Marking Period 3, Part 2

MT	Learning Goals by Measurement Topic (MT) <u>Students will be able to . . .</u>
Operations and Algebraic Thinking	<ul style="list-style-type: none"> use the relationship between addition and subtraction to solve problems. add and subtract within 20 using a variety of strategies. write and solve equations with an unknown (missing number) in all positions. add and subtract within 20 to solve word problems by using objects, drawings, and equations.
Number and Operations in Base Ten	<ul style="list-style-type: none"> add a 2-digit number to a 2-digit number ending in 0. Examples include: $\square = 40 + 15$ and $25 + 30 = \square$ subtract 2-digit numbers ending in 0. Examples include: $70 - 30 = \square$ and $\square = 40 - 20$ add a 2-digit number and a 1-digit number. Examples include: $\square = 45 + 2$ and $32 + 9 = \square$

Thinking and Academic Success Skills (TASS)		
	<u>It is . . .</u>	<u>In mathematics, students will . . .</u>
Synthesis	<p>putting parts together to build understanding of a whole concept or to form a new or unique whole.</p> 	<ul style="list-style-type: none"> solve for a unknown (missing number) by using the relationship between addition and subtraction. write and solve word problems with unknowns (missing numbers) in all positions. find possible 2-digit addends that equal a target sum. <div> <p>target sum: 54 possible addends: 10 and 44 ($10 + 44 = 54$); 30 and 24 ($30 + 24 = 54$); 40 and 14 ($40 + 14 = 54$); 50 and 4 ($50 + 4 = 54$)</p> </div>
Effort/Motivation/ Persistence	<p>working diligently and applying effective strategies to achieve a goal or solve a problem; continuing in the face of obstacles and competing pressures.</p> 	<ul style="list-style-type: none"> persevere when solving for the unknown (missing number) in an equation. describe how a strategy helped to solve a challenging word problem. willingly accept suggestions from teacher and peers when a strategy is not working.

Learning Experiences by Measurement Topic (MT)		
MT	 <u>In school, your child will . . .</u>	 <u>At home, your child can . . .</u>
Operations and Algebraic Thinking	<ul style="list-style-type: none"> use subtraction to solve an unknown addend problem. For example, when given the problem $4 + \square = 9$, students will identify "5" as the unknown number by solving $9 - 4 = \square$. solve related addition and subtraction equations within ten. For example, when given $5 = 2 + 3$, students will identify "2" as the unknown number in $5 - \square = 3$, as these equations are related. 	<ul style="list-style-type: none"> gather a set of fewer than 10 objects (buttons, coins, stuffed animals) and write an addition equation representing the sum of the objects. For example, if 7 objects were selected, a possible equation is $7 = 5 + 2$. Then write a related subtraction equation ($7 - 2 = 5$). Repeat with various amounts of objects. use this website to identify related addition and subtraction facts: http://www.ixl.com/math/grade-1/related-addition-facts
Number and Operations in Base Ten	<ul style="list-style-type: none"> add any 2-digit number and a 2-digit number ending in 0 (10, 20, 30, etc.) using a place-value manipulative such as base-10 blocks and/or Digi-blocks. <div data-bbox="615 673 999 805" data-label="Equation-Block">  $32 + 20 = 52$ </div> subtract 2-digit numbers ending in 0 by playing math games. <div data-bbox="711 862 1020 984" data-label="Equation-Block">  $50 = 70 - 20$ </div> add a 2-digit number to a 1-digit number using place-value manipulatives. <div data-bbox="302 1092 648 1357" data-label="Equation-Block"> <p>Example 1 (student does not need to compose a ten) $29 = 24 + 5$</p>  </div> <div data-bbox="682 1016 995 1409" data-label="Equation-Block"> <p>Example 2 (student needs to compose a ten) $24 + 8 = \square$ composing a ten</p>  $24 + 8 = 32$ </div> 	<ul style="list-style-type: none"> choose a 2-digit number. Starting with that number, do jumping jacks while adding 10 with each jump. <div data-bbox="1457 678 1953 805" data-label="Equation-Block">  $24 \quad 34 \quad 44 \quad 54$ </div> engage in a math discussion. Roll a number cube three times. Use the first two numbers to build a 2-digit number and use the third number as the addend. Discuss whether or not composing a ten is necessary when solving the problem. <div data-bbox="1100 997 1562 1256" data-label="Text"> <p>For example, if a 4 and a 6 are rolled on the first two rolls, the number 46 can be used. If a 5 is rolled on the third roll, the addition sentence would be $\square = 46 + 5$. In the equation $\square = 46 + 5$, a ten needs to be composed because six ones added to five ones equals 11 ones.</p> </div> <div data-bbox="1596 1055 1929 1206" data-label="Equation-Block"> <p>1st roll 2nd roll 3rd roll</p>  </div> practice solving 2-digit addition problems using an online resource: http://nlvm.usu.edu/en/nav/frames_asid_154_g_1_t_1.html?from=category_g_1_t_1.html
