

Beginning with the 2015-2016 school year, the new baseline is an average energy use of the prior five school years. Each school's quarterly energy usage is now compared against the same period's average of the prior five school years.

As each school had an active SERT program during this time frame, the reported energy use and cost avoidance for each school represents the marginal savings over a baseline that includes the efforts of SERT.

Energy Cost Avoidance
