C. Connectors for Grounding and Bonding:
1. Description: Connectors appropriate for the application and suitable for the conductors and items to be connected; listed and labeled as complying with **<<UL 467>>**.
2. Unless otherwise indicated, use **<< exothermic welded connections; compression connectors; or _____>>** for underground, concealed and other inaccessible connections.
3. Unless otherwise indicated, use **<< mechanical connectors; compression connectors; exothermic welded connections; or _____>>** for accessible connections.

D. Ground Bars:
1. Description: Copper rectangular ground bars with mounting brackets and insulators.
2. Size: **<< As indicated; _____ unless otherwise indicated or required; or _____>>**.
3. Holes for Connections: **<< As indicated or as required for connections to be made; or _____>>**.

E. Ground Rod Electrodes:
1. Comply with **<<NEMA GR 1>>**.
2. Material: **<< Copper-bonded (copper-clad) steel; Zinc-coated (galvanized) steel; Stainless steel; or _____>>**.
3. Size: **<< 3/4 inch; 5/8 inch; or _____>>** diameter by **<< 10 feet; 8 feet; or _____>>** length, unless otherwise indicated.

F. Chemically-Enhanced Ground Electrodes:

DRAFT

1. Description: Copper tube factory-filled with electrolytic salts designed to provide a low-impedance ground in locations with high soil resistivity**<< ; straight (for vertical installations) or L-shaped (for horizontal installations) as indicated or as required; ; straight (for vertical installations); ; L-shaped (for horizontal installations); ; _____; or None - N/A>>**.
2. Length: **<< 10 feet; 20 feet; or _____>>**.
3. Integral Pigtail: Factory-attached, **<< sized not less than grounding electrode conductor to be attached; #4/0 AWG; #2/0 AWG; #2 AWG; or _____>>**.
4. Backfill Material: Grounding enhancement material recommended by electrode manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that work likely to damage grounding and bonding system components has been completed.

B. Verify that field measurements are as indicated.

C. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Perform work in accordance with **<<NECA 1>>** (general workmanship).

C. Provide the complete grounding of conduit systems, electrical equipment, conductor and equipment enclosures, motors, transformers, and neutral conductors in accordance with applicable codes. Grounded phase and neutral conductors shall be continuously identified. Continuity of metal racways shall be insured by double locknuts.

D. Furnish and install main ground for secondardy electrical service to cold water main accordance with NEC requirements. IN addition to the cold water ground, provide ground rods as indicated or as required by NEC and applicable codes.

1.

E. Grounding busbar: Busbars shall stand off the wall a minimum of 2 inches. Mount 6 inches above finished floor, unless otherwise indicated. Insulate the busbar from its supports.

1. Conductors connecting busbar to other busbars, and to the grounding electrode system shall be attached to busbar with exothermic welds.
2. Connect other conductors to busbar using lugs.

F. Install copper grounding jumpers of 3/0 copper cable around each main water valve in the building. Install copper grounding jumpers around conduit expansion fittings. Jumpers shall be of adequate current carrying capacity corresponding to size of conduit.

G. Ground system connections which are beneath the floor and in a concealed or inaccessible location shall be brazed or welded. Brazing and welding shall be "CADWELD".

H. Separately-derived 120/208-volt three phase wye electrical systems originating in transformers shall be grounded at the transformer neutral terminal:

1. The grounding electrode for the system shall be whichever oneof the following that is closest to the transformer:
   a. Building's grounding electrode.

DRAFT

b. Steel structural member of the building conforming to NEC requirements for grounding electrodes.
c. First five feet of the water service piping to the building.

I. Separately-derived three phase why electrical systems originating in generators shall be grounded at the generator neutral terminal:
1. The grounding electrode
2. The grounding electrode for the indoor generator shall be whichever one of the following that is closest to the generator:
a. Building's grounding electrode.
b. Steel structural member of the building conforming to NEC requirements for grounding electrodes.
c. First five feet of the water service piping to the building.

J. Bonding separately-derived systems:
1. Each metal water piping system, not used as the electrical system's grounding electrode, in the area served by the electrical system, shall be bonded fo the electrical system's neutral by a system bonding jumper.
2. If exposed structural metal is not used as the grounding electrode for the system, bond exposed structural metal in the arear served by the electrical system to the system's neutral by a system bonding jumper.
3. If a metal water piping system in the area served by the electrical system is bonded to exposed structural metal by a NEC-compliant bonding jumper, then only one of the two (piping or structural metal) need to be bonded to the electrical system's neutral.

