 - Death
- Not based on compensability

^{*}Must be recorded on annual OSHA 300 injury/illness log form.

How do we measure injury/illness rates?

OSHA-Recordable Injury/Illness Incidence Rate

What is an incidence rate?

- Number of OSHA-recordable injuries/illnesses (ORs) per 100 full-time employees
- Permits comparison of relative injury/illness rates between employers of different sizes, industries
- Can assist in identifying problem areas, operations within organizations
- Can be compared to state, national data (where available)

Formula for calculating incidence rate:

No. of ORs * 200,000¹ / Total hours worked by employees

¹ This represents the total hours worked in a calendar year by 100 full-time employees: 2,000 hours for 100 employees (2,000 * 100 = 200,000).

What is MCPS' Incidence Rate?

Systemwide Incidence Rate (CY22)

No. of OSHA-Recordable Injuries and Illnesses * 200,000 / Total hours worked by employees =

990 ORs * 200,000 / 37,133,914.52 = 5.3 ORs

5.3 OSHA-Recordable Injuries/Illnesses per 100 full-time employees
