Marking Period 2, Part 2

MT	Learning Goals by Measurement Topic (MT) <u>Students will be able to . . .</u>
Number and Operations - Fractions	<ul style="list-style-type: none"> <li>use equivalent fractions (fractions that have the same amount of value) as a strategy to add and subtract fractions with unlike denominators.</li> <li>solve word problems involving addition and subtraction of fractions with unlike denominators.</li> <li>apply understanding of <b>factors</b> and <b>multiples</b> to generate equivalent fractions and add fractions with unlike denominators.</li> <li>explain the relationship among numerators and denominators to add and subtract fractions with unlike denominators.</li> <li>solve word problems involving multiplication of fractions and whole numbers and multiplication of fractions and fractions.</li> <li>identify multiplication of a fraction and a whole number as it relates to <b>resizing (scaling)</b>.</li> <li>use visual fraction models (pictures) to multiply a fraction by a fraction.</li> </ul> 
Number and Operations in Base Ten	<ul style="list-style-type: none"> <li>use the standard algorithm to multiply multi-digit whole numbers.</li> </ul>

Thinking and Academic Success Skills (TASS)		
	<u>It is . . .</u>	<u>In mathematics, students will . . .</u>
Synthesis	putting parts together to build understanding of a whole concept or to form a new or unique whole.	<ul style="list-style-type: none"> <li>use knowledge of <b>factors</b>, <b>multiples</b>, equivalent fractions, and number lines to add fractions with unlike denominators.</li> <li>consider the relationship between denominators and equivalent fractions to subtract fractions with unlike denominators.</li> <li>identify how estimation, number line drawings, and common denominators help to subtract fractions with unlike denominators.</li> </ul>
Metacognition	knowing and being aware of one's own thinking and having the ability to monitor and evaluate one's own thinking.	<ul style="list-style-type: none"> <li>identify how number line drawings and thinking about the relationship between denominators help determine whether fractions are being added accurately.</li> <li>apply knowledge of operations with whole numbers to help make generalizations about operations with fractions.</li> </ul>

Marking Period 2, Part 2

Learning Experiences by Measurement Topic (MT)		
MT	 <u>In school, your child will . . .</u>	 <u>At home, your child can . . .</u>
Number and Operations - Fractions	<ul style="list-style-type: none"> <li>use pattern blocks and other visual fraction models to represent equivalent fractions as a strategy to add and subtract fractions with unlike denominators.</li> <li>use benchmark fractions (a common fraction that you can judge other fractions by) to estimate the answer to addition and subtraction of fractions with unlike denominators. <u>Example:</u> <math>\frac{7}{8} + \frac{5}{6}</math> is less than 2 because each fraction is less than the benchmark of 1 whole.</li> <li>create number line representations to add and subtract fractions with unlike denominators.</li> <li>identify efficient strategies for determining common denominators and equivalent fractions to add and subtract fractions. <math>\frac{2}{3} + \frac{5}{4} = \frac{8}{12} + \frac{15}{12}</math>     <math>\frac{a}{b} + \frac{c}{d} = \frac{ad + bc}{bd}</math></li> <li>solve word problems involving multiplications of fractions and whole numbers.</li> <li>interpret multiplication of a fraction and a whole number as <b>resizing (scaling)</b> . <u>Example:</u> Given the expression <math>\frac{2}{7} \times 18</math>, write a fraction that will result in a product greater than, less than and equal to 18.</li> </ul>	<ul style="list-style-type: none"> <li>create equivalent fractions to solve real-world problems involving adding and subtracting fractions with unlike denominators. (Look through recipes and add the fractional amounts.)    <u>Example:</u> a recipe calls for <math>\frac{3}{4}</math> cup of sugar and <math>\frac{1}{2}</math> cup of flour. How many cups is that altogether?   <u>Possible questions:</u> <ul style="list-style-type: none"> <li>What strategy is most efficient in helping to solve the problem?</li> <li>How can using a benchmark fraction help to estimate the solution?</li> <li>Synthesize by asking, "Is there anything you have learned about adding and subtracting whole numbers that may help you add and subtract fractions?"</li> </ul> </li> <li>multiply a whole number by a fraction and find relevant applications.   <u>Example:</u> If you read for <math>\frac{1}{2}</math> hour every day, how many hours have you read by the end of the week?   <u>Website to support learning about fraction models:</u>  <a href="http://www.mathplayground.com/Fraction_bars.html">http://www.mathplayground.com/Fraction_bars.html</a> </li> </ul>
Number and Operations in Base Ten	<ul style="list-style-type: none"> <li>use the standard algorithm to multiply multi-digit whole numbers.   <math display="block">\begin{array}{r} 22 \\ 34 \\ 256 \\ \times 47 \\ 1792 \\ +10240 \\ \hline 12032 \end{array}</math> </li> </ul>	<ul style="list-style-type: none"> <li>look in newspapers or magazines for numbers to create multiplication problems using the standard algorithm to practice multi-digit whole numbers.</li> </ul>

Glossary	<p><b>factor:</b> a number that is multiplied by another number</p> <p><b>multiple:</b> a product of a given whole number and any other whole number</p> <p><b>resizing (scaling):</b> a multiplicative comparison which compares the size of the product to the size of one factor based on the other factor</p>