K. Bonding straps and jumpers: Install in locations accessible for inspection and maintenance except where routed through short lengths of conduit.
1. Bonding to structure: Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.
2. Bonding to equipment mounted on vibration isolation hangers and supports: Install bonding so vibration is not transmitted to rigidly mounted equipment.
3. Use exothermic-welded connections to outdoor locations; if a disconnect-type connection is required, use a bolted clamp secured with a minimum of two bolts and lock washers.

L. Identify grounding and bonding system components in accordance with Section **<< 260553>>**.

3.03 EQUIPMENT GROUNDING AND BONDING

A. Provide insulated equipment grounding conductors to all feeders and branch circuits.

B. Air-duct equipment circuits: Install insulated equpment grounding conductor to duct-mounted electrical devices operating at 120V and more, including air cleaners, heaters, dampers, humidifiers, and other duct electrical equipment. Bond conductor to each unit and to air duct and connected metallic piping.

C. Water heater, heat tracing, and anti-frost heating cables: Install a separate insulated equipment grounding conductor to each electric water heater and heat tracing cable. Bond conductor to heater untis, piping, connected equipment and components.

D. Isolated grounding receptacle circuit shall be provided with an additional equipment grounding conductor insulated from the normal equipment grounding conductor.

E. Signal adn communication equipment: In addition to grounding and bonding required by NFPA 70, provide grounding systems complying with requirements in ANSI/TIA/EIA J-STD-607-A.
1. Telephone and data equipment may share a common grounding system.

DRAFT

a. Provide a No. 4 AWG minimum conductor from the IBGB to a TMGB, located in the telecommunicaitons entrance facility.
b. Provide a TGB in each telephone and data wiring closet. Where a telephone and data terminal cabinet is not in a wiring closet, provide a TGB next to it.
c. Provide No. 4 AWG minimum conductors to bond the TMGB to each TGB.
d. Where a TMGB or TGB is in a room with a panelbaord providing circuits to the telephone or data equipment in the room, locate the busbar as cloas as is practical to the panelboard, and bond the panelboard's equipment ground or enclosure to the busbar.

2. For other communication equipment, such as fire alarm, intercom, CATV, and security panels, when located in a room other than where the IBGB, TMGB, or TGB is, provide a grounding busbar in teh same room as the equipment. Bond the grounding busbar to the IBGB, TMGB, or TGB with a No. 4 AWG minimum conductor.

F. Gas piping:
1. Comply with NFPA 54.
2. Provide bonding jumpers for each length of corrugated stainless-steel tubing (CSST).
a. Jumpers shall be No. 6 AWG or the same size as the equipment grounding conductor serving the equipment served by the CSST, whichever is larger.
b. Install in accordance with CSST manufacturer's instructions and NFPA 54.

3.04 GROUNDING UNDERGROUND DISTRIBUTION SYSTEM COMPONENTS

A. Grounding manholes and handholes: Install a driving ground rod through manhole or handhole floor, close to wall, and set rod depth so 4 inches will extend above finished floor. If necessary, install ground rod before manhole is placed and provide No. 1/0 AWG bare, tinned-copper conductor from rod into manhole through a waterproof sleeve in a manhole wall. Protect ground rods passing through concrete floor with a double wrapping of pressure-sensitive insulating tape or heat-shrunk insulating sleeve from 2 inches above to 6 inches below concrete. Seal floor opening with waterproof, nonshrink groute. Bond exposed-metal parts such as inserts, cable racks, pulling irons, ladders, and cable shileds within each manhole or handhole, to ground rod or grounding conductor. Train conductors level or plumb around corners and fasten to manhole walls. Connect to cable armor and cable shield according to written instructions by manufacturer of splicing and termination kits.

3.05 APPLICATIONS

A. Underground grounding conductors: Install bare copper conductor, No. 2/0 AWG minimum.
1. Bury at least 24 inches below grade.

3.06 IDENTIFICATION

A. Comply with requirements in Section260553, Identification for Electrical Systems, for instruction signs. The label or its text shall be green.

B. Install labels at the ends of telecommunications bonding conductors and the grounding electrode conductor where exposed.
1. Label text: "If this connector or cable is loose, or must be removed for any reason, please cal the building telecommunications manager."

3.07 GROUNDING SYSTEM TEST

A. Inspect and test each component of the grounding system in accordance with **<<NETA ATS>>** except Section 4.

DRAFT

B. Perform inspections and tests listed in **<<NETA ATS>>**, Section 7.13.

C. Perform ground electrode resistance tests under normally dry conditions. Precipitation within the previous 48 hours does not constitute normally dry conditions.

