

ENERGY SAVINGS IN COMPUTER LABS

Does your computer lab have the lamp pictured to the right?

If not, please contact the SERT program to supply your school with these lamps and to work with your SERT/Green Team to install them. The expectation is that when students are working in the computer labs, they will use these 23 Watt lamps instead of the overhead lighting. Using the floor lamps to provide lighting for the computer labs will not only reduce the electricity used by approximately 85 percent but will also reduce the school's overall carbon footprint.
