

Styling Links

- Can be styled with any CSS property
- Can style individual “states” of links using pseudoclasses
- States:
 - link → Normal, unvisited
 - visited → link user has visited
 - hover → link when user mouses over it
 - active → link at the moment it is clicked

What do the Style Definitions Look Like?

```
a:link{
    color:#F00; /*red*/
}

a:visited{
    color:#030; /*dark green*/
}

a:hover{
    color:#F69; /*pink*/
}

a:active{
    color:#000; /*black*/
}
```