D. Ensure the grounding system is continuous and that resistance to earth is not more than 10 ohms.

E. Test each ground rod for resistance to earth before making connections to rod; tie grounding system together and test for resistance to earth.

F. Investigate and correct deficiencies where measured ground resistances do not comply with specified requirements.

G. Submit detailed reports indicating inspection and testing results, including locations of rods as well as resistance and soil conditions at the time measurements were made, and corrective actions taken.

END OF SECTION 260526

DRAFT

SECTION 260529
HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 RELATED REQUIREMENTS

A. Section **<< 033000 - Cast-in-Place Concrete>>**: Concrete equipment pads.

B. Section **<< 260548 - Vibration and Seismic Controls for Electrical Systems>>**.

1.02 REFERENCE STANDARDS

A. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

B. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.

C. ASTM B633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel.

D. ASTM D635 - Standard Test Method for Rate of Burning and/or Extent and Time of Burning of Plastics in a Horizontal Position.

E. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

F. MFMA-4 - Metal Framing Standards Publication.

G. NECA 1 - Standard for Good Workmanship in Electrical Construction.

H. NFPA 70 - National Electrical Code.

I. NFPA 101 - Life Safety Code.

PART 2 PRODUCTS

2.01 SUPPORT AND ATTACHMENT COMPONENTS

A. General Requirements:

1. Comply with the following. Where requirements differ, comply with most stringent.
   a. **<<NFPA 70>>**.
2. Provide required hangers, supports, anchors, fasteners, fittings, accessories, and hardware as necessary for complete installation of electrical work.
3. Provide products listed, classified, and labeled as suitable for purpose intended, where applicable.
4. Where support and attachment component types and sizes are not indicated, select in accordance with manufacturer's application criteria as required for load to be supported**<< with minimum safety factor of _____; _____; or None - N/A>>**. Include consideration for vibration, equipment operation, and shock loads where applicable.
5. Do not use products for applications other than as permitted by **<<NFPA 70>>** and product listing.
6. Steel Components: Use corrosion-resistant materials suitable for environment where installed.
   a. Zinc-Plated Steel: Electroplated in accordance with **<<ASTM B633>>**.
   b. Galvanized Steel: Hot-dip galvanized after fabrication in accordance with **<<ASTM A123/A123M>>** or **<<ASTM A153/A153M>>**.

B. Components for Vibration Isolation and/or Seismic Controls: See Section **<< 260548>>**.

DRAFT

C. Conduit and Cable Supports: Straps and clamps suitable for conduit or cable to be supported.
   1. Conduit Straps: One-hole or two-hole type; **<< steel; malleable iron; or _____>>**.
   2. Conduit Clamps: Bolted type unless otherwise indicated.

D. Outlet Box Supports: Hangers and brackets suitable for boxes to be supported.

E. Metal Channel/Strut Framing Systems:
   1. Manufacturers:
      a. ABB**<< ; _____; or None - N/A>>**: www.electrification.us.abb.com/#sle.
      b. Atkore International Inc; Unistrut**<< ; _____; or None - N/A>>**: www.unistrut.us/#sle.
      c. Eaton Corporation**<< ; _____; or None - N/A>>**: www.eaton.com/#sle.
      d. Elgen Manufacturing Company, Inc**<< ; _____; or None - N/A>>**: www.elgenmfg.com/#sle.
      e. **<< Thomas & Betts Corporation>>**.
   2. Description: Factory-fabricated, continuous-slot, metal channel/strut and associated fittings, accessories, and hardware required for field assembly of supports.
   3. Comply with **<<MFMA-4>>**.
   4. Channel Material:
      a. Indoor Dry Locations: Use **<< painted steel; zinc-plated steel; galvanized steel; or _____>>**.
      b. Outdoor and Damp or Wet Indoor Locations: Use **<< galvanized steel; or _____>>**.

F. Fiberglass Channel/Strut Framing Systems:
   1. Manufacturers:
      a. Atkore International Inc; Unistrut**<< ; _____; or None - N/A>>**: www.unistrut.us/#sle.
      b. Champion Fiberglass**<< ; _____; or None - N/A>>**: www.championfiberglass.com/#sle.
      c. Eaton Corporation**<< ; _____; or None - N/A>>**: www.eaton.com/#sle.
      d. Enduro Composites**<< ; _____; or None - N/A>>**: www.endurocomposites.com/#sle.
   2. Description: Factory-fabricated, continuous-slot, fiberglass channel/strut and associated fittings, accessories, and hardware required for field assembly of supports.
   3. Flammability: Fire retardant with **<<NFPA 101>>**, Class A flame spread index, maximum of 25, when tested in accordance with **<<ASTM E84>>**; self extinguishing in accordance with **<<ASTM D635>>**.

G. Hanger Rods: Threaded, zinc-plated steel unless otherwise indicated.

H. Anchors and Fasteners:
   1. Manufacturers - Mechanical Anchors:
      a. Hilti, Inc**<< ; _____; or None - N/A>>**: www.hilti.com/#sle.
      b. MKT Fastening, LLC.
      c. Cooper B-Line, Inc:, a division of Cooper Industries
   2. Manufacturers - Powder-Actuated Fastening Systems:
      a. Hilti, Inc**<< ; _____; or None - N/A>>**: www.hilti.com/#sle.
      b. MKT Fastening, LLC.

DRAFT

c. Cooper B-Line, Inc:, a division of Cooper Industries

3. Unless otherwise indicated and where not otherwise restricted, use anchor and fastener types indicated for specified applications.
4. New Concrete: Use **<< preset concrete inserts; expansion anchors; screw anchors; or _____>>**.
5. Existing Concrete: Use expansion anchors
6. Solid or Grout-Filled Masonry: Use **<< expansion anchors; screw anchors; or _____>>**.
7. Hollow Masonry: Use **<< toggle bolts; or _____>>**.
8. Hollow Stud Walls: Use **<< toggle bolts; or _____>>**.
9. Steel: Use **<< beam clamps; machine bolts; welded threaded studs; or _____>>**.
10. Wood: Use **<< wood screws; or _____>>**.
11. **<< Plastic and lead; or _____>>** anchors are **<< not permitted.; permitted only as follows:; or _____ .>>**
12. Powder-actuated fasteners are **<< not permitted.; permitted only as follows:; or _____ .>>**
    a. **<< In standard-weight concrete 4 inches thick or greater for a supported weight of less than 50lbs>>**.
13. Preset Concrete Inserts: Continuous metal channel/strut and spot inserts specifically designed to be cast in concrete ceilings, walls, and floors.
    a. Manufacturer: Same as manufacturer of metal channel/strut framing system.
    b. Comply with **<<MFMA-4>>**.
    c. Channel Material: Use **<< galvanized steel; or _____>>**.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that mounting surfaces are ready to receive support and attachment components.

C. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install hangers and supports in accordance with **<<NECA 1>>** and NECA 101.

C. Provide independent support from building structure. Do not provide support from piping, ductwork, or other systems.

D. Maximum support spaceing and minimum hanger rod size for raceway: Space supports for conduits and raceways as required by NFPA 70. Minimum rod size shall be 1/4 inch in diameter.

E. Multiple Raceways or Cables: Install trapeze-type supports fabricated with steel slotted support system, sized so capacity can be increased by at least 25 percent in the future without exceed specified design load limits.
    1. Secure raceways and cables to supports with two-bolt conduit clamps.

DRAFT

F. Spring-steel clamps designed for supporting single conduits without bolts may be used for 1-1/2-inch and smaller raceways serving branch circuits and communication systems above suspended ceilings for fastening raceways to trapeze supports.

G. Unless specifically indicated or approved by **<<Architect>>**, do not provide support from suspended ceiling support system or ceiling grid.

H. Unless specifically indicated or approved by **<<Architect>>**, do not provide support from roof deck.

I. Do not penetrate or otherwise notch or cut structural members without approval of **<< Structural Engineer; Architect; or _____>>**.

J. Equipment Support and Attachment:

1. Use **<< metal, fabricated supports; supports assembled from metal channel/strut; or _____>>** to support equipment as required.
2. Use **<< metal channel/strut secured to studs; or _____>>** to support equipment surface mounted on hollow stud walls**<< when wall strength is not sufficient to resist pull-out; _____; or None - N/A>>**.
3. Use **<< metal channel/strut; or _____>>** to support surface-mounted equipment in wet or damp locations to provide space between equipment and mounting surface.
4. Unless otherwise indicated, mount floor-mounted equipment on properly sized concrete pad **<< 3 inches; 4 inches; or _____>>** in height; see Section **<< 033000; or _____>>**.
5. Securely fasten floor-mounted equipment. Do not install equipment such that it relies on its own weight for support.

K. Preset Concrete Inserts: Use manufacturer provided closure strips to inhibit concrete seepage during concrete pour.

L. Secure fasteners in accordance with manufacturer's recommended torque settings.

M. Remove temporary supports.

3.03 FIELD QUALITY CONTROL

A. See Section **<< 014000 - Quality Requirements>>** for additional requirements.
